But would you believe it, the mocking-bird is as much of a murderer as the blue jay! "My dear Mr. Audubon," said Dr. Wilson of Charleston, in the house of Bachman, "I have several beautiful fox-coloured sparrows in my aviary, but of late some of them have been killed, and I wish you would tell me by what other birds the murders have been committed." Audubon laid the charge first on the blue jay, (see what it is to have a bad character,) but the doctor replied, that even they seemed too much molested by some other species. Audubon was dumb. Next day the doctor returned, and astonished him not a little by informing him that the culprit was a mocking-bird—ay "the unrivalled vocalist!" They went together to the doctor's aviary—and with all their four eyes saw the mocking-bird alight on one of the fox-coloured sparrows, in the manner of a small hawk, and attempt to murder him! The poor finch was rescued, but it was reduced to its last gasp, and expired. "This very mocking-bird we strongly suspected of being the individual that had killed a *blue jay of exceedingly meek disposition* a few weeks before. It was ultimately removed into a lonely cage, where it is yet passing its days, perhaps in unavailing penitence."

We must bring our article to a close—but shall probably next month return to this volume, which teems, as our readers now know, with interest and amusement. We conclude with a *leetle* anecdote most characteristic of the enthusiasm of the great ornithologist. The black poll warbler builds in Labrador. And thus Audubon tells us of his having found its nest. "One fair morning, while several of us were scrambling through one of the thickets of trees, scarcely waist-high, my youngest son chanced to scare from her nest a female of the black poll warbler. Reader! just fancy how this raised my spirits. *I felt as if the enormous expense of my voyage had been refunded! 'There,' said I, 'we are the first white men that have seen such a bird.'*"

AWARD OF PRIZES.

At the anniversary of the institution of the Royal Academy, the annual distribution of medals to the various successful candidates in the several departments of architecture, painting, and sculpture, took place at Somerset House. The silver medal, and the Lectures of Barry, Opie, and Fuseli, bound and inscribed, were presented to Mr. G. Sayer, for the best copy of the "Assumption," by Murillo, from the Dulwich Gallery. The silver medal was presented to Mr. J. Welsh, for the best drawing from the life. Also, the silver medal to Mr. J. Johnson, for the best elevation, from actual admeasurement, of the Council-office and Board of Trade, Whitehall; and a similar medal to Mr. G. Lee, for the best drawings from the antique of the head of Jupiter, the Laughing Faun, together with drawings of the hand and foot. The silver medal was likewise awarded to Mr. G. Bool, for the best model in alto-relief of the "Discobolus," from the antique. The learned president, in his comments on the copies made in the school of painting, observed, that notwithstanding their claims to merit as regarded mechanical excellence, there was in the principal portion of the copies a feebleness of design exhibited, against which he would caution the aspiring student as a defect, and as a bar to the attainment of real excellence in his academic pursuits. The merit of the drawings from the life was particularly deserving notice, and on that account the more excited his surprise that no *models* in the same department should have been received by the Academy. In drawings from the antique, he continued, considerable excellence in detail and execution had been displayed; for had the Academy departed from their usual custom of not awarding a second medal, they must have adjudged three to as many performances of equal merit.

Sir Martin further urged a close and unremitting study of the human figure as essential to spirit and freedom of design. Purity of design, he continued, was not the characteristic of the British school; indeed, its deficiency in this respect was its most vulnerable point. The study of the human figure had been often referred to as the fundamental principle—the grammar—of the art of painting; but it was more, it was the language of the science—purity of design was the important end of study. This attained in the British school, and British artists would then enter in honourable rivalry with the excellences of the ancient and foreign schools, and insure the predominant ascendancy of their own.

From the Asiatic Journal.

REMARKABLE CHARACTERS IN INDIA.

COLONEL GARDINER.—THE BEGUM SUMROO.

A few years ago, India presented a wide field for adventure. The distracted state of the country, the ambitious projects and conflicting interests of native princes, were highly favourable circumstances to those who brought with them a competent knowledge of the art of war and of military discipline, and who preferred a wild, erratic, roving life, amongst the children of the soil, to the regular service of the India Company. There are two individuals still living in the Bengal presidency, and occupying a distinguished, though singular, position in society, whose eventful career, if circumstantially related, could not fail to prove highly interesting. The general outlines of the history of the Begum Sumroo, and of Colonel Gardiner, of Khasgunje, are known to every person who has visited the theatre of their exploits, but very few are acquainted with the details; for such is the shifting nature of Anglo-Indian society, that it is impossible to gain more than the passing information of the day, in places rendered memorable from circumstances of universal notoriety, but of which nobody can give the particulars.

Some apology ought, perhaps, to be made for associating the name of so gallant and highly respected an officer as Colonel Gardiner with that of the begum, and her still more worthless husband; but as those readers of the *Asiatic Journal*, who have not been in India, are puzzled by the announcement of the marriages, or projected marriages, of the daughters of this gentleman with the nephews of the King of Delhi, an explanation of the circumstances, which have produced these apparently extraordinary alliances, will doubtless prove acceptable. The writer of these pages does not pretend to know more of Colonel Gardiner than the tongue of rumour could tell, or a casual meeting in society could afford; but so remarkable a person naturally made a strong impression, and the anecdotes extant concerning him were too singular to be easily forgotten. Colonel Gardiner's tall, commanding figure, soldier-like countenance, and military air, rendered his appearance very striking. When at his own residence, and associating with natives, it is said that he adopts the Asiatic costume; but while visiting a large military station, in company with the resident of Lucknow, he wore a blue surtout, resembling the undress uniform of the British army, but profusely ornamented with silk lace.

Colonel Gardiner, who is a connection of the noble family bearing that name, came out to India in the king's service, which he soon afterwards quitted. The cause of his resignation is variously related; in the absence of an authentic account, it would, perhaps, be wrong to give sanction to any one of the reports afloat concerning it. At this period, it was impossible to foresee that the tide of fortune would bring the British government of India into actual warfare with the sovereigns of provinces so far beyond the frontier, that human invention dared not contemplate their subjugation. Many loyal men were, therefore induced to follow the banners of native princes, under the expectation that they never could be called upon to bear arms against their own country; but fate decreed it otherwise, and, in the Mahratta war, those officers who had entered into Holkar's service found themselves in a very awkward predicament, especially as they were not permitted a choice, or even allowed to remain neutral, their new masters endeavouring to force them, upon pain of death, to commit treason to the land of their birth, by fighting in the ranks of a hostile force.

In some of the native courts, the English were immediately put to death upon the approach of the enemy, or on the slightest suspicion of their fidelity. Upon more than one occasion, Colonel Gardiner, who, independent of his military skill, possessed a thorough knowledge of the native character and very considerable talent, penetrated the designs of his employers, and withdrew in time from meditated treachery; but his escape from Holkar was of the most hazardous description, not inferior in picturesque incident and personal jeopardy to that of the renowned Dugald Dalgetty, who was not more successful in all lawful strategy than the subject of this too brief memoir.

Anxious to secure the services of so efficient an officer, after all fair means had failed, Holkar tied his prisoner to a gun, and threatened him with immediate destruction should he persist in refusing to take the field with his army. The colonel remained staunch, and, perchance in the hope of tiring him out, the execution was suspended, and he was placed under a guard, who had orders never to quit him for a single instant. Walking one day along the edge of a bank leading by precipitous descent to a river, Colonel Gardiner suddenly determined to make a bold effort to escape, and perceiving a place fitted to his purpose, he shouted out *bismillah!* "in the name of God!" and flung himself down an abyss of some forty or fifty feet deep. None were inclined to follow him, but guns were fired, and an alarm sounded in the town. He recovered his feet, and making for the river, plunged into it; after swimming for some distance, finding that his pursuers gained upon him, he took shelter in a friendly covert, and with merely his mouth above the water, waited until they had passed; he then landed on the opposite side, and proceeded by unfrequented paths to a town in the neighbourhood, which was under the command of a friend, who, though a native, and a servant of Holkar, he thought would afford him protection. This man proved trustworthy, and after remaining concealed some time, the colonel ventured out in the disguise of a grass-cutter, and reaching the British outposts in safety, was joyously received by his countrymen. He was appointed to the command of a regiment of irregular horse, which he still retains; and his services in the field, at the head of these brave soldiers, have not been more advantageous to the British government, than the accurate acquaintance before mentioned, which his long and intimate association with natives enabled him to obtain of the Asiatic character. It was to his diplomatic skill and knowledge of the best methods of treaty, that we owed the capitulation of one of those formidable hill-fortresses (Komulmair, in Mewar,) whose reduction by arms would have been at the expense of an immense sacrifice of human life. The commandant of the division despatched to take possession of it, wearied out by the procrastinating and indecisive spirit of the natives, would have stormed the place at every disadvantage, had not Colonel Gardiner persuaded him to entrust the negociation to his hands. The result proved that he had made a just estimate of his own powers: the garrison agreed to give up the fortress on the payment of their arrears, and Colonel Tod, in his *Annals of Rajast'han*, mentions the circumstance as one highly honourable to the British character, that, there being not more than four thousand rupees at the time in the English camp, an order, written by the commandant for the remainder, upon the shroffs or bankers in the neighbourhood, was taken without the least hesitation, the natives not having the slightest doubt that it would be paid upon presentation.

The marriage of Colonel Gardiner forms one of the most singular incidents in his romantic story. In the midst of his hazardous career, he carried off a Mahomedan princess, the sister of one of the lesser potentates of the Deccan, who, though now reduced to comparative insignificance, during the rise and progress of the Mahrattas, were personages of considerable consequence.

> Ever the first to climb a tower,
> As venturous in a lady's bower,

the sacred recess of the zenana were entered by the enterprising lover, who, at the moment in which his life was

threatened by the brother's treachery, bore away his prize in triumph, and sought an asylum in another court.

A European, of popular manners and military experience, could in those days easily place himself at the head of a formidable body of soldiers, ready to follow his fortunes, and trusting to his arrangements with the princes whose cause he supported for their pay, which was frequently in arrear, or dependent upon the capture of some rich province. In the command of such a troop, Colonel Gardiner was a welcome guest wherever he went, and, until the affair with Holkar, he had always contrived to secure his retreat whenever it was prudent to commence a new career in another quarter.

It is difficult to say what kind of bridal contract is gone through between a Moslem beauty and a Christian gentleman, but the ceremony is supposed to be binding; at least it is considered so in India, a native female not losing the respect of her associates by forming such a connection. The marriage of Colonel Gardiner seems perfectly satisfactory to the people of Hindostan, for the lady has not only continued stedfast in the Mahomedan faith, and in the strict observance of all the restrictions prescribed to Asiatic females of rank, but has brought up her daughters in the same religious persuasion, and in the same profound seclusion—points seldom conceded by a European father. They are, therefore, eligible to match with the princes of the land, their mother's family connections and high descent atoning for the disadvantage of foreign ancestry upon the paternal side. Educated according to the most approved fashion of an oriental court, they are destined to spend the remainder of their lives in the zenana; and this choice for her daughters shows that their mother, at least, does not consider exclusion from the world, in which European women reign and revel, to be any hardship.

So little of the spirit of adventure is now stirring in India, that the Misses Gardiner, or the young begums, or whatever appellation it may be most proper to designate them by, have not attracted the attention of the enterprising portion of the European community. Doubtless their beauty and accomplishments are blazoned in native society, but, excepting upon the occasion of an announcement like that referred to in the Calcutta periodicals, the existence of these ladies is scarcely known to their father's countrymen residing in India. We are ignorant whether their complexions partake most of the eastern or of the northern hue, or whether they have the slightest idea of the privileges, from which their mother's adherence to Mahomedan usages has debarred them. Their situation, singular as it may appear in England, excites little or no interest; nobody seems to lament that they were not brought up in the Christian religion, or permitted those advantages which the half-caste offspring of women of lower rank enjoy; and, acquainted with the circumstances of the case, the editors of the aforesaid periodicals do not enter into any explanation of intelligence of the most startling nature to English readers, who, in their ignorance of facts, are apt to fancy that European ladies in India are willing to enter into the zenanas of native princes.

Colonel Gardiner has of course adopted a great many of the opinions and ideas of the people with whom he has passed so great a portion of his time, and in his mode of living he may be termed half an Asiatic; this, however, does not prevent him from being a most acceptable companion to the European residents, who take the greatest delight in his society whenever he appears amongst them. His autobiography would be a work of the highest value, affording a picture of Indian manners and Indian policy, with which few besides himself have ever had an opportunity of becoming so intimately acquainted. As he is still in the prime and vigour of existence, we may hope that some such employment of these piping times of peace may be suggested to him, and that he may be induced to devote the hours spent in retirement at Khasgunje to the writing or the dictation of the incidents of his early life. In looking back upon past events, the colonel occasionally expresses a regret that he should have been induced to quit the king's service, in which, in all probability, he would have attained the highest rank; but, eminently qualified for the situation in which he has been placed, and more than reconciled to the destiny which binds him to a foreign soil, the station he occupies leaves him little to desire, and he has it in his power to be still farther useful to society by unlocking the stores of a mind fraught with information of the highest interest.

The life of the Begum Sumroo presents a more extraordinary tissue of events, extraordinary even in Asiatic annals, notwithstanding the numerous stepping-stones to wealth and power which were offered to the enterprising in the wild and troublous periods of Indian misrule. In early youth, this singular woman attached herself to a German adventurer, called by the natives Sumroo; but whether this appellation was a corruption of Summers, a name he is said to have taken upon his entrance into the company's service, or of a soubriquet supposed to have been bestowed upon him on account of his gloomy and saturnine aspect, is not known; both versions of the story being equally current in India. This man commenced his career in the east as a private soldier in the English army, from which he speedily deserted, and made his way to the upper provinces. He is described as a low-born, uneducated person, so illiterate as not to be able to write his own name. He possessed talents, however, which recommended him to the notice of Cossim Ali, nawaub of Bengal, who took him into favour, and gave him the command of his army. While in the service of this prince, Sumroo perpetrated a deed which stamped his name with indelible infamy. Inviting the English residents at Patna to his table, while partaking with the most unreserved confidence of the banquet, he gave a signal for a general massacre, and not one escaped the assassin's dagger. This act of perfidy proved as useless as it had been base and treacherous; the Company's troops under Major Adams speedily recaptured the city, and soon afterwards the entire conquest of Bengal obliged Cossim Ali and his followers to seek refuge at the court of Sujah Dowlah, Nawab Vizier of Oude. During the remainder of his life, English officers had often the mortification of seeing this renegade basking in the sunshine of favour at the courts of native princes; and though, as their star prevailed, he was compelled to try his fortune in more distant scenes, his prosperity daily increased. He established himself at the head of a considerable force, who were attached to his person, and wanted nothing but pay to be exceedingly effective. Finding it difficult to satisfy them or their leader, Nudjift Khan put him into possession of a very considerable jaghire, or rather a small principality, in the province of Delhi, which the begum retains to this day.

Sumroo died in 1776, and, at his decease, the corps which he had raised was kept up in the name of his son, though the chief authority fell into the hands of the extraordinary woman who has since made so conspicuous a figure in Hindostan. The origin of Zaib ul Nissa (ornament of her sex,) a name which, as well as the title of *begum*, was conferred upon her by the King of Delhi, is not known. By some persons it is said that she was a dancing girl; and many are of opinion that she was a Cashmerian by birth, an idea which has arisen from the remarkable fairness of her complexion. But though this is not a common circumstance amongst the natives of Hindostan, instances are sufficiently frequent to render it very possible that she was born at Agra, the place in which she attached herself to the fortunes of Sumroo.

There can be no doubt that the begum possessed a more than ordinary share of personal charms, for, at an advanced age, the remains were very striking. She is

rather under the middle size, delicately formed, with fine-chiseled features, brilliant hazel eyes, a complexion very little darker than that of an Italian, and hands, arms, and feet which Zoffani, the painter, declared to be models of beauty. Of these, though now grown fat and wrinkled, she is justly proud. It is well known that, while apparently excluded from all share of authority, women in India in reality often obtain unlimited sway over their husbands' property. Little or nothing is said of Sumroo's son, but his widow, as she is called, speedily became a person of great importance. By some of her contemporaries it is averred that, at a very early period of life, "her highness" became a convert to the Roman catholic faith, which she now professes, and that she was married to a German by the forms of that church; others seem to think these circumstances doubtful, and are of opinion that, like many Mahomedan women living with Europeans, she for a long period retained her own religion, though considering herself as much the wife of her protector as if he had fulfilled all the ceremonial of the Moslem contract.

After the death of Sumroo, the begum entered into another matrimonial engagement, with a French adventurer, a Monsieur L'Oiseaux, or Le Vassu, who had been in the Mahratta service, under General Perron, and was afterwards employed by her as commander-in-chief of the troops belonging to her jaghire. Like many widows, the lady soon discovered that she had committed a grievous error in the choice of a second husband; but there are very few who could extricate themselves so boldly and artfully from the entanglement. The cause of the begum's earnest desire to get rid of her new lord is variously related; but, in all probability, those persons are right who have attributed it to the desire which the Frenchman manifested to return to Europe. Native women of rank and wealth are well aware that they will lose all their consequence in a foreign country, and they usually make it a *sine qud non*, that those whom they espouse shall agree to spend the remainder of their days in India. Naturally alarmed at a proposition which seemed to be dictated by the purest selfishness, and which assured her that she was indebted for her husband to the wealth she had amassed, and which he now desired to lavish amongst strangers to her, by whom she would be regarded as an object of contempt, she made no outward opposition, but dissembling deeply, determined to circumvent a plan which threatened to be so injurious to her interests.

Le Vassu was no match in diplomatic arts for his subtle wife; she pretended to enter with the greatest readiness into the scheme, but conjured him to keep his intentions secret, lest the troops, exasperated by the abandonment of their chief, should endeavour to detain them by force. While apparently engaged with the greatest alacrity in the collection of the gold and jewels which he proposed to carry along with him, she employed various emissaries to inflame the minds of the people against the Frenchman, and to represent his intended desertion in the most odious colours. These agents took care to contrast her love and devotion to the interests of those over whom she had been placed, with her husband's base betrayal of their confidence; and when every thing was prepared according to her wishes, she alarmed Le Vassu with rumours of an intended revolt. She assured him that there would be the greatest difficulty in effecting their escape from a highly-excited people, who had resolved upon their destruction should they be taken in the act of quitting the province, and declaring her determination never to survive the disgrace of a capture, she represented the horrors which would ensue in such a glowing manner, and worked so strongly upon the imagination of her husband, that he agreed to follow her example, promising to kill himself should their party be insufficient to quell the insurgents.

Having made these arrangements, they set forward on their journey, attended by a strong escort, and each being provided with pistols, which the lady well knew how to use. At the appointed spot, the escort was attacked, or apparently attacked, by a party in the begum's interest; the guards were put to the rout, and the fugitives seemed to be completely in the power of their supposed enemies. There was a great deal of confusion, and amid several reports of musketry, news was brought to the bewildered Frenchman, that the begum had shot herself. He instantly dismounted from his elephant, and rushing to her palanquin, found the attendants in great affliction and disorder; these people confirmed the fatal intelligence, giving as a proof the lady's veil saturated with blood. Knowing the resolute disposition of his wife, he concluded from this act of despair that all was lost, and destitute of the resources of a strong mind, and unsuspicious of double-dealing, he saved his enemy from the guilt of his actual murder, by putting a pistol to his head.

The begum, taking care to have better information than her luckless spouse, the moment his death was ascertained, threw open the doors of her palanquin, and mounting an elephant, addressed the troops in eloquent and impassioned language, descanting upon the affection she bore to the people bequeathed to her care by their former chief, her opposition to the wishes of the dastard who would have plundered and left them, and her determination to live and die in the discharge of the important duties which she was called upon to perform.

Until this moment, it is said, she had never appeared in public; but the exigency of the case excused her assumption of masculine rights. Her appeal to the soldiers was received with the greatest enthusiasm, and they conveyed her back to camp with shouts and acclamations. From that period, she publicly exercised all the rights of a sovereign, and has retained undisputed possession of her authority. Officers formerly attached to the Mahratta service relate that they have seen her in the zenith of her beauty, leading on her troops in person, and manifesting in the midst of the most frightful carnage the reckless intrepidity which seems only to belong to the other sex. Upon one of these occasions, during the reign of Shah Alum, she is said to have saved the Mogul empire, by rallying and encouraging her troops, when those of the king were flying before the enemy. It is certain that she performed good service, and its reward was proportionate. The emperor created her a princess, or begum, in her own right, exalting her to a rank only second to that of the imperial family. Linking her fortunes with those of Delhi, she, with her usual foresight, showed herself favourable to the English interests, and in the treaties of 1805, adroitly managed to have her territories not only confirmed to her, but exempted from the jurisdiction of the civil power, greatly, it is said, to the obstruction of all executive measures of police.

The internal management of her estate, however, renders her independence less objectionable, since she contrives to keep her subjects in excellent order, and to render the revenues extremely productive.

The town of Seerdhuna, the capital of her district, is populous and flourishing; her fields, according to common report, look greener, and her peasantry more contented, than those of native states, or even of the company's provinces, in her neighbourhood. She maintains a body of troops for the protection of her own person and the collection of the revenue, besides the quota she is required to furnish to assist in the performance of the police duties at Meerut. These soldiers are under the command of officers of European descent, but to judge from the accounts which sometimes appear in the Calcutta papers of the abject nature of their enforced subservience to the will of an imperious and arbitrary woman, they cannot be of a very high grade.

The begum's troops, who are principally Rajpoots,—

tall stout men, but, like all the retainers of native princes, of haughty and insolent demeanour,—are clad in uniforms of dark-blue broadcloth, loose vests, reaching nearly to the feet, and fastened round the waist with scarlet cummurbunds; their turbans are of the same colour, and they are well armed and mounted. Her highness has also a park of artillery in very excellent order; and altogether does not make a contemptible appearance in the field.

The siege of Bhurtpore revived all the military ardour of the begum, who was very desirous to appear before the place in person, and to obtain some share of the glory and the prize-money. The commander-in-chief, who did not think her handful of retainers of much importance, endeavoured to reconcile the Amazon to her exclusion, by offering to place the holy city of Muttra under her charge; but, observing that, if not seen at the post of danger, the people of Hindoostan would say she had grown cowardly in her old age, she pitched her tents in the neighbourhood of the head-quarters' camp, and carried her point so far as at least to have the honour of being present at the capture of the fortress.

The revenues of the begum are estimated at ten lacs, or £100,000 sterling, and she is supposed to be in possession of immense treasures amassed during a very long and prosperous life. The principality of which she is the sovereign is about twenty miles long, twelve broad, and seventy in circumference. Her palace is built in the European fashion, and she has also erected a church there, after the model of St. Peter's at Rome. Both the design and execution of this cathedral are very beautiful; the altar of white marble, brought from Jyepore, and inlaid with cornelians and agates of various colours, being particularly rich and splendid. The gardens at Seerdhuna are celebrated for their fruit-trees, and especially for the groves of oranges, lemons, and citrons, which perfume the air with their blossoms and weigh down the branches with their golden treasures.

The begum also possesses a mansion at Delhi, which was formerly her favourite place of residence. It is situated at the upper end of the Chaudry Chowk, and crowns an eminence in the centre of a spacious and stately garden, laid out according to the prevailing fashion of the East. Its parterres are thickly planted with the choicest fruits and flowers, and it is traversed by avenues of superb cypresses, whose luxuriant though melancholy beauty atones for the formality of their appearance. During the period of Lord Lake's sojourn at Delhi, and for many subsequent years, the begum was wont to give superb entertainments, and to receive the highest marks of respect from her European visiters. She has probably been a little spoiled by flattery, and has acquired rather too inflated a notion of her own political importance, since it is said that, on her excursions to Delhi, during the latter years of her life, she did not pay the usual tribute of homage to the resident, of a visit, which, as the representative of the British government, he has a right to expect from all persons of inferior rank. The omission, in process of time, was reported to the supreme authorities at Calcutta, and the begum, duly admonished, proceeded in form to the residency, though with a very ill-grace. In fact, her pride was so deeply hurt by this enforced concession, that she speedily turned her back upon Delhi, declaring at her departure that she would never enter its walls again. She has kept her word, residing at places in which her dignity is not lowered by the presence of so high a functionary. Her palace at Seerdhuna is under the same ban, though not from the same cause. Some of her astrologers have predicted that her return will be marked by her death; and though long past the usual period of existence, she has not the least desire to be gathered to her forefathers, and, in avoiding the fatal spot, hopes to retard her doom. She is building a house at Kinwah, about eleven miles distant from the capital of her fief, and possesses one at Bhurtpore, and another in the neighbourhood of Meerut, outside the cantonments, which is now her principal residence. Here she gives splendid entertainments, particularly to the great personages who travel in that direction. She has long since abandoned the restrictions imposed by Asiatic prejudice, and sits at table with large parties of gentlemen without scruple. She formerly attended to the Mahomedan precepts as far as they related to the preparation of food; but, having once passed the Rubicon, she refused to return to her trammels again, not even following the example of the English ladies, when they retired from table, but preferring to remain with the gentlemen, on the plea that she made it a point never to leave her "pipe half-smoked."

The dress of the begum differs in some degree from that of other Hindoostanee ladies, her highness choosing to substitute a turban for the veil invariably worn by the females of her country; a circumstance which, though apparently trifling, shows that she entertains little or no regard for native opinions and prejudices, the turban being only assumed by dancing-girls during some performances which are considered highly indecorous, and are not exhibited before ladies. The Begum's costume usually consists of a short full petticoat of rich stuff, which displays a few inches of her gold or silver brocaded trowsers. The *coortee* and under garment are similar to those worn by other ladies, and she throws a shawl over her turban, which envelopes her throat, arms, and shoulders, in the muffling though not ungraceful manner in which the veil is worn in India. Her slippers are as bright and as small as those of Cinderella, and notwithstanding the near approach of her eightieth year, are displayed with a considerable degree of coquetry. She smokes out of a magnificent hookah, and upon most occasions is decorated with a prodigious quantity of jewels.

The property of every kind, which this fortunate adventurer has accumulated, is immense; her stud of horses is one of the finest in Hindoostan, and she drives about in a carriage and four of English fashion and Calcutta build, which boasts, or at least did boast when it was first launched, a high degree of splendour. It is a large bright yellow coach, with silver mouldings, the window-frames of solid silver, and the lace and hangings, which are very rich and substantial, also of silver, with splendid bullion tassels; the lining is of violet-coloured satin, embroidered all over with silver stars, and the postilions are in dark blue and silver liveries.

The begum, during her latter years, has frequently sat for her portrait to a native artist, who takes excellent likenesses, and having had the advantage of European instruction has made considerable progress in the art. One of these, a miniature, is in the possession of Lord Combermere, for whom her highness professed the warmest degree of friendship. In former days, our Indian Elizabeth was distinguished for elegance and grace; and whenever she had a point to carry she employed such captivating and fascinating arts, that she seldom failed to succeed. She does not speak any language except Hindoostanee, and her increasing years and infirmities have reduced the beautiful and dignified heroine of a thousand fields, to a decrepid old woman, who is still, however, courteous and polite, and not insensible to the homage formerly so freely rendered, but which now seems only to proceed from a sentiment of pity, or a love of the ridiculous. Unhappily, the character of the begum is stained with cruelties of so deep a dye, that respect for her talents is merged in abhorrence for her crimes. The natives say, that she was born a politician, that she has allies every where, and friends no where, and there is much truth in these assertions: for, though liberal to her dependants, she is accounted a severe mistress, and, before the occupation of the neighbouring provinces by

the British government, did not scruple to commit atrocities of the most frightful nature. The darkest stories are circulated of murders perpetrated by her order, and in her own presence; some of her subjects she is said to have impaled alive, and others barbarously mutilated. But the most shocking tale is connected with a fertile cause of female cruelty and revenge. She became jealous of one of the females of her household, and not satisfied with depriving her of existence, prolonged her sufferings, and rejoiced over them with a savage barbarity, which can only be compared to the sanguine ferocity of the tigress, tearing and torturing her prey before she gives it the final stroke. The unfortunate girl was buried alive under the floor of the apartment occupied by her mistress, who slept upon the spot in order to feast her ears with the dying groans of her victim, and to prevent the possibility of a rescue: the whole establishment compassionating the fate of the hapless creature who had fallen under the clutch of so relentless a monster.

The seclusion in which Hindoostanee women are obliged to live is not favourable to the formation of the female character, nor does it tend to soften and improve the heart. Women of strong feelings, for want of other excitement, are apt to exercise the most wanton cruelties upon their dependents, and the zenana is frequently a scene of the greatest misery. The slave-girls of the princesses of Delhi have been known to escape from the palace and fly to the British residency for protection; and surrounded by such examples, and armed with absolute power, it is not surprising that a woman, of so determined a character as the Begum Sumroo, should have exceeded all her contemporaries in the recklessness with which she indulged her hatred against those who had the misfortune to offend her.

The begum's first husband, the founder of her fortunes, is buried at Agra. She, herself, is said never to have had a child; but the son, mentioned as the successor to the jaghire, of whom nothing in India seems to be known, certainly left some offspring, who have formed allianees with Europeans and Indo-Britons. The Calcutta papers, of October, 1831, announced the marriages of two gentlemen, John Rose Troup, Esq., and Monsieur Peter Paul Mari Le Caroli, with the daughters of Colonel George Alexander Dyce, great granddaughters of the Begum Sumroo. The ceremony was performed in the cathedral of Sancta Maria, at Seerdhuna, by the padre Julius Cæsar, and that of Mr. Troup was afterwards celebrated a second time at the begum's palace, by the protestant chaplain of Meerut.

Several priests of the Roman Catholic persuasion are settled at Seerdhuna, and their influence over the begum, which is said to be very considerable, will, it is to be hoped, lead to a deeper sense of her misdeeds than that self-satisfied old lady appears at present to entertain. She could scarcely be in better hands than those of father Julius Cæsar, who realises the most beautiful ideas which could be formed of a Christian minister. Destitute of ambitious hopes, and debarred from those ties of kindred and affection which tend to reconcile the protestant clergy to a residence on a foreign shore, he devotes all his time and thoughts to the preservation and enlargement of his little flock. Though occasionally to be found at Seerdhuna and other places where a catholic community is assembled, his residence is in the city of Patna, where he has a small congregation. He is the only European who has ever taken up his abode within the walls since the cold-blooded massacre which took place in 1764, and he is universally respected by the natives, who regard with great veneration those persons belonging to the priesthood who act up to their clerical profession, whatever their religious opinions may be. In times of expected irritation or tumult, the services of the padre are frequently called for in aid of the civil authorities, and he is always ready to employ his influence in the promotion of any good work. His talents and amiable character render him a welcome and an honoured guest at the houses of the British residents at Bankapore, a civil station in his immediate neighbourhood, and Bishop Heber seems scarcely to have done justice to this excellent man, in ascribing his popularity to the smoothness of his manners, and his tact in administering to the self-love of his associates. Father Julius Cæsar is a Franciscan friar, wearing the garb and practising the self-denial enjoined by his order, the products of his little cure being barely adequate to the support of a very humble establishment.

The begum's court at Seerdhuna has been the asylum of European adventurers of various ranks, who, disappointed of the golden harvest which they had hoped to reap in the fertile fields of India, have been content to sit down for the remainder of their lives upon appointments which gave them more luxuries than they could command at home. Forming connections with Asiatic women, or giving their children wholly up to the care of the natives, Seerdhuna has exhibited Europeans in a very singular position, having nothing of their father-land about them save the hue of their skin. Some English gentlemen, sitting at table at Agra, were surprised by the appearance of a man, whose fair complexion, sandy whiskers, and peculiar physiognomy, announced him to belong to the Emerald Isle, but whose dress and language were purely Hindoostanee. With all the native volubility, he told the story of his wrongs, his unjust dismissal from the begum's service, and his travels in search of redress or employment. Upon being questioned upon the subject of his parentage, he said that his father was an Irishmen, but seemed to know nothing farther about the matter, and to be perfectly unaware of the astonishment which his Asiatic manners and habits would occasion to those with whom he was conversing. It is very seldom that transplantation to a foreign soil produces so complete a change in the immediate descendants of British exiles, though other Europeans, French people in particular, accommodate themselves more easily to the customs and usages of the people with whom they are destined to live. Some of the most respectable of the begum's foreign retainers have been natives of France; her colonel-commandant, a gentleman named Peton, who resided at her court during a great many years, was very justly esteemed for his invariable good conduct and gentlemanly manners. Latterly, her service has fallen into disrepute; as the country has become tranquilised, the prospects of Europeans at native courts have become less brilliant, and as her highness does not offer very high emoluments, and there is no honour whatever to be gained in her employ, she is surrounded by half-castes, whose expectations are of a very limited nature, and who submit to treatment which would disgust persons of higher pretensions.

Either according to treaty, or in consequence of the begum's gratitude for the protection she has experienced, she has made the British government her heir, and, at her death, which in the course of nature must take place very shortly, the jaghire will be placed on the same footing as those under the company's jurisdiction. The begum is very liberal in her donations to public charities, and other popular institutions in Calcutta. After the death of her husband Sumroo, she kept up a monastery founded by him at Agra, for persons belonging to the Roman catholic church, of any country or nation, adding an establishment for nuns; but whether many persons of either sex have availed themselves of this asylum we have little opportunity of knowing, since European travellers pass through Agra without taking the slightest interest in any of its minor features, and the greater number are quite content with casting a listless glance

upon the buildings of note which are to be seen in the fort and the cantonments.

The begum exercises the almost boundless hospitality which native custom has prescribed to those who are placed at the head of a fief or large estate, entertaining the whole of the servants and camp-followers of parties of travellers, to whom she is desirous to pay respect and attention. The supply of firewood, ghee, grain, and sweetmeats, to the multifarious attendants of the ambulatory establishment of a great man, is a serious affair; but her highness always does the thing handsomely, and the people who are feasted at her expense have no cause to complain of the meagreness of their fare. Salutes of cannon are fired, and her troops are turned out, whenever her capital is visited by travellers of distinction, and while the retainers are furnished with the materials for a feast, the ladies and gentlemen are invited to her own table, sumptuously covered at breakfast and dinner, the banquet being followed by nautching and fire-works.

From Chambers's Edinburgh Journal.

BENTHAM.

Jeremy Bentham, recently deceased, has been described as one of the most remarkable literary characters in Great Britain. Till the period of his decease, he existed in some measure as a connecting link betwixt the philosophic theorists of the past and present age, yet extremely little is known of his character or pursuits; for though lauded in unmeasured terms by some of his contemporaries, and made a subject among magazine writers and reviewers, the *people*, by whom it will be allowed all popularity and true greatness become fixed, hardly know that there was ever such a person, and very few of them indeed could tell what were his peculiar doctrines. There is a large class of individuals in this country who continue to write and publish books, and make up papers for periodical publications, and whose names are frequently enough met with in our ephemeral literature, yet who are quite unknown and uncared for by the general community, and whose productions have no visible effect whatever either on the conduct or style of thinking of the people. To this class in a great measure belonged Jeremy Bentham. He was a great and voluminous writer on metaphysical and political subjects, as well as on jurisprudence; he strove for many years for what he considered the good of the people; and he almost died for the people, for he bequeathed his body to the dissectors, in order to benefit the science of anatomy; yet, strangely enough, the people generally seem to know little or nothing of him; and it might be safely affirmed that there could not be found a dozen complete copies of his works in ordinary use. Nevertheless, according to some of the newspapers and magazines, and those who give praise on trust, Bentham was "one of the greatest philosophers of his time"—an assertion there is no possibility of disproving. From what can be guessed as to the sum of Bentham's principles, it appears he was one of those men who *think* themselves into a belief, that, as things go, mankind are all in the wrong; that they do nothing rightly; that the whole of the machinery of society should be stopped, the wheels cleaned and altered, and then set a-going on a new plan. Yet, with this whimsicality of character, Bentham was in reality a sincere friend to mankind in the widest possible sense; and it is only a pity that he did not take pains to bring his views lucidly and pointedly before the community, so that they might have been studied, and, if necessary, acted upon. His plans for simplifying forms of law were, we believe, of a valuable kind, and had he brought them forward on a practical scale, great benefit might have ensued. As it is, they might almost as well have never been digested. The character of Bentham—in whom there was much to admire, and something to condemn—has perhaps never been so well delineated as by Hazlitt, and, with the translation from the present to the past tense, may here be introduced.

"Mr. Bentham was one of those persons who verified the old adage, that 'a prophet has no honour, except out of his own country.' His reputation lay at the circumference; and the lights of his understanding were reflected, with increasing lustre, on the other side of the globe. His name was little known in England, better in Europe, and best of all in the plains of Chili, and the mines of Mexico. He offered constitutions for the New World, and legislated for future times. The people of Westminster, where he lived, hardly knew such a person. We believe that the Empress Catharine corresponded with him; and we know that the Emperor Alexander called upon him, and presented him with his miniature in a gold snuff-box, which the philosopher, to his eternal honour, returned. Mr. Hobhouse is [or was] a greater man at the hustings; but Mr. Bentham would have carried it hollow, on the score of popularity, at Paris or Pegu. The reason is, that our author's influence was purely intellectual, having devoted his life to the pursuit of abstract and general truths, and to those studies

'That waft a *thought* from Indus to the Pole,'

and never mixed himself up with personal intrigues or politics. Mr. Bentham was very much among philosophers what La Fontaine was among poets:—in general habits, in all but his professional pursuits, he was a mere child. He lived for the last forty years in a house in Westminster, overlooking the park, like an anchoret in his cell, reducing law to a system, and the mind of man to a machine. He scarcely ever went out, and saw very little company. The favoured few who had the privilege of the entrée were always admitted one by one. He did not like to have witnesses of his conversation. He talked a great deal, and listened to nothing but facts. When any one called upon him, he invited them to take a turn round his garden with him (Mr. Bentham was an economist of his time, and set apart this portion of it to air and exercise), and there you might have seen the lively old man, his mind still buoyant with thought, and with the prospect of futurity, in eager conversation with some opposition member, some expatriated patriot, or trans-Atlantic adventurer, urging the extinction of close boroughs, or planning a code of laws for some 'lone island in the watery waste,' his walk almost amounting to a run, his tongue keeping pace with it in shrill, cluttering accents, negligent of his person, his dress, and his manner, intent only on his grand theme of UTILITY. He heard and saw only what suited his purpose, or some 'foregone conclusion;' and looked out for facts and passing occurrences in order to put them into his logical machinery, and grind them into the dust and powder of some subtle theory. Add to this physiognomical sketch the minor points of costume, the open shirt-collar, the single-breasted coat, the old-fashioned half-boots, and ribbed stockings, and you would have found in Mr. Bentham's general appearance a singular mixture of boyish simplicity and the venerableness of age.

"Mr. Bentham, perhaps, overrated the importance of his own theories. He has been heard to say (without any appearance of pride or affectation) that 'he should like to live the remaining years of his life, a year at a time, at the end of the next six or eight centuries, to see the effect which his writings would, by that time, have had upon the world.' But we do not think, in point of fact, that Mr. Bentham has given any new or decided impulse to the human mind. He cannot be looked upon in the light of a discoverer in legislation or mor-

He has not struck out any great leading principle or parent truth, from which a number of others might be deduced, nor has he enriched the established stock of intelligence. Mr. Bentham's *forte* was arrangement. He has methodised, collated, and condensed all the materials prepared to his hand, on the subjects of which he treats, in a masterly and scientific manner. His writings are, therefore, chiefly valuable as books of reference, as bringing down the account of intellectual enquiry to the present period. Mr. Bentham's leading doctrine was the necessity for studying UTILITY in every rule of society; but he was not the first writer who assumed that principle as the foundation of just laws, and of moral and political reasoning. Perhaps the weak side of his conclusions is, that he has not made sufficient allowance for the varieties of human nature, and the caprices and irregularities of the human will. [This, by the way, has been a very common error among the philosophers and theorists of ancient and modern times.] Every pleasure, says Bentham, is equally a good, and is to be taken into the account as such in a moral estimate, whether it be the pleasure of sense or of conscience, whether it arise from the exercise of virtue or the perpetration of crime. We are afraid the human mind does not readily come into this doctrine. Our moral sentiments are made up of sympathies and antipathies, of sense and imagination, of understanding and prejudice. Mr. Bentham, in adjusting the provisions of a penal code, lays too little stress on the co-operation of the natural prejudices of mankind, and the habitual feelings of that class of persons for whom they are more particularly designed. Legislators (we mean writers on legislation) are philosophers, and governed by their reason; criminals, for whose control laws are made, are a set of desperadoes, governed only by their passions. What wonder so little progress has been made towards a mutual understanding between the two parties! If sanguine and tender-hearted philanthropists have set on foot an inquiry into the barbarity and the defects of the penal laws, the practical improvements have been mostly suggested by reformed cut-throats, turnkeys, and thief-takers. The laws are ineffectual and abortive, because they are made by the rich for the poor, by the wise for the ignorant, by the respectable and exalted in station for the scum and refuse of the community. If Newgate would resolve itself into a committee of the whole press-yard, with Jack Ketch at its head, aided by confidential persons from the county prisons or the hulks, and would make a clear breast, some *data* might be found out to proceed upon; but as it is, the *criminal mind* is a book sealed. Mr. Bentham, in his attempts to revise and amend criminal jurisprudence, proceeded entirely on his favourite principle of utility. Convince highwaymen and housebreakers that it will be their interest to reform, and they will reform, and lead honest lives, according to Mr. Bentham. He says, 'All men act from calculation, even madmen reason.' And, in our opinion, he might as well have carried this maxim to Bedlam or St. Luke's. Criminals are *not* influenced by reason; for it is of the very essence of crime to disregard consequences both to themselves and others. You may as well preach philosophy to a drunken man, or to the dead, as to those who are under the instigation of any mischievous passion. The style of Mr. Bentham is unpopular, not to say unintelligible. He wrote a language of his own, that *darkens* knowledge. His works have been translated into French—they ought to be translated into English. People wonder that he was not prosecuted for the boldness and severity of some of his invectives; but he might have warped up high-treason in one of his inextricable periods, and it would never have found its way into Westminster Hall. He was a kind of manuscript author—he wrote a cypher hand, which the vulgar have no key to. It is a barbarous philosophical jargon, with all the reputations, formalities, uncouth nomenclature and verbiage of law Latin; and what makes it worse, it is not mere verbiage, but has a great deal of acuteness and meaning in it, which you would be glad to pick out, if you could. Mr. Bentham, in private life, was an exemplary character. He was a little romantic, or so; and dissipated part of a handsome fortune in practical speculations. His house was warmed and lighted by steam; and he was one of those who prefer the artificial to the natural in most things, and think the mind of man omnipotent. It was the great fault of this able and extraordinary man, that he concentrated his faculties and feelings too entirely on one subject and pursuit, and did not 'look enough abroad into universality.'"

From the Asiatic Journal.

SPLENDOURS OF THE EAST.

OUDE.

"The King of Oude has kept up a greater degree of state than his more highly descended, but less fortunate, contemporary of Delhi, and, in fact, Lucknow is the only native court throughout Hindoostan, which can afford any idea of the princely magnificence affected by the former rulers of India; that of Gwalior can bear no comparison, nor are those in the central provinces distinguished by the pomp and splendour which still characterise the throne of this ill-governed kingdom.

"Like the generality of Indian cities, Lucknow presents a more imposing spectacle at a distance, than its interior can realise, though some of its buildings may bear a comparison with those of the most celebrated capitals in the world. When viewed from some commanding point, the city exhibits a splendid assemblage of minarets, cupolas, pinnacles, towers, turrets, and lofty arched gateways, through which, with many windings, the river glides, while the whole of this bright confusion of palace and temple is shadowed and interspersed with the rich foliage of trees of gigantic growth, and redundant luxuriance. But when visited in detail, the gorgeousness of the picture is obscured by the more than ordinary degree of dirt, filth, and squalid poverty, which are placed in juxta-position with its grandest feature: the lanes leading from the principal avenues are ancle-deep in mud, and many of the hovels, which afford an insufficient shelter to a swarming population, are the most wretched habitations the imagination can conceive.

"The palace, which faces the Goomtee, comprises six principal courts or quadrangles, surrounded by pavilion-like buildings. In the first of these, which is entered by two lofty gateways, the attendants of the court have their apartments. Over the outer gate there is a handsome chamber, called the Nobut Khana, or music-room, forming an orchestra upon a very splendid scale. The second court, encompassed by state apartments, is laid out as a garden, having a well, or bowlee, in the centre. Round this well are pavilions, opening to the water, and intended to afford a cool retreat during the hot weather; the air is refreshed by the constant dripping of the fountain, and the piazzas and arcaded chambers beyond, within the influence of its luxurious atmosphere, are well calculated for sleeping chambers in the sultry nights so constantly occurring throughout the period of the hot winds. Parallel to the second court, and at the eastward of it, stands a splendid edifice, raised upon an arched terrace, entirely of stone. This fabric, which is called the Sungee Dalaun, contains a grand hall, surrounded with a double arcade, crowned with a cupola at each angle, and one over the principal front, all of copper doubly gilt. At the extremities of the terrace there are wings, and flower-gardens stretch along each front, divided into parterres by walks and fountains. A corridor extends round this court, planted with vines, and out of three entrances, one with a covered passage is appropriated to the ladies. These gateways

are decked with gilded domes, and the mosque, zenana, and other buildings attached to the palace, give to the whole edifice the air of a city raised by some enchanters. Without entering farther into dry descriptive details, it may be sufficient to say, that in no place in India can there be a more vivid realisation of visions conjured up by a perusal of the splendid fictions of the *Arabian Nights*. Those who have visited the Kremlin, have pronounced that far-famed edifice to be inferior to the Imambara, and the palaces of the Hyder Baugh, Hossein Baugh, and Seesa Mahal, have nearly equal claims to admiration. The banks of the Goomtee are beautifully planted, and its parks and gardens rendered singularly attractive by the multitude of animals kept in them. At a suburban palace, European visitants are delighted with the novel sight of a herd of English cattle, their superior size, roundness of form, and sleek looks, offering a strong contrast to the smaller, humped, and dewlapped breeds of Hindoostan: the latter are perhaps more picturesque, but the associations connected with cows bred in English meads, the numerous pastoral recollections which their unexpected appearance revive in the mind, render them, when viewed beneath the shade of the tamarinds and banians of a tropical clime, objects of deep and peculiar interest.

"The menageries of Lucknow are very extensive, and besides those wild and savage animals kept for the purpose of assisting at 'the pomps of death and theatres of blood,' in which this barbaric court delights, there are many fierce beasts, not intended for fighting, retained merely as ornamental appendages. Several rhinoceroses are among the number; they are chained to trees in the park, but some of the tigers appear to be so ill secured, rattling the wooden bars of their cages with such vigorous perseverance, that it requires rather strong nerves to approach the places of their confinement. Delkusha (heart's delight) is one of the most celebrated parks belonging to the king; it is planted and laid out with great care and taste, open glades being cut through the thick forest, in which numerous herds of antelopes, Indian deer, and the gigantic variety of this interesting species, the nylghau, are seen disporting. This park abounds with monkeys, which are held sacred; for, though the Moslem religion has the ascendancy, that of the Hindoo is not only tolerated but allowed the fullest enjoyment of its superstitions: the monkeys in this district are under the guardianship of a party of fakirs, who have established themselves in the private park of a Mahomedan monarch. The palace of Delkusha possesses no great exterior pretensions to elegance, but it is handsomely fitted up, and, in common with the other royal residences, contains toys and *bijouterie* sufficient to stock a whole bazaar of curiosity-shops.

"The pigeons belonging to Lucknow even exceed in number those of Benares, and other places where they are objects of reverence; here they are more esteemed for their beauty than for any peculiar sanctity, and the different breeds are preserved with the greatest care. On the summits of nearly all the roofs of the palaces, particularly the zenanas, these interesting birds are seen in flocks of from seventy to a hundred in each; they are selected for the beauty of their plumage, and each variety is kept in a separate flock. Boys are employed to teach them different evolutions in their flight. When on the wing, they keep in a cluster, and at a whistle fly off into the fields of air, ascend, descend, or return home as the signal directs. When turning suddenly, and darting towards the sun, the gleam of their variegated necks produces a beautiful effect, and when they alight upon the ground, they form a carpet of the most brilliant colours and the richest design imaginable. So great is the native attachment to the amusements which these birds afford, that it is recorded of some of the sovereigns of Lucknow that, in their country excursions, 'they were accompanied by their women and pigeons.'

"Another remarkable feature of this extraordinary city is its elephants, which are maintained in multitudes; immense numbers belong to the king, and all the nobility and rich people possess as many as their means will admit. In royal processions, festivals, and state-occasions, they appear in crowds. A battalion of elephants, fifteen abreast, formed into a close serried column, richly caparisoned in flowing jhools of scarlet and gold, with silver howdahs, and bearing natives of rank clothed in glittering tissues, form an imposing sight; but this can only be seen with full effect in the open country beyond the city. Once within the streets, the jostling and confusion are tremendous, and not unfrequently, in very narrow passes, ladders, and housings, or perhaps part of the roof on the verandah of the projecting buildings, are torn away by the struggles for precedence displayed by elephants, acquainted with their strength, and entering with ardour into the resolves of the mahouts to gain or maintain the foremost places. Elephants breed in a state of domestication, and young ones not larger than a good sized pig, are frequently seen frolicking by the side of their mothers through the streets of Lucknow; a spectacle fraught with interest to the eye of an European stranger. Camels are equally numerous, and when handsomely caparisoned, add considerably to the splendour of a procession. The king's stud does not consist of fewer than a thousand horses, many of which are perfect specimens of the finest breeds, and considered paragons of their kind; these are brought out to increase the splendour of his retinue, and, even upon ordinary occasions, his suwarree exceeds in multitude and variety any European notion of ostentatious show. When seeking amusement at his numerous parks and gardens, the king is attended by immense numbers of people, and spare equipages of every description, dogs, hawks, hunting leopards, with their keepers; and an almost endless train of guards and domestics, both on horseback and on foot, form his multitudinous accompaniments; and though the delight in show, which characterises Asiatics, may be esteemed a childish and puerile taste, and we could wish the sovereign of so interesting a territory to be guided by nobler aims and to seek higher pursuits, one can scarcely desire that these pomps and pageantries, the relics of old romance, should be numbered with by-gone things.

"In imitation of European sovereigns, the king gives his portrait set in diamonds to ambassadors and other persons of rank, this distinction being also bestowed upon the aides-de-camp, and officers who have accepted situations of equal honour at the court. There is nothing very remarkable about the audience-chamber, but the king's throne is extremely splendid. It is a square platform, raised two feet from the ground, with a railing on three sides, and a canopy supported upon pillars; of these the frame-work is wood, but the casing pure gold, set with precious stones of great value; the canopy is of crimson-velvet richly embroidered with gold, and furnished with a deep fringe of pearls; the cushions, on which the king is seated, are also of embroidered velvet, and the emblem of royalty, the chattah, is of the same, with a deep fringe of pearls. The king appears literally covered with jewels, the whole of the body down to the waist being decorated with strings of diamonds, rubies, emeralds, &c.; his crown is a perfect constellation of gems, and overshadowed by plumes of the bird of paradise. A native of rank stands on either side of the throne, waving chowries of peacocks' feathers set in gold handles. To the right of the throne are gilt chairs for the accommodation of the resident and his wife; if he be a married man, the rank of the British ambassador (who certainly acts the part of viceroy over the king) being recognised as equal to that of the monarch himself: he is the only person permitted to use the chattah, the chowrie, and the bookah,

in the sovereign's presence. The English persons attached to the residency take up their position behind and at the side of these chairs, standing; those in the service of the king wearing very handsome court-dresses of puce-coloured cloth, richly embroidered with gold. The left of the throne is occupied by natives of rank holding high official situations, splendidly attired in the picturesque costume of the country. The prime-minister stands at the king's feet to receive and present the nuzzurs. These consist of money, from twenty-one gold mohurs down to a few rupees in silver, according to the circumstances of the parties. The person offering, advances to the throne with many salaams, and having his gift placed upon a folded handkerchief, presents it to the king to touch in token of acceptance; it is then given to the minister, who adds it to the heap by his side. After this ceremony, the king and the resident rise; the former takes from the hands of the person in waiting certain necklaces composed of silver riband, ingeniously plaited, which offers a cheap mode of conferring distinction; the investiture is made by the king in person, and upon taking leave, the resident is accompanied by the king to the entrance, where he salutes him with a short sentence, 'God be with you!' pouring atta on his hands at the final exit. Should the ambassador happen to be in great favour at the time, the compliment is extended to all the English visitants as they pass out. Titles of honour, khillauts, and their accompanying distinctions, such as an elephant fully caparisoned, a charger, or a palanquin, are frequently conferred upon these court-days; the nuzzur is then of proportionate value, persons anxiously coveting some grant or distinction, offering not less than a lac of rupees; this sum is conveyed in a hundred bags, covered with crimson silk, and tied with a silver riband, and so solid a proof of attachment is not unfrequently rewarded by an embrace before the whole court, a mark of royal favour well worth the money bestowed upon it, since any person's fortune is made in native states, who is known to have interest at court.

"The king's dinners are better than his breakfasts; there is an abundance of wine for the English guests, and though the native visitants do not partake in public, many confess that they indulge at their own tables. Nautches and fire-works conclude the evening's entertainment; the latter can never be shown off to so much advantage as in an Indian city, where the buildings they illuminate are of the same fairy-like nature. No description can do justice to the scene presented on some fine, dark, clear night, when the Goomtee is covered with boats, of those long canoe-shaped graceful forms, belonging to the king, some resembling alligators, others swans, peacocks, or dolphins, enameled in various colours, intermingled with gold, and filled with a splendid company glittering in gems and tissues. Blue lights, so artfully disposed as not to be visible, while they clothe the whole pageant with their unearthly gleams, render every adjacent object distant, and as the blaze of ten thousand rockets bursts forth, palaces, mosques, and temples seem to rise majestically during the brief illumination. In the next moment, all is dark save the pageant on the Goomtee, and again minarets and domes, cupolas and spires, spring up, silver and gold, as the marble and the gilding catch the vivid gleams of jets and spouts of fire ascending to the skies."

East Indies.—The provisions of the new charter, empowering all natural born subjects of his majesty to hold lands, had been acted upon, a gentleman in the neighbourhood of Agra having applied to the commissioners to hold land in his own name, to which request the government had acceded. The injurious prohibition of Europeans holding lands would thus no longer oppose an obstacle to the improvement of the country.

JAPHET IN SEARCH OF A FATHER.

Continued from p. 190.

We had taken our horses for the next town; but as soon as we were fairly on the road, I stopped the boys, and told them that the Great Aristodemus intended to observe the planets and stars that night, and that they were to proceed to a common which I mentioned. The post-boys, who were well aware of his fame, and as fully persuaded of it as every body else, drove to the commony we descended, took off the luggage, and received directions from Melchior in their presence about the instruments, to which the boys listened with open mouths and wonderment. I paid them well, and told them that they might return, which they appeared very glad to do. They reported what had occurred, and this simple method of regaining our camp, added to the astonishment of the good town of ——. When they were out of sight we resumed our usual clothes, packed all up, carried away most of our effects, and hid the others in the furze to be sent for the next night, not being more than two miles from the camp. We soon arrived, and were joyfully received by Fleta and Nattee.

As we walked across the common, I observed to Melchior, "I wonder if these stars have any influence upon mortals, as it was formerly supposed?"

"Most assuredly they have," replied Melchior. "I cannot read them, but I firmly believe in them."

I made the above remark, as I had often thought that such was Melchior's idea.

"Yes," continued he, "every man has his destiny—such must be the case. It is known beforehand what is to happen to us by an omniscient Being, and being known, what is it but destiny which cannot be changed? It is *fate*," continued he, surveying the stars with his hand raised up, "and that fate is as surely written there as the sun shines upon us; but the great book is sealed, because it would not add to our happiness."

"If, then, all is destiny, or fate, what inducement is there to do well or ill?" replied I. "We may commit all acts of evil, and say, that as it was predestined, we could not help it. Besides, would it be just that the omniscient Being should punish us for those crimes which we cannot prevent, and which are allotted to us by destiny?"

"Japhet, you argue well; but you are in error, because, like most of those of the Christian church, you understand not the sacred writings, nor did I until I knew my wife. Her creed is, I believe, correct; and, what is more, adds weight to the truths of the Bible."

"I thought that gipsies had no religion."

"You are not the only one who supposes so. It is true that the majority of the tribe are held by the higher castes as serfs, and are not instructed; but with—if I may use the expression—the aristocracy of them it is very different, and their creed I have adopted."

"I should wish to hear their creed," replied I.

"Hear it then. Original sin commenced in heaven—when the angels rebelled against their God—not on earth."

"I will grant that sin originated first in heaven."

"Do you think that a great, a good God, ever created any being for its destruction and eternal misery, much less an angel? Did he not foresee their rebellion?"

"I grant it."

"This world was not peopled with the image of God until after the fall of the angels: it had its living beings, its monsters perhaps, but not a race of men with eternal souls. But it was peopled, as we see it now, to enable the legions of angels who fell to return to their former happy state—as a pilgrimage by which they might obtain their pardons, and resume their seats in heaven. Not a child is born, but the soul of some fallen cherub enters into the body to work out its salvation. Many

do, many do not, and then they have their task to recommence anew; for the spirit once created is immortal, and cannot be destroyed; and the Almighty is all goodness, and would ever pardon."

"Then you suppose there is no such thing as eternal punishment?"

"Eternal!—no. Punishment there is, but not eternal. When the legions of angels fell, some were not so perverse as others: they soon re-obtained their seats, even when, as children, having passed through the slight ordeal, they have been summoned back to heaven; but others who, from their infancy, show how bad were their natures, have many pilgrimages to perform before they can be purified. This is, in itself, a punishment. What other punishment they incur between their pilgrimages we know not; but this is certain, that no one was created to be punished eternally."

"But all this is but assertion," replied I; "where are your proofs?"

"In the Bible; some day or another I will show them to you; but now we are at the camp, and I am anxious to embrace Nattee."

I thought for some time upon this singular creed; one, in itself, not militating against religion, but at the same time I could not call to mind any passages by which it could be supported. Still the idea was beautiful, and I dwelt upon it with pleasure. I have before observed, and indeed the reader must have gathered from my narrative, that Melchior was no common personage. Every day did I become more partial to him, and more pleased with our erratic life. What scruples I had at first gradually wore away; the time passed quickly, and although I would occasionally call to mind the original object of my setting forth, I would satisfy myself by the reflection, that there was yet sufficient time. Little Fleta was now my constant companion when in the camp, and I amused myself with teaching her to write and read.

"Japhet," said Timothy to me one day, as we were cutting hazel broach wood in the forest, "I don't see that you get on very fast in your search after your father."

"No, Tim, I do not; but I am gaining a knowledge of the world which will be very useful to me when I recommence the search; and what is more, I am saving a great deal of money to enable me to prosecute it."

"What did Melchior give you after we left?"

"Twenty guineas, which, with what I had before, makes more than fifty."

"And he gave me ten, which makes twenty, with what I had before. Seventy pounds is a large sum."

"Yes, but soon spent, Tim. We must work a little longer. Besides, I cannot leave that little girl—she was never intended for a rope dancer."

"I am glad to hear you say that, Japhet, for I feel as you do—she shall share our fortunes."

"A glorious prospect truly," replied I, laughing; "but never mind, it would be better than her remaining here. But how are we to manage that?"

"Ah! that's the rub: but there is time enough to think about it when we intend to quit our present occupation."

"Well, I understand from Melchior that we are to start in a few days?"

"What is it to be, Japhet?"

"Oh! we shall be at home—we are to cure all diseases under the sun. To-morrow we commence making pills, so we may think ourselves with Mr. Cophagus again."

"Well, I do think we shall have some fun; but I hope Melchior won't make me take my own pills to prove their good qualities—that will be no joke."

"O no, Num is kept on purpose for that. What else is the fool good for?"

The next week was employed as we anticipated. Boxes of pills of every size, neatly labelled, bottles of various mixtures, chiefly stimulants, were corked and packed up. Powders of *any thing* were put in papers; but, at all events, there was nothing hurtful in them. All was ready, and accompanied by Num (Jumbo and Fleta being left at home) we set off, Melchior assuming the dress in which we had first met him in the wagon, and altering his appearance so completely, that he would have been taken for at least sixty years old. We now traveled on foot with our dresses in bundles, each carrying his own, except Num, who was loaded like a pack-horse, and made sore lamentations: "Can't you carry some of this?"

"No," replied I, "it is your own luggage; every one must carry his own."

"Well, I never felt my spangled dress so heavy before. Where are we going?"

"Only a little way," replied Timothy, "and then you will have nothing more to do."

"I don't know that. When master puts on that dress, I have to swallow little things till I'm sick."

"It's all good for your health, Num."

"I'm very well, I thank'e," replied the poor fellow; "but I'm very hot and very tired."

Fortunately for poor Num, we were not far from the market town at which we intended to open our campaign, which we did the next morning by Num and Timothy sallying forth, the former with a large trumpet in his hand, and the latter riding on a donkey. On their arrival at the market-place, Num commenced blowing it with all his might, while Timothy, in his spangled dress, as soon as they had collected a crowd, stood upon his saddle and harangued the people as follows:—

"Gentlemen and ladies—I have the honour to announce to you the arrival in this town of the celebrated Doctor Appallacheosmocommetico, who has traveled further than the sun and faster than a comet. He hath visited every part of the globe. He has smoked the calamut with the Indians of North America—he has hunted with the Araucas in the South—galloped on white horses over the plains of Mexico, and rubbed noses with the Esquimaux. He hath used the chopsticks with the Chinese, swung the cherok pooga with the Hindoos, and pulled the nose of the great Cham of Tartary. He hath visited and been received in every court of Europe; danced on the ice of the Neva with the Russians—led the mazurka with the Poles—waltzed with the Germans—tarantulaed with the Italians—fandangoed with the Spanish—and quadrilled with the French. He hath explored every mine in the universe, walked through every town on the continent, examined every mountain in the world, ascended Mont Blanc, walked down the Andes, and run up the Pyrenees. He has been into every volcano in the globe, and descending by Vesuvius has been thrown up by Stromboli. He has lived more than a thousand years, and is still in the flower of his youth. He has had one hundred and forty sets of teeth one after another, and expects a new set next Christmas. His whole life has been spent in the service of mankind, and in doing good to his fellow-creatures: and having the experience of more than a thousand years, he cures more than a thousand diseases. Gentlemen, the wonderful doctor will present himself before you this evening, and will then tell what his remedies are good for, so that you may pick and choose according to your several complaints. Ladies, the wonderful doctor can greatly assist you: he has secrets by which you may have a family if you should so wish—philters to make husbands constant, and salve to make them blind—cosmetics to remove pimples and restore to youth and beauty, and powders to keep children from squalling. Sound the trumpet, Philotas; sound, and let every body know that the wonderful Doctor Appallacheosmocommetico has vouchsafed to stop here and confer his blessings upon the inhabitants of this town." Hereupon Num again blew the trumpet till he was black in the face; and Timothy,

dropping on his donkey, rode away to other parts of the town, where he repeated his grandiloquent announcement, followed, as may be supposed, by a numerous cortege of little ragged boys.

About four o'clock in the afternoon, Melchior made his appearance in the market-place, attended by me, dressed as a German student, Timothy and Num in their costumes. A stage had been already prepared, and the populace had crowded round it more with the intention of laughing than of making purchases. The various packets were opened and arranged in front of the platform, I standing on one side of Melchior, Timothy on the other, and Num with his trumpet, holding on by one of the scaffold poles at the corner.

"Sound the trumpet, Philotas," said Melchior, taking off his three-cornered hat, and making a low bow to the audience, at every blast. "Pray, Mr. Fool, do you know why you sound the trumpet?"

"I'm sure I don't know," replied Num opening his goggle eyes.

"Do you know, Mr. Dionysius?"

"Yes, sir, I can guess."

"Explain, then, to the gentlemen and ladies who have honoured us with their presence."

"Because, sir, trumpets are always sounded before great conquerors."

"Very true, sir; but how am I a great conqueror?"

"You have conquered death, sir; and he's a very rum customer to have to deal with."

"Dionysius, you have answered well, and shall have some bullock's liver for your supper—don't forget to remind me, in case I forget it."

"No, that I won't sir," replied Timothy, rubbing his stomach, as if delighted with the idea.

"Ladies and gentlemen," said Melchior to the audience, who were on the broad grin, "I see your mouths are all open, and are waiting for the pills; but be not too impatient—I cannot part with my medicines unless you have diseases which require their aid; and I should, indeed, be a sorry doctor, if I prescribed without knowing your complaints. *Est neutrale genus signans rem non animatum*, says Herodotus, which in English means, what is one man's meat is another man's poison; and further, he adds, *Ut jecur, ut onus, put ut occiput*, which is as much as to say, that what agrees with one temperament will be injurious to another. Caution, therefore, becomes very necessary in the use of medicine; and my reputation depends upon my not permitting any one to take what is not good for him. And now, my very dear friends, I shall first beg you to observe the peculiar qualities of the contents of this little phial. You observe, that there is not more than sixty drops in it, yet will these sixty drops add ten years to a man's life—for it will cure him of almost as many diseases. In the first place, are any of you troubled with the *ascites*, or dropsy, which, as the celebrated Galen hath declared, may be divided into three parts, the *ascites*, the *anasarca*, and the *tympanites*. The diagnostics of this disease are, swelling of the abdomen or stomach, difficulty of breathing, want of appetite, and a teazing cough. I say, have any of you this disease? None. Then I thank Heaven that you are not so afflicted.

"The next disease it is good for, is the *peripneumonia*, or inflammation on the lungs—the diagnostics or symptoms of which are, a small pulse, swelling of the eyes, and redness of the face. Say, have any of you these symptoms?—if so, you have the disease. No one. I thank Heaven that you are none of you so afflicted.

"It is also a sovereign remedy for the *diarrhœa*, the diagnostics of which, are faintness frequent gripings, rumbling in the bowels, cold sweats, and spasm."

Here one man came forward and complained of frequent gripings—another of rumbling in the bowels, and two or three more of cold sweats.

"It is well. O, I thank Heaven that I am here to administer to you myself! for what says Hippocrates? *Relativum cum antecedente concordat*, which means that, remedies quickly applied kill the disease in its birth. Here, my friends, take it—take it—pay me only one shilling, and be thankful. When you go to rest, fail not to offer up your prayers. It is also a sovereign remedy for the dreadful *chiragra* or gout. I cured the whole corporation of city aldermen last week, by their taking three bottles each, and they presented me with the freedom of the city of London, in a gold box which I am sorry that I have forgotten to bring with me. Now the *Chiragra* may be divided into several varieties. *Gonagra*, when it attacks the knees—*chiragra*, if in the hands—*onagra*, if in the elbow—*omagra*, if in the shoulder, and *lumbago*, if in the back. All these are varieties of gout, and for all these the contents of this little bottle is a sovereign remedy: and, observe, it will keep for ever. Twenty years hence, when afflicted in your old age—and the time will come, my good people—you may take down this little phial from the shelf, and bless the hour in which you spent your shilling; for as Eusebius declares, '*Verbum personale concordat cum nominativo*,' which is as much as to say, the active will grow old, and suffer from pains in their limbs. Who, then, has pains in his limbs, or lumbago? Who, indeed, can say that he will not have them?"

After this appeal, the number of those who had pains in their limbs, or who wished to provide against such a disease, proved so great, that all our phials were disposed of, and the doctor was obliged to promise that in a few days he would have some more of this invaluable medicine ready.

"Ladies and gentlemen, I shall now offer to your notice a valuable plaster, the effects of which are miraculous. Dionysius, come hither, you have felt the benefit of this plaster; tell your case to those who are present, and mind you tell the truth."

Hereupon Timothy stepped forward. "Ladies and gentlemen, *upon my honour*, about three weeks back I fell off the scaffold, broke my back bone into three pieces, and was carried off to a surgeon, who looked at me, and told the people to take measure for my coffin. The great doctor was not there at the time, having been sent for to consult with the king's physicians upon the queen's case, of *Cephagus*, or intermitting mortification of the great toe; but fortunately, just as they were putting me into a shell, my master came back, and immediately applying his sovereign plaster to my back, in five days I was able to sit up, and in ten days I returned to my duty."

"Are you quite well now, Dionysius?"

"Quite well, sir, and my back is like a whalebone."

"Try it."

Hereupon Dionysius threw two somersets forward, two backward, walked across the stage on his hands, and tumbled in every direction.

"You see, gentlemen, I'm quite well now, and what I have said, I assure you, *on my honour*, to be a fact."

"I hope you'll allow that to be a very pretty cure," said the doctor, appealing to the audience; "and I hardly need say, that for strains, bruises, contusions, wrenches, and dislocations, this plaster is infallible: and I will surprise you more by telling you, that I can sell it for eightpence a sheet."

The plaster went off rapidly, and was soon expended. The doctor went on describing his other valuable articles, and when he came to his cosmetics, &c., for women, we could not hand them out fast enough. "And now," said the doctor, "I must bid you farewell for this evening."

"I'm glad of that," said Timothy, "for now I mean to sell my own medicine."

"Your medicine, Mr. Dionysius! what do you mean by that?"

"Mean, sir; I mean to say that I've got a powder of my own contriving, which is a sovereign remedy."

"Remedy, sir, for what?"

"Why, it's a powder to kill fleas, and what's more, it's just as infallible as your own."

"Have you indeed; and pray, sir, how did you hit upon the invention?"

"Sir, I discovered it in my sleep by accident; but I have proved it, and I will say, if properly administered, it is quite as infallible as any of yours. Ladies and gentlemen, I pledge you my honour that it will have the effect desired, and all I ask is sixpence a powder."

"But how is it to be used, sir?"

"Used—why, like all other powders; but I won't give the directions till I have sold some; promising, however, if my method does not succeed, to return the money."

"Well, that is fair, Mr. Dionysius; and I will take care that you keep your bargain. Will any body purchase the fool's powder for killing fleas?"

"Yes, I will," replied a man on the broad grin, "here's sixpence. Now, then, fool, how am I to use it?"

"Use it," said Timothy, putting the sixpence in his pocket; "I'll explain to you. You must first catch the flea, hold him so tight between the fore finger and thumb as to force him to open his mouth: when his mouth is open you must put a very little of this powder into it, and it will kill him directly."

"Why, when I have the flea so tight as you state, I may as well kill him myself."

"Very true, so you may, if you prefer it; but if you do not, you may use this powder, which upon my honour is infallible."*

This occasioned a great deal of mirth among the bystanders. Timothy kept his sixpence, and our exhibition for this day ended, very much to the satisfaction of Melchior, who declared he had taken more than ever he had done before in a whole week. Indeed, the whole sum amounted to 17*l.* 10*s.*, all taken in shillings and sixpences, for articles hardly worth the odd shillings in the account; so we sat down to supper with anticipations of a good harvest, and so it proved. We stayed four days at this town, and then proceeded onwards, when the like success attended us, Timothy and I being obliged to sit up nearly the whole night to label and roll up pills, and mix medicines, which we did in a very scientific manner. Nor was it always that Melchior presided; he would very often tell his audience that business required his attendance elsewhere, to visit the sick, and that he left the explanation of his medicines and their properties to his pupil, who was far advanced in knowledge. With my prepossessing appearance, I made a great effect, more especially among the ladies, and Timothy exerted himself so much when with me, that we never failed to bring home to Melchior a great addition to his earnings—so much so, that at last he only showed himself, pretended that he was so importuned to visit sick persons, that he could stay no longer, and then leave us, after the first half hour, to carry on the business for him. After six weeks of uninterrupted success, we returned to the camp, which, as usual, was not very far off.

Melchior's profits had been much more than he anticipated, and he was very liberal to Timothy and me; indeed, he looked upon me as his right hand, and became more intimate and attached every day. We were of course delighted to return to the camp, after our excursion. There was so much continual bustle and excitement in our peculiar profession, that a little quiet was delightful; and I never felt more happy than when Fleta threw herself into my arms, and Nattee came forward with her usual dignity and grace, but with more than usual condescendence and kindness, bidding me welcome *home*. Home—alas! it was never meant for my home, or poor Fleta's—and that I felt. It was our sojourn for a time, and no more.

We had been more than a year exercising our talents in this lucrative manner, when one day, as I was sitting at the entrance of the tent, with a book in my hand, out of which Fleta was reading to me, a gipsy not belonging to our gang made his appearance. He was covered with dust, and the dew drops hanging on his dark forehead proved that he had traveled fast. He addressed Nattee, who was standing by, in their own language, which I did not understand; but I perceived that he asked for Melchior. After an exchange of a few sentences, Nattee expressed astonishment and alarm, and put her hands over her face, removed them as quickly is if derogatory in her to show emotion, and then remained in deep thought. Perceiving Melchior approaching, the gipsy hastened to him, and they were soon in animated conversation. In ten minutes it was over: the gipsy went to the running brook, washed his face, took a large draught of water, and then hastened away and was soon out of sight.

Melchior, who had watched the departure of the gipsy, slowly approached us. I observed him and Nattee, as they met, as I was certain that something important had taken place. Melchior fixed his eyes upon Nattee—she looked at him mournfully—folded her arms, and made a slight bow as if in submission, and in a low voice, quoted from the Scriptures, "Whither thou goest, I will go—thy people shall be my people, and thy God my God." He then walked away with her: they sat down apart, and were in earnest conversation for more than an hour.

"Japhet," said Melchior to me, after he had quitted his wife, "what I am about to tell you will surprise you. I have trusted you with all I dare trust any one, but there are some secrets in every man's life which had better be reserved for himself and her who is bound to him by solemn ties. We must now part. In a few days this camp will be broken up, and these people will join some other division of the tribe. For me, you will see me no more. Ask me not to explain, for I cannot."

"And Nattee," said I.

"Will follow my fortunes, whatever they may be—you will see her no more."

"For myself I care not, Melchior; the world is before me, and remain with the gipsies without you I will not: but answer me one question—what is to become of little Fleta? Is she to remain with the tribe, to which she does not belong, or does she go with you?"

Melchior hesitated. "I hardly can answer—but what consequence can the welfare of a soldier's brat be to you?"

"Allowing her to be what you assert, Melchior, I am devotedly attached to that child, and could not bear that she should remain here; I am sure that you deceived me in what you stated, for the child remembers, and has told me, anecdotes of her infancy, which proves that she is of no mean family, and that she has been stolen from her friends."

"Indeed, is her memory so good?" replied Melchior, firmly closing his teeth. "To Nattee or to me she has never hinted so much."

"That is very probable; but a stolen child she is, Melchior, and she must not remain here."

"Must not."

"Yes; must not, Melchior; when you quit the tribe, you will no longer have any power, nor can you have any interest about her. She shall then choose—if she will come with me, I *will* take her, and nothing shall prevent me; and in so doing I do you no injustice, nor do I swerve in my fidelity."

"How do you know that? I may have my secret reasons against it."

* We assure our friend Rigdum Funnidos that we stole this Joe Miller months before his "Comic Almanac" came out. We claim precedence as a thief.

"Surely you can have no interest in a soldier's brat, Melchior?"

Melchior appeared confused and annoyed. "She is no soldier's brat; I acknowledge, Japhet, that the child was stolen; but you must not, therefore, imply that the child was stolen by me or by my wife."

"I never accused you or thought you capable of it; and that is the reason why I am now surprised at the interest you take in her. If she prefers to go with you, I have no more to say, but if not I claim her; and if she consents, will resist your interference."

"Japhet," replied Melchior, after a pause, "we must not quarrel now that we are about to part. I will give you an answer in half an hour."

Melchior returned to Nattee, and recommenced a conversation with her, while I hastened to Fleta.

"Fleta, do you know that the camp is to be broken up, and Melchior and Nattee leave it altogether?"

"Indeed!" replied she with surprise. "Then what is to become of you and Timothy?"

"We must of course seek our fortunes where we can."

"And of me?" continued she, looking me earnestly in the face with her large blue eyes. "Am I to stay here?" continued she, with alarm in her countenance.

"Not if you do not wish it, Fleta; as long as I can support you I will—that is, if you would like to live with me in preference to Melchior."

"If I would like, Japhet; you must know I would like—who has been so kind to me as you? Don't leave me, Japhet."

"I will not, Fleta; but on condition that you promise to be guided by me, and to do all I wish."

"To do what you wish is the greatest pleasure that I have, Japhet—so I may safely promise that. What has happened?"

"That I do not know more than yourself; but Melchior tells me that he and Nattee quit the gipsy tents for ever."

Fleta looked round to ascertain if any one was near us, and then in a low tone said, "I understand their language, Japhet, that is, a great deal of it, although they do not think so, and I overheard what the gipsy said in part, although he was at some distance. He asked for Melchior; and when Nattee wanted to know what he wanted, he answered that '*he* was dead;' then Nattee covered up her face. I could not hear all the rest, but there was something about a *horse*."

He was *dead*. Had then Melchior committed murder, and was obliged to fly the country? This appeared to me to be the most probable, when I collected the facts in my possession; and yet I could not believe it, for except that system of deceit necessary to carry on his various professions, I never found any thing in Melchior's conduct which could be considered as criminal. On the contrary, he was kind, generous, and upright in his private dealings, and in many points proved that he had a good heart. He was a riddle of inconsistency it was certain, professionally he would cheat any body, and disregard all truth and honesty; but, in his private character, he was scrupulously honest, and, with the exception of the assertion relative to Fleta's birth and parentage, he had never told me a lie, that I could discover. I was running up all these reflections in my mind, when Melchior again came up to me, and desiring the little girl to go away he said, "Japhet, I have resolved to grant your request with respect to Fleta, but it must be on conditions."

"Let me hear them."

"First, then, Japhet, as you always have been honest and confiding with me, tell me now what are your intentions. Do you mean to follow up the profession which you learnt under me, or what do you intend to do?"

"Honestly, then, Melchior, I do not intend to follow up that profession, unless driven to it by necessity. I intend to seek my father."

"And if driven to it by necessity, do you intend that Fleta shall aid you by her acquirements? In short, do you mean to take her with you as a speculation, to make the most of her, to let her sink, when she arrives at the age of woman, into vice and misery?"

"I wonder at your asking me that question, Melchior; it is the first act of injustice I have received at your hands. No; if obliged to follow up the profession, I will not allow Fleta so to do. I would sooner that she were in her grave. It is to rescue her from that very vice and misery, to take her out of a society in which she never ought to have been placed, that I take her with me."

"And this upon your honour?"

"Yes, upon my honour. I love her as my sister, and I cannot help indulging the hope that in seeking my father, I may chance to stumble upon hers."

Melchior bit his lips. "There is another promise I must exact from you, Japhet, which is, that to a direction which I will give you, every six months you will inclose an address where you may be heard of, and also intelligence as to Fleta's welfare and health."

"To that I give my cheerful promise; but Melchior, you appear to have taken, all at once, a strange interest in this little girl."

"I wish you now to think that I do take an interest in her, provided you seek not to enquire the why and the wherefore. Will you accept of funds for her maintenance?"

"Not without necessity compels me; and then I should be glad to find, when I can no longer help her, that you are still her friend."

"Recollect, that you will always find what is requisite by writing to the address which I shall give you before we part. That point is now settled, and on the whole I think the arrangement is good."

Timothy had been absent during the events of the morning—when he returned, I communicated to him what had passed, and was about to take place.

"Well, Japhet, I don't know—I do not dislike our present life, yet I am not sorry to change it; but what are we to do?"

"That remains to be considered; we have a good stock of money, fortunately, and we must husband it till we find what can be done."

We took our suppers altogether for the last time, Melchior telling us that he had determined to set off the next day. Nattee looked very melancholy, but resigned; on the contrary, little Fleta was so overjoyed, that her face, generally so mournful, was illuminated with smiles whenever our eyes met. It was delightful to see her so happy. The whole of the people in the camp had retired, and Melchior was busy making his arrangements in the tent. I did not feel inclined to sleep; I was thinking and revolving in my mind my prospects for the future; sitting, or rather lying down, for I was leaning on my elbow, at a short distance from the tents. The night was dark but clear, and the stars were brilliant. I had been watching them, and I thought upon Melchior's ideas of destiny, and dwelling on the futile wish that I could read mine, when I perceived the approach of Nattee.

"Japhet," said she, "you are to take the little girl with you I find—will you be careful of her? for it would be on my conscience if she were left to the mercy of the world. She departs rejoicing, let her joy not end in tears. I depart sorrowing. I leave my people, my kin, my habits and customs, my influence, all—but it must be so, it is my destiny. She is a good child, Japhet—promise me that you will be a friend to her—and give her this to wear in remembrance of me, but——not yet—not till we are gone——." She hesitated. "Japhet,

do not let Melchior see it in your possession; he may not like my having given it away." I took the piece of paper containing the present, and having promised all she required, "This is the last—yes—the very last time that I may behold this scene," continued Nattee, surveying the common, the tents, and the animals browsing. "Be it so; Japhet, good night, may you prosper!" She then turned away and entered her tent; and soon afterwards I followed her example.

The next day, Melchior was all ready. What he had packed up was contained in two small bundles. He addressed the people belonging to the gang, in their own language. Nattee did the same, and the whole of them kissed her hand. The tents, furniture, and the greatest part of his other property, were distributed among them. Jumbo and Num were made over to two of the principal men. Timothy, Fleta, and I, were also ready, and intended to quit at the same time, as Melchior and his wife.

"Japhet," said Melchior, "there is yet some money due to you for our last excursion—(this was true,)—here it is—you and Timothy keep but one purse, I am aware. Good by'e, and may you prosper!"

We shook hands with Nattee and Melchior. Fleta went up to the former and crossing her arms, bent her head. Nattee kissed the child, and led her to Melchior. He stooped down, kissed her on the forehead, and I perceived a sign of strong compressed emotion as he did so. Our intended routes lay in a different direction, and when both parties had arrived at either verge of the common we waved our hands as a last farewell, and resumed our paths again. Fleta burst into tears as she turned away from her former guardians.

I led the little sobbing girl by the hand, and we proceeded for some time in silence. It was not until we gained the high road that Timothy interrupted my reverie, by observing, "Japhet, have you at all made up your mind what you shall do?"

"I have been reflecting, Timothy. We have lost a great deal of time. The original intention with which I left London has been almost forgotten; but it must be so no longer. I now have resolved, that as soon as I have placed this poor little girl in safety, I will prosecute my search and never be diverted from it."

"I cannot agree with you that we lost time, Japhet; we had very little money when we started upon our expedition, and now we have sufficient to enable you to prosecute your plans for a long time. The question is, in what direction? We quitted London, and traveled west, in imitation, as we thought, of the *wise men*. With all deference, in my opinion, it was like *two fools*."

"I have been thinking upon that point also, Tim, and I agree with you, I expect, from several causes, which you know as well as I do, to find my father among the higher classes of society; and the path we took when we started, has led us into the very lowest. It appears to me that we cannot do better than retrace our steps. We have the means now to appear as gentlemen, and to mix in good company; and London is the very best place for us to repair to."

"That is precisely my opinion, Japhet, with one single exception, which I will mention to you; but first tell me, have you calculated what our joint purses may amount to? It must be a very considerable sum."

"I cannot have much less than two hundred pounds," replied I.

"And I have more than sixty," said Timothy. "Really, the profession was not unprofitable."

"No," replied I, laughing; "but recollect, Tim, that we had no outlay. The public provided us with food, our lodging cost us nothing. We had no taxes to pay; and at the same time have taxed folly and credulity to a great extent."

"That's true, Japhet; and although I am glad to have the money, I am not sorry that we have abandoned the profession."

"Nor am I, Tim; if you please, we will forget it altogether. But tell me, what was the exception you were about to make?"

"Simply this. Although two hundred and sixty pounds may be a great deal of money, yet if we are to support the character and appearance of gentlemen, it will not last for ever. For instance, we must have our *valets*. What an expense that will be! Our clothes too—we shall soon lose our rank and station in society, without we obtain a situation under government."

"We must make it last as long as we can, Timothy; and trust to good fortune to assist us."

"That's all very well, Japhet; but I had rather trust to our own prudence. Now hear what I have to say. You will be as much assisted by a *trusty* valet as by any other means. I shall, as a gentlemen, be only an expense and an incumbrance; but as a valet I shall be able to play into your hands; at the same time more than one half the expense will be avoided. With your leave, therefore, I will take my proper situation, put on your livery, and thereby make myself of the greatest use."

I could not help acknowledging the advantages to be derived from this proposal of Timothy's; but I did not like to accept it.

"It is very kind of you, Timothy," replied I; "but I can only look upon you as a friend and an equal."

"There you are right and are wrong in the same breath. You are right in looking upon me as a friend, Japhet; and you would be still more right in allowing me to prove my friendship as I propose; but you are in wrong loooking upon me as an equal, for I am not so either in personal appearance, education, or any thing else. We are both foundlings, it is true; but you were christened after Abraham Newland, and I after the workhouse pump. You were a gentleman foundling, presenting yourself with a fifty pound note, and good clothes. I made my appearance in rags and misery. If you find your parents, you will rise in the world; if I find mine, I shall, in all probability, have no reason to be proud of them. I therefore must insist upon having my own choice in the part I am to play in the drama, and I will prove to you that it is my right to choose. You forget that, when we started, your object was to search after your father, and I told you mine should be to look after my mother. You have selected high life as the expected sphere in which he is to be found, and I select low life as that in which I am most likely to discover the object of my search. So you perceive," continued Tim, laughing, "that we must arrange so as to suit the views of both without parting company. Do you hunt among bag-wigs, amber-headed canes, silks and satins—I will burrow among tags and tassels, dimity and mob caps; and probably we shall both succeed in the object of our search. I leave you to hunt in the drawing-rooms, while I ferret in the kitchen. You may throw yourself on a sofa and exclaim—'Who is my father?' while I will sit in the cook's lap, and ask her if she may happen to be my mother."

This sally of Timothy's made even Fleta laugh; and after a little more remonstrance, I consented that he should perform the part of my valet. Indeed, the more I reflected upon it, the greater appeared the advantages which might accrue from the arrangement. By the time that this point had been settled, we had arrived at the town to which we directed our steps, and took up our quarters at an inn of moderate pretensions, but of very great external cleanliness. My first object was to find out some fitting asylum for little Fleta. The landlady was a buxom, good tempered young woman, and I gave the little girl into her charge, while Timothy and I went out on a survey. I had made up my mind to put her to some good, but not very expensive, school, if such were to

be found in the vicinity. I should have preferred taking her with me to London, but I was aware how much more expensive it would be to provide for her there; and as the distance from the metropolis was but twenty miles I could easily run down to see her occasionally. I desired the little girl to call me her brother, as such I intended to be to her in future, and not to answer every question they might put to her. There was, however, little occasion for this caution; for Fleta was, as I before observed, very unlike children in general. I then went out with Timothy to look for a tailor, that I might order our clothes, as what we had on were not either of the very best taste, or in the very best condition. We walked up the main street, and soon fell in with a tailor's shop, over which was written in large letters—"Feodor Shneider, Tailor to his Royal Highness the Prince of Darmstadt."

"Will that do, Japhet?" said Timothy, pointing to the announcement.

"Why yes," replied I; "but how the deuce the Prince of Darmstadt should have employed a man in a small country town as his tailor, is to me rather a puzzle."

"Perhaps he made his clothes when he was in Germany," replied Tim.

"Perhaps he did; but, however, he shall have the honour of making mine."

"We entered the shop, and I ordered a suit of the most fashionable clothes, choosing my colours, and being very minute in my directions to the foreman, who measured me; but as I was leaving the shop, the master, judging by my appearance, which was certainly not exactly that of a gentlemen, ventured to observe that it was customary with *gentlemen*, whom they had not the honour of knowing, to leave a deposit. Although the very proposal was an attack upon my gentility, I made no reply; but pulling out a handful of guineas, laid down two on the counter and walked away, that I might find another shop at which we might order the livery of Timothy; but this was only as a reconnoitre, as I did not intend to order his liveries until I could appear in my own clothes, which were promised on the afternoon of the next day. There were, however, several other articles to be purchased, such as a trunk, portmanteau, hat, gloves, &c. all which we procured, and then returned to the inn. On my return, I ordered dinner. Fleta was certainly clad in her best frock, but bad was the best; and the landlady, who could extract little from the child, could not imagine who we could be. I had, however, allowed her to see more than sufficient money to warrant our expenses; and so far her scruples were, although her curiosity was not, removed.

That evening I had a long conversation with Fleta. I told her that we were to part, that she must go to school, and that I would very often come down to see her. At first, she was inconsolable at the idea; but I reasoned with her, and the gentle, intelligent creature acknowledged that it was right. The next day my clothes came home, and I dressed myself. "Without flattery, Japhet," said Timothy, "you do look very much like a gentleman." Fleta smiled, and said the same. I thought so too, but said nothing. Putting on my hat and gloves, and accompanied by Timothy, I descended to go out and order Tim's liveries, as well as a fit-out for Fleta.

After I was out in the street I discovered that I had left my handkerchief, and returned to fetch it. The landlady, seeing a gentleman about to enter the inn, made a very low curtsey, and it was not until I looked hard at her that she recognised me. Then I was satisfied; it was an involuntary tribute to my appearance, worth all the flattering assertions in the world. We now proceeded to the other tailor's, in the main street. I entered the shop with a flourishing, important air, and was received with many bows. "I wish," said I, "to have a suit of livery made for this young man, who is about to enter into my service. I cannot take him up to town this figure." The livery was chosen, and as I expressed my wish to be off the next evening, it was promised to be ready by an hour appointed.

I then went to a milliner's, and desired that she would call at the inn to fit out a little girl for school, whose wardrobe had been left behind by mistake. On the fourth day all was ready. I had made enquiries, and found out a very respectable school, kept by a widow lady. I asked for references, which were given, and I was satisfied. The terms were low—twenty guineas per annum. I paid the first half year in advance, and lodged fifty guineas more in the hands of a banker, taking a receipt for it, and giving directions that it was to be paid to the schoolmistress as it became due. I took this precaution, that should I be in poverty myself, at all events Fleta might be provided in clothes and schooling for two years at least. The poor child wept bitterly at the separation, and I could with difficulty detach her little arms from my neck; and I felt, when I left her, as if I had parted with the only valuable object to me on earth. All was now ready; but Timothy did not as yet assume his new clothes. It would have appeared strange that one who sat at my table should afterwards put on my livery; and as, in a small town there is always plenty of scandal, for Fleta's sake, if for no other reason, it was deferred until our arrival in London. Wishing the landlady good by'e, who I really believe would have given up her bill to have known who we could possibly be, we got on the outside of the stage-coach, and in the evening arrived at the metropolis. I have been particular in describing all these little circumstances, as it proves how very awkward it is to jump, without observation, from one station in society to another.

But I have omitted to mention a circumstance of great importance, which occurred at the inn the night before I placed Fleta at the boarding-school. In looking over my portmanteau, I perceived the present of Nattee to Fleta, which I had quite forgotten. I took it to Fleta, and told her from whom it came. On opening the paper, it proved to contain a long chain of round coral and gold beads, strung alternately; the gold beads were not so large as the coral, but still the number of them, and the purity of the metal, made them of considerable value. Fleta passed the beads through her fingers, and then threw it round her neck, and sat in deep thought for some minutes. "Japhet," said she at last, "I have seen this—I have worn this before—I recollect that I have; it rushes into my memory as an old friend, and I think that before morning it will bring to my mind something that I shall recollect about it."

"Try all you can, Fleta, and let me know to-morrow."

"It's no use trying; if I try, I never can recollect any thing. I must wear it to-night, and then I shall have something come into my mind all of a sudden; or perhaps I may dream something. Good night."

It immediately occurred to me that it was most probable that the chain had been on Fleta's neck at the time that she was stolen from her parents, and might prove the means of her being identified. It was no common chain—apparently had been wrought by people in a state of semi-refinement. There was too little show for its value—too much sterling gold for the simple effect produced; and I very much doubted whether another like it could be found.

The next morning Fleta was too much affected at parting with me, to enter into much conversation. I asked whether she had recollected any thing, and she replied, "No; that she had cried all night at the thoughts of our separation." I cautioned her to be very careful of the chain, and I gave the same caution to the schoolmistress; and after I had left the town, I regretted that

I had not taken it away, and deposited it in some place of security. I resolved to do so when next I saw Fleta; in the mean time, she would be able, perhaps, by association, to call up some passage of her infancy connected with it.

I had enquired of a gentleman who sat near me on the coach, which was the best hotel for a young man of fashion. He recommended the Piazza in Covent Garden, and to that we accordingly repaired. I selected handsome apartments, and ordered a light supper. When the table was laid, Timothy made his appearance, in his livery, and cut a very smart dashing figure. I dismissed the waiter, and as soon as we were alone, I burst into a fit of laughter. "Really, Timothy, this is a good farce; come, sit down, and help me to finish this bottle of wine."

"No, sir," replied Timothy; "with your permission, I prefer doing as the rest of my fraternity. You only leave the bottle on the sideboard, and I will steal as much as I want; but, as for sitting down, that will be making too free, and if we were seen, would be, moreover, very dangerous. We must both keep up our characters. They have been plying me with all manner of questions below, as to who you were—your name, &c. I resolved that I would give you a lift in the world, and I stated that you had just arrived from making a grand tour—which is not a fib, after all—and as for your name, I said that you were at present *incog.*"

"But why did you make me *incog?*"

"Because it may suit you so to be; and it certainly is the truth, for you don't know your real name."

We were here interrupted by the waiter bringing in a letter upon a salver. "Here is a letter addressed to 'I. or J. N., on his return from his tour,' sir," said he; "I presume it is for you?"

"You may leave it," said I, with nonchalance.

The waiter laid the letter on the table, and retired.

"How very odd, Timothy—this letter cannot be for me; and yet they are my initials. It is as much like a J as an I. Depend upon it, it is some fellow who has just gained this intelligence below, and has written to ask for a subscription to his charity list, imagining that I am flush of money, and liberal."

"I suppose so," replied Tim; "however, you may just as well see what he says."

"But if I open it he will expect something. I had better refuse it."

"O no, leave that to me; I know how to put people off."

"After all, it's a fine thing to be a gentleman, and be petitioned."

I broke open the seal, and found that the letter contained an enclosure addressed to another person. The letter was as follows:—

"My dear Nephew,—['Bravo, sir,' said Timothy, 'you've found an uncle already—you'll soon find a father.'] From the great uncertainty of the post, I have not ventured to do more than hint at what has come to light during this last year, but as it is necessary that you should be acquainted with the whole transaction, and as you had not decided when you last wrote, whether you would prosecute your intended three months' trip to Sicily, or return from Milan, you may probably arrive when I am out of town; I therefore enclose you a letter to Mr. Masterton, directing him to surrender to you a sealed packet, lodged in his hands, containing all the particulars, the letters which bear upon them, and what has been proposed to avoid exposure; which you may peruse at your leisure, should you arrive before my return to town. There is no doubt but that the affair may be hushed up, and we trust that you will see the prudence of the measure; as, once known, it will be very discreditable to the family escutcheon. ['I always had an idea you were of good family,' interrupted Tim.] I wish you had followed my advice, and had not returned; but as you were positive on that point, I beg you will now consider the propriety of remaining incognito, as reports are already abroad, and your sudden return will cause a great deal of surmise. Your long absence at the Gottingen University, and your subsequent completion of your grand tour, will have effaced all remembrance of your person, and you can easily be passed off as a particular friend of mine, and I can introduce you every where as such. Take, then, any name you may please, provided it be not Smith or Brown, or such vulgarisms, and on the receipt of this letter, write a note, and send it to my house in Portman Square, just saying, '*so and so* is arrived.' This will prevent the servants from obtaining any information by their prying curiosity; and as I have directed all my letters to be forwarded to my seat in Worcestershire, I shall come up immediately that I receive it, and by your putting the name which you mean to assume, I shall know whom to ask for when I call at the hotel.

"Your affectionate uncle,
"Windermear."

"One thing is very clear, Timothy," said I, laying the letter on the table; "that it cannot be intended for me."

"How do you know, sir, that this lord is not your uncle? At all events, you must do as he bids you."

"What—go for the papers! most certainly I shall not."

"Then how in the name of fortune do you expect to find your father, when you will not take advantage of such an opportunity of getting into society? It is by getting possession of other people's secrets, that you will worm out your own."

"But it is dishonest, Timothy."

"A letter is addressed to you, in which you have certain directions; you break the seal with confidence, and you read what you find is possibly not for you; but, depend upon it, Japhet, that a secret obtained is one of the surest roads to promotion. Recollect your position; severed from the world, you have to re-unite yourself with it, to recover your footing, and create an interest. You have not those who love you to help you—you must not scruple to obtain your object by fear."

"That is a melancholy truth, Tim," replied I; "and I believe I must put my strict morality in my pocket."

"Do, sir, pray, until you can afford to be moral; it's a very expensive virtue that; a deficiency of it made you an outcast from the world; you must not scruple at a slight deficiency on your own part, to regain your position."

There was so much shrewdness, so much of the wisdom of the serpent, in the remarks of Timothy, that, added to my ardent desire to discover my father, which, since my quitting the gipsy camp, had returned upon me with two-fold force, my scruples were overcome, and I resolved that I would not lose such an opportunity. Still I hesitated, and went up into my room, that I might reflect upon what I should do. I went to bed, revolving the matter in my mind, and turning over from one position to the other, at one time deciding that I would not take advantage of the mistake, at another quite as resolved that I would not throw away such an opening for the prosecution of my search; at last I fell into an uneasy slumber, and had a strange dream. I thought that I was standing upon an isolated rock, with the waters raging around me; the tide was rising, and at last the waves were roaring at my feet. I was in a state of agony, and expected that in a short time I should be swallowed up. The main land was not far off, and I perceived well-dressed people in crowds, who were enjoying themselves, feasting, dancing, and laughing in merry peals. I held out my hands—I shouted to them—

they saw, and heard me, but heeded me not. My horror at being swept away by the tide was dreadful. I shrieked as the water rose. At last I perceived something unroll itself from the main land, and gradually advancing to the inland, formed a bridge by which I could walk over and be saved. I was about to hasten over, when, "Private, and no thoroughfare," appeared at the end nearest me, in large letters of fire. I started back with amazement, and would not, dared not, pass them. When all of a sudden, a figure in white appeared by my side, and said to me, pointing to the bridge, "Self-preservation is the first law of nature."

I looked at the person who addressed me; gradually the figure became darker and darker, until it changed to Mr. Cophagus, with his stick up to his nose. "Japhet, all nonsense—very good bridge—um—walk over—find father—and so on." I dashed over the bridge, which appeared to float on the water, and to be composed of paper, gained the other side, and was received with shouts of congratulation, and the embraces of the crowd. I perceived an elderly gentleman come forward; I knew it was my father, and I threw myself into his arms. I awoke, and found myself rolling on the floor, embracing the bolster with all my might. Such was the vivid impression of this dream, that I could not turn my thoughts away from it, and at last I considered that it was a divine interposition. All my scruples vanished, and before the day had dawned I determined that I would follow the advice of Timothy. An enthusiast is easily led to believe what he wishes, and he mistakes his own feelings for warnings; the dreams arising from his daily contemplations for the interference of Heaven. He thinks himself armed by supernatural assistance, and warranted by the Almighty to pursue his course, even if that course should be contrary to the Almighty's precepts. Thus was I led away by my own imaginings, and thus was my monomania increased to an impetus which forced before it all consideration of what was right or wrong.

The next morning I told my dream to Timothy, who laughed very heartily at my idea of the finger of Providence. At last, perceiving that I was angry with him, he pretended to be convinced. When I had finished my breakfast, I sent to enquire the number in the square of Lord Windermear's town-house, and wrote the following simple note to his lordship, "*Japhet Newland* has arrived from his tour at the Piazza, Covent Garden." This was confided to Timothy, and I then set off with the other letter to Mr. Masterton, which was addressed to Lincoln's Inn. By reading the addresses of the several legal gentlemen, I found out that Mr. Masterton was located on the second floor. I rang the bell, which had the effect of "Open, Sesame," as the door appeared to swing to admit me without my assistance. I entered an ante-room, and from thence found myself in the presence of Mr. Masterton—a little old man, with spectacles on his nose, sitting at a table covered with papers. He offered me a chair, and I presented the letter.

"I see that I am addressing Mr. Neville," said he, after he had perused the letter. "I congratulate you on your return: You may not, perhaps, remember me?"

"Indeed, sir, I cannot say that I do, exactly."

"I could not expect it, my dear sir, you have been so long away. You have very much improved in person, I must say; yet still I recollect your features as a mere boy. Without compliment, I had no idea that you would ever have made so handsome a man." I bowed to the compliment. "Have you heard from your uncle?"

"I had a few lines from Lord Windermear, enclosing your letter."

"He is well, I hope?"

"Quite well, I believe."

Mr. Masterton then rose, went to an iron safe, and brought out a packet of papers, which he put into my hands. "You will read these with interest, Mr. Neville. I am a party to the whole transaction, and must venture to advise you not to appear in England under your own name, until all is settled. Your uncle, I perceive, has begged the same."

"And I have assented, sir. I have taken a name instead of my real one."

"May I ask what it is?"

"I call myself Mr. Japhet Newland."

"Well, it is singular, but perhaps as good as any other. I will take it down, in case I have to write to you. Your address is ——"

"Piazza—Covent Garden."

Mr. Masterton took my name and address. I took the papers, and then we both took leave of one another, with expressions of pleasure and good will.

I returned to the hotel, where I found Timothy waiting for me, with impatience. "Japhet," said he, "Lord Windermear has not yet left town. I have seen him, for I was called back after I left the house, by the footman, who ran after me—he will be here immediately."

"Indeed," replied I. "Pray what sort of person is he, and what did he say to you?"

"He sent for me in the dining parlour, where he was at breakfast, asked when you arrived, whether you were well, and how long I had been in your service. I replied that I had not been more than two days, and had just put on my liveries. He then desired me to tell Mr. Newland that he would call upon him in about two hours. Then, my lord," replied I, "I had better go and tell him to get out of bed."

"The lazy dog!" said he, "nearly one o'clock, and not out of bed; well, go then, and get him dressed as fast as you can."

Shortly afterwards a handsome carriage with grays drew up to the door. His lordship sent in his footman to ask whether Mr. Newland was at home. The reply of the waiter was, that there was a young gentleman who had been there two or three days, who had come from making a tour, and his name did begin with an *N*. "That will do, James; let down the steps." His lordship alighted, was ushered up stairs, and into my room. There we stood, staring at each other.

"Lord Windermear, I believe," said I, extending my hand.

"You have recognised me first, John," said he taking my hand, and looking earnestly in my face. "Good heavens! is it possible that an awkward boy should have grown up into so handsome a fellow? I shall be proud of my nephew. Did you remember me when I entered the room?"

"To tell the truth, my lord, I did not: but expecting you, I took it for granted that it must be you."

"Nine years make a great difference, John;—but I forget, I must now call you Japhet. Have you been reading the Bible, lately, that you fixed upon that strange name?"

"No, my lord; but this hotel is such a Noah's ark, that it's no wonder I thought of it."

"You're an undutiful dog, not to ask after your mother, sir."

"I was about———"

"I see—I see," interrupted his lordship; "but recollect, John, that she is still *your mother*. By-the-by, have you read the papers yet?"

"No, Sir," replied I, "there they are, pointing to them on the side table. I really do not like to break the seals."

"That they will not contain pleasant intelligence, I admit," replied his lordship; "but until you have read them, I do not wish to converse with you on the subject, therefore," said he, taking up the packet, and breaking the seal, "I must now insist that you employ this fore-

noon in reading them through. You will dine with me at seven, and then we will talk the matter over."

"Certainly, sir, if you wish it, I will read them."

"I must *insist* upon it, John; and am rather surprised at your objecting, when they concern you so particularly."

"I shall obey your orders, sir."

"Well, then, my boy, I shall wish you good morning, that you may complete your task before you come to dinner. To-morrow, if you wish it—but recollect, I never press young men on these points, as I am aware that they sometimes feel it a restraint—if you wish it, I say, you may bring your portmanteaus, and take up your quarters with me. By-the-by," continued his lordship, taking hold of my coat, "who made this?"

"The tailor to his serene highness the Prince of Darmstadt had that honour, my lord," replied I.

"Humph! I thought they fitted better in Germany; it's not quite the thing—we must consult Nugee, for with that figure and face, the coat ought to be quite correct. Adieu, my dear fellow, till seven."

His lordship shook hands with me, and I was left alone. Timothy came in as soon as his lordship's carriage had driven off. "Well, sir," said he, "was your uncle glad to see you?"

"Yes," replied I; "and look, he has broken open the seals, and has insisted upon my reading the papers."

"It would be very undutiful in you to refuse, so I had better leave you to your task," said Timothy, smiling, as he quitted the room.

I sat down and took up the papers. I was immediately and strangely interested in all that I read. A secret!—it was, indeed, a secret, involving the honour and reputation of the most distinguished families. One that, if known, the trumpet of scandal would have blazoned forth to the disgrace of the aristocracy. It would have occasioned bitter tears to some, gratified the petty malice of many, satisfied the revenge of the vindictive, and bowed with shame the innocent as well as the guilty. It is not necessary, nor, indeed, would I, on any account, state any more. I finished the last paper, and then fell into a reverie. This is, indeed, a secret, thought I; one that I would I never had possessed. In a despotic country my life would be sacrificed to the fatal knowledge—here, thank God, my life as well as my liberty is safe.

The contents of the papers told me all that was necessary to enable me to support the character which I had assumed. The reason why the party, I was supposed to be, was entrusted with it, was, that he was in a direct line eventually heir, and the question was whether he would waive his claim with the others, and allow death to bury crime in oblivion. I felt that were I in his position I should so do—and, therefore, was prepared to give an answer to his lordship. I sealed up the papers, dressed myself, and went to dinner; and after the cloth was removed, Lord Windermear first rising and turning the key in the door, said to me, in a low voice, "You have read the papers, and what those, nearly as much interested as you are in this lamentable business, have decided upon. Tell me, what is your opinion?"

"My opinion, my lord, is, that I wish I had never known what has come to light this day—that it will be most advisable never to recur to the subject, and that the proposals made, are, in my opinion, most judicious, and should be acted upon."

"That is well," replied his lordship; "then all are agreed, and I am proud to find you possessed of such honour and good feeling. We now drop the subject for ever. Are you inclined to leave town with me, or what do you intend to do?"

"I prefer remaining in town, if your lordship will introduce me to some of the families of your acquaintance. Of course I know no one now."

"Very true; I will introduce you, as agreed, as Mr. Newland. It may be as well that you do not know any of our relations, whom I have made to suppose that you are still abroad—and it would be awkward, when you take your right name by-and-by. Do you mean to see your mother?"

"Impossible, my lord, at present; by-and-by I hope to be able."

"Perhaps it's all for the best. I will now write one note to Major Carbonnell, introducing you as my particular friend, and requesting that he will make London agreeable. He knows every body, and will take you every where."

"When does your lordship start for the country?"

"To-morrow; so we may as well part to-night. By-the-by, you have credit at Drummond's, in the name of Newland, for a thousand pounds; the longer you make it last you the better."

His lordship gave me the letter of introduction. I returned to him the sealed packet, shook hands with him, and took my departure.

"Well, sir," said Timothy, rubbing his hands, as he stood before me, "what is the news; for I am dying to hear it—and what is this secret?"

"With regard to the secret, Tim, a secret it must remain. I dare not tell it even to you." Timothy looked rather grave at this reply. "No, Timothy, as a man of honour, I cannot." My conscience smote me when I made use of the term; for, as a man of honour, I had no business to be in possession of it. "My dear Timothy, I have done wrong already, do not ask me to do worse."

"I will not, Japhet, but only tell me what has passed, and what you intend to do?"

"That I will, Timothy, with pleasure;" and I then stated all that had passed between his lordship and me. "And now, you observe, Timothy, I have gained what I desired, an introduction into the best society."

"And the means of keeping up your appearance," echoed Timothy, rubbing his hands. "A thousand pounds will last a long while."

"It will last a very long while, Tim, for I never will touch it; it would be swindling."

"So it would," replied Tim, his countenance falling; "well, I never thought of that."

"I have thought of much more, Tim: recollect I must in a very short time be exposed to Lord Windermear, for the real Mr. Neville will soon come home."

"Good heavens! what will become of us?" replied Timothy, with alarm in his countenance.

"Nothing can hurt you, Tim, the anger will be all upon me; but I am prepared to face it, and I would face twice as much for the distant hope of finding my father. Whatever Lord Windermear may feel inclined to do, he can do nothing; and my possession of the secret will ensure even more than my safety; it will afford me his protection, if I demand it."

"I hope it may prove so," replied Timothy, "but I feel a little frightened."

"I do not; to-morrow I shall give my letter of introduction, and then I will prosecute my search. So now, my dear Tim, good night."

The next morning I lost no time in presenting my letter of introduction to Major Carbonnell. He lived in apartments on the first floor in St. James's Street, and I found him at breakfast, in a silk dressing gown. I had made up my mind that a little independence always carries an air of fashion. When I entered, therefore, I looked at him with a knowing air, and dropping the letter down on the table before him said, "There's something for you to read, Major; and in the meantime I'll refresh myself on this chair;" suiting the action to the word, I threw myself on a chair, amusing myself with tapping the sides of my boots with a small cane which I carried in my hand.

Major Carbonnell, upon whom I cast a furtive eye

more than once during the time that he was reading the letter, was a person of about thirty-five years of age, well-looking, but disfigured by the size of his whiskers, which advanced to the corners of his mouth, and met under his throat. He was tall and well made, with an air of fashion about him that was undeniable. His linen was beautifully clean and carefully arranged, and he had as many rings on his fingers, and when he was dressed, chains and trinkets, as ever were put on by a lady.

"My dear sir, allow me the honour of making at once your most intimate acquaintance," said he, rising from his chair, and offering his hand, as soon as he had perused the letter. "Any friend of Lord Windermear's would be welcome, but when he brings such an extra recommendation in his own appearance, he becomes doubly so."

"Major Carbonnell," replied I, "I have seen you but two minutes, and I have taken a particular fancy to you; in which I, no doubt, have proved my discrimination. Of course you know that I have just returned from making a tour?"

"So I understand from his lordship's letter. Mr. Newland, my time is at your service. Where are you staying?"

"At the Piazza."

"Very good; I will dine with you to-day; order some mulligatawny, they are famous for it. After dinner we will go to the theatre."

I was rather surprised at his cool manner of asking himself to dine with me and ordering my dinner, but a moment's reflection made me feel what sort of person I had to deal with.

"Major, I take that as almost an affront. You will dine with me *to-day!* I beg to state that you *must* dine with me every day that you are not invited elsewhere; and what's more, sir, I shall be most seriously displeased, if you do not order the dinner every time that you do dine with me, and ask whoever you may think worthy of putting their legs under our table. Let's have no doing things by halves, major; I know you now as well as if we had been intimate for ten years."

The major seized me by the hand. "My dear Newland, I only wish we *had known* one another ten years, as you say—the loss has been mine; but now—you have breakfasted, I presume?"

"Yes; having nothing to do, and not knowing a soul after my long absence, I advanced my breakfast about two hours, that I might find you at home; and now I'm at your service."

"Say rather I am at yours. I presume you will walk. In ten minutes I shall be ready. Either take up the paper, or whistle an air or two, or any thing else you like, just to kill ten minutes—and I shall be at your command."

430

PARISIAN IMPROVEMENTS.—The prefect of the department has decided on the appropriation of 1,500,000f. for works in the Place de la Concorde and the Champs Elysées, which will be proceeded with, to the amount of 300,000f. annually, till they are completed. There will be a great basin, with an elegant fountain, in each of the four squares of the place, and six fountains in different parts of the Champs Elysées, where handsome buildings will be erected for dances, concerts, exhibitions, and other establishments—such as coffee-houses, eating-houses, and reading-rooms. All the paltry buildings which now exist in the Champs Elysées are to be demolished, but not a tree is to be cut down. The works will be begun in the spring of 1835.

SKETCHES ON IRISH HIGHWAYS.

IRISH RUINS.

"Now, with all deference, it is suggested that there are monuments of antiquity in Ireland worthy of inspection; there is scenery on which the eye may rest with delight. We have woods, and waters, and glens, and mountains abundantly picturesque, and sufficient to call forth the exertion of the pen and pencil in their description." So writes Mr. Cæsar Otway; and his statement may be corroborated by all who have visited the country.

There *are* monuments of antiquity worthy of inspection; there *is* scenery on which the eye may rest with delight; and, withal, there are people, warm, kindly, and affectionate, to be met with in every dwelling. Within the mansion, and within the hut, one vast spirit of hospitality presides. Whatever is possessed is shared, and shared by the heart as well as the hand. And *yet*,—alas! how sad it is that a single monosyllable should signify so much!—and *yet*, shine the sun ever so warmly, let the voice of mirth come upon your ear ever so gladly, there is fading in the beams of the one, and a wailing cadence in the last strains of the other, which says, "*This is a land of ruins!*"

"Irish Ruins!" The term is sadly comprehensive. It implies far more than the register of mouldering walls, or round, mysterious towers;—it calls to mind the ruined dwellings—the roofless cottages—the mismanaged farms—the improvident gentry—the trampled peasantry—in one sentence, *the ruined country;* the country over which foes triumph, and which "friends" betray,—whose worst enemies are of its own progeny,—whose sons may seek, and find, in every nation upon earth, except their own, prosperity and independence,—whose daughters, conspicuous for wit, beauty, and virtue, grace the courts of strangers, because the once gay and festive halls of Ireland are lone and desolate: the harps are hung upon the willows—the grass grows in the streets—the land is one of ruins! Little prospers, even in its chief city. The merchants have ample leisure for salutations in the market-places; and the young men squander time which, in well-regulated England, would be transmuted into gold. Yet, what heroes has this country sent forth to fight and conquer, that others might enjoy! What statesmen to regulate the affairs of Europe, and forget, in the magnitude of their employments, the little green speck that gave them birth! What poets, who founded songs upon her sorrows, and spent the emolument derived therefrom amongst aliens, and those who knew her not! And yet the skies above her are blue and smiling, and the earth—the fertile earth—teems with abundance. It seems a mystery that centuries should pass and leave her more desolate and more depressed;—yet, so it has been, and so—for aught I can see—so it will be for many a day to come.

I have often been asked why I do not more frequently quit the neighbourhood of Bannow, and sketch more at large throughout the country. My answer simply is, that I love smiles better than tears; that, blessed be God! cheerfulness and I

are twin-born; and that, in the particular district I have loved to talk and write about, there is peace, prosperity, and contentment; that, were it not for the whim, the mirth, the frolic of the people, you might imagine yourself in well-conducted, sober—stupid England; that the only—at least, *almost* the only—ruins in that pretty region of resident landlords and cheerful industry, are those of the ruined church, and "one or two ould, ancient castles, that bate the world out-an'-out intirely for beauty." But, alas! Bannow is not Ireland; and truth obliges me to relate what occurs beyond my own particular pet district, where I should like to colonise some twenty or thirty English families, with all the comforts of sea-bathing, cheap living, and hospitable treatment, for four months out of every twelve. If I were affronted with any of them, I would mount them upon an Irish jaunting-car, and set them off at full gallop to Taghmon. Those who have ever so journeyed will appreciate my kindness; those who have not, may imagine a dislocation of all limbs, combined with perpetual motion. If their imagination is very vivid, they will appreciate my intended treatment as it deserves.

It was a calm and cheerful day in August; but there was no breeze—nothing animating in the atmosphere—nothing bright in the sky;—no music—no song swelling from the harvest-field. The bouchlawns, with their cold, stiff, yellow blossoms, were so erect, that a troop of fairies might have gallopped over their petals without disturbing a single leaf. We were wending our way to the ruins of the Abbey of Dunbrody, leaving behind us the picturesque town of New Ross. By the way, there is a legend about the same ruined looking town: how that some English king sent over a mandate, directing that all the monks of the Ross monastery should be murdered in their own garden; and how they were; and how their blood runs red in a stream,—which I have seen myself,—*not* the blood, but the stream,—which I was assured was red; and so it was,—the gravel underneath the water I mean, not the water itself.

We soon overtook a very respectable looking man; I was told he was a butcher—one who had stared ruin in the face, until at length he stared her out of countenance.

"I don't know how it was," said our guide, "but iviry thing in the wide world went wrong with the poor craythur; to be sure he was over-fond of the drop—what else have we to comfort us? He might have been *too* fond of it—the thing's possible—I have a laning myself that way, but only of a Sunday afther mass—bad cess to the taste ever passes my lips till then. Well, he was a gone boy—and what was harder than all upon him, the girl he loved turned agin him—and whin the steamers come in fashion, with their great wigel-wagel claws, batin the brains out of the sald wather, Murtogh was done intirely, for all the calves were shipped clane and clever for England. 'I'm ruined like my counthry,' said Murtogh, 'and nothing can put us past our luck.' And the poor fellow grew worse and worse, until ne'er a man in the shambles tossed his little finger so high as Murtogh Delany. Well, one day, he wasn't so far gone as usual, not high toast—it was about ten o'clock in the morning—but any how, as he was turning a corner by the bridge, what should run up agin him but blind Kisheen and his pipes, and he fell right into the water; well, the girl I spoke of was passing at the same time, and without a word or a skreel (an' most women are mighty skreelish in general)—without a word, faith, she dashed in afther him, like a mermaid—and maybe he hadn't enough to do to save her—and then when he got her on the bridge, she turned from him, without a word, only she said 'twas better to be drowned in water than die by whisky. Well, somehow the word took hould of his heart, and he pondered it over and over, and went that night into Lawrence Mulloger's store-shop, and stood the sight of the drams, and the smell of the hot whisky punch, without so much as tasting; and afther that he set off to the girl's house, and she was winding off a reel, and the clothes she had on in the morning hanging drying still by the fire, and no stockings on her feet, for she owned but the one pair, and those she had put on for dacency when she had the luck to go into Ross—but well he knew that if she liked she might marry a boy who could afford her a dozen pair of the whitest in Belfast,—and that's saying a grate dale;—he stood before her on the flure, and he thought a light from heaven broke upon him, though she didn't spake, nor seem to heed him; he thought how good and quiet and tractable she was in her family—slaving like a negre; and how she had risked her life for him—and he saw the trouble he had given her traced out on her pale face—

"'And Ellen, (her name was Ellen,) Ellen,' says he, 'if—I know I have chated many an oath against the whisky—but, if I join the temperance society, and remain faithful to it—say for a year or two—will you marry me then?"

"'Murtogh,' says she, 'I'm not going to tell a lie—my heart has been crushed intirely through the drink—my father lost his rason wid it, and the smell of it's never off my mother—it's the rale curse of the counthry—the ruin of ould Ireland. If—but oh, Murtogh, it's impossible—you never will give it up!'

"'Didn't I stand the sight of forty-seven nagins going down about half as many mouths in less than half as many minutes,' said Murtogh, 'and the smell of Lawrence Daly's seven tumblers, gliding down his throat—and never touch'd it? And now, Ellen dear, smell the breath on me,' he added, as he placed his lips close to hers, 'and you can tell if the drop has passed here—through all my temptation—and then say if there's hope for me.'

"Ellen looked up, and clasping her hands, earnestly replied, 'God strengthen you, Murtogh; and if He does, there is——'

"'A year—or two—Ellen?'

"'One year is as good as twenty; and if you keep from it one year; this day—no, to-morrow—twelve months—for you tasted it this morning—neither poverty, nor sickness, nor sorrow shall hinder me from being your wife; and if—if—not, Murtogh—why there's no use in talking, but the green sods in the churchyard will make the young heart an' the broken heart asy.'

"Well, we all wondered what in the world

had come over Murtogh—he grew so steady, and so sober, and we didn't think it was the same man was in him; he had more gumpshon* than ever, and somehow some of the calves stayed with him, instead of turning to English veal, and pigs an' the like; and the quality afther a while took to buying from him—and Ellen no longer looked crooked into the broken window of Lawrence's dram-shop, as she passed it on t'other side the way, for at last she had full faith in Murtogh's promise——"

"And they were married?"

"Ay, in troth, and Ellen is one of the best and happiest wives in Ross, and he the most thriving man; and the world an' all wouldn't argufy Murtogh but what whisky is the *biggest ruin in all Ireland!* And, my lady, 'twas all owing to Murtogh's going to a good gintleman well known in these parts,—one Mister George Carr,—and writing his name in a book, promising not to touch a drop o' speerits, pure or mixed; and it seems this way is a dale surer than taking an oath agin 'em—for somehow or other we forgets our word, but we aren't mane enough to put our pen to a lie; and when we does what a dale o' the gentry done before us, why honour and shame are both pushing us on to stick to the word we wrote upon paper. Myself thinks I'll be after following the way of Murtogh Delany."

Our guide was a tall, stalwart man, firm set and muscular, with a round bullet head, garnished in thick, dark, crisp curls—his eyes were black, deep set, and sparkling; and he had a word and a jest ready for every passer-by. He was a guide *con amore*—for his father had left him some very small independence—enough, however, to enable Jack Laggin, as he said, "to do nothing in the world but take it asy, and amuse himself," which he certainly did. He knew every body, every nook, every house, every legend, and was not over-burthened with feeling for the distresses of his fellow-creatures. "Weren't they born to misery, what else could they expect?" was his continual observation upon the troops of half-naked wretches we occasionally encountered. Jack was in constant request by all who desired to hear local news, or see the country; not that I think his information as to particular persons or politics is much to be relied on, for Jack has a knack of cleverly finding out your sentiments before he imparts his own, and falling into yours with extraordinary facility. He does not pretend in the least to the rank of gentleman, and takes "the bit and the sup" any where that he can get it; he is in fact a "hanger-on," with sufficient tact and sufficient taste to sing a good song, tell a good story, be particularly civil to those who can serve him, and never uncivil to any one; in England he would have been exactly the person to make a sharp lawyer's clerk, or perhaps a smooth, clever, polite nuisance, called a shopman—

"Of such materials was Jack Laggin formed!"

"Do you see that cottage there, ma'am, to the left? There used to be a cottage there onc't—though but little else than the walls are in it now—bare and naked walls! and yet I mind when they were roofed, and dacency within them."

"Who lived there?"

"James Tracey;—but there's a beautiful place upon the hill."

"Tell me of the cottage, Laggin."

"God bless you, ma'am dear, you're cruel fond of hearing of cottages; sure the history of most of them in this country is alike; a wedding, and little to begin with, a power of children, and little to give them, rack-rent for the bit of land, turned out, bag and baggage, for that or the tithe! Beggary, starvation, sickness, death! That's a poor Irishman's calendar, since the world was a world, barrin here and there, now and then, when he gets a sight of good fortune, *by mistake!*"

"But the cabin——"

"Ay, poor James, I mind when he built it himself and the neighbours with him, and the ould landlord was over here, and gave him a promise of renewal of his father's lease, and we wanted James to get the promise in writing; but he put it off, ('twas a way he had, the only fault I ever knew in James,) he didn't like to be bothered about what was coming, when he was satisfied with what was come. Well, the ould landlord died, and after that, the young one raised the rint in course, to get all he could to spend away from us, and poor James felt the want of the lease, for a dead man's promise is seldom thought of except by those who want to see it fulfilled; by this time he had a young heavy family about him, and he depinded a good deal out of an ould bachelor uncle of his dying and leaving him all he had—*which was more than would fit in a midge's eye*—and this hindered him from doing what he otherwise would have done: but it's ill waiting for dead men's shoes—sorra as much as would pay for a stone of praties did he ever get from that same man. Well, ma'am, gale day came and came, and he got time at first, and they do say he could have pulled up, but somehow he had got fixed in the way of putting off, putting off, and one thing went to rack, and another thing to rack, and James got a hurt in the back from his horse, which he neglected to fasten in the stable; and he'd pass the length of a summer's day, propped against a post which stood at the gabel end of the house, doing nothing only fuming with a neighbour or keeping the hens out of the cabbages; and so, in the long run, every thing was distrained, and James turned into the road, himself and his children. It's little the landlord got by distraining, for no one would buy, nor no one would take the land over his head, *for a reason they had*, until a north countryman ventured; and sure it wasn't for want of the warning that himself was shot one harvest night against the very post where James used to stand; if you turn about you can see the spot now, madam, though we're so far from it—there, against that post, and the house burnt, and three or four in it, and James himself, to crown the matter, and two more, hung for the same!"

"How dreadful! and all originated in the ruinous habit of procrastination!"

"Oh sure you're going back entirely to say that, though maybe you're in the right. What's left of

* Sense.

the children are scattered through the counthry with one friend or another—and the poor mother —Christ defend us !—here she is !—now for God's sake don't gainsay her—maybe she won't speak—only don't gainsay her—she's wild mad."

A slight tall woman had ascended the opposite side of the hill from which we were looking down upon the cottage that had been the scene of such a horrid act, and she came upon us so suddenly that the narrative, united to her singular appearance, gave me a shock I shall remember to my dying day. She wore a petticoat of black stuff, and a short cloak and hood of the same material; her legs were bare, and her feet thrust into shoes much too large—they were strapped over her instep by leather thongs; she had on neither cap nor bonnet, and her hair, which once must have been beautiful, hung in grey matted tresses over her bosom; the hood was thrown back, so that her features were fully exposed—they were low and flat, but the expression of her large blue wandering eyes was fierce and fearful! She advanced, curtseying at every step, towards us—we had been walking up the hill—and though she did not ask charity, I placed a small silver coin in her thin hand. Our guide was behind, or rather more to the right than we were, so that the maniac's eye, resting on him, would be led in a direct line to look down upon her once happy home.

"Save ye kindly, this fine morning," he said in a kindly tone. She turned quickly, looked at Laggin for a moment—then tossing her arms wildly in the air, uttered a long, loud, and appalling scream—I never before heard such a sound —it reverberated through the air like what one imagines would be the howl of those doomed to eternal agony—and then, as if exhausted by the effort, she sank on her knees on the earth, her right arm extended towards her cottage.

"Leave her alone—she'll come to presently; there's one of her boys—*an innocent*—an' he's not far off; he tends and tracks his mother whereever she goes."

The man had hardly finished speaking when a squalid, ragged youth of about fifteen crept from among some underwood—a copse of mingled furze and hawthorn—and without heeding us commenced turning her round. She appeared to have become rigid, for he moved her as though she were a kneeling statue, and having accomplished his purpose, which was to withdraw her from looking towards the ruined cottage, he sat on the earth beside her, staring up into her face with the calm quiet air of one whose feelings are deadened—yet who once felt. I never saw so affecting a picture of human desolation as that mother and son, in sight of their blasted, ruined home!

I rarely see an Irish beggar, and I never hear of an *Irish natural*, or *innocent*, without calling to mind one of the most unoffending of the latter class, whose acquaintance I made amid the beautiful ruins of Dunbrody Abbey. This splendid relic of the olden time is situated in the barony of Shelbourne, on the banks of the river Barrow, and well repays the traveller for the trouble of visiting its extensive remains: the site is well sheltered, and possesses the advantages of inland navigation—those jolly monks had right good taste, and chose the situation of their monasteries with both wit and wisdom. The interior walls of the church are in a beautiful state of preservation, and on each side of the chancel are three vaulted chapels. The great isle is divided into three parts, by a double row of arches, supported by square piers; the inside of those arches is ornamented by a rich moulding, which springs from beautiful consoles, and conveys an idea of the enormous care and expense that must have been bestowed upon the building. The tower appeared to be rather low in proportion to the extent of the whole, but it is supported by a magnificent arch: there is a sort of narrow walk on the summit of the walls, which commands a superb and extensive view of the adjacent country. The cloisters appear to have been spacious, but their foundations alone remain, and it was curious to trace them out amid the weeds and long grass which waved and triumphed in all the pride of summer existence over the relics of antiquity. Nearer to the centre of the abbey are a number of ruined walls, which indicate where the hall, the refectory, and the dormitory stood. I can fancy nothing appealing more powerfully to the imagination than these noble ruins.

"Two or three columns, and many a stone,
Marble and granite, with grass o'ergrown!
Out upon time! it will leave no more
Of the things to come, than the things before.
Out upon time! who for ever will leave
But enough of the past for the future to grieve
O'er that which has been, and o'er that which must be,
What we have seen our sons shall see;
Remnants of things that have passed away,
Fragments of stone raised by creatures of clay!"

We all value, while we mourn over, the ruins of the past—and the greater the desolation the greater our regret. The western window of this noble pile is of an uncommon form, and though nearly entire gives symptoms of a decay which a little care and attention on the part of the proprietor might easily prevent. The door immediately beneath it is very magnificent, being adorned with filagree open work, cut out of the solid stone, and so raised as to allow a finger easily to pass under its carvings. It was a fine day in August when we walked up the avenue leading to this time-honoured ruin; the dimness of the morning had brightened into sunshine, and the dark masses of ivy contrasted brightly with the grey stone and light green of the fresh grass, while the many tinted mosses appeared like an exquisite mosaic of rich and curious tracery.

As we entered one of the outward courts, a troop of innocent calves, frightened at our appearance, crowded beneath a gateway, where, perhaps, Richard, Earl of Pembroke had often stood in his shining armour, and looked upon the increasing walls that now crumbled beneath our feet. The silvery Barrow murmured on its way, and could have told us much of what its waters witnessed in the olden time of fray and foray, of banquet, fast, and stately pageant. While we paused and looked upon Dunbrody with that species of awe which enforces silence, the puny

sound of a tin trumpet quivered upon the air, and would have made little impression upon us, had it not been followed by a shout of loud yet heartless laughter.

The church is protected by a gate; and as we wound round one of the towers to gain the entrance, we encountered the idiot, who had been making merry within the sanctuary. He was a tall, slight youth, with large, lustreless eyes, not unlike "poor Johnny, poor Jack," of Wexford memory, save that in his person he was delicately clean; and his dress was so fantastic, that I cannot resist the temptation of describing it.

He wore what are called Hessian boots, with white pantaloons. His jacket was tight; but, with the exception of the sleeves, it was impossible to tell what materials it was composed of; for behind hung a sort of rude, short cloak, made of the fur of hare, rabbit, fox, and, I really believe, every animal "that ever wore a hairy skin." Around his neck were suspended a tin trumpet and various baubles; amongst them shone conspicuously a huge leaden watch, upon which, poor fellow! his eye often rested. His flat fur cap was adorned with a number of long scarlet tassels, that floated over his shoulders as he moved restlessly from place to place. There was an air of gentility in his manner, a gentle courtliness in his salutation, and a tastefulness in his piebald costume, which conquered both the dread and dislike I feel towards "Irish naturals." We speedily became acquainted. He told me his name was Johnny Welch; answered every question I chose to ask. "Where did he live?" He lived here; he loved the ould Abbey; he knew every stone, every turn of it. It was a fine ould place—a *pleasant* place to live in.

"Where did he sleep?"

"In there," (pointing to a low vaulted room,) "in there he slept *with the dead men:* there was a heap of their bones."

"Was he not afraid?"

He laughed wildly. "No; what had he to be afraid of? Would he root up some of the dead men's bones for my honour to look at?" and before I had time to reply, he threw himself upon a heap of clay, and insinuated his long muscular fingers into the earth so effectually, as to bring up bone after bone with the rapidity of lightning. These relics of mortality he briefly descanted upon, as he tossed them from him, to "root" for others. "There's a skull, a fine skull, a big skull, hould a dale o' brain: the people long ago had a power o' wit! There's a bone, a thigh bone, a great soldier, maybe, a strong bone! I sleeps upon dead men's bones. The Abbey's a pleasant place! There's a *weechy* bone, a lady's arm, a pretty bone! Shall I root more for ye? Another skull! There's a hole in it: a murdered skull. Hurrah for the fight! hurrah for the fun! Shall I root more for ye?"

I felt my heart sicken; it was such a painful lesson to see that poor idiot boy sporting so fearlessly with the relics of mortality; to note the eagerness with which he disinterred those memorials of decay; to see folly and rags fluttering like a butterfly over what once contained the essence of God's own spirit.

I was really sick, and leaned for some moments against a pillar before I could leave the painful spot. At last he turned his head, and looking up kindly in my face, he exclaimed, "Lady grow pale! bury the bones!" which he did so quickly and so effectually, that in three minutes the sun's rays rested only on a mound of fresh turned earth.

Amongst other things that were slung round his neck was a fox's head. We wanted him to sell it. "No, he would not, Colonel Piggott and the gentlemen of the hunt would go mad with him if he parted with it; he loved hunting, he often went hunting with the gentlemen, they were very good to him, why then should he give away their fox's head?" Not even a bright shilling should tempt him to part with it. Poor fellow! I shall long remember Johnny Welch as the most pleasing fool (notwithstanding his taste for bones) I ever encountered. The generality of Irish naturals are the most disgusting specimens of humanity produced in any country; but Johnny was clean, and (but for the vacancy of look, and the universal habit that idiots possess of turning in their toes) exceedingly handsome, and even graceful in his appearance; he solicited no charity, pleaded neither hunger nor poverty, and though he followed us over the abbey, he did not speak except when spoken to, and evinced a mild and gentle temper.

I learnt from two shepherd boys that Johnny's mother was a respectable widow, that she would give "the world and all if her son would stop at home with her, which he was too fond of the ruins of Dunbrody to do, that he was born *innocent*, and that every body liked him."

This I could readily believe, for as we were about to enter our carriage I felt sorry to think I should never see poor Johnny again. I turned to bid him adieu as he was seated on the wall which separates the lands of Dunbrody from the road, looking a fantastic figure to so magnificent a back-ground; there he sat, his broad flat watch resting on his open palm, while his gaze was earnestly fixed on its motionless hands.

THE WINDOW DUTIES.—It is not generally known that all persons assessed to the window-duty are, by an act passed the last session of parliament, empowered immediately to open, free of extra duty, any additional number of windows in their dwelling-houses. But if any new building be attached to a dwelling-house, or any communication be opened with any adjoining premises, the windows in the same will be charged with the duties already assessed. The same exemption will apply to persons not assessed, by reason of there being less than eight windows (exclusive of the front shop windows) in their respective dwelling-houses. Composition for window duties will entirely cease on the 5th of April next. The above important exemption will prevent surveyors from making surcharges on such duties.

From the United Service Journal.

POLAR SCENES.—NO. I.

The Polar expedition left Deptford on a beautiful morning in May, 1824. The season was far advanced, spring was just budding into summer, and its exhilarating aspect corresponded well with the elasticity of the adventurous mariners. The expedition was towed down the river by government steamers, and our smart lieutenants had not failed putting the ships into crack order. The sails were neatly furled, yards squared, and ropes as taut as a harp-string; so that we had full time to admire the rich beauty of the surrounding scenery, which, under any circumstances, much less the novelty of ours, it was impossible to pass unnoticed. The meridian sun shone brightly on that land, which, happy in its freedom, stood pre-eminent for its maritime greatness. A few light passing clouds varied the beauty of the scene, throwing their fleeting shadows on patches of rich verdure; and the *coup d'œil* lost none of its charms from the parting cheers which greeted us from every passing vessel,—cheers that were flung back on the air by our crew with animating wildness, until their reverberating echo died away in the recesses of the woody landscape.

In looking over my journal of that memorable epoch in my nautical career, I find many little events recorded which I pass over in these fragments, as too trivial to amuse the general reader, however much they may interest me from their forming a link with the daily occurrences of the voyage, and thus leading to many minor, yet pleasing recollections. Our sojourn at the Nore was short, and by no means agreeable; in fact, on leaving our moorings at Deptford, we had broken the ice of our enjoyments in England, and we were not the less anxious to set about breaking it more effectually in the arctic regions. Then again we had the usual scene to contend with on pay-day, between Jews and Gentiles, and the confusion consequent on that heavy day of reckoning, to say nothing of the departure of the sailors' wives or their *etceteras*. Not being blessed with an encumbrance of the kind, either way, my heart was light on the occasion. The rough untutored efforts of some of the sailors to check the falling tears of their better halves—and the clumsy manner in which they endeavoured to console them—was to many of us a subject of laughter and merriment; and, although many of our fair companions had rendered themselves very useful to us in hemming our towels, table-cloths, and sheets, I blush, even at this distant period, when I think how little we sympathised with their sufferings; and many of the poor creatures did suffer intense grief in being torn from their husbands.

One of the strongest men in the ship, and one of the best, came to my cabin a few minutes after his wife had left him, with a sorrowful, downcast countenance, struggling to conceal feelings, which, as an old and weather-beaten seaman, he almost felt ashamed to exhibit. I guessed his errand, and gave him a glass of grog—a regular *Nor'-Wester*—he swallowed it in silence, winced a little, wiped his mouth with the sleeve of his jacket, and casting a momentary glance at me, touched the rim of his tarpaulin hat and retired. We sailed from the Nore on the morning of the 19th of May. The day broke in with drizzling showers, and the last cheer of those friends who had passed the night with us, and were returning to town in the steamer, broke mournfully on our ears.

The first object that attracted our attention after we crossed the Atlantic differed in no small degree from the subject of my preceding observations: for who will presume to compare a woman to an iceberg? The first of those magnificent objects we saw had an appearance so splendid, so unlike any thing I had ever seen, that the impression is not likely to fade from my memory. Its first aspect was that of a very high uncultivated mountain, and when, in a few minutes, it changed its character, it resembled the most noble castellated structure the mind can conceive. Then again it was canopied by light passing clouds, the clear outline of its irregular pinnacles becoming less and less indistinct, until, gradually receding from our view, they were blended with the misty vapour which obscured them, and the immense fabric of frozen water seemed to melt into air. Towards evening the bright tint of the western horizon indicated our affinity with the ice. The light and vivid colour which was reflected in the heavens, gradually softened in its declination towards the margin of the sea, until its ethereal aspect assumed the soft azure of the ultra-marine.

On the following morning we cast anchor in a small compact harbour on the coast of Greenland, which proved to be a Danish settlement for the transmission of oil to Europe. A few irregular huts, more resembling small hummucks in the land than human dwellings, lay scattered, in close keeping with the sterility of the scene, on the inner part of the island. The governor of this rude little colony was a native of Denmark, and had under his jurisdiction about a hundred beings, male and female, of the Esquimaux tribe. In their dress and appearance they exactly corresponded with the wilder groups of their fraternity seen on former voyages; but there was one among the number who claimed a closer and more intimate affinity with the civilised world.

Cara Moosefelt was the servant of the governor, the companion of his wife, and a general favourite on the island. It was said that her father was a Dane, and her mother an Esquimaux; and her features testified her claim to the mutual proximity. Cara was the orphan daughter of the governor of an adjacent island. Her features were a little too large to be strictly feminine, still they were delicately fair and expressive—her figure was commanding; and had it not been for the Esquimaux touches which were here and there exhibited, Cara might have passed, on the coast of Greenland, for a handsome girl: she was beautiful. Her general outline was, however, rather masculine, owing perhaps to the slight distinction observable in the aboriginal costume of the natives: she had the largest and the finest blue eyes I ever beheld. The governor sent poor Cara to a neighbouring island, just as

we were getting acquainted with her. There was scarcely an officer on the expedition who did not give her a present.

There was a man upon the island named Peter —a quick, active, intelligent jack-of-all-trades, but master of none. Peter's avocations were spiritual, as well as temporal. He was carpenter, shipwright, priest, pilot, and interpreter. His knowledge of the hidden rocks in the harbour was so accurate, that he had scarcely taken charge of the Hecla ere he placed her upon the only one to be dreaded; an event which nearly made as large a breach in her bottom, as it did in Peter's maritime reputation. Peter gave one of the officers a dog, of the Esquimaux breed, which turned out as great a rogue as its master.

It is not intended in this fragment to give a diary of the polar expedition in 1824. Months may therefore often intervene between the events here narrated. Exposed to the uncertain alternations of wind, weather, and ice, the ships were at one moment firmly locked in the latter, and in the next they were free on their native element. Scenes of calm and sunshine were succeeded by the dismal howl of the tempest, which, on one occasion, threatened them with destruction. The month of August commenced with as tremendous a gale as the oldest mariner on the expedition recollected. The ships were closely hemmed by the ice on all sides—no one knew its extent; but the pressure indicated not less than a hundred miles. It was the Sabbath day—and the solitary stillness that reigned throughout was only interrupted by the wild scream of the ivory gull in its struggle to catch the fragments of food that lay in the pools of water on the ice. The expedition was engaged in prayer, which gave the scene an awful air of solemn grandeur, seldom, if ever, to be equaled. It was impossible for man to witness it and not feel his insignificance. One of the ships was forced over on her broadside, and we knew not the moment she might be crushed to atoms. When danger points to eternity, we feel the doubtful tenure of our existence, and tacitly acknowledge the wonderful works of the Creator. On the following morning the weather was calm and serene; the young ice had formed like a looking-glass around the ships, in which they were reflected with astonishing transparency. Our friends at home would have given something for so faithful a sketch of the expedition.

On another occasion we were very nearly lost. The night was closing fast—the sky looked fierce and angry—clouds, black and lowering, followed each other in rapid succession—the waves sparkled with phosphoric brilliancy—and the drifting ice was pressing the ships towards the rocks. The threatened gale came on, but with a sudden change in the wind—sudden and providential for us—as the position of the vessels was critical and perilous. Had the wind veered but one point in the opposite direction, no human effort could have saved us.

The following instance of maternal anxiety, evinced by a large bear for the safety of its offspring, occurred shortly after we reached our winter-quarters; and affords a striking example to many of the human race. She was seen with her two cubs about half a mile from where the ships lay. Our Esquimaux dogs gave chase, and the unwieldy animal, finding her retreat to the land cut off, made for the edge of the ice at the entrance of the harbour, where the sea was still partly open. The swiftness of the dogs exceeding that of the young cubs, the mother kept in the rear of her offspring, acting on the defensive, and nobly contesting every inch of ground until she had effectually covered their retreat. After they had taken the water, her sagacity told her to keep her enemy at bay until the young ones were comparatively beyond their reach. This she persevered in with remarkable courage until she considered them free from danger; then suddenly wheeling round, she plunged into the sea, and swam boldly after her progeny. The poor mother had, however, another enemy to contend with.

While she was engaged with the dogs, a party of our seaman had launched a boat over the ice, but not before the bears had swam nearly a mile from its edge. At this period of the chase there were few on board who did not feel a lively interest in the result. The scene was unusually animating, the animal had identified itself with the best feelings of our nature, she had fought with desperate energy for the preservation of her offspring, and I confess that I, for one, almost hoped she might escape. As the boat approached the bears, the parent seemed bewildered in her painful anxiety for the safety of her cubs. Wholly regardless of her own danger, she dived repeatedly, and alternately supporting them in the water, she endeavoured to urge them forward. When they were wounded she dived again and rose to the surface so as to place them on her back: thus singularly balanced, she swam with her offspring in that position until her destruction was accomplished.

Shortly after this event, the following singular accident occurred to the gun-room steward of the Fury, whom, as he was an original in his way, and contributed much to the amusement of his shipmates, I shall endeavour to describe. The different climes he had served in added at least ten winters to a constitution never very strong; his life, from the age of fifteen, had been that of a wandering mariner; he could boast of having been thirteen times closely engaged with the enemies of his country; he hated a Frenchman as he did the devil, and a Yankee ten times worse than that; was severely wounded in the deadly conflict between the Java and American frigate United States; and having survived the maladies incidental to the tropical climes, was doomed to close his checkered career on the desert shores of the polar regions.

Although naturally free and easy in his manner, Cottrell never forgot that respect with which long habit had imbued his mind, and which, with the officers, gave him the privilege of saying many things that could scarcely have been countenanced in any other man on board the ship. With the crew he was a licensed demagogue, the leader of all mischief—popular, but never factious: nevertheless he told them their faults, lectured them indiscriminately on their delinquen-

cies, and had always some little, good-humoured anecdote, applicable to the moment, which seldom failed to reconcile them to the officious interference of their strange monitor.

As the duties of the officers' servants confined them almost exclusively to the ships, it was arranged that they should take a daily portion of exercise; and on a sunny afternoon, Cottrell and two others strolled up a very deep ravine, which led them to a spot famous for specimens of mineralogy. Whilst his companions were hammering every snow-covered block of stone that attracted their notice, he lay down on the brow of a hill and fell asleep. On waking, he perceived a large bear within a few yards of him, and looking round for his fellow-servants, neither of them were to be seen. Cottrell felt himself tremble from head to foot; he arose and ran, as he thought, in the direction of the ravine; the bear pursued him. Feeling almost exhausted from the excessive weight of a clumsy pair of cloth boots, he kicked the unwieldy incumbrance, one to his right, the other to his left, and darting forward with renewed speed, threw himself from the edge of a steep cliff six hundred feet high.

The poor fellow was discovered lying on the ice, within a few yards of the ravine, frightfully disfigured. His head was cut, his body much bruised, and the soles of his feet were dreadfully lacerated—he was alive, but insensible. His companions brought him on board; they could give no tidings of the affair, but when he himself recovered his senses, he told his story in the manner I have described it, and then fell into a refreshing sleep. Next day, however, not the slightest track of a bear could be discovered; though the man's footsteps were clearly traced.

Cottrell's recovery was slow and doubtful; when, in a convalescent state, he again sallied forth on another ramble, the last the poor fellow ever took: at this period the ice was opening in the channel, the birds were migrating to the northward. Cottrell wounded a little dovekey which fell into a pool of water, where it lay helplessly fluttering its wings. In his effort to reach it with the but-end of his fowling-piece, he overbalanced himself and fell into the pool, and was drowned. Cottrell had a gloomy presentiment that he should never leave Port Bowen. A few days before his death I saw him standing on the forecastle, gazing on the only spot of land which exhibited marks of vegetation. Turning to address me, he pointed to it, and said, with a smile of sadness, "That spot will be my grave, sir"—in less than a week the poor fellow was laid there.

About the middle of November, we began to feel the dreary approach of a polar winter. A feeble gleam of light still faintly tinged the southern horizon, while the opposite direction assumed the sombre shade of night. The almost dazzling whiteness of the grotesque hummucks of ice, that lay scattered in irregular masses on the plane, formed a strange contrast with the soft, purple shade of twilight. The full moon shed its pale lustre on the lonely scene, and the colours which it reflected on the ice were chaste beyond conception. The planets twinkled in their orbs, and Jupiter shone brilliantly at the hour our friends in the English channel might be taking a meridian altitude of the sun. The aurora borealis was often visible, and on one occasion it formed the most perfect arch I ever beheld, rising in a single line of brilliant light in the southeast, passing through the zenith, and terminating at the verge of the horizon in the opposite point, thus dividing the circle into two equal parts: after this its coruscations were beautiful.

The thermometer about this time stood at 30° of Fahrenheit below zero; and when the wind blew, the cutting pain inflicted by the cold on the face—the only part of the person exposed—can only be compared to the pricking of so many hundred of the finest needles. The frost accumulated so rapidly on the eyelashes, that had not the warmth of the hand been constantly applied, the external margin of the lids would have been frozen.

Christmas arrived—that merry season of the year, when every person, from the most exalted to the most humble station in life, feels disposed to lay aside their cares and be happy. Even in the cold, inhospitable region of the arctic clime, the friendly greeting of "A merry Christmas!" had something in it to cheer the dreariness of the scene, while it recalled to the memory of our little colony individual recollections of happiness. At noon the captain and officers assembled to view the domestic arrangements made by the crew on the occasion. The mess-tables on either side had on an English washed table-cloth, a luxury the officers could scarcely boast, and the usual appendages for dinner were neatly disposed. But there was one placed exactly in the centre of the ship, and twice the length of the others, which particularly attracted our attention: it will scarcely be imagined that the damask table-cloth had been purchased in England for the express purpose. Salts at each corner, with wine decanters to correspond, silver spoons, and a slice of bread at the side of each plate, had been judiciously arranged under the superintendence of the captain's steward. This was the mariners' mess. When the dinner drum had beat "The Roast Beef of Old England," three of the leading men in the ship presented a slice of plumcake and a small glass of brandy to the captain and each of the officers, who drank to the health of the crew and a speedy passage into the Pacific. Three hearty cheers followed.

The officers held their festival at a later hour in the day. When the expedition touched at the Shetland Islands, some salted soland geese were purchased, of a tolerably good flavour: one of these birds had been preserved for the present occasion, and, in order to extract the salt, it was suspended by a string in the fire-hole, (an opening kept free in the ice alongside the ship,) on the previous evening. Our friends, who were engaged to dine with us, knew that we should have the only goose in the ship for dinner, and interest had been made in more than one quarter for the wings and breast. On the morning, however, of the eventful day, the steward announced, with a precious long countenance, that the shrimps had

made their Christmas meal on the goose, for on pulling up the string, he found nothing but the skeleton, the bones of which were as clean as if the body had undergone the preparation of an anatomist. "I thought it felt rather light," said he, "when I was hauling it up."

"Never mind," said our wily caterer: "say nothing of the affair; but when dinner is placed on the table, put it before me under a large cover-dish."

The guests assembled. Those who bargained for the wings and breast rubbed their hands; their eyes sparkled as they glanced towards the cover. "What kind of a goose have we here, steward?"

"I never seed a finer one in my life, sir!"

Another rub of the hands, and another eager glance at the caterer from the candidates for the wings and breast.

"Take the covers off," said the caterer. All were removed, that before him being left to the last, "that the goose," as he observed, "might not get cold." At length the skeleton was exposed, and the astonishment of every one obliged the steward to scamper out of the room as fast as his legs could carry him. In a few minutes the lively cheers of the ship's company told us they participated in his merriment.

Accustomed all our lives to consider the new year a kind of half-way house in our passage through the winter season, we could scarcely dispel the cheerful illusion, although we knew that we should be seven months longer locked up in our present dreary quarters. The limited festivities of our Christmas *revel* softened in some degree the rigour of our isolated position. Placed by the care of God in the centre of a lonely valley, in regions hitherto unknown to man—surrounded by a continent of ice, which none but the master-key of heaven could open—the passing incidents of our solitary exile could only interest the little band of adventurers thus singularly thrown on the resources of each other. Where is the man, who, not having seen the sun for one hundred and thirteen days, could say that he did not feel himself estranged from the living world and its social enjoyments?

General Post Office.—The new act of parliament has lately come into operation, by which stamped newspapers may henceforth be sent to any of his majesty's possessions and colonies beyond the seas free of expense, and received from the same, if put up in covers open at each end, with no other writing or print than the name of the parties to whom sent: newspapers printed in foreign colonies, and in the language of such colonies, may be received as formerly on the payment of three-pence postage. Newspapers may be forwarded to France, and other parts of the continent, on the payment of two-pence when put in the foreign post-office here, and received from the same states on the payment of two-pence, if printed in the language of such state.

New Monthly Magazine.

From Blackwood's Edinburgh Magazine.

WILLIAM PITT.

The memory of great men is the noblest inheritance of their country. All other distinctions are perishable. A few centuries have covered the most intellectual regions of the world with the deepest barbarism. National valour, the spirit of national sacrifice, the noble and natural pride of public supremacy, all that was great in the nature, the ambition, and the power of a nation, is exchanged for debility and decay, or survives but in the form of some faint memorial, mutilated sculptures round the tomb where the dead glory of the people slumbers. But the character of her eminent minds is unassailable by the process that humiliates the strength and dignity of the nation. Their ordeal is past; they have reached the point at which fame is inevitably their own. In passing to the grave, they have secured the honours, which to all the living must be still liable to the common chances of things. The nation may go down, and be submerged in the common tide of human casualty. But their fame stands up, like the mountain tops in the deluge, the last retreat of the national hope and virtue, the first point from which they reissue to possess and restore the land.

William Pitt was one of those men whose mind shaped his time. Fortunate for the vigour and purity of our own time, if that mind were to be taken as the model of living British statesmanship. The subject is at this hour more important than ever. The destinies of England are more and more approaching to that crisis, in which their good or ill depends on personal character. Pitt was formed to carry the empire through a convulsion altogether new, fierce, and beyond the calculation of the old public wisdom of Europe. At this hour, the statesman may be forming, on whom is to depend the pilotage of the empire through a tempest, of which the fury will be equally beyond calculation, the trial more severe, and the elements more powerful, wilder, and more unknown. Pitt saw the continent with one revolution in its centre, and that revolution enough to shake Europe. The statesman who is yet to succeed in the high and solemn task of sustaining the name of England through all her trials, may see every kingdom the centre of a revolution; the solitary Jacobinism of France forgotten and eclipsed by a universal hostility to throne and temple; popular passion inflamed into boundless frenzy; and the earth involved in one reckless and measureless confusion of war, conspiracy, and infidelity. To the man and his age, the study of the life of William Pitt, and of the years in which he achieved the triumph of his principles, must be the most essential and productive employment of their wisdom, the most speaking lesson to their experience, and the most assured and cheering pledge of their ultimate safety. They will find in his personal character the solid connection of private virtues with public fidelity; no factitious and glaring professions of impracticable patriotism; no degrading submissions to the popular cry; no desperate experiments on the public security, to grasp at a sha-

dowy and fugitive power, and they will find the success commensurate to the integrity of the principles; public difficulties that seemed insurmountable, rapidly overcome; disaffection at home converted into emulous loyalty. The broken system of Europe rebuilt into one superb confederacy; the fallen fortitude of the continent suddenly inspirited into invincible courage; the revolutionary idol which disdained to be fed with less than the blood of kings, and sat enveloped with the smoke of human hecatombs, resistlessly torn from its altar, and cast into its own flames; an unexampled war, which involved all Europe, and menaced the dissolution of every tie of nations and of man, closed by an unexampled triumph, in which all Europe shared, and which established a new bond of friendship and mutual reliance among all its kingdoms.

The history of Europe is imperfectly and obscurely written, if the historian forgets to look to Providence. But the history of our own country forms one of its finest illustrations. If it had been contemplated by man in the middle of the eighteenth century, that at its close the French revolution should shake the continent, and that England should be the great agent in the hand of Providence, first to protect mankind from the fatal supremacy of that revolution, and next to overthrow and extinguish it in the very spot where it first started upon the human eye, no measures of provision could be more distinctly and powerfully preparative than the apparently simple contingencies of England from the end of the Seven Years' war. The peace of 1762 had tranquilised Europe, but it was the abortive tranquility of a truce. War was at an end on the continent. Austria had been baffled by Prussia, but Prussia was exhausted by her victory. No German power remained, of sufficient strength, to revenge the ravages of both. France had lost armies, and what she valued more, laurels. Russia, scarcely recovered from domestic murders, and employing her resources in doubtful hostilities with the Ottoman, was scarcely recognised as a European power. England, flushed with victory, had gained all the prizes of the war, an unlimited territory in the New World, the French West Indies, a new empire in the East, and the unquestioned influence of a power of the first order on the European system.

The natural peril to England, in this condition of safety and superiority, would be, that she might relax the sinews of her strength; that without an enemy to dread, she might cease to be warlike; that with hourly increasing opulence, she might become surcharged with indolent voluptuousness; and that with a population rapidly rising in the consciousness of its own influence, she might be tossed about by every gust of republicanism. All those contingencies would have been formidable hazards under any condition of the surrounding kingdoms. But the nature of the coming crisis, utterly unascertained as it was by man, must have rendered the hazards almost certain ruin.

If, a quarter of a century before the first meeting of the national assembly, the angel of the future had drawn up the curtain, and revealed to some great English mind the characteristic form and features of the French revolution, its universal spirit of aggression, its conversion of the whole power of the state into war, its hatred of all settled authority, and its universal appeal to the power of the populace at home and abroad; what would be the qualities which such a mind would require to see, as first and most predominant in England, if she were finally to rescue herself and redeem others from the general danger? The answer must be, that she would be compelled by circumstances to keep her warlike vigilance in activity, that she should be in some degree even exercised in war during the interval, that she should be directed to the knowledge of those peculiar resources on which she must finally rely, and be taught the especial use of that arm by which the battle was to be chiefly borne, that she must feel the value of a financial system founded on the most accurate estimate of her means, that she should be taught the infinite peril of suffering the populace to become the dictators of her government; that to put the whole machine of public power and virtue in motion, there should stand at the head of affairs some individual whose peculiar talent lay in that management of the public wealth so essential in a long, costly, and exhausting course of hostilities, while his unquestioned general ability, public devotedness, and personal integrity, made the nation look up to him with unbounded homage, and follow his counsels with deferential obedience. Another requisition, of the highest moral value in a contest, which was as much of character as of arms, was, that on the throne should be seated a king, whose manliness, firmness, and religious principle qualified him to preside over a nation, among whom the last virtues of the earth were to find a shelter, religion to make its stand against atheism, loyalty against rebellion, patriotism against treason and the ancient and generous character of royal government against the novel, bitter, and bloodthirsty selfishness of popular anarchy. Is it fanciful to conceive those requisitions? No more so than to remember their necessity. The history of the revolution a quarter of a century after is lying open before the world. There, guided by the ominious light shed from the lamp of the regicide and the assassin, we may trace, line by line, the precautionary wisdom of that singular and effectual discipline, by which England was unconsciously made ready for the most extraordinary and trying contest that ever summoned a nation into the field for the highest interests of human nature.

The peace of 1762 had placed England in the most distinguished rank which she had ever yet attained. All was national supremacy, all was popular exultation. The public feeling of her pre-eminence was so unquestioned, that the nation actually trembled at the sudden overflow of prosperity, and while the language of the politician was, that she must thenceforth prepare to meet the combined jealousy of all nations, the philosopher pronounced, that as the wheel of change was in continual motion, and she had now risen to its summit, she must thenceforth make up her resolution to descend.

But all history seems written to baffle the pride

of human prediction. From the hour when her sword was laid by, the spirit of England began to be exercised in civil contests, menacing in appearance, but of the first importance to her constitutional vigour. The quarrels of Wilkes with the government, the struggles of rival leaders for the cabinet, and the excited feelings of the nation from both causes, kept the country in a perpetual state of that uninjurious activity, which is the finest school for civil knowledge. The few remnants of ancient despotism clinging to the constitution were rent away in the contest; and in the midst of much popular violence, party follies, and national alarm, freedom gained at every advance, until every man of sense and honesty felt that not the shadow of a feudal fetter remained on the noble proportions of English liberty. The discussions with the American colonies followed, and they were rapidly exacerbated into war—a war which now lies too deep among the crimes of the past and gone for us to revive its memory, but on whose tomb the most lenient hand, if it be the hand of truth, must inscribe popular profligacy, unprovoked rebellion, and filial ingratitude. But that war was made the direct means of preparing England for the coming hostilities, which were to summon all her force. Even the peculiar nature of the war seems to have belonged to that system of foresight which turned all casualties to the great future emergency. It scarcely occupied a fragment of the military force of England. It largely occupied the naval. After a long period of necessary inaction, it compelled England to feel that the navy was her right arm; it disciplined that navy, by frequent encounters, into almost a security of future success; it turned all the triumphs of England in the direction of the navy; it showed her that if the time were to come when she must fight the battle of law and liberty against combined Europe, the navy was her strength, and in that strength she might fight the battle.

When the war ceased, the naval vigilance of England was sustained by the singular event of a naval coalition in Europe. Russia, rising into power and jealousy together, Sweden, almost her vassal, and Denmark in terror of both, confederated, in the well-known armed neutrality, to break down the power of the British Empire. The principle, that "free ships make free goods," was contradictory to all justice, for it obviously sanctioned the supply of a British enemy by a British ally; involving at once a contempt of all diplomatic obligations, a defiance of common justice, and a burlesque of common sense. Holland, then the base and mercenary trafficker with all nations, in scorn of all treaties, was an eager party to this general Jew-dealing with the principles of national trade; and bitterly and soon she had reason to repent her substitution of swindling for honour. The Armed Neutrality gave way before the firm countenance of the English cabinet, and the feeling of its own treachery. But the effect on England had been produced. The navy was found to be the supreme national protector; the naval spirit of the nation was sustained in its unimpaired vigour, and when the true necessity was at hand, the English fleet was found prepared in all points, of numbers, discipline, and national favour, to begin the contest with a superiority of physical and moral force, which never failed in a single instance during the revolutionary struggle.

But, as if for the purpose of making the proposition complete in every respect, England was to be taught a resistless lesson of the dangers of popular supremacy. The riots of 1780, unaccountable in their origin, and trivial in their results, yet displayed the terrors of popular passion, in a degree qualified to impress the nation for ever. England saw with astonishment a multitude, which had assembled from motives avowedly religious, justifiable, and national, suddenly touched with a fury which flamed out into public devastation, and whose limits no man could hope to define. Of all the violences of popular power, this exhibited the evil in the most direct, broad, and naked form. In other instances there had been a popular leader, a cause, an oppression, an anarchy engendering license by its habits, some bold prejudice operating on some glaring iniquity of power. But the burning of London was due to the simple will of the mob, with no leader but a ridiculous and half-witted religionist, no conceivable oppression, no denial of justice, no rejected claim, nothing to stimulate the multitude to the most horrible atrocities, but the mere sense that it had the means. Armed with this sense, 40,000 of the rabble, not a thirtieth of the population of London, held the capital in alarm for three days and nights, marched through it like a conquering army, plundered and burned at their will, threw the court into terror, the government almost into dissolution, and shook all but the firmness of the brave and manly king. The tumult died away, as rapidly as it rose. But the lesson was of infinite value. It was not forgotten when the first gatherings of the revolutionary clouds in France began to throw their shade on the shores of England. The sounds of the tempest at a distance prepared the steersman of the British ship for the last extremities of the visitation. The clamours of conspiracy in England were instantly answered by the national voice of loyalty. The speciousness of popular deliberation, regenerated rights, and the new age of rabble legislation, were specious no longer to the eye which had seen the rights of the populace registered in the flames of the capital. The minister was called on by the national experience to guard against the boundless calamity of a government with its throne in the streets, and its councils in the uproar of robbery and massacre. Jacobinism protested its innocence in vain. The names of philosophy and philanthropy figured largely at the head of the memorial by which France pleaded her treacherous and sanguinary cause before Europe. The English minister was already warned, he looked to the body of the document, and showed that it was a proclamation of democracy and treason. The universal answer, and the true one, to all the advocates of rabble authority was, —"The riots of '80." The national feeling, without which the highest activity of the government must be ineffectual, unhesitatingly sustained the wisdom of the minister. The warning

had been written in characters which were not to be dimmed by political sophistry, nor effaced by public folly. They had once been characters of blood and ashes, they were now characters of light, and while every finger pointed to them on the wall of the tribunal where the cause of revolution was tried among us, no dexterity could confuse the national judgment, or avert the national decision.

The kingly character essential to the crisis was fully found in the steadiness, sincerity, and public spirit of George III. The ministerial in the illustrious subject of the present memoir.

William Pitt was the second son of William first Earl of Chatham, and of Lady Hester, only daughter of Richard Grenville and Countess Temple. His elder brother, the Earl of Chatham, still lives; his younger, James, died early, a captain in the navy. Of his two sisters, the elder, Lady Hester, was married to Lord Mahon in 1774; the second, Lady Harriet, to the Honourable Edward James Eliot, eldest son of Lord Eliot, in 1785.

At the age of six years, Mr. Pitt's education began, under the care of the Rev. G. Wilson, in Lord Chatham's house, a tuition which continued till he was fourteen; but his health was so feeble that for nearly half this period he was unable to receive any instruction. In 1773 he was sent to Pembroke Hall, Cambridge, his tutor still residing with him, in consequence of the delicacy of his health. But his studies were solely directed by Prettyman, one of the two public tutors, afterwards well known as the Bishop of Lincoln.

There is a natural interest in pursuing the steps by which a mind like William Pitt's advanced in knowledge. On his entrance at Cambridge, his literary acquisitions were found to be of unusual extent for his age; he read all Latinity with ease, and could make his way through half a dozen successive pages of Thucydides, a remarkably idiomatic and condensed author, without any peculiar difficulty. It is a curious circumstance, that by Lord Chatham's express desire, Thucydides was the first book to be put into his hands in college, followed by a direction to his tutor that he should read Polybius with him. The plain perspicuity of the Greek tactician's narrative might have recommended him for the formation of a mind in which clearness and accuracy were to be prominent features; but when we remember that Demosthenes transcribed Thucydides eight times as the model of an oratorical style, we must believe that Chatham was preparing the future fame of his son as the great leader of the British senate.

His understanding soon began to develope itself. His apprehension of his studies was distinguished for clearness and rapidity; he became an exact grammarian, and took delight in the philological niceties of the Greek and Latin. He exhibited equal ability for mathematics, speedily made himself master of all that formed the usual course of college studies, even to the highest branches of the examinations, felt, as we are told by his tutor, "a great desire to fathom still further the depths of pure mathematics," and, as his concluding wish on leaving college for the bar, expressed a hope "to be able to read the Principia again with him after some summer circuit." Even in the more advanced periods of his eminent career, his reverence for those studies had not deserted him. He frequently declared, "that no portion of his time had been more usefully employed than that which had been devoted to those studies; not merely from the new ideas and actual knowledge which he had thus acquired, but also on account of the improvement which his mind had received from the habit of close attention and patient investigation."

He was a great admirer of Locke's Essay; of which he made a complete analysis. But he seemed to think lightly of the subtleties of our metaphysicians in general. The details of his chief literary tastes, given by his tutor, are interesting. He tells us, that in the alternate reading of classics and mathematics with him, the rapidity of Pitt's comprehension was most extraordinary, while his memory retained every thing that it had ever received. His reading was extensive. There was scarcely a classical writer of Greek or Latin which he and his pupil had not read together; Pitt was a nice observer of their various styles, and alive to all their characteristic excellences. But he was also capable of close and minute application. When alone he would dwell for hours upon some striking passage of an orator or historian, in marking their manner of arranging a narrative, or explaining their motives of action. It was a favourite, and must have been a most advantageous, employment with him, to compare opposite speeches on the same subject; and examine how each speaker managed his own side of the question, and obviated the reasonings of his opponent. His chief studies on this head were Livy, Thucydides, and Sallust. On those occasions his remarks were frequently committed to paper, and furnished matter for further consideration. He was also in the habit of copying eloquent sentences, or phrases of peculiar beauty, which came in his way in the course of general reading. The Greek poets constituted a peculiar study, and he even urged this fondness to the extent of toiling through the obscurities of Lycophron. "The almost intuitive quickness," are his tutor's expressions, "with which he saw the meaning of the most difficult passages of the most difficult writers, made an impression on my mind which no time can efface. He possessed indeed this faculty in so extraordinary a degree, and his application to Greek literature had rendered his knowledge of the language so correct and extensive, that I am persuaded, if a play of Menander or Æschylus, or an ode of Pindar, had been suddenly found, he would have understood it as soon as any professed scholar. There unquestionably have been persons who had far greater skill in verbal criticism and in the laws of metre; but it may, I believe, be said with the strictest truth, that no one ever read the Greek language, even after devoting his whole life to the study of it, with greater facility than Mr. Pitt at the age of twenty-one."

Among his classical acquirements he did not forget the writers of his own country. He read the poets with delight, and the historians and politicians with diligence and instruction. He

even wrote verses, and at an early age had contributed his part with his brothers and sisters to a play in rhyme, which they acted before their father and family circle. His favourite prose models were Middleton's Life of Cicero, and Bolingbroke's political and historical works. He read Barrow's Sermons by the desire of his father, who pronounced them an admirable repertory of language. In the university he attended with great interest to Dr. Halifax's lectures on civil law.

For three years after his entrance at college, his health had continued to form a serious impediment to his progress. In 1773, he was seized with an illness which had nearly deprived the world of his abilities. He was so weak on his recovery, that the journey to London occupied four days. But this shock finally confirmed his constitution. Exercise, attention to diet, and early hours, rapidly recruited him after a confinement of two months, and at eighteen he had every prospect of longevity. The incessant toils of public life alone seem to have shortened his bright and powerful career.

In college he was remarkable for propriety of conduct. The son of the Earl of Chatham, the first and most popular minister that England had seen for a century, must have been a conspicuous object of attention and temptation. But Pitt was above the poor celebrity to be gained by violations of order. It is well worth remembering that this youth, at the height of all that life could offer, was to be seen attending the public duties of his college with a strictness which would be meritorious in the student whose conduct was to be his fortune.

No man was more regularly present morning and evening at chapel, and he was never known to pass an evening out of the college walls. In this combination of pure habits with vigorous diligence he passed seven years. "In the course of which time," says his tutor, "I never knew him to spend an idle day, nor did he ever fail to attend me at the appointed hour. At this early period there was the same firmness of principle, and rectitude of conduct" which marked his character to its close.

The strong interest which Lord Chatham took in his second son, the almost prophetic anticipation by which he saw his future eminence, is a matter of common knowledge; but the fondness of his feelings towards this young representative of his genius and his fame was but little suspected in the haughty fabric and bold ambition of Chatham's mind. In passing on to the more public transactions of this stirring time, we may justly pause for a moment over those memorials of the heart of a mighty statesman. It ennobles our sense of human nature, to see that so much nerve and grandeur of mind is compatible with so much tenderness of affection. But the unquestionable truth is, that a large portion of the supremacy of a leading genius must arise from the susceptibility of soul. Nations reluctantly own the sway of the most powerful intellect, when they cannot repose on the feelings of the man. Public assemblies revolt from all the splendours of eloquence, where they are not the emanations of natural sensibility. The orator may have the command of all the treasures of literature and language, but a single word from the heart carries off the prize from them all. He may stand before them like the golden image of the Assyrian king, and counsel their passing and public idolatry; but the unfailing homage is to the invisible spirit of the pure, generous, and beneficent impulses, the impress of the divinity within. Lord Chatham had made the moral education of his children a subject of personal interest from their birth. He constantly associated with them, conversed with them on all subjects of which their young minds were capable, treated them as companions, gave them all opportunities of expressing their opinions, and "never passed a day of health without giving instruction of some sort to his family," and seldom without "*reading a chapter of the Bible with them.*" The benefit of such early lessons is perhaps among the most vivid of all remembrances, even in the turmoil of after life; and "his boy William" became, at an early age, extensively acquainted with scripture. "I had frequent opportunities," says his tutor, "of observing Mr. Pitt's accurate knowledge of the Bible; and I may, I trust, be allowed to mention the following anecdote:—In the year 1797, I was reading to him, in MS., my exposition of the first of the Thirty-nine Articles, afterwards published in my Elements of Christian Theology. There were several quotations from scripture, all which he remembered. At last we came to a quotation at which he stopped, and said, 'I do not recollect that passage in the Bible, and it does not sound like scripture.' It was a quotation from the Apocrypha."

Lord Chatham's first letter was written on his son's going to the university, in 1773. We give a few sentences—"Thursday's post brought us no letter from the dear traveller; we trust this day will prove more satisfactory. It is the happy day that gave us your brother, and will not be less in favour with all here, if it should give us, about four o'clock, an epistle from my dear William. We compute that yesterday brought you to the venerable aspect of *Alma Mater*, and that you are invested to-day with the *toga virilis*. Your race of *manly* virtue and *useful* knowledge is now begun, and may the favour of Heaven smile upon the noble career. * * * How happy, my loved boy, is it that your mamma and I can tell ourselves there is at Cambridge *one*, without a beard, and all the elements so mixed in him, that nature might stand up and say, 'this is a man.' I now take my leave for to-day, not meaning this for what James calls a regular letter, but a flying thought, that wings itself towards my absent William. Horses are ready, and all is birthday. Bradshaw has shone, this auspicious morning, in a very fine speech of congratulation; but I foresee 'his sun sets weeping in the lowly west,' that is, a fatal bowl of punch will, before night, quench this luminary of oratory. Adieu, again and again, sweet boy, and if you acquire health and strength every time I wish them to you, you will be a second Sampson, and what is more, will keep your hair."

The next letter is in a graver yet not less

natural strain. It was written on the young student's recovery from his dangerous illness.—"October 30, 1773. With what ease of mind and joy of heart I write to my loved William, since Mrs. Wilson's comfortable letter of Monday. I do not mean to address you as a sick man. I trust in Heaven that *convalescent* is the only title I am to give you in the ailing tribe. * * But, though I indulge with inexpressible delight in the thought of your returning health, I cannot help being a little in pain lest you should make *more haste than good speed* to get well. Your mamma has been before me in suggesting that most useful proverb, *reculer pour mieux sauter*, useful to all, but to the *ardent necessary*. You may indeed, my sweet boy, better than any one, practise this sage dictum, without any risk of being thrown out in the chase of learning. All you want, at present, is quiet, With this, if your ardour, ἀρετωσιν, can be kept in till you are stronger, you will make *noise* enough. How happy the task, my noble, amiable boy, to caution you *only against pursuing too much* all those liberal and praiseworthy things, to which less happy natures are perpetually to be spurred and driven.

* * * You have time to spare. Consider, there is but the Encyclopedia; and when you have mastered that, what will remain? You will want, like Alexander, another world to conquer."

In a subsequent letter, he thanks "his dearest William" for his affectionate anxiety for the result of a fit of the gout, which had left the great earl an invalid; or, as he describes it himself, "left him behind in the hospital, when his flying camp removed to Stowe. Gout has for the present subsided, and seems to intend deferring his favours till winter, if autumn will do its duty and bless us with a course of steady weather, those days, which Madame de Sevigné so beautifully paints as, '*des jours filés d'or et de soie?*'"

The gout had now nearly sapped the constitution of the earl, and he was subject to violent pains, which almost precluded writing. But his latest correspondence is full of the same fond and *secure* feelings for the progress of his son, whom he evidently regarded as the representative of his mind, if not as the direct inheritor of his political power. A letter, within a few months of his death, thus begins:—"How can I employ my reviving pen so well as by addressing a few lines to the *hope* and *comfort* of my life. My dear William,—you will have pleasure to see, under my own hand, that I mend every day, and that I am all but well." The letter then laughingly alludes to Lord Mahon's (the late Earl Stanhope's) experiments for the extinction of fires. "On Friday, Lord Mahon's indefatigable spirit is to exhibit another *incendium* to lord mayor, foreign ministers, and all lovers of philosophy, and means to illuminate the horizon with a little bonfire of twelve hundred faggots, and a double edifice. Had our friend been born sooner, Nero and the second Charles would never have amused themselves with redueing to ashes the two noblest cities in the world. My hand begins to demand repose: So, with my best compliments to Aristotle, Homer, Thucydides, and Xenophon, not forgetting the civilians and law of nations' tribe, adieu, my dearest William.

"Your ever most affectionate father,

"CHATHAM."

The Earl of Chatham died May 11, 1778, in his 70th year, followed to the grave by the regrets of the empire; and going down to posterity with the fame of the most commanding eloquence, the noblest range of political conception, and the most triumphant statesmanship of the most intellectual, ardent, and successful age of England.

The world of public life was now before Pitt, and to no man was this tempting and powerful career ever more widely expanded. His great father's renown, the popular expectation which had already begun to gather round himself, and the strong inspiration of kindred genius, urged him to the senate. All his studies were thenceforth turned to parliament. He became a constant attendant in the gallery of the house of commons, and in the house of lords, on every important occasion, and exercised his natural acuteness by observing, as each speaker proceeded, how he might be answered; how his arguments might be enforced; what might be added; and especially what might be retrenched. A characteristic of his own oratory, in after times, was the avoidance of repetition, a quality essential to all the influences of public speaking.

In the spring of 1780, he became resident in Lincoln's Inn, and on the 12th of June he was called to the bar, and went the western circuit in the same summer. In the autumn he was a candidate for the university of Cambridge, which lost the honour of returning the most illustrious of her sons to parliament. But in January, 1781, he was returned for the borough of Appleby, in Westmoreland, in the interest of Sir James Lowther.

His first speech in the house of commons (February 26) was nearly accidental. Burke's bill, for the reduction of the civil list, was in debate. Lord Nugent rose to speak against the bill. While he was speaking, Byng, member for Middlesex, asked Pitt whether he would not reply. His answer was a doubtful one, but he at length came to the determination of remaining silent. However, on the conclusion of Lord Nugent's speech, Byng called out his name. His call was instantly and loudly echoed, and Pitt, observing that the house waited for him, thought it became him to rise. His speech was brief, but it gave remarkable promise by its vividness, elegance, and fervour. It was pronounced, from that moment, that the mantle of Chatham had descended on shoulders worthy of its inspiration. The members of both parties were unqualified in their praise. Burke, in his idiomatic style, declared that "he was not merely a chip of the old block, but the old block itself." Fox carried him to Brookes's, where he was elected, and thus was at once brought into intercourse with all the leading men on the side of opposition. But it was soon clear that Brookes's was not his element; he never played; he never gave way to the still more exceptionable habits which were then considered to be almost essential to fashionable society. His

name continued on the books of the club for some years, but its tastes were not his, and he scarcely ever set foot within its walls from the time of his becoming a minister.

In this session Pitt spoke on three occasions, and with equal effect on all. On the last of those, an unpremeditated defence of his father's opinions on the American war, brought up the Lord Advocate Dundas, (Lord Melville,) who declared, "that however unwilling he might be to say in the honourable gentleman's presence what truth would exact from him were he absent, yet, however unusual it might be, he must confess, that he found himself compelled to rejoice in the good fortune of his country and his fellow subjects, who were destined, at some future day, to derive the most important services from so happy a union of first-rate abilities, high integrity, bold and honest independence of conduct, and the most persuasive eloquence." Those were unusual compliments to any man, and still more unusual from the man who paid them. Yet they were paid to a senator of two-and-twenty! But the general sentiment was equally strong. At the close of the session, on an observation being made, that "Pitt promised to be one of the first speakers ever heard in the house of commons," Fox, turning round on the speaker, instantly replied, "He is so already."

Every incident that belongs to the progress of such a mind is curious; and the anecdotes that have transpired in later years of Pitt's short sojourn at the bar are highly interesting. In his first circuit, he was employed in several election causes, in one of which his argument on the admissibility of a point of evidence attracted so much attention, that it was panegyrised by Buller, the judge, a rough son of Themis, whom nothing but singular qualities in any advocate could keep within the bounds of civility. One of those remembrancers, who went the western circuit with him, says, "In a criminal case at Exeter, he exhibited, as junior counsel, such talents in cross-examination, that it was the universal opinion of the bar that he should have led the cause. During his short stay in the profession, he never had occasion to address a jury; but on a motion in the court of king's bench for a habeas corpus to bring up a man to be bailed who was charged with murder, Pitt made a speech which excited the admiration of the bar, and drew down very complimentary approbation from Lord Mansfield. When he made his first brilliant display in parliament, those at the bar who had seen little of him expressed surprise; but a few who had heard him speak, in a sort of mock debate at the Crown and Anchor Tavern, when a club, called the Western Circuit Club, was dissolved, agreed that he had even then displayed all the various species of eloquence for which he was afterwards celebrated.

"Before he had distinguished himself in the house, he certainly looked to the law as a profession. The late Mr. Justice Rooke used to relate, that Pitt had dangled for seven days with a junior brief and a single guinea fee, waiting till a cause of no sort of importance should come on in the court of common pleas. At Pitt's instance, an annual dinner took place for some years at Richmond Hill, the party consisting of Lord Erskine, Lord Redesdale, Sir William Grant, Mr. Bond, Mr. Leycester, Mr. Jekyll, and others. I well remember a dinner with Pitt, and several of his private friends, at the Boar's Head, in Eastcheap, in memory of Falstaff. We were all in high spirits, quoting and alluding to Shakspeare the whole day, and it appeared that Pitt was as well and familiarly read in the poet's works as the best Shakspearians present. After he was a minister, he continued to ask his old circuit intimates to dine with him, and his manners were unaltered."

To those who had seen the minister only in the senate, stemming the rough tide of debate, or known him only as the resolute and solemn statesman, on whose head lay the weight of public care for all Europe, representations of his personal gaiety and liveliness may come with some doubt. But this remembrancer tells us from personal knowledge, and we have sufficient testimonies in corroboration, that "Among lively men of his own time of life, Pitt was always the most animated and convivial in the many hours of leisure which occur to young men on circuit. He joined all the little excursions to Southampton, Weymouth, and such parties of amusement as were habitually formed. He was extremely popular. His name and reputation, for high acquirements at the university, commanded the attention of his seniors. His wit, good-humour, and joyous manners, endeared him to the younger part of the bar."

But he was soon to give new evidence of his powers on the higher stage. In November, parliament met. The American war had wearied the ministry, and raised the hopes of the opposition. It was evident that Lord North struggled in vain. Fox, at the head of opposition, thundered at the ministerial ramparts, and was followed by an emulous crowd of the most brilliant and popular names of England. The barrier must soon break down, and then all the prizes of the contest, and they were of the first order of competition to accomplished and ambitious minds, were open to every man's hand. On the day of meeting, Fox moved an amendment to the address, deprecatory of the war. The amendment was rejected, by 218 to 129. On the following day, on the report of the address, Pitt spoke, and eclipsed every other speaker on the question, concluding by a lofty invective against "the incapacity of a cabinet, which, by its fatal system, had led the country, step by step, to the most calamitous and disgraceful condition in which a once glorious empire could be placed—a condition which threatened the dissolution of the empire."

The acclamations of the house were so loud and continued, that it was a considerable time before any other voice could be heard. The lord advocate then was warmed to another panegyric. Fox gave his ready testimony to the universal admiration excited by the speech; and Courtenay pronounced, that "its splendid diction, manly elocution, brilliant periods, and pointed logic, conveyed in a torrent of rapid and impressive eloquence, brought strongly to his recollection that great and able statesman, (Chatham,) whose memory every grateful and generous Briton re-

vered." The address, however, was carried by a majority of 131 to 54.

But events, more resistless than oratory, were rapidly loosening the ground under the ministerial feet. The unexpected and unaccountable capture of Cornwallis at York, in Virginia, a capture which ought for ever to have settled the question of his lordship's military talents, came like a thunderclap upon the cabinet. Opposition now struck blow after blow. One of Pitt's speeches was made memorable by the pungency and classical elegance of his allusion to ministers. He had begun by pointing out the contradictory declarations of Lord North and Lord George Germaine in the debate, and while he was pressing them on this point, the attention of the house was suddenly withdrawn to the spectacle of the two ministers whispering with Welbore Elis, the treasurer of the navy (afterwards Lord Mendip). He stopped in the middle of a sentence, and looking significantly on the group, said—"I pause till the Nestor of the treasury bench shall settle the difference between the Agamemnon and the *Achilles*." The shaft was launched with a keen hand, and the disastrous memory of Lord George's (formerly the well-known Lord George Sackville's) military fame, gave it incomparable force. The effect on the house was electric, the ministers instantly assumed the most respectful attention, and Pitt concluded in a tumult of applause from both sides of party. Rigby, paymaster of the forces, a bold and unhesitating speaker of good or ill, pronounced him the true representative of Chatham, and, in his rapture, went to the extent of declaring that "his oratory was not less persuasive, his abilities not less powerful; nay, he would make no scruple to assert, that he regarded him as a still greater orator than his noble and admired father. He had observed with amazement and pleasure the effect which his eloquence had produced, and the awe, the hope, and the animation which it had inspired." Fox similarly declared, that "with that commanding eloquence, which even the effrontery of ministers could not resist, the honourable member had detected and exposed the glaring and abandoned disunion which subsisted in his majesty's councils." The minorities continued to increase, until, in March 1782, Lord North rose in the house to announce that the ministry had resigned.

We have no instance in the records of debate similar to this reception of the young ability of Pitt. Compliments to the first efforts of promising members are not unusual, and civilities occasionally pass between members of all standings, on the subject of successful addresses to the house. But those few and formal courtesies have no relation to the perpetual, universal and glowing admiration lavished on the early eloquence of the son of Chatham. If there were some *prestige* in the title, it must be remembered, that after the first novelty had worn off, that title would be an additional weight on the steps of an infirm aspirant, that the force of the contrast would have operated as a most oppressive impediment to strength unable to sustain the comparison; and that, while the very sounds of the father's eloquence were still reverberating in every ear, nothing but a spell of equal, or perhaps superior, power, could have vindicated the senatorial honours of the son. But we fail of reaching the natural height of the estimate, if we forget the astonishing rivalry exhibited at that moment in the British senate: that Pitt was not standing in a solitary arena, with nothing to divide the public homage but the sepulchre of his renowned parent, but that he descended to the combat in a circle of the most vigorous, practised, and ardent intellectual champions that England ever saw together: that the strong sensibility and massive logic of Fox, the universal knowledge, and almost inspired conception of Burke, the brilliant acuteness of Dunning, and the various fine faculties of a host of men, any one of whom would have been the master of the house in days nearer our own, were then in their lustre. Yet all those luminaries, and never was the title more justly earned, if intellectual splendour was to be the claim, united in doing homage to the new risen brightness of Pitt. And all this eminence was gained at an age scarcely beyond boyhood, at twenty-two! It may be unwise to attempt to follow the steps of Providence with too eager a determination to discover all its ways, but the character of the times that were at hand, the character of the minister by whom they must be met, the nature of the ministerial faculties essential to the public safety, and the nature of the people, to be ruled in that crisis only by mental superiority of the highest and most *undisputed* order, unless the most marked coincidences are dreams and vapour, justify the natural and cheering conception that Pitt was a gift of the protecting Providence, which willed the unexampled triumph of England over the furies and frenzies of revolution.

It will be acknowledged, that the *ministerial* eloquence of this great man does not seem calculated to have called forth those bursts of rapture. It might be entitled to the profounder admiration due to finer skill, exerted under circumstances of still greater difficulty. Reserve, calm sagacity, and ever watchful caution, are the qualities most requisite for the leader of the house of commons. The part of the minister in debate must be chiefly defensive. The simple fact of its being his to originate measures, almost restricts all his efforts to vigorous repulse. To opposition belongs the vividness, variety, and animation of attack. Thus Pitt, always equal to the emergency, and exhibiting the force of his eloquence always in noble subordination to the force of his reason, naturally changed his style with his circumstances, and the most dazzling declaimer of opposition was changed, and the change was but an additional title to honour, into the most unanswerable reasoner, and the calmest, clearest, and most comprehensive of living depositories of the power and the hopes of empire. The early speeches of Pitt are wholly lost to the student of oratory. Nothing beyond the most meagre outline is preserved. All the colourings and rich fillings in of the master-hand are extinguished. Yet even the outline is majestic. We find every where the traces of magnitude of mind. That he attained the highest rank of the new style of eloquence, urged on him by

situation, is a matter of general acknowledgment. It was often said of him, "that no speaker ever knew better how to tell all he chose to tell, and not a syllable more." Fox, at the end of his long career of rivalry, declared that "in all the years in which he had been opposed to Pitt, he had never once caught him tripping;" and familiar as the phrase was, it conveyed the highest panegyric on the sleepless intelligence, and imperturbable sagacity of the mind which watched over the fates, less of England than of the civilised world.

The fall of the minister was naturally followed by the transfer of opposition to the treasury bench. With some similitude to the state of public affairs, even while these lines are writing, the king sent for Lord Shelburne, and offered him the premiership, as first lord of the treasury. But the earl declined the appointment, saying, that in his judgment no one was so fit to be at the head of the cabinet as the Marquis of Rockingham. The suggestion was received, and in a few days the new cabinet was announced, which was to be so brief, yet to be immortalised by Burke's praises. The marquis, first lord of the treasury; Shelburne and Fox, secretaries of state; Lord Keppel, at the admiralty; Lord John Cavendish, chancellor of the exchequer; Lord Camden, president of the council; the Duke of Grafton, privy seal; General Conway, commander-in-chief; Dunning, (Lord Ashburton,) chancellor of the Duchy of Lancaster; and Thurlow continued as lord chancellor.

The extraordinary distinction already acquired by Pitt could not suffer him to remain disregarded in the change. Various offices were proposed to him, and, among the rest, the vice-treasurership of Ireland, a place of large emolument, which must have rendered it of peculiar importance to the younger son of a nobleman of the narrow income of Lord Chatham, and which had the farther recommendation of being formerly held by his father. But Pitt, with the loftiness of mind which always marked his career, and with that due sense of his capacity which is one of the characteristics of genuine greatness, resolutely declined all proposals of subordinate place, determining never to accept any office which did not give him a seat in the cabinet, grounding this determination on his reluctance to pledge himself to the defence of measures, in whose origin he had no share.

It is remarkable, as a contrast to the national feeling in the later years of the king, that for more than one half of his reign he was singularly unpopular; and this contrast derives the greater force, from the fact, that during this obnoxious period no aspersion was ever thrown on the personal virtues of the monarch. He was acknowledged to be pure, patriotic, and intrepid in public life; gentle, pious, and domestic, in his palace; anxious only for the national good, and willingly sacrificing all private predilections to the national advantage. But party was the libeller. The hand of faction was the blackener of the statue which should have stood high in the temple of British honour, as it now stands high in the temple of British gratitude. If the purpose of some great controlling power had been to show Britain the innate and incorrigible perverseness, folly, and virulence of partisanship, how could it have been more effectually promoted than by showing one of the most upright of men and sovereigns the object of its perpetual malignity.

His adoption of the Bute cabinet, a natural result of his education, and impeachable on no just ground of incapacity in the objects of his choice, had been seized on by the daring and reckless competitors for power, as an act of scarcely less than treason. The prosecution of the American war, of all wars the most popular in its commencement, was the next count in the charge brought by party against the king. The daring virulence of Junius, whose libels, like venomous insects preserved in crystal, still survive, through the exquisite beauty of the medium in which they were sent forth to the world; the unprincipled violence of Wilkes, and the crude and corrupt malevolence of Horne Tooke, were all in restless action to inflame a populace giddy with prosperity, arrogant with the consciousness of new strength, and in the mere passion for movement ready to solicit the extremes of public subversion. The fiercer reality was yet to be perpetrated by the populace of France; there the crime of the obscure miscreant who burned the temple to make a name was realised by a whole people. The evil there came from the heart. The more generous and imperial character of England might find its representative in the act of the mighty Macedonian, burning the palace in a moment of intoxication. The error there was of the head; and English opinion gloriously atoned for the temporary extravagance, by a loyalty which struck its roots into the grave, and which still flourishes over the monument of that patriot king.

His sense of this injustice naturally drove him to retirement. The satirist then charged him with misanthropy, with contempt of opinion, and even with aversion to the name of England.

"Our sons some slave of greatness may behold,
Clad in the genuine Asiatic mould,
Who, of three realms shall condescend to know,
No more than he can spy from Windsor's brow."

He at length came into public, exhibited himself to the people, and even went to Portsmouth to be present at the naval reviews. Satire sent its shafts at his publicity as much as at his seclusion.

"There shall he see, as other folks have seen,
That ships have anchors, and that seas are green;
Shall count the tackling trim, the streamers fine,
With Bradshaw prattle and with Sandwich dine;
And then row back amid the cannon's roar,
As safe, as sage, as when he left the shore."

In another sense of contrast, the fate of the King of France was equally remarkable. In 1781, the year in which George III. had reached the *acme* of unpopularity, Louis stood on the summit of national idolatry and personal fortune. In October of that year, he had seen the sword of the last British general in America laid at the foot of his throne by Lafayette, as the pledge of the final separation of the colonies from England. His fleet had been successful in its seizure of the West India islands, under Suffrein, an officer who

seemed to have imbibed more the spirit of the English seaman, than of his own country, "more an ancient Roman than a Dane," the possession of the East India seas was boldly and almost successfully contested with the British fleet, under the brave but unlucky Sir Edward Hughes. The most galling wound of all was inflicted on England by the sight of the combined French and Spanish fleets blockading the Channel, and even threatening to attack our fleet at anchor. The Spanish government, taking courage from these disasters, threw itself into the arms of France; and after capturing Minorca and West Florida, marched a powerful force against Gibraltar, the last hold of England on the Mediterranean. Holland, almost the natural dependency of England, had joined the confederacy, and fought the desperate action of the Doggerbank under Zontman, one of the bloodiest struggles of the war, but a drawn battle. To crown the exultation of France, Marie Antoinette, destined yet to the most fatal catastrophe that ever rent the heart for beauty, fortitude, and virtue, gave birth to a dauphin, after a marriage of ten years. Within ten years more, this glittering picture was covered with universal shade. Exulting France was a sea of burning and blood; Louis and Marie Antoinette had perished on the scaffold. The dauphin was dead of disease. His unhappy brother, the Duke of Normandy, had become heir to a crown only to die of misery in a dungeon. All the royal brothers were exiles. The church, the court, the army, the whole stately fabric of the monarchy, were sunk in dust and ashes.

Yet it is not to be forgotten that the fall of the French monarchy was but a further vindication of the high principles of national faith. Its treacherous violation of the British alliance, in the prospect of humbling England by the loss of America, was the immediate and well-known source of that conflagration which so suddenly wrapt France in irremediable ruin. The instrumentality of that violation in effecting that ruin, was capable of being traced in every point. The presence of Franklin preaching republicanism in Paris, gave the first guilty confidence to the *philosophes* who made political regeneration the watchword of revolution. The French troops who had returned from America were the direct propagators of the revolt, and their general, Lafayette, was the direct agent of leading the unfortunate king into that fatal reliance in the people, which paved his way to the guillotine. If that most courteous of revolutionists had not *bowed* the king out of all precaution on the 6th of October, 1792, France might have been saved from the guilt which was yet to be expiated, and scarcely expiated, by the loss of three millions of lives, the tyranny of the sternest despot of modern Europe, and the double capture of her capital.

The close of the American war was the close of a great political period. The humiliation of England, and the elevation of France, equally came to an end at that moment. Thenceforth, all on the British side was restoration of character and fortune—all on the French, confusion and decline.

The detail, by an eyewitness, of the manner in which the dissolution of the luckless ministry of Lord North, the beginning of good, was actually effected, possesses a more than common interest in our own day of rapid ministerial change. "During the month of November, the accounts transmitted to government of Lord Cornwallis's embarrassments, augmented the anxiety of the cabinet. Lord George Germaine, in particular, conscious that on the prosperous or adverse result of that expedition hinged the fate of the American contest and his own office, as well as probably the duration of the ministry itself, expressed to his friends the strongest uneasiness on the subject. The meeting of parliament stood fixed for the 27th of the month. On the 25th, about noon, the official intelligence of the surrender of the British forces at Yorktown, arrived from Falmouth at Lord George Germaine's house in Pall Mall. Lord Walsingham, who, previously to his father Sir William de Grey's elevation to the peerage, had been under secretary of state in that department, and who was to second the address in the house of lords, happened to be there when the messenger brought the news. Without communicating it to any other person, Lord George, for the purpose of despatch, immediately got with him into a hackney coach, and drove to Lord Stormont's residence in Portland Place. Having imparted the disastrous information to him, and taken him into the carriage, they instantly proceeded to the chancellor's house in Great Russel street, Bloomsbury, whom they found at home; when, after a short consultation, they determined to lay it themselves in person before Lord North. He had not received any intimation of the event when they arrived at his door in Downing street, between one and two o'clock. The first minister's firmness, and even his presence of mind, gave way for a short time under this disaster. I asked Lord George afterwards how he took the communication. 'As he would have taken a ball in his breast,' replied Lord George: 'he opened his arms, exclaiming wildly, as he paced the apartment during a few minutes, Oh God! it is all over,' words which he repeated many times, under emotions of the deepest agitation and distress."

Military affairs have since displayed themselves on a broader scale, and we can scarcely conceive that such notions of national calamity could be appended to the capture of a force which, however brave, scarcely amounted to the vanguard of a modern army, certainly not to the *twentieth* of the army with which Wellington appeared on the peninsular frontier of France. The misfortune of the troops under Cornwallis was unquestionable, but their character was unstained, they had been brought by their commander into a *cul de sac*, where, it is true, they might have held out for ever, if they could have received supplies by sea. But that contingency was too delicate to have been relied on by an officer of any intelligence. The result proved the fact. The French fleet took up the position which Lord Cornwallis's imaginary plan had marked out for the British. The army within York town found that though to the Americans they were impregnable, they had a more formidable enemy, famine, to deal

with; and, finally, to that enemy, and that enemy alone, they surrendered.

We next have a picture of a cabinet council in terror. When the first agitation had subsided, the four ministers discussed the question, whether it might not be expedient to prorogue the meeting of parliament for a few days; but, as scarcely an interval of forty-eight hours remained before the appointed time of meeting, and as many members of both houses had arrived in London, or were on their way, the proposition was abandoned. It became, however, indispensable to alter, and almost remodel, the king's speech. This was done without delay, and at the same time Lord George, as secretary for the American department, sent off a despatch to the king, then at Kew, acquainting him with the fate of Lord Cornwallis's expedition.

The narrative proceeds: "I dined on that day at Lord George's; and although the information which had reached London in the course of the morning from France, as well as from the official report, was of a nature not to admit of long concealment, yet it had not been communicated to me or any other individual of the company when I got to Pall Mall between five and six o'clock. Lord Walsingham, who also dined there, was the only person, except Lord George, acquainted with the fact. The party, nine in number, sat down to table. I thought the master of the house appeared serious, though he manifested no discomposure. Before dinner was over, one of the servants delivered to him a letter, brought back by the messenger who had been despatched to the king. Lord George opened and perused it; then looking at Lord Walsingham, to whom he exclusively directed the observation, 'The king writes,' said he, 'just as he always does, except that I observe he has neglected to mark the hour and the minute of his writing, with his usual precision.' This remark, though calculated to awaken some interest, excited no comment, and while the ladies, Lord George's three daughters, remained in the room, we repressed our curiosity. But they had no sooner withdrawn, than Lord George, having acquainted us that information had just arrived from Paris of the old Count Maurepas, first minister, lying at the point of death, 'It would grieve me,' said I, 'to finish my career, however far advanced in years, were I first minister of France, before I had witnessed the termination of this great contest between England and America.' 'He *has* survived to see that event,' replied Lord George, with some agitation."

The conversation was prolonged until, on the mention of the Virginian campaign, the minister disclosed the full bearing of the intelligence. "The army has surrendered, and you may peruse the particulars of the capitulation in that paper." The paper was taken from his pocket, and read to the company. The next question was one of rather an obtrusive kind, to see what the king thought on the subject. The narration states the minister's remark, that it did the highest honour to his majesty's firmness, fortitude, and consistency. But this was a complying moment, and the billet was read to this effect:—"I have received, with sentiments of the deepest concern, the communication which Lord George Germaine has made to me, of the unfortunate result of the operations in Virginia. I particularly lament it on account of the consequences connected with it, and the difficulties which it may produce in carrying on the public business, or in repairing such a misfortune. But I trust that neither Lord George Germaine, nor any other member of the cabinet, will suppose that it makes the smallest determination in those principles of my conduct, which have directed me in past time, and which will always continue to animate me under every event, in the prosecution of the present contest."

The cabinet, strengthened by the royal determination, now recovered courage; they met parliament at the appointed time, and fought their battle there with unusual vigour. Perhaps in all the annals of senatorial struggle there never was a crisis which more powerfully displayed the talents of the commons. Burke, Fox, and Pitt were at once seen pouring down the whole fiery torrent of declamation on the government. The characteristic distinctions of their public speaking gave new vividness and force to their assault upon the strongholds of the ministry. Fox's passionate personality hurled the fiercest invective against the ministry, the court, and, fatally for his own ambition, the king. Burke's vast and glowing grasp gathered materials of charge from all quarters, and all subjects, and heaped them, alike strong and weak, on the devoted heads of the culprit cabinet. Pitt, with keener sagacity, for both the present and the future, tore up the frame of the ministerial policy, spared persons, avoided an insult to the monarch; but with the copious and superb combination of fact and feeling, argument and appeal, which from that period was adopted as his great parliamentary weapon, and which was made to give him matchless superiority in a deliberative assembly, swept all before him with "two-handed sway," and where he smote, left nothing for friend or enemy to combat or defend after him.

These efforts failed of overthrowing the cabinet at the time; but there can be no question that they hastened that precipitate fall which was so speedily afterwards to surprise the nation. The assault had terrified the garrison, and shaken the battlements, to a degree which made the result of the next attack secure. But a more important result was already discoverable in the variety of the powers exhibited by the three great champions of opposition; the true preparative for a crisis which was to fling the petty contests of colonies and ministerial juntas into the shade. It was palpable, that when the government of the British empire should again become the prize, when the three triumvirs, who now combined so vigorously, should separate and struggle for themselves, the master of the day would be found in the matchless dignity and brilliant sagacity of Pitt. It was remarked that Fox, though delighting every ear by his command of language, by a bold simplicity of conception, which made the feeblest argument in his hands assume the appearance of strength, and by a quick sensibility, almost a tenderness of heart, which, of all the qualities of an orator, is one of the rarest and the most resistless, yet

wanted temper. Neither place nor person was sacred from his tread; the tread was acknowledged to be gigantic, but the house looked for the judgment which should have directed the footstep, and looked in vain. Where rebuke would have been sufficient, he reprobated; he was not content with stripping off the disguise, he scourged and lacerated. The language which he directed openly against the king, on the first day of the session, was rash in the extreme. "Those," he exclaimed, "who are ignorant of the character of the prince whose speech we have just heard, might consider him as *an unfeeling despot, exulting in the horrid sacrifice of the liberty and lives of his people!* The speech itself, divested of the disguise of royal forms, can only mean,—our losses in America have been most calamitous; the blood of my subjects has flowed in copious streams throughout every part of that continent; the treasures of Britain have been wantonly lavished, while the load of taxes imposed on an overburdened country is intolerable—*yet will I continue to tax you to the last shilling.* When, by Lord Cornwallis's surrender, all hopes of victory are for ever extinct, and a continuance of hostilities can only accelerate the ruin of the British empire, *I prohibit you from thinking of peace;* my *rage for conquest* is unquenched, and *my revenge* unsated; nor can any thing except the total subjugation of my American subjects *allay my animosity.*" Burke roved through his own metaphoric region with unrivaled wing; but the times were too anxious for the mere rapture of eloquence, and men's minds were too keenly fixed on the calamities which seemed to be flowing in full tide round their feet, to enjoy the careerings of this sitter on the clouds above their heads. But in Pitt they saw the true leader. He wasted none of his prodigious power in rash accusation, or splendid excursion into the world of fancy. He broke ground directly in front of the cabinet, and urged on his attacks alike with steady, daring, and consummate judgment, completely and justly drawing the line between the king and the ministry—and there can be no juster distinction than between the motives of the man who can have no personal object, and ministers, all whose objects may be personal, and to whose advice all the acts of government must be constitutionally referable. Pitt's conduct on this occasion was so distinguished an evidence of his superior fitness for the guidance of affairs, that the future minister was seen in him from that hour; and Dundas, the lord advocate, a man remarkable for his knowledge of political human nature, attached himself to him as the man on whom, at no distant period, he foresaw the destinies of the country would depend. Though sitting among the ministers on whom Pitt was flinging red-hot brands, he contrived to panegyrise their force and fire, while impugning their direction; applauded the patriotism, while he tenderly deprecated the opposition of the young orator; and attributed his adoption of the hostile side to the mere accidents of his entrance into public life, foretold in him the future defender of his country; in contrast with its hot and hurried assailant, hailing him as a beneficent luminary rising on the horizon, that had but just before glared with the baleful flames of an eccentric meteor, "shaking from its horrid hair pestilence and war."

From the London Metropolitan.

SICILIAN FACTS.

THE VOW.

The following anecdote, which may perhaps find difficult credence with the phlegmatic natives of the north, ignorant of the peculiar character of the Sicilians, may easily be verified by any traveller whom business or pleasure may conduct to Catania, and will serve as an excellent specimen of the whimsical superstition of even the higher classes among that eccentric people.

The heir of one of the first houses of the above-mentioned city being seized with a violent fit of illness, his life was despaired of by the faculty. The Marchesa R——, his afflicted mother, finding no hope in the doctors, had recourse to the saints, and addressing herself to Saint Antonio, for whom she entertained an especial devotion, and whose name was borne by the invalid, implored his interposition, vowing, that if he recovered, she would marry him to the first maiden young woman of whatever rank or station she might find, offering her prayers before his altar.

It turned out that the health of the young man began immediately after the vow to improve. The mother was not slack in acknowledging her engagement with the saint. When she arrived at the shrine in search of the bride provided by Saint Antonio, she found a young beggar girl, the only devotee at the altar. Nothing disappointed, having only ascertained that she was unmarried and unengaged, she did not presume to look the gift horse in the mouth; but, to the wonder of the mendicant, saluted her as her daughter-in-law, and conducting her by the hand to her carriage, which was waiting, without any regard to her person and apparel, which were naturally none of the cleanest, placed the ragged girl in the vehicle, and drove off with her to the palace, of which she was destined to become the future mistress. The son, equally devout with his mother, gratefully received the precious godsend, which Saint Antonio, no doubt, to put to the test, had taken care should be as little blest with the gifts of person as those of fortune, being, in addition to her other qualifications, as ill-favoured a young person as any in the city of Catania.

The careful marchesa, knowing how prone youth is to change, having submitted her daughter-in-law to the necessary operations of the bath and the toilette, and the helping hands of the friseur and dress-maker, had the marriage duly celebrated on the morrow. The young bride scarcely knew what to think of the new element in which she found herself, and felt at first rather awkward, making many remarks on the troublesome and unnatural restraints imposed on themselves by the rich. For instance, she could not, for her life, see the propriety of taking our food with a fork, when Providence had so liberally provided us with fingers, or indulging, in warm weather, in the superfluous luxury of shoes and stockings.

But all these little *gaucheries* wore off by degrees, and under the tuition of her mother-in-law, she promised to turn out as fine a lady as her quondam betters. There was, however, one of her peculiarities which excited the curiosity of the family, and occasioned the sagacious marchesa no little anxiety. Every day after dinner she retired to her apartment, and carefully locking the door after her, remained invisible for several hours; as low voices were heard within, the mother-in-law began to entertain suspicions that all was not right. She therefore resolved to keep a vigilant watch on her motions, and in order to ascertain the nature of her after-dinner occupations, had a hole privately bored in one of the pan-

nels of the chamber. Next day, following her softly up stairs, and applying her eye to the aperture, she saw, to her astonishment, her daughter-in-law produce fruit, pieces of bread, and other fragments, which she had secreted at table, and placing a portion on each of the chairs in the room, she began with the first, and extending her hand, with the usual doleful cant of the mendicant fraternity, supplicated for "a little charity for the love of heaven." After continuing her entreaties for some time, she took what was lying on the chair, and whining a benediction on the supposed donor, passed on to the next, until she had made a tour of the whole, when she sat down in a corner and devoured the fragments with greater zest and appetite than she ever displayed at table. Thus verifying the old adage, "that custom is second nature."

THE UNFORTUNATE CITY.

Catania appears, from the earliest ages, to have been entirely built of lava, as at present. The most ancient remains, now many feet below the surface, are of that material; and so plainly does its site seem marked for the course of these destructive streams, that strata of lava are found to a vast depth beneath the foundations of the old city. War, pestilence, famine, earthquake, and Mount Ætna, have done their work on this devoted town.

Times innumerable have irruptions devastated its territory with their fiery torrents, changing cultivation into a desert, annihilating the fruits of its fields, and leaving its wretched inhabitants, deprived of their expected sustenance, to suffer under all the accumulated horrors of famine. Often has that destructive scourge, the plague, visited and nearly exterminated its population. Repeatedly, after obstinate, and bloody sieges, have hostile armies passed in triumph through its gates, putting this unhappy people to the edge of the sword, or selling them into slavery. Yet, as if these disasters were partial and insufficient, twice has the entire body of its citizens been expelled in mass from its walls, leaving their desolate hearths a prey to the enemy and the stranger; twice has the city been razed to its foundations by the hand of war; twice shaken to the ground by earthquakes, and twice buried beneath the burning lavas of Mount Ætna.

1. B. C. 474. Hiero 1st, King of Syracuse, expelled the Catanensians in a body from their city, obliging them to migrate to Leontium. In their place he peopled Catania with five thousand Peloponnesians, and as many Syracusans, changing the name of the town to Ætna. Fifteen years after, on the death of Hiero, the ancient inhabitants recovered the city and restored its name, Catania, which it then bore.

2. B. C. 403. Dionysius the Elder again ejected them from their homes, bestowing the vacant town on his Campanian mercenaries, whom, seven years afterwards, he persuaded to remove to Leontium, which he was desirous of strengthening. On this occasion it is probable that the former population returned to their habitations.

3. B. C. 121. Catania was ruined by the ninth recorded eruption of Mount Ætna. The roofs of the houses fell in under the weight of the ashes and stones ejected by the mountain; and the whole town was buried to the depth of many feet. So great was the desolation, that the Romans granted it a respite from all imposts for the space of ten years.

4. B. C. 39. The city was taken and leveled to the earth by Sextus Pompeius, but it was soon restored, with increased magnificence, and its dispersed inhabitants reestablished, by the gratitude of Augustus, in whose cause it had suffered.

5. A. D. 1144. The lava which burst from Ætna in this year, passed, in its course to the sea, through Catania, and destroyed a great part of the town. The same stream so completely filled up the port of Ulysses, that it would be difficult, were it not otherwise well attested, to believe that the existence of a harbour in that place was not a dream of the poets.

6. A. D. 1169. Catania was overthrown on the 4th of February by a tremendous earthquake, which took place during a violent irruption of Mount Ætna. This visitation happened in the reign of William. The shocks were so incessant and severe, that the town appeared to roll from one side to the other, like a ship at sea. The bishop, with forty-four Benedictine monks, accompanied by a vast crowd of the populace, was preparing to conduct in procession from the cathedral of St. Agatha, the image of that saint, with the celebrated veil, which the Catanese believe to have often miraculously preserved them on similar occasions, when the roof of the church fell in and buried them all beneath the ruins. Soon after, almost every house in the town was thrown to the earth at once, filling the streets with the materials, and overwhelming the affrighted inhabitants as they hurried to and fro, vainly endeavouring to shield themselves from the impending danger. More than fifteen thousand persons perished. Many places in the neighbourhood were in like manner destroyed. Ætna was observed to sink in considerably on the side towards Taormina. Ancient rivers disappeared, and others burst forth in spots before arid. The spring of Arethusa, in Syracuse, the waters of which were till that period renowned for their purity and sweetness, became discoloured and brackish. The fountain of Tavi, one of the sources of the Giaretta, after remaining dry for the space of two hours, threw out for a third waters of the colour of blood.

7. A. D. 1234. Catania was destroyed and razed to the ground by order of the Emperor Frederic II. The soldiery committed the most frightful excesses, sparing neither age nor sex, and butchering so many thousands of the citizens, that the smoking ruins of the town may be said to have been quenched in the blood of its inhabitants; so severe was the blow, that it remained almost entirely deserted, until the reign of Charles V., who restored it to its former splendour.

8. A. D. 1669. Exactly five centuries after its destruction by the dreadful earthquake of 1169, Catania was afflicted by another terrible visitation. The vast river of lava ejected from the newly-created Monte Risso was, in the beginning of June, rapidly advancing on the ill-fated city, setting fire to, and involving the whole country as it passed in a red cloud of smoke and flame; its devastations had already plunged hundreds of families in irremediable ruin: a roof in the town to cover them was all that remained; and the unrelenting lava having already deprived them of their sustenance, was on the point of expelling them from their habitations. With a progress gradual but certain and irresistible, it rolled onward on the dismayed and helpless city. Whilst the distance was yet considerable, whilst a chance yet remained of its course being arrested or diverted, hope and fear predominated by turns on the countenances of those who hurried to and fro in the public streets and squares to collect the tidings, or crowded on the house-tops to observe the progress of the lava, varying in their expression as its appearances seemed favourable or discouraging: processions were made to every church, vows were offered at every shrine, and the sacred veil of St. Agatha, which, borne by the bishop at the head of all the clergy of Catania, still hung suspended from the walls. But when the burning torrent, four miles in width and sixty feet in height, closed upon the town, and overhung the ramparts, casting its frightful shade far into the place, incessantly detaching its enormous scoriæ, and rapidly filling up the small interval remaining, unqualified horror sat on every face, the consecrated veil was withdrawn in despair, processions dispersed in disorder, prayers gave way to lamentations, and every one capable of removing prepared for immediate flight. The shrieks of

women, the wailing of children, the cries of men grown desperate with their misfortunes, arose on every side. Mothers with their infants in their arms, dutiful sons with their aged parents on their shoulders, fathers of families carrying their little remaining all, hurried to the gates in promiscuous confusion; whilst the helpless and bed-ridden, whom no filial or friendly hand had assisted to remove, abandoned to inevitable fate, were heard in many of the houses with feeble cries, vainly imploring succour. Such is but a weak description of the scene presented by Catania, when a little before mid-day on the 11th of June, the fiery torrent entered the town at an angle, near the Benedictine convent. By far the greatest part of the place was buried beneath the burning mass; and so great were the vapours and smoke of the conflagration, that for fifty-four successive days, the few remaining inhabitants of Catania could discern neither sun nor stars. After traversing the city, and destroying where it passed, every vestige of human habitation or presence, it at length, with a noise that stunned and terrified the hearer to a vast distance, precipitated itself into the sea, the waves of which, exalted into steam by the heat, spread themselves in an impenetrable mist for miles around. The waters were discoloured and heated far and wide, and the fish perished in such numbers, as not only to afford for some days, sufficient sustenance to the homeless and destitute thousands deprived of other resources, but for months afterwards their remains were brought up by fishermen in their nets.

9. A. D. 1693. Whilst yet labouring under the effects of the last mentioned disaster, this afflicted city was doomed to suffer a calamity still more dreadful from an earthquake. Antonio Seravita, an eye witness, relates that he was traveling towards Catania, when the day became gradually overcast, and at the distance of a few miles he was surprised at the sight of a black and heavy cloud, which hung like night over the city; the sea, near which lay his road, began to rise and overflow the beach, sending forth an unusual and terrific sound: at the same time Ætna threw up flames to an amazing height, and a tremendous explosion was heard, which appeared to Serravita louder than if all the artillery in the world had been discharged at once. The birds flew about in evident consternation, and the cattle ran bellowing through the fields. The horses of Serravita and his companions stopped short, and refused, in despite of whip and spur, to proceed, rearing and plunging in a frightful manner when urged on; they were obliged to dismount, but no sooner had they alighted, than they were at first thrown down, and then again, by the heaving motion of the earth, cast up at least a foot and a half from the ground. When Serravita arose, and turned his eyes towards Catania, he was amazed at not seeing a vestige of the town remaining, and in its place nothing but a dense cloud of dust rising in the air. It was the token of destruction —the superb and populous Catania was leveled to the earth, and eighteen thousand of its inhabitants buried in its ruins.

During the shocks, no one could keep his footing; and those who lay on the ground were tossed from side to side by the undulating motion of the earth, as if on the billows at sea; high walls were lifted from their foundations, and thrown into the air. Fifty-four cities, with villages and castles innumerable, were overthrown by this frightful visitation.

10. A. D. 1819. Catania has been of late years the scene of a melancholy occurrence. In the spring of 1819, a violent earthquake took place during the celebration of the festival of San Salvadore, by which the church was shaken to such a degree, that the walls fell in upon the crowds which had flocked there to behold the service, burying the whole congregation in the ruins. Upwards of two thousand persons perished on this dreadful occasion.

From the Asiatic Journal.

HUGH BOYD OF MADRAS,

THE REPUTED JUNIUS.

When the authorship of the letters of Junius became the fashionable puzzle of the day, it was quite ridiculous to remark the variety of individuals to whom the honour was ascribed. The most startling inconsistencies, the wildest improbabilities, nay, the most glaring impossibilities, threw little or no impediment in the way of a favourite theory. To such an excess was the habit carried of finding out Junius in every body, that some sagacious persons agreed in making the Duke of Grafton the author—that very Duke of Grafton, who, according to Horace Walpole, could never put two sentences of decent English together; nay, the same Duke of Grafton upon whose public and personal character Junius expended his blackest venom. Burke, the leading partisan of the administration to which Junius himself belonged, the party which it is well known that Junius supported through thick and thin; Horne Tooke, whom Junius unsparingly ridicules as Parson Horne, or bespatters with abuse as the adversary of Wilkes; Lord George Germaine—have each, upon the slenderest inductions and in defiance of the greatest improbabilities, had the credit of those memorable letters. Mankind will always retain their propensity to pet and patronise a plausible conjecture, and a *catalogue raisonné* of the different persons, wise and simple, learned and ignorant, good and indifferent writers, who have enjoyed in their generation the fame of being Junius, would furnish an amusing if not instructive paper.

Many Anglo-Indian characters have, in their day and in their own circles, figured as the writers of those singular compositions. When it was the usage of the company to send out persons invested with civil employments, who had not passed through any antecedent gradations of the service, and who were frequently of a somewhat advanced age, it was not very uncommon for some of them to bring out a kind of hazy confused suspicion of being Juniuses—one on the strength of having written, under the signature of Brutus, an admirable series of letters in the *Public Advertiser* upon the conduct of Beckford, when the king turned his back upon him at the levee; another for a letter, full of fiery remonstrance and indignant eloquence, upon the disgraceful negligence of the city scavengers; and even upon slighter grounds of conjecture. If any analogy of style or diction could be traced in an official letter or two from the hands of any of those who laboured under these flattering surmises, the evidence was complete; and one individual became Junius through all the company's dominions, because, in his complaint to the government of being superseded as chief of Cuddalore, he told them that "the rays of their indignation irradiated the victim they were intended to consume."

It is certain that the claim of Mr. Francis (afterwards Sir Philip) rested upon evidence, internal and external, of an extraordinary kind. The coincidences were miraculous, if he was not the author. Yet miraculous coincidences have hap-

pened, and will happen to the last chapter of time,—and the point sought to be established remains as it was. Much fuss was made about the structure of Mr. Francis's sentences,—the most fluctuating of all standards. It is obvious that, after books had been written and controversies instituted, he adopted a more stately and antithetical manner of writing than he used before. Indeed, as far as internal testimony goes, the correspondence and letters of Mr. Hastings might now and then, upon testimony equally unexceptionable, make him out to be Junius. In fact every body who can write at all will be occasionally a Junius—at least for a sentence or two.

Hugh Boyd was a school-fellow of Grattan, and a friend and protegé of Flood, from whose familiar conversations he acknowledged himself to have received the greatest benefit in the aim and objects of his studies. Left by the death of his father nearly destitute, he chose the law as his profession, and came to London in search of fame and fortune, where he cultivated the acquaintance of Goldsmith, Garrick, Armstrong, and the celebrated Mrs. Macauley, the historian (as she facetiously called herself) of the Stewarts. But his most familiar associate was Mr. Laughlin M'Lean, the nabob of Arcot's accredited agent. With this well-informed but highly convivial character, Boyd frequently heard the chimes of midnight at the celebrated Devil Coffee House, afterwards known by the name of Dick's near Temple Bar. It was a place that might be said, so far back as Queen Anne's time, to be "native to famous wits or hospitables." His subsequent introduction to Lord Macartney, with whom he proceeded to India, was chiefly attributable to the good offices of M'Lean, who instructed him in the details relative to the dispute going on between Mohammed Ali Khan and the East India Company, and Boyd took up the nabob's cause in a series of letters that appeared in Woodfall's *Public Advertiser*, in 1777. They are written plainly and perspicuously, but the stately structure of literary reputation, reared upon them by flattering friends and enthusiastic critics, was not the least of the specious absurdities to which the Junius controversy gave rise. Soon after, M'Lean went to India for the purpose of adjusting the dispute between the nabob and the company, and had he remained there, might have been of inestimable use to Boyd in advancing his fortunes. But the ship in which he embarked for Madras, in all probability, foundered at sea, for she was never heard of, after she left the Cape.

But it was decreed that Boyd must be Junius. The hypothesis was fought *adversis frontibus* through certain circles, and to show with what desperate tenacity it was clung to by its supporters, it is only requisite to adduce a specimen of the kind of reasoning to which they condescended to resort. Boyd once or twice met Dr. Johnson at the house of Sir Joshua Reynolds, and showed him, by every demonstration in his power, the reverence he felt for his wisdom and virtue. But it is well known that Johnson not only attacked the political character of Junius, but handled his style and diction with peculiar severity, in that most beautiful of all tracts, *Thoughts on the Falkland Islands*. These sagacious reasoners, therefore, concluded that Junius would have reciprocated the attack with more than his usual bitterness, but for some extraordinary motive; and as Junius maintained a profound silence as to Johnson's animadversions, it followed necessarily, that Boyd must be Junius, inasmuch as it was respect and admiration only for Johnson, that could suppress even recriminatory or angry feeling after such a provocation. Another of his eulogists adduces, in aid of the same theory, an incident which, though probable, was not likely to have the effect attributed to it. In the gallery of the house of commons, Boyd frequently sat near Pitt, who was not then a member of the house. They got so well acquainted, that once, after a long debate upon the affairs of Ireland, they retired together to a late dinner at a coffee-house, and over their wine jointly committed to writing the substance of the debate, which they transmitted to Ireland. When the bill was called for, Boyd (the most probable part of the story) happened not to have cash enough about him to pay his share, and borrowed of Pitt a few shillings to make up the deficiency. Afterwards, when it began to be positively asserted, and in a tone beyond that of conjecture, that Boyd was the author of Junius's letters, Pitt, in confirmation of the same opinion, stated his strong belief in it, by recounting the incident of their having jointly written the Irish debate, and of his attention being singularly called to Boyd's report of what had been said by Colonel Barré, which, he observed, in spirit, point, and sarcasm, reminded him, as he read it over, so strongly of Junius, that he should always retain the conviction, that a piece of writing so remarkably tinged with the colour and complexion of Junius, could have proceeded from no other pen.

However, with this reputation of being the author of Junius, Boyd went out to India, as second secretary to Lord Macartney, who had been nominated to the chair at Madras, where he arrived in the autumn of the year 1781. It might have been rationally inferred that Junius, whoever or whatever he was, had he been disposed to serve the government he had attacked with such unrelenting animosity, would have been spared the mortification of soliciting a place under it. Yet so it was. He exerted his interest with Mr. Flood to obtain for him the appointment of under-secretary of state in Lord Germaine's department. The strongest efforts were made in his behalf, but from some *hidden cause*, it is pretended, proved ineffectual. This circumstance, which speaks volumes to show that Boyd was not Junius, has been twisted by Mr. George Chalmers into an irresistible proof that he was. By the way, it may be observed that Mr. Chalmers' efforts to establish the literary identity of Junius and Boyd, occupy two very considerable volumes. Boyd, upon his arrival at Madras, devoted himself sedulously to oriental politics, and an absurd whim having crept into the head of the governor, that an alliance with the King of Candy would be of vital importance to the Company's possessions in India, then threatened with a powerful confederacy, which aimed at nothing less than their total destruction,

Mr. Boyd accompanied Sir Edward Hughes's expedition against Trincomalee, was present at its storming, and then set out on an expedition into that almost impenetrable country, from whose court few ambassadors ever returned, and where several, who had gone in the vigour of youth, were detained till they were old men for an answer. Boyd was more lucky. His Candian majesty refused to acknowledge the right of the Company to treat with an independent sovereign, and the ambassador departed without having obtained the most material purpose of his mission. The vessel, in which he embarked from Trincomalee, was captured by Suffrein's fleet, and he remained several months at the island of Mauritius, a close prisoner.

On his liberation (after a short visit at Calcutta, where every body was charmed with the talents, wit, and humour of the supposed Junius) he was recalled to Madras, having been appointed master attendant at that settlement. It is remarkable that Boyd never contradicted positively the conjecture, that he was the real Junius. When the subject accidentally arose in conversation, he seemed anxiously to shrink from the discussion; and it was considered, in general, a point of delicacy to abstain from it. Once, indeed, a blundering Irishman addressed a letter to him, with the superscription of "Junius Boyd, Esq;" and in the carelessness of the convivial hour, unguarded hints and allusions were made to the presumed author of the celebrated letters, and sometimes designedly, for the purpose of drawing him out on the subject. Except, however, his remark, upon one occasion, that the writer, whoever he was, had a mass of the most weighty reasons for preserving the secret, and no other but that of idle vanity to betray it, he was uniformly silent upon this topic. This, indeed, left the question as it was. It might still be Boyd, so reasoned the zealous partisans of the favourite hypothesis, and he might have a thousand powerful motives for concealment. Yet those who looked deeper than the surface, might discern in Hugh Boyd feelings very far from those of anxiety *not* to be taken for Junius. They who looked still deeper, thought they could discern certain coquetries he was wont to play off, that might on the contrary fortify the presumption. Amongst these was a most superbly bound volume, containing the letters of Junius, flung carelessly on his table, and on opening it, a variety of pencil marks and references to living names and characters in every page.

At the conclusion of the Mysore war, in 1792, he set on foot a paper called the *Madras Courier*, and the most superficial reader, acquainted with Junius, might observe that the style and manner of the principal articles were so framed as to confirm the notion of the writer's identity with the *nominis umbra*. In 1793, also, he commenced a series of periodical essays, under the title of the *Indian Observer*. They have been republished in a collection of Boyd's works; and the most prominent peculiarity, visible in all of them, is a laborious straining after the frame and structure of Junius's sentences,—frequently the same powerful antithesis, the same playfulness of figure, and not unfrequently an analogous pointedness of rebuke and bitterness of sarcasm. Yet, with all this, it was not Junius. It was impossible, even with a predisposition to believe that he was the *veritable Amphytrion*, to fly from the perpetually recurring persuasion that it was the fictitious one. A paper, like the *Indian Observer*, at one of our eastern settlements, where literary attainments were not common, did not languish for want of encouragement. Before the publication of the second number, it could boast the names of seven hundred opulent subscribers. Want of prudence, and convivial habits, however, involved poor Boyd, in spite of his master-intendantship, which was about two hundred star pagodas monthly, and of the profits of his publication, in continual perplexity. He died at Madras in 1799.

From Blackwood's Magazine.

PRINCE TALLEYRAND.

The return of Monsieur de Talleyrand to France, has created in all political circles there —and what circles are not political?—much the same kind of sensation as the known presence of an incorporeal spirit would among a congregation of blind bodied mortals. Such a subtle and unaccountable intelligence is attributed to him, that from the king on his throne to the mere newspaper speculator, all experience a boding flutter of apprehension at his very presence. He is considered as a sort of political magician, who holds in his hands the fate of kings and cabinets. Louis Philippe is supposed to acknowledge his supremacy, as that of astrologers was acknowledged by monarchs of old. In fact, there is a kind of superstition attached to his name, and the mingled dread, respect, and abhorrence which it inspires in France, is well depicted in a little production which Madame Sand, better known by her former name, Madame Dudevant, has lately given to the world. We shall, therefore, in the present article, borrow largely from this little production. Its authoress is well known in France as having written several very pleasing and successful romances, and as having, we are told, been formerly enthusiastically, and perhaps platonically, in love with Lord Byron. The paper to which we now allude, is written in a strain of thoughtful and sensitive morality, which pleases us much, and the opening of the dialogue, in which it consists, puts one in mind, if changed times will admit of the comparison, of the two shepherds in Virgil musing and moralising on the manners of the great city Rome. With respect, however, to the vials of burning wrath, which the fair lady has thought proper to pour on the head of the hoary diplomatist, that, we confess, is not quite in the same spirit. Yet will we undertake to justify it also; Monsieur de Talleyrand has shrouded his real character—if a different one he have from that which is usually attributed to him —so carefully in silence and in mystery, his ways have been so subterranean—his tread so stealthy and noiseless—his agency so potent, and his means so invisible; if we have seen his hand, we have seen nothing but his hand; that what appears of his character is, to say the best of it,

enigmatical, and forms a back ground from which only the darkest portrait can fittingly stand out. Acts which shun the light, we very fairly conclude belong to darkness; and so we leave intrigues, great and little, without pity, to their fate—to all the exaggerations which fancy may add to their real baseness. We, however, have formed a somewhat different appreciation of Monsieur de Talleyrand's character from Madame Sand. To us there appears in it nothing mysterious or unaccountable. Brought up to a calling in which forms are essentials, and in which the art of imposing stands in the place of truth, thence plunged into a revolution which professed to tear away all imposition and disguises, and to bring naked realities alone into action—and finding this also illusion, it is no matter of wonder that he should have come to the conclusion, that what men call truth and virtue are mere phantoms, and exist not, that life is a great game, and that the best player is the best man. Thinking thus of him, we think Monsieur de Talleyrand holds a high place only in a very second rate order of mind. He has sagacity enough not to be deceived by the sanguine credulity and generous hopes which delude others. He sees through these, and sees them to be vain. And this exemption from the influences which move the multitude, gives him his superiority over them. His impassability is the secret source of his clear-sightedness and his power. But he has *not* sagacity to perceive that shows and illusions of good, the wildest and most extravagant that ever made men act like madmen or idiots, could not exist if they had not their deep sources in truths which agitate before they are apprehended. These are the indicators of truth's whereabouts, and vibrate, like the diviner's rod, over the spot where secret treasure lies buried. Thus the absurdities and horrors of superstition proved the existence of religious verity, and preceded its manifestation. To be arrested, however, by such a consideration as this, supposes in the mind an abstract love of truth; and this Monsieur de Talleyrand has not. He sees only, and that with the acutest perspicacity, that which is palpable and above ground, and denies the rest; but denies it with so perfect a faith, that he has become of old a privileged being, out of the influence of delusion, and also out of the sphere of truth, duping others, yet still more deeply duped himself, by denying the *ultimate* aim and tendency of those very delusions which enable him to dupe them. Such characters as his are the natural product of a revolution, which put all crude, but in a metaphysical sense true, ideas, rudely to a violent test. The experiment failing, men inevitably fell into unbelief, and became cold, selfish, disenchanted beings, regarding nothing as important but their own personal interests, because believing in nothing but material existence. Of all the effects of revolution accomplished, this perhaps is the worst—that it blasts hope, and meets every moral and spiritual truth with constant negation. Out of it arises the denying fiend, "*der geist der stets verneint.*" It makes Talleyrands of every grade of intellect, and calls forth such indignant invectives as follow from outraged believers in virtue.

"Wherefore then do we live," exclaimed he, seating himself, with a sudden movement, on the stone bench in front of the chateau. "What profit is there in our lives? What noble use do we make of our faculties? What then is virtue? Is it a stagnant marsh, or an impetuous river; the buried diamond, or the bursting lava, shrouding its brilliancy from the light, or shedding intolerable splendours over the world?"

"In none of these things is virtue imaged," replied I. "I would rather liken it to the little rivulet proceeding from the peaceful grotto, giving moisture to verdant meadows, to plants which embalm the air, and to flowers which enamel the earth. Virtue, mind you, is not genius, it is goodness. You who are so ambitious, look at that palace, think of him who inhabits it, and tell me, are you not reconciled to your lot?"

"Hideous consolation!" responded my friend.

"Patience, patience," I resumed, "do not believe it is apathy which makes me counsel contentment. When one can prevent crime, it is mean and cowardly to wash one's hands like Pilate. But tell me, how many Messiahs are there born every century? Are you not alarmed and indignant at the number of redeemers and legislators who pretend to the throne of the moral world? Instead of seeking a guide, and listening thirstily to the inspired word, the whole human race seems rushing to the pulpit and the rostrum. All would be instructors; all know better, speak better, reason better, than those who have preceded them. Yet all this confused murmur over our heads and around us, is nothing but the echo of vain words and sonorous declarations, in which the heart and intelligence seek in vain for any ray of warmth or light. All the elements of force and activity are abroad, and in disarray, and are only stopped and paralysed in their career by their mutual shock. How many calamities go to procure our benefit! The promised regeneration is seen only through a vista of crime, and the instruments by which it is to be worked out are men who lose all their personal virtue in the task. Let us not adventure our little stock of virtue on that raging sea, in which so many consciences have perished, so many principles have made shipwreck. Are you not seized with an invincible disgust, a secret horror, for active life, in front of that chateau, where so many unclean projects, so many compact scoundrelisms, brood and germinate in the silence of the night? Know you not that the man resides there, who, for sixty years, has been playing with nations and crowns as at a game of chess? Who knows but that this man, the first time he sat before a table in the public service, had an honest resolution in his head, and a noble sentiment in his heart?

"Never," cried my friend; "profane not integrity by such a thought. That lip, like a cat's drawn up, and clinging to the gums, that other lip, like a satyr's, large and falling; a mixture of dissimulation and lasciviousness; those soft and well-rounded lineaments, marking suppleness of character; that dangerous fold on a prominent forehead, that arrogant nose, with that reptile look; so many contrasts on a human physiognomy, reveal a man born for great vice and little

actions. Never has the heart of this man felt the warmth of a generous emotion; never has a frank idea traversed his laborious head; that man is an exception in nature, a monstrosity so rare, that the human race, even in despising him, has contemplated him with a stupid admiration. I will defy you to abase yourself even to the most extraordinary of his talents!"

Here my friend stopped with an air ironically joyous, and after a few moments' silence resumed:—"When I think of the thoughts which have engaged us in this place, almost under the windows of the greatest impostor in the universe, we, poor children of solitude, all of whose dreams, all of whose cares, are to spread virtuous sentiments and make them contagious, I feel an inclination to laugh at ourselves. Here we are almost weeping for tenderness over the human race, which knows us not, and if it did, would repulse us with contumely, should we attempt to preach to it our doctrines; whilst it bows down and prostrates itself under the intellectual power of those who detest and despise it. Contemplate a moment the pale immoveable face of this old palace! Listen and look; all is sombre and silent. It seems as if we were in a burying-ground. Yet fifty persons at least inhabit that wing. There are but some few of its windows barely lighted. Not the slightest noise betrays the whereabouts of the master, his society or his suite. What order, what respect, what gloom presides over this little empire. The doors open and shut without noise. The valets come and go without awakening an echo by their tread under these mysterious arches. Their service seems to be done by enchantment. Look at that window, a little better lighted than the others through which you may see the uncertain spectre of a white statue; that is the dining-room. There are assembled, sportsmen, artists, brilliant women, men of fashion, and all which France possesses the most exquisite in elegance and grace. But do you hear from this assembly a song, a laugh, or the raised sound of a single voice, attesting the presence of man? I would wager even that they avoid each other's looks, lest a thought should circulate under ceilings which canopy silence, mystery, and secret dread. Not a valet dares sneeze, not a dog dares to bark in this place. Does it not seem to you that the air around their Moorish towers is more sonorous than in any other spot of the earth? But, hark! I think I hear the roll of a carriage over the fine sand of the court. It is the master returning. Eleven o'clock has just struck. It is impossible to conceive a life more regular, a diet more strictly observed, an existence more avariciously distributed than that of this octogenarian fox. Go and ask him if he believes himself so necessary to the conservation of the human race, that he so anxiously watches over his own. Go and tell him that twenty times a day you are on the verge of despair, from the fear of remaining unprofitable to your fellow-creatures, and that you are alarmed, and care-stricken at the idea of living without virtue, and you will see him smile like a prostitute to whom a pious virgin might confess the languidness of her prayer, or her distraction during the divine service. Ask by what occupations, by what good actions, his day is filled up. His people will tell you that he rises at eleven o'clock, and gives four hours to his toilet, in the vain attempt to impart some appearance of life to his marble face, which dissimulation has petrified even more than age. At three o'clock you will be told he takes the air in his carriage, attended by his physician, driving up and down the solitary alleys of his immense park. At five o'clock the most scientific and succulent dinner which can be prepared in France, is served up to him. His cook is, in his own sphere, a personage as rare, as profound, and as much admired as himself. After this repast, of which every course is announced by a flourish of trumpets, the prince gives a few minutes to his family and his little court. Every exquisite word, emanating in pity from his lips, has the effect of bending the person to whom it is addressed double. A canonised saint would not inspire more veneration in a community of *dévots*. As the night falls the prince again enters his carriage with his physician, for a second promenade. He has just now returned; you see the light just appearing at his window in that retired apartment, which is guarded by his lackey, in his absence, with an affectation of mystery as solemn as it is ridiculous. He will now be deeply at work till five o'clock in the morning. At work! —Oh, moon, rise not yet, hide thy timid ray behind the black horizon of the forest;—river, suspend thy course, slow and feeble as it is;—leaves, tremble not on the foreheads of the trees;—all nature, be mute and motionless, like the stone of a sepulchre—for the genius of man awakes—the most skilful and important of the princes of the earth is about to bend over a table, and by the light of his lamp, in the depth of his cabinet, like Jupiter from the height of Olympus, to move the world by the contraction of his brows!

"But what, then, has this astonishing man produced by sixty years of assiduous vigils and unremitting labours? What has brought the representatives of all the powers of the earth into his cabinet? What important services have all the sovereigns who have possessed and lost the crown of France, for half a century, received from him? Wherefore that unaccountable terror on which he walks, as on a soft carpet, through an host of difficulties and dangers? What revolutions has he effected or paralysed? What sanguinary wars, what public calamities, what scandalous exactions, has he hindered? How has he been so necessary, this voluptuous hypocrite, to all our kings, from the haughty conqueror to the bigoted *dévot*, that they have imposed upon us the shame and the disgrace of his elevation. Napoleon, in his contempt, branded him with a soldier's metaphor, full of energetic cynicism; and Charles X. in his days of orthodoxy, said—in a whisper be it understood—'*after all he is a married priest!*' But has he stayed them in their terrible falls, these masters whom he has alternately flattered and betrayed? Where are his benefits? Where are his works? No one knows. No one can, will, or dare, declare what titles this inevitable statesman possesses to power

and to glory: his most brilliant actions are enveloped in impenetrable clouds. His genius exists only in silence and imposture. What shameful turpitude does the diplomatic mantle cover!"

"And what do you say," cried I, "to the imbecility of the nation which suffers this infamy, and allows its name, its honour, and its blood, to be apposed to shameful contracts, which it is completely ignorant of? Do you still desire to act a part of the political theatre?"

"The more my fellow-men are abased," replied my friend, "the greater desire I feel to exalt them. I am not discouraged. But let me indulge in my indignation against this impenetrable man, who has moved us all about at his will, like pawns upon his chess board, and would not devote the great power he has possessed to our advancement. Let me curse this enemy of the human race, who has had possession of the world, only to heap up a fortune, satisfy his vices, and impose upon his despoiled dupes the debasing esteem of his iniquitous talents. The benefactors of humanity die in exile or on the cross, but thou, old vulture, bald, and gorged, will die in thy nest slowly and unwillingly; and as death crowns all men of celebrity with a mild forgiving halo, thy vices and basenesses will be quickly forgotten, and thy talents and seductions alone remembered. Oh man of impostures and spells, scourge of mankind, whom the Ruler of the universe kicked into the world like a limping Vulcan, there to forge incessantly unknown arms at the bottom of inaccessible caverns, thou wilt have nothing to say at the great day of judgment. Thou wilt not even be interrogated. The Creator who has refused thee a soul, will never demand an account of thy sentiments and passions."

"But see! a window is opening. It is the prince's."

"How!" said my friend, lowering his voice, "do corpses feel too warm? Do marbles need to respire the evening air? What are those two white heads which advance as if to regard the moon? It is the prince and his—how shall I call him? for I will not profane the name of *friend*, on which Monsieur de M. prides himself before servants and subalterns. Besides, it is a title which he would not permit himself to assume in the presence of his master; for *he* would sneer at all expressions which represent sentiments. To make use, then, of a term of their calling, I will denominate M. de M. an *attaché* of the prince, although his functions consist merely in admiring and writing down in an album all the *bon mots* which for forty years have issued from that incomparable mouth. I will give you one as an example. '*Distrust always a first impulse, and never yield to it, for it is almost always good.*' But listen to that sepulchral note; which, then, of the two philosophers has spoken? But, no; I am wrong; it is the cry of the screech-owl flying from the forest. Good! Scream louder, bird of ill-omen, proclaimer of funerals. . . . Ah, monseigneur, there is a voice which you cannot frighten back into the throat of the insulter. Do you hear that brutal burden of churchyards, which respects nothing, and which dares to tell such a man as you that all men die, without adding the *almost* of the court preacher?"

"Your indignation is bitter," said I, "and your anger cruel. If this man could hear us, this is the way in which I would address him—'May God prolong your days, unfortunate old man! Meteor, on the point of returning to eternal night! Light which fate has launched over the world, not to conduct men to good, but to lead them astray in an endless labyrinth of intrigue and ambition! In impenetrable designs, heaven refused you that mysterious ray which men call the soul: that pale but pure reflection of the Divinity, that lightning which brightens at times before our eyes, and gives us intimations of immortal hopes; that soft and penetrating warmth which reanimates from time to time our flagging spirits; that vague and sublime love, that holy emotion, which melts us with delicious tears; that religious terror which makes us hate evil with all the energies of our nature. Being, without a name, thou wert furnished with an immense brain, and with senses greedy and delicate; the absence of something unknown and divine, which makes us men, made thee greater than the first among us, and more little than the lowest of us all. Infirm, thou hast trampled upon men healthy and robust; the most vigorous virtue, the strongest organisation, were before thee only as a fragile reed; thou hast domineered over beings more noble than thyself; that which failed thee of their grandeur made thine own, and thou art now upon the border of a tomb, which will be hollow and cold as thy petrified heart. Beyond this gaping sepulchre there is nothing for thee, not the hope, nor perhaps the desire, of another life.

"Unhappy old man! the horror of the last moment will be such that it may perhaps expiate some of the misdeeds thou hast committed. Thine approach was fatal, thy look fascinated, it is said, like that of the viper. Thy breath was like the breeze of an April morning, which withers buds and flowers, and scatters them at the feet of the attristed trees. Thy words beshamed hope and innocence from the foreheads of the men who approached thee. How many spring promises hast thou blasted? How many holy confidences and lovely chimeras hast thou trodden under foot? How many honest men hast thou depraved? How many consciences vitiated or destroyed? Well, then! If the enjoyments of thine old age are confined to the satisfactions of vanity, or to the rarest enjoyments of a palled epicurism, eat, eat, old man, and respire the incense of flattery with the odour of thy repasts! Who can envy thee thy lot, or wish thee a worse? For our parts, we pity thee as much for having lived as for having to die; and we pray that on thy bed of death, the adieus of thy family, or the tears of some faithful servant, awaken not, at the last moment, a movement of sensibility, and that no spark of affection, till then unfelt, be struck from that stone which has served thee for an heart. We pray that thine eye moisten not, nor thy pulse beat quick, that love, hope, regret, or grief, may not impart a first and last flutter to thy frame, and that thou

mayst be consigned to the humid bowels of the earth, without having felt on its surface the warmth of sensibility, or the inspiration of life. May not despair show its dreadful form at the dying couch; may not thy last words reproach the God in whom thou believest not!"

We shall neither attempt to censure nor justify, more than we have already done, the above rather bitter invectives against one who is certainly perfectly insensible to them himself. We have cited the passages chiefly because they give a faithful, though satirical, description of the person and some of the domestic habits of Monsieur de Talleyrand, which cannot fail to be interesting to our readers. From the same motive, we inform them, that one of the peculiarities of this mighty potentate of diplomacy, is the immense quantity of spectacles he uses. There is always about from seventy to eighty pair lying about his room, so that he may always put his hand upon them, without having to incommode his unwieldy person by referring to his pocket. Report does not say whether these supplementary organs of sight are adapted severally to the particular persons and subjects he may have to look into, but forming the *entourage* of such a being, they look rather like familiar spirits to assist the mental vision, than common glasses to aid the outward optics; and when they bestride his puzzling features, fascinating and revolting—jacobinism, priestcraft, and Voltairian refinement, and malice combined—they certainly do give a most baffling cast to his countenance, which seems to be shrouding its own expression whilst reading intently the secret thoughts of others. Since his arrival in Paris, some pungent sayings have been recorded of him. It was recollected of Bassano, whilst he was three days' minister, that when he was secretary to Napoleon, Talleyrand had said of him, on hearing that the emperor had lost all his baggage, "*Alas, poor Maret! he is gone then at last.*" This saying revealed to the French people, both the incapacity of Bassano, and the kind of passive executor of his will which it suited Louis Philippe to appoint as his minister. Of the Duke of Wellington he has lately said, what has already been mentioned, but what will bear repetition from its justness, "*That of capable men he was the most capable.*" We will not say what he has said of the whigs; certainly, they have been as tersely, though not quite so flatteringly, appreciated. Of Lord Palmerston, especially, he has spoken with such caustic scorn, that we verily believe, if we should record any of his sententious sneers, they would burn a hole in the pocket (where his heart is) of that ex "*valet de place.*"

ANCIENT COINS.—Some workmen, forming a new road near Brinkburn Priory, near Newcastle, lately discovered a small brass pot, containing several gold coins, rose nobles of the first and second coinage of Edward III., and some half and quarter nobles of the same reign, all in perfect state of preservation. The pot and coins are now in the possession of Major Hodgson Cadogan, of Brinkburn.—*Gentleman's Magazine.*

Critical Notices.

Chances and Changes, a Domestic Story. By the author of "Six Weeks on the Loire." 3 vols. 12mo. Saunders and Otley.

Nothing could more truly describe this novel than the two words on the title-page, for it is in every respect a "Domestic Story." The scene is laid chiefly in the house of the worthy rector of a living in Craven, whose daughter, Catherine, is the heroine. It is shifted, however, to London and its fashionable circles; and thence to those mountain valleys of Piedmont, where the descendants of the Waldenses still continue to profess a pure religion, amid a patriarchal simplicity most consonant to that creed.

Throughout the whole three volumes there is not a single sentiment which will not be approved by every sound heart and mind; and the moral end is wrought out with great verisimilitude, as the necessary result of the situation, circumstances, and characters of the *dramatis personæ*. From the vortex of dissipation and contact with profligacy, where vanity or selfishness are inherent, escape is withheld; but where a better principle prevails, it is shown that even the strongest of human ties may be loosened, when their stricter union would be incompatible with happiness here, and the higher hopes of futurity.

The interest in the narrative, though it is not highly excited, never flags; and the picture of some of the finer workings in the female bosom is worthy of the pencil of an accomplished female writer. The story is also continuous and unbroken; so much so, indeed, that we were never more perplexed than we are how to extricate any part as an example of its merits. What we might select most readily would infringe on our rule, not, in such cases, to divulge a scintilla of the author's secret; and therefore what we do quote must be brief, as well as insufficient even as a brick of the building. A pretty, though melancholy, love-affair of Mariette, one of the fairest of the dwellers in the seclusion of St. Etienne, may supply the hiatus; and we take a few pages from a sabbath in the mountains where she sorrows:—

"Never was there a more delightful pilgrimage, as it might be termed, to a sacred shrine, than the walk of Edward Longcroft with Catherine to the little church among the mountains. At every turn in the road, every winding in the path, there was something to delight or awe: sometimes they looked down on a cheerful hamlet, sheltered with orchards, brightening in fruits and flowers, refreshed by streams, and soothed with rills; sometimes they plunged into wild glens, or dreary passes, where nature itself appeared to have been rent asunder with convulsive throes, and to have scattered the rocks around in appalling fragments or inaccessible masses, among which the foaming torrents dashed impetuously along, giving a living majesty, a moving grandeur to the scenes which would otherwise have presented only the stillness of desolation. Every spot was fraught with some historic event, some moving recollection, which alternately awakened the zeal or sensibility of Arnaud, as he pointed them out to the observation of his companions. 'It was from these mountains,' said he, his eye kindling as he spoke, 'that the cry of 'death, rather than the mass!' resounded from one to another; that the valleys caught it from the echoes, and sent forth the faithful to the honours of martyrdom and glorious death. It was to these very mountains that our persecuted Victor Amadeus came for refuge from his enemies, and found it in the loyalty of the very people whom he had just before hunted out like wild beasts, and destroyed with fire and sword. But I will not dwell upon these frightful times,' and turning from his younger children, who walked at

his side, he added, in a lower tone, 'we speak as little as possible of these things before our young people, lest we should, unwittingly, implant in their hearts, before their judgment is sufficiently matured to correct the sentiments of resentment and hatred, which are as incompatible with Christian duty as the crimes that may have served to engender them. And, alas! even now, they see and hear too much of the injustice we are exposed to, not to feel quite as lively an indignation against our oppressors as it is wholesome to indulge in, and somewhat more.' Mr. Neville and Edward Longcroft exchanged looks that sufficiently expressed how admirable this Christian forbearance appeared in their eyes; they did not sully it by the language of compliment; but the good pastor felt that he was understood by them, and continued: 'It was among these mountains that Henri Arnaud, my favoured ancestor, of blessed memory, girded on the sword of the Lord, and took a solemn oath never to resign it, till he had reinstated the thirteen altars of our sanctuaries in the purity of their original worship. It would turn your daughter's cheek pale, my good brother, were I to relate half what he and his followers suffered in these fastnesses; but you must read them in his own account of '*La Glorieuse Rentrée*.' Look at these barren crags: what places for human beings to winter in, destitute of a change of garments, half famished for want of food, not daring to light a fire, for fear of betraying the place of their shelter! 'they wandered about in sheep-skins and goat-skins, being destitute, afflicted, tormented; of whom the world is not worthy: they wandered in deserts, and in mountains, and in dens, and in caves of the earth.' Lift up your eyes to these cliffs, seemingly inaccessible to all but the eagle! yet the Lord guided the feet and strengthened the hands of his children, to scale them, even in the night; and perhaps the very darkness contributed to their safety; for often, when daylight came, they shuddered, even the bravest of them, to see the dangers they had incurred, the apparently insurmountable difficulties they had overcome. Truly might they say, 'the Lord was a lantern unto their feet, and a light unto their paths.' He it was who 'taught their hands to war, and their fingers to fight, and sent them help out of his holy hill!' No, assuredly it is not among these mountains and valleys that our people can ever lose sight of their religion, and of the mercies which have sustained them in it, even unto this day.' Mr. Neville uttered some words in a low tone, of which *est genius loci* reached the ear of the minister, who smiled, and finished the quotation. Such was the discourse that beguiled the road, till they reached the point where, hollowed partly out of the rocks, stood the little church where service was to be performed. The congregation were assembling, the bell which summoned them together was answered by the bells in the distant valleys, the clear blue vault of heaven seemed a fit and gracious canopy for worship so pure, and devotion so fervent; and when the voice of the people poured out in full chorus the beautiful consolations of the twenty-third psalm,

"The Lord is my shepherd, I shall not want,"

it seemed to recall the days of the primitive Christians when they also fled to the wildest spots to offer up their worship secure from their persecutors, in houses 'not made with hands,' and on 'high places,' sanctified to them by the spirit of God. When the service was concluded, a scene scarcely less impressive followed, of exhortation and enquiry, between the pastor and his flock, scattered as it now was over the mountains. One wished him to go one way—another, another; all pressed him to go to their huts and chalêts for refreshment; and as he had two other churches to serve at some distance during the day, he agreed to make his rounds among them so as to bring him to the nearest point for each in succession. The honest mountaineers pressed the strangers to accompany the minister, and partake such fare as they could set before them; but the fear that Lord Hervey might think their absence long, prevented their compliance, which otherwise would have been as great a pleasure to them as to those who invited them. They, therefore, took leave of their host until the evening, and retraced their steps, being rested by their attendance at church, and refreshed by a cup of milk from the neighbouring chalêt."

We shall only add, that remarks of rational and just observation often occur in *Chances and Changes*. For instance: "It is impossible to be very busy and very unhappy at the same time," may be adopted as an unfailing adage; and the following is, if not so terse, at least as deserving of our consideration:—

"'What is it that makes us look back with such delight on the days of our youth? Is it novelty that gives such a zest to life?' 'No,' said Mr. Neville, 'it is innocence: if you trace the thing, you will always find that retrospection becomes disagreeable precisely at the point of time when it is, in some way or other, connected with self-reproach.'" *Lond. Lit. Gazette.*

—

Excursions in the Holy Land, Egypt, Syria, &c. By John Madox, Esq. 2 vols.

By the portrait of the author prefixed to these volumes, we should have judged him to be a little too *full of flesh*, and too highly *esginated* for the expedition which he undertook, where his food was to be little more than locusts and wild honey; but we are bound in honesty to acknowledge that he never showed any want of perseverance or activity; that his curiosity never stumbled, or his zeal relaxed; but that, whether in the plains of Esdraëlon, or in the caverns of Thebes, or the snows of Lebanon, or the desert of Cossier, he was ever the first to be on his camel at sunrise; he climbed the pyramids of Gizeh, and he penetrated the subterraneous chambers of Carnac; he drank sour milk, and eat fried locusts; suffered the rats to run over him without losing his temper, and offered his body without murmur to the multitudinous proboscoes of the never-satiated musquitoes. What Mr. Madox's previous habits of life had been, we do not know; or what had been the duration or extent of the studies that are to capacitate him for the character of a traveller; whether his youth had passed in the shelter of academic bowers, or in the voluptuous saloons of fashion, we cannot tell; but we heartily wish that he had added acquirements to zeal, and secured the utility of his arduous journeys by such an acquaintance with science, as would have enabled him to detect what was singular and rare in the remote nations he visited; and to place his name in the honourable list of those who had preceded him in the regions of the east, with Pococke, and Shaw, and Niebuhr, with the enterprising Brown and the indefatigable Clarke. As it is, we must take the will for the deed, and we cannot help lamenting that a few courses of lectures at the London University did not prepare our traveller for his various expeditions; for the countries which he visited, still offer rich and ample materials of information, and can pour their yet unexhausted contributions into the treasury of science. Occasionally, however, our author, instead of seeing too little, observes more than we can really give him credit for; as, for instance, at p. 200 of his publication, he sees three *Turkish* females who possessed sleeping *Italian* eyes. This is hard to credit, though on such good authority. The transplantation of eyes has not yet distinguished the march of intellect, and we therefore suppose it is a sort of periphrasis, and delicate manner of expressing that they had eyes made of the fine glass manufactured at Venice, which certainly might be called *Italian eyes*.

In Egypt the author seems to entertain no doubt of the following fact, which we do not deny, but consider

necessary to be further confirmed, before it is received as an acknowledged truth in the history of the instinct of animals.

"My servant Abdubbo exclaimed, 'Ecco un' animal del Nilo.' It was a crocodile, and the first I had seen. It lay on the other side in a muddy bank, a little way from the rocks, which here shelved down to the river's brink. The men were dragging the boat, and after we had approached nearer, I thought of firing at him with a bullet, but when nearly even with him, a *pelican was seen, and on our closer approach, the bird gave him warning by touching him with his beak.* The crocodile instantly disappeared, while the pelican remained on the bank. This I thought a curious occurrence, but found that it was often the case, and that the *pelican kept watch for the crocodile.*"*

This circumstance is mentioned as again occurring. We should have thought the crocodile so well armed by nature, as not to need a friend at his elbow to warn him of danger. Our author excavated some churches at Ebsambul, but nothing of consequence is brought to light. In his visit to the cedar trees of Lebanon, (vol. ii. p. 102,) we were exceedingly surprised at hearing him say,

"We rode into the *forest* of trees, for such it appears, there being between 5 and 600. They stand upon hillocks, some in a valley at the foot of the higher part of the mountain, and a few scattered about the lower parts of it."

Now we always considered, from the accounts of other travellers, that there were but a very few indeed of these noble monarchs of the forests of the East remaining; though we were also aware, that there were several *young* trees growing around their venerable parents; and we still think either Mr. Madox has made some mistake, or that we do not clearly understand his meaning; for we supposed that not more than seven or eight trees of any size now remained.

We should like to have heard the result of more industrious investigations into the habits, policy, and religion, of that singular people the *Druses*. Mr. Madox says,

"My servant told me an extraordinary story of the Emir Bechir having a few days since entered a mosque in the mountain belonging to the Druses. Here he found them at prayers, worshipping a *silver calf*, which he immediately ordered to be taken from them, and sent to the pasha of Cure, who caused the mosque and minaret to be destroyed."

Mr. Madox says that the *Druses* are divided into two very opposite and distinct sects. The first are reserved and distant, and are supposed to be very learned; they do not mix with the other party, and are said to deny themselves all participation in the good things of this life. They never smoke, or drink spirits; they are styled *Akals*, or wise men, and are initiated into their religion, under vows of secresy. The second or inferior Druses, are called Djahels, or ignorant; they eat, drink, smoke, and laugh, and live like good fellows, and have no affectation of superior sanctity. The Drusic ladies are in general well made, and of a lovely brunette complexion. They wear the *tantour*, and seem much more sociable than the men. The Druses are numerous, but do not form so large a body as the *Christians*. In some villages both live amicably together, yet never *intermarry*. They are reported to be idolators, worshipping the golden calf; it is said to be exhibited in their chapels, from which all but themselves are excluded; but they outwardly comply with the Mussulman form of worship. The principal village of the Druses is called Deir-el-Kammur. The plain is not far from Beteddeen, the residence of the Emir Bechir, prince or chief of the mountains, but the Druses inhabit many parts of the Lebanon range. At Beirout, are the remains of a noble palace, formerly inhabited by the Emir Faccadine, a prince of the Druses, who lived for some time in Italy, and returning to Syria, enriched this palace in a style of magnificence unknown before. The end of the man was melancholy; the Turks grew jealous, and drove him from Beirout; for some time he sought refuge in the neighbouring mountains, but being forced from his retreats, repaired to Constantinople, where he was soon after made away with.

At p. 291, the author gives an account of a wedding of a princess; but we have not room to insert it. He also made an excursion of a few days from Damascus to the Haouran, which may be read with interest, as it is a district so difficult to penetrate as to have been entirely unknown before the time of the enterprising Burckhardt; but we do not find that Mr. Madox has added any thing to what we knew of it from the traveller just mentioned, and from the expedition of Messrs. W. Bankes and Buckingham, the former of whom we presume to be the Englishman whom Mr. Madox heard of, as having been in that country about ten years before.—*Gentleman's Magazine.*

* Another fact connected with natural history is mentioned in vol. ii. 195, which we should wish to have had narrated upon more particular authority. "A *species* of hawk was shot at Damascus, in June, 1825, having a billet of wood around its neck, and on it, Landsberg in Prussia, 1822."

The Siege of Vienna. Smith, Elder, & Co., Cornhill.*

This volume contains a translation from the German of Madam Pichler; and the manner in which it is executed is worthy of the good company among which it is introduced. We shall not give an outline of the story, as it is one of great interest, and a little mystery, and it would not be fair to deprive its readers of the pleasing suspense, and the spur of curiosity, that makes romance reading so delightful. This tale is remarkable for power of language, and accuracy of costume, whether we regard the descriptions of the outward man, or the tone of thought prevalent in the era in which the scene is laid. The characters of the two sisters are finely contrasted, and the principles that act upon the temperament of each, worked out to their legitimate result. This work should become a favourite.—*Metropolitan.*

* Now in the course of publication in Waldie's Select Circulating Library.

Obituary.

DOM PEDRO.

Sept. 24. At the palace of Queluz, Lisbon, in his 36th year, Dom Pedro d'Alcantara, Duke of Braganza, Regent of Portugal, and ex-Emperor of the Brazils.

Dom Pedro was born in the palace of Queluz, Oct. 12, 1798, the second son of King John the Sixth, and Carlotta Joachima, daughter of Charles the Fourth of Spain; but, by the early death of his brother Anthonio, he became heir-presumptive to the throne. In his youth he showed a weakness of constitution; yet at the same time displayed much of that activity and vivacity which distinguished him in after life. His first tutor was the Padre Antonio d'Arrhabida, afterwards Bishop of Annamuria, who instructed him in Latin and music, and in the latter he became a proficient, both as a player and composer.

When ten years of age, he accompanied his father to the Brazils; and on his arrival there, his education was confided to the accomplished John Radamak, who had been ambassador from Portugal to Denmark; but he

soon died, and the prince was afterwards permitted to educate himself. Left alone, in an uninformed state of society, where no indulgence was considered too gross, no action too immoral, there was little hope, whatever his natural disposition might be, that his acquired habits would not form him into every thing that was bad. Fortunately for him and for the people, there were two or three strong and harmless propensities, which in some measure diverted his mind from worse pursuits. He was fond of mechanics, and many specimens of his boyish ingenuity are still preserved; the chace also removed him from the enervating capital to the exercises of the Brazilian forests; but, above all, his taste for music tended to withdraw him from less innocent amusements. He composed several pieces of music for his father's chapel, and also attempted poetry, and some of his rondos and madrigals are still played in Brazil.

At an early age, his father resolved to have him married, as well to form a political connection, as to draw him from that low sensuality, which both he and his brother Miguel began to indulge at an immature age, and with the meanest objects. A princess of the house of Austria was selected for him, and Leopoldina, daughter of the Emperor Francis I., and sister to the wife of Napoleon, was married to him on the 13th of May, 1817, before he was nineteen years of age. The princess was of an amiable and affectionate disposition; but she was not handsome, and was unusually careless in her dress and habits, which disgusted Pedro, and his unkindness led to her premature death. She left five children.

The revolutionary spirit had now infected Brazil; and, after King John had returned to Portugal, Pedro, who was left as regent, thought it politic to put himself at the head of the movement. His conduct was severely censured at Lisbon, and the Cortes issued a peremptory order that he should return to Europe in four months. When he received this decree, Dom Pedro read it with deep emotion; but, after a few minutes' reflection, being well convinced of the sentiments of those about him, he exclaimed, "Independence or Death!" This was repeated with enthusiam on all sides, and soon spread over all parts of the country. The independence of Brazil was proclaimed, and Pedro declared the emperor of the new nation; this took place on his birth-day, in the year 1825. He was crowned on the 1st of December, because that was the day on which the Portuguese had delivered themselves from the yoke of the Spaniards, as he had delivered the Brazilians from the yoke of the Portuguese. A national assembly, which he convoked in the following May, he dissolved after a few days by military violence; and he himself drew up the constitution, to which no one dared to object. The sum of two millions was paid to Portugal for her acknowledgment of the independence of Brazil; and Pedro was established at the head of a magnificent empire.

In 1826 King John died at Lisbon; and Pedro in consequence succeeded to the throne of Portugal; but, knowing how unpalatable the reunion of the crowns would be to his new subjects, he acted with a promptness and decision consonant to his character. He immediately drew up a constitution for the Portuguese, which took him just one week to compose, and then abdicated in favour of his daughter, Dona Maria de Gloria. It had previously been her father's intention to unite her to her uncle, Dom Miguel; and the legal part of the ceremony had actually been performed at Vienna; to Dom Miguel therefore he committed full powers to act as Regent of Portugal on behalf of his niece and bride. That prince accordingly set out from Vienna, where he then was, and having passed through England, proceeded to assume the sovereignty of Portugal, where he in a very short time altered his title of regent to that of king.

It has been often remarked, that it is difficult to decide which of the brothers deserves the highest character for dishonesty and bad faith. Dom Pedro had scarcely sworn to his father to remain faithful to him and the Portuguese nation, than he accepted the sovereignty of Brazil; Dom Miguel had scarcely sworn fealty to his niece, than he assumed the crown of Portugal.

When the news of this unexpected perfidy, of which he had himself set the example, arrived in Brazil, and the emperor saw himself deceived by his brother, he could not repress his passion. He tore his brother's portrait to pieces, and kicked the fragments about the palace. Nor did he delay the prosecution of less impotent measures of reprisal; he addressed a proclamation to the Portuguese nation, and sent his daughter to Europe, to be ready to avail herself of any movement in her favour. He could not, however, induce the Brazilians to espouse his personal quarrel, and he was disappointed in the aid he anticipated from England: at the same time that he utterly refused the reconciliation with Miguel, proposed to be negotiated in the tedious embassy of Lord Strangford.

At this period, Pedro seemed disposed to forget his public mortifications in private indulgences. He sought the society of the Duchess of Goyas more than ever, and feeling his home desolate without his wife or favourite daughter, he determined to marry his concubine, and place her on the throne. The Bishop of Rio, who had been for some time in disgrace for not conniving at the excesses of the court, was now conciliated, and every pains taken to reconcile him to the measure. The real friends of Dom Pedro now took serious alarm: and therefore seriously set about counteracting this project, which could only be done by seeking for him another wife. In this object some difficulty was experienced, for his treatment of the first had alarmed the young ladies of the different courts; however, after several fruitless applications, he was accepted by a very amiable and excellent person, Augusta, daughter of Eugene Duke of Leuchtenberg, who, to the great joy of his friends, arrived at Rio in August, 1829, and the nuptials were celebrated with great splendour.

But the mortal struggle was now approaching between Pedro's absolute power and the authority of his chambers. The occupation of his mind in his daughter's cause contributed to estrange him from the affections of the Brazilians, and they dreaded he would again attempt to destroy their legislative authority. When the struggle came, Pedro was deserted by the army; and left indeed without any support. With his characteristic precipitation, he immediately embarked on board an English frigate, and abdicated in favour of his son, Dom Pedro d'Alcantara, then eight years old.

The affairs of his daughter were at this time in a desperate state; the abortive attempts of the patriots of Oporto had altogether failed, and the reign of Dom Miguel was established with the apparent consent of the people so firmly, that little hope remained of shaking it. A gleam had appeared in the unexpected capture and submission of Terceira; but the possession of a small and remote island in the Atlantic would afford but a dim prospect. It proved, however, the harbinger of success. An expedition from thence landed at Oporto, where the arrival of Dom Pedro at this critical time infused fresh hopes, as it seemed to give himself fresh energies. The contest at that town and its vicinity was tedious; but at length, after considerable perseverance and energy, Pedro succeeded in reaching Lisbon on the 28th of July, 1833, established himself there as regent to his daughter, and on the 22d of September she also arrived, and was formally acknowledged as constitutional Queen of Portugal. Thus in the records of history, Dom Pedro will be remembered as a man who, in a brief but extraordinary career, not only abdicated sovereignty twice, but actually (besides once inheriting it) acquired it three

times, first for himself, next for his son, and lastly for his daughter.

Scarcely had he, during a twelvemonth of busy thought and anxious exertions, completed the establishment of his daughter's throne, when he has been suddenly removed by death; his fatal malady is supposed to have been water in the chest. In contemplating his character, all must acknowledge his energy and sagacity; at the same time that they cannot overlook his sensuality, caprice, and violence, and occasional cruelty. In person he was inelegant, low in stature, with limbs rather coarse and robust; his countenance had little intelligence; his face was broad, pitted, and blotched, and covered with enormous whiskers, which he required every military man to imitate. He generally dressed in a splendid uniform, and his private clothes were always new and fashionable. His funeral occupied the greatest part of the night between the 27th and 28th of September, though, by his own directions, only the ceremonies usual at the interment of generals were observed.

The following epitaph has been placed on his tomb, in the church of St. Vicente da Fora:

D. O. M.
PETRUS IV.

Portugaliæ et Algarbiarum Rex, primus Brasiliæ Imperator, ac Brigantiæ Dux—Joan VI. Imperat. ac Regis filius—Patriæ Libertatus Assertor et Vindex. Dum Regnum in filiam carissimam Mariam II. sponte translatum, ejus nomine regerit, obiit maximo omnium Lusitanorum luctu die XXIV. Septemb. An. Dom. MDCCCXXXIV, ætatis suæ XXXVI.—*Gentleman's Magazine.*

—

JOHN PENN, ESQ.

June 21. At Stoke Park, Bucks, aged 75, John Penn, Esq., LL.D. formerly Proprietary and Hereditary Governor of the province of Pennsylvania in North America.

Mr. Penn was the eldest surviving son of the Hon. Thomas Penn, Esq., (son of the celebrated founder of Pennsylvania,) by Lady Juliana Fermor, fourth daughter of Thomas, first Earl of Pomfret. He succeeded to the family estates, when a minor, on the death of his father, in 1775. In consequence of his maternal descent, he was received as a nobleman at the University of Cambridge, where he was a member of Clare hall, and the degree of M.A. was conferred on him in 1779, and that of LL.D in 1811.

During the American war, the family of Penn endeavoured to act as mediators between Great Britain and her colonies; and having finally settled in England they received in 1790 a grant from parliament of an annuity of 4000*l.* in part compensation of their losses.

In 1789 Mr. Penn pulled down the old mansion at Stoke Park, (which his father had purchased in 1760 of the executors of Lady Cobham,) and erected a new house, from the designs of Mr. Nasmith, and completed by Mr. James Wyatt. It is in the villa style, of the Doric order, and contains a very fine library; a view of it will be found in Neale's Seats. Mr. Penn also erected a column in the park, on which stands a colossal statue, by Rossi, of Lord Chief Justice Coke, who died at Stoke Poges.

In 1796 Mr. Penn published a tragedy, entitled "The Battle of Edington, or British Liberty," which was derived from the history of Alfred, and privately acted at the Haymarket theatre; in the following year, appeared a Reply to the strictures of the Monthly Reviewers on the same production; and a translation of a Letter from Signor Ramieri di Calsaligi to Count Alfieri, on Tragedy. In 1798 he published his "Critical, Poetical, and Dramatic Works," in 2 vols. 8vo.

In the same year he put forth "A timely Appeal to the Common Sense of the People of Great Britain in general, and of the inhabitants of Buckinghamshire in particular, on the present state of affairs;" and in 1800 "Further Thoughts," a continuation of the same. At the general election of 1802, he entered the house of commons as one of the members for Helston: but we believe he was not a member of any other parliament.

In 1802 he printed two volumes of "Poems, consisting of original Works, Imitations, and Translations;" and in 1811, again two volumes of "Poems, being mostly reprints."

Some years ago, Mr. Penn raised many a smile by his employing more than one lecturer gravely to persuade youth of both sexes to enter into the holy bands of matrimony.

Mr. Penn had two brothers, Grenville Penn, Esq. F. S. A. who has distinguished himself by several able critical works, and a life of his great-grandfather, Sir William Penn, the distinguished admiral, and Richard Penn, Esq. formerly M. P. for Lancaster, and not less remarkable for his classical attainments, and wonderful powers of memory. Their sister, Sophia Margaret Juliana, was the wife of the late Hon. and most Rev. William Stuart, archbishop of Armagh.—*Ib.*

—

CHARLES WESLEY, ESQ.

May 23. Aged 76, Charles Wesley, Esq. for many years organist to their late majesties George the Third and George the Fourth.

This celebrated musician was born at Bristol, Dec. 11, 1757, the son of the Rev. Charles Wesley, and nephew to the Rev. John Wesley, the founder of the Methodists. His brother Samuel, also a musical genius, was eight years his junior; he died in 1815. His father communicated to a friend the following notice of his early years. He was 2¼ years old when I first observed his strong inclination to music. He then surprised me by playing a tune on the harpsichord readily, and in just time. Soon afterwards he played several others. Whatever his mother sang, or whatever he heard in the streets, he could, without difficulty, make out upon this instrument. Almost from his birth his mother used to quiet and amuse him with the harpsichord. On these occasions, he would not suffer her to play with one hand only; but, even before he could speak, would seize hold of the other, and put it upon the keys. When he played by himself, she used to tie him by his back-string to the chair, in order to prevent his falling. Whatever tune it was, he always put a true bass to it. From the beginning he played without study or hesitation. Whenever, as was frequently the case, he was asked to play before a stranger, he would invariably enquire in a phrase of his own, "*Is he a musicker?*" and if he was answered in the affirmative, he always did it with the greatest readiness. His style, on all occasions, was *con spirito;* and there was something in his manner so much beyond what could be expected from a child, that his hearers, learned or unlearned, were invariably astonished and delighted.

When he was four years old, Mr. Wesley took him to London; and Beard, who was the first musical man who heard him there, was so much pleased with his abilities, that he kindly offered his interest with Dr. Boyce to get him admitted among the king's boys. This, however, his father declined, as he then had no thoughts of bringing him up to the profession of music. However, when he was about six years old, he was put under the tuition of Rooke, a very good-natured man, but of no great eminence, who allowed him to run on *ad libitum*, whilst he sat by apparently more to observe than to control him.

For some years his study and practice were almost entirely confined to the works of Corelli, Scarlatti, and Handel; and so rapid was his progress, that, at the age of twelve or thirteen, it was thought that no person was

able to excel him in performing the compositions of those masters.

On coming to London, he received instructions on the harpsichord from Kelway, and in the rules of composition from Dr. Boyce. His first work, "A set of six Concertos for the Organ or Harpsichord," was published under the immediate inspection of that master; and, for a first attempt, was indeed a wonderful production, as it contained some fugues which would have done credit to a professor of the greatest experience and the first eminence. In 1784, he published "A Set of Eight Songs," in an extremely fine and masterly style.

His subsequent career was one of greater success than incident. He was for some years organist of Surrey Chapel, better known by the name of its minister, the late Rowland Hill. His duties were latterly confined to the old church at Marylebone. It is said that the "ruling passion" was so strong on his death-bed, that he was continually humming Handel's music; and, fancying he had his piano-forte before him, working his fingers on his bed clothes as though he were playing on the instrument, and that even within two days of his decease. He was of a most amiable disposition, a true Christian, and perfectly resigned to the will of his Maker.—*Ib.*

MR. MALTHUS.

The death of this gentleman, which occurred at Bath on Monday the 29th Dec. has been already noticed in most of the public journals; and we have reason to believe, that, at no distant period, some account of his life and writings will be prepared by his friends, more full and comprehensive, and better calculated to satisfy the public expectation than any which the columns of a newspaper could supply. Meanwhile, it cannot be expected that a person of so great celebrity should be suffered to pass away from a scene in which he has acted so conspicuous a part, without some present marks of the feelings with which he was regarded in it; and it would be matter of sorrow to the family he has left, if, while so much has been already said by others to whom he was little known, no friendly voice should be raised to speak of him as he really was, and to prevent, if possible, the continuance of those censures, which passed lightly over him while alive, but which are calculated to aggravate the grief of his family, to whom no consolation can be so precious as the memory of his virtues.

Mr. Malthus had, we believe, just entered his 70th year, but he was in the full enjoyment of all his faculties, and his death was totally unexpected by his friends. He left London about three weeks ago, on a visit to his father-in-law at Bath, in good spirits, and apparently in strong health, anticipating a cheerful Christmas with his children and other members of his family, who were invited to meet him; but Providence had ordained otherwise—the meeting took place, but the joy was not there; Mr. Malthus was taken ill soon after his arrival, with a disorder of the heart, which, in a few days, hurried him to the grave. He has left a widow, and a son and daughter both grown up.

Upon his character as an author, in which he stands most prominent, our observations will be very brief; his principal work has been long known, not only in this country, but in every civilised portion of the globe, and the judgment pronounced upon it by intelligent men generally, has been such as to satisfy the warmest and most zealous of his friends. One or two remarks only we shall venture to make, and these chiefly with a view of placing his literary claims upon a proper basis, and of throwing a clearer light upon the motives and views with which his labours were undertaken. It arose very naturally from his professional duties at the East India College, that, for many years, the studies of Mr. Malthus were chiefly directed to political economy, and especially to the discussion of certain subtle and controverted points of the science, in which an unavoidable ambiguity of language had added greatly to the natural obscurity of the subject, and increased the difficulty of arriving at clear results—viz. the measure of value, the excess of commodities, &c. In this field Mr. Malthus will be always classed with the most distinguished of his fellow-labourers; and we may venture to add, that his "Theory of Rent," and his work, "On Political Economy," are of themselves sufficient to place him in the foremost rank. It is not, however, upon his success in this department, in which he shares the palm with many, but upon his "Essay on Population," published many years ago, that his reputation ought to rest. In this work he stands alone as the expounder and illustrator of a new branch of knowledge, heretofore little thought of or cultivated in any country, but now, by his labours, raised to a degree of eminence in men's minds, corresponding with its vast importance, and brought with great efficacy to bear upon the morals and welfare of mankind. To enquire, as many have done, whether he were really the discoverer of the principle of population on which the Essay rests, is something worse than idle, especially as Mr. Malthus never laid claim to such a title himself: undoubtedly many scattered notices of it may be found in other works, particularly in the "Travels of Mr. Townshend in Spain," which Mr. Malthus was ever ready to acknowledge; but the practical use, and the full developement and application of the principle, are entirely his own. His views were first presented to the public in a single octavo volume, chiefly intended as a refutation of the theory of Condorcet and Godwin, upon the perfectibility of man; in proportion, however, as he reflected upon the subject, its importance was more evident to his mind, and the necessity of a further and clearer exhibition of it became more urgent. That nothing might be wanting, therefore, to the work, he visited, in 1800, every country in Europe then accessible to English travellers, observing carefully all the facts likely to bear upon the subject, inspecting the places, whether cities or villages, where any thing remarkable in the population was to be found, and consulting every public or private document which was calculated to benefit his labours; the fruits of these researches he carefully digested and arranged soon after his return, and, having embodied with them his former work, he gave them to the public in a quarto volume; and it is well worthy of observation, that the system then came from him in so complete and perfect a form, so guarded on every side, so carefully pursued and carried out to all its consequences, as to require little or no alteration afterwards, either from himself or any other person. The work of Mr. Malthus has gone through a great number of editions in this country, and has been translated into almost every language of the civilised world.

We are well aware, indeed, of the different judgments which have been formed of this Essay, and of the calumnies with which the author has been assailed. We know that coldness, harshness, and even cruelty, have been frequently imputed to the most humane and considerate of men, and that a design of degrading the poor has been charged upon a work whose sole motive and tendency was to increase their comforts, and to raise their moral and intellectual condition;—it is a consolation, however, to remember that the most reflecting and cultivated minds in this as well as in every other country, have unanimously adopted and approved both the principle and the reasoning of his work, whilst its most violent opponents and vilifiers have been, with one or two exceptions, either persons who have not read it at all, or who have grossly misunderstood or misrepresented it. Its greatest triumph, however, is, that it has been adopted as a principle of government and legislation; nor can we hesitate to believe, that at no distant period, when the cloud of prejudice and passion in which the subject is

involved shall have dispersed, the humanity of the system will be as apparent to all mankind as its truth.

It has been sometimes said and repeated publicly, since the author's death, that the view Mr. Malthus himself took of the principle of population, was a gloomy one. The remark is true, though somewhat uncharitable, for the fault was in the position of the author, not in his mind. It must be remembered, that at the time when the "Essay on Population" was published, now thirty years ago, he had to deal with a great practical and growing evil in society, of which few persons at that time had observed either the source or the remedy; that there prevailed generally amongst the poor an utter improvidence with respect to marriage and settlement in life; that foresight and frugality, the special virtues of their station, were fast losing ground in their estimation, and that they were recklessly sinking into a state of entire dependence on the poor's rate; while the conduct and opinions of those above them, so far from repressing their error, rather tended to encourage it. With these facts before him, and the consequences strongly impressed on his mind, we cannot wonder that Malthus, having laid down and demonstrated the great law of nature respecting population, should have thought it necessary in the first instance to point out, in all its naked deformity, the sin and misery which would inevitably attend an habitual violation of it; and that under this aspect he himself should have chiefly regarded it. That there is a bright side to this law of nature, is most true; and every benevolent and pious mind will be delighted to dwell upon it. God is good and righteous in all his ways, and they who have read the work of Bishop Sumner upon the "Records of the Creation," will remember how ingeniously and beautifully he has shown, that, in the hands of a gracious Providence, this principle is made subservient to the most beneficial and improving ends, being the great moving cause which excites the best energies of mankind into action, and gives spirit and perseverance to their most valuable labours. In considering this part of the subject, it should never be forgotten, however, that the labours of Mr. Malthus were at first directed against that wild and most unscriptural tenet—the perfectibility of man; and that temperance, frugality, chastity—virtues strictly scriptural and evangelical—were the sole remedies recommended by him. Nor can it be said at present that these gloomy views were unnecessary; notwithstanding all the warnings of the "Essay on Population," the evil it contemplated has now arisen to so great a height as to become almost incapable of remedy; but we believe, firmly, that had it not been for this book of Mr. Malthus, and all the wise and salutary parochial regulations which have sprung from it, the mischief would have been infinitely greater, and our way out of it much more obscure and difficult,—if any way could have been found at all, short of a convulsion of society.

Of his character in a social and domestic view, it would be difficult to speak in terms which would be thought extravagant by those who knew him best, and who, after all, are the best judges of it. Although much conversant with the world, and engaged in important labours, his life was, more than any other we have ever witnessed, a perpetual flow of enlightened benevolence, contentment and peace; it was the best and purest philosophy, heightened by Christian views, and softened by Christian charity. His temper was so mild and placid, his allowances for others so large and so considerate, his desires so moderate, and his command over his own passions so complete, that the writer of this article, who has known him intimately for nearly fifty years, scarcely ever saw him ruffled, *never* angry, never above measure elated or depressed. Nor were his patience and forbearance less remarkable—no unkind word or uncharitable expression respecting any one, either present or absent, ever fell from his lips; and though doomed to pass through more censure and calumny than any author of this or perhaps of any other age, he was rarely heard to advert to this species of injury, never disposed to complain of it, and, least of all to retort it. Indeed, he had this felicity of mind, almost peculiar to himself, that, being singularly alive to the approbation of the wise and good, and anxious generally for the regard of his fellow creatures, he was impassive to unmerited abuse—so conscious was he of his integrity of purpose, so firmly convinced of the truth of the principles he advocated, and so calmly prepared for the repugnance with which, in some quarters, they would be heard.

The most remarkable feature of his mind was the love of truth, and it was also the most influential: it was this which enabled him patiently to investigate, and fearlessly to expose, an inveterate and popular error; and it was this which in his private life, was the parent or the nurse of many other virtues conspicuous in him—justice, prudence, temperance, and simplicity. It is almost unnecessary to add, that in his domestic relations, all these qualities appeared under their fairest form, and with their sweetest influence—all the members of his family loved and honoured him—his servants lived with him till their marriage or settlement in life, and the humble and poor within his influence always found him disposed, not only to assist and improve them, but to treat them with kindness and respect.

His conversation naturally turned upon those important subjects connected with the welfare of society which were his peculiar study; in these he was always earnest, serious, and impressive, producing his opinions in such a clear and intelligible way, as to show that they were the fruit of considerable thought and reflection; but he was habitually cheerful and playful, and as ready to engage in all the innocent pursuits and pleasures of the young, as to encourage them in their literary progress and studies. By his intelligent colleagues at Haileybury, his loss will be long and sincerely felt—few persons knew so well as they how to appreciate his worth, and none had so many opportunities of observing its influence. His good breeding, candour, and gentlemanly conduct, were felt in every thing; and his sound judgment and conciliatory spirit, were not less remarkable in the councils of the college, than his manners and attainments were delightful and improving in their social intercourse and relations. In politics he was a firm, consistent and decided whig, the earnest advocate of salutary improvement and reform, but strongly and sincerely attached to the institutions of his country, and fearful of all wanton experiment and innovations.

Mr. Malthus was a clergyman of the church of England, and during the greater part of his life read prayers and preached regularly in turn with the other professors, in the chapel of the East India College at Haileybury: in these services, and, indeed, in every other ordinance of religion, his manner was uniformly serious and devout; his sermons were calculated to make a strong impression on the minds of the young men who felt and acknowledged their value; and it is now particularly pleasing to record, that they became more earnest and more edifying every year he lived. In religion, indeed, as well as in other things, he was always unobtrusive and unostentatious, but it was easy to perceive the spirit of the gospel had shared largely in forming his character, and that both the precepts and doctrines of Christianity had made a deep impression upon his mind.

In the latter period of his life, his temper and character were subjected to a peculiar trial: the government, by adopting the principles of his work, as the basis of their Poor Laws Amendment Bill, had recalled in a remarkable manner the public attention towards him, and the praise lavished upon him during the discussion in parliament, had only served to connect him more inti-

mately with the measure. The consequence was, that from all quarters a fresh flood of calumny and abuse was poured upon him, which has continued without intermission to the present day; and though he was never consulted about any of the provisions or enactments of the bill, yet every real or supposed defect which was discovered in the construction of it, were without ceremony attributed to him. We verily believe that if the late ministry had remained longer in power, some solid mark of favour or encouragement would have been bestowed upon him or his, as well to vindicate their adoption of his views, as to express their sense of the support he had so long and consistently given to the principles upon which their administration was founded; and further, that it may be a subject of deep regret to them, that, as far as he himself is concerned, the opportunity is lost for ever. At all events, we know well Mr. Malthus himself was never heard to utter the slightest murmur or complaint: with his usual equanimity he bore the neglect of one party and the abuse of the other; and, whatever might have been his apprehensions and feelings respecting the late change in the ministry, as far as regarded the country, he never for a moment spoke of it as affecting, or likely to affect, himself.—*London Athenæum.*

Arts and Sciences.

LONDON SOCIETY OF ARTS.

Mr. Aikin on the natural history and commercial history of cotton.—The word *cotton*, observed the lecturer, has been adopted in modern European languages from an Arabic word, meaning the same thing, and which, when put into English letters would be pronounced *kutun:* in Egypt it is called *gotun.* The Spanish word *algodon* is evidently the Egypto-Arabic word, with the article *al* prefixed. The Germans, who in general avoid intercalating into their language words of foreign origin, call it *Baum-wolle, i. e.* tree-wool. Mr. Aikin then laid before his numerous auditors the most important notices which are to be found in ancient classical authors, respecting the growth of cotton in India and on the coast of Arabia: and the importation of cotton fabrics of various qualities from India to Egypt by the way of the Red Sea. He likewise noticed the establishment of the culture of the cotton plant on the coasts of the Mediterranean—but, though exceedingly interesting, our space calls upon us to pass on to more modern times. Cotton wool was imported by the Genoese and Venetians into England and the Netherlands in the very beginning of the fourteenth century: but the use to which it was applied, except for candle-wicks, is not known. In 1430, fustians were made, perhaps invented, in Flanders—being probably intended as an imitation of the velvets manufactured in Italy. In 1534, several ships from London and Bristol traded to the Levant, and imported, among other articles, cotton wool. It might be expected, therefore, that at this time some cotton fabrics should have been established in England; and this seems at first sight to be confirmed by a statement in Leland's *Itinerary*, in the reign of Henry the Eighth, that cottons were made at Bolton-le-Moors in Lancashire, and in the villages about; as also by the mention in an act of parliament, passed in 1552 (Edward VI.), of Manchester, Lancashire, and Cheshire cottons. In this manner Mr. Aikin came down to the present period; noticing, however, as he went along, the invention of the "spinning jenny" in 1767. This engine draws several threads at once; and as it derives its principal motion from a mechanical first mover, produces them more even than had heretofore been done by hand. It was soon discovered that an improved method of carding the cotton, before it was subjected to the action of the jenny, was essential to the good performance of the machine. This was attempted with some success by Mr. Hargreaves, was very much improved on by Mr. Peel, and was brought to perfection in the carding machine of Mr. Arkwright. Egyptian cotton was introduced in 1823; it is of a long, strong, and silky staple, and has since been improved by the introduction of seeds of the Sea Islands' cotton. The demand for raw cotton in the British market has gone on progressively increasing; the following are the details of the importation of cotton wool for the last year, viz.—

Uplands and New Orleans.	262,885,000lbs.
Sea Islands.	3,500,000
Brazil.	26,540,000
Surat and Bengal.	11,570,000
West Indies.	1,610,000
Egypt.	1,540,000
	303,645,000lbs.

On comparing the above with the importation of 1831, it appears that there is an increase in the last year in the proportion of 303 to 288: but that the quantity furnished from all the above-mentioned countries, except the United States, has diminished. In the year 1832 the whole quantity of cotton spun in Great Britain was 277,260,000 lbs., of which about one-ninth, or 30,325,000lbs., was loss from dirt and waste in spinning, and the produce was 246,935,000lbs. of yarn. Of this quantity 222,596,000 lbs. was spun in England, and was thus disposed of:—Exported in yarn 71,662,000lbs.; ditto in thread 1,041,000 lbs.; manufactured goods 61,251,000lbs.; or about 134 millions of lbs. Besides the above, there were candle-wicks and mixed goods, of which, part were exported, 12,000,000lbs.; supply of home market and stock on hand 70,941,000lbs.; sent to Scotland and Ireland 5,700,000lbs.: total 88,641,000lbs. Therefore, in whole numbers, about 62 per cent of the entire quantities of cotton manufactured in England is exported; and of this 33 per cent is in the state of yarn and thread, and 28 per cent in woven goods. According to MacCulloch, the total value of every kind of cotton goods annually manufactured in Great Britain at present may be estimated at 34,000,000*l*; from which if we deduct 7,000,000*l*. as the cost of the raw material, and 21,000,000*l*. as wages to 900,000 workmen, there will remain for the cost of superintendence, coals, materials of machinery, and profit, 6,000,000*l*. The amount of capital vested in buildings and machinery is computed at 20,000,000*l*.

The lecturer was listened to with great attention.

LONDON ASTRONOMICAL SOCIETY.

Return of Halley's Comet. F. Baily, Esq. in the chair. Several fellows were elected. The translation of a paper by Dr. Olbers on the approaching return of Halley's comet was read. After some preliminary observations, the author proceeds to show that a probability exists of the comet's being seen in February or March next, before its conjunction with the sun. This probability arises chiefly from the circumstance that other comets, in particular that of 1811, have been visible at greater distances from the sun and the earth than Halley's will be in the spring of 1835. Dr. Olbers does not suppose that Halley's comet is so large that, under similar circumstances, it will be so easily seen as the splendid comet of 1811; still it is described by former observers, especially at its appearance in 1682, as having been sufficiently remarkable. Besides, it will be more strongly illuminated by the sun, in the proportion of 8 to 5, than the comet of 1811 was on the 17th of August, 1812, when it was finally observed by Wisniewsky; and, which is an important consideration, the latter comet was seen in July

and August 1812 with very inferior telescopes, whereas telescopes of great power may be employed in observing Halley's comet. In reasoning on the probability of its being visible in February and March next, from the splendour of its appearance in 1682, Dr. Olbers, of course, assumes that it has not since that time sustained any sensible diminution of its mass. Many astronomers believe in the gradual dissipation of the matter of comets; but we have as yet no facts to warrant this conclusion in respect of Halley's comet. In 1607, and at its last return in 1759, it appeared pale and dim, but in 1682 it shone forth with greater splendour; and the diminished appearances of 1607 and 1759 may be explained by its position at those times between the sun and the earth, without supposing its mass to have undergone any change. It ought, however, to be stated that Halley's comet became invisible to Messier in 1759, so early as the 4th of June, when its distance from the sun was only about 1.68 and from the earth 1.42. About the beginning of next March, the comet's distance from the sun and earth will be nearly the same, and = 3.78; but, according to the received theory of light, the intensity of the light of a heavenly body not self-luminous is proportioned to $\frac{1}{R^2 D^2}$ R representing its distance from the sun, and D its distance from the earth. Hence, in the beginning of March, the intensity of the comet's light will be about thirty times less than when Messier lost sight of it; but, at that time, it was close upon the confines of the evening twilight; whereas, in March next, it will still be at a considerable height in the sky, when the twilight has entirely disappeared. There is a very remarkable fact connected with the appearance of Encke's comet unquestionably proved by the experience of 1822 and 1833, to which Dr. Olbers thinks sufficient attention has not been given, viz. that it was visible at a far greater distance from the earth and sun before it had passed its perihelion than after. Should this turn out to be the case also with Halley's comet, the probability of seeing it in the spring of 1835 will be increased.

Notabilia.

Short Sight.—Dean Cowper, of Durham, who was very economical of his wine, descanting one day on the extraordinary performance of a man who was blind, remarked that the poor fellow could see no more than "that bottle." "I do not wonder at it at all, sir," replied a minor canon at table, "for we have seen no more than that bottle all the afternoon."

Walking upon Water.—"Le Voleur" quotes a paragraph from a German paper, which states that a Swedish fisherman has made several experiments with complete success, of walking upon the water, which he does with as much ease as upon land, by means of slight tin shoes. These shoes are made in the shape of a small canoe, and are attached together, so that they can only be separated so far as to ensure the power of walking with ease.

Mdlle. Duchesnois.—The Paris journals announce the death of this eminent actress.

Geology.—A paragraph in the French journals, though not sufficiently explicit to admit of our full understanding of the case, appears to describe a matter of considerable geographical interest—namely, the discovery in a sand-pit, near Chateaudun, of a petrifaction resembling the top of a palm-tree, about 3½ feet in length, and 1½ feet in girth at the base, whence it gradually tapers to the other end—altogether resembling a club. The wood is almost as sonorous as bell-metal; and in the same pit are found petrified bones of animals, and shells belonging, it is said, both to sea and river formations.

Lord Brougham left Paris on the 22d December, for Italy, and is expected to return to England, via Paris, about the 15th of January. It appears that his journey in Italy will not extend further than Genoa. His lordship's last visit was to M. de Chateaubriand, on Saturday the 20th inst.

Spontaneous Burning.—On Thursday the attention of the persons residing opposite St. Mary's church, Oxford, was attracted by the extraordinary appearance of a lad, named Barnes, of Watlington, *who, as he was crossing the road, suddenly burst out into flames.* Several members of the University ran to his assistance, and succeeded in extinguishing the flames, in which attempt their gowns and hands were much burnt. On investigation, it proved that a quantity of phosphorus, which he had in his pocket, had ignited, and thus caused the flames to burst out in several places about his thighs. The lad was taken into Mr. Spiers's, chemist, who rendered him every necessary assistance, so as to enable him to proceed home in a gig with his father.

Swallowing a Decree.—Last week, two bailiffs executing a decree against a county of Roscommon magistrate, at the suit of Mr. Richard O'Keefe, of Galway, were violently assailed, and obliged *to swallow the decree and some other papers of great importance!*—*Con. Adv.*

A Service of Glass.—A superb service of cut-glass is just completed by Messrs. Jones, of Ludgate Hill, for the Pacha of Egypt. It is said to contain every requisite for dinner and dessert that can be conceived and manufactured in glass, and to be the finest specimen of the skill of British manufacturers, in this department, which has yet been produced. The claret decanters are modeled after the Etruscan—those for hock, after specimens of vases found at Herculaneum; and the water-ewers are, in form, like those usually placed in the hands of Hebe by our artists.

An Egg Bath.—A few days ago, a boatman from the Highlands had laid his wherry alongside of the quay at Greenock, and exposed for sale a large cargo of eggs, when a drunken vagabond took it into his head to board the wherry, with what intention it did not appear, but in jumping into the boat, he missed the place for which he aimed, *and went right into the middle of the eggs, where he sunk to the middle.* The Highlander, rendered motionless by his astonishment, was unable to make any effort to seize the offender, till he had, at the expense of some hundreds more of the eggs, worked himself out of the puddle in which he had nearly stuck, and gained the quay. By this time the Highlander had recovered from his stupor, and set off in pursuit of the culprit, who, with his legs and body shining yellow, made his way through various closes and streets, till at last all trace was lost not only of the man, but of the savory traces he had left in his flight.

Hydrographic Paper.—M. Chevalier has examined a paper lately invented, which may be written on with a pen dipped in pure water. He found that it was prepared by soaking the sheets of paper in a solution of sulphate of iron, drying them, and then covering them with finely powdered galls. He states that similar papers may be prepared by using other solutions and powders; thus blue is probably prepared by powdering the paper, soaked in sulphate of iron, with ferrocyanate of potash.

Indian Antiquities.—The following account of the results of a tour made by M. Honigberger, a Russian traveller, through India, is given by a St. Petersburg Journal:—"He has made a large collection of antiquities in marbles, bronzes, and sculptured stone, as well as of plants and other specimens of natural history, which he has left at Lahore to be packed and sent to Europe. M. Honigberger has brought with him some very curious medals, of which two are of gold, and of the size and

weight of a double ducat. One of them, which he found amongst the numerous stone monuments in the environs of Kaboul, is the more remarkable, as it makes us acquainted with the name and portrait of a King Kadphises, which has never appeared either in numismatics or in general history. It bears, on one side, the bust of an aged man, whose features do not show much dignity; the head is bald, without any of the emblems of royalty, and the drapery is simple. It is surrounded by the legend 'Kadphises Basileus,' and there are some other letters, among which M. O. are slightly perceptible. On the reverse is the figure of a naked young man, having some traces of a cap on his head. It is surrounded by an inscription in ancient Pehlvi characters. The other medal represents an Indian prince at full length, on foot, completely armed, and holding in his right hand a species of trident; of the inscription, only the Greek B and O are to be deciphered. On the reverse is a man fully clad, and by his side an animal with horns, probably the Indian sacred cow; the inscription on this face is in Pehlvi characters. M. Honigberger has also three Bactrian medals in silver, a large sized Demetrius, a small Euthydemus, and a small Hormisdas, all in very fine preservation."

Ruins of Athens.—M. de Klentze, the Bavarian architect, appointed by King Otho and the Regency of Greece to review the plan under consideration for the reconstruction of Athens, has made a report to the regency on the subject, in which he proposed to establish regular guards to protect the monuments and relics of antiquity from the devastation to which they were daily subjected. He also proposed the restoration of the monuments, as far as the remaining materials permitted, and offered to direct the works in person as long as he remained in Athens. Every thing was granted, and the necessary funds provided. M. de Klentze therefore, as soon as his political mission was terminated, proceeded to Athens, and commenced clearing the Parthenon. He has found four portions of the famous frieze of the Panathenea, of which some are better preserved than any of those sent to England by Lord Elgin. M. de Klentze has also recommended the clearing of the whole of the Acropolis, and the formation of a museum, which has been approved of, and the necessary sums for some years assigned; so that a sanctuary for the greatest masterpieces of art will soon exist on the most classical spot in the world. A sculptor has been appointed to superintend the restoration of the discovered objects.

Literary Intelligence.

We are happy to see that Mr. Murray is preparing a literary speculation for the future, which promises much in respect to value, interest, rarity, and readableness. We allude to his Prospectus of the forthcoming combined Memoirs of Johnson, which are to be published in a style similar to the works of Byron and of Crabbe. But typographical excellence, or beauty of illustration, is a secondary matter, compared to the literary character of the intended undertaking. When we look to the fulness and completeness of the proposed collection, to the interest and amusement which every page will impart, and to the character of the hero himself, it may be questioned whether the annals of literature do or ever will furnish a parallel to the *first complete and uniform edition of the various Memoirs of Samuel Johnson.* The interest will consist not only in its being the most complete life of a human being ever published, and that being a man who lived as much in his conversation as in his writings: the man himself was remarkable for his strength and his weakness; learning, acuteness, sagacity, and a magnificence of power, which, if it cannot be called genius, produces all its effects, rendered him the intellectual monarch of his age,—while the oddities of his manner, and the superstitions which clouded his understanding, seemed to place him occasionally below the level of ordinary men. His life itself has two great divisions of interest,—his early struggles with the world, and the poverty he underwent without contamination; the latter years of his pilgrimage, when he associated with all who were distinguished in letters, arts, philosophy, or public affairs; so that in his biography we have a sketch of every contemporary of eminence. Lastly, what life had ever such historians, especially if we speak of the entertainment they afford? Saying nothing of himself,—or even of that singular man who has so identified his own name with that of his hero, that we never speak but of Boswell's *Johnson*,—what more amusing reading can be desired than the anecdotical reminiscences of Piozzi, Hawkins, Murphy, &c.; the commentaries of Croker, the illustrative information he has collected from the veteran actors on the scene; besides a body of gossip from various authors, "including numerous valuable private documents now in the possession of the publisher?"

Literature is not all connected with this singular undertaking; we shall have art as well. Independent of the frontispieces and vignettes in the volumes, Mr. Murray proposes to publish separate illustrations of the memoirs, which shall consist of autographs, localities, and portraits. If the views should be fac-similes of the scenes as they appeared at the time, they would have an interest far beyond any arising even from pictorial excellence. On the *portraits* no remark is necessary; they will form, we imagine, a select Reynolds gallery, where we shall see the faces of the characters more vividly and distinctly than we even read their manners in the text.

The quiet noticed in our last still prevails in the literary world; but announcements are peeping out, and there are some of pleasant promise. Mr. Murray is about to publish "Table Talk," by the late S. T. Coleridge; "Oriental Illustrations of the Scriptures, from the Manners, Customs, and Superstitions of the Hindus," by the Rev. Jos. Roberts; "A Visit to Ireland," by the younger Barrow; and Miss Kemble's (now Mrs. Butler) "Travels in the United States, and *Opinions of the Americans*;"—by the by, the change in her name reminds us that she has already expressed a very strong opinion in favour of the Americans. Messrs. Longman, too, we observe, announces "The Gipsy," a romance, and "Edward, the Black Prince," both by Mr. James; a third volume of "The Doctor;" the "Journal of a Visit to Constantinople, and some of the Greek Islands," by Mr. Auldjo; "The English in India;" and a new volume of Poems, by Lady Stuart Wortley. Messrs. Rivington, "An Account of the Writings of Clement of Alexandria," by the Bishop of Lincoln; and a "Life of Bishop Jewel," by the Rev. C. W. Le Bas—and Messrs. Saunders & Otley, Sir Grenville Temple's "Travels in Africa," parts of which have been read with such general satisfaction at the late sittings of the Geographical Society.

An Essay on the Deaf and Dumb—Second Edition—By J. H. Curtis, Esq., aurist in ordinary to his majesty. This is a most important and valuable work. Every thing respecting the ear must be acknowledged to be highly interesting when we consider it in connection with our personal safety, our external relations, and social happiness; and yet to no part of the human structure has so little attention been paid as to the organ of hearing. It is also singular to observe, that, although the knowledge of the ear engaged the study of the ancient anatomists and philosophers, their researches have produced so little in a practical point of view. The public are much indebted to the author of this useful and

learned treatise, and to the medical practitioner it will prove invaluable.

The Fifty-seventh Part of the *Encyclopædia Britannica* has articles whose names are promising,—(the conclusion of) Geography, Geometry, Germany, Gibbon, and Gifford, besides a variety of smaller subjects.

Sir Egerton Brydges has announced a third volume of his Autobiography, with Anecdotes of Mrs. Montague, chiefly literary, and some of Mrs. Carter. Also, a few piquant words on Hannah More—a woman, he asserts, of a most ridiculous vanity and self-conceit.

The Poetical Works of S. Rogers, illustrated by above a hundred Vignettes from designs by Stothard and Turner, are to appear in monthly parts.

The Rev. F. C. Hasenbeth announces a complete Answer to the Rev. G. Stanley Faber's enlarged second edition of the Difficulties of Romanism.

There has been discovered in the library of Count Wallenstadt, a copy of the Tracticus Theologico-Politicus of Benedict Spinosa, which has numerous marginal notes and additions in the hand-writing of the great philosopher himself. Other necessary arrangements are making for publishing this important work, with a lithographic fac-simile of the MS.

M. Von Hammer is engaged in passing through the press, in livraisons, a second edition of his History of the Ottoman Empire, with additions and improvements. We have always thought this work worthy of an English dress.

A complete Bohemian Dictionary, and, we have every reason to believe, a very important philological work, is promised by Dr. Jungmann. He has been employed upon it for thirty years; and it is to be published in parts.

Mr. J. D. Harding announces Sketches at Home and Abroad, by lithograph imitations of original Sketches from Nature.

Oriental Literature.—We are glad to see the works of Confucius (Kong-fou-tseu) and of Mencius (Meng-tseu), the two great Chinese philosophers, are about to appear, by M. M. G. Pallthier, with a translation opposite the original Chinese.

Capt. Alexander, the author of Transatlantic Sketches, has published a new work, entitled "Sketches in Portugal during the Civil War of 1834." He has since departed on a more arduous travel, under the sanction of the Geographical Society, to explore the southeast parts of Africa.

—

From Bent's Literary Advertiser.

LITERATURE AND ART.—The Supplement to the Literary Advertiser, for 1834, issued with the present Number, contains lists of the new books and principal engravings published in London, during the past year, with their sizes and prices. The number of books is about 1270, exclusive of new editions, pamphlets, or periodicals, being upwards of 100 more than in 1833. The number of engravings is 73 (including 31 portraits), 15 of which are engraved in the Line manner, 49 in Mezzotinto and 9 in chalk, aquatints, &c.

The following are in the press:—Villeroi, by the author of the "Valley of the Clasone."—English in India, and other Sketches, by a Traveller.—The Book of Revelation, with notes, by the Rev. J. Ashe, A.M.—On the Nature, Treatment, and Prevention of continued Fever, by Dr. H. M'Cormac, Belfast.—Family Prayers, by the author of "Explanatory and Practical Comments."—The Village Churchyard, and other Poems, by the Right Hon. Lady E. S. Wortley.—The Mediator of the New Covenant; a Series of Sermons, by the Rev. J. S. Knox.—Sir Grenville Temple's Travels in Africa.—The Gipsey, a Romance, by the author of "Mary of Burgundy," &c.

In the press, Hector Fieramosca, or the Challenge of Barletta. An Historical Tale: by the Marquess D'Azeglion. Translated from the Italian.

The Pilgrims of Walsingham, a novel, by Miss Strickland, will appear shortly.

In the press, Faustus, a Mystery—The first Walpurgis Night—The Bride of Corinth. Translated from the German of Goethe. By John Anster, LL.D., Barrister at Law.

A Series of Catechetical Lessons, by Rachel Howard, of Ackworth, with 12 engravings in outline, by Zeitter, is nearly ready for publication.

In the press, the Revolutions of the Globe familiarly described: in a series of Letters addressed to a Lady, by Dr. Bertrand.

The author of the "Anti-Spelling Book," is about to publish a new work entitled, the French Language its Own Teacher; being a system to enable the pupil to learn French without the aid of a master.

A new edition of the works of Milton is forthcoming, in monthly parts, with life and copious original and collated notes, by Sir Egerton Brydges, and historical and imaginative illustrations, by J. M. W. Turner, R.A.

Mr. O. Rich, the American bookseller, is about to publish Bibliotheca Americana Nova; a catalogue of books relating to America, printed since the year 1700, with an historical and critical account of the origin, nature, author, &c. of each work, noticing many which are extremely rare and valuable; the whole chronologically arranged.

Mr. S. Birch announces, Annals of the Coinage of China: being an account of the origin and progress of the Chinese mint, with engraved specimens of their coins and medals—from the Shin Paou, the shell currency, the Thou, the Poo, or cloth-formed coinage, and the Tseen, or present currency.

A German Tale, descriptive of the age of Rodolph the Second, by Lord Albert Conyngham, is announced for publication, under the title of the Natural Son.

Nearly ready, Popular Statistics and Universal Geography, a companion to all the almanacs, containing the length, population, revenue, &c. &c., of every state in the world.

Mr. Loudon announces a new publication, to be entitled, Arboretum Britannicum, or Portraits from Nature, to a scale of a quarter of an inch to a foot, of all the trees of ten years' growth which endure the open air of Britain, drawn from trees now growing within ten miles of London: with botanical specimens of the flowers and fruit, or seeds of each tree, to a scale of two inches to a foot.

The author of "Essays on the Formation of Opinions," has a work in the press, on the General Principles of Political Representation, and on the vicissitudes in the value of money.

An important work by M. Keferstein has just appeared at Leipsic, on the Physiology of the Earth, Geognosy, Geology, and Palæontology (Fossilogy). The latter part contains a voluminous catalogue, with the Latin names, of all the known fossils of either the animal or vegetable kingdom.

The Life and Times of William III. King of England, and Stadtholder of Holland. By the Hon. Arthur Trevoir, M.A. F.A.S &c.

New editions are printing of Robinson's Theological Dictionary—of Nicholson's Course of Mathematics, and of Phillips's Million of Facts.

A new edition of Dr. Adams' Roman Antiquities is in the press with additions and corrections, edited by Rev. S. R. Major, M.A., of King's College, London.

A Physical Description of the Earth is preparing for publication by Baron Humboldt.

In the press, the Wars of Montrose, by the Ettrick Shepherd.—Also the Picture and the Prosperous Man, by the author of "Exile of Idria."

Yours faithfully
James Smith

ONE OF THE AUTHORS OF "REJECTED ADDRESSES".

From Fraser's Magazine.

JAMES SMITH, ESQ.

Ay! there's the end of it! We all know what Dr. Radcliffe said to Queen Anne, when she asked him what brought on the gout. There sits James Smith, with his foot pressing a soft cushion, his elbows propped by the arms of an easy chair, his hand resting on a crutch, his hair departed from his head, his nose tinged with the colours of the dawn, and his whole man in a state of that repose which indicates that he has had much work in his way while sojourning in this world, and that, like Falstaff, he is taking his ease in his own inn, the Garrick—a club of gentlemen which in a great measure would answer the description given by that worthy knight of his companions in arms, as being principally composed of "gentlemen of companies, slaves as ragged as Lazarus—discarded unjust serving-men, younger sons of younger brothers, revolted tapsters, and ostlers trade-fallen." Among them sits James Smith, regaling them with jokes, which, if they are not quite as good as those of Falstaff, have at least the merit of being at least as old.

The name which he bears has excited some rather elaborate wit in *Don Juan*—

"'Mongst these were several Englishmen of pith—
Sixteen called Thomson, and nineteen named Smith;"

and so forth. It is, in spite of this and many other jokes of the same kind, one of the most honourable names in the world. It is derived directly from Tubal Cain. As old Verstegan sings, after some far older authority—

"From whence comes Smith, all be he knight or squire,
But from the smith who worked in the fire?"

And what descent can be more noble? The Smith has, however, not been especially famous in our literature; and in the present case is distinguished only by some cleverly hammered out jokes. Whether James or Horace were the principal hammerman, is a question in doubt among the critics who employ themselves in discussing matters of such moment. We incline to those who think that any thing of value in the *Rejected Addresses* is to be attributed to the pen of James. But as Horace (Flaccus, not Smith) remarks, "*grammatici certent*"—we shall not dogmatise on the subject. It is certain that James lays no claim to the novel-writing honours of his brother. With respect to the *Addresses*, he is content to "partake the triumph;" but he has no notion that he is called upon to "pursue the *Gale*"—no, nor the *Reuben*, nor the *Brambletye*, nor any thing that is his—viz. Horace's.

James Smith was an attorney, and is a pleasant, twaddling, pun-making, epigram-manufacturing, extempore-grinding, and painstaking elderly joker. He made one hit, and that was a good one; on the strength of which he has lived ever since, as indeed he deserved to live. We cannot recollect that he wrote any thing in the book line except his contributions to the *Rejected Addresses*, unless he had a hand in such stuff as *Jokeby*, or *Horace in London*. His magazine papers in the *New Monthly* were rather monotonous; and his continual quoting of them for years afterwards has contributed in a great measure towards getting him, so generally as he is, considered to be a bore. But let him have his praise. His single talent was a *good* talent, and there is no reason why he should wrap it up in a napkin. We have already alluded to the universal diffusion of his name among us English folk, and its trite and ordinary sound in our ears. It is perhaps more congruous on that account with the station which he has chosen to hold in our literature. His place there is of the Smiths, Smithish. In his own magazine essays, it was a favourite pastime to represent Mr. Deputy Higgs of Norton Falgate aping the great, and very much disparaged for the parody. To Scott, to Southey, to Wordsworth, to Byron, Smith is what this Norton-Falgatian is to the gentlemen of White's. He is, therefore, well named; and let him not repine at his "compellation," as in former days, when, walking in Oxford Street with Wilson Croker, he observed over a shop door "Mortimer Percy, tailor,"—"Is it not too hard," said James, then fresh from all the honours of the *Rejected Addresses* about him, "that two such grand and aristocratic names should be the lot of a tailor, while two wits and gentlemen are moving about the streets afflicted with the names of Croker and Smith?"

No—the name is right—

And may the Garrick hail with loud acclaims,
For many a year, the gouty jokes of James.

From the Westminster Review.

ALGERINE COMMISSION.

Procès-Verbaux des Rapports de la Commission d'Afrique instituée par Ordonnance du 12 Decembre, 1833. *A Paris, de l'Imprimerie royale*, 1834. Communicated by the Ministry to the Chamber of Peers, and of the Chamber of Deputies.—4to. pp. 539.

Louis Philippe, on receiving the report of the president of the council of ministers, decided on the 7th of July, 1833, "that a special commission should be appointed to proceed to Africa, to collect any important facts which might tend to the information of government relative to the actual state of the country, or the measures indispensable to its future welfare." The members of this commission, Lieutenant-General Count Bonnet, peer of France, president; the Count d'Haubersart, peer of France; Messrs. De la Pinsonnière, Laurence, Piscatory, Reynard, members of the chamber of deputies; De Montfort, maréchal de camp and inspector of engineers; Duval d'Ailly, captain in the navy; were, on their return, to join a more numerous commission, which was carefully to examine the information obtained, and make a detailed report thereon to government. The former commission reached Algiers on the 1st of September, and immediately proceeded on the mission confided to them. They not only visited the environs of the town, but traveled as far as Belida at the foot of the Atlas, and from thence by sea to Oran, Arzew, and Bona. They endeavoured, without success, to disembark at Mustaganim; and several of them landed at Bou-

gie, of which a French expedition from Toulon had lately taken possession. The result of their enquiries and observations having been presented to the president of the council of ministers, the second named commission was instituted by proclamation on the 12th December, 1833. Its members are the Duke de Cazes, peer of France, president; Lieutenant-General Count Guilleminot, peer of France; Baron Monnier, peer of France; M. Duchatel, privy counsellor and member of the chamber of deputies; M. Dumont, do. do.; M. Passey, member of the chamber of deputies; the Count de Sade, do.; M. Baude, do.; Lieutenant-General Bernard, aide-de-camp to the king; Vice-Admiral Ducampe de Rosamel; Baron Volland, intendant militaire.

This new commission, composed of nineteen members, began by carefully examining all the documents brought from Africa by the former one. The *procès-verbaux* of all the sittings were read to them; the French and Moors, then in Paris, and many other persons whose evidence was deemed useful and important, as also several other individuals who had volunteered to communicate certain facts, or give certain necessary explanations on various subjects, were severally heard by them. They then discussed all the questions specified in the instructions furnished by the president of the privy council to the first commission at the period of their departure for Africa; and after forty successive sittings, they drew up a report of all their proceedings, which is divided into two distinct parts. The first contains the discussion of the fundamental points, the evacuation or continual occupation of Algiers, the extent to be given to that occupation, and the form of government most proper to be adopted for the French possessions on the coast of Africa. The second part of the report relates to the civil administration, justice, and finances, and contains the decision of the commission relative to several private questions on which they had previously been consulted. The commission, by a majority of seventeen to two, were of opinion that "France ought to retain its possessions on the northern coast of Africa." They were almost unanimous on this fundamental resolution, but differed on the proper system to be adopted for the occupation and government of these possessions. There were various opinions on this subject; the principal maritime places only might be occupied; or the conquest might be extended, and an expedition sent into the interior to subdue the province of Constantina; or an intermediate system might be fixed upon, a kind of medium where equal advantages could be reaped from the two extreme plans; or the towns now occupied might be retained, and the neighbouring territory gradually extended on every favourable opportunity.

After a somewhat lengthened discussion, it was unanimously agreed on, that in its execution, the system was to allow of nothing absolute; that by economising the resources of the present, the access of future prospects must not be debarred. The government must preserve the fortified towns, as also the territory round those towns, which would easily be defended by troops. Government must also endeavour to extend the authority and influence of France, by combinations in perfect harmony nevertheless with the right of conquest by which the authority of France has been substituted for that of the regency, and guided by the rules of a humane and enlightened policy. The commission having adopted this basis, it remained only to apply it to the different parts of the territory of the regency which are at present in the possession of France. The commission entered into a serious discussion on this important subject, and at length drew up and signed the following resolutions.

"The commission are of opinion:

1. "That, for the honour and interest of France, the possessions on the northern coast of Africa must be retained.

2. "That, in maintaining the right of France to the sovereignty of the entire regency of Algiers, it will be proper for the present to confine the military occupation to the towns of Algiers, Bona, Oran, Bougie, and a certain designated territory in advance of the two former places.

3. "That the territory occupied in front of the town of Algiers, must be protected by a line of military stations, extending from the chain of the Atlas at Belida, or the neighbourhood of that town, to the sea side; on one side in the direction of Cape Matifou, and on the other towards Coleah.

4. "That the territory occupied in front of Bona must also be flanked by a line of military outposts, extending from the extremity of Lake Fekara, passing through Side-Damden to the mouth of the Mafrag.

5. "That the general object of the fortifications to be constructed, is to place the towns and outposts in a state of defence against the attacks of the native hordes; and that works of regular fortification can for the present be dispensed with.

6. "That the effective military force must be reduced on every possible opportunity, and remain limited to 21,000 men, who are to be thus distributed:

For the defence of Algiers and territory.....	12,000
For that of Bona and territory.....	4,000
For that of Oran.....	3,000
For that of Bougie.....	2,000

7. "That it will be necessary also to employ corps of natives as an auxiliary force to the French garrisons, and to compel the native tribes to furnish their share of these troops, which would only be entitled to receive pay during active service.

8. "That all matters which in France are settled by the legislative power, should likewise be so in the French possessions situated on the northern coast of Africa, and in virtue of royal proclamation previously deliberated in the council of ministers; and that, to this effect, a law should be passed to delegate the legislative power in these possessions, to the king in person.

9. "That a governor general, invested with authority and civil power, be appointed to these dominions; that his powers be regulated by royal proclamation sanctioned by the council of ministers, as also by the instructions he will receive relative to the general administration of government.

10. "That the king's orders relative to every part of the service, should be transmitted to him by the secretary of state, president of the council of ministers, only; but in all financial and judicial matters, the governor general should correspond directly with the ministers of those two departments.

11. "That the authority of the governor general, who should reside at Algiers, extending over the whole possession, the commandants of Bona, Oran, and other places,

should be under his immediate orders, and communicate with him alone.

12. "That the civil administration be exercised under the orders of the governor general, and by his administrators residing at Algiers, Bona, Oran, and Bougie, who will severally keep up a correspondence with him.

13. "That the regulations, established in France relative to the division of the civil and military departments, must be observed in fixing the duties of the commandants and their administrators; and that the governor general should have the right of delegating to any of the military commandants of different stations, any portion of his power he may deem requisite.

14. "That the first duty of the governor general should be to guarantee the persons and property of the inhabitants, and liberty of religion; to protect agriculture and commerce; on no account to have recourse to military force, except for defence against the attacks of the natives; but no expedition with intent to extend the occupation beyond the given limits, to be undertaken without a previous order from the king.

15. "That, nevertheless, the governor general should seek by all other possible means to extend the dominion of France over all the parts of the country which are yet unsubdued.

16. "That it will be desirable that the governor general be assisted by a council consisting of the general commandant of the garrison of Algiers, a judicial functionary appointed by the king, the military intendant, and the director of finances.

17. "That a special budget for the government of Algiers should be voted; this budget to detail the total amount of expenditure for the French possessions on the northern coast of Africa."

The foregoing are the official resolutions definitively agreed upon, and fully detailed in the general report of 10th March, 1834.

The next object is to examine the important discussions which have taken place in the numerous sittings.

The first sittings, namely those from 22nd December, 1833, to 23d January, 1834, M. Pichon was introduced, and made the following statement in reply to various questions put to him by the president.

"I resided five months at Algiers. All that I saw of the country and inhabitants during that period has fully convinced me that the word 'colonisation,' at least in the sense given to it in France, is erroneous as far as relates to the French possessions in Africa, inasmuch as the settling of a colony of cultivators in that country is impossible. I am of opinion that for the present it will be better only to persist in the occupation of Algiers, Bona, and Oran, as the most important maritime positions on the coast of Africa. We can try cultivation in a range of country near these points; but, above all, let us not attempt colonising on the plan of the settlements in America. The two countries cannot be assimilated, not only on account of the different nature of the soil, but also the difference of manners and customs of the inhabitants. Any attempt to settle beyond the territories defended by the three places mentioned, would prove fruitless to the inhabitants, and ruinous to France. The surest means of destroying the future prospects of Algiers, would be to attempt to over-extend the territory already in the possession of France, and to continue on the same plan as at present. I will ask one question;—What benefit has been derived from the works executed, and the money employed to colonise those possessions, for these four years past?

"I certainly conceive that our possessions at Algiers will hereafter enable us to command the whole of Africa; but then it must be on the same system that the English govern in India, where they wisely rejected any attempt at colonising, which measure would have finally driven them from that important country. For a century and a half that they have retained possession of that part of the world, they have never suffered their countrymen to settle within the boundaries of the twenty-four districts given up to them. This system is in no way similar to that adopted for settlements in America, and still the analogy is continually insisted on. In Africa you will find warriors accustomed and well trained to war, and who will seek every opportunity of satisfying their propensity, but are naturally uncontrollable. In America the invaders found wandering tribes settled here and there over a vast territory, flying, or submitting to their arms and their civilisation, naturally of a pacific disposition, and willingly submitting to their demands. In Africa the inhabitants are all cultivators or graziers: they occupy and possess small portions of the territory; for instance, the Kabailes live in the mountains which they inhabit, in huts surrounded by a small spot of cultivated ground. The American natives were all huntsmen, and willingly gave up the land."

In the sitting of 25th January, 1834, M. de Damrêmont was examined before the commission. The substance of his evidence was as follows:—

"I am of opinion that government ought not to interfere in the colonising of the country further than to afford every encouragement to persons who may wish to risk their capital in the propagation of industry, or to protect any works executed on the territory of Algiers. The country is too populous to depend on the natives to cultivate the land, and the neighbouring tribes will never contribute to the cultivation of those districts they do not inhabit, unless by sending occasionally a few hands to assist. But when once confidence is fully established, colonists will flock to the country in abundance; and the land owners will be glad to have them settle on their property, or even have no objection to make over certain portions of their property to them on fair terms. To support my opinion, I will state to the commission some information which I collected while at Marseilles, and which may be considered authentic. Several opulent Swiss merchants, established in that city, often intimated to me that if they were certain that these possessions would not be given up, they would purchase land for those of their countrymen, who, finding no means of existence at home, are obliged to quit their native land, and would prefer Algiers to America, on account of the immense distance of the latter country. I will add, as my firm belief, that the commercial portion of the community at Marseilles, who are exceedingly prudent, and very rarely speculate on matters of chance, would become purchasers of portions of the territory of Algiers and Bona the very day that an official communication from government should make known the positive intention of the king's ministers relative to the French possessions on the coast of Africa."

The President.—"What effective force do you conceive would be necessary to keep Algiers and the neighbouring possessions within the limits you have designated?"

M. de Damrémont.—"I think that fourteen thousand men would be sufficient to protect the colonists, afford them complete security, and execute the necessary sanitary works."

In these first sittings, the debates of the commission were frequently interrupted by the necessity of referring to the means which had been employed to obtain power in Africa, which

means were, on several occasions, highly censured, and severe measures adopted to prevent further abuse. M. Pichon is again called to give information on this subject. Interrogated by one of the members as to what he knew relative to the military execution of the tribe of El-Ouffia and their Sheik, by order of the Duke of Rovigo, M. Pichon made the following reply.

"You there remind me of a most unfortunate event which it was totally out of my power to prevent, in spite of my utmost endeavours to that effect. The following were the motives of the Duke of Rovigo's extreme severity on that occasion. Our most distant military post on the left of Algiers, is that called the Maison Carrrée. Part of a small tribe called El-Ouffia had settled within cannon range of this fort; but the greater part had remained in the mountains. On the 5th of April, 1832, the Duke of Rovigo granted an audience to several Arabs, who stated themselves to be deputed by the tribes of the desert to establish a friendly intercourse with us. The general received them with kindness, and made them a present each of a red mantle and fifty francs in specie. They departed satisfied; but on their arrival on the evening of the 6th at the Maison Carrée, they were attacked by some wandering Arabs, who, calling them cowards and traitors to their country, plundered them, and drove them back to Algiers. On hearing this, General Rovigo secretly ordered out 800 men, who proceeded in the night of the 7th to the Maison Carrée. The troops surprised and massacred all they met of the unfortunate tribe, and seized their cattle and the whole of the plundered property in their possession. Several soldiers, I am told, on their return, carried on their bayonets a number of women's ears with jewellery hanging in them.

"Eighteen were made prisoners; and among these was the chief of the tribe, a Marabout; he was tried by a court-martial and condemned, and his appeal was rejected by the *Conseil de révision*. On the eve of the day of execution, which took place on the 19th of April, twelve days after the expedition, several of the neighbouring tribes deputed messengers to solicit the pardon of their countrymen. All the stolen property had been brought back to the general. But in spite of their entreaties, my own, and General Frezel's, and the supplications of the tribe of Krachmas, where the offenders had taken refuge, the pardon was refused, and the unfortunate men executed. In this expedition, neither men, women, nor children, were spared."

These are the kind of things which make the name of Frenchmen hated throughout Europe; and all that their friends in more civilised countries can do to hinder it, is utterly thrown down. Every one of these women's ears was worth a regiment to Wellington; and the murders in the Rue Transnonain were better to the holy alliance than a hundred thousand men. Every man and officer concerned in them ought to go to Gratz and ask for the order of the Holy Ghost. It would be all in the fitness of things.

One of the members of the commission having enquired of M. Pichon if there had not been public rejoicings at Algiers, after the attack on the tribe of El-Ouffia, that gentleman replied that the commissary of police had ordered illuminations to celebrate the victory.

The commission, in its sitting of 24th January, 1834, acknowledged that it would be an act of strict justice to grant an indemnity to all proprietors of land or buildings taken for the public service, and that a similar indemnity should be granted over the whole of the possessions occupied by the French; and that it would be bad policy and unfair to grant it to French claimants and not to natives.

The sanitary measures to be adopted also occupied the commissioners in their early sittings. M. Maurice, proprietor and colonist of Algiers, declared that the German workmen had, as yet, been unable to stand the climate, and whether from intemperance or other causes, mortality had been greater among them than those of any other nations. M. de Damrémont is of opinion that the decrease of the garrison of Bona, in 1832 and 1833, by malady, must not be solely attributed to the climate. In the action between the Turks and the inhabitants, the town was almost totally destroyed, and when the French took possession they were unable to find shelter from the inclemency of the weather. The soldiers were lodged in damp houses, and there was no time to cleanse the town, and empty the cisterns and wells of the dead bodies which had been thrown there by the Turks. A few troops being sufficient to guard this position, it would perhaps have been prudent to have stationed only two battalions there in the first instance; these would have prepared for the reception of others, who then could have been lodged in healthy and dry quarters. A foraging expedition, made at an unsuitable time of the year, with the bad management and insufficiency of hospitals, no doubt greatly contributed to disease among the military; to prevent which, sure means will no doubt be resorted to this year, owing to the experience which has been acquired, and the amelioration effected in the condition of the troops. From the extensive operations of the staff and engineers, it may be inferred that the cleansing of the vast plains around Bona may be effected with little trouble or expense. This measure is of the most urgent necessity.

From the 27th January, 1834, the debates of the commission become animated, and relate more particularly to the colonising question, and without being interrupted by so many unimportant incidents as before. One of the members, in a most vehement discourse, makes the following observations on the policy of Europe with respect to Algiers.

"In France we have nothing to fear. The present state of our finances alone give us cause of uneasiness. Is it at a period when we can with difficulty establish an equilibrium between our receipts and expenditure, when it is impossible to foresee when we shall be able to attain this object, that we ought to think of such exorbitant extraordinary expenses? Take care that an annual deficit be not the most likely produce of our boasted colony. Fortunately we have peace abroad, and have no reason to fear that it will be interrupted for some time to come. But the two hostile principles which divide Europe cannot fail sooner or later to cause a general war. If we persist in retaining our colony, we must make up our minds to be deprived of the aid of 40 millions of francs, and 40,000 men. We must ultimately be obliged to abandon it, and shall not be able to do so without its being attended with serious disadvantage or perhaps opprobrium.

"Have we not fresh in our memory our former foolish

expedition to Egypt? At that period, France was within a hand's breadth of her downfall, through having been deprived of her best general and her best army. The circumstances are not exactly similar, but are of striking analogy. It is evident that the very limited plan of colonising which has been proposed to you, will take more men and money to execute than the author flattered himself in his calculation; but, should it even prove more advantageous than anticipated, it will always be impracticable. The change of system of a minister, the ambition or even interest of a governor, the local influence and the combined efforts of the interested parties, who will not fail to be incessant in urging us to go forward, will, in the end, force our colonising measures beyond the boundary which we would in vain seek to oppose to their further progress."

Another member vehemently opposes these arguments.

"The retaining our sovereignty over Algiers," he says, "according to the person who preceded him, offers neither political, commercial, nor military advantages, or if any, by no means proportionate to the sacrifices they will require. I am on this question of a directly opposite opinion. In sending an expedition to Algiers there were several objects in view. The first was to abolish piracy, and so far the expedition has succeeded to the utmost; but then the future prospects must be insured, there must be the same guarantees then as at present. France has already felt the immense advantages of the stimulus given to trade by the newly acquired security of the Mediterranean. The tonnage of our vessels in 1825, the year which preceded the blockade, amounted to 1,323,179, and in 1832 had increased to 1,796,885; this immense difference must be attributed in part to the general progress of the several branches of commerce, but this progress has been equally important in the Atlantic, and perhaps ought even to have been still more so. Our principal rivers, our richest provinces, join it, and it is through its medium that the trade of our capital is carried on. But the tonnage of the Atlantic in 1825 was 4,370,342, and in 1832, 5,021,284; therefore it increased in the proportion of 1000 to 1149, while that of the Mediterranean increased in the proportion of 1000 to 1357; certainly it must be allowed that the destruction of piracy contributed in part to this advantageous result in the latter. It is very probable that Spain, Italy, and the other states which border on the Mediterranean, have profited still more by the security afforded to trade. In this respect they have infinitely more to gain, for their traders were much more harassed by the pirates than ours; but the prosperity for which they are indebted to us, is refelt on the coasts of France. In 1833, at least according to the official returns of the first quarters, the above mentioned benefit will be still greater. Now, if I am not greatly mistaken, the consequences of the Algerine expedition will not place us in that awkward situation, with regard to the other powers interested in the security of the Mediterranean, which persons would insinuate. The very great extension given to the commercial intercourse of those powers among themselves or with us, will give them fresh reason to desire a continuation of peace. Spain, Italy, Russia, and Austria, will be glad to see a new civilised power established on the northern coast of Africa; new and important interests connected with their own, in the navigation of the Mediterranean and our sovereignty at Algiers, will constitute one of those questions which diplomatists call separate, and which, for the very reason that we perfectly agree with respect to them, although we are at variance with respect to other matters, will be as it were placed in reserve to await a final settlement. I allow that we shall not derive any military advantage from our Algerine possessions, unless our colony be founded on the remodeling or total destruction of the native tribes; or, to be more explicit, be in a continual state of open hostility; and this state of things would necessarily employ a considerable body of troops which might be indispensable in other parts; and this, according to my ideas, is sufficient to determine me to give my assent to no other system of colonising than that founded on a state of peace. But be it as it may, the possession of Oran alone affords military advantages far superior to what it costs us.

The disposition of Spain towards us has always given cause of uneasiness whenever we have been threatened upon our northern frontiers, or upon that of the Rhine. This latter power, after the revolution of July, showed very hostile intentions towards us. Oran and the road of Mers-el-Kebir would be a point well adapted to annoy Spain towards her southern frontier, which would have the effect of drawing from the Pyrenees troops which she might wish to send to attack us in that quarter. If on the contrary we are at peace with Spain, ships of war or privateers might on occasion pass into the roads of Mers-el-Kebir or Carthagena, and cut off our enemies from all communication with the Atlantic and the exterior basin of the Mediterranean. Certainly the expense incurred in the occupation of Oran, does not exceed the value of the guarantees it affords us against Spain in the event of any attempt on the part of that country to molest us. It is impossible to speak of our policy abroad without referring to the state of our affairs at home. Our influence abroad depends solely on the union of the government with the nation. It is in the southern provinces that the revolution of July has the fewest partisans, it is there also that the restoration had the deepest roots. What would not be the effect on the population of these provinces, if the present government were to abandon a country conquered by that we have overturned? The opinion of Marseilles, that metropolis of our Mediterranean coast, possesses vast influence in the south; and on the tranquillity of that city depends that of several whole departments. Marseilles has grown less exasperated, since its speculative views have been directed to the coast of Africa. You cannot expect that a population which is yet but very indifferently inclined towards the present dynasty, will renounce interests and prospects of which they hold exaggerated anticipations. All other considerations apart, this single one, according to my views, ought to be sufficient to induce the government to maintain our sovereignty."

The president then called the minister of marine; the commissioners felt anxious to learn from him the means of communication between the possessions at Algiers and the metropolis, that they might be able to form some idea, from his information, of the expenses likely to be incurred by these communications, and in general of those the occupation of the country would cause to the marine department. The minister replied,—

"That, whatever system be adopted, it will be absolutely necessary to establish regular and frequent communications between the different stations of the French troops. If the restricted system which has been proposed, be finally adopted, and if we be confined to the occupation of the towns we are already in possession of on the northern coast of Africa, the means of communication ought to be as extensive as the restriction is great; for must we not apprehend that, in the event of that moral disease *nostalgia* gaining ground among such of the troops as may be deprived of news from their native land for some time, we should be compelled to frequent changes in our garrisons, which would necessarily involve

immense expense. This remark is particularly applicable to Bona, Oran, and Bougie; Algiers is excepted, for this town, in consequence of its abundant means of communication and extensive resources, may be classed by itself. The minister conceives that Algiers alone will require a frigate and four light vessels, one of them a transport, to carry assistance in case of emergency to any threatened point. At Oran, one stationary vessel, and another to serve as a transport for troops and despatches, besides a third vessel to guard the coasting trade. At Bona, the same as at Oran. At Bougie, one stationary vessel only. The communications with France ought to be established on one point only of the coast of Africa, with which all the lateral stations should communicate; but then each of the above-mentioned places must have the means of communicating directly with France if required. Between Algiers and Toulon, for a garrison of 3,000 men, four steam-vessels ought to ply regularly. Between Bona and Oran, there ought also to be a direct but lateral communication. Steam-vessels will leave Toulon for Algiers and return once in eight days, in order to establish a regular post once a week. The lateral communication will require two steam-boats for each side, one of which to be at the disposal of the governor for particular service. The lateral communication will then require in the whole eight steam-vessels, but will only be kept up eight months in the year, owing to the boisterous weather off the coast of Africa during the other four. These eighteen vessels, the frigate included, carrying in all 2,000 men, at 1,008 francs per man, every article of equipment included, will cost 2,000,000 francs. The expense of the marine for the service of Africa, every item included, will amount to 2,500,000 francs per annum."

The committee then resumed the general question on the subject of colonising.

"Gentlemen," exclaimed a member, "Russia has long been seeking to extend her maritime possessions. The Black Sea is already under her dominion, and she will soon carry her power into the Mediterrancan. England possesses almost all the principal maritime points in the world. Several of the states of Germany, Austria, in fact all nations in Europe, are anxious to extend their dominions and form new settlements. Will France alone neglect so favourable an opportunity of increasing her power in foreign parts, to form a colony, which ultimately cannot fail to flourish? What extraordinary change has of late taken place in her policy? Only a few years back if France had been told that for a few millions of francs she could obtain possession on the coast of Africa of several maritime and military points, with the faculty of extending her power through the interior of the country,—which, gentlemen, among you, would have advised to refuse such advantages? Who even would have hesitated to vote a sufficient sum to endow the country with the very same establishments which we have now the means of obtaining for nothing? Now, we are in possession of some of the most important parts of Africa, and must endeavour to keep them, not by timid or retrograding measures, but by decidedly progressive means. We must advance and extend our possessions, and then colonise them; in so doing we shall gain ascendancy in the country, and the natives will no longer attribute to motives opprobrious to France, the little care we take of our military occupation. In the present state of things in Africa, and by the plans which were submitted to you in a former sitting, there is in my opinion an absolute impossibility of obtaining any real advantages; and if six millions are thus expended annually it will be six millions thrown away. The financial situation of France is perhaps not altogether favourable to the expenses our colonies are at present in need of; but our African possessions will fully compensate for this by the great advantages which there is no doubt they will ultimately produce. The European powers, by their efforts to extend their maritime possessions, set an example which we cannot do better than follow. A member has expressed his desire that the colonising should be limited and almost reduced to the occupation of a few military stations, leaving to time and private speculation to extend the settlements, without the previous assistance of an adequate force. No colony can be established in this manner, and cultivators will never risk their labour beyond the territories protected by the troops."

Another member was altogether of a different opinion.

"We have already," he said, "a sufficient number of maritime stations in the Mediterranean; Toulon, Marseilles, and the different ports in the island of Corsica. Colonies are not indispensable to the prosperity of nations; and in England several statesmen are of opinion that colonies are a burden to the mother country, and if there were a possibility of getting rid of some of them, it would be of the greatest benefit. This member considers definitive occupation prejudicial to the country; and would desire the possession of Algiers only to secure the Mediterranean against the depredations of pirates. He concludes by expressing to the commissioners his full conviction of the non-utility of the expenses at present incurred by our African possessions.

"Another member of the commissioners inclines, and for other motives, to the military side of the question. He does not seem to appreciate the importance of the political side of the question so closely connected with the possessions at Algiers; though he is aware that spreading the military force over the country, far from increasing power, on the contrary weakens it; but this is only the case when largely extended. History informs us that it is useful to a large and powerful nation to be well supported abroad. Without going farther than the Mediterranean, which there is every reason to believe will hereafter become the theatre of most important events, do you think that Malta and Corfu are not of the greatest importance to England; or that the English government are at all disposed just now to relinquish those possessions, although the cost greatly exceeds the profit? Passing events seem to announce a vast ruin at hand, of which the spoils will be eagerly fought for by many contending powers: it may not, perhaps, be impossible for France to obtain on the southern shores of the Mediterranean some particle of the Turkish empire, if it be destined to fall. Spain likewise, in her regeneration and the changes which may accompany it, will perhaps be obliged to make some slight sacrifice to obtain protection and security. Why should not the Balearic Islands be the concession for fresh succours, or the payment of an old standing debt? Well, if we were once in possession of an insular settlement nearer Constantinople, either the Balearic Islands or any other point within the African range, who then would dare contest the equality, perhaps the superiority, of our power in the Mediterranean, even with a force comparatively less? Our ships would find a friendly harbour and well supplied arsenals on almost every point, and within a few hours' sail; with these a check in our naval operations would be very improbable, and at all events of less disastrous nature. I believe that we must not think of keeping Algiers, without carrying our influence into the interior of that country; we must remain, gentlemen, but endeavour to provide some compensation. We can purchase hope, perhaps pay for it in advance on advantageous terms; but we cannot make sacrifices manifestly useless, the inevitable consequence of an occupation restrained as to territory."

The foregoing are the most striking passages of the great work published by the government. From February, 1834, the commission were occupied with very interesting details. It was decided that 3,000 men are necessary for the occupation of Oran; 300,000 francs are awarded for the works of every description to be executed at Bougie in the course of the year 1834; 500,000 francs for those at Bona; the commissioners were of opinion, by a majority of sixteen to eleven, that a military force of 12,000 men of all arms would be necessary for the military occupation of Algiers, with the territories as far as Mount Atlas. In their sitting of the 12th of February, the commissioners heard a very remarkable report on the civil administration of the regency. They were of opinion, that public functionaries in Africa ought not to be allowed to purchase landed property on the territory in the French possession. No functionary should, either by himself or through the medium of a third party, have any commercial transactions, under penalty of being superseded. The commission calls the attention of government to the manœuvres which might be resorted to, to elude these dispositions. In the sitting of 17th February, the Duke de Cazes transmitted some information relative to the formation of the direction of Algiers, which the then president of the council, M. Casimir Perrier, had included in his department. M. Casimir Perrier, absorbed by the multiplicity of affairs, and by occupations of higher importance, greatly neglected this direction; despatches were accumulated in his bureau, and remained unanswered. At his death, the direction of the colony was made over to the minister of war, who in the absence of the president of the council had continued to manage the affairs of the regency; and they finally remained in his department, either as president of the council or minister of war. On the 10th of March 1834, M. Laurence presented a report on the legislation and administration of justice in the regency. In the sitting of 26th March, the commissioners were informed that a national guard actually existed at Algiers consisting of 600 individuals. On one occasion, the entire garrison of Algiers was obliged to quit the boundaries of the city; the national guard was called out, and 400 answered to the call and occupied all the military posts. Here a member made a very curious observation; he wanted the national guard to be content with the title of *Civic Militia*. This suggestion was adopted by the commissioners, who it appears do not love *National Guards*.

The light in which the occupation of Algiers is viewed in England, would perhaps not be very popular in France. The liberal party considers the occupation, as being from the beginning a Bourbon plot to carry 40,000 of the best troops of France to a distant point, and so far help to lay her at the mercy of the foreigner; and it sees with astonishment, that the extreme liberals of France should be the foremost to throw themselves into such a shallow snare. Many religious and chivalrous recollections were also to make part of the war against the misbeliever, and all hostile to the interests of liberty at home. But the great reason for sending the French army to Algiers, was lest it should be found upon the Niemen. The absolutist party in England see all the difficulty that France is involved in; and have much too little regard for her to disturb her in her position. It is generally understood that the tory government had assurances, which would be available for pressing the evacuation; but it will be seen they know better than to claim the bond. The first great man that gets to the head of affairs in France, will probably relieve the *nostalgia* of the army of Algiers, by posting it upon the Rhine.

From Fraser's Magazine.

COLERIDGEIANA.

Subsequently to the printing off our paper containing certain reminiscences of Coleridge,* which belonged both to our personal experience of the man and our perusal of his writings, we were favoured with some documental evidences, every way proper to be made public, to which we are desirous of adding some fuller particulars, by way of annotated detail, touching some things therein merely hinted and suggested, but deserving to be set forth more at large. One document has already surprised the general reader, having gone the round of the papers: it is the poet's will. What had he to leave? a man living, according to all accounts, on benevolence. Verily, his friends did well by him, and nursed his incomings and controlled his outgoings to good uses. By means of an assurance in the Equitable (effected by himself in early life†), the widow and children of Coleridge will come in for the interest of 2665*l*. The means by which this was rendered possible were highly honourable, both to his friends and himself. So far from being the victim of indolence, we have Mr. Gillman's own authority for saying, that Mr. Coleridge was ready to make money in any way through which his talents could be rendered available. We also understand, from a friend of ours, that a relation of his, desirous of taking a course of logic under this great philosopher's direction, found the urbane sage quite willing to undergo the toil of privately instructing him. The task was undertaken without any agreement as to compensation; but, as highly honourable to the young man alluded to, it may be mentioned that, upon his coming into the receipt of fifty pounds unexpectedly, he, without loss of time, and immediately (so as to prevent any other dispoaition of the money, his means being at that time restricted,) made the best of his way to Highgate, and safely lodged the whole amount in the hands of his instructor, as a free-will offering of love. This was doing the right thing; and it is to be hoped, nay, we believe that, in many instances, they who occupied his private time (we mean, other than his Thursday evening colloquies) gave the teacher such recompense of reward as they were able to render. It is also

---

* See vol. x. pp. 379—403.

† The reader may judge from this fact of the exaggerations abroad about Coleridge's imprudence. He was as prudent *as his circumstances* and the high task he had set himself permitted.

probable, though no stipulation was ever made before hand, that Coleridge expected (as he might justly) not to be forgotten by his intellectual debtors.

Assuredly, he was the most benevolent of creditors; but that he felt he had a right to payment is evident from a certain aphorism in the *Aids to Reflection*, concerning the duty which disciples ought to observe toward teachers. With these few preliminary remarks we present to our readers the last will and testament of the poet and sage, which they will find no ordinary composition; but a thing, as it were, of life and love, breathing eloquence and truth.

Highgate, Sept. 17th, 1829.

"This is the last will of me, Samuel Taylor Coleridge. I hereby give and bequeath to Joseph Henry Green, of Lincoln's Inn Fields, surgeon, all my books, manuscripts, and personal estates and effects whatsoever (except the pictures and engravings hereinafter bequeathed), upon trust, to sell and dispose of all such part thereof as shall not consist of money, according to his discretion; and to invest the produce thereof, and also all money which I may leave at my death, and that shall be due to me from the Equitable Assurance Office or elsewhere, in the public funds, in the name of the said Joseph Henry Green; and he shall pay the dividends of the stock to be purchased therewith to my wife, Sarah Coleridge, during her life, and after her death pay the same dividend to my daughter, Sara Coleridge, she being unmarried, and as long as she shall remain single. But if my daughter, Sara Coleridge, shall before or at the time of my death have married (unless, indeed, she—which may the Almighty in his mercy forfend!—should be left a widow, wholly unprovided for by her husband's will and property, or otherwise, in which case the former disposition of this testament is to revive and take place,) I then give the dividends of the stock purchased to be equally divided between my three children, Hartley Coleridge, the Rev. Derwent Coleridge, and the aforesaid Sara Coleridge; or if one of these my three children should die, then to be equally divided between the two survivors; and the whole dividend of the stock to be paid to the last survivor. Still, however, it is my will that each of the three, namely, Hartley, and Derwent, and my daughter Sara, should retain the right and power each of bequeathing the third part of the principal, after the death of the last surviving, according to his or her pleasure. And my will is, that notwithstanding any thing herein and before contained, and it is my desire that my friend, Mr. Joseph Henry Green, shall, in lieu of selling my books, have the option of purchasing the same, at such price as he shall himself determine, inasmuch as their chief value will be dependent on his possession of them. Nevertheless it is my will, that in case the said Joseph Henry Green should think it expedient to publish any of the notes or writing made by me in the same books, or any of them, or to publish any other writings of mine, or any letters of mine, which, should any be hereafter collected from or supplied by my friends and correspondents, then my will is, that the proceeds and all benefit accruing therefrom shall be subject to the same trusts, and to be paid to or amongst such persons as shall be entitled to my said personal estate hereinbefore bequeathed. The pictures and engravings belonging to me in the house of my dear friends, James and Ann Gillman—my more than friends, the guardians of my health, happiness, and interests, during the fourteen years of my life that I have enjoyed the proofs of their constant, zealous, and disinterested affection, as an inmate and member of their family—I give and bequeath to Ann Gillman, the wife of my dear friend; my love for whom, and my sense of her unremitted goodness, tenderness, and never-wearied kindness to me, I hope and humbly trust will follow me, as a part of my being, into that state into which I hope to rise, through the merits and mediation, and by the efficacious power of the Son of God incarnate in the blessed Jesus, whom I believe in my heart, and confess with my mouth, to have been the Way and the Truth, and to have become man, that for fallen and sinful men he might be the resurrection and the life. And further, I hereby tell my children, Hartley, Derwent, and Sara, that I have but little to leave them; but I hope, and indeed confidently believe, that they will regard it as a part of their inheritance, when I thus bequeath to them my affection and gratitude to Mr. and Mrs. Gillman, and to the dear friend, the companion, partner, and helpmate of my worthiest studies, Mr. Joseph Henry Green. Further, to Mr. Gillman, as the most expressive way in which I can mark my relation to him, and in remembrance of a great and good man revered by us both, I leave the manuscript volume lettered "Artist. Manuscript. Birds (Acharnians, Knights)," presented to me by my dear friend and patron, the honourable John Hookham Frere; who, of all the men that I have had the means of knowing during my life, appears to me eminently to deserve to be characterised as "Οιος πόλ' ἀγαθὸς ὁ φιλόκαλος. To Mr. Frere himself I can only bequeath my assurance, grounded on a faith equally precious to him as to me, of a continuance of those prayers which I have for many years offered for his temporal and spiritual well-being. And further, in remembrance that it was under his (Mr. Gillman's) roof I enjoyed so many hours of delightful and profitable communion with Mr. J. H. Frere, it is my wish that this volume should, after the demise of James Gillman, senior, belong, and I do hereby bequeath the same to, James Gillman, junior, in the hope that it will remain as an heir-loom in the Gillman family.

"On reviewing this my will, there seemed at first some reason to apprehend that in the disposition of my books, as above determined, I might have imposed on my executor a too delicate office; but on the other hand the motive, from the peculiar character of the books, is so evident, that the reverential sense which all my children entertain of Mr. Green's character, both as the personal friend of their father, and as the man most intimate with their father's intellectual labours, purposes, and aspirations, I believe to be such as will, I trust, be sufficient to preclude any delicacy that might result from the said disposition.

"To my daughter, Sara Coleridge, exemplary in all the relations of life in which she hath been placed—a blessing to both her parents—and to her mother the rich reward which the anxious fulfilment of her maternal duties had, humanly speaking, merited—I bequeath the presentation-copy of the *Georgica Heptaglotta*, given me by my highly respected friend, William Sotheby, Esq. And it is my wish that Sara should never part with this volume, but that if she marry, and should have a daughter, it should descend to her; or, if daughters, to her eldest daughter; as a memento that her mother's accomplishments, and her unusual attainments in ancient and modern languages, were not so much nor so justly the object of admiration, as their co-existence with piety, simplicity, and a characteristic meekness; in short, with mind, manners, and character so perfectly feminine. And for this purpose I have recorded this my wish in the same, or equivalent words, on the first title-page of this splendid work.

"To my daughter-in-law, Mary Coleridge, the wife of the Rev. Derwent Coleridge, whom I bless God that I have been permitted to see, and to have so seen as to esteem and love on my own judgment, and to be grateful for her on my account, as well as in behalf of my dear son, I give the interleaved copy of the *Friend*, corrected

by myself, and with sundry notes and additions in my own handwriting, in trust for my grandson, Derwent Coleridge; that, if it should please God to preserve his life, he may possess some memento of the paternal grandfather, who blesses him unseen, and fervently commends him to the great Father in Heaven, whose face his angels evermore behold.—Matthew xviii. v. 10.

"And further, as a relief to my own feelings by the opportunity of mentioning their names, that I request of my executor that a small, plain gold mourning-ring, with my hair, may be presented to the following persons: namely, to my oldest friend, and ever-beloved school-fellow, Charles Lamb; and in the deep and almost life-long affection, of which this is the slender record, his equally beloved sister, Mary Lamb, will know herself to be included. 2. To my old and very kind friend, Basil Montague, Esq. 3. To Thomas Poole, Esq., of Nether Stowey; —the Dedicatory Poem to my Juvenile Poems, and my Tears in Solitude, render it unnecessary to say more than that, what I then, in my early manhood, thought and felt, I now, a gray-haired man, still think and feel. 4. To Mr. Josiah Wade, whose zealous friendship and important services during my residences at Bristol I never have forgotten, or, while reason and memory remain, can I forget. 5. To my filial friend, dear to me by a double bond in his father's right and in his own, Lancelot Wade. 6. To Miss Sarah Hutchinson.

"To Robert Southey and to William Wordsworth my children have a debt of gratitude and reverential affection, on their own account; and the sentiments I have left on record in my literary life, and in my poems, and which are the convictions of the present moment, supersede the necessity of any other memorial of my regard and respect.

"There is one thing yet on my heart to say, as far as it may consist with entire submission to the Divine Will, namely, that I have too little proposed to myself any temporal interests, either of fortune or literary reputation, and that the sole regret I now feel at the scantiness of my means arises out of my inability to make such present provision for my dear Hartley, my first born, as might set his feelings at ease, and his mind at liberty, from the depressing anxieties of to-day, and exempt him from the necessity of diverting the talents with which it hath pleased God to entrust him to subjects of temporary interests; knowing that it is with him, as it ever has been with myself, that his powers, and the ability and disposition to exert them, are greatest when the motives from without are least, or of least urgency. But with earnest prayer, and through faith in Jesus the Mediator, I commit him, with his dear brother and sister, to the care and providence of the Father in Heaven, and affectionately leave this my last injunction—'My dear children, love one another!'

"Lastly, with awe and thankfulness I acknowledge, that from God, who has graciously endowed me, a creature of the dust and the indistinction, with the glorious capability of knowing Him, the Eternal, as the author of my being, and of desiring and seeking Him as its ultimate end, I have received all good, and good alone. Yea, the evils from my own corrupt yet responsible will He hath converted into mercies, sanctifying them as instruments of fatherly chastisement for instruction, prevention, and restraint. Praise in the highest, and thanksgiving and adoring love to the I AM, with the co-eternal Word and the Spirit proceeding, one God from everlasting to everlasting; his staff and his rod alike comfort me!"

The original revised, interlined, and corrected by his own hand, signed by himself, and witnessed by Ann Gillman and Henry Langley Porter.

"*Grove, Highgate*, 2 *July*, 1830.

"This is a codicil to my last will and testament.—S. T. Coleridge.

"Most desirous to secure, as far as in me lies, for my dear son, Hartley Coleridge, the tranquillity indispensable to any continued and successful exertion of his literary talents, and which, from the like character of our minds in this respect, I know to be especially requisite for his happiness; and persuaded that he will recognise in this provision that anxious affection by which it is dictated, I affix this codicil to my last will and testament.

"And I hereby give and bequeath to Joseph Henry Green, Esq., to Henry Nelson Coleridge, Esquire, and to James Gillman, Esq., and the survivor of them, and the executor and assigns of such survivor, the sum (whatever it may be) which, in the will aforesaid, I bequeathed to my son, Hartley Coleridge, after the decease of his mother, Sarah Coleridge, upon trust. And I hereby request them, the said Joseph Henry Green, Henry Nelson Coleridge, and James Gillman, Esquires, to hold the sum accruing to Hartley Coleridge, from the equal division of my total bequest between him, his brother Derwent, and his sister, Sara Coleridge, after their mother's decease; to dispose of the interest or proceeds of the same portion to or for the use of my dear son, Hartley Coleridge, at such time or times, in such manner, and under such conditions, as they, the trustees above named, know to be my wish, and shall deem conclusive to the attainment of my object in adding this codicil; namely, the anxious wish to insure for my son the continued means of a home: in which I comprise board, lodging, and raiment. Providing that nothing in this codicil shall be so interpreted as to interfere with my son Hartley Coleridge's freedom of choice respecting his place of residence, or with his power of disposing of his portion by will, after his decease, according as his own judgment and affections may decide.

"S. T. Coleridge. 2d July, 1830.

"Witnesses,
Ann Gillman,
James Gillman, Jun."

The solicitude which Coleridge here expresses for his son Hartley is deeply touching; and we turn again with considerable interest to this young man's poetical volume, in which so much of his father's peculiar spirit yet breathes and lives. The preface to this book is marked with a spirit of humility which ought to excite interest in favour of the author. The sentiments on poverty, feelingly expressed in some of the sonnets, are exceedingly honourable to him. But how is it that the best poetical productions of late years have met with least success, while volumes of *mediocre* verse have sold by thousands? To his father the book is dedicated in the following sonnet:—

"Father and Bard revered! to whom I owe,
Whate'er it be, my little art of numbers;
Thou in thy night-watch o'er my cradled slumbers
Didst meditate the verse that lives to show
(And long shall live when we alike are low)
Thy prayer how ardent, and thy hope how strong!
That I should learn of Nature's self the song,
The lore which none but Nature's pupils know.
Thy prayer was heard. *I wandered like a breeze*
By mountain brooks and solitary meres,
And gathered there the shapes and fantasies
Which, mixed with passions of my sadder years,
Compose this book. If good therein there be,
That good, my sire, I dedicate to thee."

Connected with the name of his son, we are thrown back to that period in the history of Coleridge's intellect when David Hartley was to him the "wisest of mortal kind." Sir James Mackin-

tosh, in his celebrated lectures, affirmed that Hobbes was the original discoverer of the law of association, while its full application to the whole intellectual system is owing to David Hartley. Coleridge, however, has shown historically that, long before either Hobbes or Descartes, the law of association had been defined, and its important functions set forth, by Melancthon, Ammerbach, and Ludovicus Vives. But the first and fullest enunciation of the associative principle is to be found in the writings of Aristotle, whose positions on this subject are unmixed with fiction. Aristotle delivers a just *theory*, without pretending to an *hypothesis*. He excludes place and motion from all the operations of thought, whether representations or volitions, as attributes utterly and absurdly heterogeneous. His theory is this, *i. e.* every partial representation awakes the total representation of which it had been a part. In the practical determination of this common principle to particular recollections, he admits five agents, or occasional causes: 1st, connection in time, whether simultaneous, preceding, or successive; 2d, vicinity, or connection in space; 3d, interdependence, or necessary connection, as cause and effect; 4th, likeness; and 5th, contrast.

These few explanations we thought necessary to premise, as introductory to the following sportive verses from the pen of Coleridge, here printed for the first time. They were written in pencil on the blank leaf of a book of lectures delivered at the London University, in which the Hartleyan doctrine of association was assumed as a true basis.

ASSOCIATION OF IDEAS.

1.—*By Likeness.*

" Fond, peevish, wedded pair! why all this rant?
O guard your tempers! hedge your tongues about!
This empty head should warn you on that point—
The teeth were quarrelsome, and so fell out.—S. T. C.

2.—*Association by Contrast.*

" Phidias changed marble into feet and legs.
Disease! vile anti-Phidias! thou, i'fegs!
Hast turned my live limbs into marble pegs.

3.—*Association by Time.*

SIMPLICIUS SNIPKIN *loquitur.*

" I touch this scar upon my skull behind,
And instantly there rises in my mind
Napoleon's mighty hosts, from Moscow lost,
Driven forth to perish in the fangs of Frost.
For on that self-same month, and self-same day,
Down Skinner Street I took my hasty way—
Mischief and Frost had set the boys at play;
I stept upon a slide—oh, treacherous tread!—
Fell smash, with bottom bruised, and brake my head!
Thus Time's co-presence links the great and small,
Napoleon's overthrow, and Snipkin's fall."

It is proper to state in conclusion, Mr. Coleridge's ultimate opinion, that Hartley's system, as far as it differed from that of Aristotle, is neither tenable in theory, nor founded in fact. Hartley's hypothetical vibrations, in his hypothetical oscillating ether of the nerves, outrages the very axioms of mechanics in a scheme the merit of which consists in its being mechanical. Granting the possibility of a certain disposition in a material nerve; either every idea has its own nerve and correspondent oscillation, or it has not. If the latter be the truth; every nerve having several dispositions, when the motion of any other nerve is propagated into it, there will be no cause or ground present why exactly the oscillation *m* should arise, rather than any other to which it was equally predisposed. But let every idea have a nerve of its own, then every nerve must be capable of propagating its motion into many other nerves; and, again, there is no reason assignable why the vibration *m* should not arise rather than any other *ad libitum*.

But to quit the thorny paths of metaphysics—which we find it possible to do by an easy transition—and by quoting another scrap of Coleridge's playful wit, never before published.

The Three Sorts of Friends.

" Though friendships differ endless *in degree*,
The *sorts*, methinks, may be reduced to three.
*Ac*quaintance many, and *Con*quaintance few;
But for *In*quaintance I know only two—
The friend I've mourned with, and the maid I woo!

" MY DEAR GILLMAN,

" The ground and *materiel* of this division of one's friends into *ac*, *con*, and *in*quaintance, was given by Hartley Coleridge when he was scarcely five years old. On some one asking him if Anny Sealy (a little girl he went to school with) was an acquaintance of his, he replied, very fervently pressing his right hand on his heart, 'No, she is an *in*quaintance!' 'Well! 'tis a father's tale;' and the recollection soothes your old friend and inquaintance.

" S. T. COLERIDGE."

And now for the mysterious conclusion of *Christobell*. Doubtless, what we wrote on this subject in our late number has excited great curiosity. We do now what we had not room to do then—give it entire, as it was originally published in the *European Magazine*. It will, of course, be henceforth a matter of grave dispute whether it is or not the production of Coleridge's pen. Upon this subject we have already said our say; and shall be willing to await the judgment of wiser heads.

" *Christobell.** *A Gothic Tale.*

" Whence comes the wavering light which falls
On Langdale's lonely chapel walls?
The noble mother of Christobell
Lies in that lone and drear chapelle;
And every dawn, ere the sun has shown,
And a tear and a flower are on that stone;
But the tear is dry, the flower is dead,
And the night-wind blows on her silent bed.

A stranger treads o'er the holy mound:
Thrice it hath breathed a moaning sound!
He has lifted thrice his mighty wand;
He has touched the stone with his red right hand;
The light which round the chapel streams,
Bright on his beard of silver gleams;
But shines not on his muffled brow,
Which mortal eye must never know!

The noble mother of Christobell
Is waken'd by the mighty spell;
She seems but as if a wizard's arms

* " Written as a sequel to a beautiful legend of a fair lady and her father, deceived by a witch in the guise of a noble knight's daughter."

Awhile had wrapp'd her in his cell;
As if his cold and earthy touch
Had blighted her beauteous lips too much.
But now returning beauty warms
Her lips and her kindling cheek so well,
She looks like the lovely Christobell.

'Lady, lady, who! who was she,
That met thy child by the old oak-tree?
When not a breese was heard to sigh,
And the yellow leaf waved not which hung so high?
She who told that men of blood
Lured her to the lonely wood?
She who slept by thy daughter's side,
While the grey dog moan'd and the owlet cried?
Is that lady, of soft and sober mien,
Sir Roland's true daughter Geraldine?'

The noble mother of Christobell
Has open'd her dim and hollow eye,
And spirits are thronging from cave and dell
To listen to her lips' reply:
'Merlin, Merlin! I know thee well!
Though a minstrel's cloak is around thee flung,
And a holy hood on thy brow is hung,
The dead and living obey thy spell.
But not till the moon has passed away,
And the bell has toll'd on her bridal day,
Thou wilt know the foe of Christobell.'

* * * * *

The grey dog howls though the moon is bright—
Why sits the lady alone to-night?
Why comes she not at her father's call,
While the noble stranger is in his hall?
That stranger of soft and sober mien,
Sir Roland's fair daughter Geraldine.

But Christobell's brow is cold and damp
As she sits alone by her silver lamp—
That lamp for a maiden's spousal meet,
Which hangs from a smiling angel's feet:
But who comes near with steps so light!
And why is her cheek so lily-white?
For, glist'ring in his mail of gold,
His azure scarf around him roll'd,
She sees her own true knight.

'Christobell, my task is done!
Christobell, my prize is won!
The stars are smiling, the moon is bright,
The bell of our spousal shall toll to-night!'
She does not smile, she does not weep;
Her cheek is like the parting snow
When early roses bud below,
But scarce a blush of crimson keep:
Yet she has taken her lover's kiss,
And the touch of her melting hand is his.

But another eye is on her face,
Another form beside her stands—
That form so ghostly, lean, and tall,
Is it Bracy, the bard of Langdale Hall?
He has touch'd the lamp in its silver vase,
And it brighter burns than a thousand brands;
He calls on saints in their holy place
The spousal of Christobell to grace,
Then joins the plighted lovers' hands.

'Now follow me, Christobell, with speed!
I go at thy lordly father's call,
To strike the harp in his ancient hall,
But thou the mirthful dance shall lead:
Thy own true knight shall be near thy side,
And the matin-bell shall proclaim a bride.'

They follow: but whence is the taper's glare,
That leads them down the lonely stair?

They look his shadowy face upon—
They look, but his silver beard is gone:
His cloak is changed to an azure dye,
And a mirthful gleam is in his eye.
But Christobell's cheek is cold and pale,
For she sees not her lover's shining mail;
He seems but a stripling soft and young,
With a minstrel's harp behind him slung.

With muttered words of grammarye
The bard stalks foremost of the three:
At ev'ry soundless stride he takes,
The base of Langdale's mountain shakes:
The elf-dog starts as he passes by,
But closes again his shrinking eye;
The banner falls from the castle wall
As he strikes the porch of its blazing hall!

* * * * *

Lord Leoline sat in chair of pride,
The white-armed stranger by his side—
O bright was the glance she gave to view.
When back her amaranth locks she threw!
It was like the moon's on the fountain's brim,
When the amber clouds around her skim;
The rubies that on her bosom flamed
Seem'd of her richer lips ashamed:
There never was lovely lady seen
Like the stranger-guest, fair Geraldine!

'Now welcome, welcome Bracy the bard!
Welcome the rites of song to guard!
Sit and waken thy warbling string,
The legend of love and beauty sing.
Well hast thou sped since noontide's hour,
If thou comest from good Sir Roland's tower.'
'Sir Roland greets thee, Lord Leoline!
He greets thee first for his Geraldine;
His heart thy bounty and love receives,
Like dew that drops upon wither'd leaves.
But he asks one pledge thy faith to prove,
He asks for his son thy daughter's love;
And he sends this goblet of crysolite
To grace their feast on the bridal night.'

Lord Leoline from his feast rose up,
And fill'd to the brim the shining cup:
He waved it high with gesture bland,
Then gave it to Geraldine's lily hand;
But the crysolite changed as she touch'd its brim,
And the gem on its sapphire edge grew dim—
The lamps are quench'd in their sockets of gold,
The *hour* is past, and the *bell has toll'd*.

Lord Leoline's hall again is bright
With a thousand lamps of golden light;
And roses, by fairy fingers tied,
The banners and shields of knighthood hide;
While over the roof and over the walls
A curtain of painted vapour falls:
Now pillars of jasper seem to grow
From the green bright emerald floor below,
With garlands of rubies bound.
The sky is purple with meteor fires—
A thousand tongues, and a thousand lyres,
Through the lone chapelle resound.
Where is the white-hair'd bard who spoke
With voice so meek, in his azure cloak?
The sage of eternal might is there,
A meteor wreath'd in his ebon hair;
And there, in his youthful beauty's pride,
The heir of Sir Roland is by his side.

Where is she, with eyes so fair,
Who sat and smiled by the baron's chair?
There sits a dame of royal mien,
But her lips are pearly, her locks are green;

The eider-down hides her speckled breast,
The fangs of the sea-wolf clasp her vest;
And those orbs, once bluer than western skies,
Are shrunk to the rings of a serpent's eyes.

'Witch of the lake! I know thee now.
Thrice three hundred years are gone
Since beneath my cave,
In the western wave,
I doom'd thee to rue and weep alone,
And writ thy shame on thy breast and brow.

'But thou and thy envious friends in vain
Have risen to mock my power again:
The spell which in thy bosom worketh
No holy virgin's lip can stain;
The spell that in thy false eye lurketh,
But for an hour can truth enchain.
Not ev'n thy serpent eye could keep
Its ire near guiltless Beauty's sleep;
The Spirit of Evil could not dare
To look on heav'n—for heav'n is there.
Thy hour is past—thy spells I sever;
Witch of the lake, descend for ever!'

"*March*, 1815, "V."

In regard to Coleridge's alleged imprudence, we have already done something towards correcting the misapprehensions of the public. The following extracts from a letter to Mr. Pringle will show that our opinion is in harmony with the facts as stated by Mr. Coleridge himself.

"At no period of my life have I ever belonged to any party, religious or political; never laboured for any lower purpose than the establishment or maintenance of principles; but though neither Whig nor Tory, I am enough of the latter, I trust, sincerely and habitually to fear God, and to honour the king as ordained of God! as no reflection or derivation from the sovereignty of the *people*, but as the lawful and consecrated symbol and representative of the unity and majesty of the *nation*.

"At my first introduction to the R. S. L., I stated that I received the appointment with glad and grateful feeling, as tending powerfully to confirm me in the hope, that I had not mistaken my vocation,—retrospectively, and prospectively, as a means of enabling me to devote my whole time and strength to the completion of the more important works, for which I regarded all I had hitherto published, *viva voce*, or by the press, but as preparatory discipline.

"Grievously have I been misunderstood, if I have been supposed to plead that poverty of itself, and independent of its causes, as the ground of my application. I avowed it because I know it not only to be a blameless but an *honourable* poverty; not the consequence and penance of vice, improvidence, or idleness, but the effect of an entire and faithful dedication of myself to ends and objects, to the attainment of which I was bound to believe myself peculiarly fitted, and therefore called, in open-eyed and voluntary dereliction of those more lucrative employments equally and at many periods of my life in my power, but in which hundreds of my contemporaries could engage with equal or perhaps greater probability of success."

Equal misrepresentations have got abroad in regard to the poet's occasional use of opium. The origin of this habit he has described himself, in a document which we have now before us. After his return from Germany he had an attack of acute rheumatism; on which occasion he was attended by a Mr. Edmondson, from whom he borrowed a load of medical books, in one of which he found a case similar to his own where a marvellous cure had been performed by rubbing in laudanum—at the same time that a dose was administered inwardly. He tried it, and finding it answer was induced to continue it medicinally from time to time, as he found occasion. "Wretched delusion!" he concludes; "but I owe it in justice to myself to declare, before God, that this, the curse and slavery of my life, did not commence in any low craving for sensation, in any desire or wish to stimulate or exhilarate myself,—in fact my nervous spirits and my mental activity were such as never required it,—but wholly in rashness, and delusion, and presumptuous quackery, and afterwards in pure terror."

Subsequently he laboured under disease of the heart, which was of slow growth, with feeble circulation and oppressed breathing, for which he was compelled at times to take stimulants, *but always under medical direction*. In his general habits he was exemplarily temperate, restricting himself to a bottle of wine in two days.

Coleridge wrote his own epitaph; it is, however, inapplicable to the place in which he was buried: a handsome tablet, erected in Highgate New Church to his memory, bears the following inscription:

"Sacred to the Memory of
SAMUEL TAYLOR COLERIDGE,
Poet, Philosopher, Theologian.
This truly great and good man resided for
The last nineteen years of his life
In this Hamlet.
He quitted 'the body of this death'
July 25th, 1834,
In the sixty-second year of his age.
Of his profound learning and discursive genius,
His literary works are an imperishable record.
To his private worth,
His social and Christian virtues,
James and Ann Gillman,
The friends with whom he resided
During the above period, dedicate this tablet.
Under the pressure of a long
And most painful disease,
His disposition was unalterably sweet and angelic.
He was an ever-enduring, ever-loving friend,
The gentlest and kindest teacher,
The most engaging home-companion.
'O framed for calmer times and nobler hearts!
O studious poet, eloquent for *truth!*
Philosopher contemning wealth and death,
Yet docile, child-like, full of life and love:'
Here, on this monumental stone, thy friends inscribe
Thy worth.
Reader! for the world mourn.
A light has passed away from the earth.
But for this pious and exalted Christian
'*Rejoice! and again I say unto you rejoice!*'

S. T. C."

This inscription has great merit, and does justice to the memory of the illustrious dead, and to the feelings of the affectionate survivors. An ode on the death of the poet, quite Coleridgeian in the cast of its sentiments and con-

struction, written by Mr. Heraud, has also been put into our hands. We close our paper of notes and documents with this elegiac production.

Ode on the death of Samuel Taylor Coleridge.

Fair as the Sabbath morn,
In the seventh heaven's beatitude,
The Eternal Throne before,
A Seraph-Angel stood—
The Angel of a Child new-born,
To whom 'tis given, for evermore,
To see the Father's face;
Then, bowing to adore,
Prayed for his Charge a grace.

"From the highest heaven,
Throughout the seven,
Descend; and, in mysterious wise,
Prepare him through the seven to rise.
Give him will and give him wing,
Give him withal a voice to sing,
And him through each and all up-bring,
Into my presence, triumphing."

Glad heard the Seraph in that realm of Being,
Where every being seeth the All-seeing,
The Sabbath of the Worlds; then down descending
On the next orb, where Will with Will is blending,
Made for the sphere of Consciousness his way,
And gave his plumes free motion and full play.
Three heavens are passed—remain but four—
God speed thee, Seraph, evermore!

And now he meets, in happy season
Meeting him, the seraph Reason;
And soon his cherub-twin embraces,
And both dominions eager traces—
And now upon the world of Knowledge lands,
And his dropt wings hides with his arms and hands.
Six heavens are passed—remains but one—
God speed thee, Seraph, thy flight is done.
And now thy toilsome task commences—
To walk, not fly, befits the Senses;
And there, in swaddling bands embraced,
The Infant in his cradle lies:
Small the room where he is placed,
Small circle for his energies.
But the Seraph-Angel on his eyes
Sheds euphrasy and rue;
Sets wide the portals of his ears,
And makes him feel in every nerve,
Of touch and taste too exquisite;
And from all odours win delight.
But each predestined to subserve
What the poetic mind reverses,
The holy Muses' due.

The Seraph now, one gorgeous eve,
The boy-bard teaches to perceive,
How differed from all other plants
One sacred, though not such to see,
Divine and sovereign for all wants,
And bade him name it Hesmony.
Thus taught to judge, full soon he might
Essay to speculate aright,
And thence, in Contemplation's car,
Seek worlds beyond the furthest star;
Self-conscious still, however far
He soared, and feeling in his heart
No impulse but of his own will;
Yet framing all his travels' chart
By heavenly observations still.
For there was heaven, and there he well
Aye listened to heaven's oracle;
And therefrom he responses gave,
Of power to slay and power to save.
Thus he, while dwelt his body here,
Was versant with another sphere.
What, though the world might do him wrong?
He turned him to the angels' song.
What though the earth consumed in strife?
He lived and loved—all love, all life;
A seraph, like his seraph guard,
Earth might not merit nor reward.
The Seraph stood again before
The throne, and bowed him to adore.
"My task is done; both will and wing
I gave him, and a voice to sing:
And hither, Father, him I bring
Into thy presence triumphing."
And thereupon a chorus blended
Of sacred harps, a Sabbath hymn,
To hail the Poet-Sage attended,
Borne on the plumes of cherubim.

From the New Monthly Magazine.

ANECDOTES OF THE FRENCH PROVINCES.

ST. JOHN OF THE ISLAND.

The monks were cunning caterers. The monastic estate appears to have originally taken for its emblem the green olive of the Scriptures, "planted by the running waters," and to have been bent on accomplishing among the Gentiles the promises spoken to the Jews, by framing a Canaan for itself wherever milk and honey abounded in the land. The progress of unreformed Christianity through heathen Europe was, in fact, marked by the erection of certain caravansaries, wherein the wanderers, its disciples, might set up their rest: judiciously selected in spots where corn, wine, and oil were of almost spontaneous growth—where clear streams supplied the requisite material for their luxurious abstinence—where green pastures afforded herbage for their flocks and herds—where, in short, they were enabled to approximate themselves with ease to heaven, by creating temporal existence where "paradise was opened in the wild!"

In how many lands of wide-spreading Europe do we find the ruined arch and crumbling altar-stone of by-gone conventual splendour, sheltered by lofty groups of forest trees, and scattered upon green and mossy turf, in the heart of some sequestered valley, through whose glossy stream the speckled trout dart gaily beneath the overhanging hazels, and where the remnants of the once fertile orchard lie basking in the sun, the musky fruit still sending forth from its moss-grown stumps an occasional sample of luscious quality. In such retreats, nature still proudly displays her warrant of abundance, till we cease to wonder at the extent of the ruined granaries, threshing-floors, cider-presses, wine-presses, and other offices connected with the extinct establishment. Plenty, as well as peace, seem to have abided with the chartered ascetics of ancient Christendom; and such places as Val-y-Crucis Abbey, in the Vale of Llangollen—Fountains and Furness, in green England—the convents of Laach, in Rhenish Prussia—La Trappe, La Chartreuse, and fifty others in France, are mani-

festly calculated to "draw an angel down" to share their

> "Populous solitude of beds and birds,
> And fairy-formed, and many-coloured things!"

Among the fifty let us, however, especially distinguish a favourite spot—the convent of St. John of the Island. About a stone's throw from the Seine, just where the double branches of the river Juigné pour their abounding waters into the metropolitan stream,—circumscribed by their fantastic course, so as to form a distant land of verdure,—lie a series of beautiful water-meadows, enamelled by an infinite variety of wild flowers, and in part entangled by thickets of underwood, bequeathed to the land by many a stately stem, which had fallen under the axe of the destroyer. On the extreme verge of these, so that the toppling wall of its watch-tower overhangs the sedgy channel of the Juigné, stand the ruins of St. John of the Island,—an ancient Augustine monastery, converted to the service of the Order of Malta, and founded during her mysterious life of repudiation by Isemburge, the Danish wife so unceremoniously ejected from the bosom of Philip Augustus, to make way for fair Agnes of Merania!

And well and wisely did that royal devotee select the site of the dwelling she chose as the refuge of her earthly sorrows—her eternal rest. The monastery which for so many years concealed the tears of Isemburge, and subsequently, for so many centuries, her majestic tomb, lies niched within a verdant solitude, at that period uninvaded by the busy industry of the town of Esonne, or the rival prosperity of Corbeil. The stream which now imparts vitality to so many mills and engines (for the production of flour, floor-cloth, cotton, printed calicoes, and as many and as various items as might figure advantageously in a Liverpool or a Bristol invoice), was then the lonely haunt of the king-fisher, and the abiding place of the red-tit. The neighbouring groves of *Chantemerle* (dating their insignificant antiquity from the reign of the chevalier king, the chivalrous Francis I.) had not arisen to overtop the rustling abele-trees and flowering limes of St. John of the Island. The monastery stood alone in its glory, listening to the ripple of its circumfluent waters as they hurried in busy self-importance, to lose their identity in the Seine. At that period, the harmonious chants rising at day-dawn from its altars, were heard only by the vintagers as they plied their light labours along the *côte*, in the vineyards belonging to the neighbouring religious houses of St. Guénault and St. Exupère: and even when the Grand Master of the Order of St. John held his chapter, three ages later in the monastery, it was still secluded—still intimately linked with the beauty and the solitude of nature.

Even now though surrounded by human habitation, and invaded by commercial industry, how singularly does the place maintain that aspect of loneliness! Overgrown as it is with trees and luxuriant aquatic plants, silent, sad, secluded, the stranger wanders fast beside the ruined church, without dreaming of its vicinage. Having crossed the ruined bridge under which the stream has been widened into a modern canal, the banks of which are adorned with weeping-willows, dahlia beds, and summer-houses such as Batavia herself might envy, we saunter down a sombre avenue of limes, and behold only an ancient portal serving the daily use of an ordinary farm; nor is it till, attracted by shoals of fish, and thickets of alder overgrown by the wild hop, we follow the discursive channel of the brook into the fertile meadows, that we descry, between the lofty trees, the granite skeletons of monastic pomp—the ruined church and monastery of St. John of the Island.

Following the mossy bank, till the waters of the Juigné can be crossed by a plank dedicated to the temporary use of a mill recently erected at one of the extremities of the island, let us now step cautiously among the brambles and elder-bushes springing forth from heaps of rubbish, where strange rustlings and hissings apprise us that we startle some obscene reptiles from a long unmolested retreat, till, entering the *enceinte* of the deserted burying-ground, we look with reverence to the monastic roof; or down, with solemn contemplation, upon the broken grave-stones—some inscribed with quaint German devices—some with abbatial and even episcopal emblems—some uniting with the mitre, crosier, and hour-glass, the ghastly impress of a human skeleton, surrounded by the symbolic insignia of ecclesiastical dignity. At length, having moralised our fill over the site wherein queen, monks, knights—nay, even the memory of its dead, has disappeared—let us learn to invest those desecrated ruins with a new interest, derived from the following record of their modern fortunes.

Previous to the revolution of '89, one of the finest aristocratic residences on the banks of the Seine was the château de Mousseaux, situated some five miles from the confluence of the Juigné, and inhabited by the Duchess of Cossé-Brissac. Of the Duc de Cossé too much is known to posterity, as the lover who succeeded Louis XV. in the arms of the infamous De Barri—as the victim whose gory head was thrown by the triumphant populace at the feet of the royal concubine, as she paraded the terrace of her pavilion at Luciennes; but of the duchess—the serene, the suffering, the solitary, duchess—something remains to be endited. Deserted by a worthless libertine, Madame de Brissac, instead of plunging into the dissipations of the capital, retreated with decent self-respect to her palace on the Seine: finding, or seeking, happiness in the cultivation of its beautiful gardens, and creating those lordly *charmilles* and proud arcades, which, even now, divided and apportioned as they are, create an interest for the adjoining plain—whence labyrinth and quincunx have disappeared, and where the colossal statue of Atlas, once forming the central point of their entanglement, stands in ludicrous isolation in the midst of a homely corn field.

The Duchess de Brissac, although deeply wounded by the neglect of her husband, was not in a position of life to fly to *utter* solitude. She had too many noble relatives, too many admiring friends, to be left alone; and the humility of true

affection suggested that it were better to adorn her residence and enliven her society, in hopes to win back the truant to her presence—to perfect, with his approving suffrage, the charms of her favourite retreat. The best society of the capital was accordingly invited to grace her coterie. At Mousseaux, Boufflers, Arguillons, Choiseuls, Birons, and Grammonts, forgetting their political animosities, daily abounded; all that was fair, young, gay, and graceful, of the court of Marie Antoinette was to be found in the circle of the Duchess de Cossé-Brissac.

But there was one, unhappily, to be found there, whose presence was unconnected with court or courtier—one fair, even among its fairest—one graceful, even among its most accomplished—one ill-fated, even among the most unfortunate of its fore-doomed associates. CLARICE (what other name she had is too ignoble to be recorded), Clarice, the hazel-eyed Clarice, was one of those victims of conventional tyranny, called *demoiselles de compagnie*. Her beauty had proved her bane; for her beauty was the means of making her the inmate of the Château de Mousseaux. Twelve years before, the attention of Madame de Brissac had been attracted, while rolling in her stately coach and six, on a visit to the Countess de la Tour d'Aubray, at St. Germain en Corbeil, by the loveliness of a little dirty, curly-haired brat, hanging to the apron of a woman, who bore on her back a vintage-hod, and with her brown right hand bestowed a sufficiency of cuffs and thumps upon the child, who was too much struck by the fine equipage of the duchess to get out of the way of the trampling horses. Clarice, in short, was slightly injured by the carriage-wheel; and the duchess, having ordered her servants to stop and bestow a small gratuity upon the little sufferer, was eventually so captivated by her artless graces, as to resolve upon her permanent adoption. Regarding her as no higher in the scale of creation than the animals of her menagerie, Madame de Brissac conditioned for, and *ordered home*, the child, as she would have done a clever monkey, or a parrot of handsome plumage, to increase the *agrémens* of the château.

But poor Clarice was unhappily organised for such a position. In defiance of Madame de Brissac's calculations, she had a heart to feel, a soul to reflect, as well as a sweet smile and graceful air, to captivate the admiration of beholders. The first of these superfluous faculties soon made itself apparent in the adoration with which she regarded her benefactress; the second, as she grew in girlhood, developed itself, only too acutely for her happiness, in her mode of contemplating the false position in which destiny had placed her. Admitted, in the loveliness and playful peremptoriness of childhood, to climb the knees and court the caresses of the illustrious visiters of the duchess, she found, as she advanced towards maturity, that every additional day of her life drew her nearer to the menial degree. She was gradually recurring to her real situation in life; and the haughty servants of the condescending aristocrat, indignant at having been obliged to bestow their services on one whose birth was so inferior even to their own, took every occasion to mortify the village *parvenue*. Clarice found she must no longer aspire to the society of the great—that she was not allowed to descend to the society of the little—that she was alone in the world.

Her uneducated mother, with whom, once or twice a year, Clarice was allowed an interview, considered, and assured her, that she was the most fortunate of human beings; inasmuch as "Madame la Duchesse had promised to *marry her*, and give her a *dotation*." But although this absolute mode of settlement in life was the one in use throughout all degrees of French society, from the duke to the artisan, the feelings of Clarice rebelled against being "married" after the fashion so satisfactory to her mother.

"They will give me to the steward's son, or some clerk of Madame la Duchesse's notary," said the high-minded girl, whose notions of independence and refinement had been fostered in the society of lords, ladies, and ministers of state. "And even these half-educated men will be aware that they are doing an honour to the peasant's child, who has been bought upon their acceptance with a dowry. Their friends, their relatives, will receive with scorn the village-girl, whom chance has raised out of the dust; and *there*, no less than *here*, I shall be alone against the contempt of those around me. Why have I not strength of mind to lay aside these fine clothes, and return to the humble station in which I was born? Why cannot I reduce my desires to nature's level? Alas! alas! why, rather, did Madame la Duchesse raise me from my apportioned sphere? Unfitted by my birth for my present situation—unfitted by my present station for the sphere of my birth, the purposes of my Almighty Creator seem to have been wantonly frustrated. Yet, since it is his will to humiliate and chastise me, let me pray, at least, for a more Christian spirit of resignation, to reconcile me to my appointed trials."

But this spirit came not at her call. The rebellious tone of the supplicant who sought, as for her own merits, obtained no favour in the sight of Heaven; while, as she grew in years, Clarice became only more susceptible to the irritations of her situation. At length, a bitter source of evil mingled with the current of her destinies.

Among the habitual and most favoured guests of the château, was a nephew of Madame de Brissac, a younger and orphan son of a sister to whom she had been tenderly attached. The Vicomte d'Arnonville was a model of the best order of the ancient nobility of the unregenerated court of the Bourbons. Young, handsome, brilliant, ignorant, idle, vain, self-complacent, and egotistical, Adolphe possessed the redeeming qualifications of courage, a high sense of honour, and a chivalrous courtesy of demeanour, which became almost a virtue in one so selfish and so indolent. He was in every way endowed to fascinate the admiration of an inexperienced woman; and few were the women of the Court of Versailles whose attention he had not attracted. The young viscount was not, however (for the times), a determined libertine. He was neither a Fronsac nor

a Lauzun; perhaps because his self-love inspired him with a distaste for the incessant embarrassments and annoyances entailed upon the vocation of *un homme à bonnes fortunes*. He allowed himself to be wooed, but was not *always* won; even his gallantry was tinctured with the listless but not uncalculating egotism of his mode of life. It sufficed, therefore, when, shortly after his return from a tour in Italy with his elder brother, the Prince d'Arnonville, he presented himself at Mousseaux, and first beheld the interesting *protégée* of the duchess—it sufficed for his aunt to recommend Clarice to his forbearance, as a young person whom it was her intention to settle respectably in life, for Adolphe to limit his attentions within the bounds of common courtesy. He was more kind, indeed—more considerate—than the generality of those by whom the château was frequented; for the viscount, naturally good-natured, was not in the habit of inflicting pain upon others, unless where his own interests or convenience especially demanded the effort; and he was often at the trouble of opening a door, closing a window, picking up a book, or even going in search of the duchess's white spaniel, for the sake of receiving from Mademoiselle Clarice one of those bright sunshiny smiles with which she involuntarily recompensed his magnanimity.

It was not, however, these commonplace civilities which blinded the eyes of the young *demoiselle de compagnie* to his defects, or induced her to "fancy merit where she saw it not." But the lowly-born was, as we have already noticed, highly and finely organised. She possessed all the instincts of a pure and delicate taste; and the graceful manners of Adolphe d'Arnonville—his refinement of voice and conversation—the playfulness of his wit—his sprightly mode of relating and commenting on the anecdote of the day, rendered his arrival at the château as much a holiday to herself as to Madame de Brissac. In pursuance of the custom of disposing of the unportioned younger sons of the nobility, he had been engaged from his childhood in the Order of Malta, with a view to obtaining the Commandery of St. John of the Island, which, in former days, had been the appanage of his house. But he was not yet received a knight. Certain irregularities of conduct were supposed to have placed a serious obstacle to his preferment; and it was rumoured in the household of Madame de Brissac, that the object of her nephew's deference and assiduity was to cause himself to be nominated heir to her estates, and thus obtain a remission from his uncompleted vows. He was even said to have formed an attachment, rendering the prospects of a life of celibacy insupportable to his feelings.

All this did but augment the interest he had excited in the heart of Clarice. She now saw in him a victim—a victim like herself; and her whole sympathy connected itself with his fortunes. She had good reason to know that Madame de Brissac meditated no such disposal of her property as he was said to anticipate; and from the moment the tale of his passion, and its projects, reached her ear, she could scarce refrain, while she noted the patient devotion of his time to the caprices and exactions of her benefactress, to whisper, "Seek some other mode of exemption from the restraints that await you. Exert yourself elsewhere to secure your happiness. The inheritance of the duchess will never, never afford you a pretext of release from your vows as a knight of St. John."

Clarice had, however, sufficient delicacy to feel that it was not for *her* to seek the confidence of a man of the age and condition of the viscount. He returned, therefore, a frequent guest to the château, still to be the companion of her rides and walks with the duchess. On the river, in the beautiful forest of Lénart, among the lofty groves and *charmilles*, he was constantly by her side. He sang with elegance, talked with brilliancy; the very tone of his voice, and idiom of his discourse, betrayed the man of refinement. If Clarice might be termed a *chef d'œuvre* of nature, Adolphe d'Arnonville exhibited the utmost perfection of art. The commonplaces of life derived a tone of originality from his mode of utterance; the most ordinary actions appeared embellished by his sprightliness; and Clarice fancied she had formed as intimate an acquaintance with the court and courtiers of Versailles, from his frequent descriptions, as if she had passed her life in that region of splendour and futility.

With these sketches, there now began to intermix a thousand details which must have excited strong indignation in the mind of the duchess, even had they not been related with the glowing energy characteristic of the political opinions of her nephew. The fermentation of the revolutionary leaven was beginning to be perceptible even at Versailles. The murmurs of the people had reached even unto the king's chamber; the eloquence of Mirabeau had roused the echoes of respondent Europe; and man was beginning to feel and assert himself man, whether festooned with a blue riband, or with the rags of humiliating penury. All this the viscount related to admiration; sometimes with the bitter sneer of a courtier—sometimes with the angry eloquence of wounded pride. In all cases, the duchess applauded with enthusiasm; and Clarice, though she did not applaud, was approvingly silent; for though her inborn soul was with the triumphs of the people, her heart was with the "*homme de qualité*" by whom those triumphs were held up to hatred or derision.

Meanwhile, the stir and tumult of the kingdom hourly increased; the emigration of the nobility commenced; and the king and queen were held prisoners in their palace of the Tuilleries. But the greater the danger incurred by the intemperate line of conduct pursued by young d'Arnonville, the more obstinate, the more chivalrous grew his adherence to the royal cause. He adopted loyalty as a religion; and probably without anticipating (for who *did*—who *could* anticipate) the fearful outrages consequent on the intoxication of freedom among the emancipated helots of the realm, already he denounced the liberal party as plunderers and assassins. In vain did Clarice, by a few incidental words of remonstrance, attempt to moderate the rash fervour of his zeal. To tell him that he was incurring personal hazard to no good end was but to inflame his anti-revolutionary

ardour; and though she implored him to be prudent for the sake of those who loved him, if not for his own, the terms of the adjuration did not so much as excite his notice.

One circumstance, in all this, afforded some consolation to the *demoiselle de compagnie*. In the general disorganisation which was beginning to confuse and confound all ranks of society, Adolphe was already brought nearer to her. The approximation was scarcely perceptible to any but herself. But *she* felt that he was now glad to secure a submissive companion—a patient auditor of his diatribes; *she* felt that his arm was now offered as her support during their prolonged promenades; since his favourite coteries had been broken up, and his idols dispersed, he was moved to perceive, for the first time, that the large hazel eyes which fixed themselves so sympathisingly upon his own while he related to the Duchesse de Brissac the humiliations of Marie Antoinette, and the afflictions of Madame Elizabeth, were far more expressive than those of the most fashionable beauty of the noble Faubourg. He had not, in fact, conceived that a *roturière* could be so graceful; and began to enquire within himself whether noble blood might not, by some indirect means, flow in the veins of the *Paysanne parvenue*.

At last came the trial of the king; and foremost among those imprudent partisans, whose vehemence endangered his cause, was the Vicomte d'Arnonville. But he endangered not alone the royal cause; his own life was now in imminent peril, and his name on the lists of proscription. His only chance of safety remained in flight. A prudent, or, perhaps, a generous inspiration arrested his steps. The Duc de Brissac was already a captive in the clutch of the Jacobins; as the nearest kinsman of the duchess, as her heretofore assiduous cavalier, he felt, therefore, that he could not do less than offer his services to her protection. Already Adolphe had been compelled to desert his habitation in the now spoliated and confiscated hotel of his brother, the Prince d'Arnonville, in the Rue de Lille. The very atmosphere of the Faubourg St. Germain, where his person was as well known as the towers of St. Sulpice, would have been fatal to him; and he had even some apprehension of making his appearance overtly in the quarter where he might procure a conveyance to Mousseaux. It occurred to him, however, since disguise was now his only resource against detection, to make his way on foot to the village of Berey, under cover of night; and there, having procured the dress of a waterman, to seek a passage in the first return stone-barge or wood-raft making its way up the Seine towards Burgundy; whence it would be easy to gain the shore, at the ferry of Ris or Evry.

The autumn was already far advanced, and Clarice, dispirited alike by the fearful aspect of public affairs, and the impaired health of her protectress, which rendered all agitation perilous, and a long journey impossible, began to shudder as she listened to every shrill blast whistling along the lofty arcades of Mousseaux. The lime-trees were already divested of their leaves; and the reddened foliage of the cloistral-looking avenues of chestnuts fell to the ground in crisp showers with every fresh eddy of the wind. Even the blue waters of the Seine bore against the opposite embankment of Soisy, in curling waves that imparted a chilly, comfortless aspect to the autumnal landscape. Three times since the commencement of the king's trial had the mansion of the duchess been subjected to domiciliary visits on the part of the heads of the revolutionary committee sitting at Corbeil; and, at the first of these, the beauty of the young *demoiselle de compagnie* had attracted the favourable notice of a certain citizen, Marc Antoine Delamarre, the son of an ex-steward of an ex-nobleman of the province of Champagne; who, perceiving that the denunciation of the marquis, his seigneur, might afford a more lucrative return, than even the habitual malversations of his stewardship, had sent his master to the scaffold, and his son into the fiercest ranks of republican convention. But Marc Antoine, though sanguinary and unprincipled, had a heart open as day, or, as his classic namesake, to the influence of the fairer sex. For the sake of the pleading words of Clarice, accordingly, and still more for the sake of her hazel eyes, he had rendered his interrogation of the "aristocrate" of Mousseaux more forbearing than altogether became his functions; on the second visit he had openly avowed to the lovely mediatress the motive of his unwonted humanity, inviting her to desert the cause of the titled fools, who despised her, and become the companion of an honest *sans-culotte;* and, on the third, finding his proposition treated with silent contempt, had burst into a tirade of injurious invective, which unluckily had the effect of rousing all the hitherto repressed energies of his Cleopatra. It was not what he said of herself, or *to* herself, that she resented; but his menaces against Madame de Brissac were accompanied by so gross and groundless a vilification of her character, that the grateful Clarice could no longer subdue her indignation. She knew that whatever might be the corruptions of the court, the life of her benefactress was blameless; and boldly challenging the insolent accuser, excited against herself such a complication of rage and passion, that her danger was now equally urgent, from the love and hatred of her adversary. For that time, however, she was safe. The instructions of Delamarre were not such as to authorise him in the arrest of Madame de Brissac, or her *protégée*. He therefore contented himself with uttering threats for the future.

It was on the day following this frightful scene that Clarice, having escaped from the heated atmosphere of the *boudoir* of Madame de Brissac, to refresh herself with momentary aspiration of purer air, and to collect her thoughts in solitary self-communion, was pacing, with agitated steps, the labyrinth adjoining the river, when she perceived one of the rush-rafts, so common at that place and season, suddenly pause opposite the gardens, and steer towards the shore. A minute afterwards, a man, habited in the vest and broad straw-hat of a fisher of the Seine, leaped on shore; and while the raft was pointed

back towards the current of the stream, she saw him descend into the fosse of the *saut-de-loup* surrounding the park, and having, with great agility, ascended the opposite wall, make his way towards the terrace. Clarice stopped short, and trembled. It was not that for a moment she dreaded to discover Marc Antoine in the person of this mysterious intruder. The eyes of affection have a searching glance; and, in a moment, she had detected the gallant, gay Adolphe, under the sordid weeds of his disguise. When, therefore, he advanced familiarly towards her, and, trusting to the high espaliers of the labyrinth to screen them from observation, drew her arm under his, pressed the trembling hand that lay upon his sleeve, and whispered the tale of his danger—the tale of his devotion—in a tone very different from that of his usual sprightly impertinence, Clarice could scarcely refrain from blessing the misfortunes which seemed to have extinguished the painful inequality between them.

Dear as was young Arnonville to his noble kinswoman, his arrival, though prompted by such generous motives, seemed but to add to her perplexities. An ancient maître d'hôtel of her neighbour the Duchess de Bourbon had been despatched back to Petit Bourg by that considerate friend, to be the guide of her projected flight to the frontier; and she foresaw that a guardian so impetuous as Adolphe would but augment the perils of the journey. Nevertheless she could but gratefully thank his intended services, more particularly when they were again and again pointed out by Clarice to her admiration; and it was finally agreed among them that, on the following evening, the duchess and Clarice, with the viscount disguised as a postilion, should quit the château, *en caléche*, as if for an ordinary excursion; proceed with their own horses as far as Etampes, where their persons were unknown, obtain relays of post-horses, and proceed onward to the coast. This plan satisfactorily arranged, Madame de Brissac related to her nephew the eventful history of the insults they had recently undergone; enlarging with much eloquence upon the passion kindled by Clarice in the susceptible breast of Monsieur Marc Antoine Delamarre; and the burst of rage with which the announcement of his pretensions was received by Adolphe might almost seem to justify the flush of delight and triumph with which every flattering word that fell from his lips was treasured up by his devoted votaress. Mistaking the excitement with which the eventfulness of the times had animated his listless demeanour, for the first expansion of a more liberal frame of mind, she fancied herself becoming dear to him; she fancied that when the deluge of the revolution should subside, all things on earth would be found reduced to the level of nature, and that the frame of society in France could not again renew its artificial distinctions. Never had poor Clarice been so happy as on that evening of consternation; when, seated beside the sofa of Madame de Brissac, with Adolphe at her feet, they formed wild projects for the future, as if their destinies were inextricably interwoven.

But, at a very early hour on the following morning, a new alarm spread through the chateau. A young man employed in the *octroi* of Corbeil, whose appointment had originated in the interest of Madame de Brissac, had been moved by feelings of gratitude to give them furtive information that they were about to be subjected to a fourth domiciliary visit; and that Delamarre, forewarned of their flight, had determined to arrest them. The first idea of Clarice, on obtaining this painful intelligence, was the concealment of Adolphe d'Arnonville; for *his* name was actually on the lists of proscription;—*him* Delamarre would be amply justified in consigning to the hands of the law. Five minutes, however, sufficed to immure him in one of the vaults of the chateau, originally destined to receive the produce of the extensive vineyards formerly attached to the domain; and when at midday Marc Antoine actually made his appearance at the head of his detachment, the poor girl felt satisfied that, whatever calamities might befall herself, the object of her affections was secure.

"Look you, *citoyenne* would-be-aristocrat!" cried Delamarre, seizing the arm of Clarice as she was about to take her station beside the duchess, while the chateau was submitted to the ordinary search for arms and suspected persons, "I have obtained due warning of your projected emigration. If the examination now instituting by my people should afford any shadow of grounds for your arrest,—nay, should it not, but at my own hazard and instigation,—I will consign both you and your mistress to the revolutionary tribunal of Corbeil, which has already sent the decapitated carcasses of so many titled traitors floating yonder into Paris, to rejoice the sight of the good patriots of the Grève. In pity, however, to your youth and folly, I first offer you once more the means of redemption. Be mine, and the old woman yonder may make her way towards her kindred in emigration, without obstruction or hindrance. You call yourself grateful, Citoyenne Clarice. I give you an occasion to save the life of her who from your childhood has fed you, clothed you, loved you,—and yet you hesitate!"

"My poor Clarice!" faltered the duchess, casting a wistful eye upon the young girl, whom she affectioned as a pet and companion, but by no means so dearly as to overcome the selfish terrors of her own heart.

"Decide, young woman," cried Delamarre; "the alternative will not long exist to perplex you:" and, taking a roll of papers from his vest, he proceeded to fill up a blank warrant of arrest with her own name and that of the ex-duchess.

"Grant me but till this hour to-morrow for decision!" cried Clarice, with a look of wan despair, and having already taken a desperate resolution. "Since I must needs part from my generous benefactress, afford me at least one day to gain courage for our eternal separation."

And Marc Antoine, better informed perhaps than she imagined, as to her motives for the request, jerked his papers back into his pocket with a significant smile; and after a moment's communication with the serjeant of the municipal guard, sneeringly announced his acquiescence in the demand of Clarice. He informed her,

with an air half-tender, half-contemptuous, that at the meridian hour of the following day he should return to seek his bride,—or his victim;—and straightway departed, not judging it necessary to acquaint her that three of his men were posted in the premises, to keep due watch over the movements of the chateau.

At nightfall, accordingly, Clarice, satisfied that they were once more secure from observation, ventured forth into the corridors, and, escorted by the old steward, descended the concealed staircase to liberate her beloved prisoner. But, lo! a rude hand was laid upon her shoulder as she placed her key in the stone door of the vault, and a gruff voice thanked her for having yielded a clue to the secret which the citizen Delamarre was so intent on discovering.

Having summoned, by a shrill whistle, his brethren in authority, the serjeant, whose *ruse* was now successful, had little difficulty in forcing the door against the resistance of Adolphe; and the promiscuous discharge of the pistols with which the prisoner had been provided by the care of Clarice, unfortunately produced no other effect than that of inflicting a severe wound upon that generous protectress! The poor girl stood leaning against the wall of the vault, bathed in her blood, and half fainting from weakness, while Adolphe, overpowered by numbers, was captured and heavily ironed. The aid of the servants of the house was requisite indeed to remove her from the fatal spot,—not yet, however, so insensible to all that was passing around her as not to hear with distinctness the parting apostrophe of Arnonville,—"Clarice, dearest Clarice! make no sacrifice you are likely to repent. Let not the danger of your friends impel you into a rash and miserable marriage!"

"He is not indifferent, then, to my fate!" murmured she, as she lay writhing on the bed of pain, awaiting the arrival of the surgeon, who had been summoned to her assistance. "Ah! when I thought he cared no more for me than for the spaniel sporting at his feet, even then I would not for a moment have placed my own happiness in competition with his safety; but now, what would I not do, what suffer for his sake!"

A few hours afterwards, and while yet labouring under the harassing effects of her wound, the immolation of Clarice was completed. She had signed an engagement with Marc Antoine Delamarre to become his wife so soon as her restoration to health might admit; and to accompany him to St. John of the Island, the ruins of which were converted by the Conventional Government into a *poudrière*, or powder-mill, under the direction of their good and faithful servant the Citoyen Delamarre, to whose domicile was assigned the adjoining mansion of the Knight Commander of the Order. Clarice scarcely shuddered when she reflected on the signature to this fatal promise; for, thanks to the promptitude of her self-sacrifice, Madame de Brissac and her nephew were already safe, on their road to the frontier, with the connivance of Delamarre. There had been no farewell interview between Adolphe and his kinswoman and the generous Clarice. The duchess protested that she had not courage to witness the agony which was the price of her redemption from bondage; and Clarice scarcely desired to augment her own misery by the pangs of parting.

* * * * * * * *

A year from that afflicting moment had passed away. Arnonville was fighting with the armies of Condó, Madame de Brissac telling her beads in the gloomy walls of Holyrood; the Château de Mousseaux leveled with the ground; its gardens devastated; its fine woods sold for the benefit of the nation. Blood had been poured forth like water from one end of revolutionised France to the other; whole families were swept away; and the grave-yards of the *Madelaine* and *Les Innocens* of Paris were fattened with the multitudes of dead.

But Clarice still lived,—if life that could be termed which was estrangement from herself. From the day of the duchess's departure, her mind had been never wholly coherent. She was aware, indeed, of the sufferings that had befallen her; but sometimes she appeared to know more, sometimes less than the truth. Yet, by some strange perversity, the passion of Delamarre seemed only to increase with her infirmity. He had consulted the best physicians in her behalf; and received an assurance that the mind disordered in its faculties by the strong emotions of some great crisis, is often, by a second crisis, restored to tranquillity. Clarice was about to become a mother; and it was augured that the strong excitement of her new position might suddenly recall her scattered wits. She was what is termed "harmless;" betrayed her aberration of intellect only by an unmeaning, ill-timed laugh, or some disjointed apostrophe; and Delamarre, still cherishing a hope that she might one day recover and reward his forbearance and assiduity by becoming an affectionate and complacent wife, was too well satisfied to retain the power of gazing upon her delicate and now almost etherial loveliness, to suffer her to be removed to a place of confinement. Two rooms, overlooking the gardens of the abbey, were devoted to her use; and a nurse appointed to watch over her movements.

The time for her deliverance approached, and at length a fair girl nestled in the unconscious bosom of the lunatic. But reason returned not with the formation of this new and potent tie to life and happiness. Clarice laughed as wildly and strangely as ever, when the innocent creature was tendered to her embraces; and when consulted what name should be enregistered as that of her daughter, she answered, with a vacant smile, "Call her Adolphe,—call her Adolphe!"

Delamarre was fortunately not present to witness this disappointment of his expectations with respect to the influence of the birth of his child upon his wife's recovery. For some previous weeks, indeed, he had been compelled to leave the direction of the *poudrière* almost entirely in the hands of his foreman, and absent himself from the island for the execution of other official duties. The Reign of Terror was at its climax; and every day he received rebukes from those in authority, for the mildness with which his crusade against the aristocrats was prosecuted. The names of Brissac and Arnonville were specially enumerat-

ed in the charges brought against his zeal in the good cause; and it appeared that his own sole chance of escape from denunciation lay in increased severity of creed and action. He began to foresee the probability of falling under a sentence such as he had often been the means of fulfilling towards others; and scarcely dared to return to the lofty shades and green meadows of the island-convent. He had seen Clarice indeed but once since the birth of their child.

It was remarkable that, although the invalid by a vague air of restlessness and enquiry demonstrated her consciousness of his absence, she never enquired into the cause. For many months past she had ceased to betray impatience of his attentions, and was evidently imperfectly aware of his identity. She knew him not as the enemy of her benefactress, the captor of her lover,—the husband of her sorrow;—she saw in him only an assiduous friend, ever at hand to obey her summons and assuage her sufferings. She bore with him,—she almost loved him; not, it is true, as Marc Antoine Delamarre, but as the being kindest among those by whose kindness she was now surrounded. Yet among them there was one whose devotion was of no common kind, for the woman selected by Delamarre to watch over his afflicted Clarice—was her mother.

Ten days had elapsed since the birth of the infant, and Clarice was just able to totter round her apartment and look forth anew upon the face of nature. The summer was nearly at an end; but there was still perfume enough in the atmosphere of the gardens, and freshness enough in the foliage of the groves, to gratify her languid eyes. She began to miss something from her accustomed companionship.

"He is not here!" faltered she, gazing mournfully in the face of her mother. "It is not long since he was here. When will he come again?"

"Of whom are you speaking, *ma cherie?*" enquired the old woman.

"Of *him*—of Adolphe!" replied Clarice (for she had acquired a habit of calling every thing and every one that pleased her by the name of Arnonville). "Doubtless they have discovered him—arrested him. He is in the dungeons of Mousseaux; mother, let us go in search of him."

Aware that the poor maniac adverted to her husband, and expecting, from hour to hour, the return of Delamarre, the old woman contrived to pacify her for a time; but towards evening, as she was sitting musing beside the open window, the bells of St. Spire and St. Leonard of Corbeil—then converted into infantry barracks—suddenly rang out, as if in proclamation of some occasion of public rejoicing.

"Something great and good has happened!" cried Clarice, starting up; "I hear at a distance the acclamations of the people! Adolphe has escaped."

"What can have occurred?" ejaculated the old woman; and, putting forth her head from the window, she called aloud to the workmen, who, although the powder-mill was closed at dusk, often loitered about the premises on errands of their own. But no answer! not a soul was stirring!

Again the bells struck up a merry peal; and, excited as she was by the joyous sound, the infirm mother of Delamarre's wife little suspected how glorious were the tidings which produced these public demonstrations. Robespierre was no more—the reign of terror was at an end. The intelligence had just reached Corbeil, and young and old were pouring forth into the streets and market-place, with mutual congratulations.

"She is quiet enough to-night; I will just step down to the offices and enquire the meaning of all this joy and tumult," muttered the old woman to herself, when even her imperfect hearing was startled by the shouts of the distant multitude; and, having uttered an imperative injunction to Clarice not to attempt to quit the apartment during her absence, (the surest mode by which she could have pointed out to the maniac that she was accidentally at liberty), the old woman locked the door and stole down stairs, promising to return in a moment. But the offices to which she repaired were solitary—there was not a single soul on the premises; and having left Clarice musing and melancholy, safe in her nursing chair, the inquisitive old lady assured herself that no harm could arise from her hastening through the cemetery towards the mill at the extremity of the island, to prosecute her enquiries. "The poor child wants so sadly to know the cause of all this bell-ringing," was her apology to herself for her indiscretion; and away she scudded under the trees, enchanted at the prospect of a moment's gossip with *la mère Pinson*, at the mill.

The first object that struck her on arriving there (revealed by the light streaming from the windows, upon the little wooden bridge crossing the Juigné), was the person of her son-in-law.

"*Que diable fais-tu ici?*" was his instant salutation—an invocation which, but for her terror of the violence of her son-in-law, she might have been content to reiterate. "What was *he*, so long absent, doing there at last?"

"I came, at the request of Clarice, to ascertain what was going on," said she, checking herself, "and now let us return to the house."

"At the request of Clarice? Heaven be thanked! She is then sufficiently restored to feel an interest in what is going on around her! For once the doctors were right."

"Not altogether, I fear," faltered the old woman in reply; "our poor child can scarcely yet be said to enjoy the right use of her senses. Yet on such topics——"

"You have not surely left her *alone?*" cried Delamarre, as they were traversing the young plantation of poplars leading to the boundary wall of the cemetery.

"She was so calm, so tranquil, this evening, that I considered——"

"*Did* you leave her *alone?*" persisted Delamarre, in a voice of thunder. "Speak out!"

"I *did* then; but——"

"Infernal fool!" ejaculated the agonised husband, hastening his steps; "how dared you neglect my orders?"

But on reaching the wall of the churchyard leading to the commander's house, a spectacle

was before him that suspended the words of imprecation on his lips.

Extending from the second story of his house to a range of offices—formerly the farm-sheds of the convent, but for some time past serving as a temporary powder-magazine—was a massive but ruinous wall, part of that portion of the Abbey of St. John which was demolished on the ejection of the monks. At the farther extremity was a tower, partly standing at the present day, and said to have been originally used as a prison for recalcitrant brethren of the order; and on the summit of this wall, bending, or rather climbing, her way towards the dilapitated turret, stood Clarice, holding a lighted taper in one hand, and with the other folding closely around her the white draperies of her night-dress. On discovering herself alone, engrossed as she was by the fixed idea of going to deliver Adolphe from his imprisonment, she had escaped by a window, leading to the wall; and, thanks to the aerial lightness of her attenuated figure, and the rash security of her unshrinking steps, had hitherto escaped destruction.

Delamarre perceiving in a moment that a miracle alone could save her, felt, with a sad and sudden conviction, that of such a miracle he was wholly undeserving. He dared not even raise his voice to heaven to sue for its mercy in the preservation of his wife. All he could do was to seize the old woman with imperious violence, and clasp his hands over her mouth, to prevent the utterance of a single outcry, which might be fatal to her child.

The night was dark; and the taper, burning in the hands of Clarice, derived a sort of unnatural brilliancy from the contrast of its gloom; it was still, too, as it was obscure—scarcely a breath of air was stirring among the lime-trees; and Delamarre could distinctly hear the bricks of the ruined wall displaced and falling to the earth at every step hazarded by the poor lunatic. Never had her sweet countenance appeared more lovely to him than now, when irradiated by the strong light of that solitary taper; for her looks were brightened by the sweetest of smiles—she was happy—she fancied herself once more in pursuit of Adolphe.

So entrancing was the perturbation of Delamarre, as he stood with his eyes fixed on that appalling apparition, that even had he not known that the preservation of Clarice depended upon her not being startled, he was incapable of the utterance of a single syllable. His heart was swelling with hope almost to suffocation, for already Clarice had attained more than midway of her hazardous career; and she was now passing over the sheds serving as magazines: which, were she to fall, must necessarily break her descent and diminish her peril. But, mercy of mercies, a new danger now presented itself. The lighted taper! The powder!

Scacely had this fearful notion occurred to Delamarre, when a shock as of an earthquake laid him and his companion prostrate on the earth; while high in air—so high as to be perceptible as far as Choisy on one side and Melun on the other,—rose a burst of impetuous flame, reddening the heavens as with an announcement of the wrath of God,—an announcement spoken in thunders, even as when the Almighty communed on Mount Sinai with the rulers of his people!

Just as poor Clarice attained that portion of the ruins overhanging the magazine, the bells of St. Spire had unfortunately renewed their joyous peals, and her irrepressible start at the sound had proved fatal! Falling upon the very spot used by the workmen for packing canisters of powder, the overthrow of her taper among the particles had ignited them, and the ignition communicated itself to the vast store of barrels in the shed beyond; and, in an instant, the roar of the detonation announced that all was over.

* * * * * * * * *

The blackened and defaced walls of the Church of St. John of the Island still announce the dread event by which their ruin was completed; and, in a gloomy corner of the old cemetery, overshadowed by the drooping boughs of an ancient chesnut-tree, is a small mound—greener than the rest of its turf—which covers the fair corse rescued by Delamarre, after many days' exertion, from the ruins. Horror-struck by the miseries provoked by his own ungovernable passions, Delamarre, immediately after the interment, sent in his resignation of the post of director of the republican powder-mill of St. John of the Island, and departed, with his infant child, to a distant part of the country. When next he was heard of at Corbeil, he was married again—prudently—wisely—and the father of two sons.

And now that the events of the first revolution are forgotten in the hopes and promises of a second, those sons, redeemed from their father's ignominy by the purchase of a *savonnette à vilain*, enjoy titles, wealth, distinction, in the gay circles of the French metropolis. They know nothing of the young sister, who lived not to share with them their father's inheritance; still less of the beautiful—the gifted—the sacrificed Clarice Delamarre—who sleeps in the secluded cemetery beside the waters of the Juigné. In the brilliant coteries of the Faubourg St. Honoré—in the *foyer* of the Italians—at Tortoni's—at the Salon—they sometimes meet the infirm Duc d'Arnonville, who, by the death of his brother, acceded some years ago to that title. Surprised by the eagerness with which the antediluvian libertine fixes his gaze upon them, they naturally attribute his inquisitorial glances to the excellence of their tailors, and of their own taste.

How could it occur to such men, that their importance in the eyes of the favourite of Charles X. might be traced to a little heap of mouldering dust in the cemetery of St. John of the Island?

Press in Switzerland.—In 1817 there were in all Switzerland no more than 54 printing offices and 16 journals; in 1830, there were 71 printing offices and 29 journals; and at present, there are 93 of the former and 54 of the latter.

From the London Athenæum.

Nautical and Hydraulic Experiments, with numerous Scientific Miscellanies. By Col. Mark Beaufoy, F.R.S. &c. Vol. I. royal 4to. Printed at the private press of Col. Beaufoy.

It is now some three or four months since certain gentlemen, known as connected with science in the two universities, and in the metropolis, found themselves each in possession of a goodly quarto volume of 700 and odd pages, superbly printed, illustrated by twenty plates—(among the finest specimens of machine engraving ever executed), and wood-cuts *passim*, and bearing the above title. As he opened this magnificent volume, each read upon the first page of it the following epistle dedicatory—his own name filling up the blank space in it.

* * * * *
* * * * *

"The *acceptance* of a copy of
Colonel Beaufoy's
Nautical and Hydraulic Experiments,
is most respectfully solicited by the Publisher.

For never any thing can be amiss,
When simpleness and duty tender it.—SHAKSPEARE.

The second and third volumes will be duly forwarded as soon as printed.

"South Lambeth. HENRY BEAUFOY."

Of the munificence of the gift, some idea will be formed when we have described it. The following is the history of the work.

It appears that the attention of Col. M. Beaufoy, the author, and the father of the gentleman who, at his own great cost and charge, has published it—

"had made his first experiments upon the resistance of solids moving through water, before he was fifteen years of age; and he pursued the subject, with unabated zeal, until within a few months of his death. His attention was first drawn to the subject in consequence of his hearing stated one evening by an eminent mathematician, as an axiom generally received by naval mechanics, that '*a cone drawn through the water with its base foremost, experienced less resistance from the fluid than with its apex foremost.*'

"This paradoxical assertion excited young Beaufoy's curiosity, and before bed-time, with the assistance of a neighbouring turner, he ascertained the fallacy of the alleged opinion, by making the experiment in one of the coolers in his father's brew-house, the large bunch of counting-house keys being put in requisition for a motive power."

The impetus was thus given, and the prevailing tendency of the man's thoughts seems strangely enough to have been fixed by it *for his life;*—of that life, so far as it was connected with science, the experiments and calculations recorded in the work before us are the result, and the work itself an appropriate monument erected at the hands of his son. The first experiments of Col. Beaufoy, on the resistance of fluids, were made by attaching different solid bodies to a pendulum suspended over a kind of trough containing water; the pendulum was inclined in each case at the same angle, and loaded, so as to have the same weight, and then being allowed to descend by this weight through the fluid, the angle through which its first oscillation took place, was observed, and this angle was taken as a measure of the greater or less degree of resistance opposed by the fluid to its motion. There are numerous objections to this method of experimenting on fluid resistance; it is very possible that the body best calculated to move through fluid occupying the confined space of the trough, and revolving in a circular arc.* may not be that best calculated to move in a straight line, and through a mass of fluid of unlimited dimensions. And, moreover, the different solids used would have different momenta of inertia, of which their velocities at any instant in free space—and, therefore, their resistances in a resisting space,—would necessarily be functions. Thus, the correct interpretation of experiments on resistance made with the pendulum, would necessarily be very complicated and difficult; and, indeed, in the existing state of science, it would be impracticable. It was probably for these reasons that Col. Beaufoy held none of his pendulum experiments in any estimation; although he seems to have considered them sufficient for showing the *comparative* resistances of the solids tried under similar circumstances. On these experiments we shall make no further remark than this, that they indicate the singular fact, confirmed by other experiments of a far more accurate nature, that increasing the length of a solid of almost any form, by the addition of a cylinder in the middle, exceedingly diminishes the resistance with which it moves, provided the weight in water remain the same; also, that the greatest width of a body moving in a fluid, should not lie in the middle, but nearer to its anterior extremity.

Impressed with the insufficiency of these experiments, and viewing the subject, with justice, as one of *national* importance, Col. Beaufoy appears to have been the founder of a society calling itself 'A Society for the Improvement of Naval Architecture."

"A meeting, in consequence of a public advertisement for that purpose, was held at the Crown and Anchor Tavern, in the Strand, on Thursday, the 14th of April, 1791, to take into consideration the expediency of instituting 'A Society for the improvement of Naval Architecture.' It was attended by a numerous company of noblemen and gentlemen, when it was unanimously agreed:—

"'That the theory and art of ship-building being objects of the first magnitude and importance to these kingdoms, and not so well understood in this country as matters of so much consequence deserve, a remedy for this radical deficiency merited the attention of every well-wisher to the true interests of Great Britain.

"'That the most effectual remedy for this deficiency would be, to concentrate the theoretical and practical wisdom of this country, by the institution of a Society for the Improvement of Naval Architecture.

"'That such a society be instituted, under the direction of a president, vice-presidents, and other officers, and that his royal highness the Duke of Clarence be requested to accept the office of president, and to lay the plan of it before his majesty.'

"This society resolved, by the assistance of their own

* The arcs described varied from 15° to 27°.

nembers, and other gentlemen properly qualified, to nake a series of experiments on the resistance of water, ıpon a much more extensive scale than any which had yet been made in this or any other country.

"A committee of gentlemen was chosen for the purpose of conducting the experiments.

"The Greenland Dock was fixed upon as the largest and most convenient piece of still water for the purpose near London, and they chose the upper end, as there they would be less liable to be disturbed by the general business of the dock; and conceived that the 400 feet run, and 11 feet depth of water, obtained at that part of the dock, were amply sufficient to answer the views of the society.

"Though a committee of gentlemen was chosen, all of whom entertained the most ardent desire to render themselves useful in the business, yet from their professional and other individual concerns, few of them were able to bestow more than their occasional assistance; the whole onus, therefore, of regular attendance, from first to last, and of conducting the process, (for he never absented himself for a single day,) was borne by Colonel Beaufoy; the assistant secretary to the society, Mr. James Scott; and by Captain John Leard, as often as his nautical duties would permit him to attend.

"For some years the calculations were made at Colonel Beaufoy's residence at Hackney Wick, by himself, assisted by his wife, who contributed no inconsiderable share to the progress and success of the experiments; for, favoured alike in person and in mind, being a woman of considerable talent and scientific attainments, besides the usual female accomplishments in which she excelled, she was a good mathematician and practical astronomer, familiar with all the details of the observatory, the calculation of eclipses, &c.; and by method and strict economy of her time, while the domestic arrangements proceeded with perfect regularity, she was never at a loss for leisure in the furtherance of her husband's pursuits. But,

'Pauca decet..... rostque tabellis
Ut bene depictâ floris odore caret,'

"She died in the year 1800, at an early age, after a few hours' illness; an irreparable loss to her husband. He survived her twenty-seven years, and proved the sincerity of his attachment to her memory by not marrying again. A few hours before he died, he spoke of her with emotion, which showed that time had not caused the smallest diminution in his affection for this estimable woman.

"After her decease the calculations were continued by Colonel Beaufoy, in association with the assistant secretary, Mr. James Scott. These calculations were attended with great labour and trouble, and occupied more than ten years subsequent to the final close of the experiments, at Greenland Dock. Colonel Beaufoy verified them for the fifth time shortly before his death.

"That a society, with objects so important, and commenced under such favourable auspices, should have sunk into decay for want of funds, is deeply to be regretted. In consequence of this event the experiments were, for a considerable period, conducted and brought to a conclusion solely at the expense of Colonel Beaufoy.

"At length, however, he had the satisfaction of seeing a perfect copy of the whole of the experiments, with appropriate drawings of the apparatus and solids employed, comprised in two folio volumes. To the first volume of which he appended a notice, that 'this was the only complete copy of the experiments in existence.' It is from this copy that the present publication is taken, without alteration or addition."

Whilst the experiments of the society were thus in the hands of Col. Beaufoy, and undergoing through a long course of years that process of careful verification, and were made the subject of those elaborate calculations, without which he appears to have resolved not to give them to the world, a set of experiments was undertaken in Sweden, having for their object the solution of the same question. These Swedish experiments were conducted under the sanction and at the expense of the society of iron-masters at Stockholm, by Messrs. Lagerhjelm, Farrelles, and Kalestenius, and were tried at Fahl mine in the years 1811, 1812, 1813, 1814, and 1815. Copies of the Swedish experiments were sent to Col. Beaufoy, and he made two ineffectual attempts to obtain, at his own expense, an English translation of them. In the meanwhile his scientific labours terminated. In the year 1827 this public-spirited man descended to the grave, where there is "no work, nor device, nor knowledge." The experiments and calculations to which he had dedicated, with a skill, industry, and perseverance, unparalleled in the history of science, more than thirty years of his life, were not, however, to be lost. His manuscripts were bequeathed to his eldest son, who determined to fulfil his father's wishes, by publishing the whole of them, together with the Swedish experiments, "for the benefit of those who might feel disposed to prosecute the investigation hereafter." In carrying this purpose into effect, he has spared neither labour nor money.*

"The Swedish language is rarely cultivated in England, and consequently it became extremely difficult to meet with a person who could combine the capabilities for translating a mathematical and abstruse work from Swedish into English, with a disposition to undergo the labour of arranging papers,—of superintending the press,—and of preparing, by way of preliminary, exact copies of the original manuscripts for the printer.

"After many fruitless enquiries, and when there appeared no chance of the work being published agreeable to the colonel's intentions, a lucky incident occurred which removed every difficulty."

Difficulties vanish before the energy and perseverance of the Beaufoys. This lucky expedient was no other than the *engaging of a gentleman of university education to learn the Swedish language*, and thus qualify himself for the duties of a translator. In the spring of 1832, when he had succeeded in translating the first volume, this gentleman was sent over to Stockholm to lay the translation before the learned author, Assessor Lagerhjelm—

. ."who, being an excellent English scholar, could satisfy himself that the translator had rendered the Swedish

* Some idea of the expense of the work and the *devotion* of the publisher, may be formed from the following passage in a note which has reference to some trifling errors which he had detected in the work. "At one time the publisher felt disposed to have cancelled the whole edition (1550 copies), and to have reprinted the work; but seeing that he had already paid more than three thousand pounds for what had been done (i. e. to the first volume), he thought it more advisable to adopt the plan of inserting the Table of Corrected Reading—a decision which, under all circumstances, he trusts will meet with the approbation of the reader."

into English according to the true spirit and meaning of the author.

"The assessor was pleased to express himself in terms of warm commendation of his performance, and zealously afforded him every assistance towards the perfection of the undertaking. Not content with loading his English visiter with personal kindness and attention, he interested himself in bringing the object of the reverend gentleman's voyage to Stockholm before the Society of Iron Masters, who, doubtless at Assessor Lagerhjelm's suggestion, most liberally and considerately offered the use of the copper-plates belonging to the original Swedish work, in order to facilitate and diminish the expense of the publication. * * *

"The work will consist of three volumes.

"The first volume will contain Colonel Beaufoy's experiments upon the Resistance of Solids moving through Water, made at Greenland Dock, divided into the First and Second Series, containing the whole of Vols. I. and II. of the original MS.

"The second volume will contain the translation of the first and second volumes of the Swedish Hydraulic Experiments, and also that of the '*Tentamen Theoriæ Resistentiæ Fluidorum constituendæ.*'

"The third volume will contain Colonel Beaufoy's Miscellaneous Papers, chiefly reprinted from Thompson's Annals of Philosophy. These papers are numerous, and treat on astronomy, naval architecture, air, magnetism, meteorology, tides, trigonometry, sound, and other scientific subjects.

"It is possible that these miscellanies may require a fourth volume; but, be that as it may, the second volume will include the translation of the first and second volumes of the Swedish Experiments upon Hydraulics, and will close with Assessor Lagerhjelm's '*Tentamen Theoria Resistentiæ Fluidorum constituendæ.*' If Providence permits, such is the course of publication intended to be pursued. The uncertainty of human life, and the vicissitudes of health and circumstances, may not suffer the fulfilment of the entire work. The object must be, therefore, to make each volume complete in itself.

"The united experiments made by the English and Swedish philosophers have not cost so little as 50,000*l.* sterling; and it would be a melancholy event should fire or accident deprive the world of a body of experiments, which are believed to be unparalleled in extent and accuracy, by any that have been made heretofore upon this particular branch of hydrostatics.

"The number of copies (1500), multiplied as they now will be through the medium of the press, may possibly snatch the labours of these disinterested men from oblivion.

"The whole course of Colonel Beaufoy's life was devoted to the cultivation of science, and spent in the advancement of useful knowledge; yet, in no one instance, did he seek (much less derive) the smallest personal advantage from his scientific occupations. His aim was to be useful in his station,—his ambition was to contribute his mite to the aggregate of human improvement,—and, with the exception of the commencement of the Greenland Dock experiments, the whole of his researches were conducted by himself, and at his sole expense.

"As Colonel Beaufoy's scientific labours were given to the public gratuitously, so, likewise, are these volumes intended for the honour of gratuitous distribution."

Some alteration has taken place in the order of the volumes. The translator engaged by Mr. Beaufoy has gone to Archangel, having become the chaplain of the Russian (British) factory there; and he has thus been prevented from making a second journey to Stockholm, which Mr. Beaufoy considers necessary, to verify his translation of the second volume of the Swedish Experiments. This second volume of the Swedish Experiments is therefore reserved for the third volume of Mr. Beaufoy's work; and his second volume will contain the remainder of his father's experiments on nautical subjects, and the *first* volume only of the Swedish Experiments.

Of the experiments (many thousands in number), which are registered in this volume, only a slight notice can here be given. They were made at the Greenland dock, in the years 1793, 1794, 1796, 1797, 1798; and the object of them was to ascertain the actual *amount* of resistance opposed to the motion of bodies of different dimensions moving in a fluid; one set of experiments being made near the surface, and the other at a mean depth of six feet.

A body floating *at rest* sustains on all sides of it certain pressures, which may be resolved into horizontal and vertical: the vertical pressures are all neutralised by the weight of the body, and are together equal to that weight. The horizontal pressures neutralise one another: those on any portion of one side of the body being exactly balanced by others on a corresponding portion of the other side. If the body be put in motion in any direction (say horizontally), the equilibrium of both these sets of forces is destroyed—the horizontal pressure on that side *towards* which the body is moving is increased, and that on the side *from* which it is moving is diminished: the resistence is the difference of the head and stern pressures; and for both these causes it is *increased*. Also it appears by recent experiments, that not only is the equilibrium of the horizontal forces thus destroyed; but that although the disturbing force is applied wholly in a horizontal direction, the equilibrium of the *vertical* forces is destroyed by it, so that the sum of the vertical pressures is no longer equal to the weight, but is made to exceed it, and cause the floating body to rise out of the fluid. It is remarkable, that in the numerous and varied experiments of Colonel Beaufoy, made as well at the surface as below it, this fact, of which such advantage has since been taken in canal navigation,* did not occur to him; we cannot help viewing this as a great misfortune; the opportunities he had of ascertaining, in the course of his experiments, the nature and law of this vertical disturbance, and his admirable skill, perseverance, and accuracy, as an experimenter, render it a real loss to science, that his attention should not have been directed to this point; and it is more particularly

* It has been ascertained, that when floating bodies are put in motion, by means of a horizontal force, with more than a certain velocity, they *rise* out of the water so as materially to diminish the resisting surface, and, of course, the resistance. Advantage has been taken of this fact in canal navigation; and a barge, which will contain somewhere about 100 passengers, is now actually dragged along a part of the Forth and Clyde canal, at the rate of twelve miles an hour. The Edinburgh and Glasgow passage boats *commonly* travel at the rate of nine miles an hour. Mr. Challis has, in the last number of the Cambridge Philosophical Transactions, endeavoured to account for the elevation of a sphere drawn horizontally through a fluid, by investigations derived from the general equations of fluid motion.

to be regretted, because the question is one affecting, in some degree, the valuable results contained in the volume before us, especially those made near the surface in the years 1793, 1794, 1795. Of the effects of this vertical disturbance several instances are mentioned. We are told, that where the heads were obtuse, and the velocities considerable, the water would not unfrequently rise so as to flow over the top of the body; and that, in some cases, "the water thus collecting on its fore part, the body would dive down to the bottom of the dock, then overset, and tumble out the ballast." Another example of this disturbance in the *vertical* equilibrium is presented in some experiments made with two bodies, in both of which the solid content is the same, and the angle which the surface opposes to the fluid is the same; but, in the one case, it divides the fluid laterally; and in the other, the body, in order to move, must displace it vertically; the resistance in these cases is essentially different, as may be seen by comparing the experiments in pages 139 and 155. The experiments made in 1796, 1797, 1798, were principally at a considerable depth beneath the surface, and here (except in respect to the conductor,) the same source of error could not exist; these experiments constitute, by far, the most valuable part of the work. It is impossible, within our limits, to give any thing like an accurate notion of the important practical results deducible from these experiments. The following are, nevertheless, some of them:—When a floating body passes from a state of rest to a state of horizontal motion, there results evidently, as we have before stated, an *increase* of the pressure upon its head, and a *diminution* of that on the stern. The *sum* of increase, and this diminution, constitute the whole resistances. Now, in the work before us, there is detailed a very ingenious method by which these two pressures have been (we believe for the first time,) separated, and their amount separately measured. The bodies experimented upon were each composed of three pieces, a head-piece, a body, and a tail-piece, capable of being separately attached to one another, or varied in any way, so that to the same head-piece and body might be attached a different tail-piece, &c. Attaching in this manner to the same head-piece and body triangular tail-pieces of different lengths, it was found, that the whole resistance diminished as the length of the tail-piece increased, until it exceeded a certain length, or the angle, which terminated it, was less than a certain angle, then (the effect of friction being deducted) any farther increase of length or acuteness of the tail-piece produced no alteration in the resistance. Now, since, before this limit was attained, an increase in the length of the tail-piece—the head, &c. remaining the same—diminished* the resistance, it was concluded, that the stern pressure upon the body was less diminished by its motion, as its tail-piece was longer; and since, beyond a certain limit, this effect ceased, it was concluded, that *there* this diminution of the stern pressure by the motion did not take place at all, and that the stern pressure was the same as though the body were at rest. Thus, a body with such a stern end as this would have no resistance offered to it, but that upon its head; and, the head resistance being thus ascertained, if this head-piece be combined with any other stern, and, from the whole observed resistance, that ascertained to be due to the head be subtracted, the remainder will be the stern resistance. Thus, the amounts of the *two* resistances may, in any case, be correctly ascertained, and the result admits of easy verification by joining a head and stern, whose respective resistances have been determined *independently*. Verifications of this kind established the truth of the method; and, for every experiment, we have the head and stern pressures given us in the tables *separately*.

It was found that the head resistance varied according to a law which was somewhat less than that of the square of the distance, deviating more as the velocity was greater, also, that the stern pressure follows nearly the same law—a fact which remarkably verifies the theorem so recently introduced into the theory of fluid motion by Professor Moseley, and first, we believe, demonstrated by him as a *general* principle of hydrodynamics. Among the most remarkable results of these experiments, and one of great practical importance, is this, it is proved incontestibly that the resistance upon a body is diminished, *cæteris paribus*, by increasing its length. Thus, if a sphere be cut into hemispheres, and then separated by a cylinder, the solid thus formed will move through a fluid with greatly less resistance than the sphere itself would. It required, for instance, a weight of 6285 pounds to move a sphere at the rate of 13,527 feet per second through the water, and only 4971 to move, with the same velocity, a body compounded of its two hemispheres and an intervening cylinder. It may be presumed, that in both these cases the head resistance was the same, and that the cylinder produced its effects by diminishing the stern resistance—and probably, by allowing time for the first deflexion of the fluid at the head to be overcome, and thus facilitating the influx into the space which the moving body, as it advances, continually leaves behind it. On the same principle, a cube was found to move with less resistance than a square plain, having the same area with one of its sides, and a cylinder with less resistance than a circular area of the same dimensions with one of its sections.

Some of the experiments we have before stated to have been made at the surface, and others at different depths beneath it. Now, in reference to these, it was observed, that, deducting the effects of friction, there was, in all cases, more resistance to a body moving at the surface than to the same body immersed. This remarkable fact is probably to be assigned to the same cause—the greater facility of influx behind—the moving the fluid now pouring into the space left by the body as it advances from above as well as from below and sideways, and its influx being accelerated by the superincumbent weight.

To ascertain the effect of curved lines on the

* We see here a reason for the elongated forms of fishes.

resistance, two bodies were formed precisely of the same dimensions and form, except that the head of one was triangular and the other elliptical, the extremities of both being at the same distances from the thickest part; the body with the elliptical head was found to move with greatly less resistance than the other.

Friction on the same body was found to vary according to a law somewhat less than that of the square of the velocity; in different bodies it was found to depend very greatly upon the *nature* of the surfaces used—a fact to which sufficient attention does not appear to be paid: even the slime which collects in a very short time on the surface of a body floating at rest, is sufficient to produce a very sensible alteration in this respect; and for the amount of friction on perfectly smooth surfaces, by no means a sufficient allowance appears to be commonly made. These experiments clearly show it to be quite possible that ships built in every other respect alike, may differ very greatly in their rates of sailing, by reason only of a slight difference in the smoothness of their bottoms.

In concluding the lengthened notice which we have thought due to this important work, we have only to express our obligations to the publisher for the munificent gift he has laid on the altar of science. By the time his work is completed, it will, it is reported, have cost, together with the experiments it records, a sum of 60,000*l*., the value of thirty years of assiduous labour not being counted in this estimate. There is a munificence and devotion about this gift which have, we believe, no parallel in the history of science. Experiments and calculations, equally laborious and expensive, may have been made elsewhere, but they have been made by societies of men, and at the national expense. We believe it to be characteristic of the wealth, the genius, and the enterprise of the British nation, that so noble, so national a work has here sprung from the patriotism, the scientific ardour, and the private resources of an individual.

THE SULTAN.—The learned and enlightened Sultan of Turkey has presented to the widowed mother of the late gifted and lamented Mr. Arthur Lumley Davids a splendid diamond ring, by the hands of J. H. Mandeville, Esq. (recently Minister of Legation at Constantinople), in return for a copy of the English grammar, presented to his highness by the author (Mr. Davids), and dedicated to him by special permission. In forwarding the ring to Mr. Mandeville by his Reis Effendi, the sultan requested it might be delivered to Mrs. Davids, as a testimonial of his approbation of the immense labour and great research exhibited in her son's extraordinary work, and of his regret at the too early loss of such a genius, who died of spasmodic cholera three weeks after the publication, and within the same time of the completion of his majority. From an immense mass of manuscripts left behind him, his mother intends selecting many for the press, to which she has already written the preface. He was her only son.

From the New Monthly Magazine.

NOTES ON NATIONALITIES.

BY A TRAVELLER.

"I hate the French," says the one-legged sailor of Goldsmith, "because they are slaves, and wear wooden shoes." This sentiment is not extravagantly portrayed, for there are a great many people whose patriotism is a horse of the same colour; and in these individuals I dare affirm the wooden shoes come in for a greater share of hatred than the slavery: such a perversity governs the passions of men, that they seldom love or hate one another for the right reason. I know not whether Beranger had the above expression in view when he penned his ironical *Anglomane*, but the introductory couplet furnishes quite a pendant to Jack's unsophisticated antigallican speech—

"Quoique leurs chapeaux soient bien laids,
G—d dam moi! j'aime les Anglais."

Which I propose to translate—

John Bull you wear a shocking bad hat,
But, sacré! I don't dislike you for that.

Leaving it very plain that he thinks it fair not to like a man who ensconces his caput in a felt of outlandish proportions. Some of these antipathies have been conquered on both sides, but the two nations have their own modes of thinking still. All men were sent into the world for the same end, yet it seems they will think differently on points where one would suppose they were made to agree. We know that mankind differ, and we have a thousand ingenious reasons to account for these differences, but I am not aware that I recollect a satisfactory one.

Human nature, according to the oft-repeated maxim, is the same every where. Now general maxims I hold to be worth very little: they are commonly either false or insignificant. It is true that all men have the same passions, but it is not true that they universally assume the same modes of operation, or lead to the same results, or exhibit the same moral phenomena in their progress and effects. It is a dangerous error to trust altogether to this crude principle in our calculations upon the conduct of men. When Augustine Iturbide returned to Mexico from his banishment, doubtless he expected the result would be an exact copy of Napoleon's return from Elba, on the strength of the popular maxim; but what was the consequence? Napoleon regained a throne, and Iturbide was shot for a runaway. Such are the miscalculations of those who confide in general maxims, and do not make proper distinctions.

Leaving this, however, for the moralist or the metaphysician to explain, I will only remark further, that let men differ as they will in their modes of thinking, they appear to be aiming at the same point,—they all wish to think right. All nations, however rude or savage, have some idea of a quality which they praise under the name of virtue, goodness, justice, or the like, although their habits may exhibit some points which strike our eyes as contradictions to such an idea. The South African who lives by plundering the flocks and herds of his neighbour, has certain notions of property

which do not precisely tally with the code of laws in which we glory. A Caffre chief was once put to his catechism by one of the missionaries. "What is the chief end of man?" asked the divine. "To steal cattle," was the ingenious reply.

Now the honest missionary, who looked, I dare say, for some refined theological subtilty in answer to his query, was much shocked at this strange answer, and fell straightway into some very dismal surmises as to the morals of a people who made such an open profession of thieving; yet do you think the Caffre might not be an upright man after his own fashion? In the matter of quadrupeds, to be sure, he is not a text for our handling, but in other respects he might be just, and veracious, and beneficent,—in short, an honest man, in spite of his kill-cow principles.

It is equally clear that the French may be a good sort of people in spite of their wooden shoes. The anecdote perhaps is yet remembered of the Englishman in a coffee-house who refused to sit at the same table with his neighbour because he never ate mustard with his beef. This difference alone completely occupied his mind, and under the impression thus created, he looked upon the mustard-avoider as a being of a distinct species. The thing was natural: in comparing other people with ourselves, we are struck vastly more by the differences than by the resemblances. How many there still remain among us, who in imagining a Frenchman, do not consider the thousand characteristics which he has in common with themselves, but think only of fiddling, frog-eating, and *parley voo!*

But let all that pass; my purpose is to specify a few national peculiarities rather than to account for them. Are the English more humane than the French, or the reverse? The French are allowed to be the more polite, and as politeness is the outward expression of good feeling, it follows that the French exhibit more external evidence of humanity. This, however, is not the question, as it is possible to do the most disagreeable things in the politest manner in the world. The French avoid sanguinary punishments, and their juries have the greatest aversion to convict capitally. The disregard of human life in street accidents seems to be vastly greater in London than in Paris, or indeed than in any other city. Not even in the Toledo of Naples, where the whole city is out of doors, and horses and carriages are perpetually driving through the dense mass of population, is it possible to witness the hundredth part of those occurrences which meet the eye in the London journals under the title of "Cab and Omnibus Nuisance," or "Accident from furious driving."

A Frenchman is more cheerful than an Englishman—that is, in company, for a Frenchman appears to be miserable when left alone. On this point the Englishman has certainly the advantage, as he is not dependent upon others for enjoyment. Nevertheless, the sociality of the Frenchman appears the more amiable: give him salad, soup, and chatter, and he wants nothing more to fill up the day. The Frenchman makes a parade of his feelings: the Englishman studies to conceal them. The one affects the enthusiast, and the other the stoic. A Frenchman does not forget that the world is looking on him even *à l'article de mort.* How many smart sayings were prepared for utterance at the last moment by those who fell by the guillotine during the reign of terror! The *perruquier* who, a few weeks since, committed suicide, because, according to his own account, he had calculated all his chances, and found he could never be so great a man as Napoleon, was perhaps quite sincere in his grief; but was it not genuine French vanity, the ostentation of feeling, that induced him to make this display? The grief alone did not cause the suicide, but the opportunity of making it known to the world in this very striking and theatrical style was so tempting.

Another incident of a kindred complexion is still more recent. A little girl kills herself in the regular charcoal way, because she feared her parents did not love her! But mark the desire for exhibition and effect even in a child. This little creature had taken the pains to learn to write, solely for the purpose of leaving behind her a letter explaining her motives! She might have done this orally to her parents, her relatives, and acquaintance; but this was not sufficient, the world must know it, and a suicide would not be regularly sentimental without a letter. Here again we have the *coup de théâtre.*

Are mankind ever likely to lose their national characteristics? New systems of policy reconcile those who have been accustomed to regard each other as hereditary enemies. The intercourse of travelling and trade, a more liberal interchange of thought by literary intercourse, the reciprocal adoption of foreign customs, and other similar causes, are in action, and not without effect. The Italians drink beer, the French are convinced that the *trottoir* may have its advantages over the *totalité de la rue;* yet is there any disappearance of what constitutes the real distinctions? Are not our neighbours the same in substance that they ever were? The age of chivalry is past among them, and a little alteration in outward behaviour may be remarked, yet they are in substance the men of the *fronde*, of Louis XIV., of the revolution, and of the empire. Political circumstances have brought in the dynasty of the grocers; yet a Frenchman is a Frenchman still.

It has been remarked that, in times of great political excitement, the French theatres are the most crowded, while the reverse is true in the case of the English. A Frenchman is every thing in a crowd, he is nothing alone: only persuade him that *tout le monde* will do this or that, and he is ripe for it at once. Under this excitement there is no excess, good or bad, of which he is not capable. But *sauve qui peut* is a sound that puts his self-possession to flight. Look at a French crew in a shipwreck; what panic, insubordination, blind precipitancy, confusion, and despair! How different from the cool presence of mind which an English sailor preserves in the same circumstances! It is here that the individual is every thing. How many a British ship has foundered at sea, and gone down with every man at his post!

Why is John Bull so notorious a grumbler? Why does he grumble at home and grumble abroad?—grumble at his meat, and grumble at his drink?—grumble at sunshine, and grumble at rain?—grumble at Hardy's dishes, and at the vintage of Ai?—and at roast beef and heavy wet?—grumble at the fog and smoke of London, and at the sky and landscape of the Campagna Felice?—grumble at quick time, grumble at common time, and grumble against time?—for he confesses to all this, honest man! Is it that John cares more for his personal comfort than other people, or that he only wishes to make a show of this super-serviceable egotism?

Fogs, rain, and raw winds, keep the English within doors: hence their occupations and amusements have a fire-side character: but the French and Italians are an out-of-door people; they are of the air, airy. An Italian must have sunshine as a fish must have water; his nature must be changed ere he can live without it. Yet there are strange contradictions here. "Let us eat and drink, for to-morrow we die," appears to be the motto of the Italians, yet this sensual people produced Dante and Galileo, Tasso and Buonarrotti.

A little girl of my acquaintance at Florence surprised me one day in a pensive mood.

"What are you doing here all alone?"

"I was thinking of something."

"Think! Holy Virgin! *you* think! a *giovanotto* without wife or child! What can you have to think about?"

Now there spoke the true Italian, for without wife or child, which, according to Corporal Trim, are the only things that can make a man sorrowful, one may sit in the sunshine all day, and practise that "sweet do-nothing," which is the *summum bonum* with these people; and while he can do this, no Italian it seems can imagine an inducement to subject himself to the labour of thinking.

Englishmen are proud, Frenchmen are proud, but the Italians are not proud. I must make an exception in the case of the Romans. "*Sono Romano Io*" is an expression that comes forth as majestically as "*Je suis Français moi*," or "Do you know, sir, I am an Englishman?" But the Roman pride is different from that of the two others: an Englishman's or a Frenchman's pride rests quite as much upon what his nation *is*, as on what it *has been*, but a Roman is proud only of the past, for how can a Roman be proud of any thing present except the *materiel* of which his city is composed, and which of course is not the work of his hands? The populace, however, may still believe, for aught I know to the contrary, that the eternal city yet gives laws and legions to the world, since the regular clap-trap at the theatre is the expression, "*Roma invincibile sempre sara.*"

The old caricatures of meagre, starveling Frenchmen are, after all, not without truth. It is impossible to mistake their faces for English—there is a thin, unsubstantial, soup-and-salad appearance about them, which contrasts strikingly with the roast-beef robustiousness of the sturdy *insulaires*. Any one who has seen a French regiment under arms must have been surprised too at the diminutive stature of the soldiery; they are mere boys in height. The newspapers recently furnished us with an account of a decently tall recruit being sent home as unfit for a soldier on account of his height. Some ingenious reason was invented for this, but the true cause was, his comrades could not bear to be reminded of their diminutive looks by comparison with him. If you ask a French officer, he will endeavour to persuade you that short men are selected from choice, because they move quicker, and every thing with the French soldiery depends on celerity of movement!—so reluctant is a Frenchman to allow his inferiority in any thing. Napoleon's victories have cost the male population three quarters of an inch of their altitude. The English are an inch taller than the French, but the Yankees are taller still, for they are on an average nearly an inch taller than the English.

The politeness of the Parisians is less the expression of any real amiability of feeling, than a consciousness that it behoves them not to lose sight of the fact that *Paris est le centre du bon gout.* In truth, they are for ever obtruding upon your notice the substance of the old inscription in front of the Louvre—

> "Earth no such folks, no folks e'er such a town
> As Paris is—sing derry derry down."

One is surprised to remark the interest which old people among the French retain to the last for the amusements and pursuits of their youth. It is common to see aged and gray headed men as hotly engaged in discussing theatrical affairs as the most hair-brained youngsters of seventeen; and it is quite amusing to note the nicety of their criticisms upon the coiffure of Mademoiselle Mars, or the twirls of Taglioni's toe, when, from the marks of time upon their visages, you would imagine they had little to think of but to make up their accounts for the other world. In scientific pursuits it is the same; the chemist, the geologist, the naturalist, will debate with one foot in the grave, about acids, and strata, and genera, and species, with all the ambitious heat and dogmatism of youth. The Italians have much the same characteristic. Canova, in his last sickness, was told by his physician that he could live but two or three months longer—"*Dunque non faro piu Venere*" was his reply. What a sad reflection, that he should "make no more Venuses!"

What is the main object in life of a Frenchman?—*Faire claquer son fouet.* Of an Italian?—*Dolce far niente.* Of an Englishman?—To be comfortable. The others know not what manner of thing comfort is; they have no word for it, as they have no word for home. What is comfort? It is not pleasure, though it is pleasant—all languages have a word for that. It is the agreeable sensation we have of the absence of some particular distress, or annoyance, or incommodity. A fire in cold weather is comfortable; dry clothes, after we have been wet to the skin are comfortable; sunshine, after fog or rain, is comfortable—in short, all comforts, properly so called, seem to belong to the ungenial climate of the north, because the discomforts are sufficiently numerous to give rise of necessity to the correla-

tive term. There is, therefore, a physical reason for the existence of the thing, and a philological one for the existence of the word, among the people of the north exclusively.

Many people find it difficult to account for the difference between the English and the inhabitants of southern Europe, as to temperance in drink. Wine countries, say some, are proverbial for temperance. England produces no wine, therefore the English are not temperate. It is true that in the south of Europe drunkenness is uncommon, but if England produced wine, the habits of the people would nevertheless, I am of opinion, be much the same on this point as they are at present; though wine may be less hurtful than spirit or malt liquor. The truth is, the desire for strong liquors, so common to all northern nations, is owing to peculiarities in their climate and food, rather than the lack of vineyards. These peculiarities are the coldness and moisture of the air, and the use of animal food. Under the soft and genial sky of the south, the native feels no want of that internal stimulant to fortify him against the severity of the elements. His food consists wholly or in a great measure of vegetables—he performs little labour: in both cases you find a reason for his refraining from strong drink.

On the contrary, the inhabitant of the north finds himself perpetually exposed to the unfriendly action of cold and moisture, and the necessity of cordial drinks to counteract their influence seem a part of his constitution by nature. The soil he cultivates is less productive; he labours more, and requires more solid and nourishing aliment than the native of the south. Animal food is not only a provocative to drink, but, to a certain degree, renders strong liquors necessary to help its digestion. All the northern nations among whom animal food has been common have ever been addicted to the use of strong drink. Beer and mead constituted the nectar of the Scandinavians long before the art of distillation was discovered, or the juice of the grape had been carried into the north. The Tartars, who subsist upon animal food, and can procure neither spirit, wine, nor beer, in the pressure of their necessity for a beverage agreeing with their victuals, will brew an intoxicating liquor from milk: so difficult it is for a flesh eater to be a water drinker.

People have speculated much on the influence of literature upon society. It appears to me that they run the scent the wrong way. We are told that literature forms the manners of a people. This is a mistake. Manners create literature, and not literature manners. The Italians are not sensual and dissolute because Boccaccio wrote licentious tales, but Boccaccio gave free descriptions of free manners already existing. The Voltaires, the Diderots, and the D'Alemberts did not bring about the French revolution by their writings, according to the vulgar belief; for as Lord Byron truly remarked, the encyclopedists might have written their fingers off without producing a revolution, had not the remote causes previously existed in the social and political institutions of the country. The literature of any age or country will always reflect to a certain degree the manners and opinions current at the time, but the causes which mould a national character lie deeper than in the pens of individuals who sit in their closets to write, for the amusement of those who sit in their closets to read.

The most polite, good-natured and amiable among the Italians are the Tuscans. The politeness of the Parisians is, in a great degree, mere grimace; but the civility of the Florentines is the expression of much real kindliness of feeling. The Romans are notoriously surly and suspicious, in comparison, let it be understood, with the other Italians. The Neapolitans exhibit great extremes: nothing can be more cringeingly servile than the behaviour of some, nothing can exhibit more impudent effrontery than the behaviour of others. They are utterly devoid of any sense of that quality with which we are so familiar by the name of *impertinence*. A fellow will pick your pocket while you are buying an orange of him in the street, and if caught in the act he will laugh in your face, and expect a continuance of your custom as if nothing had happened. A cicerone whose services you decline will dog you, nevertheless, the whole day long, though you threaten to knock him down an hundred times; he pursues you round every corner, follows you into every shop, thrusts himself, covered with tatters and dirt, into the faces of your companions, male or female: no place is sacred from his intrusion: you may thrust him out of your bed-chamber, and he will continue to lie in wait at the door.

The impudence of a Neapolitan coachman may be considered as the beau ideal of that quality for which this class of worthies has been long celebrated. It is quite a perilous enterprise for a stranger on his first arrival at Naples to venture into the Largo del Castello, a place where jarvies most do congregate: he cannot take a step without having a whip cracked in his face with the cry of *a carroz! a carroz!* for such is the way these fellows beat up for custom: they sit upon the boxes, and horsewhip every gentlemanly-looking person that comes within the reach of their whiplash. They may put out your eyes, but any one of them would be astonished should you refuse to employ him on that account. Whenever I have been passing down a narrow street and chanced to espy an empty carriage a-head, I have always been certain that the driver would stretch his vehicle across the street from wall to wall, shutting up all passage, unless I chose to walk into the door of the carriage, which he took care always to hold open for the purpose. A stout stick was commonly my only means of raising the embargo.

"What a blundering fellow is that brother waiter of yours," said I one day to the attendant of a *café* in Florence.

"True, true," he replied; "but what else can you expect from him? he is a Roman!"

These antipathies, for they are nothing more, are not, however, so strong as they were during the middle ages. The Romans are slothful in comparison with the Tuscans, yet their intellect is regarded as not at all inferior by the other Italians. It is remarkable, notwithstanding, that Rome has given birth to so few men of genius, and Florence to so many. What great names of

modern times belong to Rome? I can recollect not one. Even going back to classical ages, I can call to mind only Julius Cæsar. But Florence, "little Florence," has had for her sons Dante, and Michael Angelo, and Galileo, and Macchiavelli, and a host of others, if others need be named after these.

Different nations charge one another with being proud. John Bull formerly laughed at his neighbour across the channel for the airs he gave himself on account of *le grand monarque*, and latterly for the same behaviour on the score of *le grand empire*. It is true the Frenchman has always been a great propagandist, but is the excess of pride really so much on his side? Is not John Bull quite as self-satisfied as his neighbour? Has he not engrained this feeling into the very idiom of his vernacular tongue, being sure thereby to remind himself by contrast of his own accomplishments, when he speaks of taking "French leave," drinking "Dutch courage," "walking Spanish," and the like? It is very easy for him to apply the epithets of boastful and vain-glorious to the French, the Spaniards, or the Americans, when they take the liberty to praise themselves in a style which he thinks not to be in the best taste; but if he were aware of the truth, he would know that he is apt to crow in as high a note as any fowl there is flying. National pride is not a difficult thing to discover in any quarter, for all nations have something to be proud of.

National pride or vanity gives rise to strange misnomers. "Merry England" and "Notre belle France," are household words in the two countries, while all the world knows that England is not merry nor France beautiful. But *ad ogni uccello suo nido é bello;* even the Dutch believe that paradise was situated somewhere upon the Zuyder Zee. These things, after all, only prove that the people are attached to their respective homes; and to complain of others for their expressions of national pride and self-esteem, is to complain of the proper and natural operation of things.

National antipathies appear to have exhibited themselves in ancient times pretty much the same way as at present, in incorporating opprobrious expressions with the vulgar language. The Roman literature has made us familiar with the *Punica fides*, but had we Punic authority instead of Roman, doubtless the charge of mendacity would lie as strongly the other way.

The Americans are proud,—prouder than the English or French, just as a child is prouder than a man. This I say not in their disparagement, but the contrary: the thing is perfectly natural, and is an indication of the right sort of character. What hopes can we entertain of a man who has no pride? Who can be worse off than he who cares nothing for what is said of him? The Italians, generally speaking, as I have said before, have no national pride. You may abuse his country, and government, and social institutions, and men and women, and all things therewith connected, moral, political, mechanical, or metaphysical, to the face of a Neapolitan, and he will make no gainsaying or denial: what does he care? He is not proud, and, not valuing your praise, he will not study to deserve it. Here is the secret: did he feel any concern for what others say about him, he would strive to amend his condition.

"Ahi! serva Italia, di dolore ostello!"

Now, there is not a people in the world more sensitive to the opinions of others than the Americans; no people are so solicitous to know what is said, and thought, and felt respecting them by other nations. Nothing can be written of them in an European journal, that is not copied into their newspapers and read by every man in the republic: be it praise or blame, the interest is of the same degree. No people are more elated with praise, and none more sensibly feel the malice of their detractors. This is good evidence of a sound and healthy moral feeling among them. It is false that they are possessed with a blind and indiscriminate admiration for every thing good and bad in their institutions: *experto crede*, they are sensible that all political institutions are imperfect, and that they have yet much to learn. Proud let them be; it will do them good, for he who values the good opinion of the world will study to deserve it.

The English are, in a manner, full and satiate of glory; they have a literature and a history to which nothing need be added. Their island is filled with people, and the four quarters of the earth bear witness to their renown. America is in her infancy, and has all these objects yet to struggle for. The Englishman may afford to be very calm when the intellectual character of his countrymen is depreciated, for he knows that Shakspeare and Newton cannot be stolen from him. He may honour with a disdainful smile the imputation that is hazarded against their bravery, for he is conscious that, if Waterloo and Trafalgar are not sufficient, there are Blenheim and Ramillies, Cressy and Agincourt. The Englishman may therefore be forgiven if he is apathetic on many points where the blood of one belonging to a younger nation, with a fortune and fame yet to be made, would be up with becoming promptitude and spirit.

But, after all, does it in reality become John Bull to take such frequent occasion of charging Brother Jonathan with being *thin-skinned?* John himself altogether stoical and silent when travellers in England write saucy or stupid books? His country, it is true, is so well known that the absurd misrepresentations of foreigners have less effect abroad than in the case of America; yet, when assailed, we find he never hesitates to take up the cudgels with becoming wrath. We have not yet forgotten how severely Puckler Muskau and D'Haussez were taken in hand by the reviewers, for their fancy sketches of men and manners in England; yet these gentlemen, the reader may rest assured, never made a fiftieth part so near an approach to the graces of Mendez Pinto, as that ingenious race of romancers beginning with nobody remembers whom, and ending with Mrs. Trollope, whose work, says the equally ingenious and ingenuous "Quarterly Reviewer," "is just the book we have long desired to see." Much good may it do him.

In spite, however, of the inventions of a multi-

tude of travellers of questionable motives, and of the exertions of reviewers and journalists, whose motives are un-questionable, I think I may safely affirm that the endeavours to breed an ill feeling between the two nations have been hitherto unsuccessful,—at least on the other side of the Atlantic. In the first place, the Americans are a people not easily made angry; they are touchy, they are sensitive, as I have already remarked, but they are too shrewd, too prudent, too calculating, to make a serious business of being angry without knowing a sufficient cause for it, and what good will it do them in the end. Travellers may paint them as Yahoos, but ere they wax warm upon it, they sit down and consider whether Gulliver has many believers now-a-days. Individuals on whom the whitewash of philanthropy is not yet decently dry, may fling slavery in their teeth, but they are aware that the world knows to whom they are indebted for the institution, and that it is a thing not to be got rid of in an instant. Jokes may be uttered against them, but they know that the hardest joking breaks no bones. In short, they are sensible that all men must pass for what they are worth,—that truths must be put up with, and lies may go for what they will fetch:—that if they have a tender spot they must allow themselves to be touched there as well as elsewhere, being well persuaded of the good sense of Don Quixote's remark, that "it would be absurd if the inhabitants of Reloxa should knock every man on the head who asked them what time of day it was."

On this subject they exercise more discrimination than probably the English give them credit for; they distinguish between the writer of an abusive work and the great body of the English people, to whom they believe such works are addressed ineffectually. The most recent publication of this sort that has attained any notoriety, is one in which they are severely handled, yet the *malus animus* of the whole work is so apparent, that it can influence none but those who have a previous bias toward such an influence. This they are aware of, and here lies the pith and marrow of the subject; if the English quarrel with the Americans it must be their own fault, for the Americans do not wish to quarrel with the English. Why *should* these two nations quarrel? No two people in the world have better opportunities of understanding each other, and what is the synonym to *quarrel* but *misunderstanding?*

The perversity which certain people display in catching at every thing that can be turned to the discredit of the Americans is surely a most un-English feeling. The prosperity of that nation can reflect nothing but honour on the English character, for the substance of their social and political institutions belongs to the mother country. Englishmen may persuade themselves that they have neither part nor lot in the matter; but the truth is, that the fate of their brethren in the west, whether for weal or woe, is of no small practical importance to them. In spite of the declaration of independence, either of the two parties may say, with a modification of the old maxim —"Anglicus sum, nil Anglici a me alienum puto."

The condition of the Irish in America is peculiar. Other emigrants, as the English and the Scots, disperse throughout the country, settle upon farms, or dive into the wilderness. But the Irish herd together in the large cities. Other emigrants become incorporated with the native population, get rich, and lose their nationality. The Irish keep themselves separate from the Americans, and swarm together by thousands in New York, Boston, and Philadelphia, where they exercise the same instinct that may be remarked among the Jews in the European cities, that of selecting the most filthy, confined, and incommodious quarters for their residence. Here they are content to vegetate rather than go into the country, cultivate farms, and become thriving landholders. Nothing can induce them to separate, and each of the large American cities seems destined to have its Irish quarter, where broken heads and the brogue are to be perpetuated from generation to generation.

The largest number of the Irish is at New York, where their turbulence is at times quite formidable. At Boston the proportion is small, yet there are sufficient numbers to render it necessary at times for the citizens to look sharply after them when their festivities wax boisterous. They agree perfectly well with the Americans, but their disposition to brandish the shillelah among themselves is what the salt sea has not been able to wash out of them.

"Cœlum, non animum mutant qui trans mare currunt."

The Bostonians have found that the best method of cooling their courage on these occasions is a dose of cold water "fresh and fast applied," and their fire-engines have been found singularly efficacious in quelling a riot among these heathen.

The people of Great Britain, in fine, have greater inducements to wish well to the Americans than any other nation on the globe, for surely no two people are more alike. The time is past when men can be made to believe that the human race deteriorates on the other side of the Atlantic. They are the same people in all the essentials of character with those of their fatherland; their conduct is marked with the same courage and enterprise, the same old Saxon stubbornness and energy.

The English are perhaps not aware how much interest the present condition of their country excites in America. The Americans are far better informed respecting the political institutions of Great Britain than the English people are respecting those of America. The gentlemen of the London newspapers not unfrequently knock matters out of joint in transatlantic politics, after a fashion which, if imitated by one of their class in America in touching upon English affairs, would spoil him as a political oracle as long as it was remembered. The journalists, indeed, on this side the water, have a way of their own in looking through the right or wrong end of the telescope, according as they point it to this quarter or to that, which is quite striking to one who knows how the land really lies. These directors of the press witness the broken heads that enliven the scene at the English hustings, hear of riots, rick-burnings, agitations, Irish murders and

massacres, and the whole diablerie of disaffection and misrule; all these pass before their notice, and they make nothing more of them than every-day occurrences; but if they hear of a bloody nose at an American election, they cry out "the republic is at an end!"

From the Asiatic Journal.

LIFE AND CORRESPONDENCE OF MR. SALT.*

The reputation of the late Mr. Salt, from his travels in the East, from the respectability which his scientific zeal and liberal hospitality imparted to the character of British-consul-general in Egypt, and above all, from the curious fruits of the researches he made and encouraged in that country, gives him a fair claim to be ranked amongst those individuals, in whose peculiar history their country feels an interest, and whose memory it desires to cherish.

Mr. Salt was the son of a respectable medical practitioner at Lichfield, who had a numerous family. Henry, the eighth and last, was born in that city on the 14th June 1780. He was, when a boy, of an amiable disposition, volatile, and of quick feelings, though easily checked, and particularly pleasing both in person and manner. His sister, the Countess de Vismes, says that, "like most boys, he never learned any thing but what he was obliged to do;" Mr. Halls, his biographer, however, though he has no doubt "that this was the case as far as school-studies were concerned," states that, "from his earliest years, he was excessively fond of reading, and of acquiring desultory knowledge," which is confirmed by the report of another sister. Being the youngest child and a favourite, he was rather spoiled in his juvenile days. His opportunities of instruction at school seem to have been limited under a master whose ignorance he was able to expose to derision. He was then "a very idle boy, full of spirits and fun, and the ringleader in every frolic." This turn and his good disposition rendered him popular amongst his school-companions, one of whom he saved, at some risk, from drowning. Whilst at school, he suffered a severe attack of the ague, after his recovery from which, his spleen was found to be diseased, which was the cause of many painful attacks of illness during his life, and of his death thirty-six years after. His education was completed under Mr. (now Dr.) Harwood, at Lichfield, and, having been led to select portrait-painting as a profession, he received lessons in drawing from Mr. Glover, the water-colour painter, and was sent to London, in 1797, at the age of seventeen, to finish his education as an artist under Mr. Farington, a landscape-painter: a choice strangely injudicious.

At this period, Mr. Halls, his biographer and relative by marriage, became first acquainted with Salt, whom he describes as, at that time, "a tall, thin, and somewhat ungain-looking young man, of insinuating address and frank and pleasing manners." From Mr. Halls, he received considerable aid in acquiring the rudiments of the art he studied, the difficulties of which, arising from error in the choice of instructors, sometimes drove him almost to despair. He was admitted as a student into the Royal Academy; but he gained no honorary distinction there; the place was ill-regulated then, and his dislike to it was so great, that, years after, in passing Somerset House, he acknowledged an involuntary shudder at the unpleasant feelings he had experienced within its walls.

Mr. Halls considers that Salt's professional progress, under Mr. Farington, was, upon the whole, satisfactory, though, when he quitted him, he was deficient in the management of oil-colours. Thus, although his father had expected that, at this period, his son would be in a condition to provide for his own subsistence, the young artist, without the practical knowledge of portrait-painting, without adequate resources, and perhaps in debt, was in a situation which became every hour more desperate. His father, at length, consented that he should be placed under Mr. Hoppner, whose pupil he became in 1800, and remained so for about a year and a half, being treated by him more as a friend than a pupil.

Mrs. Salt, his mother, died in 1801; soon after which he was attacked by a malignant fever, which nearly proved fatal to him.

When he quitted Mr. Hoppner, he commenced painting portraits; but the impediments he had encountered, added to the precarious nature of the profession, led him to form the resolution of abandoning his profession as soon as an opportunity offered. Besides the causes just assigned for his ill success, Mr. Halls adds another. He had been sent to the metropolis at an early age, without guide or guardian, and being controlled by strong passions and an ardent imagination, joined with an affectionate disposition and great liberality, he was continually falling into indiscretions. The irregularity and wildness of his conduct appeared in his "devotion to the gentler sex," from whence, Mr. Halls says, "arose some of the defects and many of the most laudable and prominent virtues of his character." With this temperament, it is not wonderful that, at the age of twenty, he became deeply enamoured with a young lady of beauty, whose death in 1800 plunged himself into deep affliction: although time and youth enabled him to surmount it, he never ceased to speak of the object of his early affection with grief and regret, and her image seems to have haunted him for years after.

From his habits of procrastination and (not criminal) dissipation, he at length resolved to extricate himself. "It is time," he says, in a letter to Mr. Halls, "to rouse myself from this infantile slumber, so disgraceful to my age, and exert the energy of my mind, the strength of which has not yet been tried."

In 1801 or 1802, Lord Valentia, who was intimately acquainted with the family of the Butts, Mrs. Salt's relations, communicated to young Salt, who had been introduced to him by the Rev. T. S. Butt, his uncle, his intention of visiting India; whereupon Salt solicited his lordship to take him as his secretary and draughtsman. The

* The Life and Correspondence of Henry Salt, Esq., F. R. S., &c. By J. J. Halls, Esq. Two vols. London, 1834. Bentley.

proposal was agreed to; and this may be regarded as his entrance into that course of pursuit which led to public notice and employment. Lord Valentia seems to have been from this moment a warm and steady friend of Mr. Salt throughout life.

He was now about twenty-two, with all his bodily and mental faculties in full vigour. He had greatly improved himself in some essential branches of education in which he had been deficient, and the prospect of seeing the world, and of quitting a profession which promised so little, banished depression from his mind, and filled it with energy, hope, and ardour. They embarked in June 1802, and reached Calcutta in January 1803.

By the patronage of Lord Wellesley, Mr. Salt had opportunities of exercising his professional talents at Calcutta; and after visiting the Upper Provinces, he accompanied Lord Valentia to Ceylon, from whence they proceeded to Madras, and at Mangalore embarked on board a company's cruizer waiting to convey them, by the governor-general's command, to the Red Sea, with the view of exploring its western coast, and of endeavouring to ascertain whether a commercial intercourse could not be opened with Abyssinia. They were obliged, however, to return to Bombay, whence they proceeded in another cruizer to the Red Sea, in December 1804.

The details of this expedition are already before the public; it is, therefore, sufficient to glance at its most prominent incidents as respects the history of Mr. Salt.

At Mocha, Lord Valentia took into his service Nathaniel Pearce, who was afterwards left in Abyssinia. In June 1805, Mr. Salt was despatched by Lord Valentia on a mission to the Ras, or chief, of Tigre, which, in spite of his youth and inexperience, and the risk and difficulties he incurred, he executed with vigour, judgment, and intrepidity. His published Journal of this expedition contains some interesting particulars.

His lordship and suite then proceeded to Suez, and thence traveled to Cairo and Alexandria, where Salt visited the objects of art, made sketches, &c., and in October 1806 they returned to England.

At this period, Salt, though still young, frolicksome and eccentric, had acquired some sedateness and solidity of character, as well as a knowledge of the world and of society, which, joined to his great colloquial powers, rendered his conversation highly entertaining. The writer of this notice, who occasionally came in contact with him at this period, and who well remembers the subjects of their conversation and the charm of it, can bear testimony to the truth of Mr. Halls' statement. With the characteristic ardour of his temper, and the love of distinction, he was eager to grasp every means of forwarding his views of honourable ambition. His biographer says that, "in his serious moments, he frequently observed to me, it should go hard with him, if, before the close of his life, he did not obtain some respectable niche in the temple of fame."

He was, in 1809, gratified by being employed as the bearer of a letter and presents from his majesty to the court of Abyssinia, being directed at the same time to make enquiries respecting the trade of the country by sea and by caravans with the interior of Africa, and to obtain all the facilities he could for European commerce with the Red Sea.

Before his departure upon this rather perilous expedition, Salt, who entertained a notion, not uncommon, though never verified, of the practicability of the spirits of departed persons "revisiting the glimpses of the moon," signed, in conjunction with Mr. Halls, whose opinion did not coincide with his friend's, the following curious contract: "It is hereby mutually promised by the undersigned, that, in case of the death of either of the parties, the spirit of the deceased shall, if permitted, visit the survivors, and relate what he may be able to impart of his situation." On the return of Mr. Salt, they both agreed that this was an indiscreet act, though it was merely a silly one, and the paper was burnt. This incident would not have been worth mentioning, but for a strange circumstance thus related by Mr. Halls:—

"The subject was never again alluded to, nor do I recollect that I ever thought of it again till a long time after he had gone out as consul-general in Egypt; but at this period, though I had received no intelligence that could tend to call him to my remembrance, nor to induce me to recollect our former compact, I experienced an apparent vision, of so vivid a nature, that, though convinced of its fallaciousness, I can scarcely, even now, persuade myself that it was an illusion.

"I fancied then that I was lying awake in my bed-room reflecting upon events with which Salt was in no respect connected. It was broad day-light, and I saw every thing in the apartment most distinctly, when a figure glided by the foot of the bed, undrew the curtains, on the side next the window, and Salt stood before me. He took my hand in his, which felt cold and lifeless, and looked earnestly in my face. His countenance was calm, but appeared deadly pale; and there was a bloated and unearthly look about it, that at once convinced me he was no more. I felt awed, but not alarmed, and exclaimed, 'Salt, you are not among the living.' He shook his head mournfully, which was his habit on any melancholy occasion, and replied, 'I have come to you according to our promise.' I then asked, 'How is it with you?' He answered, 'Better than might have been expected.' He again pressed my hand, fixed his eyes stedfastly upon me, and his image faded from my view.

"I instantly sprang from my bed, and ran to my watch. It was exactly five minutes past five, and the morning was the 5th of May. I took up a pencil, and wrote, on a piece of paper that lay on the table, the hour and the date. I then examined the room and the door, which I found fast locked, according to my usual habit, on the inside; and, having satisfied myself no one could have entered, I returned to my bed, and, in spite of the perturbed state of my spirits, fell into an undisturbed sleep.

"When I awoke, I began to consider the whole business as a mere dream; but, on going to the table, I found the paper where I had left it. I afterwards mentioned the circumstance to the Earl of Mountnorris, who also took down the date; but I did not think much more of the matter till about six weeks subsequently, when news was brought from Egypt, that, after a severe illness, Salt had died at about the time the event occurred to me.

"The report of his death, however, proved groundless, though it was perfectly true that at that period he had been so dangerously ill as to be given over. It is almost

needless to add, that he did not die till about eight years afterwards: but I confess, had his death happened at the time of the event, it would have gone far towards establishing the belief, in a mind certainly not superstitious, of the existence of a supernatural agency; yet, under all the circumstances of the case, how very possible was it, that the apparent vision might have exactly tallied with the reality, and yet nothing miraculous have occurred!"

Although he left England in March 1809, it was October before he reached Aden. At this place he made excursions, and met with some antiquities. His hazardous ascent, by himself, of a steep craggy rock, at this place, crowned with some ancient Turkish towers, is noticed by Mr. Halls as a proof of Mr. Salt's innate hardihood of character. "Nothing," he remarks, "can be more characteristic of the natural structure of Salt's mind than the whole of this incident: wherever he had any great object to accomplish, he seldom stopped to consider the difficulties or the dangers by which his progress might be impeded."

The political state of Abyssinia rendered the mission of Mr. Salt an office of great peril and difficulty. He at length entered the country by way of Massowah, where he was joined by Pearce, and, after suffering extortions and incurring risk of life from the lawless chiefs in the interior, he arrived, without any untoward accident, at Chelicut, the residence of the Ras of Tigré, a wise, prudent, valiant, and amiable character, who would not hear of Mr. Salt's proceeding to Gondar, since the distracted state of the provinces, and the enmity of a rival chief, would have ensured his ruin. The envoy was, consequently, obliged to deliver the presents to the ras, and, after an excursion into the interior, to return to the coast, which he did by the way of Axum, in order to re-examine its antiquities. He was treated during his residence at Chelicut with great kindness by the ras, who, amongst his presents to him, included two MSS., one an account of the true doctrines of the Abyssinian faith, since translated.

On his return-voyage, Mr. Salt touched at Bombay, and received great attention from his old friend Governor Duncan and Sir James Mackintosh, and reached England in January, 1811. Notwithstanding the obstacles the mission encountered, the result, in a mercantile point of view, is stated to have been "productive of considerable advantage." The subsequent disorganisation of the kingdom, however, rendered all future attempts to establish commercial relations with it nearly hopeless. Mr. Salt received £1,000 for his services, and the satisfaction they gave the government had no inconsiderable influence in subsequently procuring him his post in Egypt.

On his arrival in England, he entered into communication with the late Dr. Alexander Murray, the editor of Bruce's Travels, a gentleman of considerable acquirements as an oriental linguist, whose letters, in the work before us, contain some curious remarks upon Abyssinian literature and history, and demonstrate the little faith to be reposed in the work of Bruce:—in short, setting the question as to his veracity, which has been recently defended by Major Head, at rest for ever.

The reputation of Mr. Salt, his extensive connection with literary and political characters, and the exertions of warm friends of rank, procured him, with difficulty, in 1815, the appointment of British consul-general in Egypt, with a yearly salary of £1,700, on the resignation of Major Misset. Previous to his departure to the scene of his duties, he formed an acquaintance, with a view to a matrimonial engagement, with a young lady of high respectability and great personal attractions and accomplishments, at Lichfield. But the description of the country he was going to, drawn with honourable fidelity by Salt himself, induced the lady to break off the proposed connection.

He reached Alexandria in March, 1816, traveling by way of Paris and Geneva across the Simplon into Italy, visiting Venice, Bologna, Florence, Rome, and embarking at Naples for Malta. His letters describe, in vivid colours, the high enjoyment which the scenery in this tour had afforded to one so qualified to relish its beauties. The productions of the Italian masters, too, were not without their interest to an artist.

Mr. Salt appears, the moment he set foot in Egypt, to have commenced, with characteristic ardour, the object recommended to him by Sir Joseph Banks, a collection of the antiquities of that interesting country, which were fast disappearing under the *improvements* of the pasha, whose clumsy machines for leveling the ground, as well as the ignorance of those who used them, pulverised the hardest substances. Being soon upon good terms with the pasha, he had few impediments to contend with, arising from the prejudices of the government authorities. "The pasha," he says, "is a sensible, and, for a Turk, an extraordinary man, and were he not hampered by the prejudices of those around him, we should soon see a different state of things in Egypt. He has taken all the produce of the country into his own hands, and is himself the greatest manufacturer and merchant in the state. His revenue is enormously increased, and yet, though the merchants cry out, they are all making money, and fresh European adventurers are daily flocking into the country. The French influence is at a low ebb, and the English proudly predominant; so that I have continual applications from those foreigners who have no consul of their own, to be permitted to rank themselves under our banners. In fact, the pasha will scarcely attend to any other remonstrances but those which I present: a truth so generally admitted, that the merchants, in all emergencies, apply for my good offices in their favour."

In 1817, Mr. Salt's father died, which event put him in possession of about £5,000, an acceptable addition to his resources, which were much cramped by the insufficiency of his salary to meet his expenditure. The extraordinary exertions and outlay of money incurred by him in the prosecution of his researches and collections, did not, in his opinion and that of his biographer, meet with the reward the sacrifices and services deserved. This is a subject which forms a rather important

feature in the biography of Mr. Salt, to which we shall hereafter advert, premising that, as we pretend to no particular acquaintance with the facts, we shall take them entirely from the work before us.

About two years after his arrival in Egypt, he and Mr. Burckhardt jointly undertook the removal of the gigantic head of the younger Memnon from Thebes. They employed in this work Belzoni, who had been introduced by Burckhardt to Mr. Salt, who was struck with his manly appearance, and his insinuating address, and engaged him to accomplish the opening of the temple at Ipsambul. Belzoni was then out of employ, and, with his wife, in difficulties. Mr. Salt, it is stated, felt compassion for his misfortunes, and acted towards him with liberality, which is consistent with his general character. The engagement between the parties seems to imply, what Mr. Salt asserted, that Belzoni acted merely in the capacity of a paid agent.* Mr. Salt, however, in the documents he sent to England, from whence the two articles written in the *Quarterly Review* of 1818 were compiled, and, in his private letters, did ample justice to the merits of Belzoni, speaking of his achievements in terms of warm enthusiasm. Belzoni, however, claimed the entire credit of the discoveries he made whilst thus employed by Mr. Salt; who, when he heard of this claim, remarked, in a letter to Lord Mountnorris (August 1818), 'as to his monopolising the credit of these discoveries, I have no objection to it, for I have only the merit of having risked the speculation and paid the expenses;" and in another letter, he says, respecting Belzoni's work, "why should I object to his copying and publishing? It was he that made the discovery, though with my money, and surely he deserves to be remunerated." The letters from whence these extracts are taken were written after the "unworthy treatment," as Mr. Halls leniently terms it, with which Belzoni repaid the kindness or Mr. Salt, and, as he justly adds, they "certainly display any thing rather than an hostile disposition towards that individual." It was not until October, 1821, after Belzoni's work had been some time published, that, provoked by the insidious attacks in that work and through other channels, Mr. Salt was induced to draw up an account of the real circumstances of the case, entitled "A Plain Statement of Facts," not for publication, lest it might injure Belzoni, but for the information of his friends. He therein states that Belzoni was employed by him and Mr. Burckhardt, to bring down the head; that he (Salt) furnished him with some thousand piastres to excavate and buy antiquities on his (Salt's) account; that the instructions were signed by himself and Mr. Burckhardt; that the firmaun of the pasha describes Belzoni as "a person employed by Mr. Salt;" that he (Belzoni) could not have procured permission to work on his own account; and a copy of a letter is subjoined, from Belzoni, which admits his being a mere agent. Mr. [illegible] ment, Belzoni was satisfied, at what he received (£[illegible]), consented to undertake another exp[illegible] Mr. Salt's exclusive expense. He was then provided with another firmaun, describing him as in Mr. Salt's employ, and was actively employed in his service from February to October, 1817, every possible expense, as well for personal accommodation as for researches, being defrayed by Mr. Salt. The valuable discoveries made during this period are well known. Upon the visit of Mr. Salt to Thebes, in November, 1817, Mr. Salt says, Belzoni began to address him in rather an ambiguous style on the subject of remuneration, when he was told by Mr. Salt that he should have £25 a month clear of all expenses, from the time of his quitting Alexandria until his completion of the work he had begun, with any articles he (Mr. Salt) could spare. With this he appeared satisfied; but a few days after, in the presence of several English travellers, upon some remark from Mr. Salt, Belzoni broke out into violent terms, declared he had never been employed by him; that he had been working for the British nation, &c. From this time altercations became frequent; Belzoni brought forward pretensions to which Mr. Salt could never accede, and exhibited an unfounded jealousy of the latter's assuming all the merits of the discoveries, estimating the value of the articles discovered at £20,000. At length, Mr. Salt brought the matter, as he supposed, to an amicable and final arrangement, by allowing Belzoni £500, several articles of value, and a share in whatever sum the British museum should give for the celebrated sarcophagus, above £2,000. Belzoni was afterwards permitted by Mr. Salt to dig on his own account, and subsequently, in 1818, took employment again under Mr. Salt, for which he received 1,500 piastres, without producing a single article. At their last settlement in May, 1819, he was paid more than the sum due to him, and was permitted to take some articles of value from Mr. Salt's collection.

After this statement, which is consistent with itself and with circumstances, we can only regret that Belzoni should have acted so little in accordance with what was due from him to his benefactor. But Mr. Beechey observes, that "he was, on some points, more than half mad, and this was decidedly one of them."

The splendid character of the discoveries made by Belzoni, "under the auspices and at the expense" of Mr. Salt, (to use the phrase inserted in the last agreement, at the instance of Belzoni), was, indeed, calculated to dazzle the discoverer. The first great exploit was the removal of the Memnon's head from Thebes to Alexandria, and thence to its present site in the British museum: a specimen of Egyptian art which, Mr. Halls observes, "for grandeur or style, may be fairly placed on a par with most of the best productions of Grecian sculpture." The details of the process of removal are familiar to the reader. The next undertaking was opening the magnificent temple at Ipsambul, buried under a bed of loose sand, fifty feet deep, a work of such difficulty that probably nothing but the personal strength and

* Messrs. Salt and Burckhardt paid all the expenses of bringing down and embarking the head, and gave Belzoni 2,000 piastres (£50); the whole expense was about £350.

persevering spirit of Mr. Belzoni, as Mr. Halls remarks, could have overcome it. The native labourers refused to work, and Belzoni himself, with the aid of Mr. Beechey and Captains Irby and Mangles, effected the operation by dint of hard labour. When the building was opened, their efforts were rewarded by a specimen of Egyptian skill, which proves that the arts "descended from Ethiopia, the style of the sculpture being, in several respects, superior to any thing that has yet been found in Egypt." The next great discovery was that of the alabaster sarcophagus, in excavating the tombs of the kings. In a letter from Mr. Salt to Lord Mountnorris, he notices the errors committed in the great French work on Egypt, as respects the tombs of the kings.

"Every thing they have done from the king's tombs (he says), which is all that I have yet closely compared, is exceedingly bad, especially in what belongs to the colours, which are most perversely contrary to those in the originals. In design they have made errors almost as palpable, especially a ludicrous one in the celebrated judgment scene, where some figures are walking up steps, and another standing in front of Osiris with a pair of scales, while above is represented a boat with a pig in it, apparently driven away by a monkey. Now in the corner of this plate, to the left as you look at it, the French have represented four flying birds with human heads (like cherubs), which they conjecture, most *happily*, to be the souls of the blessed after passing through the ordeal of judgment; and from it have built up in the body of the work (*vide* Dissertation on the Kings' Tombs) a beautiful theory. But unfortunately it happens, on examining these said cherubs with a light, that they prove to be gazelles' or goats' heads reversed (rather a common representation in the tombs), the horns being mistaken for birds' legs, the ears for their tails, and the neck, where it is cut off, for their wings; which puts a most conclusive bar to their reasoning, and will remain for ever as an unlucky instance of their vaunted accuracy."

The colour of the figures in the new tomb seems to have operated magically upon Mr. Salt, who considers that "it throws a new light on Egyptian colouring, and is, without comparison, the finest monument of ancient art, as respects painting, that exists. The scale of colour on which they painted is that of using pure vermillion, ochre, and indigo; and yet they are not gaudy, owing to the judicious balance of the colours, and the artful management of the blacks. It is plain that they worked on a regular system, which had for its basis, as Mr. West would say, the colours of the rainbow, as there is not an ornament, throughout the dresses of the figures, where the red, yellow, and blue, are not alternately mingled, which produces an harmony that is really, in some of the designs, delicious." Mr. Beechey, it appears, speaks of these paintings in a strain of similar enthusiasm; and as both these gentlemen were educated as artists, and had an excellent eye for colour, it seems unlikely, as Mr. Halls remarks, that they should have been deceived, though he confesses his inability to understand how "delicious and harmonious effects could be produced by any artful arrangement of strong and unbroken colours, without the aid of reflexes, or the intervention of varied tints." He admits, however, that the ancient Egyptians, in very early ages, had made considerable progress not only in the first principles of colour, but also in design, composition, and drawing; though they seem to have been entirely ignorant of chiaroscuro and the art of breaking their colours.

Another person, whose enterprise was encouraged by the pecuniary aid of Mr. Salt, was Captain Caviglia, an Italian, navigating a merchant vessel under the British flag. He is described by Mr. Salt as "a gentleman with whose amiable character is blended an ardent enthusiasm for antiquarian research." He had long desired to explore the antiquities of Egypt, and especially the pyramids, and, in conjunction with two other persons, he examined the "well," as it is termed, in the chamber of the Great Pyramid, which he traced with extraordinary perseverance, and cleared throughout the whole of the passages to the great apartment in the centre of the pyramid. No important result flowed from this discovery, the expense of which was partly borne by Mr. Salt. Captain Caviglia then directed his attention to examining the ruined mausoleums in the vicinity of the pyramids, which Mr. Salt was of opinion stood on a burying-place for the ancient kings of Egypt, anterior as well as subsequent to the construction of the pyramids, connected with the city of Or or Heliopolis, before the seat of empire had been transferred to Memphis. These edifices contain specimens of painting, sculpture, and painted bas-reliefs, which are highly curious, considering their antiquity in connection with their freshness, high-finish, and occasional elegance of form and boldness of outline. The last and most arduous of Captain Caviglia's undertakings was that of denuding the lower part of the sphinx to its base, which was covered by the sand, whereby he revealed a temple, and granite tablet and altar, on a regular platform in front of the figure, whose paws stretched fifty feet in advance. This singular discovery has been pretty fully detailed in several publications: a finished memoir on the subject, with illustrations, was drawn up by Mr. Salt, and as the sands have resumed their dominion over relics which it cost so much toil and expense to reveal, the memoir must be curious, and it is to be hoped that it will be published.

After Mr. Salt's return from Upper Egypt, towards the end of 1819, he married the daughter of Mr. Pensa, a respectable merchant of Leghorn. The lady was about sixteen, and a strong recommendation she possessed in Mr. Salt's eyes was her resemblance to the object of his first love. The match appears to have been sudden and hasty, but it proved a happy one.

Mr. Salt's health, at this period, was declining, though he was but thirty-eight; yet he survived his wife several years: she died in childbirth in 1824. On the day of his wedding, he was suddenly attacked by the internal malady he had contracted, which kept him for several weeks on the verge of the grave. In 1820, he obtained leave of absence to revisit England, but was unable to avail himself of it, on account of the apprehended rupture with Russia, and the unsettled state of Turkey, which rendered his presence in Egypt indispensable. He expresses in his letters

a warm sympathy for the cause of the Greeks, and accuses the European nations, and particularly Russia, with exciting the Greek population to arms, and then treacherously abandoning them to the Turks.

The events in Mr. Salt's history, during the year 1824, severely tried mind and body. Besides the loss of his wife and child, the death of his friend, Mr. Lee, the consul at Alexandria, was a sad shock to him, and increased his official toils. Rallying all his fortitude and philosophy, however, busying himself in archæological researches, writing in confirmation of the Champollion theory of phonetic hieroglyphics (as far as respects the interpretation of proper names), and looking forward to the enjoyment of a moderate pension at home, he was enabled to endure his severe losses, and the mortification which his negociation with the Museum occasioned him, with firmness.

In August, 1827, he suffered another and a severe attack of his old malady. He partially recovered, but in October, internal hemorrhoids reduced him to a very low state, and on the 30th he expired, at Dessuke, a village on the Nile, to which he had removed. Upon a *post-mortem* examination, his spleen was found to be in a very advanced state of gangrene: the rest of the body was perfectly healthy.

Mr. Salt left one child, a daughter. We subjoin the following conclusion of Mr. Halls' summary of his friend's character:—

"By his zeal in embracing every opportunity his situation afforded of discovering and of studying the buried antiquities of Egypt, as well as by his liberal encouragement of every undertaking that promised to throw light on the remote history of that interesting country, he has not only enlarged the boundaries of human knowledge, but has acquired for himself no despicable portion of reputation and renown.

"His strenuous and persevering exertions in the cause of literature and research, have reflected credit on his country, and have greatly tended to remove the impression entertained by foreigners, that our official agents abroad are apt to make their public station entirely 'subservient to their private interest.' The firmness and prudence of his character, his amiable disposition and general suavity of behaviour, gave him an unusual ascendancy over the vigorous mind of the able ruler of Egypt, who rarely refused granting any favour required at his intercession. When taking his rides in Cairo and the vicinity, the Pasha would often stop his horse at the consul's door, and pay him the distinguished compliment of entering with him into long and familiar conversation. In fine, by his judicious conduct, liberality, and hospitality, Mr. Salt obtained the affection and esteem of every one around him, and has left a reputation among the European residents and the natives of the country which will not speedily be forgotten.

"Mr. Salt was in stature about six feet high, well-proportioned, and with somewhat of dignity in his manners and general deportment. His countenance was manly and open, and its habitual expression remarkably pleasing and intelligent, though at times it could assume an aspect of great sternness and determination. It formed, indeed, the complete index to a mind which overflowed with good-will and charity to his fellow-creatures, and was equally distinguished by firmness and placability."

A long account of the transactions with the trustees of the British Museum, respecting the purchase of the Egyptian antiquities, is appended to the work.

It appears that, stimulated by the recommendation of Sir Joseph Banks, before adverted to, Mr. Salt freely expended his own private funds in the collection of antiquities. The Memnon's head was gratuitously presented, by him and his partner in the undertaking, to the Museum. Although the trustees, influenced, it is stated, by Sir Joseph Banks, who had changed his opinions on the subject, were averse to receiving any more Egyptian relics, yet, having incurred already much expense, and obtained some valuable specimens, Mr. Salt was anxious that the Museum should take them, and offered the entire collection "at a fair valuation," to be settled by any person the government might appoint. In a list Mr. Salt forwarded in a private letter to his friend Mr. Hamilton, he placed a rough calculation of their *supposed* values opposite the chief articles, which appear to have been rather extravagant. The priced list was submitted, incautiously, to Sir Joseph Banks and others, who, considering it as an official document, and the prices intended as a standard, raised an outcry against Mr. Salt as "a Jew,"—"worse than Lord Elgin," &c. To obviate misapprehension, he wrote to Sir Joseph, offering at once, without any condition, the whole collection to the Museum, stating that, should the trustees reimburse him, wholly or in part, his expenses (amounting, with interest, to about £3,000), he should receive it as an obligation. In a letter to a friend (Mr. Bingham Richards), Mr. Salt says: "it may be right to tell you in confidence, that I hope to get £4,000 from government, or otherwise I shall feel myself aggrieved: should it be £5,000, I shall be highly satisfied."

Three years having elapsed without any reply from the Museum, Mr. Salt repeated, in May, 1822, the "unconditional" offer of his collection (excepting the sarcophagus, which was subject to the contingent claim of Mr. Belzoni), leaving the remuneration entirely to the liberality of the trustees: the collection had now, after some difficulties raised by Belzoni about the sarcophagus, been deposited in the Museum. In September, 1822, a resolution of the trustees was forwarded to Mr. Salt's agent in England, expressing their desire "that Mr. Salt should appoint some person on his own part to make a valuation of the Egyptian collection," and declining the alabaster sarcophagus, "on account of the very high value put upon it by Mr. Belzoni:" this person having stated that purchasers were ready to give £3,000 (he had estimated its value originally at £20,000), and the trustees valuing it, according to Mr. Banks's statement, at "considerably under £1,000."

After much delay and annoyance from Belzoni, Mr. Richards, the agent of Mr. Salt, in February, 1823, received an offer from the trustees of £2,000 for the collection, excluding the sarcophagus, which he thought himself authorised to accept.

Mr. Halls remarks that "the smallness of the sum which had been offered and accepted for a collection so admirable in its kind, and which had been assembled with so much risk and expense, certainly excited no small degree of sur-

prise and dissatisfaction in the personal friends of Mr. Salt, and in all those who felt anxious for the credit of our great national institution." It must, however, be recollected that (as was pointed out to Mr. Richards by Mr. Yorke, a friend of Mr. Salt), "the value to be put on these articles, on behalf of Mr. Salt, was a mixed consideration, inasmuch as he probably could never have acquired them, or been in the way to do so, had it not been for the public character with which he had been invested by the British government."

The sarcophagus being placed at Mr. Richards' disposal, that gentleman communicated with Mr. Brown, of Trinity College, Cambridge, who held Belzoni's power of attorney, stating his readiness to treat with his purchaser. The communication was strangely delayed in its passage to Cambridge, and did not reach Mr. Brown till Belzoni had gone upon his African expedition, from which he never returned. No purchaser appeared, and Mr. Brown knew of none. Mr. Salt wrote to authorise the offer of the sarcophagus to Belzoni or to any one for £2,000, or even £1,500. Efforts were made to induce the trustees (some of whom were favourable) to spare the nation the disgrace of losing this curious relic of antiquity. The trustees *seemed* to offer £2,000; but Mr. Richards declined to take less than £3,000 without Mr. Salt's authority (the letter sanctioning the sale of it for £1,500 had, by some mischance, not yet reached him); and the negociation ended, to the mortification of Mr. Salt, who wrote an angry letter to his friend, desiring him to throw the sarcophagus into the collection for nothing. Mr. Soane had, however, offered £2,000, and became, as is well known, the proprietor of this superb article.

Mr. Halls considers the whole transaction a discreditable one to the Museum, which got the collection for half the sum expended in making it, without considering the toil, judgment, and risk. He makes no allowance, however, for the consideration already hinted at, namely, the facilities derived by the collector from his official functions.

This notice has extended to some length. We have, therefore, but little space to devote to a criticism of the work. Mr. Halls has performed his task with a strong natural bias in favour of his friend, but with an evident impression that he has been impartial. It is much to be regretted that he should not have deemed a selection of the letters sufficient; he seems to have printed all he could get, consequently many which possess no interest or utility whatsoever as biographical materials. These redundant epistles, with a want of succinctness in the style of the narrative, which is rather flat, have most unnecessarily spun out the work. With these drawbacks, it is nevertheless no unacceptable accession to our stock of biography.

Matthews being asked what he was going to do with his son, (the young man's profession was to be that of an architect,)—"Why," answered the comedian, "he is going to *draw houses*, like his father."

From the Eclectic Review.

LIFE AND CHARACTER OF CAREY.

1. ***A Discourse occasioned by the Death of the Rev. William Carey***, D. D., of Serampore, Bengal. By Christopher Anderson, Edinburgh. 8vo. 1s. 6d. Edinburgh, 1834.
2. ***Tenth Memoir respecting the Translations of the Sacred Scriptures into the Oriental Languages.*** By the Serampore Brethren. With a brief Review of their various Editions from the Commencement in the Spring of 1794. 8vo. Second Edition. Edinburgh, 1834.

It is not a subject for the pencil,—but we can picture to ourselves no human being in an attitude of mind partaking more of moral grandeur, no human intellect more sublimely occupied in the view of the angels, than William Carey, the obscure village schoolmaster, conceiving the project of going forth, single-handed, to make an inroad into the very heart of the kingdom of darkness, in the distant East. While yet a youth, struggling with penury, his mind was first visited with that strong impression of solicitude for the salvation of the heathen, which it would be impiety to ascribe to any other source than the immediate suggestion of Him who had designed and separated him for the work. If there is such a thing as a call from Heaven, conveyed, not by audible sound or by vision, but by an internal impression of which the reason, not the imagination, is the subject,—if there is any propriety in speaking of being moved, on any occasion, by the Holy Ghost, such language will most appropriately describe the formation of the strong, heroic purpose in the mind of young Carey. Among other branches of elementary knowledge which he was employed in teaching to his village pupils, he was particularly fond of geography; and, as he pointed out to them the different countries on the map, or globe, he was led to mention the *religion* professed by the inhabitants. Going over this repeatedly,—and having occasion to reiterate, "These are pagans, and these are pagans,"—it occurred to him:—"I am now telling these children as a mere fact, what is a truth of the most melancholy character." This led to a train of deep and anxious meditation, the result of which he afterwards imbodied in the form of a tract entitled, "Enquiry into the Obligations of Christians to use means for the Conversion of the Heathen." This was written before he had received any encouragement to cherish his noble project, although, owing to his innate modesty combined with poverty, it was not published until the year 1792. The train of thought by which the solemn sentiment first awakened, was matured into a fixed resolution and conscientious principle of action, is thus interestingly described by Mr. Anderson.

"It seems as though it had been the commission of our blessed Lord to his apostles, which, of itself alone, set all in motion. He had said Go—Go and teach all nations, and again, Go into all the world and preach the gospel to every creature. The extent of this commission was manifest, and though, perhaps, scarcely a single individual upon earth at the moment arrogated less to himself than Carey, the obligation was felt by him to be imperative. He sat down—patiently examined into all that had been accomplished, first by the apostles themselves, and then by others down to his own day; and

ıfter this took a minute survey of the existing state of he world. Dividing it into the four quarters of Europe, Asia, Africa, and America, he ascertained as exactly as ıe could the extent of every country, the number of its nhabitants, and their religion. At the conclusion, his stimate was this—that there were then living in the vorld about seven hundred and thirty-one millions of ıuman beings,—of these he calculated that seven millions were Jews; thirty millions belonging to the Greek ınd Armenian churches; forty-four millions were protestant Christians; one hundred millions Roman Catholics; one hundred and thirty millions Mahometans; and herefore, four hundred and twenty millions still in pa-an darkness. An estimate as we now know to have ıeen below the truth.

" Of the heathen, he entertained no desponding idea; hey appeared to him as capable of receiving knowledge .s ourselves, having in many places discovered uncommon genius; in others, a tractable disposition; but his conceptions of other parties were at once just and de-ıressing. The vices of the Europeans had been conveyed to the heathen, and had sunk them lower still—he Christians of the Greek and Armenian churches were more vicious than the Mahometans themselves—he Georgian Christians, near the Caspian, maintained hemselves by selling their neighbours and relations, and ven their children, for slaves to the Turks and Persians —the members of the Greek church were extremely gnorant, and papists in general almost as much so, and ery vicious. 'Nor,' said he, 'do the bulk of the Church of England much exceed them, and many errors nd much looseness of conduct are to be found amongst issenters of all denominations. The Lutherans in Den-ıark are much on a par with the ecclesiastics of Eng-ınd, and the face of most Christian countries presents dreadful scene of ignorance, hypocrisy, and profligacy. 'arious baneful and pernicious errors appear to gain round in almost every part of Christendom; the truths f the gospel, and even the gospel itself, are attacked, nd every method that the enemy can invent is employ-d to undermine the kingdom of our Lord Jesus Christ.'

" Such was the state of things, in our world, accord-ıg to Carey's estimation; and with this general, though loomy outline, every dispassionate and intelligent Chris-ıan will agree, when he is reminded that the picture was rawn between the years 1785 and 1791; and, therefore, ears before the existence of any missionary efforts in ıis country, when the church at large lay in a state of ad repose.

" Turning, however, again to the heathen world; there ere impediments in the way. Their distance from our hores, their barbarity, the danger of being killed, the ifficulty of subsistence, and their language was unnown! But before his spirit, these mountains were but plain.

" If distance was talked of, he literally fixed his eye n the mariner's compass, or on the ships that had gone ut on voyages of discovery, but, above all, on such pas-ages of the Divine word as this, 'Surely the isles shall ait for me, and the ships of Tarshish first, to bring my ons from far, and their silver and their gold with them, nto the name of the Lord thy God.' Commerce, he elieved, would subserve the spread of the gospel, and ıat there would be a very considerable appropriation of ealth to that purpose.

" As to the barbarity of the heathen—this, he thought, ould be an objection only to those whose love of ease endered them unwilling. This was no objection to the postles, nor, in modern times, to such men as Elliot or Brainerd; nor even to commercial men, who braved all uch barbarity, for the profits arising from a few otter kins. After all, this uncivilised state of the heathen he egarded as an argument *for* preaching to them, not *gainst* it. 'Can we hear,' said he, 'that they are without the gospel, without government, without laws, without arts and science, and not exert ourselves to introduce among them the sentiments of men and of Christians?'

" In regard to the *danger of life*, he thought that whoever went, must put his life in his hand, and not consult with flesh and blood; our duty as creatures and as Christians loudly calling upon us to venture every thing.

" As to the difficulty of procuring subsistence, this would not be so great as at first sight. 'The Christian minister would at least obtain such food as that on which the natives subsisted, and this would only be passing through what he had virtually engaged to do, by entering on the ministerial office. The Christian minister was in a peculiar sense not his own. He engages to go, where God pleases—to do or endure whatever he commands. He virtually bids farewell to friends, and pleasures, and comforts.' 'It is inconsistent,' said Carey, 'for ministers to please themselves with thoughts of a numerous auditory, cordial friends, a civilised country, legal protection, affluence, splendour, or even a competency. The slights and hatred of men, and even pretended friends—gloomy prisons and tortures, the society of barbarians of uncouth speech—miserable accommodation in wretched wildernesses, hunger and thirst and nakedness, weariness and painfulness, hard work, and but little worldly encouragement, should rather be the objects of their expectation.' 'I question,' said he, 'whether all are justified in staying here, while so many are perishing in other lands. Sure I am, it is entirely contrary to the spirit of the gospel, for its ministers to enter upon it from interested motives, or with great worldly expectations. On the contrary, the *commission* is a sufficient call to them to venture all, and, like the primitive Christians, go every where preaching the gospel.'

" As for the difficulty of acquiring a *foreign tongue*, having mastered several languages already, he made nothing of this objection; but fully satisfied that the *prophecies* respecting the increase of Christ's kingdom were *true*, and the *commission* of the Saviour was still *obligatory*, his mind was loaded with a sense of the importance of all these principles. Thus, when he began to be about thirty years of age, having made known his views through the medium of the press; in the summer of 1793, he gave to all he had said the force of his own example, by embarking for India."

From the Discourse before us, and an article which has appeared in a provincial journal, we obtain the following particulars relating to the birth and early life of this admirable man, the protestant Xavier.

William Carey was born at Hackleton, in Leicestershire,* on the 17th of August, 1761. The circumstances of his parents were extremely narrow, and he had few advantages of education, except those which his own active and enquiring mind obtained for him. He was brought up as a journeyman shoemaker; and a boot made by him is still preserved by one of his friends as a relic. It was about the year 1779, when he was in his eighteenth year, that young Carey became the subject of a decided religious change. Up to that time, he had discovered no piety, and had even ridiculed religious people. The conversation of a fellow-apprentice, the occasional ministry of the Rev. Thomas Scott, the Expositor, and the perusal of the " Help to Zion's Travellers," by

* The article in the Liverpool Times states, that he was born at Paulersbury, in Northamptonshire; but this we presume to be a mistake.

Robert Hall the elder, are stated to have been the means of his conversion. Mr. Scott was not aware of having been instrumental in producing this happy change in Carey's mind, until he learned it from a message conveyed to him from the venerable missionary himself, through Dr. Ryland, more than forty years after. "He heard me preach only a few times," Mr. Scott wrote in reply, "and that, as far as I know, in my rather irregular excursions; though I often conversed and prayed in his presence, and endeavoured to answer his sensible and pertinent enquiries, at Hackleton. But to have conveyed a *single* useful hint to such a mind as his, may be considered as a high privilege and matter of gratitude."

The change in young Carey's sentiments and feelings soon became visible to his family, in his altered conduct and conversation, and was the subject of wonder. "For some time he stood alone in his father's house." At length he asked and obtained leave to introduce family prayer. "When in his nineteenth year," says his sister, "my dear brother used to speak (on religious topics) at a friend's house in the village, when he came to see us. I recollect a neighbour of ours, a good woman, the first Monday morning after he had spoken before a few friends, came in to congratulate my mother on the occasion; when with some surprise my mother said: 'What! do you think he will be a preacher?' 'Yes,' our friend replied, 'and a great one too if he lives.' My father felt a great desire to hear him, if he could go *undiscovered*. In this, he was afterwards gratified, though unknown to my brother or any one at the time. We could tell he was gratified, although he never discovered any thing to us like praise. In a few years, I hope, God gave him the desire of his heart, in bringing his two sisters to see a beauty in religion. Then we were dear indeed to each other."

In 1783, Mr. Carey united himself to the baptist church at Olney, under the pastoral care of the Rev. Mr. Sutcliff. By this church, agreeable to the practice which then obtained among that denomination, he was, in 1785, called to the work of the ministry. In the following year, he removed to Moulton, a village four miles from Northampton; and he was ordained pastor over the infant baptist society in that village in 1787. Even there, his whole income being much below £20 a year, he taught a village school for his support. In July 1789, he removed to Leicester, and in May 1791, was ordained to the pastoral charge of the baptist church meeting in Harvey Lane, over which the late Robert Hall afterwards presided for so many years. Here his ministry was so successful, that the number of members in the church was doubled during the short time he was their pastor. He introduced among them the practice, first adopted by some ministers at Nottingham, upon Mr. Sutcliff's suggestion, in 1784, of spending an hour on the evening of the first Monday in every month, in social prayer for the revival of religion and the success of the gospel, which has since become so general; and these meetings powerfully contributed to cherish the fine spirit which they discovered, when he announced his resolution to dedicate himself to the work of evangelising the heathen. "No," said they, "you shall not *go*,—we will *send* you: we have long been calling upon God, and he now calls upon us to make the first sacrifice."

The circumstances which decided him upon going out to India, are thus stated in an article already referred to.

"About the year 1793, a gentleman of the name of Thomas, who had visited Bengal, and there seen the wretched superstition and ignorance of the Hindoos, and the destructive influence of their sanguinary, sensual, and monstrous superstitions on their religious feelings, morals, and happiness, being himself strongly impressed with the vast importance of introducing the religion of Britain into the extensive and populous regions subjugated by her arms and ruled by her governors, greatly strengthened by his conversation the desire which had been for some time growing in Dr. Carey's mind to see a strenuous effort made for the religious improvement of the heathen world. In consequence, Dr. Carey and Mr. Thomas communicated with Andrew Fuller, Dr. Ryland, and other leading members of the baptist denomination, on the subject; and after much discussion a society was established for that purpose, which commenced its labours with between £13 and £14, as the whole amount of its disposable funds! With no better pecuniary prospects than these, but with a firm and unbending faith, and a determination not to be deterred by difficulties, Dr. Carey agreed to go out to India, and there to support himself as far as possible by his own exertions, whilst he qualified himself for his missionary duties.

"The circumstances under which he quitted England were singular and interesting. From the first, his wife had refused to embark in what appeared so hopeless an undertaking; and after every entreaty had failed to change her determination, Dr. Carey and Mr. Thomas (who went out with him) were compelled to sail without her. After they had proceeded a short distance on their voyage, the captain of the East Indiaman by which they had taken their passage, came to Mr. Thomas, and told him that he had received an anonymous letter, informing him that there was a person on board who was proceeding to India without a licence from the company. As the regulations of the East India Company, in reference to persons going out to India, were at that time singularly rigid, and it is well known that the directors were peculiarly averse to any attempts of a missionary character, the captain added, that he was satisfied this letter must refer to Mr. Thomas. This surmise afterwards proved to have been unfounded; but as the captain seemed to be greatly alarmed by the apprehension of the consequences to himself, if Mr. Thomas insisted on the engagement into which he and the captain had mutually entered, he was, at length, induced to yield to the entreaties of the captain, and he and Mr. Carey were put on shore, the vessel immediately proceeding on its voyage. This event was, at the moment, a severe disappointment: but having learnt that a Danish vessel was to leave Deal for Calcutta in two days, they took courage, determining to avail themselves of that interval, short as it was, to revisit Mrs. Carey, and urge their plea in favour of her accompanying them. A difficulty occurred in the want of funds for the increased charge of a passage by the ship in question, and of the expenses of traveling, which they were thus unexpectedly exposed to. This difficulty, however, was surmounted by Dr. Rippon, who still survives, having promptly lent them £100 which he had on hand; and by the late Mr. Abraham Booth borrowing, for their use, a like sum from his friends. Thus furnished, they hasted down to Mrs. Carey, having barely time to accomplish this object. To their great grief, however, she again turned a deaf ear to all their entreaties, and they, with heavy hearts, took, as they thought, a last

irewell, and left her. When they had proceeded two niles from the house, Mr. Thomas insisted that they hould turn back and make one more attempt. Mr. Carey objected, entreating his companion to spare his eelings, and not to allow them to be further harrowed y perseverance in a hopeless effort. Mr. Thomas seem-d, however, so resolutely bent on his renewed effort, hat at length they did turn back; again used every ar-ument that could suggest itself, but apparently with as ittle success as before, till at length, moved by her hus-and's tears and entreaties, Mrs. C., turning to her sister, vho stood by, said that if her sister would accompany ier, but not else, she would consent to go. The sister vas then appealed to, and at length, though apparently vith great reluctance, they both yielded. Not a moment vas now to be lost. The wife, the sister, four children, nd as much of their clothes and furniture as was in-lispensable for the voyage, were hurried off to Deal. On heir arrival there, the vessel was descried under sail, vith scarcely the possibility of their overtaking her. The attempt however was made, and, by dint of persever-ng labour, they approached the ship, on which the cap-ain backed his sails, and received them all safe on board, onveying them, at length, to their destination.

"On their arrival in India, Dr. Carey and Mr. Thomas mmediately proceeded to act upon the intention they ad avowed on quitting their own shores, of receiving o further pecuniary aid from the friends of the mission han might be necessary for their existence. In pursu-nce of this determination, therefore, they both engaged hemselves in a secular employment, which enabled them, y constant intercourse with the natives, to become amiliar with their vernacular language. Although Mr. Carey, who had obtained the superintendence of an in-ligo factory, at a considerable distance in the interior, vas thus far removed from the observation of the ruling uthorities in Calcutta, his frequent conversations with he natives on the subject of religion were soon reported here: he was immediately called to account, and, on his dmitting that his design was to evangelise the heathen, e was told that the residence of missionaries in India, f any denomination, would not be tolerated; and that e must forthwith re-embark for England. This cruel nd impolitic proceeding drove Mr. Carey to seek refuge n the Danish settlement of Serampore, about 13 miles rom Calcutta, where he was joined, in January 1800, by Ward, Marshman, and others; all of whom, except Dr. Marshman and his son, who joined his exertions to theirs ome years afterwards, have entered into their rest."

We gather some further particulars from Mr. Anderson.

"Carey had been on board of an English vessel, in vhich he intended to have gone to India, but was pre-ented. Had he then thus proceeded, such was the feel-ng at the time, that it is more than probable he would ave been immediately sent home again. But Providence roviding a more secure passage for him on board of the Princess Maria, a Danish East Indiaman, he took up his bode at Bandell, an old Portuguese town, in the province f Bengal. He afterwards removed to Mudnabatty, be-ween Malda and Dinagepore, till, in the close of 1799, one of those trivial incidents, as they are called, though ctually links in the chain of providence, fixed him down, vith his brethren Marshman and Ward, at Serampore. This small Danish settlement of about six square miles, as proved the 'little sanctuary,' where he and his bre-hern have been preserved, amidst all the 'times that ave passed over them, and over' India. Their settling lown here has been ascribed, in part, to so trivial an in-ident as the substitution by the compositor, of *one letter* or another, a *p* instead of a *b*: and the omission of a *t*, whether by design or inadvertently. Upon Marshman and Ward, &c., landing, 'government,' says Dr. Carey, refused to permit the (American) captain to trade, unless he produced the passengers at the police office, (who had, either by the mistake of the printer or by design, been published in the newspaper as *papist* [instead of baptist] missionaries) to enter into an agreement to return to Europe, or get the company's leave to reside in the country. I wrote to some gentlemen of my acquaintance to interest themselves in the business, which they very kindly did, but in vain. The report of papist missionaries made government fear that they were French emissaries, as I heard this week. A standing rule of government was enforced in this instance, to our great distress at that time,—though perhaps it may eventually turn out for the furtherance of the gospel.' Of course, on proper explanation, all fear died away, though this trivial affair explained the importance of a secure abode, and Danish ground being chosen, there they were to live, till their residence became as pleasing to the eye of the British government as that of any men in India."

An interesting record of Mr. Carey's feelings and unshaken faith soon after reaching the scene of his future labours, is preserved in a letter dated in the spring of 1794, when he was, as yet, all alone in the mission.

"When I first left England," he writes, "my hope of the conversion of the heathen was very strong; but among so many *obstacles* it would utterly die away unless upheld by God; having nothing to cherish it, but many things to obstruct it for now a year and nineteen days, which is the space since I left my dear charge at Leicester. Since that time, I have had hurrying up and down—a five months' imprisonment with worldly men on board the ship—five months spent in learning the language, my moonshi not understanding English sufficiently to interpret my preaching—my colleague separated from me—long delays respecting my expected settlement—few opportunities for social worship—no woods to retire to, like Brainerd, for fear of tigers: not fewer than twenty men in the department of Dayhutta, where I am, having been carried away by them from the salt-works this season—no earthly thing to depend on. Well, I have God, and his word is sure; and though the superstitions of the heathens were a million times more deeply rooted, and the examples of Europeans a million times worse than they are—if I were deserted by all, and persecuted by all, yet my hope fixed on that sure word will rise superior to all obstructions, and triumph over all trials; God's cause *will* triumph, and I shall come out of all trials as gold purified in the fire."

Upon his arrival in India, the first language to which Mr. Carey turned his attention was the vernacular tongue of the people among whom he lived and died. But he soon perceived that the Sanskrit was the grand root of oriental literature, the key to all its treasures; and by the year 1796, he had begun to study both that language and the Hindoostanee. In Jan. 1800, he removed to Serampore, and in the following year was appointed professor in the new Government College of Fort William. Early in the same year, the Bengalee New Testament was finished at the mission press. This translation of the sacred scriptures into the vernacular tongue of at least twenty-five millions, had been commenced by Mr. Carey as early as the spring of 1794; Mr. Thomas having, however, previously accomplished a translation of part of the New Testament. By the close of 1796, the translation of the New Testament was completed for revision. In July 1800, the Gospel by Matthew began to be distri-

buted among the natives. At length, after being nine months in the press, the first edition of the Bengalee New Testament, (8vo, 900 pages) consisting of 2000 copies, was issued on the 7th of Feb. 1801. This was followed, in 1802, by the Pentateuch in the same language, and in 1803, by the Psalms and other portions of the Old Testament. A small impression of the Gospel of Matthew in Mahratta, was issued in 1805; and a second edition of the Bengalee New Testament in 1806. In 1809, the New Testament in Orissa, and in Sanskrit, were completed at press; and some portions of the Old Testament in Orissa had been issued, besides an edition of the Mahratta New Testament, of the Hindostanee New Testament, and the four gospels in Persian, when, on the 11th of March 1812, the printing office was destroyed by fire!

The circumstances which so greatly facilitated the translation of the Scriptures into the cognate dialects, after Mr. Carey had surmounted the first difficulties of acquiring the vernacular language and the sacred tongue of India, have been fully explained in our defence of the translations against the base and ignorant calumnies of Dubois. The assembling of so many learned pundits from all parts of India in the college of Fort William, threw into the hands of Dr. Carey a living polyglot apparatus such as he could not otherwise have obtained: and the overruling hand of Divine Providence was strikingly manifested in the whole business. But how extraordinary must have been the energy of the mind which could grasp so vast a plan, and direct the movements of the subordinate instruments employed in this great work, upon which his soul was bent! Of Dr. Carey's indefatigable industry,—an industry the more extraordinary under the relaxing effects of a burning climate, the description of a single day affords a striking specimen. It occurs in a letter dated June 1806, and is given as an apology for not writing more frequently. At this time, he spent three days of every week at Calcutta, and the following describes one of his Calcutta days.

"I am extremely loth to let this opportunity pass without dropping a line, and yet scarcely can find time to write to any one. I give you a short view of my engagements for the present day, which is a specimen of the spending one half of the week. I rose this morning at a quarter before six, read a chapter in the Hebrew Bible, and spent the time till seven in private addresses to God, and then attended family prayer with the servants in Bengalee. While tea was getting ready, I read in Persian with a moonshi, who was waiting when I left my bed-room; read also before breakfast a portion of the Scripture in Hindostanee. The moment breakfast was over, sat down to the translation of the Ramayuna from Sungskrit, with a pundit, who was aslo waiting, and continued this translation till ten o'clock, at which hour I went to college, and attended the duties there till between one and two o'clock. When I returned home, I examined a proof-sheet of the Bengalee translation of Jeremiah, which took till dinner-time. I always, when down in Calcutta, dine at Mr. Rolt's, which is near. After dinner, translated, with the assistance of the chief pundit of the college, the greatest part of the eighth chapter of Matthew into Sungskrit. This employed me till six o'clock. After six, sat down with a Telinga pundit, (who is translating from the Sungskrit into the language of his country,) to learn that language. At seven I began to collect a few *previous* thoughts into the form of a sermon, and preached in English at half-past seven. About forty persons present, and among them one of the puisne judges of the Sudder Dewany Adawlut. After sermon I got a subscription from him of 500 rupees, (£63 10s.) towards erecting our new place of worship; he is an exceedingly friendly man. Preaching was over and the congregation gone by nine o'clock. I then sat down and translated the eleventh of Ezekiel into Bengalee, and this lasted till near eleven, and now I sit down to write to you. After this I conclude the evening by reading a chapter in the Greek Testament, commending myself to God. I have never more time in a day than this, though the exercises vary. This is Thursday; to-morrow evening I return to Serampore. We have then a conference with our native brethren: after which brother Marshman and I revise the Ramayuna till eleven. At six the next morning we begin again till eight. After breakfast and family prayer—revisal of proof-sheets and translations, and preparing for Sabbath. After tea, family consultations, and the temporal concerns of the mission till near midnight. Lord's day, exercises are various. Monday—the Ramayuna till breakfast. After which, proof-sheets and translations till tea-time. After this a lecture on some *science* till nine. Tuesday at six, the Ramayuna. At seven, social prayer-meeting for the success of the gospel in Hindoostan. After breakfast the same course as on Monday, till four. Then to Calcutta. Thus at present I spend my time."

From his early youth, Dr. Carey discovered a fondness for botanical studies; and in his rural walks with his younger sister, he would often point out to her with vivid delight the beauty exhibited in the phenomena of vegetation. This admiration for nature accompanied him to the East; and his delight in the works of God has been considered as conducing in no small degree both to his health, and to that fine flow of spirits for which he was distinguished.

"Rising before five in the morning, he rode out for an hour, and after this was to be found among his trees and plants. In process of time his garden became perhaps the first private garden belonging to any European in India; and when Dr. Roxburgh retired to this city, where he died, he said that government could be at no loss in the meanwhile by committing the keys of the Government Botanic Gardens to Dr. Carey. The consequence of this was, the publication of the *Hortus Bengalensis*, or catalogue of the plants growing in the Honourable East India Company's Botanic Garden at Calcutta, which he printed at Serampore in 1812. The manuscripts of Roxburgh were also in part committed to his care, which he edited; *The Flora Indica*, first in two volumes, in 1821—24; and again in three volumes, from the Serampore press, in 1832. I shall only add here, that in the botany of India, two trees and an herb bear his name—the *Careya arborea*,—*spherica*,—and *herbacea*. The first of these, the Saul tree, is one of the woods of which Indian ships are built, and it was given by Dr. Roxburgh as a token of his respect, so long ago as the year 1797. Drawings of the *Careya arborea* and the *Careya herbacea* may be seen in Roxburgh's fasciculus of the plants of Coromandel.

The *Agricultural and Horticultural Society of India* owes its origin to Dr. Carey, the prospectus he published, dated 'Mission-House, Serampore, 15th April, 1820.' being the cause of its formation. What is rather singular, when the first meeting was called, no one appeared save Dr. Marshman and another gentleman; but nothing daunted, they considered the society as formed, on the

14th of September, 1821, and calling another meeting on the 21st of the following month, the plan was soon patronised by the Marquis and Marchioness of Hastings. Of this institution, of which Dr. Carey was for some time the secretary, the governor-general is now the patron, and in 1830, 20,000 rupees, say about 2,000*l.* was voted by government to be bestowed in premiums for the most successful cultivation of sugar and tobacco, silk and cotton.

"Nor was it to the vegetable world only that he directed his leisure moments, if leisure he ever knew; though he but seldom referred to these subjects when writing to his Christian correspondents. Now and then, however, he would glance at them, and in the present instance, you will observe the reason. 'I have for a long time,' says he to Dr. Ryland, so long ago as 1811, 'been describing the birds of Asia, and have already accomplished almost one half of them, and some of the quadrupeds, and a few of the insects. I shall, perhaps, publish them in a series of papers in the Asiatic Researches, but have not yet determined. I have but little time to spare for these pursuits, for which I have a strong natural inclination; but I also find it very expensive, as nothing can be done without books and animals, as well as correspondents in different countries. These, I have in a good measure, but yet the work goes on very slowly. I notice this, because you mention a wish that our brethren might know something of natural history and geography. I certainly wish so too, and to show that I do, I make this attempt to fill up this department.'

"In a few words, besides his valuable lectures on divinity, lectures on astronomy and geography, as well as natural history, and in Bengalee as well as English, were delivered by him for many years." pp. 27—29.

But his aptitude for acquiring languages was Dr. Carey's most wonderful natural endowment. Before he left this country for India, he had contrived, amid the pressure of poverty and the constant engagements of his school and pastoral office, to make himself sufficiently master of *six* languages, besides his native tongue, to read the Bible in each; viz. Latin, Greek, Hebrew, French, Italian, and Dutch. His knowledge of the last language was acquired, without the intervention of one elementary book, through some Dutch quarto obtained from an old woman. In December, 1811, we find him writing to his friends Fuller, Sutcliff, and Ryland, in the following terms.

"I have of late been much impressed with the vast importance of laying a foundation for Biblical criticism in the East, by preparing grammars of the different languages in which we have translated, or may translate, the Bible. Without some such step, they who follow us will have to wade through the same labour that I have, in order to stand nearly on the same ground that I now stand upon. If, however, elementary books are provided, the labour will be greatly contracted, and a person will be able in a short time to acquire that which has cost me years of study and toil.

"The necessity which lies upon me of acquiring so many languages, obliges me to study and write out the grammar of each of them, and to attend closely to their irregularities and peculiarities. I have, therefore, already published grammars of three of them, namely, the *Sungskrit*, the *Bengalee*, and *Mahratta*. To these I have resolved to add grammars of the *Telinga*, *Kurnata*, *Orissa*, *Punjabee*, *Kashmeera*, *Gujuratee*, *Nepalese* and *Assam* languages. Two of these are now in the press, and I hope to have two or three more of them out by the end of next year.

"This may not only be useful in the way I have stated, but may serve to furnish an answer to a question which has been more than once repeated, 'How can these men translate into so great a number of languages?' Few people know what *may* be done until they *try*, and *persevere* in what they undertake.

"'I am now printing a Dictionary of the Bengalee, which will be pretty large, for I have got to page 256 quarto, and am not near through the first letter. That letter, however, begins more words than any two others.

"To secure the gradual perfection of the translations, I have also, in my mind, and, indeed, have been long collecting materials for *An Universal Dictionary of the Oriental Languages, derived from the Sungskrit.* I mean to take the Sungskrit, of course, for the groundwork, and to give the different acceptations of every word, with examples of their application in the manner of Johnson, and then give the synonyms in the different languages derived from the Sungskrit, with the Hebrew and Greek terms answering thereto; always putting the word derived from the Sungskrit term first, and then those derived from other sources. I intend always to give the etymology of the Sungskrit term, so that *that* of the terms deduced from it in the cognate languages will be evident.

"This work will be great, and it is doubtful whether I shall live to complete it; but I mean to begin to arrange the materials, which I have been some years collecting for this purpose, as soon as my Bengalee dictionary is finished. Should I live to accomplish this, and the translations of Scripture in hand, I think I can then say, 'Lord, now lettest thou thy servant depart in peace.'" pp. 32, 33.

For a complete list of Dr. Carey's literary labours, and of the publications issued from the Serampore press, we must refer the reader to pp. 37—44, and 57—61, of the highly interesting memoir noticed at the head of this article. The entire Scriptures have been printed in six of the languages of India, besides that stupendous work of Carey's beloved and inseparable companion in labour, Dr. Marshman, the Chinese Bible; the New Testament has been printed in twenty-three languages, and portions of the Scriptures in ten others. In few words, "God most graciously prolonged the years of his servant, until he lived to see more than 213,000 volumes of the divine word, in forty different languages, issue from the Serampore press."

There are some other traits in the character of this admirable man, mentioned by Mr. Anderson, which must not be passed over. Speaking of his "enlarged humanity," Mr. A. remarks, that "long familiarity with the miseries of Hindooism has hardened by degrees the heart of many a European in his day; they never could the heart of Carey."

"His exertions unquestionably first led to the prevention of infanticide, and that of persons devoting themselves to death at Saugur island in the mouth of the Hooghly; and though the immolation of widows on the funeral pile went on, it was through his influence that the Marquis of Wellesley left a minute, on his retiring from the Indian government, declaring his conviction that suttees *might, and ought to be abolished.* The truth I believe to be this, that previously to the return of the marquis in 1805, or thirty years ago, Dr. Carey submitted three memorials to government, the first relating to the exposure of infants in the northern parts of Bengal, the others to Saugur island and the inhuman practice of suttee. The two first evils were soon and very easily abolished, but of the latter, Carey and his brethren never lost sight. In 1817 the valuable document, drawn up in examination of the Shastras of highest authority, to prove

that it was decidedly contrary to the law of Munoo; and which, after being laid before Mr. Harrington, the first judge of the chief native court of justice, was deposited for preservation in the library of Serampore College, may be adduced in proof. In 1822 also a powerful article against this dreadful custom was inserted in the quarterly 'Friend of India,' which, after abundant proofs and many arguments, closed in these expressive words of Scripture, 'If thou forbear to deliver them that are drawn unto death, and those that are ready to be slain; if thou say, Behold we knew it not, doth not He that pondereth the heart consider it? and He that keepeth thy soul, doth not He know it? and shall not He render to every man according to his works?' After this the *Samachar Durpun*, or Serampore, Bengalee, and English newspaper, lent all its powerful aid, till on the 4th of December, 1829, 'the burning or burying alive of the Hindoo widow,' was declared by the governor-general in council to be *illegal*, a day never to be forgotten in India. There have been other individuals who lent their aid; but surely if the blessing of them that are ready to perish come upon the heads of any, then Carey and his companions must come in for their share.

"I only add, that in the attempt to establish a *leper* hospital in Calcutta, Dr. Carey, it is well known, took an active part. The Benevolent Institution, in the same city, for the education of the indigent and neglected Portuguese children, was established by the senior Serampore brethren in 1809, and has continued under their management to the present day. They were the first who commenced the education of the Hindoo *female*, and schools for boys have long been formed at their stations scattered over India." pp 40—42.

Disinterestedness and Christian generosity were prominent features in the character of Carey and his brethren. The total amount of the sums raised by their exertions, and consecrated by them to their great enterprise, it would not be easy to estimate; but Mr. Anderson states, that since the year 1827, between £7000 and £8000 sterling have been devoted by the Serampore brethren to those great undertakings in which, through life, they have been employed. But we hasten to notice the concluding scene of the life of the venerable father of the mission, which was extended until within two months and a week of his seventy-third year. God gave him to see, in that foreign land, the climate of which is so trying to a British constitution, not only his children's children, but even the third generation; for it is now some years since Dr. Carey became a great-grand-father.

For rather more than a month before his decease, Dr. Carey had been confined to his couch, reduced to a state of extreme weakness, but with no disease but a gradual decay of nature. He suffered no pain, continued to sleep at night, and, being laid on his couch, remained comparatively at ease all the day,—understanding what he heard, but unable to speak;—his mind in the most placid and tranquil state;—having not a doubt, and as he often told his venerable colleague, Dr. Marshman, not a wish left unsatisfied. His weakness, however, gradually increased, until he became, at last, almost unconscious of what was passing around him.

"The last sabbath of his life," writes Dr. M. to Mr. Anderson, "June 8th, I visited him about noon, eighteen hours before his decease, and found him lying on his couch by the side of the table, in his dining room above stairs, placed there for the sake of the air. He was scarcely able to articulate, and after a little conversation, I knelt down by the side of his couch and prayed with him. Finding my mind unexpectedly drawn out to bless God for his goodness, in having preserved him and blessed him in India for above forty years, and made him such an instrument of good to his church; and to entreat that on his being taken home, a double portion of his spirit might rest on those who remained behind: though unable to speak, he testified sufficiently by his countenance how cordially he joined in this prayer. I then asked Mrs. Carey whether she thought he could now see me. She said, yes, and to convince me, said, 'Mr. Marshman wishes to know whether you now see him?' He answered so loud that I could hear him, 'yes I do,' and shook me most cordially by the hand. I then left him, and my other duties did not permit me to reach him again that day. The next morning, as I was returning home before sun-rise, I met our brethren Mack and Leechman out on their morning ride, when Mack told me that our beloved brother had been rather worse all the night, and that he had just left him very ill. I immediately hastened home through the college, in which he has lived these ten years, and when I reached his room, found that he had just entered into the joy of his Lord,—Mrs. Carey, his second son Jabez, my son John, and Mrs. Mack, being present." p. 63.

"It is an interesting fact," says another of the Serampore brethren, "that the very last thing in which our dear doctor appeared to take any interest, was the *mission*; and it must gratify our friends at home not a little to know, that his last thoughts respecting it were thoughts of gratitude, thanksgiving, and praise. It was about the 22d of last month, that we received the delightful news of the deep and increasing interest that our friends at home are taking in the cause of God among us in this dark idolatrous country. The large contributions that had been made for the cause, and particularly the noble offering for Chirrapoongee—the many prayers that were continually ascending in our behalf to the God of missions—and the many cheering letters that brought this information, were all like cold water to a thirsty soul. When brother Mack took these letters and read the most important of them to the dear old man, as he was able to hear them, his heart revived, his strength seemed to return; and the whole day he was filled with gratitude to God and to his dear people, for the goodness thus manifested to the cause that he loved. I went in to see him shortly after brother Mack had left him, and I shall never forget how the aged saint raised his emaciated hands to Heaven, and expressed his delight, though he was then so weak that we could scarcely distinguish what he wished to say—he could only speak in the lowest whisper. This was the last thing in which he took an interest. The last chord that vibrated in his heart was gratitude to God and his people on behalf of the mission. Very soon after this his mind began to wander. But this was still uppermost even in his incoherent thoughts. Often in his delirium he was anxious to get to his desk that he might write a letter of thanks to his friends at home, and particularly to that friend who has contributed so liberally for Chirra. In that part of the mission he always took a deep concern. He bore the half of the expense of the station himself to the last, notwithstanding all his losses. And he lived to see it in a very prosperous state, before he was taken to his great reward. Indeed it was one of the most consoling circumstances connected with our dear doctor's removal, that he has left the mission in a more peaceful and prosperous state than he could have done at any previous period of its history. The little church that he at first formed has branched out into *six and twenty* churches *now* connected with the mission, in which the ordinances of the gospel are regularly administered! Often did he exclaim in astonished thankfulness, 'What has God wrought!'" pp. 58, 59.

We are happy to learn that an authentic memoir of the life and labours of this great and good servant of Christ, is in preparation. In the mean time, this brief and imperfect outline will, we hope, be acceptable to our readers. Mr. Anderson will forgive our having made such free use of his Discourse, which we cordially recommend to the perusal of our readers; the more so, as whatever profits arise from the sale will be devoted to the printing of the sacred Scriptures in the language of India. Mr. Christopher Anderson is already advantageously known to our readers, both as an able writer and as a zealous advocate of the claims of Ireland and the Irish language. He now comes forward as the friend of India, and announces a work on the subject of that vast empire and its languages which we anticipate with interest.

CAPTAIN ROSS'S CHRONOMETERS.

When Captain Ross was about to start from London, in the year 1829, on his voyage, an eminent chronometer maker in Cornhill requested him to take out with him four of his best made chronometers, in order to ascertain their goodness by subjecting them to the trial of the intense climate of the north. Captain Ross accordingly took the chronometers out with him, and in order to guard against casualities, the owner of the instruments took the precaution to insure them at Lloyds, they being of great value, but he did not deem it necessary to insure, as we understand, to the full amount for which they were even then saleable at home, not considering that the hazard of losing them was very great. The long unaccounted for absence of Captain Ross, without any communication being had with him for nearly four years, excited, as is well known, great alarm for the safety of himself and crew, and indeed left but little doubt on the public mind that they had perished. In these circumstances, the period having elapsed without hearing any thing of the property insured, when by law the owner is entitled to the sum insured, the chronometer maker claimed and received of Lloyd's the amount of the insurance on his instruments, which were given up by all parties as lost. Since then, Captain Ross happily returned in safety, and with him the four chronometers, which proved in the severe trial to which they had been submitted, to be of an all but perfect construction, as to the regulation of time, and of course, their value, now considering all those adventures, and their avowed goodness, is scarcely to be named. It is not to be wondered then, that the original owner should be most desirous to possess them again, but unfortunately for him, other owners are now substituted, for Lloyd's have claimed the chronometers as being now their property, having paid the sum insured on them long since, and Captain Ross has accordingly handed over the instruments to them.

In vain has the maker offered to return the amount insured with interest, for so great is the estimation in which the chronometer's are held by Lloyd's, that on no condition would the establishment part with them to other hands.

From the London Metropolitan.

THE STORY OF A CHIMNEY-SWEEPER.

I hate all pain
Given or received; we have enough within us,
The meanest vassal as the loftiest monarch,
Not to add to each other's natural burthen,
Of mortal misery; but rather lessen,
By mild reciprocal alleviation,
The fatal penalties imposed on life.

BYRON.

This is the age of luxury. At no period of the world's history, in no country, under no system whatsoever, have elegance and comfort been so generally diffused through a civilised community, as at the present time through every part of the British dominions. To witness the innumerable contrivances for the attainment of it, one might believe that personal convenience was the sole aim and end of existence. Human ingenuity, though taxed every day for this purpose, appears inexhaustible; not only the various stores of creation, but the elements themselves lend their aid for the furtherance of the one great object. A self-adjusting couch receives the frame, exhausted perhaps by the pursuit of pleasure, and an air-cushion supports the gouty limb entailed by intemperance upon the victim of turbot, turtle, and champagne. A wealthy patient complains to her physician of the injurious pressure of her bed of down, and forthwith the bed of down, floating upon the limpid wave, yields to every movement of the sufferer, and converts that which had been a source of pain, into one of alleviation. To attempt a catalogue of inventions would, however, be a task far exceeding both my powers and limits. I would only call the attention of my readers to a few simple but important facts, of which, in the midst of luxury, refinement, and indulgence, we are all of us but too apt to lose sight.

We cannot take even a cursory view of the progress of civilisation, without feeling a rational pride in the many triumphs of that superior intelligence with which we are endowed; but let us not forget that some evil is ever attendant upon good, that these *agrémens*, these conveniences so desirable, of a social state, involve a certain portion of misery and mischief which ought to lower the tone of our exultation. If in the height of prosperous ease, individuals or classes cease to regard the means by which it is achieved—the hands which labour that they may indulge in selfish indolence—the expenditure of health and strength, even of life itself—the toils and privations endured by the many for the benefit of the few—then does civilisation become a curse instead of a blessing, and a temporary banishment to a savage state, wherein the basket-maker is exalted above the prince, would be a just punishment and a salutary lesson.

The burden of this world's sorrow falls, alas! principally upon the poor operative: his labour is severe, and scanty his reward. The ox truly is muzzled that treadeth out the corn; the hand that weaves the web of silk to deck the children of affluence, is too often fain to draw over shivering nakedness the rags of niggard poverty. It is

painful in the extreme, to a mind of any feeling, to reflect that comforts and luxuries must be purchased at such a price; that the wheels of the mighty mechanism of social life cannot move without the risk, often the certainty, of crushing a multitude beneath their pressure. Let us take a glance at the number of avocations essential to our present state of civilisation, which have been ascertained beyond a doubt to be not only deleterious, but deadly, and we shall see that such is the fact. Foremost in the list we may place those who, working in the pernicious minerals, such as lead and quicksilver, become liable to paralysis, cholic, and distortion of the joints; secondly, those employed in cutlery; [Dr. Knight, in the north of England Medical Journal, states that out of eighty fork-grinders, exclusive of boys, there was not a single individual thirty-six years of age. They usually die at the ages of twenty-eight or thirty-two. The grinder's disease is a slow but fatal consumption:] thirdly, all those whose employments are carried on in an atmosphere confined or impure, and suffer thereby more or less; fourthly, those whose employments injure by acting upon the skin; fifthly, those whose employments produce dust, odour, or gaseous exhalations; sixthly, those whose occupations expose them to wet and steam, or who are obliged to bear great variations of temperature; but when I add that about two hundred different employments have been enumerated, which have an influence upon human health, it will be sufficiently evident that I cannot attempt to describe one tenth part of them.

In these examples it will be urged, both the labour and the risk are voluntary, consequently neither individuals are, nor society at large is, censurable for the injury sustained; and this, if we leave out of the question the hard law of necessity, it is true: there are, however, other cases where the same plea cannot be advanced, where the labour is compelled before either mental or bodily powers are sufficiently matured to admit either of remonstrance or resistance;—I mean in the instance of the factory-child and the infant chimney-sweeper;—the former has obtained the protection of the law, but the latter, equally oppressed and yet more degraded, is still suffered to languish in a horrible, soul-debasing, life-destroying bondage.

When we consider the nature and magnitude of the evil, it is difficult to conceive how, in a country like our own, boasting superior enlightenment, and certainly in many instances distinguished by a spirit of liberality and humanity, two such foul blots, as the impressment of seamen and the use of climbing boys, can have been so long tolerated. As an act of barbarity, neither a Nero nor a Domitian, nor any other *amateur* in the art of torturing, whose name disgraces the pages of history, could have devised a cruelty more atrocious than that of compelling a helpless, naked infant, to ascend a dark, intricate funnel, filled with a suffocating atmosphere, and probably in a state of ignition, at the risk of life and limb, and at the sacrifice of every comfort, every decency, to which human beings have a natural right to lay claim. Let government enforce, and that promptly, that other means be resorted to for the cleansing of chimneys, and inflict a severe penalty on all who shall set such mandate at defiance. There are spies and informers sufficiently vigilant to find such delinquents, and give notice of the introduction of a climbing-boy into a dwelling-house, with equal precision as that evinced by them in the detection of smuggled silk or French brandy. If the total abolition of the system be found impossible, if the safety of the public requires that human hands should, on some occasions and in some places, be used instead of machinery, let it be under such restrictions as shall render the practice comparatively harmless. Better, far better, that every chimney in every town and city of the realm were leveled with the ground, and that, like the denizens of primeval wilds, we cooked our victuals upon embers whose smoke issued through some hole or crevice in the roof of a hut of the rudest construction, than that a repetition of miseries and enormities, such as I am about to narrate, should be incurred.

This subject, and I must think it an important one, both on the score of morals and humanity, must be again brought under the consideration of parliament; the following particulars will not therefore, I trust, be deemed ill timed. A daily attendance at the infirmary of one of the principal prisons of the metropolis formed, during several years of my life, the most painful portion of a rather extensive medical practice. It was in the winter of 18—, that I was requested to examine a patient in one of the wards appropriated to sick prisoners; my patient, who had been committed on a charge of robbery, was a young man, apparently about eighteen or nineteen years of age, and had been a chimney-sweeper. It needed but a few questions on my part, to ascertain the nature of the case; it was that malignant disease known to the faculty by the name of chimney-sweeper's cancer, and here it was exhibited in its most aggravated character, just admitting of a chance that immediate operation might save the life of the sufferer; but to this, when proposed to him, he offered an obstinate resistance, with the same spirit of resolute endurance which had prompted him to conceal all symptoms of the disease, until it had arisen to a height all but incurable. Neither threats nor entreaties could overcome his sullen refusal. Approaching dissolution had no terrors for him, and he seemed to take a pleasure in baffling every effort of those who wished to save him, as if rejoicing in the only species of freewill it was in his power to exercise. He uttered no complaint; the attenuated state to which he was reduced, alone betrayed the horrible progress of disease. There was something in his very stubbornness which, contrary to its usual effect upon me, commanded my respect, while the aspect of so much misery, garbed though it was in debasement and crime, called forth the deepest compassion. I soon became convinced that nothing could be done but by gentle measures. If the poor wretch had any of the better feelings pertaining to our nature, lurking beneath the mass of vice with which I supposed his soul encrusted, it must be through that alone that we should obtain any influence

over him. The event proved that I was right. I requested that he might be given over entirely to my management, and my representations at length drew from him an assent; not given direct to myself, but reluctantly, and, as it were, with the shame of the vanquished, imparted to the nurse who had charge of that ward. If the doctor had set his mind upon it, he might e'en do as he liked, he was a good gemman, and did not think any shame in talking to a poor sweep; for himself, it mattered not whether he lived or died, nor did he care the value of a brass farthing about pain; it was not that—by —— it was not!

No time was to be lost; on the following day the operation was performed. My patient evinced throughout, the same unshrinking courage with which he had previously borne the ravages of the disease. I had entertained many fears as to the result, so malignant was the state that the malady, from neglect, or rather concealment, had attained; but in due process of time the symptoms were so favourable, that a perfect cure might be reasonably expected. During my attendance upon this unhappy prisoner I learned—and the lesson might be an useful one to any man—that human nature may occasionally be found not all depraved, even where the aspect of things is the most unpromising. The poor creature was sensible of kindness—probably the first he had ever experienced from a fellow being—and so far as he could show gratitude, circumstanced as he was, it was manifested. Of a mood dejected, even gloomy, his haggard features would lighten up with a gleam of satisfaction when I approached his bed, and a tear would sometimes glitter in his sunken, melancholy eye. Docile and unrepining, he now strictly conformed to every thing required of him, only still spending the long dull hours without speaking, apparently in a sort of apathetic dream; but it was not so, there was more of thought, of mind, in his reverie than a common observer would have given him credit for. He had received during his illness, some visits from a clergyman, whose exemplary life is a sufficient guarantee for his good intentions, but whose zeal rather outstripped his judgment. I saw my patient a few minutes after one of these visitations.

"Mr. —— is a good man, sir," he said to me; "and talks very nicely. I know that I am a great sinner, or I should not have been here. I have been thinking over many bad things I have done in my life; but Lord bless you, if Mr. —— knew all, he would not lay so much blame to me. How could I have godliness like to *he*, that has *book-larnen?* Let him be a sweep, and me a parson; let him have my hardships, and me his house, with a warm bed to lie in, and a good dinner every day of the week, and nothing to do but to *larn vartue*, and see who'd be the sinner then. Ah, sir, if Mr. —— knew what a life I have had of it, and what lives the like of us lead!"

This was uttered with a deep sigh, and followed by a profound pause, as if the poor man felt the impossibility of expressing by words the extent of his misery, and that of his unfortunate caste. This silence I afterwards succeeded in breaking, and drew from him, not always in the language in which I shall give it, but in a slang vocabulary, of which I have introduced only occasional characteristic samples, the following particulars of his dismal history.

"The first thing I can recollect, perhaps I was about from four to five, but I have nothing certain to go by, was walking with my mother in a narrow street, somewhere near a big church—I have often thought it must have been St. Martin's. The weather was cold, and the lamps in the streets and shops were lighting up. My mother was crying, and I cried too, because I was cold and hungry, and because she cried. Well, presently, she bid me sit down on a door step, and gave me an apple to eat, and told me to be a good boy, and not cry; that she was going a little farther on, and would come back again soon with some bread she was going to buy in a shop. I recollect it well; how should I forget the last words I ever heard my mother speak, almost the last kind words I was to hear in my life! So I sat quiet, and left off crying, and was still eating my apple, when a man with an empty sack across his shoulder, came up to the step where I was a sitting. He was all over soot from head to foot, but as I was used to see the like of *he*, so he did not fright me. He asked me what I sat there for, and when I said I was waiting for my mammy, he said if I would go with him, I should have as many apples as I could eat, and bread and butter with sugar on it, and that mammy knew where he lived, and would come for me. He took me by the hand, and away we went. To a little chap like me, a small bit of road might seem vast, so the distance we went might be no great matters; but our way that night was not up the same street I had been used to go with my mother, which made it seem still longer, and I was tired before we reached the man's home, which was up a court. How many times since have I walked up that court with legs far more weary, and a sadder heart, than I carried there on that first night! In the house where he took me, I saw a set of little fellows, some of them not much bigger than myself, and all black like the man, who I soon found was their master; some were eating their bit of supper, others, who had done theirs, were out in a slip of a yard at the back, sifting soot, which I then thought a nasty sort of play, far worse than making dust pies in the street, which my mother had often scolded me for. I was not long of learning, that what they were about was any thing but pastime.

"It began to grow late, my mother did not come for me, as the man had promised, nor had I any apples, or sugar-bread and butter given me, only a little dry bun, so I cried again more bitterly than ever, and made for the door, that I might go home, but the cruel man who had enticed me, whisked me back into the room, and fetching me a cuff on the side of the head, said I was a d——d ill-conditioned whelp, and bade me leave off howling. I crept, sobbing, into a corner, and durst not move again till a great fat woman, who was the master's wife, took me down into a cellar, where some of the lesser boys were stretched out asleep, and showing me a bundle of dirty sacks upon the floor, told me I

must lay there till morning, and mind not to make a noise and a crying in the night, or the man would come and whip me. Hungry and weary, I did as I was bid; I laid my head on the soot-bags, and for many years after, sir, *them* was my only bed.

"I was waked in the morning by something stirring near me. I opened my eyes, and was frightened to find all strange about me, and to see two little boys a pulling at the sacks I was lying on; all but them two had gone away long afore. Again I fell to crying for my mammy, which brought the fat woman down stairs to scold me, and drive me up into daylight. She told me I was so naughty, my mammy would have nothing more to do with me, so I need not cry for her; but if I would promise to be good, she would give me some breakfast. Ah, sir! it was but too true, I never heard of my mother again. I have often, when I grew older, thought of this, and wondered if indeed my parent did give me up to so much misery, or if she went back to the door step on that unlucky night, thinking to find me there. I have heard of parents selling their children to the trade for a few shillings; my mother was indeed ill to do in the world, but though she would beat me sometimes, and call me names, she used at others to set me on her knee, and stroke my head, and kiss me. I do not like to think that she was so *unnat'ral*.

"By degrees I got used to the people I was to live with and their ways; I went with the boys in the yard, and rolled in the soot; and when, on the third day, the master told me he would make a man of me, and teach me to climb like Bill and Tom and the rest of them, poor witless child that I was, I thought it would be a fine thing, and was as pleased as if I had been told I should ride in a coach. He dressed me in a little flannel jacket, a pair of leather breeches, and let me keep on my old shoes; then I and another of us not much bigger followed the master to a house hard by, where I was to try climbing for the first time.

"I was keen enough of beginning; I crept in as well as another at the mouth of the chimney, but when they told me I must scramble up, holding by my hands and knees, to the top, and when the soot began to shower down into my eyes and almost choked me, I hallooed out that I could not go up any farther. I recollect the master damned me, and said it was the way with all at first, but he'd soon cure me, and make as good a hand of me as the best on 'em. 'Hark ye, Sam,' says he, 'my little lad, if you get up to the top, there's a plum bun and a crown-piece in the chimney-pot for *he* as gets it; if you don't, Jem will.' To have a whole crown-piece of my own, to buy apples, or what I liked with, and a plum-cake too, besides the fear of Jem's getting them, for he was close behind me, made me do what nothing else would, so I got up somehow or other, and all of a hurry to get the bun and the money, I shoved the chimney-pot, which I warrant was loose and rotten, as I've seen a many since, down into the yard. I set up a loud cry, for I thought my cake and crown-piece had gone, and the master and the rest of 'em below, fancied that I had fallen with it, a thing no ways uncommon, since the very jacket I had upon my back had belonged to a boy, called Dick Struthers, who was smashed to pieces, with a rotten chimney-pot he was a sweeping, which fell with him in Bateman's Buildings. I often heard Jem, who was *partikilar* kind with him, tell of it, but I was too young to mind it then. The master cried out, with a great oath, 'Why Dick's jacket has the luck on't.'

"When I came down I ran into the yard, thinking to find my cake and money, but there was nothing but the broken pieces of the pot; so they all set up a great laugh at my expense; and the master kicked me and cuffed me, for the mischief I had done, and I tumbled over the broken pot, which cut me on the brow till the blood ran down into my eye, but nobody cared for that, they only laughed the more; and when I cried and rubbed, with my black fingers, my eyes, which were smarting with the soot that had got into them, and when I felt at my poor sore knees and elbows, which were all grazed and bleeding, they said I must go home to my mammy; but I had no home, no mother, which they knew well enough, so they jeered me. Ah, sir! it ayn't no use to tire you with the like o' this, it was only the beginning of the hard life I have led, for we poor sweeps have no pleasure and no holiday, like other children, barring the May week, which makes Tom-noodles of the most of us: howsomever, I got used to it, and went on so till I was growñ too big to climb, and, bad as it was, I will say this, I've seen them as has fared worse."

It may be well here to mention, that most of the details which follow were given by the prisoner in answer to various interrogations put to him by myself, which are omitted, in order that the chimney-sweeper's narrative may proceed uninterruptedly.

"The soreness of my knees was long a great trouble to me. I never went up a chimney for many a day, that I did not come down with the blood streaming down my legs and arms, and not only with the skin off, but pieces of the flesh knocked out; I have the scars yet, but still up I must go with the sores all open, and running like an ulcer. The master would not hear of our using pads, which some of the trade allow; he said that a boy was never fit for nothing until the places got hardened with practice, and though I could have hollaed with the pain, I durst not for my life, for fear of the *hiding* I should get from him. I'm crippled, and *knapped-kneed:* did you never notice, sir, there's scarce a sweep to be seen, who is not stiff o' the knee joint, owing to the soreness which never goes off, till the knee becomes in a manner hard and stiffened; then we get lamed often with *parging*, sitting o' this way all a twist, stopping up holes to keep the smoke from coming out, with our legs bent under us. I've *parged* many a time till I couldn't straighten myself properly for hours after, and had cramps at night that were like as if a body was braying my legs with a mallet. A many little fellows, *partic'lar* if they're weakly children in the back or joints, grow lame and crooked. from carrying loads of soot, that would break the back of a jackass.

"The master was a hard man with his boys;

ne worked us early and late, and nothing would satisfy him. Often and often have I gone out by four or five o'clock of a cold winter's morning, aye earlier than that, when the fog was so thick I could not see my way, or the pavement all *slipping* with ice, and my chilblains, which the main of us always had in cold weather, paining me so I could scarce walk. I recollect once, it was *partic'lar* hard on me—master had an order for one of his boys to go and sweep a chimney in ——— square. It was to be done early, between four and five, they said, that the servants might have time after to get their work out of hand before the family was up, and because there was to be a grand dinner that day. Well, master sent me; he was bidden go himself to see all rightly done, but as it was the Christmas week,* when the trade is always the busiest, he would not go, but charged me to be *partic'lar*, so I was, and you'll hear the upshot on't. It struck the half hour by ——— clock just after I rang at the door bell the first time; so I waited, thinking as they had given us such strict orders to be early, that I should soon be let in. I never *feel'd* a rawer morning; the icicles were hanging every where, and my feet froze to the step as I stood, for my shoes were so bad they were almost the same as nothing. As nobody answered, I rang again, something harder, and then continued to wait, shivering, and so numb I could hardly keep myself from falling. The cold frosty fog hurt my eyes dreadfully, for they were all along, from the very first, as sore as any thing could be, with the soot getting in, and had a constant running at the corners. It was so dim, and the fog so thick, I could not see the figures on the clock-face, but I'm sure it was full ten minutes that I kept ringing, till I began to think every body in the house must be dead. I sat down upon the door-step, for I couldn't stand no longer, my feet had no feeling in them, and tried to wrap myself in the bit of cloth we carry with us, and twisted my back about my naked legs, and so I went on, sometimes giving a pull at the bell, though I thought it was to no purpose, till the clock struck five. Well, then, I rang the last time, and presently the bolts were drawn, and the lock turned, and the door opened, but I did not think to have been d——d to hell, as I was, for a good-for-nothing lazy scamp, and threatened with my master's being told of my insolence for not coming as I was ordered; but this was what I got from the footman, who *ought* to have been up to let me in, but who slept through all my ringing, and now laid the blame on me, because he knew that folks would be readier to blame the poor friendless sweep than the saucy *sarving*-man. I told him that I had been ringing there for the last half hour, till I was nearly froze to death. He said it was a swinging lie, and it was a pity I had not been quite froze, for what mattered the likes of me. Well, I said nothing, for I saw that it wouldn't be of no use, since my gentleman was in such a towering passion, and determined that the fault should fall on me. When I got into the kitchen matters did not mend, nothing was ready for me to begin on, so another quarter of an hour full was lost. At last I got done, but, before all was finished and the soot cleaned away and me paid, the gentleman of the house, who was, they said, an uneasy body, and uncommon strict that them as *did* for him should be punctual to a minute, came down stairs in his dressing-gown, and much as the footman had *jawed* it, he beat him, giving it to them right and left, and sure enough Mr. *varlet*, or whatever he called himself, spoke smooth as could be then, for he knew his swagger would not go down with his master. He said that him and the maids had all been up full an hour a waiting for the lazy monkey of a sweep, and that it would only be a just punishment to let the master chimney-sweeper know what an idle vagabond was eating his bread and ruining his custom. So the gentleman's anger all turned upon me; he wouldn't hear me speak a word in my own defence, but refused to pay me, telling me that my master should hear of my misconduct, and that he would pay *him*. Well, I took up my brush and sack in silence, and thought, as I walked off with them, how hard it was to be abused as I had been for other folks' ill-doings; and somehow or other it came all of a sudden into my head to wonder why I had ever been born, and I wished that my life was over.

"I had that morning as many as twenty jobs on hand, so that I did not get home till near ten o'clock, and then as soon as I had eaten something I went out again with the journeyman, and *did* for him till between four and five in the evening. Before I had got through all, and we set out home, I was so tired out, I could scarcely crawl under the load I had to carry, and I had a misgiving of what was a brewing for me when I did get home. The *gemmen* had been as good as his word; my master had been sent to and told of my insolence and neglect, as they were pleased to call it. He was in one of his worst humours, but I was almost too much worn out to mind any thing that might happen. 'So,' says he, 'you've been *slying* this morning, you—[we forbear to insert the epithet,] have you?' I told him the plain truth, how I had been there in proper time, but could not get in. He knew them sort of gentry well enough, but I believe it was all along of his ill-humour—he snatched my brush from my hand, and beat me about the head all round the yard, kicking me at the same time, till I was so spent with trying to get out of his way, and so stunned and dizzy with the blows, that I sunk down among the bags of soot

* The Christmas week, that season of general festivity and indulgence, especially to the young, who, returning to the homes of their fond parents, revel in all the luxuries and privileges of holiday-time, augments tenfold the misery and toil of the hapless chimney-sweeper. It is the custom in the metropolis to leave all chimneys unswept until the Christmas week, that they may be the better prepared, after so recent a cleansing, for the hard duty they are to perform during that time of feasting and blazing hearths. Who troubles his head with the thought that this unreasonable practice inflicts the cruelest suffering upon so degraded a being as a sooty-faced, blear-eyed, deformed climbing boy? Selfish gratification must be obtained at whatever cost to others.

the boys was sifting, and them screening me, he gave over.

"That was a *black* day with us. Master had scarce turned his back on me, when Jacob Noaks, one of our journeymen, came home all of a flurry with the news about Jem. Poor Jem! he was as sharp a lad as ever took brush in hand; nothing could match him for climbing, and as merry a fellow as is to be found in the *profession*. Poor Jem! I think I see him now, dressed out as a lady, as he always liked to be, in the May week, with a fine lace cap on his head and a fan in his hand. Well, it happened o' this manner. He had been sent about eleven in the morning to —— street in the Strand, where there was a foul vent wanted sweeping. About two in the afternoon, Jem not coming back afore, as Jacob had expected, to go out with him, upon his, Jacob's, account, he goes to the house in the Strand. This ay'n't Jacob's story, mind ye, but came out afterwards by them as was present; so when he gets to the house he finds a bricklayer there, just a-going to make a hole in the wall right into that chimney. So says he, 'What are you *a'ter?*' And the people of the house tells him, 'Why there's your boy went up between eleven and twelve this morning, and he ayn't come down yet, so we think he has stuck; we hear a noise, but we can't rightly make out what he says, only he seems to be in pain and trouble; so the mason's here going to set him at liberty.' 'Oh d—— him,' says Jacob, 'I suppose he's taken a lazy fit. I've seen scores of them that would lie sulking in the flues all day long if one would let 'em, and many's the boy I've haul'd down by the heels that wouldn't have stirred an inch, either up or down if I had'nt made him, and many's the pail of water I've heaved down from the top right upon them. Leave it to me, and I'll have him down in no time. Why it would be all over the town that our boys can't sweep a foul vent without a bricklayer at their heels.' 'Nay,' said the bricklayer, 'but it a'n't likely that *ere* lad would lie there sulking, as you say, more than two hours, if he could come down. We'd better just move a brick or so, and set him at liberty; one does not know what may come of it; my life on't the poor chap's sticking, and can't come out.' 'O yes, to be sure, Mr. ——,' says the woman of the house, who just then came to them, '*you* will be for taking him out that way of course, not caring a fig about spoiling my walls. Humph! it's more than the obstinate monkey's worth, that it is; but I say let the man have his own way, they know best how to manage their own boys.' 'Ay, ay, ma'am,' says Jacob, 'I'll have him out in a jiffy. Holla, you there, what's keeping you?' shouts he to poor Jem, who they all heard groaning in the chimney;—'what are you about, I say?' 'I'm stuck —I can't come down,' Jem answers. 'What you've got your arms down alongside of you, ha'n't you, and be d——d to you. It's all the boy's carelessness, ma'am,' says he to the mistress; 'he's got himself jammed wilh his arms alongside of him, but he knows how to right himself if he will.' He then called to Jem again, bidding him come down, sometimes with threats and swearing, sometimes persuading like, but it would not do; so says he, 'I'll lay a brass farthing to a crown-piece the young scamp's sulking after all.' So he hollows to him again at the top of his throat, 'If you don't come down, I'll get a barrel of gunpowder, and blow you and the vent to the devil.' 'I'll tell you what,' says the bricklayer, 'it's no use my stopping here, since we a'n't to break into the flue, but you'd better get another of your boys to go up *a'ter* him, for it's my opinion something more than sulking's a-keeping him.'

"Jacob's an obstinate fellow, never liking to do any man's bidding but his own; but they all cried out, master and mistress and all, to get another boy to go up after Jem; so he got one and a set of ropes, and he took one on 'em and gave an end to the boy, and says he, 'Go you up the chimney, and when you get at him, fasten the rope round his foot.' So he did, and Bill came down, and they both pulled as strong as they could, till the rope broke. Well, Bill went up again with another rope, and fastened it round both ankles, and the other end they knotted fast to an iron bar, the bricklayer had brought with him, and used it as a lever, but after about ten minutes that rope broke too. While they were a pulling at it, poor Jem was heard to cry out, 'Oh God! oh God!' as if the very life were being pulled out of him; so the master of the house and the bricklayer both said it was high time to fall to work, and they broke through into the chimney a largish hole, and Jacob put his head in, and called again to Jem, 'Do you hear, sir?' but got no answer, so then he began to be frightened, and sure enough he had cause, for poor Jem was got out, (after having been up in all near four hours,) quite dead! His shirt was torn to tatters, one arm and hand was all crushed and bloody, and his right hip dislocated. All this, you mind, came out before the coroner, just as I have told it.

"Poor Jem! he was long missed amongst us. I was never sorrier for nobody, except the little lass that died, it might be, a year after *he*, and she and me drew together from the first. She was a desolate *creatur*, for her stepmother, our master's wife, treated her worse than a *nigger*. Little Nan, or as she was mostly called by the boys Jacky, was a child of her first husband by his first wife, so belonged, as one might say, to nobody. The mistress she could never please, and the master swore that she should not eat the bread of idleness in his house; so, *female* as she was, he taught her to climb. She was uncommon little of her age, which made her handy for small flues, such as ovens and coppers, and the like, which is often less than nine inches square, and she had far more wit and sense than the boys that was her size. Often and often have Nan and I lain side by side at night upon the soot we had gathered in the day, with our sacks over us to cover us from the cold, for she was a shivery *creatur* still; and many's the time I've sifted her share of the soot, when she was tired with her day's work. She had always a bad cough when the cold set in; and I used to think the soot getting down her throat made it worse.

They'd say it was a hard word to use, but I always shall fancy that climbing, which was little fit for *she*, was the death of her. She fell into a waste as they called it, and before she died was nothing but skin and bone. She used to creep into a nook when they'd let her be quiet, and lie there; and if any thing would please her it was when I went slily up to her with an orange in my hand, or an apple, which I used to buy with the few pence that were given me, instead of playing at chuck-farthing with the boys. Poor thing! she had a constant dryness, and them things did her the most good. 'Sam,' she used to say, 'when I get well again, you and me'll run away, and hide in some place a great way off, where nobody sha'n't find us, for I can't climb no more, and daddy'll beat me if I don't.' She gave me a half-penny with a hole in it to keep for her sake, and that very night she died."

Here the prisoner paused—the recollection of this companion in toil and privation, this young sister in affliction, called up emotions far more powerful than I had yet seen him exhibit. He turned away his head to hide a starting tear, which he stealthily wiped with the back of his emaciated hand.

"It was about that time," continued he, "I got the worst burned that ever I did while I was in the trade, though I have been up scores of chimneys, where I have been burnt more or less. Master was sent for one day, it might be five, or half after, to send a journeyman and one of his boys to the ——— tavern, because a chimney had took fire, and they were a-cooking a great dinner, and every thing was at sixes and sevens, and the kitchen folk half crazy. Master went himself, and took we with him, much against my will, for I know'd what it was to go up a chimney all a-blaze, and if I did not get my arms and legs burnt, to have a bucket of water heaved down upon me from the top, which is the way they often take to keep the flames down, and I almost choked with the steam and smother. When we got there I never saw such a taking as the folk was in; there was a kettle of soup standing in one place, a fish-pan in another, a joint of meat in another, and fine sauces and *vegables* all covered thick with the soot that had fallen into them, and a great lord or parliament man expected, and all the other quality that was a-giving him the dinner, and nothing like to be ready. Master put his head up, and says he, 'I think it 'll do. Sam can get up fast enough.' 'Yes,' cried the cook, a big fellow, that could scarce walk across the floor for fat, 'why I'd go up myself for five shillings, which you'll get for the job, you know,' turning to the master. 'Would ye?' says he; 'then by God I'd like to give ye five shillings out of my own pocket. No, no, I a'n't such a born idiot as to let my boys stand fire for a matter of five shillings. Why didn't ye have it done in proper time, when it wanted sweeping? It's your own fault that it's on fire at all—all along of your stinginess; but I've a great mind to give information at the fire-office. Come, Sam, I a'n't a-going to stand *argufying* here. I wouldn't have such a sin on my conscience as to let one of my boys go up a burning chimney for a beggarly crown-piece; why it's against the law of the land.* Half a guinea, *gemmen*, or we budge.'

"Well, they agreed as to terms; but I refused to go up. I saw what it was like to turn out: never was a fouler chimney, or one worse a-fire. Then they all fell on me, and master dragged me and kicked me, and almost thrust me up, though a deal of fire, far too much, was in the grate; and I said so, but they told me there had been trouble enough already. The very first step I took burned me, but up I went, while the red hot flakes kept falling quite thick, and the heat of the chimney was scorching; I never felt nothing so dreadful. Look, sir, (here the prisoner showed several scars upon his legs,) these I got there, and I shall carry them with me to the grave. I roared out with the pain, and told them I couldn't go no farther, and just then a great shower of soot fell down into the grate, and the fire that was in it soon set it all in a blaze, so then they were forced to let me come down, and other means was taken to get it extinguished; I a'n't sure but the people of one of the fire offices got a notion of it, and so came. My burns were so bad I minded nothing else. They put rags dipped in oil upon them, and I limped home, but they was shocking painful for more than a fortnight, and when the fire was out they turned into open sores.

"I went on in this way month after month, and year after year, until I was fifteen—so at least I supposed. I had stuck so often, and given so much trouble during the last year, that the master said I mustn't climb no more, except upon a pinch, so I became what is called in the trade a master-boy; that is, I used to go out with a younger boy, and help him what I could, and see that he did his work clean. I was stunted, and little of my years, or I should have given over climbing sooner. This was a change for the better; but I say it with shame, I sometimes abused it. Knowing what I had done myself, and what I had borne, I did not see why others should fare better, and I was spiteful and harsh with them as was under

* There is a positive prohibition of this practice, and an enactment of penalties in one of the acts of parliament, but that it is continually infringed, the fact, that master chimney-sweepers are in the habit of detaining one or more of their boys at home on Sundays to be in readiness in case of a chimney being on fire, sufficiently proves. The subjoined paragraph, taken from the Evening Mail of Jan. 20, 1834, also corroborates the charge.

"*Death by Burning.*—Last week one of those melancholy cases occurred which have been unfortunately too common in the history of chimney-sweeping. A little boy had ascended a chimney, though the fire was not removed from the grate below, but merely covered with a girdle, which it was supposed would be a sufficient protection to the poor child. The soot fell down in great quantities on the girdle, and in a little time it ignited. In spite of every effort the blaze communicated to the chimney, which was soon in one mass of flame, whilst the poor child was pent up in the midst of it. After a considerable time he succeeded in getting down, but when he did so, he was in a frightful condition, *the flesh being literally roasted on his bones*, though he was still living. He was speedily conveyed to the hospital, where he lingered some time in a state of excruciating agony."—*Belfast News Letter.*

me—I say it with shame and sorrow—too often. Well, I got out of favour with master; he would have it that I cheated him of some money I had to receive for him, but if it is the last word I have to speak, I never took a farthing that was his, and I know he wanted to rid himself of me, for he had more than enough of hands about that time; so after I had served him as master-boy about a year and a half, he cursed me for a thief, bade me go about my business, and never darken his doors again.

"What was I to do? I was turned out into the streets with only six shillings and sixpence in my pocket: all I had in the world, all I had been able to save out of the money got at chance times at houses we swept for. I used to have an odd sixpence given now and then, when I had been climbing—for gentry, tender of heart, often pities the poor little sweep—but the journeymen always took from us what they chose, and used to win the rest from us at gambling, when they cheated, but we durst not complain; and sometimes we gave them halfpence to bribe them not to tell the master when we did amiss, or neglected to sift the soot. Then for some months past, sir, I know it was a bad thing, but I had taken too much to liquor. I felt the cancer a-coming on, and had done earlier than that, though I did not know what it was; and a dram always dulled the pain, I thought. Well, there was I, turned into the streets with them few shillings, and the poor rags I had upon my back. Of any other trade I knew no more than the babe unborn. It was in the summer time, and I did better than if it had been winter, lying out at some street-end where there was new building going on, and where there was no pavement, and I might sleep upon the rubbish unmolested; but my six shillings and sixpence did not last long. I tried in many ways to earn an honest penny: but my sooty clothes, and my unhandiness, and every thing, was against me, and wherever I applied for a job they were full of hands still, and did not want an interloper like me. So I says to myself, I must either starve, or beg, or steal, no matter which, for I'd better rot in a jail than die like a mangy dog in the streets.

"Often have I stood longing at the shop-doors of the bakers, or at the windows of the cooks' shops, with hunger eating away my very heart; but though hundreds went away with full hands and full bellies, no morsel came to me, and I have many a time picked up a mouldy crust, or a bone, or a small matter of cold *vegables*, that had been thrown into the kennel, and eaten it as greedily as a dog. I sometimes asked charity, but few people gave *me* their pence, for neither my way of asking, nor my look was taking, like beggars. I heard the same answer from them all, 'Go and work.' Ah, sir, they did not know that the very sweepers of the crossings would not let me come amongst them. I belonged to none but my own trade, and they had thrust me out.

"I recollect one day that I was on the look out for any thing that might turn up for me, in Covent Garden market, a lady was buying something at one of the stalls. She was talking very angrily, and beating about the bush to get something of the *vegable*-woman lower than was asked, and so she dropped by chance something out of her purse among the litter. I saw it fall, but she did not. It was a sovereign. I waited till she and the woman had done squabbling, and she had paid, and was putting her purse into her pocket. 'Ma'am,' says I, 'you've lost something out of your purse, ha'n't ye?' and I held the sovereign *a-tween* my thumb and finger. 'Yes,' says she, 'that *ere* sovereign's mine you've just picked up,' and then she fell to counting her money in a flurry, looking at me all the while, as if she thought I'd gotten more than that. So says I, 'Ma'am, if I'd been the rogue you're taking me for, you would not have got your sovereign back at all, but I hope you'll consider, and give a trifle.' 'Give you a trifle, indeed!' says she, 'for being commonly honest! I wonder you ay'n't ashamed to ask it.' 'Well, ma'am,' says I; 'if you was in want like me, mayhap you'd not be ashamed to ask a trifle from them as has plenty.' 'Go and work,' says she. 'If I *had* been at work,' says I, 'you'd have lost your sovereign; but I can't get no work.' 'That's an old story,' says she; 'nobody can't get no work that's too lazy to do it. You've no business to be lounging about the streets in this way; it's for no good, I'll warrant.' 'Nor you neither, ma'am,' says I, for I was ill vexed. 'What an insolent fellow!' she cried, in a passion. 'I've a great mind to give information of him at Bow Street.' Well, thinks I, as I turned on my heel, if this is all I get for being honest, I might as well turn rogue. That bit of gold might have been in my pocket now, and nobody no wiser; but I must starve, while the likes of *she* has more than enough.

"Times did not mend with me, sir, but grew worse and worse, and the very clothes on my back were getting so ragged I could scarce keep them together. I was a disgrace to be seen in a decent street. I often turned it in my mind, if I should not try to get into a hospital, on account of my complaint; but I had a dislike from the first to the operation, so I fought on as well as I could, picking up a few pence here and there in charity. I never shall forget one as relieved me about that time. I was stopping a few minutes near a coach-stand, in Oxford Road, when one of 'em was called, and presently an old lady came out of a shop, very feeble like, and leaning on a young miss's arm, who helped her as tenderly as if she had been an infant. So I goes up to the coach just as the waterman was putting up the step, and asked a trifle of them as was inside. 'Be off,' says the waterman, 'is that your manners, to trouble quality?' 'O grandmamma!' says the sweet young miss, 'I must give that poor man something, he seems very poor.' 'Do, my dear,' says the old 'un; 'but remember, he may be a common beggar.' So she puts the beautifullest hand into a little purse, and pulls out a shilling, and gives it me. 'Stay,' says she, 'you *do* look *very* poor, here's another.' May God Almighty bless her for ever, and for evermore!

"And now, sir," proceeded the prisoner, after having given a few moments to a silent but grateful remembrance of the fair and benevolent creature who had relieved his necessities, "I am going

to tell you the whole truth; yes, all as it happened about the great sin I committed; I will not hide nothing, if it be the last word I have to speak—it will be the truth. My poor rags had got so bad I was ashamed even to beg, for I couldn't look nobody in the face; so one evening when it was beginning to be dusk, I was walking up Drury Lane; two gentlemen was meeting, both with umbrellas up, which made them jostle, and one of the umbrellas caught in something that was hanging outside of a salesman's door, and pulled it down: it was all the work of the moment. Well, it was a blue cloth jacket that fell, and I saw it, and the devil surely tempted me; for what did I do but click it up and off with it before any body saw, except a boy standing at the shop-door, who was so surprised at what I did, that he stood stock still and stared at me; and then when he did come to his senses he runs in and gives the alarm, but I was off by that time clean out of sight. I felt very ill troubled in my mind, and fancied, as I hurried along the streets, that every body behind was a coming after me; and if a body looked hard at me, I was sure they knew more than I liked, and I did not feel easy till I got into the fields quite out, Paddington way, and then I sat down in a nook and began to look at the jacket I had stolen. It was not very much worn, only in places, and soiled and greasy in spots, and was trimmed round the collar and down the fronts with black silk braid. This made it too noticeable for me to wear, so I set myself to work to rip it all off as fast as I could. While I was a-doing this I felt a tap on my shoulder from behind. I started, and a cold shiver ran through me just as if I had felt the hangman's rope put about my neck. I turned my head, and there were two men standing close beside me, 'What!' says he as tapped me, 'don't ye know me, Sam?' I then looked full at him, and sure enough it was Joe Pringle, who had been a master-boy a little afore myself, but who had been turned off as I had been, but had not gone quite so empty handed, having carried some of the mistress's money with him. 'Who'd have thought of finding you here, Sam?' He told me that he saw that times had gone against me, he saw it in my face; but says he, with a nod and a laugh, pointing to what I was about, 'you've *larned* the way I see to mend your fortune.' 'You're out there,' says I, with a wicked lie in my mouth to cover a still greater sin, 'this here jacket was given me by a *gemman*, so I'm ripping off the braid, which is unfit for the likes of me. 'Oh!' says he, with a wink at the other chap, 'I'm glad to hear that the quality are grown so generous all of a sudden, ar'n't you, Bob?' and they both laughed; 'but, Sam, you want a pair of pantaloons to match the jacket, and then I guess you'd be a proper *swell*.'

"It's useless to tell over again to you, sir, their bad talk. By degrees they let me into a little of their goings on, said I was a pigeon-livered fellow to be starving as I told them I was, while there were ways and means for a man's helping himself. They were both of them well fed and well dressed; I could not but compare them with myself; I had never heard much talked about sinfulness and the like, and I began to think that to take a small matter from them as had more than enough, was, as they said, quite *nat'ral*. We all three went and got something to drink together, and then they persuaded me, making me first swear not to 'peach, to go with them to a place where some more of their *kiddies* was used to meet. Well, sir, I went; they plied me with liquor, but drunk as I was, my flesh *creeped* on my bones to hear what they and them said, as I found there was a-plotting. It was nothing less than housebreaking, and was to be done on the next night. Joe had joined their gang a matter of two years afore, with Bob Hockley, another of our trade. They were now both of them old stagers, quite hardened, and boasted of their cleverness in thievery. Well, it was too late for me now to be off; I had gone too far for that. I did not set much by my life, how should I? still the thought of what I was a-doing, and the job we were in hand with, made me mortal sick when I took the oath to be one of them.

"It was beginning to be morning before we broke up, and I reeled out into the street, for I was by that time main drunk. Well, I didn't get on far when the curb-stone at the corner tripped me up, and I fell. How long I had lain I can't justly say, when I heard somebody cry out, for I was beginning to come to myself, 'My eye, father, if there ay'n't the very chap as *nabbed* the gentleman's jacket, and if he bayn't lying in it in the kennel.' So I looked about me, and there stood two Jews, an old and a young un, with bags across their shoulders, both a-staring at me; and as I attempted to get up and make off, they seized hold of me, and called to a watch who was just a-going off his beat, and afore I well knew what had happened, or what was like to happen, they had hauled me through the streets and we were at the door of the police office. I was bewildered, but still I kept a sort of notion clear through it all that the stealing of an old jacket from a salesman's door was not a hanging matter, and that I could but go to prison. Think then, sir, what I felt when I found that the charge was far more serious?

"The magistrate began to put questions to me about the jacket, and how I came by it. I answered with the same story I had told Joe Pringle, and swore that I never saw the Jews before in my life, though I began to remember too well the face of the younker. Then he asked me if I knew of any money in the pocket of the jacket. I said there was none, for I forgot at the moment that Joe had lent me a sovereign to get some decenter clothes with, and that I had put it into the pocket of the jacket, because my breeches pocket was too worn and ragged to hold it. I said it hesitating, for the stern manner of the justice dashed me. They fell to examining the pockets closely, and found the sovereign; but this did not satisfy them, the pockets was both turned inside out one after another, and what, sir, do you think they found slipped through a small hole in the lining, right down from the pocket on the right side, so as to be out of sight? Never was the like seen before; what, sir, but a ten pound Bank of England note, all worn round the edges

where it had been folded. If I had been knocked down with a butcher's axe I could not have been more done up than I was at that moment, and just then comes another slap. Somebody cries out—it was one of the runners who had been handling the sovereign for some time—'Its a bad un! clear enough.' So thinks I it's all up with me now; and I hardened myself all at once, and wouldn't give no answer when they put it to me where I got it; I thought it would be a dirty trick to 'peach, though Joe had used me so shabbily, for it now came across me how he had advised me not to break the sovereign, or buy the things till about evening, when I was to give him back the change I got out of it. They made nothing out of me, but I stuck to it that I knew nothing of the note.

"Well, while this was a going on, up drives a hackney-coach, and out jumps a gentleman, followed by a servant girl. They had been fetched, I found, to swear to the note and jacket. The *gemman* claimed the jacket as soon as he *seed* it, and pointed out at once that the braid had been all ripped off, for there was the mark where it had been sewn; and the note he also claimed, for he said he recollected well having written his name in small at one corner on the back, when he received that and some others. This was his story. He had lodged for some months at No. —, Marchmont Street, Brunswick Square: recollected breaking a fifty pound Bank of England note into tens, which he put, as he always did, into his waistcoat pocket. Well, he went that day to make some purchase for a friend in the country, and having bought the article, he takes out one of the tens to pay the bill, when all at once he changed his mind; and as it was for a friend that he was a buying the things, he says to the shopman, 'I'll pay the bill when the articles are sent home.' So the man said it was quite right, and he put, as he believed, the note back again into the waistcoat pocket; and when the bill and the things comes home, he pays the man, as he thinks, out of the very same ten he had taken out afore, and thinks no more of the matter. Nor does he for weeks and weeks. So the jacket, he said, began to be the worse for the wear he gave it, for he liked rowing upon the river in a boat he and some other young chaps had got; and to make it worse, a fellow spills a lot of oil over it, but as he was about to cast it, he said he didn't so much care. So he gives it to the *sarvant* maid of the house to give to any poor body she had a fancy to relieve. Well, it might be a matter of two months in all since he broke the note, the fifty I mean, he began to cast up how the five tens had gone, and he couldn't clearly make out, for he had been paid some money since, which had gone too; but he began to think that one of those tens was a missing, and had never been spent by him. So he turned it in his mind, and all of a sudden it comes across him that he had not put that note back into his waistcoat pocket as he should have done, in the shop, but by mistake, or not thinking what he was about, had put it into the pocket of the jacket, for he then recollected having pulled at a large knot in the lining at the bottom, while his hand had hold of the note, and kept working at it till at last he pulled it quite out, so it was, you see, plain that the note had made its way, bit by bit, through the whole he had then picked. He looks to the waistcoats he used to wear with that jacket, but there was no hole in none of their pockets, so this made all clear that it was the jacket: but what was gone with it, that was next to be thought of. The *sarvant* girl was asked, and she confessed having made a penny of it by selling it to the clothes-man. So both of them goes to *he*, and then the whole comes out; it was the jacket as had been stolen that evening, barely an hour before they came. Sir, all this went hard against me," continued the prisoner, "still the bad sovereign, and the set I had leagued with that gave it me to pass, was the worst part of it, and I could say nothing about that. So I was *reg'larly* committed; and now, if it please God I live to get well, and stand my trial, it's like enough I may swing for that as I never was guilty of, or get sent out of the country, but, barring the gallows, nothing can be worse than the time I've had on it here, in no country whatever."

Thus did my poor patient conclude his melancholy narrative. It would be difficult, indeed, to imagine a lot more hopelessly wretched. From the cradle until the age of manhood not one solitary gleam of this world's prosperity had fallen across his path. In every sense the victim of circumstances, guilt in him was not the precursor of misery, bringing with it a just punishment, but its natural result. Misery had driven him to the commission of crime. This was a case for the interposition of mercy, and with pleasure I record that mercy was not withheld. Upon a representation being made of the peculiar circumstances attending it, in the proper quarter, punishment was rendered as light as it was consistent with justice, and when the poor penitent was finally released from prison, some humane persons stepped forward to rescue him, by a timely aid, from a repetition of the evils he had endured, and while administering pecuniary assistance, endeavoured to purify his mind from the moral taint long habits of degradation and neglect had engendered.

This, alas! is but one instance among many. With little variation, the story of this individual is the history of the fraternity to which he belonged, for it is a well-known fact, that the bands of pick-pockets and house-breakers infesting our populous cities, are constantly recruited from the ranks of chimney-sweepers out of employment. Outcasts unfit for every occupation, excepting that which at a certain age invariably discards them—thrown, in a state of utter destitution, upon society to rob and steal, and finally to become the victims of those laws necessity has compelled them to violate.

A sheet of tissue paper is now exhibiting at Colton, Devon, measuring in length nearly two miles, and in breadth three feet six inches.—*English paper.*

From Loudon's Magazine of Natural History.

SOME ACCOUNT OF WALTON HALL,

THE SEAT OF CHARLES WATERTON, ESQ.

BY JAMES STUART MENTEATH, ESQ.

"The birds, . . .
Securely there they build, and there
Securely hatch their young."

Having often wished to visit Walton Hall, my wish was not long ago gratified. In consequence of an invitation from its kind-hearted owner, Mr. Waterton, I lately partook of his hospitality.

A few observations, hastily made, that occurred during my visit, may perhaps not be uninteresting to the readers of the *Magazine of Natural History*.

Walton Hall, a place that must, like Shelborne, be ever dear to the lover of ornithology, from the many attractive objects it presents in the way of that engaging pursuit, is situated in the parish of Sandal-Magna, about four miles from Wakefield, in the county of York. This district of country forms part of the great coal formation of Yorkshire. The soil usually overlaying the coal stratification is a clay, which, being of a stiff tenacious texture, is unfriendly to the better kinds of herbage, unless it be extensively drained, and well mixed with calcined limestone; but the clayey soil of the park of Walton rests immediately upon a thick stratum of the coal sandstone, which, mouldering down, yields it a due proportion of silicious earth, and makes it an excellent soil for the growth of the richer species of grasses. Trees of nearly all kinds flourish luxuriantly upon it. Among these, especially, the sweet Spanish chestnut, one of our most valuable trees, and in the present day far too little encouraged as forest timber, is this year profusely laden with fruit, not much inferior to that which is imported from the south of Europe.

The climate is equally favourable with the soil for the growth of the delicate kinds of vegetation. The vine grows on walls in the open air, and scarcely ever fails to bear each season tolerable grapes; this year there has been an abundant crop of as fine grapes as those raised under glass. The sweet-water and black Hamburgh vines are the only varieties that have been cultivated.

Walton Hall stands upon an island included in a small lake well stocked with fish, and has been the residence of the Watertons time out of mind. The present elegant Grecian mansion occupies the site of an ancient castellated house, which, encircled by water, and accessible only by a drawbridge, must have been, before the use of cannon, an impregnable strong-hold. During the civil wars of Cromwell and Charles I. this family, stanch adherents to the house of Stuart, defied Old Noll's vengeance, and gallantly kept its forces for some time at bay, though the venerable castle was reduced almost to a heap of ruins.

All that now remains to tell the tale of its former chivalry is an ivy-clad tower. This tower will be visited with no small interest and curiosity by the ornithologist. The days of rapine and violence having happily passed away, never, we hope, to return, this tower, by many ingenious devices and contrivances, has been made a commodious and undisturbed habitation for many a family of the feathered race. In a snug corner, thickly grown over with ivy, can be seen in any day of the year, a pair of common white owls taking their nap; and, at night, the ears of the admirer of such music may enjoy their nocturnal serenades.

——"From yonder ivy-mantled tower,
The moping owl does to the moon complain
Of such as, wandering near her secret bower,
Molest her ancient solitary reign."

During the breeding season, every movement of this industrious couple may be overlooked from the windows of the hall, as they flit to and fro to cater for their hungry young family. Though the owl finds in this tower an unmolested haunt, the pretty starling, the blackbird, the thrush, the wild duck, the wood pigeon, "sweet sequestered bird," and several others, reposing a confidence in the humane owner which is never abused, resort to this delightful retreat, either to enjoy the shelter or to bring up their young.

Leaving the venerable tower and its inhabitants to enjoy that quiet which nothing disturbs, let us enter the hospitable mansion. Its doors are ever open to the poorest visiter who craves a view of its rare and curious collection of objects of natural history; and nothing is allowed to be offered to any domestic who attends; in this Mr. Waterton sets a noble example to others, who suffer their servants to receive money.

Among the most choice of the rarities of this collection none are more interesting than the birds.

"Their plumage, neither dashing shower,
Nor blasts that shake the dripping bower,
Shall drench again or decompose;
But, screen'd from every storm that blows,
It boasts a splendour ever new,
Safe with"

the amiable wanderer, who, often at the hazard of his life, and suffering dangers by land and water, while exploring the wilds of South America, got them together.

It would be idle to attempt a description of these treasures. That delightful book, the *Wanderings*, which, like White's *Natural History of Selborne*, is in almost every hand, has already rendered the reader familiar with them all; and it has also acquainted us with many a hairbreadth escape of its author, that one ignorant of the daring resolute character of Mr. Waterton almost hesitates to believe: but those who have known him from his early youth to manhood can bear testimony to the strict veracity that has ever characterised him, and can recount not a few of his dangerous feats of prowess and of daring. Few at his time of life are his equals in climbing a rope or a tree: this activity of body and steadiness of nerve give him infinite advantage over most of our modern naturalists in examining the nests of many birds, placed in almost inaccessible situations, and in thereby ascertaining important facts relative to their habits and character.

During the present summer, no less than eleven times this dauntless naturalist was let down the frightful beetling precipice of Flamborough Head, whence

> "The fishermen, that walk upon the beach,
> Appear like mice; and yon tall anchoring bark,
> Diminish'd to the cock; her cock, a buoy
> Almost too small for sight;"

in order that he might collect the eggs of the guillemot, the puffin, and the cormorant, and likewise examine their mode of hatching and other habits. I was informed by Mr. Waterton, that he has ascertained several interesting circumstances touching these sea fowl, and it is to be hoped that he will send the results of these curious observations to the *Magazine of Natural History*, whose pages are already much indebted to his pen, for contributing some of the most delightfully composed and valuable papers for which it is distinguished; every one must regret he does not appear oftener as a contributor in it.

To return to the objects in the museum. The fierce ill-looking cayman or crocodile, on whose back Mr. Waterton fearlessly mounted, while his men were dragging the monster of the deep from his native element; the snake of gigantic size, which nearly cost the intrepid traveller his life, when he grappled with it; splendidly beautiful plumaged species of birds; and numerous other animals, are seen, preserved in such a manner as to give them an appearance of life, which one can see in no other museum of natural history. The art of preserving birds and animals is amply detailed in the *Wanderings*, a detail that I should recommend all bird stuffers and keepers of museums to study and follow; and, above all, I would call upon them to visit Walton Hall, and see the art carried to the highest perfection.

Among these interesting objects, none interests more the observer than the "nondescript" animal, concerning which so much has been affirmed only from conjecture. Under what genus it is to be classed, Mr. Waterton best knows; as yet he has not disclosed it: only one individual, we believe, has been intrusted with its habits, manners, and character.

On leaving the house, and its island, and its old ivied tower, we next enter upon the park. This piece of ground embraces almost 300 acres, surrounded by a high wall to keep out the poacher and other intruder. As no gun is ever fired within its precincts, that

> ——— "clamour of rooks, daws, and kites,
> The explosion of the levell'd tube excites,"

is never heard, nor any dog suffered to disturb its peace, it may easily be supposed it will be the favourite resort of many kinds of birds. Abounding in extensive woods and groves, and an ample space of water, every fowl can suit its own taste for a sheltering-place, for a haunt to build its nest, and rear its little brood; all those birds which elsewhere suffer from the gamekeeper's ruthless gun and trap, and from those whom the bird-stuffer employs to take them prisoners, receive protection within the walls of Walton Park. The owl is an especial favourite. Besides our slumbering two friends, whom we left in the old ivied tower in the island, eleven pairs of others occupy holes in the trees, and other comfortable dormitories, purposely contrived and fitted up for their dwelling-places. It is not a little curious to observe, that, if these "wanderers" of the night be offered an unmolested habitation, a pair are not long in finding it out, and taking possession of it. Mr. Waterton, from his careful and accurate examination of the habits of the owl, has clearly exculpated it from the false charges and foul calumnies, aspersing its spotless reputation, of being the destroyer of young pigeons and their eggs. The same friendly turn he has done for the starling. Both these birds often are indwellers of the pigeon cote, not from a preference of it to any other harbour, but because the destroying hand of man has left them scarce another spot to retire to, and to breed up their young.

Many other calumnies heaped upon others of the unoffending birds and animals, when closely scrutinised, will no doubt be found to rest on equally untenable grounds as those affecting the character of the poor owl and starling.

No animal is more wronged and sinned against, than the harmless but much slandered hedgehog. The rook equally comes in for his share: though we verily believe that both will be found most useful servants of man. The former has often been unjustly criminated by the gamekeeper, as being a depredator of his game; and by the farmer as milking his cow: the gardener, who joins in the hue and cry against this inoffensive animal, will find the hedgehog a valuable assistant in clearing his gardea of many insects, noxious to his plants and interests. The rook will be found equally useful to the husbandman, as the destroyer of the eggs, the worms or larvæ, and the caterpillars, of insects hurtful to his root and grain crops.

The rapacious birds also find a home in Walton Park, and a friend in its proprietor. The raven is now and then seen, though but rarely, as the hand of the enemy has fallen heavily upon this noble bird. Great flights of the carrion crow, every evening of the year, may be seen repairing from all directions for their roosting-place in its woods; magpies in equal numbers may likewise be seen taking up in them their sleeping-quarters; different varieties of hawks resort for the same purpose, and here their "aeries build."

Some might suppose, from the presence of so many birds of prey, that no game would be found in the park: it is quite the reverse; game abounds in it. In 1833, a wood pigeon built in a tree four feet below that of a magpie; both lived in the greatest harmony, hatched their eggs, and reared their young. Many similar instances of the rapacious birds and the others living here peaceably together might be adduced. The pheasant, the partridge, the woodcock, in their season, and the hare, are very numerous. Were it not for the shelter they meet within the walls of the park, Mr. Waterton believes tha: they would have been ere this rooted out of his district of country, as some species of birds, such as the larger variety of woodpecker and others, have been.

The pheasant receives every attention. Except for about four months of the year, he can provide himself with food by living upon the beech mast, the sweet chestnut, acorns, and other sorts of food. To provide him with winter provisions, Mr. Waterton plants a quarter of an acre with the thousand-headed cabbage, which is sown in April, and transplanted in June. This cabbage the pheasant eats voraciously in the winter time. Beans are preferred to any kind of grain, as being less pilfered by the smaller birds.

The grasshopper,

——— "saltitans per herbas,
Æstatis est chorista,"

whose sweet summer song was unceasingly heard, is now silent and scarce ever heard; this insect is a dainty repast of the pheasant.

Besides the hedgehog and the rook, the jay and the woodpecker come in for their share of proscription by the gamekeeper, to swell his murderous calendar to produce to his squire. Those last two birds, he affirms, on no just grounds, prey upon his game, by pilfering eggs, and by other acts of villany. It may be truly asserted of the beautiful woodpecker, that he is never seen to alight on a tree, unless it be in a state of decay: in that condition, the decayed wood abounding in insects, which are rapidly hastening its final decomposition, the woodpecker is attracted to it to prey upon them, and pick them out from the rotten wood. While a tree is sound, he is, we firmly believe, never seen to settle upon it.

Though the park has not been above two or three years quite enclosed by high walls, its complete privacy and security have attracted a small family of herons to form a colony on some of the aged oaks that overhang the lake: this year there have been four nests, all of which have been hatched, and some able-bodied youngsters have been sent out to swell the rising population of the heronry. The herons repay their kind landlord's assiduous care of them by destroying numbers of the water-rat, that infest all our waters, and even houses.

Being on the verge of that range of country which the nightingale visits in its annual migrations, Walton Park has generally the enjoyment of the mellifluous notes of one or two of these heavenly musicians, who, each

——— "in his evening bow'r,
Makes woodland echoes ring.
. . . . . .
And sings the drowsy day to rest."

When the season of the sere and yellow leaf draws on, the migratory birds, all knowing the moment when to forsake for a time their loved homes, flock into Walton Park, as a place of refuge after their long voyage. Among this assemblage are seen the woodcock, the fieldfare with its inseparable dear fellow traveller the redstart, and several others, emigrants from distant lands. Such are a few of the daily and occasional inhabitants of the woods and groves of Walton Park.

Notwithstanding several pairs of wood pigeons breed in the confines of the park, when winter sets in, immense numbers flock in to feed on the beech mast. These appear to have come from foreign countries.

If the land birds of all kinds and dispositions receive an invitation, and find a true friend in Mr. Waterton, no less so do the water birds; and that most beautiful of all the British birds, the kingfisher, which may be considered as the link which unites these two classes together.

The lake, abounding in a variety of fish, which we have described as encircling the hall of Walton, is the continual and occasional resort of many of the waterfowl. The wild duck, the widgeon, the teal, the coot, are seen on its pleasant waters in great numbers. The wild duck is a continual inhabitant of the lake. Several pairs hatch and bring up their young. But during the winter season great flocks of them migrating from the frozen north, as well as of the widgeon and of the teal, pass their inclement season here.

Though the wild ducks are seen on the waters during the daytime, at nightfall they repair to the sea-side, the shores of which are distant nearly a hundred miles, for their supper; and, by return of dawn, these active travellers, far surpassing, in speed of wing, the rapidly moving locomotive steam-engine, are seen on the bosom of the lake, quietly pruning and careening their plumage. The widgeon, feeding like geese on the grasses and aquatic plants, does not go so far for his nightly meal. If, however, he be undisturbed, he will feed during the daytime.

Not unfrequently the wild goose and the wild swan take up their abode in severe weather in the lake.

The seamew is also not an unfrequent visiter: the abundance of eels and other fish tempts the voracious cormorant to leave the stormy ocean, and pass his winter pleasantly at Walton. This bird usually travels with his mate; and it is interesting to observe the loving couple, an example of conjugal affection to human kind, fishing and diving in company. Tired with the sports of the deep, and finding an unmolested landing-place on the island, they often rest themselves from their labours on its pretty shores, within a gunshot from the windows of the hall.

An instance of the humane and paternal care and solicitude Mr. Waterton evinces for the comfort of his feathered family, during winter, had nearly escaped me. He encourages the growth of ivy around the stems of his trees, which not only shelters many a poor starved benumbed bird, when the storm rages, but offers it an agreeable place for its nest in the spring.

From these few and hastily collected observations while visiting Walton Hall, it will appear that Mr. Waterton possesses the finest and most extensive zoological garden in the kingdom, or perhaps in Europe. Here roaming unconstrained and at free liberty, every bird and animal can be examined in its true character. In possession of a powerful telescope, which is often used, Mr. Waterton watches and examines the habits and movements of his varied feathered population. Almost constantly abroad, nothing escapes him.

The perfect seclusion of the park enables him

to experiment harmlessly on his subjects. In the spring of 1833, he made a carrion crow hatch two rook's eggs, a magpie those of a jackdaw, and the daw those of the pie.

In concluding these very imperfect remarks on Walton Hall, I am sure that every one who, like myself, has shared the hospitality and enjoyments of a visit to this second White of Selborne, will join with me in these words of the Latin poet:—

——"Hinc tibi copia
Manabit ad plenum benigno,
Ruris honorum opulenta cornu."

——"Here to thee shall plenty flow,
And all her riches show,
To raise the honour of the quiet plain."

Closeburn Hall, Nov. 22, 1834.

[The following particulars have been derived from another source:—

"Walton Park consists of 260 acres. The wall around it is, for above a mile, 10 feet high; the remainder of it, 9 feet at the lowest part. There is no public road or footpath through this park, and no gun is ever allowed, upon any score, to be fired in it. The park abounds with fine timber; and Mr. Waterton, in laying out some new grounds about twenty-six years ago, did every thing that love for birds could suggest, to make them come and settle there. This protection to the birds enables them to perform their daily functions without fear and trembling.

"In the centre of the park is a sheet of water, of 24 acres in extent; upon which, in winter, from 2000 to 3000 wild fowl may sometimes be seen. In the lake is a rock; and on this rock stands Walton Hall; now a modern building, but in times long gone by, a place of strength."]

From the Autobiography of Sir Egerton Brydges.

Having no library within reach, I live upon my own stores, which are, however, more ample perhaps than were ever before possessed by one whose whole estate was in his inkstand.

My days among the dead are past;
Around me I behold,
Where'er these casual eyes are cast,
The mighty minds of old.
My never failing friends are they
With whom I converse day by day.

With them I take delight in weal,
And seek relief in woe;
And while I understand and feel
How much to them I owe,
My cheeks have often been bedew'd
With tears of thoughtful gratitude.

My thoughts are with the dead; with them
I live in long past years;
Their virtues love, their faults condemn,
Partake their hopes and fears;
And from their lessons seek and find
Instruction with a humble mind.

My hopes are with the dead, anon
My place with them will be,
And I with them shall travel on
Through all futurity;
Yet leaving here a name, I trust,
That will not perish in the dust.

From the British Critic.

LIFE OF ROWLAND HILL.

Life of the Rev. Rowland Hill, A. M. By the Rev. Edwin Sidney, A. M. Baldwin. 1834. pp. 443.

The character with a portraiture of which this volume presents us, has called forcibly to our remembrance the *Arlecchino* of Goldoni's best comedies. Not the motley magician of the English pantomime, with his piebald face and wand of lath, but the adult baby of the Italian stage, who, in the full organisation of adolescence, and with the complete developement of bodily powers, retains all the simplicity, all the inclinations, and all the ignorance of childhood; who makes love to his mistress and cries for barley sugar in the same breath; who fondles his own nurslings as if he himself were still unweaned; and who in the closing passages of life has not any need of reduction to a *second* infancy. Even with the marvellous lack of judgment which such a description implies, there is much which we cannot forbear from regarding with a certain degree of fondness; and, whenever we are most inclined to indulge an ambiguous smile, we are checked by a recollection that this superlative imbecility is accompanied by proportionate innocuousness.

How far this inability to be wise, this *nolle altum sapere*, is compensated by a negation of absolute evil, we need not here stop to enquire. To do so, indeed, would be to involve ourselves in the very obscurest portion of metaphysics, to moot the question of first principles; and this is a task from which we may readily be excused. The reader may determine for himself, and draw his own conclusions from the biography of Rowland Hill.

Rowland Hill, sixth son of Sir Rowland Hill, baronet, of Hawkstone, in Shropshire, was born, August 23d, 1745. As a child he was full of pranks and drolleries; and it was not until he quitted the paternal roof, and was considered sufficiently old to be entered at Eton, that he received "the first beams of spiritual light," and was "converted" by an elder brother. After undergoing that process, young Rowland entered as a pensioner and soon afterwards became fellow commoner at St. John's College, Cambridge; but unhappily neither during term nor vacation was he likely to receive much encouragement. His religious sentiments were greatly disapproved at home; and at the university "he was such a marked and hated person, that nobody belonging to the college ever gave him a cordial smile, except the old shoe-black at the gate who had the love of Christ in his heart."

"Piety and Zeal," however, soon introduced him to the acquaintance of Mr. Berridge, under whose ministry at Everton he sat every Sunday, taking care to return in time for College Chapel. Fired by the precepts of this "excellent but eccentric old clergyman," the energetic Rowland commenced preaching in Cambridge and its vicinity; and having met with some opposition in his course, he took an opinion from George Whitefield, who strongly urged him not to give way nor to look back; but, after his own example at Oxford, to proceed in his happy career, till he should

obtain the distinction of being hissed and hooted in the streets, and reproached, and counted as dung and offscouring. "Never," says the veteran, "did we prosper so much as at that season."

Mr. Edwin Sidney honestly admits that this advice "was scarcely consistent with the submission which Hill had promised as an undergraduate," or, as he might express himself in more plain speech, that by adopting it he violated his matriculation oath. But it was in "unison with his desires," and *therefore* he obeyed it. He continued accordingly to preach, much to the benefit of his hearers, at Chesterton, where "no other harm was done than the windows broke;" at the castle, where there was "a little mobbing;" at Grandchester, where "many were drunk," and the orator himself "was confused;" "in a barn for the first time with much comfort," although some gownsmen "gnashed with their teeth."

These infringements of academical discipline met with strenuous condemnation from his father and mother, and were threatened by the university authorities with a refusal of testimonials and even of a degree. Nevertheless, under the auspices of Whitefield, he maintained his perseverance unshrinkingly; notwithstanding "there were also those of the same religious principles as his own, who considered his irregular course as not the *best preparation* for his degree or future ministry." At length, in 1769, he proceeded B. A.; and then prepared, although not without grief, to quit "his little flock at Cambridge." True it is that he left the sheep under a pastoral guidance which doubtless is still fresh in the remembrance of many of our readers. Among other lay-preachers whom Mr. Berridge had countenanced and established, was "an individual well known by the familiar appellation of Johnny Stittle, an eccentric, uneducated, but naturally gifted man, perfectly devoid of the fear of any human being." Johnny Stittle is described as follows by his patron; "he is a wonderful man indeed; somewhat lifted up at present, I think; but his master will take him by the nose by and by." Whether this prognostic was or was not fulfilled we are quite unprepared to decide; but not one of those who have ever heard Johnny Stittle is likely to forget his nose.

On Mr. Hill's application for orders, six bishops refused their consent, and the plea which they advanced does not seem altogether unjustifiable. They rested upon "his irregularities while at Cambridge, and his disinclination to promise in future to confine himself to the rules of the church;" of which church he nevertheless sought to partake the communion, the honours, and the emoluments. His deviations from the establishment, however, never led him into any quarrel with either the articles or the liturgy; for both of which he professed unbounded admiration.

During the interval in which his profession continued to be thus undecided, he was chiefly occupied in itinerant preaching, and supported himself as well as he was able on the very scanty allowance to which he was restricted by his father's displeasure. Nor was poverty the only cross to which he had to submit. At Stowey he was encountered by "pans, shovels, horns, bells, dirt, and eggs." At Putsham some of "the congregation stood serious, some scoffed at a distance, and others threw stones." At Melscomb he found people "unaffected and inattentive," so that it was "a miserable, dry, humbling time." At Bridgewater he preached to "a decreasing congregation." At Wotton-under-Edge, he was saved from a stone by a Gloucestershire disciple, who arrested the arm preparing to throw it, at the same time bluntly declaring "If thee dost touch him, I'll knock thy head off!" At Cheltenham, he found it "miserable work to preach to the rich." At Marlborough he met a very "rude and rebellious" congregation, who laughed at and pelted him. In the summer of 1772, he undertook a revival of Whitefield's ministry in London. That remarkable man was then dead, but Rowland Hill addressed his followers in the Moorfields Tabernacle, and in the Tottenham Court Road Chapel. Meanwhile Captain Joss and Butcher Hogg were equally active in the same cause in Gloucestershire; and the latter wrote to Mr. Hill, urging him not to spare himself, and setting so good an example of self-devotion, as to assure his correspondent, in a monitory epistle, that he prayed to kill himself "in crying aloud to poor sinners; and if I am not hoarse and weak for two or three days after the sabbath, I think I have been barren and dead."

Having written himself M. A. at Cambridge in 1773, Rowland entered upon a Christian courtship of Miss Tudway. We need not dwell upon the love-letters which his biographer has thought it edifying to print; they are perhaps equally good with most of the same ware; although it may be doubted whether many *promessi sposi* have written as boldly as did Hill when he informed his betrothed "Remember this, that Mary Tudway is as bad as she can be, she is utterly undone." He was married on the 23d of May, 1773; and on the following June 6th, was ordained Deacon, by Dr. Wills, the *aged* bishop of Bath and Wells. His title was the curacy of Kingston in Somersetshire; and, notwithstanding that he had continued his mountebank circuits up to the very moment at which he presented himself for episcopal examination, he was ordained "*without any promise or condition whatever.*"

The Archbishop of York, however, was on the alert; and when Rowland offered himself as a candidate for priest's orders, he was informed that his perpetual irregularity forbade his admission to any higher grade than that which he had already obtained. To follow him in all his rambles is manifestly out of our power; in spite of bilious attacks, and horseponds, and addled eggs, and vituperations, he persisted in his "field campaigns;" encouraged by the recollection of other faithful ministers who had endured similar martyrdoms. One anecdote, which greatly delighted him, concerned a follower of Whitefield.

"Harris used to relate of himself, that being once on a journey through Wales, his mind was agitated by great temptations to desert his Master's cause, when he said, 'Satan, I'll match thee for this'—and 'so I did,' he used to add; 'for I had not ridden many miles before I came to a revel, where there was a show of mountebanks, which I entered, and just as they were commencing, I jumped

into the midst of them, and cried out 'let us pray,' which so thunder-struck them that they listened to me quietly, while I preached them a most tremendous sermon, that frightened many of them home.' "—p. 101.

It was about this time that one of the most notorious secular incidents of his life occurred; it has often been incorrectly related, but it loses nothing of unction when reduced to the bare fact.

"His courage, at all times remarkable, often awed his most violent opposers, and on one occasion frightened away two or three highwaymen, which probably gave rise to the foolish story of his taking a robber into his service. He was riding in a phaeton somewhere near London, accompanied by Mrs. Hill, when they were attacked in the dark by either two or three men, who violently demanded their money. They had a few minutes previously made a successful attack upon a Mr. Whitefoot, his assistant, who preceded them in a gig. When they came to Mr. Rowland Hill, and he used to laugh heartily as he told the story, he set up such a tremendous unearthly shout, that one of them cried out, 'we have stopped the devil by mistake, and had better be off'—on which they ran away and left him and his lady in peaceable possession of the road. He used to say, 'I stood up in the carriage and made all the outrageous noises I could think of, which frightened the fellows out of their wits, and away they scampered.' "—p. 114.

The "usefulness" of Mr. Hill's preaching was "somewhat diminished" during the year 1775, by an ugly habit which he had acquired of mixing politics with divinity; and so violent was the language in which he denounced the American war from the pulpit, "that hints were given him of its being noticed." He engaged also in not a very gentle controversy with the Wesleyans. But we hasten over these minor episodes to the greatest event in his life, the foundation of the Surry chapel. The first stone of that building was laid on June 24th, 1782, and Hill's avowed design was to erect a pulpit "open to pious ministers of all denominations and of every country;" or, if we may so say, to become the conductor of a theological *omnibus*. Within twelve months, the building was sufficiently completed to be opened for public worship; but it had been "*erected on a marshy foundation*," and a serious accident had nearly occurred from the pressure and alarm of the crowd which attended the opening meeting, and believed that the walls were giving way. Mrs. Hill was forced from her seat by the general rush, "and fell in the chapel yard, but she providentially escaped any serious bruises."

Hill had now become attached to a regular congregation, and had a settled residence. The trustees of the Surry Chapel paid him £300 a year, out of which "he boarded the supplies who occupied the pulpit during his absence in the summer. The two *foreign* pulpits in which he most delighted were those of Mr. Cadogan at Reading, and of Mr. De Courcy at St. Alkmond's, Shrewsbury. In his own chapel he was especially fond of procuring assistance from Mr. Venn, (who, as Mr. Edwin Sidney has remarked, "in occupying Surry Chapel pulpit, forgot the due observance of ecclesiastical discipline and order," and committed "an act of irregularity contrary to canonical rules,"), or of any eminent Welsh minister who happened to be in London, and who would undertake to officiate in his native tongue. All of these sons of Cadwallader, as Fluellen tells, were "of one reasonings, save the phrases is a little variations;" or, as Hill himself describes the "Welsh manner," they "bawled out very good things till they could bawl no longer."

In 1798, Hill made "a gospel tour" in Scotland, where a hearer states, that "during some of his sermons the eternal world appeared to be next door." When he preached at Edinburgh on the Calton Hill to at least 10,000 people, "every person seemed deep in thought," and "the old women looked out of their doors and exclaimed, eh, sirs, what will become of us now!" On his way southward, when he arrived at Rotherham, he encountered some bodily peril; for a madman rushed upon him with a drawn sword, and struggled hard to reach him till he was disarmed. Before he arrived at home he was a little indisposed, and his horses fell lame; yet to this progress were his horses indebted for their distinctive names. "I once asked him," says Mr. Edwin Sidney, "why he called his carriage-horses *Order* and *Decorum?*" "Oh," he answered, "they said in the north, 'Mr. Hill rides upon the backs of Order and Decorum,' so I called one of my horses *Order* and the other *Decorum*, that they might tell the truth in one way if they did not in another." It should not be omitted that his favourite cream-coloured saddle-horse was named "Bob."

These horses sometimes, however, excited scandal among his followers; and some notion of the license permitted in Surry Chapel may be attained by the subjoined anecdote.

"Once an impudent fellow placed a piece of paper on the reading desk, just before he was going to read prayers. He took it up, and began—'The prayers of this congregation are desired—umph—for—umph—well, I suppose I must finish what I have begun—*for the Rev. Rowland Hill, that he will not go riding about in his carriage on a Sunday!*' This would have disconcerted almost any other man: but he looked up as coolly as possible and said—'If the writer of this piece of folly and impertinence is in the congregation, and will go into the vestry after service, and let me put a saddle on his back, I will ride him home instead of going in my carriage.'[a] He then went on with the service as if nothing had happened."—p. 120, 121.

When advanced in years Mr. Hill was exposed to danger by some untoward accidents. On one occasion, "Bob," unconscious of the precious burthen which he carried, fell upon his master in a steep and stony road; and, if the disposition of the steed had not been equally placid with that of the rider, the latter, perhaps, would have suffered more injury than was occasioned by the fracture of two ribs. A few years afterwards, Mr. Hill severely hurt one of his legs by tumbling through an open trap-door in the flooring of his chapel; and the wound yielded so slowly to surgical remedies, that, although he preached only once within six weeks after the fall, and then was seated, he was thought to have hurt himself by the exertion. In 1831, after attending a meeting

[a] "I once told him this story, and asked him if it was true—'Aye, that it is,' he said, 'true enough—you know I could not call him a donkey in plain terms out of the reading desk.' "

at Exeter Hall, he grazed his shin against the steps of his carriage; neglect increased inflammation, and tended much to impair his strength, so that the ladies of Surry Chapel presented him with a chair, by which he was freed from inconvenience in the pulpit. His death, however, did not occur till April 2, 1833, when he gently yielded to the infirmities of a protracted old age. The latest evidence of sensibility which he evinced was by a very marked approbation of some lines which had ever been among his favourite compositions, and which at the awful moment of departure were repeated by an attendant. We utterly disclaim all intention of scoffing; but to our ears the following miserable jingle, sounds far more like presumptuous and canting doggrel, than like a consolatory Christian hymn; and we earnestly protest, in our own case, both on the score of sober piety and of sound criticism, against the employment of any such viaticum.

"And when I'm to die,
Receive me, I'll cry,
For Jesus hath lov'd me, I cannot tell why;
But this I can find,
We two are so join'd,
That He'll not be in glory and leave me behind."

As a fair specimen of Mr. Sidney's style we may take his description of Rowland Hill's person, and of the general character of his religious views.

"The person of Mr. Rowland Hill is well known to the public. He was rather above the middle height in stature, and when young was remarkably thin, though wonderfully strong and active. His countenance was expressive of the complexion of his mind, and the play upon his lips, and piercing look of his small grey eyes, denoted both intelligence and humour. When between fifty and sixty years of age, his fine upright figure, combined with a high-bred, gentleman-like deportment, caused him to be the subject of general admiration; and when the weight of eighty years rested on his head, his erect form was not bowed down, nor was the vigour of his mind in the slightest degree impaired. A few years ago, a gentleman in a country town followed a crowd into a chapel, not the least knowing who was to be the preacher: on returning home, he said—'I have seen a man with *such a commanding air* as I never witnessed before—who can it be?' It was Mr. Rowland Hill; and this was the effect his appearance produced on all who saw him in his latter days; and, as Johnson said of Burke, if any person had merely chanced to take shelter with him from a shower, he would have gone home and said, 'I have seen an extraordinary man.'

"In his theological opinions, Mr. Rowland Hill leaned towards the tenets of Calvin, but what is called Hyper-Calvinism he could not endure. In a system of doctrine he was the follower of no man, but drew his sermons fresh from a prayerful reading of the Bible, and happy would it be for all ministers if they followed his example. By faith, and earnest entreaty for divine teaching, he let down his vessel into the wells of salvation, and the water came up clear, unpolluted by human traditions, unflavoured by dogmas, and unadulterated by the muddy conceits of man's fancied discoveries. He was for drawing together all the people of God wherever they could meet, and was willing to join in a universal communion with Christians of every name. When on one occasion he had preached in a chapel where none but baptised adults were admitted to the sacrament, he wished to have communicated with them, but was told respectfully, 'You cannot sit down at *our* table'—he only replied calmly, 'I thought it was the *Lord's* table.' "—p. 409—411.

Much of the contemporary credit of Rowland Hill arose from his *facetiæ;* perhaps on account of a very prevalent, although a very false notion, which ought long since to have been counteracted by numberless instances to the contrary, in some of the best and ablest of human kind, that lightsomeness of heart is inconsistent with genuine piety, or at least that the two are rarely found in union. From the anecdotes which Mr. Sidney has preserved, and which we therefore suppose are the choicest specimens of his deceased kinsman's powers of humour which he has the means of furnishing, we do not attribute to him the possession of highly pungent wit; but it would be unjust not to recollect that the twinkle of the eye, the shake of the head, and the richness of the tone, upon which so much of the effect of repartee depends, are now wanting, and that what remains of Yorick, alas, is no more than a *caput mortuum.*

To a lady, who once asked him to get her son made Poet Laureate, he replied, that he could as soon get him made Archbishop of Canterbury.

"One evening after dinner, his servant said, 'Sir, a foreign gentleman wishes to speak to you.' 'Well, show him in,' said Mr. Hill; and there entered a tall mustachoed man, who addressed him with,

"'Meester Hill, I have heard you are a wonderful great goot man—can do any ting.'

"'Mercy on us! then I must be a wonderful man indeed.'

"'Yes, sare, so you are a very wonderful man; so I call to ask you to *make my ambassador do his duty by me.*'

"'Sir, I can assure you I have not the honour of knowing him.'

"'Oh, sare, but he regard a letter from you.'

'"Sir, I can have no possible influence with him, and cannot take the liberty of writing to him on a subject about which I know nothing.'

"'But sare, I will tell you.'

"Finding his applicant inclined to be pertinacious, he concluded the business by saying,

"'Well, sir, you may give my compliments to the ambassador, and say that *I advise him to do his duty:* and that will do as well as writing.'

"'Very goot, sare—goot day.' "—p. 233.

In an angry controversy between a clergyman and a dissenter at one of his own missionary dinners, in which he was appealed to for a decision, "he put on one of his arch looks and said, 'Well, I declare I must say you are both equally wrong; and I was just thinking that if you were tied together by the tail, like two cats, and thrown over a forked stick, you would scratch each other's eyes out.' " One day, when a number of persons took shelter in his chapel during a shower of rain, he interlarded his sermon with the following *jeu d'esprit:* "Many people are greatly to be blamed for making their religion a *cloke,* but I do not think those are much better who make it an *umbrella.*"

"He used to tell the following droll story of what he said on one occasion:—'His Royal Highness the Duke of ——— was in the chair, and kindly desired me to sit next him. A man absolutely had the bad taste to spin out his dull tiresome *oratory* for more than an hour. Some of the people, tired to death, as well they might,

went away. His royal highness whispered to me—'Really, Mr. Hill, I do not think I can sit to hear such another speech as this; I wish you would give one of your good-natured hints about it.' It was my turn next; so I said, 'May it please your royal highness, ladies and gentlemen, I am not going to make either a long or a *moving* speech. The first is a rudeness; and the second is not required to-day, after the very *moving* one you have just heard—so *moving*, that several of the company have been *moved* by it out of the room—nay, I even fear, such another would so *move* his royal highness himself, that he would be unable to continue in the chair; and would, to the great regret of the meeting, be obliged to *move* off.' This tickled his royal highness and the assembly, and we had no more long speeches that day.'" —p. 210, 211.

Finally, on sending some trifling present to Mrs. Hannah More, he addressed her "in a playful and lively spirit," and "indulged his humourous vein by imitating the style of Sternhold and Hopkins:"

> "With this my love doth come to you:
> My love it is both sure and true,
> And eke the same, likewise, also,
> Unto your household it doth go."

What man among us could subside quietly in the grave if he knew that idle trifles such as these were to be posthumously blazoned on hot-pressed foolscap by the zeal of some dolt-headed executor! So guileless and benevolent a spirit as that which animated Rowland Hill, while living, is little likely to have created *enemies*, but those who regard his memory have good reason to pray, with the Spaniard, that it be preserved from his *friends*. He, in truth, deserves a better tribute than he has here received from Mr. Edwin Sidney: and we heartily wish that his many virtues and attaching qualities had been recorded by a discriminating biographer; by one whose judgment was capable of deciding what ought to be omitted as well as what ought to be commemorated.

From the Foreign Quarterly Review.

Correspondance de Victor Jacquemont, avec sa Famille et plusieurs de ses Amis, pendant son Voyage dans l'Inde, 1828-1832. 2 vols. Paris. 1833.—*The same translated.* 2 vols. London. 1834.

M. Jacquemont was, we understand, the son (born in 1801) of an apothecary in Paris, who, having shown considerable aptitude for what is called natural knowledge, was, on the recommendation of Baron Cuvier, appointed by the administration of the French Jardin des Plantes to travel into Central India for the purpose of investigating its natural history, and collecting specimens of zoology, botany, mineralogy, &c. During this mission, which extended from August, 1828, when he sailed from Brest, to September, 1829, when he landed at Calcutta, and thence to December, 1832, when he died at Bombay, he wrote a series of letters to his family and friends, which they have rather indiscreetly published, and which have been, we are informed, received with more approbation than we can think them—*in any respect*—entitled to.

It is singular enough that about the time when Mr. Burnes was employed in his travels in Central Asia, of which we gave an account in our last number, M. Jacquemont should be traversing parts of the same region, and that the results of their respective labours should be produced almost simultaneously. It is impossible, however, to imagine a stronger contrast than these works exhibit; and we can boldly and conscientiously pronounce that, in every respect *but one*, the comparison is in favour of our countryman. Jacquemont is, we admit, a livelier writer than Mr. Burnes: the epistolary form—the variety of persons to whom his letters are addressed—and a very loose versatility of topics, are naturally more *amusing* than the orderly and accurate style of narrative employed by Mr. Burnes; but in all other respects—in all the solid and valuable qualities which inspire esteem for the man or confidence in the traveller—he is infinitely superior to his French competitor.

M. Jacquemont is, indeed, the personification, the *beau ideal*, of a literary coxcomb of the modern French school. Clever, having *some* acquaintance (we, as yet, possess no means of judging how *much*) with the inferior sciences, and a loose smattering of popular literature, his letters are in general lively and entertaining enough, but disfigured by such frequent vanity, vulgarity, and impiety, as would, in our opinion, counterbalance all their literary merit, were that ten times greater than in fact it is. For much, however, of what is blameable in the work we must not too severely censure Jacquemont personally: he wrote in confidence to his nearest relatives, and *perhaps* did not intend that his letters should ever be made public—at least he is not responsible for their publication; but we confess that it adds considerably to the regret and alarm which we already felt as to the state of moral feeling in France, to find that a family, which seems otherwise amiable and respectable, should, for the sake of either notoriety or *profit*, have betrayed to the public the confidential letters, in which this giddy young man not only takes unwarrantable liberties with the characters of gentlemen—and, what is infinitely worse, of *ladies*—into whose society he was admitted, but exhibits *himself* as having lived a professed atheist, and died with no more sense or hope of an immortal soul than one of the baboons of his own zoological collection.

We dare say that, if the truth could be known, it would turn out that this profession of atheism was mere swagger. We have always doubted whether there could be such a thing as a *sane* atheist; but a *naturalist-atheist* would assuredly be a monster. If there be any one study more than another which teaches that

> "Arguit, in *fabro*, non in *se*, machina mentem,"

it is that of the mechanism of nature; and Jacquemont's atheism was probably, like his incredulity on several other topics, either utter thoughtlessness, or (which is more likely) the silly affectation of passing for an *esprit fort*. For this reason, and for more serious considerations suggested by his early death, we shall say

no more on this part of the character which he has drawn of himself, and which his family have had the lamentable indiscretion to publish. We shall have but too much room for censure on less offensive topics; but before we arrive at them we have two or three observations to make on the preliminary part of the work.

It appears, from the preface to the translation, (for the original edition does not condescend to give us one syllable of explanation relative either to Jacquemont or his mission,) that in June, 1828, Jacquemont came to London to make some preparatory arrangements for his expedition. The *translator* taxes the French editor with something like ingratitude for not having acknowledged the civilities and assistance which Jacquemont received on this occasion from some individuals in London; but we are not quite sure that the French editor has not, in this single instance, acted with discretion. The chief assistance that Jacquemont received in London was a packet of letters of recommendation to sundry persons of consideration in India, and seeing (as our readers will by-and-by) how very unpleasant—even to those of whom he means to speak most civilly—must be Jacquemont's indelicate revelations of their social and domestic life, the French editor may have thought that he conferred a favour on the givers of those letters in not making them publicly responsible for their result. *We* honestly confess we never should have forgiven *ourselves* if we had had the misfortune to have introduced Jacquemont to any one of the ladies of whose names he makes such familiar, and we think indelicate, use.

The translator next reproaches the court of directors—the "merchant kings" as he sneeringly—the "*Vieilles Perruques*," as Jacquemont insolently calls them, of Leadenhall-street—with some illiberal reluctance—some "fastidious delays"—to give M. Jacquemont the necessary permission to travel in their territories. Now, when we recollect some former French missions, which, *as is now avowed*, cloaked aggressive projects against our Indian empire, under scientific and diplomatic pretences—when it is notorious that the most powerful of the native princes, Runjeet Sing, has actually *French* officers in his service who have disciplined his troops in European tactics, even to the degree of receiving the word of command in *French*—we should have thought the court of directors highly blameable if they had, without some previous enquiry, opened India to this new mission. The delay, however, so far from being vexatious, or even "fastidious," must have been wonderfully *short*, for Jacquemont's whole stay in England was less than three weeks. His special patrons first announced his mission to the Asiatic Society on the 19th June: the permission of the directors is dated the 25th June; and the recommendation of Jacquemont, as a member of the Asiatic Society, (by one of whom this complaint seems to be made,) did not take place till the 28th June; so that the *tardy* consent of the "*Vieilles Perruques*" was granted within a week after the *first* steps, and three days *before* the *next* steps taken by his zealous friends in the Asiatic Society. We shall see, by-and-by, that Jacquemont abused the indulgence thus, we will say, *too readily* afforded him; and the court of directors, instead of being the objects of reproach, might, with more reason, complain of those (whoever these were—for that does not appear) who so inconsiderately recommended a person of whom they seem to have known nothing, and whose indiscretion—if he tells the truth—might, on more than one occasion, have produced very deplorable consequences.

Before we arrive with M. Jacquemont at Calcutta, we must notice a curious incident that took place on his passage out. Soon after they had left the Cape of Good Hope, the French brig-of-war, the *Zélée*, in which he was a passenger, fell in with an English merchant-ship, into which—after the stranger had hailed them *in English*, which was heard and known to be English—(she must therefore have been so close that every seaman must have seen she was a merchantman)—into which vessel, we say, the captain of the French man-of-war, in a paroxysm of terror, fired his *whole broadside of round and grape*—and so near were the ships, that Jacquemont says the broadside was fired at the moment that they thought the stranger was about to board them.*

This seems to us one of the most wanton and unjustifiable attempts at wholesale murder that we ever read of: but our readers will be anxious to know what damage was done—how many innocent lives were lost by this atrocious discharge of "round and grape" at so short a distance. We are happy to inform them that only one spar and one sail were so much as touched; and but one man was wounded: a wonderful escape—but more wonderful still, when it is added that the one sufferer was a *French* sailor, wounded on board *their own* ship, in firing *their own* cool and well-directed broadside. Although we are unwilling to recur to the subject of Jacquemont's impiety, we cannot refrain from extracting the consistent conclusion of this remarkable story, which we hope is not characteristic of the French navy in general. The wounded man was so badly hurt that amputation of the arm became necessary, and his life was in danger—the rest Jacquemont shall tell in his own words.

"The priest, whom we have on board, of course availed himself of our man's amputated arm yesterday, to go and *puzzle* him with salutary thoughts on life and death. But, being informed of what was going on by M. de Melay, who had seen his reverence going on tiptoe towards the hospital door, I went immediately, and caught him in the *very fact of frightening the poor devil*. He understood me directly, and sheered off as soon as he perceived me. I have advised the wounded man's friends not to quit his bedside, but to keep the *curé*, as they call him, at a distance; if he insists, they will receive him with a good broadside of slang."—vol. i. p. 66.

* Such is Jacquemont's own story. But we are assured, as this sheet is passing through the press, by a gentleman recently arrived from India, that the blame of this affair rested not indeed solely, but chiefly, with Jacquemont himself, who volunteered to act as interpreter, but unluckily misunderstood and misreported the answer of the English captain: but this, if true, would be no justification of the French commandant, who should rather have believed his own eyes than Jacquemont's ears.

This M. de Melay was the royal governor of Pondicherry: M. Jacquemont also was on board in an official capacity; and both held appointments under a sovereign who then bore the title of *Most Christian King*—and who at least was *a Christian King!* The whole affair is in perfect consistence! Their broadside wounds their own man, and their public functionaries insult the discipline of the ship and the religion of the state! But it is time to turn our attention more directly to Jacquemont himself.

It is said by one of our essayists that, if you wish to discover a man's character, you should get him to talk of himself, because you may generally conclude that he is really the very reverse of whatever he may represent himself to be. This is literally true of Jacquemont, for *à force de se préconiser* as the most modest—the best natured—the politest and most fascinating of mankind, he convinces you that he was one of the most impudent, conceited, ill-bred, and tiresome coxcombs that ever inflicted their impertinence on society. Let us prove our assertion out of his own mouth.

We will begin with his début in Calcutta:—

"The company was assembled in Lady William Bentinck's drawing-room. I was once more her *chevalier*, and sat next to her at dinner, that being of course the place of honour. Every thing around was royal and Asiatic: the dinner completely French and exquisite, delicious wines served in moderation, as in France, but by tall servants with long beards, in white gowns with turbans of scarlet and gold. Lord William asked me to take wine, a compliment which I immediately returned, by begging the honour of taking wine with my fair neighbour, who was conversing with me on a variety of agreeable topics, and offered to act as cicerone. To give our appetites time to revive for the second course, an excellent German orchestra, led by an Italian, performed several of the finest symphonies of Mozart and Rossini, and in a most perfect manner. The distance from which the sound proceeded, the uncertain light flickering between the columns of the neighbouring room, the brilliancy of the lights with which the table was illuminated, the beauty of the fruit which covered it in profusion, and the perfume from the flowers by which its pyramids were decorated, and perhaps also the champagne, made me find the music admirable. *I experienced a sort of intoxication*, but it was not a stupid intoxication. I chatted with Lady William in French on art, literature, painting, and music, while I answered, in *a regular English speech*, the questions put by her husband concerning the internal politics of France. I did not avoid showing, in my opinions, all that might excite disapprobation, employing, however, to express it, the *most modest forms*, which a lad of sixteen in England considers himself entitled to dispense with." [What impudent dogs these *English* are!] "Returning to Lady William's drawing-room to take coffee, of which I *drank five or six cups without perceiving it, I found myself complimented by every one enough to turn my head.* You will imagine that I did not fail to engage the physician, who is still young, in conversation, on the *novelties in physiology*; for I had no opportunity, in the general conversation, of speaking on subjects connected with my own profession of naturalist, and I wished to *show myself in character* before the hour of departure."—Vol. i. pp. 277—279.

Can there be a more perfect picture of the mingled astonishment and assurance of an impudent and vulgar person, admitted *for the first time* into good company, and painfully labouring to appear at ease! The *immediate return* of *Lord* William's compliment by asking *Lady* William to take wine—the *intoxication* produced by such *unusual* phenomena on a dinner-table as lights, fruits, flowers, and champagne—the chatting *in French* to Lady William on *art*—and *besides art*—on literature, painting, and music—which we suppose are not arts—the set speeches *in English* to her husband—the *five or six cups* of coffee drank without knowing what he did—the being complimented thereupon by every body to a degree *to turn* HIS *head*; and finally the crowning the whole by entertaining the mixed and admired audience of ladies and gentlemen by a *physiological* discussion with the doctor, for the purpose of "*showing himself in character*," are all traits of the highest comic. The last, in particular, is almost equal to that other ingenious *savant*, M. Thomas Diafoirus immortalised by Molière, who, wishing "*to show himself in character*" to Mademoiselle Angélique, invites her and her friends to a *physiological* discussion—"à venir voir l'un de ces jours, pour vous divertir, la dissection d'une femme sur quoi je dois raisonner!"

Our next extract, however, must excite more serious feelings, and will temper our amusement at his folly with something approaching to disgust at his effrontery. Before we produce it, we think it proper to premise, that Lady William Bentinck is not more distinguished for her high rank and personal accomplishments, than for her *piety* and exemplary moral conduct in all the relations of life. We owe this preliminary tribute to an amiable lady, whose name we should not have been induced by any consideration to have quoted, if it had not been already obtruded on all Europe in this publication, and if the anecdotes in which she is mentioned had not been extensively circulated in our own periodical literature, without that censure of Jacquemont's ingratitude and impertinence which they so richly deserve.

"Lady William Bentinck is religious, *or rather endeavours to be so.*"—Vol. i. p. 99.

"For a week I was overwhelmed with attentions [at the governor-general's country house]. *There was no Lady William for any one but* ME. I spent several long days with her—*tête-à-tête—chatting about* GOD—*she for, I against*—of Mozart—Rossini—painting—Madame de Staël; of happiness and misery; and of LOVE in reference to both—of *all things*, in short, which require, if not intimacy, at least a *great deal of confidence* and *reciprocal esteem especially on the part of a woman*—English too—religious and strict, with a man—*young*, a BACHELOR and a—FRENCHMAN!"—p. 114.

This last word was utterly superfluous!—Is there a man in Europe but a *Frenchman* who could have penned such a passage even in the most confidential private letter?—is there a father in Europe, except a Frenchman, who would have sanctioned the publication of such a letter from a recently deceased son? Another passage, though not so flippant, is to our feeling—and, must be, we have no doubt, to that of Lady William Bentinck—still more offensive; for he would

have us believe that these alleged discussions '*for and against* God" had a serious effect on her ladyship's mind.

"I," says he, "am no better for her attempt to convert me, whilst *she*, I really fear, is not quite so sure of the truth of her doctrine as she was before."*—Vol. i. p. 38.

We shall see, as we proceed, so many proofs of the mendacious vanity of the man, that we cannot help doubting even his most ordinary statements; but anecdotes so inconsistent as the foregoing with the character of *any* English woman, and most especially with that of Lady William Bentinck, we reject at once, on the internal evidence, as well as on the general character of the witness.

There are some other ladies treated with, if it be possible, still greater impertinence, and the passages, if quoted, would give our readers a still worse opinion of Jacquemont: but we refrain from doing so, because we are unwilling to revive or prolong the pain which they and their friends must have felt, at finding their names so cruelly, and, we can have no doubt, so causelessly insulted by the visions of such incredible vanity. He does not, indeed, dare to impute any positive levity of conduct, but it must be very mortifying to English women to find their unsuspecting good-nature and innocent urbanity to a stranger,—introduced to them by their husbands and fathers,—mistaken by the disgusting coxcomb himself, and trumpeted to the world as having something of a more sentimental and tender character. But if we entertained—which we do not—the slightest doubt of the *falsehood* of all such insinuations, it would be removed, by observing that M. Jacquemont was, or affected to be, under a similar delusion with regard to every *man* whom he happened to meet. A few specimens of this *Admirable Crichton* will amuse our readers and enable them to form their own opinion—if it be not already settled—of the ingenious and ingenuous author; and it is in a special degree worthy of admiration, that it was not merely in the polished circles of Calcutta, and under the bright and favouring influences of Lady W., or Lady G., or Miss P., that he was thus astonishingly successful. His attraction was not *fashion*, but *fascination*—it was equally powerful over both sexes and in all situations. There was no *lip* in *his* magnetism—and in the camp of the horrid desert, or the hut of the snowy Alp—in the quarters of the ensign, or in the palace of the rajah, we find him exercising the same omnipotent power. In this respect Jacquemont's work is a real curiosity, and we think it right to exhibit at some length the most marvellous portrait of personal vanity which has ever been produced to our eyes.

"My manners, which I have left natural, and have not made stiff, as it is perhaps expedient to do with the English of the common class, have had the good fortune to please. I have spoken of all things to the best of my ability, and without affectation. Some, perhaps, have liked me [*m'ont aimé*] on that account; all have shown me [*m'ont prodigué*] attention. Very seldom, I think, has a Frenchman had such extensive and *universally agreeable* intercourse with the English. I forgot that I *knew the language very little*;*—I spoke like a Frenchman. They were *infinitely pleased with my want of pretension, my genuine simplicity*, and *my unaffected manners*. My academic dignity from London has been of no use to me, any more than my official title from Paris; and *no* MODESTY *can prevent me from saying, that it is on my own personal account* [*pour moi et à cause de moi*] that every one has been so kind and hospitable. Wherever I went, I tried to pay in ready money, by giving some interest and a little diversity to the tiresome monotony of English [life]; talking, in fact—whenever I thought the folks fit to taste that pleasure so little known among the English."—Vol. i. p. 113.

This—for one who is obliged to make an effort to shake off even for a moment his natural *modesty*—is pretty well. We may by and by say a word or two on the severe judgment against English manners with which he thinks it necessary to contrast and set off the superior fascination of his own: at present, we shall confine ourselves to specimens of his "*genuine simplicity*" and "*want of pretension*."

"I know not," he says, "how it is that I inspire *such confidence in* these people [the English society at Calcutta], that they *open their hearts to* ME upon points about which they are afraid to speak to each other after years of acquaintance."—p. 85.

And again:—

"The English have *nothing which resembles what we call society*, and are almost universally destitute of that facility which we learn in it, of talking gracefully about nothings, and without dulness on serious subjects. We thus have an immense advantage over them, when we can lead them to a somewhat general conversation, the subject of which is sufficiently familiar to allow us *gradually to take the greatest share in it*, and to give it its tone. It is to this artifice that I owe most of my success in what they call their *society*."—p. 281.

That is, the artifice of having all the talk to himself—a practice which does not usually produce such astonishing *success in society*. He proceeds:—

"A Frenchman has much greater facility in entering into an Englishman's friendship than another Englishman. They are like bodies similarly electrified, which repel each other. WE are decidedly more amiable than they—much more affectionate; and I see that *all who are worth any thing* are CHARMED with my manners."—p. 102.

But such is his extreme and *obstinate* modesty, that eighteen months' experience did not entirely enlighten him as to the exact source of all this fascination. Of the *fact* of course he can have no doubt, but he is not quite so clear as to the *cause*.

---

* This is our own version—the translator having, as we shall hereafter more fully show, mistaken this and several *other* idiomatic passages.

* Jacquemont, in one of his French letters, introduces one of his own *English* after-dinner speeches, which shows him to have been any thing but accurately skilled in our language; but he had previously travelled in the United States of America, and affected, when he arrived in Calcutta, both to speak and write English—with what justice our readers will see at p. 429.

"I am not yet," he writes from the Himalaya in 1831, "accustomed to the *singular attraction which I exercise over the English*—its effects often astonish me!"—p. 334.

In another passage he gives us a kind of arithmetical measure of his own good qualities. In stating to his brother the narrowness of his allowance of 6000 francs per annum, he adds,—

"I estimate myself not according to money, but according to MY OWN *personal good and amiable qualities*. By the vulgar method, I should require at least 150,000 francs per annum to maintain the position which I occupy with my 6000 francs, and should still probably remain beneath it."—p. 121.

Or, in other words the "personal good and amiable qualities" of Monsieur Victor Jacquemont are to those of ordinary men in the proportion of rather more than one hundred and fifty to six. This, however, must only be understood as of the relative merits of Jacquemont and an *Englishman*. With a *Frenchman*, the difference, though great, is not so enormous:

"If a thousand of *my countrymen* were to come into this country with *double* or *triple* what I brought, they could not probably succeed in getting into even tolerable society; by a peculiar [*unique*] favour I have obtained a dispensation from riches, and my relative poverty has only added to the gratification of my *amour propre*."—p. 168.

That is—to *any* Englishman I stand in point of personal merit at one hundred and fifty to six,—to an *ordinary* Frenchman at about two or three to one—but *one Frenchman in a thousand* might, perhaps, be equally successful! And what places the truth of these calculations beyond all doubt is, that it is the English themselves—arrogant and selfish as, on all *other* occasions, they are—who assign to M. Victor Jacquemont this exalted place in the scale of human nature.

Nor, after he has left the artificial order of society, where men may be estimated by money, does *he* find that he is at all depreciated; he is, if we may venture to pursue his own allusion, a kind of Spanish dollar, which is current all the world over. He writes—

Encamped at Moneah.—"I have the happiness to *please every distinguished person that I have met.*"

Encamped at Sinniput.—"Welcomed as I every where am, though an entire stranger, because I always bring the most honourable recommendations, *I am soon after caressed* for *my own sake.*"

From Delhi.—"My letters of introduction always procure me a very flattering reception, but I should consider myself singularly unlucky indeed, if I did not find out in the evening that it is for *my own sake* that I am thus welcomed. *My manners* immediately force English stiffness to unbend, and *I* metamorphose into *bonnes gens*—that is, into *Frenchmen*—all the English with whom I spend even twenty-four hours."

This would be very flattering to our national pride, if we could entirely believe it—to be within twenty-four hours of *perfection*, would imply a very advanced state of civilisation; and he, that in the lesson of one day can become a Frenchman, must be already very near the summit of human excellence; but our modesty—awakened by the contagion of Jacquemont—is afraid to indulge in such presumptuous hopes, particularly when we recollect that in those passages in which he evidently speaks with the greatest enthusiasm and sincerity—we mean those which dilate on *his own* transcendent qualities—he seldom fails to enhance them by some very injurious comparisons with the dull, unhappy English—dull and unhappy, at least, when not instructed and enlivened by his vivifying presence. But, as we before hinted, it is not the English alone who are subject to his charm.

"Wade [the English resident] writes me word from Loodiana, that Runjeet Sing has written to him about me, and that of *all European lords* he had seen, no one pleased him so much as *I* have done."—vol. ii. p. 9.

And then, lest it should be supposed that this was an unauthorised report of Captain Wade's, Jacquemont prudently confirms it by his own authority—

"He [Runjeet] *proves* it by his attention to me."—*ib.*

Runjeet Sing, it is well known, writes and acts to every European he sees exactly as he did to M. Jacquemont—but all the commonplaces of oriental civility passed for honest tributes of personal admiration with this happiest of men.

Then his thoughts recur to the countless number of *dear friends* whom he has left scattered along the lines he has traveled, like little Poucet's pebbles in the forest—"whose friendship shows itself in his absence in a thousand ingenious ways,"—but he thinks it necessary explicitly to add—

"*I owe it all to myself.* I am the real architect of my fortunes. I do not allude to the 5000 rupees which I have collected in my strong box, [he however looked, as we see, to the main chance,] but to *the honourable reputation I enjoy with every one.*"—vol. ii. p. 74.

His friends in France were, it seems, astonished, and somewhat incredulous, at the accounts he had given of the amiability of the English; but he apprises them that they have read his letters too hastily—that he meant not to say that the English were amiable in general, but only made so by his means and under his influence.

"You say," he writes to his father, "that since the English are so amiable to me they must be very different in India from what they are at home—there may be something in that—but *I take to* MYSELF *the greatest part of the merit of this kind of* MIRACLE."—vol. ii. p. 242.

"How singular is my fortune with the English! They assume to *me* an *expression of kindness in spite of themselves* as it were, and probably *for the first time in their lives!* Your friendship for me, my dear Zoé, would enjoy the MIRACLES I thus and without effort operate."—vol. ii. p. 260.

When a man gets to the performance of *miracles*, we think it high time to submit at once to his supremacy, and we therefore here close our feeble and imperfect exhibition of M. Victor Jacquemont's innumerable and indescribable virtues and accomplishments, as testified by the best informed and most unprejudiced of all witnesses—M. Victor Jacquemont himself.

Is not all this very surprising?—We talk of the march of mind and of the lights of the age—but has there appeared, since letters were invented

uch an extravagant tissue of personal vanity?—
The only thing that we recollect at all like it is
he strange Autobiography of Benvenuto Cellini;
ut here is a French *savant*, selected by his go-
ernment as a man of *science* and *discretion*—
ioted in his own family, even to ridicule, for *ex-
essive modesty*—who makes his first appearance
n the world in higher flights of extravagant ego-
ism than the crack-brained Italian did, even after
e had astonished the world by the still unrivaled
roductions of his art!

As to M. Jacquemont's scientific qualifications
or, or success in, the mission on which he was
mployed, we can pronounce no opinion; for,
trange to say, amidst the vast mass of letters,
nd the great variety of topics which he intro-
luces, there is scarcely an allusion to his scientific
ursuits. We are told that his *collections* were
arge, and for aught we know they may be found
o contain some very valuable articles,—but we
onfess that we do not anticipate much addition
o natural knowledge from his own scientific es-
ays. He seems not to have been of a discrimi-
ating or analytical turn of mind, and is miserably
eficient in the first elements of induction. We
hall give a few specimens. Happening to have
ine weather during the first two thirds of his voy-
ge, he frequently and decidedly expresses a total
isbelief in storms—a slight gale off the cape only
onfirmed that opinion:—

"Two days after our departure, we encountered off he Cape of Tempests and as we doubled it, the gale ren-ered a matter of course by poetical tradition. It drown-d a few of our fowls, and that was all. You know that lecidedly there are no tempests. The longer I am afloat, he more I am convinced that they are only a happy fic-ion of poets. The word is hardly known to seamen, nd they never make use of it. The maximum of the pocies, speaking prosaically—that is, sticking to the ruth—is a very strong wind: it breaks a mast or two, nd drowns nobody. It is not terrible to look at; it is nly *vexigeneux* [engendering vexation], disagreeable, nd ugly. The picturesque in it is very rare."—vol. i. p. 61.

This letter was closed at the Isle of Bourbon, n the 3d of February, but on that very day week, his *Parcus deorum cultor* was destined to re-eive, like Horace, (but not, we are sorry to add, with so good a result,) a lesson from the angry eavens. On the 10th February began a hurri-ane, which was attended with the most appal-ing appearances and the most calamitous results oth ashore and afloat; the *Zélée* was blown out f the roads, and leaving Jacquemont, and, what was worse, all her officers—except one lieutenant nd one midshipman—on shore. This event cured im of his presumption about storms; but he does ot seem to have drawn from it the better and nore extensive lessons with which it was pregnant. Before he has even landed in India, he had formed a decided opinion on the insalubrity of the mode f life prevalent there amongst the English:—

"I am fortifying myself in a devout love of abstemi-ousness, which, I have no doubt, will cause me to enjoy perfect health in India, amid *hepatitis*, *fevers*, dropsies, nd disorders without number, which afflict the rich Eng-ish, who commit excesses at table *seven hundred and wenty times* a year."—p. 77.

To this subject he frequently recurs—and re-peats his censure of the perilous absurdity of the English mode of life—or we should rather say of *death*—for "the English for the most part die," as he tells us, "from not following a regimen similar to his."—(p. 122.) Nor is it at Calcutta only that this mortiferous system prevails; in all the remote stations, even up to the Himalayah, he regrets that his excellent and hospitable friends were—in spite of *his* precept and example—digging their own graves by those habits which cannot fail to produce, as this sapient oracle warned them, "*hepatitis, fever, &c.;*" and we cannot doubt that he would have given us a similar account of the deleterious habits at Bombay, but that unfortu-nately—just as he reached that presidency, he himself—*died* of "*hepatitis and fever;*" and it so happens, that, at the last account we have seen from India, all the numerous friends to whom he had predicted early death—the Bentincks, Wades, Kennedies, Halls, &c.—were—every man of them—alive to lament his loss, and what they may pro-bably consider a not much lighter misfortune—the publication of his letters. A pretty conclusive refutation of his medical hypothesis.

It is to the same presumptuous and thoughtless style of reasoning that we attribute those violent *boutades* against the English character in general, which contrast so strongly with his panegyrics on every *individual* Englishman he encounters. He had imbibed, it seems, from the old apothecary his father—who, for aught that appears, had never been in England, nor even spoken to an English-man—the idea that the English were "stiff—proud—harsh—unamiable—with little natural af-fection," and "no idea whatsoever of the charms of *society*." M. Victor Jacquemont comes amongst them, and finds them to his infinite surprise, in every instance, and *without one single excep-tion*—hospitable—kind—amiable—affectionate—social, and in short, the exact reverse of his preconception. How does this phenomenon strike the mind of our philosopher? If his father, hot from a history of Siam, had told him that all the elephants in India were *white*, while he had found, on the contrary, that every elephant, wild or tame, which he had seen, was, without a sin-gle exception in some thousand specimens, *brown*, would not a reasoning naturalist have suspected that the apothecary, who had never been in India and never perhaps had seen an elephant, except *one* in the *Jardin des Plantes*, might be mistaken, and that the real colour of the animal was cer-tainly *brown?* Not so Jacquemont! In spite of the evidence of his own senses, he continues to be of his original opinion; but not being able otherwise to reconcile his father's *theory* with his own *experience*, he comes to this rational and scientific conclusion, that, although it is indisput-ably true that all elephants are naturally white, yet it invariably and '*miraculously*' happens, that *whenever a Frenchman approaches one of these animals he instantly becomes brown;*—or, to come to Jacquemont's point—all Englishmen are naturally *brutes*, but under the bewitching in-fluence of a Frenchman, they miraculously change their natures, and become the most civilised and amiable of mankind.

The following, though not quite a corollary of

the former proposition, is nearly allied to it. He sneers at the multitude of native servants which every lazy Englishman requires, and he contrasts that with *his own personal activity and simplicity*. "I shall," he says, p. 119, "have but *six* servants, while an English captain of infantry" [a vastly inferior animal to M. Jacquemont] "would have *five-and-twenty*." And again—"An English ensign has a table in his tent, as well as chairs; for my part, I will eat kneeling or standing." (p. 123.) Now mark the sequel of this boast. We turn over a few pages, and we find that, in the pride of his heart, he acquaints his father (vol. i. p. 316), that he never has less than *fifty* attendants, exactly double what he had before ridiculed in an English captain of infantry; and he subsequently tells us that he had "chairs and a table, and not less than *sixty* attendants." And here we cannot but express some little wonder at the kind of state in which this worthy appears to have traveled. His allowance from his own government was originally but 6000 francs—*i. e.* 240*l.* a-year—about the same as the pay of an *English ensign* in India—and he frequently complains that the subsequent additions to his income were not available to him. How then were the expenses of his escort, and other services of that nature, defrayed? Was the Indian *government* at any charge for Jacquemont's journey?—We hope not. Lord William Bentinck has—as M. Jacquemont and better authority than M. Jacquemont's tell us—attempted a system of economy so strict as to occasion great dissatisfaction in our Indian army. We can have no objection to any safe and reasonable economy, but one instance (amongst many others that have reached us) mentioned by Captain Archer in his amusing "Tours in Upper India" (vol. i. p. 226), seems to us so unfeeling and so inhuman as to be almost incredible—the suppression of the *convalescent establishments* in the hills. We therefore hope it will turn out that—whatever Lord W. Bentinck may have thought fit to do with his own personal resources—the country which is so straitened in its finances as to be obliged to deny its own military servants the means of health and the chances of life, has not been put to any expense in furthering the mission of a *toad-eater!* We beg our French translator (if we are to have one) not to mistake this for *frog-eater*, and misrepresent it as a national reflection; we use it in its popular acceptation of a *sycophant*—a part which Jacquemont seems to have played with Lord William Bentinck; and if only such a trifle as twenty pounds has been expended from *the public purse* upon Jacquemont, we shall consider it as in principle a most reprehensible and unjustifiable misappropriation.

In the same strain as that last quoted, M. Jacquemont frequently censures the English for their harsh, not to say, inhuman treatment of the poor natives:—

"The English treat them like dogs and beasts of burden, the labour of which these poor devils in truth perform. For some days I imitated cold English *hauteur*, but returned afterwards into my natural character of a good-natured fellow."—vol. i. p. 316.

Now, let us give a few sketches of the "*good-natured* fellow in *his natural* character:"—

"I have formed an escort as I could wish, of people accustomed to wait on officers, and to be harshly treated by them; and I am already so much modified by the contagion of example, that I will suffer no relaxation of discipline. A man [even the benevolent Jacquemont himself] is degraded, and brutalised, by living among such debased beings."—vol. ii. p. 133.

Again—

"An ill-tempered fellow on the road having called me '*you*' this morning instead of '*your highness*,' I was forced to give him a very severe lesson in politeness. I had fully as much right to do so as the Parisian philanthropist would have in boxing the ears of a rustic for *thee* and *thouing* him. I ought to be the more jealous about etiquette as the simplicity of my equipment, the hard life I lead, the privations and fatigues I endure along with my people, my dress of common stuff proper for this kind of life, and every thing in me and around me, tempt them to depart from it. 'My lord,' therefore, is not sufficient for me; I must have 'Your majesty,' or, at least, 'Your highness.'"—vol. ii. p. 213.

And again—

"I ascended them [the Snowy Mountains] twice, at the interval of a day—being stopped, on the first occasion, by the superstition and above all by the stupid cowardice of my men, much below the point which I had purposed reaching. I should in the same manner have been thwarted in the object of my second expedition, if, to the first promises encouraging them to follow, I had not added *threats of chastisement*, to be inflicted on those who refused to march. One only—my gardener, the most stupid and timid of the Hindoos—remained faithful to me; the rest of the band, squatting in the sun, on a rock which pierced the mantle of snow upon which we had been marching for two hours, became perfectly mutinous, and called back my poor gardener. . . . I darted like a stone upon the rock of revolt, and made an active use of the *bamboo*. The traitor whose voice I had recognised calling the gardener paid for all, and *very dearly* too. The least weakness on my part—a half measure—would have been the most dangerous of all measures. The culprit being besides the most active, the most robust, and habitually the most evil-intentioned of all, I gave it him so *heartily on his shoulders* from the first that he would not have been able to reply, had he made the attempt. As these poor devils, notwithstanding their piteous and humble condition, are of *high caste*, and essentially military, I really did not know how the others would take this lesson. Rajpoots, and mountaineers though they are, they took it as true Hindoos—that is, joining their hands and asking pardon."—vol. ii. pp. 210, 211.

All this Jacquemont relates with a view of exhibiting the effect of his own courage, firmness, and decision, over the intimidated Hindoos. Intimidated they no doubt were by the unjustifiable violence of such an assault, but we are much mistaken if Jacquemont did not owe his impunity to the character in which he traveled as the friend and *protégé* of the governor-general, who, we dare say, will be very sorry to learn how grossly and cruelly his patronage was abused. But Jacquemont, as we have just seen, pretends that these poor people were used to this treatment from British officers, and that he was forced to follow their example. We however know that, though individuals may have hasty tempers and exhibit occasional harshness, such are not the general characteristics of the treatment of the natives by British officers; and we happen, singularly enough, to have at hand a parallel case of

disobedience on the part of the natives to an English traveller in these mountains; but we shall see how differently it was dealt with. Capt. Mundy, in his very interesting "Pen and Pencil Sketches in India," informs us that a similar difficulty happened to him at the very outset of his excursion into the Himalaya—

"Our native servants at first took fright at the cold; and some of them refused even to enter the hills."

This, we see, was a much more serious disobedience than that of the servants of Jacquemont, who only refused to climb one particularly snowy summit on one particular occasion—whereas Captain Mundy's men were disposed absolutely to desert his service before there was any difficulty, and on a mere apprehension. Let us see then how an English staff-officer, the aide-de-camp of the commander-in-chief, behaved on such an occasion. We hear of no bamboo—no assault—no constraint: on the contrary, the more obstinate were allowed to depart, and

"the others were *persuaded* by the promised *advantages* of additional *warm raiment* to accompany us; and though they sometimes looked sufficiently miserable, yet they did not suffer in their health by the unwonted change of climate."—*Mundy*, vol. i. p. 238.

Indeed, the whole spirit of Captain Mundy's book—its unaffected simplicity—its accurate details—its brilliant descriptions of scenery—its slight, but able sketches of manners—and, above all, its modest tone and gentleman-like spirit, afford a very striking and a very agreeable contrast with the confused and often unintelligible statements, and the eternal egotism of Jacquemont. It is remarkable, too, that we find in Captain Mundy's volumes—though his journey had no scientific objects, and he pretends to no scientific character—ten times the number of facts in natural history that can be extracted from Jacquemont. Indeed, in the whole of the Frenchman's work there is scarcely an allusion to the peculiar objects of his mission: all that we recollect is, that he sent his cousin Zoé a primrose, which bloomed, he says, at a height which, in the European Alps, would have been above the line of eternal snow; he talks also of having seen one animal which he *hopes* may be a new species of a well-known genus; and he mentions that he had made a journey in search of a bed of shells, at a great elevation in the Himalaya—but with what result we have yet to learn. He talks, too, very vaguely, of having four times passed over snowy ridges higher by 700 metres than Mont Blanc; again, of having crossed mountains 18,300 feet high; and he adds, that in a five days' march, his lowest encampment was at the height of 14,000 feet (p. 265)—but not a hint of how these heights were ascertained; nor do we find any allusion to barometers or barometrical calculations, except in the description of the hurricane at Bourbon, when he says that his barometers were blown out to sea in the *Zélée;* and on one occasion, in Cashmere, he mentions in a cursory way his having had recourse to logarithms for ascertaining the height of that valley.

It is true that Jacquemont says that he reserves all his scientific observations for his official reports—and *there* they may have been entered—and *there* we may hereafter find them; but it certainly is singular, that a professed *savant* should have written such a mass of letters under such peculiar circumstances, without affording the slightest indication of any thing that has even the colour of science. We prejudge nothing; and certainly M. Jacquemont's discoveries, whatever they may be, will have lost none of their *éclat* by any premature disclosure to his private friends.

But whatever he may turn out to have been as a man of science, he was assuredly, notwithstanding his pretensions, a very ordinary *traveller*. He seems to have had very little enterprise, and we did not think it possible that, writing so much, he could have given us so little information concerning the features of the country or the manners of the people. In truth, he saw, felt, and described nothing, but in its relation to *himself;* and India was to him an immense mirror, which reflected nothing but his own image.

We before hinted that some of his proceedings might have had very serious consequences. On one occasion, particularly, he—shamefully, if he speaks truth—abused the protection which was afforded him. Our readers will recollect Lieutenant Webb's being stopped at the Nitee pass, in 1819, by the Chinese Tartars, and with what patience and propriety he submitted to the local authorities. We know, also, that several other British officers were induced by similar motives to check their enterprise and curiosity. But M. Jacquemont was restrained by no such consideration, and boasts that he made a hostile and wanton inroad upon the Chinese territory.

"My little army, for it was truly an act of hostility I was committing against his *tea*-ifying majesty of Pekin, exceeded sixty men, six of whom, reckoning myself, were fighters. By rare good luck, I found Chinese vigilance at fault on the frontiers; and the unexpected arrival of my caravan, in close column, surprised the people of Behar so much that they fled on my approach, instead of offering any opposition. I encamped peaceably in a chosen spot, and next day received in my little tent the visit of a Chinese officer, who commands a turret of sandstone, fortified with two leather guns, at no great distance. He came to complain. I transformed him into the accused; put a multitude of questions to him without allowing him to speak, except in answer to them; then dismissed him and his staff with a nod, after I had sifted him to the bottom. I designedly put on a threatening look, and commanded my people to do the same, in order that such demonstration might suffice: The Beharites had no idea of a double-barreled gun, still less of a percussion one.

"It was on that day that I encamped so high as sixteen thousand feet. During the night, some horsemen came to lie in ambush near my camp; however, I had intimation of their arrival, and of their small numbers. Not caring at all for them, I commenced my examination at day-break, followed by six servants at most. The Tartar-Chinese cavalry immediately got into motion, following my steps, but at a respectful distance. I commanded one of them to approach; and the fellow doing so without alighting to speak to me, I laid hold of him by his pig-tail and threw him off his horse. This comes, my friend, of living a year in India: a man thinks himself very sincerely insulted by every act

which is not servile. Here I was wrong, for the poor devil of a Beharite was ignorant of Indian etiquette. But I saw only one thing—the colour of his skin; and, forgetting the differences of places, I took his ignorance for deliberate insult: *inde iræ*. His comrades had galloped away. The poor man remounted his nag with a good deal of trouble, and joined them as quickly as he could."—pp. 265—268.

And this insolent outrage was, in fact, still worse than it even at first sight appears; for it was not merely an outrage—it was a deliberate abuse of the confidence which the British authorities had placed in him, and might have produced retaliatory measures of plunder and bloodshed on our own frontier.

"My being a Frenchman is far from disadvantageous to me: an Englishman could not have undertaken the journey which the *French lord* has just terminated so fortunately. *The government forbids English subjects to approach the Chinese frontiers*, in order to avoid the trouble of the complaints which violations of territory might excite. Being free from this restraint, and persuaded that my little caravan would march in these deserts like a conquering army, I fearlessly ran my chance."—p. 298.

We must here observe, that not only was his personal conduct unjustifiable in violating the orders of the government under whose protection he traveled, but his attendants must have been persons supplied to him by the British authorities in consequence of Lord William Bentinck's commands. He goes on—

"Several times I found, in much greater numbers than my retinue, people assembled from all the villages around, to stop my progress; sometimes on the summit of a mountain, sometimes in a narrow defile, which a single man might have defended against thousands, sometimes on the banks of a torrent. I never hesitated to push forward without paying attention to their injunctions; and I had very seldom occasion to use any of these good people roughly, in order to disperse their astonished companions. Notwithstanding their bold appearance before the engagement, I never saw in them any signs of resistance by open force; but they endeavoured to famish me, in order to force me to retire; they did not dare positively to refuse to sell me provisions, but laid a very high price on them, and the farther I advanced the more they increased it. At length I adopted the resolution which I ought to have taken in the first instance. I dictated the price myself, on a very liberal scale, and warned them that, if they did not submit to it, I would plunder the village, and carry off their cattle: a menace which was sufficient for my purpose, and which I had never occasion afterwards to repeat."—pp. 298, 299.

Again—

"They endeavoured to stop my progress by the excessive price they put upon the provisions of which my caravan stood in need. Their refusing them altogether, which they should have done as faithful Chinese subjects, would have been compelling me to plunder their villages, and take by force what I required; but their circumspection preserved them from such a measure. I, however, considered the excessive dearness of their consent as a refusal, and reformed the prices by my own authority, still leaving them very high. I added the formal threat of plunder, if my camp was not well provisioned on these conditions; and I was allowed to want nothing."—pp. 314, 315.

All this would be very bad—and Lord William Bentinck would have much to answer for in having enabled him to commit such aggressions—but, to say the truth, we do not believe one word of it—he and his attendants might, perhaps, have pulled a solitary Chinese off his horse, but that he could have marched and countermarched, and *taken* the "town of Behar," &c., and threatened to plunder villages and lay the country under contribution, and defy and repel its whole population—passes and defiles where children rolling down stones would be as formidable as artillery—we do *most entirely disbelieve*—nay, we have our suspicions about his ever having visited Behar at all; for it was on this expedition that he asserts that he had *four times* traversed ridges higher by 3500 feet than the summit of Mont Blanc (p. 257), and in regions, according to his account, hitherto unexplored by any European—yet not a syllable do we find of explanation or description of his line of march, nor of local features—no mention of time—no note of any observations—not a word of what he did—or felt—or suffered—or saw—except only the account we have just quoted of his personal scuffle with the inhabitants of Behar. Nor is this very suspicious silence to be attributed to haste or negligence. He loves to tell the tale of his invasion of *China*, as he complaisantly calls it—he repeats it to at least *five* different correspondents—to his cousin Miss Zoé Noiset (p. 217)—to his brother (p. 265)—to M. Elie de Beaumont, a naturalist (p. 291)—to M. Dunoyer, a man of letters (p. 294)—to M. de Tracy, a politician (p. 307)—but in all these repetitions we cannot discover any allusion to either *time* or *place*, by which we can trace whence he departed—in what direction he marched—how far he went—or by what line he returned. *Le vrai n'est pas toujours vraisemblable.* His statements *may* be true, but they look to us very improbable; and we suspect the whole journey may be a fable, or at least an exaggeration, suggested to Jacquemont's mind by seeing on the maps of India a track laid down from the Sutledge to the village of Behar: for it is a very remarkable fact, that with all his lofty pretensions to activity and enterprise, we cannot find, on a careful examination of his journeys, that *he went one mile in any direction where there is not a regular line of route laid down on the ordinary maps.*

After this, as we believe, imaginary capture of Behar, he made another hostile excursion into Chinese Tartary, in which he states that he proceeded to a fort called *Dunker—which he took.* About this capture of *Dunker* we have still more serious doubts than about that of Behar. In the first place, we observe, that in *two* letters written to M. Beaumont, in a third to M. Dunoyer, and a fourth to M. Tracy, all expatiating on his personal prowess at *Behar*, and all subsequent to the supposed capture of *Dunker*, there is no allusion whatever to any such event; and, though he boasts that he extended his excursion very far to the northward, and though Dunker is the most northerly point of his track—he does not so much as mention its name, but designates his extreme position by the quotations of the latitude of 32°

10′. The whole and *sole* mention of the capture of the fort of Dunker is, in a subsequent letter to his father, in these loose terms:—

"Assisted by three servants, I literally took the fort of Dunker, in Spiti, which you will find somewhere astride on the 32d degree of latitude."—p. 315.

Considering the loquacious vanity with which he repeats all his other personal exploits, it is strange that this one, performed on the extreme verge of his Himalayan excursions, should not have been more particularly explained. After all, he *may* have visited Behar and Dunker—other persons had previously done so, and there are routes to both laid down in the maps—but it must be regretted that he should have slurred over so loosely and obscurely these the two most interesting, because the most remote and least known, portions of his travels.

But we have still more distinct grounds for doubting his accuracy in such matters. He occasionally hazards an assertion which we can detect, amidst the studied (as it would seem) obscurity of his movements, to be unfounded, as, for instance, when he writes to M. de Tracy—

"I proceeded as far as the mountains *above* the source of the Jumna; I also *approached those of the Ganges*."—p. 241.

And to M. de Beaumont—

"I went *to* the sources of the Jumna, and *near those of the Ganges*.'—p. 291.

And to M. de Tracy—

"On the 12th April I visited the sources of the Jumna—I also *approached those of the Ganges*, and ascended *considerably* above them on the eternal snows of the colossal chain that separates India from Thibet."—p. 247.

Now, it is certain, that this story thus solemnly repeated three times over—of his *approach to the sources of the Ganges*—is, in the meaning he wishes to convey, utterly false. He never was higher up the Ganges than Hurdwar, a town as easy of access as Delhi—if, indeed, he was ever so far—for, though the map prefixed to his book traces his route to Hurdwar, his verbal narrative does not mention and seems to negative his having visited it. But be that as it may, it is certain that he never ascended the *Bhagarutee*, the sacred branch of the Ganges, which, as our readers know,* descends from the mysterious Gangotree, which the Hindoos revere as the *sources* of the holy river. On the contrary, he took a different, much easier, and more frequented route, by Dehra, towards the sources of the *Jumna*; and although one of his letters is dated but one day's journey from Jumnotree, we cannot help doubting whether he had the courage and perseverance to accomplish the last stage of this perilous pilgrimage, which, however, many English gentlemen, and at least one English lady, have performed. We observe that in his letter to the most respected of his correspondents, M. de Tracy, he does not say that "*he visited the shores of the Jumna*," but only that he "*proceeded as far as the mountains above the source of the Jumna*." If he did reach scenes, which we are told by other travellers far exceed the most stupendous magnificence of the European Alps, is it not strange that he should give no account whatsoever of those very remarkable scenes? nor, indeed, does he so much as mention the fact itself, till more than a month after, when he says, in the cursory manner we have quoted, "I have visited the sources of the Jumna.' The reader who will refer to Mr. Fraser's travels, or to our article referred to in the foot note, will think that such a scene would deserve some more distinct notice. But whether Jacquemont actually went up to the sources of the *Jumna* or not, it was his approach to *them* which gave him the only pretence he had for saying that he approached *the sources of the Ganges*—which, taking their rise on opposite sides of mountains covered with eternal snow, are at a comparatively short but utterly impassable distance from those of the Jumna. Jacquemont's assertion is exactly as if a traveller who had visited the sources of the Aveiron in the valley of Chamouni, should boast that he had approached the sources of the *Po*—some of which rise on the opposite side of Mont Blanc—distant only a few leagues in a direct line, but a journey of ten days or a fortnight by any practicable road.* When we find M. Jacquemont thus equivocating to some and *lying* to others of his most respected correspondents, we conclude that he is not more trust-worthy when he is *palavering* to his cousin Zoé and his brother Porphyre. We ought, however, in fairness to add, that there is one circumstance which might account for his omission of all local description, and which renders it possible that he may have visited the sources of the Jumna and the interior of the Himalaya, though he says nothing of the natural features of either; namely, —that Jacquemont, selected by the Parisian *savans* for this remarkable mission, had the strange qualification of being so *shortsighted* as not to be able to distinguish an object at more than a few yards distance:

"My sight has certainly grown shorter within the last

* See Quarterly Review, vol. xxiv. p. 127, for Mr. Fraser's interesting account of the sources of both the Ganges and the Jumna. We should also beg leave to refer our readers to Captain Skinner's "Excursions in India." He visited both Jumnotree and Gangotree, and his work is a most interesting delineation both of manners and scenery. We can give the same praise to Captain Archer's "Tours in Upper India;" but both these officers impair the ease of their narratives and the pleasure of their readers by the occasional affectation of a kind of literary merit which is—like many of M. Jacquemont's pleasantries—quite out of place. Captain Skinner's quotations from Shakspeare, and Captain Archer's efforts to be facetious, have, we beg leave, with great respect for their talents, to say, the very contrary effect of what they intend. Their books are very clever, and with these slight blemishes very amusing—without them would be delightful.

* Captain Skinner, who seems to have possessed extraordinary courage, activity, and strength, was fourteen days in traversing the shortest practicable line between Jumnotree and the *sources of the Ganges*. The toil of the journey was immense, but was amply repaid by the magnificence of scenery to which M. Jacquemont does not even allude.

year: I only take off my spectacles to read and write, and even with them I do not see far enough to make use of my carbine. The range of my fowling-piece [from thirty to fifty yards] is just the same as that of my eyes; so I have left my carbine at Sharunpore.'—p. 207.

This really may be the cause not only of the extraordinary absence which we have noted of all local description, but of the very egotistical complexion of his letters. When a man cannot see what other people are about, he must naturally be a good deal occupied with himself. But, after making all allowances of this kind, we must repeat that M. Jacquemont was evidently by no means an adventurous traveller. He indeed promises—agreeably to his national proverb—"*Monts et merveilles;*" but the *monts* he never very willingly climbs, and the only *merveille* he thinks it worth while to produce is *himself*. He writes from the other side of the Himalaya:

"I shall return to India by the Burunda Pass, through what the Indian and European public improperly term the great chain of the Himalaya. The Burunda Pass scarcely exceeds fifteen thousand feet in elevation. This will be *mere child's play* to me, who have reached, four times, an elevation of eighteen thousand three hundred, and eighteen thousand six hundred feet."—p. 286.

"*Child's play!*" very well! but what was the result? He did *not* attempt the Burunda or any other of the difficult passes of the chain. This adventurous and curious explorer of the Himalaya returned *as he had gone*, by the valley of the Sutledge, along a road over a considerable portion of which he confesses he was luxuriously "carried in a kind of arm-chair."—p. 239.

He has, as we have seen, and in many more places than we have quoted, indulged himself in reflections on the over-attention of the English officers to their comforts, and extols his own superior hardihood. The following refutation of both these assertions is amusing. At Dehra, where he sojourned a short time, he complains grievously of the excessive severity of the climate and the desolation of the scene, but he nevertheless endures all these hardships with unabated strength and courage.

"At Dehra the lightning struck a tree under which my little tent had been pitched. Two of my people were in it with me, and both were for some instants paralysed in the left side. On the heights of *Missouri*, which overhang the valley of Dehra, the space around me was strewed with the splinters of a blasted rock; whilst, chilled with cold and wet, I made my anxious and slender repast. It seems in truth that they are aiming at me from on high. The two first shots have not touched me; but I must beware of the third."—pp. 206.

How grand! On the receipt of this letter Zoé no doubt assembled all the young ladies of Arras, and Porphyre all the students of the *Pays Latin*, to admire and sympathise with the magnanimous sufferer. Now hear how one of these effeminate English deals with exactly the same place in the same season of the year, Captain Mundy's visit to the heights of Missouri being in April, 1828, and M. Jacquemont's in April, 1830.

"*April 15th.*—Thermometer in our tents at Deyra 82° —At 4 A. M. this morning, my friend and myself started on an expedition to the two mountain stations, Llandowr and Missouree. Mr. Shore was kind enough to send two capital ghoonts (mountain ponies) for us to Rajpore, a village at the foot of the mountains, seven miles from Deyra. We galloped on our own horses to this place, where we found the rough little brutes, with two guides, awaiting us. We immediately mounted upon the well-padded saddles and commenced the ascent, being duly cautioned by the men to lay the bridle on the necks of our ponies, and allow them to rest when they pleased... The journey is certainly a nervous one for beginners, for though we have both rambled through the Alps, we have been rather accustomed to trust to our own feet than ride in mountainous expeditions. . . . . .We reached the little half-built colony without accident, and breakfasted with Major Brutton of the Eleventh Dragoons, who commands the depot of European invalids. . . . After inspecting the several buildings, and enjoying the most splendid view of the snowy range, the beautiful Doon, (Valley of Dehra,) the mountains beyond it, and in the dim distance beyond them the wide-spreading plains of Hindostan, we remounted our ghoonts, and set off for Missouree, which is somewhat lower than, and three miles distant from, Llandowr. Among the various and beautiful trees and shrubs of these mountainous regions, I was delighted to recognise many old English friends. The oak and the rhododendron are the largest timber trees; and of the latter, which in Europe and America is a mere shrub, the beams of the Llandowr houses are formed. At this period they are covered with a luxuriant crimson flower, and their stems, as well as those of the oak, are thickly clothed with a long and hoary moss. During our descent I also discovered the cherry, pear, barberry and raspberry, which are unknown in the plains. Missouree is situated on a table-hill, and is less wooded than Llandowr: but it has greatly the advantage in point of space. We called upon Major Young, who resides here, and he obligingly furnished us with directions for hunting tigers in our progress through the Doon towards Simla. The descent we found infinitely more fatiguing than the ascent, but our nerves grew callous in proportion to our fatigue; though we were obliged to dismount in a few bad places. At Rajpore we found our gig, *and drove into Deyra just in time to dress for dinner.* It was a good day's work. We rode twenty-six miles, nineteen of mountain equitation, and drove seven miles."—*Mundy's Sketches*, vol. i. pp. 185.

Thus we see that, in circumstances of such suffering and horror, that the magnanimous Jacquemont saw reason to suspect that the *vengeance of offended heaven* was specially aimed at *him*, these *bêtes* of English, with an "awkward affectation of *manliness*" (vol. i. p. 92), seek for health and pleasure, and after a good day's sport, *drive home in their gigs to dress for dinner.* We cannot now, for the last time, mention Captain Munday's lively and interesting work* without requesting our readers not to judge it by the short and mutilated extracts we have made. We think it fully equal to Jacquemont's in point of amusement, and vastly above it in every other respect; and there is one very curious circumstance connected with the two works which we must notice, though we cannot explain. Captain Mundy's tour was made in 1828 and 1829, and his book published in London in 1832. Jacquemont died in the beginning of 1832, and never could have seen Captain Mun-

* Pen and Pencil Sketches of India. By Captain Mundy, late aide-de-camp to Lord Combermere. Second edition. 2 vols, 8vo. London, 1833.

dy's volumes; yet there are some remarkable passages in Jacquemont's letters which seem *identical* with facts stated by Captain Mundy. Any reader who will take the trouble to compare Jacquemont's account of the robbery in his tent, (vol. i. p. 214;) of the fall of his horse over a precipice, and his being caught in a tree half way down, (p. 350;) and of the residence, court, and person of the Rajah of Nahun, (p. 352,) with Captain Mundy's relation in similar words of similar accidents and circumstances occurring in the same neighbourhood—any person, we say, who will make the comparison, will, we think, see a strong similitude. Jacquemont could not have seen, as we have said, Captain Mundy's book, and it is impossible to believe that his editor can have interloped such passages; yet the coincidences are curious. We are almost induced to suspect that, as Captain Mundy's adventures were of course well known at Simla, near which place they occurred, and where Jacquemont made two or three long visits as the guest of Captain Kennedy the resident there, the Frenchman may have heard the stories, and, with his usual accuracy and modesty, thought himself justified in repeating them for the amusement of his domestic circle, as having occurred to himself. It would be strange that circumstances so nearly resembling each other should have occurred to two different travellers and so nearly in the same neighbourhood.

We will pursue no further our hostile criticism on M. Jacquemont, though we are far from having exhausted the topic. We now turn to the more agreeable task of saying, that, with the drawback of his monstrous vanity and the partialities and inaccuracies which such extravagant egotism must produce, his letters are amusing, and, where his personal and national prejudices do not interfere, show considerable tact and discrimination. There is a great deal of tautology, and the same story is sometimes tediously repeated, but that is the fault not of himself, but of the form in which he writes, as he is obliged to repeat the same events to different correspondents. By the omission of some of these duplicate letters, and of those passages which offend religion and delicacy, (and these might easily have been removed,) the book would have been an agreeable, though very loose, gossip on the state of Indian manners and society. Jacquemont seems to have had a good deal of conversational pleasantry, and the art of telling a story agreeably, though there are every where traces of effort and affectation. Of course our limits will not allow us to give many specimens of qualities which are in their nature rather diffuse; but, as an example, we shall select a passage which we think is in his best style:—

"A few broken legs, and shattered shoulders, are so much a matter of course in Indian hunting, that none is ever undertaken without a surgeon. As for hunting lions and tigers, it is (for gentlemen I mean) a most harmless amusement, since the game is never sought on horseback, but only on an elephant. Each hunter is perched, like a witness in an English court of justice, in a strong and lofty box, fastened upon the animal's back. He has a little park of artillery near him; namely, a couple of carbines and a brace of pistols. It sometimes happens, but very seldom, that the tiger, when brought to bay, leaps on the elephant's head, but that does not concern us; it is the affair of the conductor (mahout), who is paid twenty-five francs a month, to run the risk of such accidents. In case of death, the latter has at least the satisfaction of a complete revenge, for the elephant does not play the clarionet unconcernedly with his trunk, when he feels he has a tiger for his headdress: he does his best, and the hunter assists him with a ball point-blank. The mahout is, you see, a sort of *responsible editor*. Another poor devil is behind you, whose duty is to carry a parasol over your head. His condition is still worse than that of the mahout; when the elephant is frightened, and flies from the tiger, which charges him and springs on his back, the true employment of this man is to be eaten in the gentleman's place. India is the Utopia of social order for the aristocracy: in Europe, the poor carry the rich upon their shoulders, but it is only metaphorically; here it is without figure. Instead of workers and consumers, or governed and governors—the subtle distinction of European politics—in India there are only the carried and the carrying, which is much clearer."—pp. 194, 195.

This, although the pleasantries are rather too elaborate, is lively enough—the best hit, however, that of the "*responsible editor*," will be lost upon those readers who are not versed in the modern practice of the French courts in the trials of newspaper libels.

At Loodiana, on the banks of the Sutlege, M. Jacquemont was introduced to two ex-kings of Cabul,—Shah Zeman, who had been blinded as well as dethroned, and Shah Soojah, his brother, who had also been dethroned, but escaped with his eyes still about him into the Himalaya mountains. The adventures of Shah Soojah, who, after having been twice dethroned, is now a third time a king, are of the most romantic character. They have been recorded by himself in Persian, and translated and published in the Calcutta journals. Of the two brothers M. Jacquemont says:

"There are two ex-majesties here, who preserve the title, and before whom I did not appear without taking off my shoes; these are Shah Zeman and Shah Shaudjah his brother, formerly kings of Cabul, Afghanistan, and Cashmere; and great sovereigns twenty years ago. The British government sent them a magnificent embassy, and sought their alliance, at the period when the presence of General Gardanne, at Tehran, raised some suspicion in the cabinet of Calcutta with regard to the views, generally not very pacific, of your friend, *the great man*, as Courier used to say. Mr. Elphinstone, the British ambassador, disputed for a fortnight with the grand master of the ceremonies, and the chamberlain of Shah Shaudjah, about the etiquette of his presentation to the king. The latter agreed at last to exact from Mr. Elphinstone only thirty-nine bows; while he himself, the king, would show his nose at the window, the ambassador remaining with his whole suite in the court-yard, at a distance of three or four hundred paces.

"His ex-majesty has the most magnificent black beard I ever saw; and I found him a very gracious personage. *A pensioner on British generosity, to which, in truth, he has no claim*, [we must be allowed to smile at the coolness of *Jacquemont* in this description,] Shah Shaudjah lives here in freedom, but under the surveillance of the British political agent, my present host. By this officer I was conducted to a private audience of the shah, with whom I spent an hour, conversing about Cashmere, whither I am going, and where he formerly

made war, from Cabul, his country,—from his mountains, of which he spoke to me with affecting eloquence. Do you recollect that the women broke open the doors of the *hotel Sinet*, to see the Tunis envoy's handsome secretary? I know not what they would do if Shah Shaudjah went to Paris; the national guard would not be sufficient to preserve public order, he is so handsome! The old emperor, Shah Zeman, who had his eyes put out, spends his time in devotion, which, however, does not prevent his having a large seraglio. He related to me his pilgrimage to Mecca, which he undertook after he became blind."—vol. i. pp. 372, 373.

Of Runjeet Sing M. Jacquemont gives the following account. It corresponds, as to essentials, with the portraiture of Burnes, and supplies some amusing *traits* which our countryman's gravity feared perhaps to introduce.

"*Lahore, March* 16, 1830.—I have several times spent a couple of hours in conversing with Runjeet, *de omni re scribili et quibusdam aliis*. His conversation is like a nightmare. He is almost the first *inquisitive* Indian I have seen; and his curiosity balances the apathy of the whole of his nation. He has asked a hundred thousand questions of me about India, the British, Europe, Bonaparte, this world in general, and the next, hell, paradise, the soul, God, the devil, and a myriad of others of the same kind.

"This pattern of an Asiatic king is, however, no saint: far from it. He is bound by neither law nor honour, when his interests do not enjoin him to be just or faithful; but he is not cruel. He cuts off the nose, ears, and a hand of very great criminals; but he never puts any to death. He is passionately fond of horses, quite to madness; and he carries on a murderous and expensive war against a neighbouring province, in order to obtain a horse which has been refused him either as a gift or a purchase. He has great bravery, a somewhat rare quality amongst the princes of the east; and although he has always succeeded in his military undertakings, it is by perfidious treaties and negotiations alone that, from a simple country gentleman, he has become absolute king of the Punjab, Cashmere, &c., and is better obeyed by his subjects than the Mogul emperors in the zenith of their power. A shiekh by profession, a sceptic in reality, he every year pays his devotions at Umbritsir; and, what is very singular, these devotions are paid at the tombs of several Mohamedan saints; yet these pilgrimages offend none of the puritans of his own sect.

"He is a shameless scoundrel, and cares not a bit more about it than Henri III. formerly among us. It is true that between the Indus and the Sutlege, it is not even a peccadillo to be a scoundrel. But what horribly offends the morality of these good people is, that the king, not content with the women in his own seraglio, often fancies those of others; and what is worse, those which belong to every body. In spite of the mystery which the orientals, even of the lowest class, throw over their intrigues, whether purchased or not, Runjeet has often exhibited himself to the good people of Lahore, mounted on an elephant, with a Mussulman courtesan."—vol. i. pp. 395—400.

M. Jacquemont says that it was only after his entrance into the Punjab that he fully appreciated the benefit of British rule in India. Before he even reached Bengal, however, he had found out that "the colossal magnitude of English sway was a blessing;" that "the British colonial institutions were admirable, as seen at the cape," and "those of the French execrable as exhibited at the Isle of Bourbon" and Pondicherry; at all which places he touched on his way thither. In p. 244, vol. ii., he remarks,—

"It is evident that it is not by physical force that the English keep under the immense population of these vast regions. The European army consists of only 20,000 men; that is all. The principle of their power is elsewhere. It is in the respect with which their character inspires these nations."

Even the mode in which we have obtained our paramount sway in India, for which we have been so often and so largely abused by foreigners, appears neither unjust nor wonderful in the eyes of M. Jacquemont. He remarks (p. 233)—

"In France, we consider as an hypocritical farce the excuse of *necessity*, alleged by the English, for the prodigious aggrandisement of their Asiatic dominions; nothing, however, is more true, and certainly no European government was ever more faithful to its engagements than that of the Company."

We believe it may be truly asserted, that in all the wars in which the British have been engaged in India, the native potentates were, more or less, the aggressors. Ambition is, in their eyes, as in the eyes of more civilised nations, a godlike virtue—"super et Garamantes et Indos proferet imperium." It is true that the Company have generally indemnified themselves for the expenses of wars, thus forced on them, by extension of territory, so as at once to reduce the strength of their adversaries, and augment their own; but their policy and their interest are and have been essentially pacific. Even the most successful wars, followed by acquisitions of territory and even of money, such as those waged against Tippoo, have not ultimately enriched their treasury; whilst some hostilities, even when prosecuted to a glorious termination, such as the late war with the Burmese, have entailed upon them ruinous expense. It must be confessed, no doubt, that territory has often been acquired in a more questionable way, by compelling the native princes, to whom we have supplied subsidiary troops, to cede portions of their possessions in payment of the military entertained for their protection and defence; but this has, in almost all instances, been the consequence of the non-payment of the stipulated subsidy, arising out of the vicious mismanagement of the native princes themselves; and has generally, if not always, been necessary to protect their subjects from extortion and oppression. Jacquemont, in bearing testimony to the general moderation of the Company's policy, adds a remarkable instance of the wanton bad faith, ingratitude, and folly, by which these princes provoke the reluctant interference of the English.

"The Indian princes have *obliged* the Company to absorb them all into its power, one after the other. They have all succumbed, in the rashest, the most stupid enterprises against the Colossus, *which would have left them in peace, had they not madly provoked* its interference. Thirty years ago, the English drove the Mahrattas out of Delhi, where they found, imprisoned in a fort, a blind old man, whose long life had been but an uninterrupted series of misfortunes. This was Shah Allum, the descendant of Timour. He had never reigned but by name. The English leave him his vain title, and pay him all the honours formerly enjoyed by the Mogul emperors. They give him a magnificent pension (four millions of francs);

guaranteeing this title, these honours, and these advantages, to his family. What use do you think he once made of the guns which have been given him for form sake to fire a salute whenever he leaves his palace? *He fired them at the English troops.* In less than five minutes the imperial palace was attacked, and the guns retaken. Well! such are the Indian princes. They are all like children, who cannot be trusted with a razor in their hands; not the princes only, but the whole population, which is utterly destitute of reason and moral sense." —vol. ii. pp. 97—98.

It must be recollected, too, that these native governments are themselves a series of fluctuating *usurpations*—that *our* territorial appropriations have seldom invaded long established rights, and, what never can be said of the change of native dynasties, have been always attended by decisive advantage to the mass of the people who have thus come under our sway.

But where, it will be said, is this system to end? The answer is, on the Indus to the west, as it has already ended on the Irrawaddy to the east. The north is barricaded by the Himalaya Mountains, and the south is guarded by the sea. Beyond these limits of Hindooism no indemnities can be found. If we cannot defend India, thus defined, out of her own resources, we must abandon her. M. Jacquemont gives it as his opinion (p. 217, vol. ii.), that "the sway of the British in India, though it may last centuries, may be terminated in a day." In this we must all agree with him. It is impossible that a people differing in blood, complexion, language, manners, and religion, from conquerors, who neither domesticate themselves among them during their stay, nor stay longer than they can help, can ever cordially like such intruders. Our superiority in arms first compelled them to submit, and the general justice and humanity of our government have certainly gone very far to reconcile them to our dominions. But the *prestige* of our superiority is now, we fear, rapidly evaporating before the entire freedom of the native, as well as the European press—the diffusion of English education —the multiplication of half castes—and the increasing numbers of European settlers and adventurers of all descriptions. The late fanatic insurrection within a few miles of Calcutta, and the long continued Cole war at no great distance from it, are pregnant instances of the decay of that moral ascendancy which Europeans once exercised over the native mind.

M. Jacquemont is, however, of opinion that "the British power in India will never perish by foreign aggression; and in this opinion also we are inclined to agree with him. Yet, although the probabilities are that any western power which might invade India would be ultimately repulsed, prudence requires that a watchful eye should be kept on the movements not only of the Russians, but of others. What has been done may be done again. As to Russia, there can be little doubt that, supposing her to have *fully attained and secured* certain older as well as nearer objects, she might, without difficulty, land an army on the southern and eastern shores of the Caspian. She has already steam-vessels on that inland sea; and, by the Volga, troops might be embarked almost at the gates of Moscow, and conveyed, with little trouble or expense, to Astrabad on the south, or the Bay of Balkan on the east coast of the Caspian. From either or both those points the occupation of Khiva, which M. Mouraviev was sent to reconnoitre in 1820, would not be difficult; for the distance does not exceed two hundred or three hundred miles, across a region which is called indeed a desert, but in which Tartar camps and villages are found frequently interspersed; forage is procured for camels, the ships of the desert—and water at a depth of only eighteen feet; a country in which the Khan of Khiva, in 1831, maintained a large army for several weeks, according to Lieutenant Burnes, and which, in fact, has never opposed any serious obstacle to the progress of an invader, either on the side of Persia or Tartary. From Khiva, on the Oxus, the route is open upon, and along, the banks of that river to Bokhara, also reconnoitred by the Russian embassy under M. Mayendorff, in 1820: whence the road to Cabul has again and again been traversed by conquering armies. This is one route. The other, from Asterabad to Cabul, by Herat, presents no physical obstacles whatever. Both routes might be undertaken in combination and at the same time. From Cabul to the Indus there is no difficulty.

"The Russians," M. Jacquemont remarks, "might present themselves in force on the banks of the Indus almost without meeting any obstacle on their route. They would march at their ease through Persia, and it is beyond doubt the Afghans would spontaneously swell the number of any army marching to the conquest of India. . . . . Runjeet Sing, the ruler of Punjab, will promise, sign, swear all that is asked, and will then consider himself quite free to act according to his fancy. If he thinks that by aiding the Russians, they will succeed in driving the British from India, he will most certainly assist them, being well persuaded that these new comers will not be able to maintain their conquest, and that then his own time will come to attempt gaining possession of India. And such," he adds, "is the stupidity of the Indian princes, that they would either forsake the British government, or act against it, the moment a Russian army crossed the Sutlege. Yet what other nation in Europe would have left the vanquished in India so fair a portion?"—vol. ii. p. 202.

Turkey as well as Persia may now, we fear, be said to be quite at the mercy of the czar. Whilst Persia could oppose his advancing armies in front, and Turkey attack them in the flank and rear of their line of operation, an attempt upon India could never have been hazarded; but our recent diplomacy has cleared the way. We can *now* suppose various circumstances of the European world, under which the scheme of Napoleon for the invasion of India might be revived by the cabinet of St. Petersburgh, in whose minds the missions of Messrs. Mouraviev and Mayendorff to Khiva and Bokhara sufficiently show that the project has never been abandoned as entirely impracticable. Yet, with common precaution on our part, it never could succeed. Armies of horse and foot, accompanied by field artillery, might be transported from Moscow to the Indus, and a Russian army advancing through Persia, Tartary, and Afghanistan might, and probably would, have its numbers rather

augmented than thinned in its progress; but if we had a few strongly fortified posts on the banks of the Indus, the Sutlege, and other Punjab rivers, how can an army, unprovided, as a Russian army must be, with a battering train and a sufficiency of siege ammunition, either take such posts or leave them in the rear? At present, we have no fortification of strength beyond Agra, whence all military supplies are furnished even to the troops on the Sutlege; but when the Indus shall be open, as it soon must be, to Bombay, no time should be lost in erecting a fortress on its banks which might bid defiance, not only to all native attacks, but to any which could be made with "*matériel*" to be brought from Europe. The line of the Sutlege, from the Himalaya mountains to the Great Indian Desert, (so far at least a desert that no large body of men ever has passed it,) is a very strong line of defence—not exceeding one hundred miles in extent—in a country in which an invading army from the north could not long subsist, especially during the intense heats of summer, but in which our native and seasoned European troops could easily maintain themselves if protected and provided with *munitions de guerre et de bouche*.

So much for Indian politics, as to which we perhaps have said more on this occasion than may seem to be called for by the value of M. Jacquemont's decisions on any subject—or even of his reluctant testimony to the excellence of our administration in that vast empire.

Of his opinions concerning his own country we shall offer a specimen. Of the July revolution he received the first news with great enthusiasm, but seems to have been surprised, as well as displeased, with the subsequent account of the results of that fraudulent insult on common sense.

"What blunders the Chamber of Deputies committed in the first week of last August! I see by the English papers that M. de Lafayette has resigned the command of the national guard, which proves that there is discord in the camp of our friends. But now that we have returned to the famous legal order, how can we sweep off the peers by an ordinance? Peyronnet would cry out from his prison, 'set me at liberty, since you have infringed the new charter, as I did the old!'"—p. 109.

And subsequently—

"My letters last winter expressed the enthusiasm with which the revolution inspired me, and the bitter regret I have sometimes felt at being so far from France at that memorable period. Since then my opinion concerning those great events has much changed. It has been modified, like your own, in proportion as I saw so many base, absurd, and ignoble consequences proceed from so noble a principle. I see many people speak in the tribune of the events of the great week, as being their handiwork—as if they had fired a gun in the streets with the working mechanics, and as if it was not solely by the muskets of these mechanics that the revolution was achieved."—p. 173.

We can have no great faith in his appreciation of our own national prospects, but as a specimen of the opinion of the radical youth of France it may be worth quoting:—

"However, the thing [a revolution] is brewing in that quarter [England]. You and I are destined to see the shell burst. The abolition of the rotten boroughs will do no more good there than did Catholic emancipation in Ireland. That which the Irish most wanted before all—especially before the equality of political rights—was potatoes to eat: emancipation has not put a single one more into their mouths. What the English people now want is bread. They have the simplicity to believe that a reformed parliament will give it them: an error which they will soon rectify when they come to put their new electoral laws to the test. I would not exchange the lot of France for the next thirty years for that of England."—pp. 210, 211.

On the whole, it is observable that, as Jacquemont recovered from the first vulgar intoxication of his reception at Calcutta, he grew better—his vanity became rather less obtrusive—his prejudices less obstinate—his affectation moderated—his views enlarged—and his natural good sense developed. He might, we think, had he lived, have realised the old observation, that a young Frenchman is the most intolerable, and an old Frenchman the most agreeable of social men. His deathbed letter to his brother is affecting—the very circumstances of the case, of a young man dying, placidly and unrepining, (just as he had successfully completed what he thought a splendid mission,) amidst strangers—and in a distant land—are of themselves sufficient to touch any heart; but ours is pained still more deeply, when we see that the pangs of early death and the prospect of a stranger-grave were not alleviated by the hopes of immortality—of meeting in another world those friends whom he loved in this, and of foreseeing, beyond that stranger-grave, a re-union of an affectionate family in the bosom of their common Father.

We must now make a few observations on the translation which we have *generally* employed in our extracts, but which is frequently incorrect. We seldom think it worth while to make remarks on the translation of such books as these, when they express with any thing like accuracy the meaning of the author. But this translator has advanced rather higher pretensions. He has prefixed an introduction to the work, in which, as from the critical chair, he pronounces a high panegyric on M. Jacquemont and his writings, a somewhat pompous eulogy on the taste and discrimination of Jacquemont's friends and *sponsors* in London, and a censure on the illiberality of others who were not quite so forward in patronising a person whom they knew nothing about. This obliges us to observe that we think the translator a very inadequate authority, and that, before he passes such decided opinions, it would be as well that he understood a little more accurately the language of the book which he undertakes not only to translate but to panegyrise. We shall amuse our readers with a few specimens of this writer's qualifications for his task.

We begin with an instance or two not of ignorance but *bad faith*. Jacquemont, *amusing* himself at the expense of the chaplain of the ship, (whom, as we have seen, he taught the sailors to insult in the performance of the most solemn of his duties,) says, that the poor man was obliged to hear '*les plus belles* impiétés.'—vol. i. p. 24. But lest this should shock English readers at the outset, the translator renders it—in complete con-

radiction to the sense and to the writer's feelings —'the most *dreadful* impieties.' A similar instance is where Jacquemont, describing his travelling library of three small volumes, one of which is Tristram Shandy—calls it '*la pièce de résistance!*'—*the solid dish!* The idea of *Tristram Shandy* being any man's *solid dish* is too ludicrous, and therefore our honest translator softens it into "Tristram Shandy is a feast of itself." We note this trifle the rather because the mention of Tristram Shandy in this letter, dated 19th December, 1828, led, as we apprehend, to a little subsequent *embarras* in M. Jacquemont's respectable family. We have seen that M. Jacquemont had a young female cousin residing at Arras, Mademoiselle Zoé de Noizet, and we find that in July, 1831, Jacquemont learned, by a letter from his fair cousin, that, after his example, she had been endeavouring to perfect herself in the English tongue, and for that purpose had undertaken—of all the books in the world—to translate *Tristram Shandy*. Jacquemont, who in the interval had probably so far improved his English as to be able to see the drift of Tristram Shandy, is exceedingly surprised at the choice which poor Miss Zoé had made, and he writes to her to express, as decently as he can, that it is altogether an *improper book* for her purpose. He had, no doubt, totally forgotten the style in which, two years and a half before, he had talked of Tristram Shandy; but what wonder that the poor girl and the poor girl's friends thought that if she were to learn English, no book could be more proper than that which her clever literary cousin had taken with him all the way to India as his *solid dish?* We, however, can easily imagine Zoé's perplexity in endeavouring to discover, in the obscure and filthy sensualities of Sterne, the moral meaning which had recommended the book to the *savant*. But it is clear that to this hour the learned family of the Jacquemonts have not discovered their error; for however indifferent they might be about Lady W. and Lady G., they would not, knowingly, exhibit their young relation in so ridiculous a light. Nor do we think the *savant* himself ever knew very much about English literature, which he so confidently talks of, for we find him saying, so late as May, 1831—

"That he has no appetite for his dinner if he has not *Locke or Sterne*, or some other illustrious dead, to bear him company at table."—vol. ii. p. 72.

We need hardly suggest, that no man who had ever read and understood a page of any of Locke's works, would have classed him with the author of "Tristram Shandy." In truth, Jacquemont knows no more about Locke than dear Zoé did of Sterne. And although he talks of his great proficiency in English—and of the set speeches which he made in that tongue to Lord William Bentinck on his first arrival—we find that even after having spent *six* months in the society at Calcutta, where, he says, he spoke nothing but English, he can make no better attempt at our language than the following:—

"Conclude from this chapter, if you will, *that I am, perhaps, a too great admirer of the foretold lady, and that it is high time for me to depart with the occasions of meeting her often.*"—vol. i. p. 144.

But we must return to our translator. The preceding examples are of wilful though trifling misrepresentations; what follows is pure ignorance:—

"I have always had but little faith in the theory which accounts for the trade-winds constantly blowing from the same quarter. You may just as well give the same reason to explain why your daughter is dumb."—vol. i. p. 23

This grave incoherent nonsense about a dumb daughter and the trade-winds is in the original a pleasant allusion to a passage in Molière, which has become a *proverbial* expression for any inconclusive reasoning:—*Voilà justement ce qui fait que votre fille est muette.* (*Médecin Malgré lui*, a. ii. s. 6.)

When Jacquemont is describing the discomforts of his mode of living in the mountains, the translator makes him eat "a *careful* repast," the very reverse of the truth, for the repast was a miserable *improvisation*—the original expression is "*soucieux*"—and the meaning—an *anxious* and scanty meal.

The *Zélée*, in getting out of the harbour of Rio, runs foul of a merchantman, and a good deal of damage is done; "but no matter; the French *agent* will pay the damage," p. 27. Poor Jacquemont, instead of this matter of fact *platitude*, meant a sly political joke—"Le *contribuable* français est là qui paira les avaries"—i. e. "The poor French tax-payer will have to pay the damage"—as if an Englishman should have said, "Our ignorant captain has caused the damage, but *John Bull*, '*le contribuable Anglais*,' must pay for it."

These mistakes are only ludicrous; but some are more serious. In the account of the strange affair between the *Zélée* and the English merchantman, the translation says the *Zélée* was worked in a particular manner, "so as not to wait for his (the Englishman's) broadside," vol. i. p. 62. This would imply that the English ship had a *broadside* to fire, and that the conduct of the French captain had so much of an excuse. The original expresses directly the contrary—"Immédiatement après une bordée à boulets et à mitraille, et tandis qu'on rechargait toutes les pièces d'un bord, le navire manœuvrait de manière à ne pas faire attendre sa *seconde* bordée." "Immediately after the first broadside of round and grape, and while they were re-loading the guns, the [French] ship was manœuvred *so as not to delay her* SECOND *broadside*."

Another very serious mistake occurs in the version of Jacquemont's impertinence about Lady W. Bentinck, which we have already alluded to. The translator makes Jacquemont say that "Lady William's attempt to convert him had failed, and that he even feared that she was a little *less sure of her aim* than she was at first." —p. 88. This is quite inoffensive, and would only imply that she began to doubt whether she should succeed in converting him. But the real meaning is, as we have rendered it, that she not only failed to convert him, but had herself become a little less confident in her own belief—*sûre de son fait*—than she was before.

The following version also contradicts the meaning of the original. Jacquemont calls the Hindoostanee "*a contemptible patois*, not worth learning"—"*the language of the court and courtiers.*"—p. 90. It surprises one that the language of *court and courtiers*, generally considered the most correct and polite, should, in this instance, be a "*contemptible jargon.*" The French is, "*de cour et des courtiers,*"—i. e. "*lawyers and brokers.*"

The following passage must perplex an English reader:

"In half an hour Shah Mohammed dismissed his court; and I retired in procession with the resident. *The drums beat in the fields* as I passed before the troops with my dressing-gown of worked muslin. Why were you not present to enjoy the honours conferred upon your progeny?"—vol. i. p. 190.

Again—

"At Lahore, I lived in a little palace of the Arabian Nights' Entertainments; a battalion of infantry was on duty near me; *the drums beat in the fields* when I put my head out of doors; and when I walked in the cool of the evening, in the alleys of my garden, fountains played around me by thousands."—vol. ii. p. 216.

One cannot conceive how drums *beating in the fields* can have any thing to do with the honours paid Jacquemont in the *cities* of Delhi and Lahore; but the French phrase, *Les tambours battirent aux champs quand je passais*, means no more than that when he passed the guard was turned out, and the drums *beat a salute.*

In the same way, when Jacquemont tells a story of a poor Swiss professor, who, having proved that the history of William Tell was a fable of the eleventh century, was condemned to death for having overturned a belief which is one of the dearest heir-looms of a Swiss peasant; the translator makes him add that, "'*fortunately being contumacious*,' he escaped with his life."—p. 290. One wonders why, if the error was so criminal, the being *contumacious* in it should have procured a mitigation of the punishment. The explanation is that *absent* offenders are condemned as "*contumaces*"—and Jacquemont meant to say, that being fortunately *absent*, he was condemned in effigy only, and so his life was saved.

We suppose these instances, selected at random, from the first half of the first volume, will satisfy our readers as to the qualifications of the translator in the niceties of the French idiom; and that they will agree in our opinion, that it would have been as well if, instead of criticising other people, he had employed himself in learning his own business.

Fodder.—One of the most simple and valuable discoveries in agriculture is, to mix layers of green or new cut clover with layers of straw. By this means the strength of the clover is absorbed by the straw, which, thus impregnated, both horses and cattle eat greedily, and the clover is dried and prevented from heating. This practice is particularly calculated for second crops of clover and rye grasses.

From the London Metropolitan.

JAPHET IN SEARCH OF A FATHER.

Continued from page 315.

"I beg your pardon, Newland," said the major, returning from his dressing-room, resplendent with chains and bijouterie; "but I must have your Christian name."

"It's rather a strange one," replied I; "it is Japhet."

"Japhet! by the immortal powers, I'd bring an action against my godfathers and godmothers; you ought to recover heavy damages."

"Then I presume you would not have the name," replied I, with a knowing look, "for a clear ten thousand a year."

"Whew! that alters the case—it's astonishing how well any name looks in large *gold* letters. Well, as the old gentleman, whoever he might have been, made you compensation, you must forgive and forget. Now where shall we go?"

"With your permission, as I came to town in these clothes, made by a German tailor—Darmstadt's tailor by-the-by—but still if tailor to a prince, not the prince of tailors—I would wish you to take me to your own: your dress appears very correct."

"You show your judgment, Newland, it *is* correct; Stultz will be delighted to have your name on his books, and to do justice to that figure. *Allons donc.*"

We sauntered up St. James's Street, and before I had arrived at Stultz's, I had been introduced to at least twenty of the young men about town. The major was most particular in his directions about the clothes, all of which he ordered; and as I knew that he was well acquainted with the fashion, I gave him *carte blanche.* When he left the shop, he said, "Now, my dear Newland, I have given you a proof of friendship which no other man in England has had. Your dress will be the *ne plus ultra.* There are little secrets only known to the initiated, and Stultz is aware that this time I am in earnest. I am often asked to do the same for others, and I pretend so to do; but a wink from me is sufficient, and Stultz dares not dress them. Don't you want some bijouterie? or have you any at home?"

"I may as well have a few trifles," replied I.

We entered a celebrated jeweller's, and he selected for me to the amount of about forty pounds. "That will do—never buy much; for it is necessary to change every three months at least. What is the price of this chain?"

"It is only fifteen guineas, major."

"Well, I shall take it; but recollect," continued the major; "I tell you honestly, I never shall pay you."

The jeweller smiled, bowed, and laughed; the major threw the chain round his neck, and we quitted the shop.

"At all events, major, they appear not to believe your word in that shop."

"My dear fellow, that's their own fault, not mine. I tell them honestly I never will pay them; and you may depend upon it I intend most sacredly to keep my word. I never do pay any body, for the best of all possible reasons, I have no money; but then I do them a service—I make them fashionable, and they know it."

"What debts do you pay then, major?"

"Let me think—that requires consideration. Oh! I pay my washer-woman."

"Don't you pay your debts of honour?"

"Debts of honour! why I'll tell you the truth; for I know that we shall hunt in couples. If I win I take the money; but if I lose—why then I forget to pay; and I always tell them so before I sit down to the table. If they won't believe me, it's not my fault. But what's the hour? Come, I must make a few calls, and will introduce you."

We sauntered on to Grosvenor Square, knocked, and were admitted into a large, elegantly furnished mansion. The footman announced us—"My dear Lady Maelstrom,

allow me the honour of introducing to you my very particular friend, Mr. Newland, consigned to my charge by my Lord Windermear during his absence. He has just arrived from the continent, where he has been making the grand tour."

Her ladyship honoured me with a smile. "By-the-by, major, that reminds me—do me the favour to come to the window. Excuse us one moment, Mr. Newland."

The major and Lady Maelstrom walked to the window, and exchanged a few sentences, and then returned. Her ladyship, holding up her finger, and saying to him as they came towards me, "Promise me now that you won't forget."

"Your ladyship's slightest wishes are to me imperative commands," replied the major, with a graceful bow.

In a quarter of an hour, during which the conversation was animated, we rose to take our leave, when her ladyship came up to me, and offering her hand, said, "Mr. Newland, the friendship of Lord Windermear, and the introduction of Major Carbonnell, are more than sufficient to induce me to put your name down on my visiting list. I trust I shall see a great deal of you, and that we shall be great friends."

I bowed to this handsome announcement, and we retired. As soon as we were out in the square, the major observed, "You saw her take me on one side—it was to *pump*. She has no daughters, but about fifty nieces, and match-making is her delight. I told her that I would stake my honour upon your possessing ten thousand a year; how much more I could not say. I was not far wrong, was I?"

I laughed. "What I may be worth, major, I really cannot say; but I trust that the event will prove that you are not far wrong. Say no more, my dear fellow."

"I understand—you are not yet of age—of course have not yet come into possession of your fortune."

"That is exactly the case, major. I am now but little more than nineteen."

"You look older; but there is no getting over baptismal registries with the executors. Newland, you must content yourself for the two next years in playing Moses, and only peep at the promised land."

We made two or three more calls, and then returned to St. James's Street. "Where shall we go now? By-the-by, don't you want to go to your banker's?"

"I will just stroll down with you, and see if they have paid any money in," replied I carelessly.

We called at Drummond's, and I asked them if there was any money paid in to the credit of Mr. Newland.

"Yes, sir," replied one of the clerks; "there is one thousand pounds paid in yesterday."

"Very good," replied I.

"How much do you wish to draw for?" enquired the major.

"I don't want any," replied I. "I have more money than I ought to have in my desk at this moment."

"Well, then, let us go and order dinner; or perhaps you would like to stroll about a little more; if so, I will go and order the dinner. Here's Harcourt, that's lucky. Harcourt, my dear fellow, know Mr. Newland, my very particular friend. I must leave you now; take his arm, Harcourt, for half an hour, and then join us at dinner at the Piazza."

Mr. Harcourt was an elegant young man of about five and twenty. Equally pleased with each other's externals, we were soon familiar: he was witty, sarcastic, and well-bred. After half an hour's conversation he asked me what I thought of the major. I looked him in the face, and smiled. "That look tells me that you will not be his dupe, otherwise I had warned you: he is a strange character; but if you have money enough to afford to keep him, you cannot do better, as he is acquainted with, and received by, every body. His connections are good; and he once had a very handsome fortune, but it was soon run out, and he was obliged to sell his commission in the Guards. Now he lives upon the world; which, as Shakspeare says, is his oyster; and he has wit and sharpness enough to open it. Moreover, he has some chance of falling into a peerage; that prospect, and his amusing qualities, added to his being the most fashionable man about town, keeps his head above water. I believe Lord Windermear, who is his cousin, very often helps him."

"It was Lord Windermear who introduced me to him," observed I.

"Then he will not venture to play any tricks upon you, further than eating your dinners, borrowing your money, and forgetting to pay it."

"You must acknowledge," said I, "he always tells you beforehand that he will never pay you."

"And that is the only point in which he adheres to his word," replied Harcourt, laughing; "but, tell me, am I to be *your* guest to-day?"

"If you will do me that honour."

"I assure you I am delighted to come, as I shall have a further opportunity of cultivating your acquaintance."

"Then we had better bend our steps towards the hotel, for it is late," replied I; and we did so accordingly.

On our arrival we found the table spread, champagne in ice under the sideboard, and apparently every thing prepared for a sumptuous dinner, the major on the sofa giving directions to the waiter, and Timothy looking all astonishment. "Major," said I, "I cannot tell you how much I am obliged to you for your kindness in taking all this trouble off my hands, that I might follow up the agreeable introduction you have given me to Mr. Harcourt."

"My dear Newland, say no more; you will, I dare say, do the same for me if I require it, when I give a dinner. (Harcourt caught my eye, as if to say, "You may safely promise that.") But, Newland, do you know that the nephew of Lord Windermear has just arrived? Did you meet abroad?"

"No," replied I, somewhat confused; but I soon recovered myself. As for Tim, he bolted out of the room. "What sort of a person is he?"

"That you may judge for yourself, my dear fellow, for I asked him to join us, I must say, more out of compliment to Lord Windermear than any thing else; for I am afraid that even I could never make a gentleman of him. But take Harcourt with you to your room, and by the time you have washed your hands, I will have dinner on the table. I took the liberty of desiring your valet to show me in about ten minutes ago. He's a shrewd fellow that of yours, where did you pick him up?"

"By mere accident," replied I; "come, Mr. Harcourt."

On our return we found the real Simon Pure, Mr. Estcourt, sitting with the major, who introduced us, and dinner being served, we sat down to table.

Mr. Estcourt was a young man, about my own age, but not so tall by two or three inches. His features were prominent, but harsh; and when I saw him, I was not at all surprised at Lord Windermear's expressions of satisfaction, when he supposed that I was his nephew. His countenance was dogged and sullen, and he spoke little; he appeared to place an immense value upon birth, and hardly deigned to listen, except the aristocracy were the subject of discourse. I treated him with marked deference, that I might form an acquaintance, and found, before we parted that night, that I had succeeded. Our dinner was excellent, and we were all, except Mr. Estcourt, in high good humour. We sat late—too late to go to the theatre, and promising to meet the next day at noon, Harcourt and the major took their leave.

Mr. Estcourt had indulged rather too much, and after their departure became communicative. We sat up for more than an hour; he talked of nothing but his family

and his expectations. I took this opportunity of discovering what his feelings were likely to be when he was made acquainted with the important secret which was in my possession. I put a case somewhat similar, and asked him whether in such circumstances he would waive his right for a time, to save the honour of his family.

"No, by G–d!" replied he, "I never would. What! give up even for a day my right—conceal my true rank for the sake of relatives? never—nothing would induce me."

I was satisfied, and then casually asked him if he had written to Lord Windermear to inform him of his arrival.

"No," replied he; "I shall write to-morrow." He soon after retired to his own apartment, and I rang for Timothy.

"Good heavens, sir!" cried Timothy, "what is all this—and what are you about? I am frightened out of my wits. Why, sir, our money will not last two months."

"I do not expect it will last much longer, Tim; but it cannot be helped. Into society I must get, and to do so, must pay for it."

"But, sir, putting the expense aside, what are we to do about this Mr. Estcourt? All must be found out."

"I intend that it shall be found out, Tim," replied I; "but not yet. He will write to his uncle to-morrow; you must obtain the letter, for it must not go. I must first have time to establish myself, and then Lord Windermear may find out his error as soon as he pleases."

"Upon my honour, Japhet, you appear to be afraid of nothing."

"I fear nothing, Tim, when I am following up the object of my wishes. I will allow no obstacles to stand in my way, in my search after my father."

"Really, you seem to be quite mad on that point, Japhet."

"Perhaps I may be, Tim," replied I, thoughtfully. "At all events, let us go to bed now, and I will tell you to-morrow morning, all the events of this day."

Mr. Estcourt wrote his letter, which Tim very officiously offered to put into the post, instead of which we put it between the bars of the grate.

I must now pass over about three weeks, during which I became very intimate with the major and Mr. Harcourt, and was introduced by them to the clubs, and almost every person of fashion. The idea of my wealth, and my very handsome person and figure, ensured me a warm reception, and I soon became one of the stars of the day. During this time I also gained the entire confidence of Mr. Estcourt, who put letter after letter into the hands of Timothy, who, of course, put them into the usual place. I pacified him as long as I could, by expressing my opinion, that his lordship was on a visit to some friends in the neighbourhood of his seat; but at last he would remain in town no longer. You may go now, thought I, I feel quite safe.

It was about five days after his departure, as I was sauntering, arm in arm, with the major, who generally dined with me about five days in the week, that I perceived the carriage of Lord Windermear, with his lordship in it. He saw us, and pulling his check-string, alighted, and coming up to us, with the colour mounting to his forehead with emotion, returned the salute of the major and me.

"Major," said he, "you will excuse me, but I am anxious to have some conversation with Mr. Newland; perhaps," continued his lordship, addressing me, "you will do me the favour to take a seat in my carriage?"

Fully prepared, I lost none of my self-possession, but, thanking his lordship, I bowed to him, and stepped in. His lordship followed, and saying to the footman, "Home—drive fast," fell back into the carriage, and never uttered one word until we had arrived, and had entered the dining-parlour. He then took a few steps up and down, before he said, "Mr. Newland, or whatever your name may be, I perceive that you consider the possession of an important secret to be your safe-guard. To state my opinion of your conduct is needless; who you are, and what you are, I know not; but," continued he, no longer controlling his anger; "you certainly can have no pretensions to the character of a gentleman."

"Perhaps your lordship," replied I, calmly, "will inform me upon what you may ground your inference."

"Did you not, in the first place, open a letter addressed to another?"

"My lord, I opened a letter brought to me with the initials of my name, and at the time I opened it, I fully believed that it was intended for me."

"We will grant that, sir; but after you had opened it, you must have known that it was for some other person."

"I will not deny that, my lord."

"Notwithstanding which, you apply to my lawyer, representing yourself as another person, to obtain sealed papers."

"I did, my lord; but allow me to say, that I never should have done so, had I not been warned by a dream."

"By a dream!"

"Yes, my lord. I had determined not to go for them, when in a dream I was ordered so to do."

"Paltry excuse! and then you break private seals."

"Nay, my lord, although I did go for the papers, I could not, even with the idea of supernatural interposition, make up my mind to break the seals. If your lordship will recollect, it was you who broke the seals, and insisted upon my reading the papers."

"Yes, sir, under your false name."

"It is the name by which I go at present, although I acknowledge it is false; but that is not my fault—I have no other at present."

"It is very true, sir, that in all I have now mentioned, the law will not reach you; but recollect, that by assuming another person's name——"

"I never did, my lord," interrupted I.

"Well, I may say, by inducing me to believe that you were my nephew, you have obtained money under false pretences; and for that I now have you in my power."

"My lord, I never asked you for the money; you yourself paid it into the banker's hands, to my credit, and to my own name. I appeal to you now, whether, if, after you so deceived yourself, the law can reach me?"

"Mr. Newland, I will say, that much as I regret what has passed, I regret more than all the rest, that one so young, so prepossessing, so candid in appearance, should prove such an adept in deceit. Thinking you were my nephew, my heart warmed towards you, and I must confess, that since I have seen my real nephew, the mortification has been very great."

"My lord, I thank you; but allow me to observe, that I am no swindler. Your thousand pounds you will find safe in the bank, for penury would not have induced me to touch it. But now that your lordship appears more cool, will you do me the favour to listen to me? When you have heard my life up to the present, and my motives for what I have done, you will then decide how far I am to blame."

His lordship took a chair, and motioned to me to take another. I narrated what had occurred when I was left at the Foundling, and gave him a succinct account of my adventures subsequently—my determination to find my father—the dream which induced me to go for the papers—and all that the reader has already been acquainted with. His lordship evidently perceived the monomania which led me, and heard me with great attention.

"You certainly, Mr. Newland, do not stand so low in my opinion as you did before this explanation, and I

must make allowances for the excitement under which I perceive you to labour on one subject; but now, sir, allow me to put one question, and beg that you will answer candidly. What price do you demand for your secrecy on this important subject?"

"My lord!" replied I, rising with dignity; "this is the greatest affront you have put upon me yet; still I will name the price by which I will solemnly bind myself, by all my future hopes of finding my father in this world, and of finding an eternal Father in the next, and that price, my lord, is a return of your good opinion."

His lordship also rose, and walked up and down the room with much agitation in his manner. "What am I to make of you, Mr. Newland?"

"My lord, if I were a swindler, I should have taken your money; if I had wished to avail myself of the secret, I might have escaped with all the documents, and made my own terms. I am, my lord, nothing more than an abandoned child trying all he can to find his father." My feelings overpowered me, and I burst into tears. As soon as I could recover myself, I addressed his lordship, who had been watching me in silence, and not without emotion. "I have one thing more to say to you, my lord." I then mentioned the conversation, between Mr. Estcourt and myself, and pointed out the propriety of not making him a party to the important secret.

His lordship allowed me to proceed without interruption, and after a few moments' thought, said, "I believe that you are right, Mr. Newland; and I now begin to think that it was better that this secret should have been entrusted to you than him. You have now conferred an obligation on me and command me. I believe you to be honest, but a little mad, and I beg your pardon for the pain which I have occasioned you."

"My lord, I am more than satisfied."

"Can I be of any assistance to you, Mr. Newland?"

"If, my lord, you could at all assist me, or direct me in my search——"

"Then I am afraid I can be of little use; but I will give you the means of prosecuting your search, and in so doing, I am doing but an act of justice, for in introducing you to Major Carbonnell, I am aware that I must have very much increased your expenses. It was an error which must be repaired, and therefore, Mr. Newland, I beg you will consider the money at the bank as yours, and make use of it to enable you to obtain your ardent wish."

"My lord——"

"I will not be denied, Mr. Newland; and if you feel any delicacy on the subject, you may take it as a loan, to be repaid when you find it convenient. Do not, for a moment, consider that it is given to you because you possess an important secret, for I will trust entirely to your honour on that score."

"Indeed, my lord," replied I, "your kindness overwhelms me, and I feel as if, in you, I had already *almost* found a father. Excuse me, my lord, but did your lordship ever—ever ——"

"I know what you would say, my poor fellow: no, I never did. I never was blessed with children. Had I been, I should not have felt that I was disgraced by having one resembling you. Allow me to entreat you, Mr. Newland, that you do not suffer the mystery of your birth to weigh so heavy on your mind; and now I wish you good morning, and if you think I can be useful to you, I beg that you will not fail to let me know."

"May heaven pour down blessings on your head," replied I, kissing respectfully his lordship's hand; "and may my father, when I find him, be as like unto you as possible." I made my obeisance, and quitted the house.

I returned to the hotel, for my mind had been much agitated, and I wished for quiet, and the friendship of Timothy. As soon as I arrived I told him all that had passed.

"Indeed," replied Timothy, "things do now wear a pleasant aspect; for I am afraid, that without that thousand, we could not have carried on for a fortnight longer. The bill here is very heavy, and I'm sure the landlord wishes to see the colour of his money."

"How much do you think we have left? It is high time, Timothy, that we now make up our accounts, and arrange some plans for the future," replied I. "I have paid the jeweller and the tailor, by the advice of the major, who says, that you should always pay your *first bills* as soon as possible, and all your subsequent bills as late as possible; and if put off *sine die*, so much the better. In fact, I owe very little now, but the bill here, I will send for it to-night."

Here we were interrupted by the entrance of the landlord. "O Mr. Wallace, you are the very person I wished to see; let me have my bill, if you please."

"It's not of the least consequence, sir," replied he; "but if you wish it, I have posted down to yesterday," and the landlord left the room.

"You were both of one mind, at all events," said Timothy, laughing; "for he had the bill in his hand, and concealed it the moment you asked for it."

In about ten minutes the landlord re-appeared, and presenting the bill upon a salver, made his bow and retired. I looked it over, it amounted to £104, which, for little more than three weeks, was pretty well. Timothy shrugged up his shoulders, while I ran over the items. "I do not see that there is any thing to complain of, Tim," observed I, when I came to the bottom of it; "but I do see that living here, with the major keeping me an open house, will never do. Let us see how much money we have left."

Tim brought the dressing case in which our cash was deposited, and we found, that after paying the waiters, and a few small bills not yet liquidated, that our whole stock was reduced to fifty shillings.

"Merciful heaven! what an escape," cried Timothy; "if it had not been for this new supply, what should we have done?"

"Very badly, Timothy; but the money is well spent, after all. I have now entrance into the first circles. I can do without Major Carbonnell; at all events, I shall quit this hotel, and take furnished apartments, and live at the clubs. I know how to put him off."

I laid the money on the salver, and desired Timothy to ring for the landlord, when who should come up but the major and Harcourt. "Why, Newland! what are you going to do with that money?" said the major.

"I am paying my bill, major."

"Paying your bill, indeed; let us see—£104. O this is a confounded imposition. You mustn't pay this." At this moment the landlord entered. "Mr. Wallace," said the major, "my friend Mr. Newland was about, as you may see, to pay you the whole of your demand; but allow me to observe, that being my very particular friend, and the Piazza having been particularly recommended by me, I do think that your charges are somewhat exorbitant. I shall certainly advise Mr. Newland to leave the house to-morrow, if you are not more reasonable."

"Allow me to observe, major, that my reason for sending for my bill, was to pay it before I went into the country, which I must do to-morrow, for a few days."

"Then I shall certainly recommend Mr. Newland not to come here when he returns, Mr. Wallace, for I hold myself, to a certain degree, after the many dinners we have ordered here, and of which I have partaken, as I may say, *particeps criminis*, or in other words, as having been a party to this extortion. Indeed, Mr. Wallace, some reduction must be made, or you will greatly hurt the credit of your house."

Mr. Wallace declared, that really he had made nothing

but the usual charges; that he would look over the bill again, and see what he could do.

"My dear Newland," said the major, "I have ordered your dinners, allow me to settle your bill. Now, Mr. Wallace, suppose we take off *one-third* ?"

"One-*third*, Major Carbonnell! I should be a loser."

"I am not exactly of your opinion; but let me see—now take your choice. Take off £20, or you lose my patronage, and that of all my friends. Yes or no ?"

The landlord, with some expostulation, at last consented, and he receipted the bill, leaving £20 of the money on the salver, made his bow, and retired.

"Rather fortunate that I slipped in, my dear Newland; now there are £20 saved. By-the-by, I'm short of cash. You've no objection to let me have this? I shall never pay you, you know."

"I do know you *never* will pay me, major; nevertheless, as I should have paid it to the landlord had you not interfered, I will lend it to you."

"You are a good fellow, Newland," said the major, pocketing the money. "If I had borrowed it, and you had thought you would have had it repaid, I should not have thanked you; but as you lend me with your eyes open, it is nothing more than a very delicate manner of obliging me, and I tell you candidly, that I will not forget it. So you really are off to-morrow ?"

"Yes," replied I, "I must go, for I find that I am not to make ducks and drakes of my money, until I come into possession of my property."

"I see, my dear fellow. Executors are the very devil; they have no feeling. Never mind; there's a way of getting to windward of them. I dine with Harcourt, and he has come to ask you to join us."

"With pleasure."

"I shall expect you at seven, Newland," said Harcourt, as he quitted the room with the major.

"Dear me, sir, how could you let that gentleman walk off with your money ?" cried Timothy. "I was just rubbing my hands with the idea that we were £20 better off than we thought, and away it went, like smoke."

"And will never come back again, Tim; but never mind that, it is important that I make a friend of him, and his friendship is only to be bought. I shall have value received. And now, Tim, we must pack up, for I leave this to-morrow morning. I shall go down to ———, and see little Fleta."

I dined with Harcourt; the major was rather curious to know what it was which appeared to flurry Lord Windermear, and what had passed between us. I told him that his lordship was displeased on money matters, but that all was right, only that I must be more careful for the future. "Indeed, major, I think I shall take lodgings. I shall be more comfortable, and better able to receive my friends."

Harcourt agreed with me, that it was a much better plan, when the major observed, "Why, Newland, I have a room quite at your service; suppose you come and live with me ?"

"I am afraid I shall not save by that," replied I, laughing, "for you will not pay your share of the bills."

"No, upon my honour I will not; so I give you fair warning; but as I always dine with you when I do not dine elsewhere, it will be a saving to you—for you will *save your lodgings*, Newland; and you know the house is my own, and I let off the rest of it; so, as far as that bill is concerned, you will be safe."

"Make the best bargain you can, Newland," said Harcourt; "accept his offer, for depend upon it, it will be a saving in the end."

"It certainly deserves consideration," replied I; "and the major's company must be allowed to have its due weight in the scale; if Carbonnell will promise to be a little more economical———"

"I will, my dear fellow—I will act as your steward, and make your money last as long as I can, for my own *sake*, as well as yours. Is it a bargain? I have plenty of room for your servant, and if he will assist me a little, I will discharge my own." I then consented to the arrangement.

The next day I went to the banker's, drew out £150, and set off with Timothy for ———. Fleta threw herself into my arms, and sobbed with joy. When I told her Timothy was outside, and wished to see her, she asked why he did not come in; and, to show how much she had been accustomed to see, without making remarks, when he made his appearance in his livery, she did not by her countenance express the least surprise, nor, indeed, did she put any questions to me on the subject. The lady who kept the school praised her very much for docility and attention, and shortly after left the room. Fleta then took the chain from around her neck into her hand, and told me that she did recollect something about it, which was, that the lady whom she remembered, wore a long pair of ear-rings of the same make and materials. She could not, however, call to mind any thing else. I remained with the little girl for three hours, and then returned to London—moved my luggage, and installed myself into the apartments of Major Carbonnell.

The major adhered to his promise; we certainly lived well, for he could not live otherwise; but in every other point, he was very careful not to add to expense. The season was now over, and every body of consequence quitted the metropolis. To remain in town would be to lose caste, and we had a conference where we should proceed.

"Newland," said the major, "you have created a sensation this season, which has done great honour to my patronage; but I trust next spring, that I shall see you form a good alliance, for believe me, out of the many heartless beings we have mingled with, there are still not only daughters, but mothers, who are not influenced by base and sordid views."

"Why, Carbonnell, I never heard you venture upon so long a moral speech before."

"True, Newland, and it may be a long while before I do so again; the world is my oyster, which I must open, that I may live; but recollect, I am only trying to recover my own, which the world has swindled me out of. There was a time when I was even more disinterested, more confiding, and more innocent, than you were when I first took you in hand. I suffered, and was ruined by my good qualities; and I now live and do well by having discarded them. We must fight the world with its own weapons; but still, as I said before, there is some good in it, some pure ore amongst the dross; and it is possible to find high rank and large fortune, and at the same time an innocent mind. If you do marry I will try hard but you shall possess both; not that fortune can be of much consequence to you."

"Depend upon it, Carbonnell, I never will marry without fortune."

"I did not know that I had schooled you so well; be it so—it is but fair that you should expect it; and it shall be an item in the match if I have any thing to do with it."

"But why are you so anxious that I should marry, Carbonnell ?"

"Because I think you will, in all probability, avoid the gaming table, which I should have taken you to myself had you been in possession of your fortune when I first knew you, and have had my share of your plucking; but now I do know you, I have that affection for you, that I think it better you should not lose your all; for observe, Newland, my share of your spoliation would not be more than what I have, and may still receive from you; and if you marry and settle down, there will always be a good house and a good table for me, as long as I find favour with your wife; and at all events, a friend in

need, that I feel convinced of. So now you have my reasons; some smack of the disinterestedness of former days, others of my present worldliness; you may believe which you please." And the major laughed as he finished his speech.

"Carbonnell," replied I, "I will believe that the better feelings predominate—that the world has made you what you are; and that you have been ruined by the world, you would have been disinterested and generous; even now, your real nature often gains the ascendancy, and I am sure that in all that you have done, which is not defensible, your poverty, and not your will has consented. Now, blunted by habit and time, the suggestions of conscience do not often give you any uneasiness."

"You are very right, my dear fellow," replied the major; "and in having a better opinion of me than the world in general, you do me, I trust, no more than justice. I will not squander *your* fortune, when you come to it, if I can help it; and you'll allow that's a very handsome promise on my part."

"I'll defy you to squander my fortune," replied I, laughing.

"Nay, don't defy me, Newland, for if you do, you'll put me on my mettle. Above all, don't lay me a bet, for that will be still more dangerous. We have only spent about four hundred of the thousand since we have have lived together, which I consider highly economical. What do you say, shall we go to Cheltenham? You will find plenty of Irish girls, looking out for husbands, who will give you a warm reception."

"I hate your fortune and establishment hunters," replied I.

"I grant that they are looking out for a good match, so are all the world; but let me do them justice. Although, if you proposed, in three days they would accept you; yet once married, they make the very best wives in the world. But recollect we must go somewhere; and I think Cheltenham is as good a place as any other. I do not mean for a wife, but——it will suit my own views."

The last observation decided me, and in a few days we were at Cheltenham; and having made our appearance at the rooms, were soon in the vortex of society. "Newland," said Carbonnell, "I dare say you find time hang rather heavy in this monotonous place."

"Not at all," replied I; "what with dining out, dancing, and promenading, I do very well."

"But we must do better. Tell me, are you a good hand at whist?"

"Not by any means. Indeed, I hardly know the game."

"It is a fashionable and necessary accomplishment. I must make you master of it, and our mornings shall be dedicated to the work."

"Agreed," replied I; and from that day every morning after breakfast till four o'clock, the major and I were shut up, playing two dummies, under his instruction. Adept as he was, I very soon learnt all the finesse and beauty of the game.

"You will do now, Newland," said the major one morning, tossing the cards away. "Recollect if you are asked to play, and I have agreed, do not refuse; but we must always play against each other."

"I don't see what we shall gain by that," replied I; "for if I win you'll lose."

"Never do you mind that, only follow my injunctions, and play as high as they choose. We only stay here three weeks longer, and must make the most of our time."

I confess I was quite puzzled at what might be the major's intentions; but that night we sauntered into the club. Not having made our appearance before, we were considered as new hands by those who did not know the major, and were immediately requested to make up a game. "Upon my word, gentlemen, in the first place, I play very badly," replied the major; "and in the next," continued he, laughing, "if I lose, I never shall pay you, for I am cleaned out."

The way in which the major said this only excited a smile; he was not believed, and I was also requested to take a hand. "I'll not play with the major," observed I, "for he plays badly, and has bad luck into the bargain; I might as well lay my money down on the table."

This was agreed to by the other parties, and we sat down. The first rubber of short whist was won by the major and his partner; with the bets it amounted to eighteen pounds. I pulled out my purse to pay the major; but he refused, saying, "No, Newland, pay my partner; and with you, sir," said he, addressing my partner, "I will allow the debt to remain until we rise from the table. Newland, we are not going to let you off yet, I can tell you."

I paid my eighteen pounds, and we recommenced. Although his partner did not perhaps observe it, for he was but an indifferent player, or if he did observe it, had the politeness not to say any thing, the major now played very badly. He lost three rubbers one after another, and with bets and stakes, they amounted to one hundred and forty pounds. At the end of the last rubber he threw up the cards, exclaiming against his luck, and declaring that he would play no more. "How are we now, sir?" said he to my partner.

"You owed me, I think, eighteen pounds."

"Eighteen from one hundred and forty, leaves one hundred and twenty-two pounds, which I now owe you. You must, I'm afraid, allow me to be your debtor," continued the major, in a most insinuating manner. "I did not come here with the intention of playing. I presume I shall find you here to-morrow night."

The gentlemen bowed, and appeared quite satisfied. Major Carbonnell's partner paid me one hundred and forty pounds, which I put in my pocket book, and we quitted the club.

As soon as we were in the street, I commenced an enquiry as to the major's motives. "Not one word, my dear fellow, until we are at home," replied he. As soon as we arrived, he threw himself in a chair, and crossing his legs, commenced:—"You observe, Newland, that I am very careful that you should do nothing to injure your character. As for my own, all the honesty in the world will not redeem it; nothing but a peerage will ever set me right again in this world, and a coronet will cover a multitude of sins. I have thought it my duty to add something to our finances, and intend to add very considerably to them before we leave Cheltenham. You have won one hundred and twenty-eight pounds."

"Yes," replied I; "but you have lost it."

"Granted; but as in most cases I never mean *to pay* my losses, you see that it must be a winning speculation as long as we play against each other."

"I perceive," replied I; "but am not I a confederate?"

"No; you paid when you lost, and took your money when you won. Leave me to settle my own debts of honour."

"But you will meet him again to-morrow night."

"Yes, and I will tell you why. I never thought it possible that we could have met two such bad players at the club. We must now play against them, and we must win in the long run; by which means I shall pay off the debt I owe him, and you will win and pocket money."

"Ah," replied I, "if you mean to allow him a chance for his money, I have no objection—that will be all fair."

"Depend upon it, Newland, when I know that people play as badly as they do, I will not refuse them; but when we sit down with others, it must be as it was before—we must play against each other, and I shall *owe*

the money. I told the fellow that I never would pay him."

"Yes; but he thought you were only joking."

"That is his fault—I was in earnest. I could not have have managed this had it not been that you are known to be a young man of ten thousand pounds per annum, and supposed to be my dupe. I tell you so candidly; and now, good night."

I turned the affair over in my mind as I undressed—it was not honest—but I paid when I lost, and I only took the money when I won—still I did not like it; but the bank notes caught my eye as they lay on the table, and——I was satisfied. Alas! how easy are scruples removed when we want money! How many are there who when in a state of prosperity and affluence, when not tried by temptation would have blushed at the bare idea of a dishonest action, who have raised and held up their hands in abhorrence, when they have heard that others have been found guilty; and yet, when in adversity, have themselves committed the very acts which before they so loudly condemned! How many of the other sex, who have expressed their indignation and contempt at those who have fallen, who, when tempted, have fallen themselves! Let us therefore be charitable; none of us can tell to what we may be reduced by circumstances; and when we acknowledge that the error is great, let us feel sorrow and pity rather than indignation, and pray that we also may not be "*led into temptation.*"

As agreed upon, the next evening we repaired to the club, and found the two gentlemen ready to receive us. This time the major refused to play unless it was with me, as I had such good fortune, and no difficulty was made by our opponents. We sat down and played till four o'clock in the morning. At first, notwithstanding our good play, fortune favoured our adversaries; but the luck soon changed, and the result of the evening was, that the major had a balance in his favour of forty pounds, and I rose a winner of one hundred and seventy-one pounds, so that in two nights we had won three hundred and forty-two pounds. For nearly three weeks this continued, the major not paying when not convenient, and we quitted Cheltenham with about eight hundred pounds in our pockets; the major having paid about one hundred and twenty pounds to different people who frequented the club; but they were Irishmen, who were not to be trifled with. I proposed to the major that we should pay those debts, as there still would be a large surplus: he replied, "Give me the money." I did so. "Now," continued he, "so far your scruples are removed, as you will have been strictly honest; but, my dear fellow, if you knew how many debts of this sort are due to me, of which I never did touch one farthing, you would feel as I do—that it is excessively foolish to *part with money.* I have them all booked here, and may some day pay—when convenient; but, at present, most decidedly it is not so." The major put the notes into his pocket, and the conversation was dropped.

The next morning we had ordered our horses, when Timothy came up to me, and made a sign, as we were at breakfast, for me to come out. I followed him.

"Oh! sir, I could not help telling you, but there is a gentleman with——"

"With what?" replied I, hastily.

"With your *nose*, sir, exactly—and in other respects very like you—just about the age your father should be."

"Where is he, Timothy?" replied I, all my feelings in 'search of my father,' rushing into my mind.

"Down below, sir, about to set off in a post-chariot and four, now waiting at the door."

I ran down with my breakfast napkin in my hand, and hastened to the portico of the hotel—he was in his carriage, and the porter was then shutting the door. I looked at him. He was as Timothy said, *very like* me indeed, the *nose* exact. I was breathless, and I continued to gaze.

"All right," cried the ostler.

"I beg your pardon, sir——," said I, addressing the gentleman in the carriage, who perceiving a napkin in my hand, probably took me for one of the waiters, for he replied very abruptly, 'I have remembered you;' and pulling up the glass, away wheeled the chariot, the nave of the hind wheel striking me a blow on the thigh which numbed it so, that it was with difficulty I could limp up to our apartments, when I threw myself on the sofa in a state of madness and despair.

"Good heavens, Newland, what is the matter?" cried the major.

"Matter," replied I, faintly. "I have seen my father."

"Your father, Newland, you must be mad. He was dead before you could recollect him—at least so you told me. How then, even if it were his ghost, could you have recognised him?"

The major's remarks reminded me of the imprudence I had been guilty of.

"Major," replied I, "I believe I am very absurd; but he was so like me, and I have so often longed after my father, so long wished to see him face to face—that—that—I'm a great fool, that's the fact."

"You must go to the next world, my good fellow, to meet him face to face, that's clear; and I presume, upon a little consideration, you will feel inclined to postpone your journey. Very often in your sleep I have heard you talk about your father, and wondered why you should think so much about him."

"I cannot help it," replied I. "From my earliest days my father has ever been in my thoughts."

"I can only say, that very few sons are half so dutiful to their fathers' memories—but finish your breakfast, and then we start for London."

I complied with his request as well as I could, and we were soon on our road. I fell into a reverie—my object was to again find out this person, and I quietly directed Timothy to ascertain from the post-boys the directions he gave at the last stage. The major perceiving me not inclined to talk, made but few observations; one, however, struck me. "Windermear," said he, "I recollect one day, when I was praising you, said carelessly, 'that you were a fine young man, but a *little tête montée* upon one point.' I see now it must have been upon this." I made no reply, but it certainly was a strange circumstance that the major never had any suspicions from this point—yet he certainly never had. We had once or twice talked over my affairs. I had led him to suppose that my father and mother died in my infancy, and that I should have had a large fortune when I came of age; but this had been entirely by indirect replies, not by positive assertions: the fact was, that the major, who was an adept in all deceit, never had an idea that he could have been deceived by one so young, so prepossessing, and apparently so ingenuous as myself. He had, in fact, deceived himself. His ideas of my fortune arose entirely from my asking him, whether he would have refused the name of *Japhet* for ten thousand pound per annum. Lord Windermear, after having introduced me, did not consider it at all necessary to acquaint the major with my real history, as it was imparted to him in confidence. He allowed matters to take their course, and me to work my own way in the world. Thus do the most cunning overreach themselves, and with their eyes open to any deceit on the part of others, prove quite blind when they deceive themselves.

Timothy could not obtain any intelligence from the people of the inn at the last stage, except that the chariot had proceeded to London. We arrived late at night, and, much exhausted, I was glad to go to bed.

From the United Service Journal.

TRADITIONS OF THE AMERICAN WAR OF INDEPENDENCE.

NO. III.

We have this month the satisfaction of presenting to our readers the first portion of a narrative, which comprehends not only some striking historical details, but a good deal of stirring adventure. The original is contained in a series of letters addressed by the author to his sister, with which we have taken no other liberty than here and there to alter an expression, and to omit the customary head and tail pieces of epistolary communications. We do not know whether there be any members of the old 71st regiment now alive, but if there be, the name of the writer, which we are requested to conceal, will be no secret to them. For ourselves we lament that any restrictions in this respect should be imposed on us, where none, we are quite sure, can be necessary. But all men have their prejudices.

On the 21st of April, 1776, the Frazer Highlanders—then numbered as the 71st regiment of the line—embarked at Greenock on board of a fleet destined for North America. The battle of Bunker's Hill having been by this time fought, and the last hope of an amicable arrangement between the mother country and the colonies laid aside, it was deemed advisable, by those at the head of affairs, to send over without delay as large a force as possible; and as there were but few old corps disposable for service, even regiments, which, like our own, had not yet completed their first drill, were directed to hold themselves in readiness. I had then the honour to rank as a lieutenant in the 71st, having, like most of my brother officers, raised men for my commission; and am, therefore, enabled to speak with confidence both as to the condition of the regiment and the temper and feelings of the men composing it. The latter were excellent, nothing, indeed, could be superior; for the recruits, having been collected chiefly from the lands of their chief, were, with few exceptions, young, able-bodied, and full of attachment to their superiors, whom, for the most part, they followed from motives of hereditary affection. But the former was, according to the criterion of the horse guards, bad enough. As a battalion, indeed, we knew nothing. Not only were we ignorant of the most common field-movements, but the very manual and platoon exercise was strange to us; yet we obeyed the order of embarkation with the highest satisfaction, and looked forward to what might rise out of it without a shadow of distrust.

For some time after clearing the Frith of Clyde, no occurrence befel worthy of being recorded. A large convoy always moves slowly; and as our fleet consisted of upwards of a hundred sail, including store-ships, transports, and a due allotment of men-of-war, we made no exception to the general rule. Nevertheless both officers and soldiers turned even delay to good account, and bore it with philosophic equanimity. The greater portion of every fine day was devoted to giving the men some knowledge of such portions of their duty as could be explained to them on board of ship. In the first place they were trained to obey the word of command when uttered in English—a language of which, when they first joined, they knew nothing. In the next place, they were taught to face, and wheel, and even to march, to handle their arms with gracefulness, and to fire; while occasionally an attempt was made to deploy from such a column as the narrow quarter-deck of a transport would admit of, into such a line as was compatible with a rolling sea. I must confess that the result of the latter manœuvre was generally to set both men and officers laughing, and that, after repeated trials, it was laid aside.

We had accomplished, according to the skipper's reckoning, the better half of our voyage, when the heavens became black with clouds, and a furious storm set in. How it fared with other vessels we could not tell, for we were driven before the wind with a rapidity which caused us from hour to hour to calculate on foundering, till every trace of convoy and partners was lost. The misery which we endured during the continuance of that gale I shall never forget. Indifferently provisioned at the best, and crowded even in fine weather, our condition throughout three days and nights, of closed hatches and cold stoves, may be imagined but cannot be described. At last, however, the fury of the elements became exhausted; and the heavy rolling swell which always succeeds a tempest wore itself out; so that the men began again to emerge, like ghosts out of their graves, from between decks. But such a change in their appearance! Pale, filthy, and sick with long confinement and the motion of the vessel, their mothers would have scarcely recognised the fine young Highlanders whom they had brought into the world; nor were the youths themselves by any means disposed to think that, in ushering them into a state of so much trouble and annoyance, their mothers had done right. But the sorrows of a recruit are seldom very deep seated. A few fine days brought back their accustomed light-heartedness, and the bagpipe, though blown by a half-starved piper, soon put metal again into the heels of many a half-starved dancer.

We were now alone in the middle of the Atlantic. Of the fleet not a vestige could be descried, and as far as the eye could reach over the wide ocean, there appeared nothing like a sail between us and the horizon. No apprehensions were, however, excited by that circumstance, for, except with the colonies, England was not yet at war; and even America could be said to be rather in a state of commotion than of open rebellion. Still when, on the second day, after the return of fair weather, a vessel hove in sight, our commanding officer considered it prudent to load the four pieces which encumbered our deck, and to fill the men's pouches with musket ammunition. This done, we held our course, and as they still edged towards us, the lapse of two hours or something more brought us within eye-shot of each other. She proved to be one of our late consorts, filled, like our own ship, with a detachment of troops. Our greetings, so soon as a communication was established, were cordial enough. Something like a consultation likewise was held between the senior officers in each vessel, as to the course which it would be judicious to follow; and they agreed that they could not do better than bear up for Boston, that being the port to which, when we quitted Greenock, the expedition was understood to be directed.

Time passed, and on the 16th of June, almost two months from the date of our embarkation on the Clyde, the look-out seamen, from the mast-head, greeted our ears with the joyful tidings of land on the larboard bow. Every soldier who has been long pent up on board of ship knows with what delight such an announcement is received. We strain our eyes in the direction pointed out, and if there be nothing else to reward the exertion, we fancy in every cloud, or even in the line of the horizon itself, that we behold the forms of a coast. And as the ship moves on, and the land breeze meets us, we perceive, or persuade ourselves that we perceive, perfumes, in comparison with which all the odours of Ara-

bia would be, under other circumstances, counted tame. Nor, in minor matters, are there many grievances more vexatious, than that the night should close in without giving to persons so circumstanced a full prospect of the shores to which their wishes pant. On the present occasion, however, we had not to complain on that score, for the breeze, though light, was favourable; and bore us along, if not as rapidly as our impatience desired, yet, as the event proved, too much so for our ultimate satisfaction.

The shores of North America are, in almost all directions, singularly low and uninteresting, and the point towards which we were steering differed little in this respect from other portions of coast; for the land hung for some time cloud-like over the water, and when it did assume a definite form, it was that of low sand-hills loosely covered with pines. This, however, gradually changed its character, till Cape Cod, with its sharp promontory, had been left behind; after which the rocks and islets, which lie scattered in beautiful disorder through Boston Bay, rose one by one into view. By and by Long Island pushed itself forward, like an advanced guard to the town, which covered, in a somewhat straggling manner, the tongue of a peninsula; and, finally, we found ourselves under a dying breeze, and with a tide running strongly against us, in the centre of Nantucket Roads. There, at the distance of three quarters of a mile from a redoubt or battery that protected the island, we cast anchor; happy in the assurance that ere four-and-twenty hours should have run their course, we should be snugly settled beside our comrades on terra firma.

It had been remarked by some of us, while the vessel held her course, not without surprise, that matters were not altogether in the condition which we had expected to witness in such a place as Boston Bay. No light cruisers had met us as we approached the cape, nor, as far as we could discern, were there any symptoms of a fleet either in the inner or the outer harbour. When we looked again to the telegraph station, we could discover no movement indicating the vigilance of those who kept it, or denoting that a strange sail was in sight. The might of the battery also slumbered, and our ensign received no salute. This was curious enough, for the customs of the service required that, in time of war, no vessel should cast anchor in a British roadstead till her name should have been made known, and the object of her coming notified. Still we could not doubt that we were in a British roadstead, nor were plausible answers wanting, as often as any, more curious than the rest, ventured to ask why so unsatisfactory a course should have been pursued. But our anxiety, if such it may be called, was not destined to be of very long continuance. Our sails were clewed up; our anchor plunged heavily into the water; the cable was veered out, and the vessel swung head to the tide,—when a solution to such misgivings as might yet linger in the minds of the most incredulous was not very agreeably afforded.

The men were clustering in the forecastle, and the officers leaning over the taffrail, with glasses turned towards the town, when a flash from the battery on the island, followed by an instantaneous report, caused us to look up. We had scarce done so, when a ball, after touching the water once or twice in its course, buried itself in a swell of the sea, just under our stern. We stared with astonishment one upon another, for the signal—if such it was—had been very awkwardly managed; but ere a word had been exchanged, another and another gun was fired, the shots from which passed some ahead, some far over, and one right through the shrouds, so as to cut away several of the ratlins. "This is a rough reception," said our commanding officer; "and devil take me if I don't see into it." The sentence, however, was as yet incomplete, when the whole mystery received its solution. "By G—d," exclaimed the skipper, "that is no union jack,"—and no union jack was it, sure enough. The thirteen stripes with the thirteen stars ornamented the flag-staff—a piece of coarse bunting having been slowly run up while the cannon were firing; and we were taught to our sorrow that we had laid ourselves in a position which admirably suited us to act as a mark for the inexperienced of the enemy's gunners to practise upon.

Thick and fast came now the shot, against which we had nothing in the world to oppose; for our miserable 4-pounders were too light to make an impression even on a fieldwork, and our distance from the shore was too great to permit of musketry being made available. Neither were our chances of escape at all satisfactory. The breeze had died wholly away, so that our sails, had we hoisted them, would have hung useless as gossamer-webs from the masts; while the run of the tide gave us the comfortable assurance that, in the event of our cable being cut, we should be carried directly ashore, under the very muzzles of the guns which now played upon us. To lie, on the other hand, where we were, was to become consenting parties to our own destruction; for, having got the range, the Yankees struck us either in the hull or rigging, at almost every discharge. Under such circumstances, the commandant gave orders that the cable should be cut, and the chances taken (and desperate indeed they were) that the ship might drift round the point, and so escape into the open sea; but no such good fortune attended us. We drifted, it is true, so soon as the cable parted, but it was not to a place of safety; for there were numerous sand-banks in the channel, and on one of these we struck. If our plight had been evil before, it was now a thousand times worse. We lay exposed to the enemy's battery; and merciless was the accuracy with which the people who manned it took advantage of our untoward situation.

As yet very few lives had been lost. Repeatedly the ship was hulled, and our mainmast, severely wounded in two places, threatened, should a third shot take effect, to go by the board; yet only three men had fallen, of whom one was a sailor. Though galled and annoyed, therefore, we did not think of surrendering; when, suddenly, a numerous flotilla, consisting of schooners, launches, and row-boats of the most formidable size, put off from the town. Onwards they came, and our glasses soon made us aware that they were all crowded with men; nor did many minutes elapse ere ample proof was given that most of the craft had cannon. They took up a position in line exactly abaft our beam; and while the shore battery raked us from stem to stern, they poured whole volleys of round and grape across our quarter. Our commandant, so far from giving way under this accumulation of evils, seemed to take courage from it. He caused the ship's guns to be traversed aft, and answered the enemy's salute with admirable spirit, though, as the event proved, to but little purpose. But such a combat could not long be maintained. Seeing that our fire produced no visible effect, and perceiving that his men began to fall fast around him; warned also by the skipper, that the transport was so riddled as to render it impossible for her to float after the tide should have turned, Colonel Campbell reluctantly gave the word to strike: and our flag, which had hitherto floated both at the peak and from the mainmast head, was, with inexpressible

mortification, hauled down. We shrugged up our shoulders as we gazed on one another, and felt that we were prisoners.

I cannot pretend to describe what were my own sensations, far less the sensations of others, after this humiliating ceremony was gone through. Had we suffered our present fate, under almost any other circumstances; had we been taken in the field, or fallen with some town or fort, there would have been this at least to console us, that to such a destiny all soldiers are liable, and that all ought to be prepared for it. But to run, as it were, with eyes open, into the lion's mouth; to be taken through our own negligence, or rather through the negligence of those whose duty it was to have provided against the possible occurrence of such a misfortune; and, above all, to become captives at the very outset of our career, ere an opportunity had been afforded of striking one blow for freedom; these were reflections which brought with them no comfort. We hung down our heads, like men who had disgraced themselves; for though we were all conscious that nothing had happened which either courage or skill could have averted, even that consideration went for nothing under the painful excitement of the moment.

Our flag was lowered, yet even the poor recompense of an immediate exemption from personal danger was not afforded. Whether the smoke which, in a dead calm, rolled off heavily from the ship, obscured us, or whether, as in the bitterness of our chagrin, we were inclined to believe, the enemy saw, without regarding, our condition, I cannot tell; but for several minutes after all opposition on our part had ceased, they continued their fire. Shot after shot struck us, till there arose at last a wild cry, in which all ranks participated, that it would be better to perish like men, with arms in our hands, than thus stand idly to be mowed down by those who seemed determined to give no quarter. "Out with the boats!" was now heard from various quarters. "The island is not far off; let us make a dash at the battery; and if we cannot carry it, let us at all events sell our lives as dearly as we can." But the utter hopelessness of such an attempt did not escape Colonel Campbell's consideration. He therefore exerted himself to soothe his irritated followers, and sending most of them below, continued himself to walk the deck with the utmost composure.

When a fortress or a ship surrenders, it is in accordance with the laws of war, that all arms, stores, and military implements contained in it, shall be handed over, exactly as they are, to the conquerors. Of this we were well aware; nor, when we hauled down our flag, was there the slightest intention on the part of any one on board to contravene the custom. But furious, at what they regarded as a wanton disregard of the dictates of humanity, our soldiers no sooner found themselves below, than they ran to the arm-racks. In five minutes there was not a musket there of which the stock was not broken across. The belts, cartouch-boxes, and bayonets, likewise were caught up, and all, together with the fragments of the firelocks, were cast into the sea.

Had Colonel Campbell been aware of what was going on, he would have doubtless put a stop to it; for he was a strict disciplinarian as well as a man of rigid honour; but the work of destruction went forward so rapidly, that long ere a whisper reached him there remained nothing further to be done. When, however, the enraged soldiers made a movement to throw the cannon likewise overboard, he withstood them; nor would he permit a particle of the spare ammunition in store to be injured. But his fair dealing in this instance was wasted; he saved the ship's guns, it is true, but he did not succeed in creating a belief among the Americans that he was not a party to the destruction of the men's muskets.

The enemy had continued their cannonade about a quarter of an hour, and several of our comrades had fallen under it, when they seemed to have discovered all at once, that our colours were not flying. The firing accordingly ceased; and a boat pushing ahead of their line, approached within hail to demand whether we had surrendered. We replied of course in the affirmative; upon which a signal was hung out for the flotilla to advance. The whole moved forward till they surrounded us on all hands, and sending their boarders over the chains, our decks were crowded with people, whose dress and language equally gave proof that they belonged to no regular service, naval or military. Such a cut-throat looking crew never indeed came together, except under the bloody flag of some fierce rover. There were landsmen in round frocks, with carving-knives stuck by their sides in place of daggers; there were militia men in all manner of dresses, armed with long duck-guns; and there were seamen—hardy and brave I do not doubt—but as ferocious in their bearing as if piracy were their profession, and life and death matters of no importance where interest came in the way. The latter were chiefly equipped with pistols and cutlasses, which they brandished with an air of insolent triumph, as uncalled for as it was unbecoming.*

Upon the scene which followed I gladly draw a veil, for it was such as I cannot think of without disgust. Irritated by the destruction of our arms, and indignant at what they were pleased to term our presumption in resisting a foe so superior, the miscreants forgot what was due, not so much to us as to themselves. They loaded us with scorn and insults,—stripped us of every valuable,—threatened to tie up the officers to the gratings,—and beat the men with the flats of their swords: indeed, in more than one instance it occurred that the edge of the cutlass was used, and that severe, if not dangerous wounds, were inflicted. Finally, they drove us, like a herd of oxen, on board of their small craft, and sent us, without a single article of baggage, to be towed in the schooners into Boston. This done, they plundered the transport of every thing contained in it, whether of public property or belonging to individuals; and finding on examination that it would not float, they summed up all by setting it on fire.

As there was a strong tide against us, and the schooners overloaded with heavy cannon went much by the head, our progress towards the landing place proved slow; indeed the sun had set some time ere we gained the extreme edge of the Long Wharf. To say the truth, we experienced little mortification at the circumstance. Though not without curiosity as to the appearance of a town in which we had anticipated a very different reception, we were content to postpone its gratification, rather than become in open day, objects of impertinent remark to the rabble, who, we could not doubt, were assembled to greet us. Nor were we deceived in this expectation. The whole extent of the wharf was crowded with men, women, and children, all on foot to witness the arrival of the British prisoners, and all anxious to testify by their hootings and yells, how cordial was the abhorrence in which they held us. Through that crowd we were marched, our guards, as it appeared to us, being more anxious to exhibit the trophies of their own valour, than to protect the captives from insult; and having passed

* A British account, truly!—*Ed Mss.*

several streets, some of them tolerably capacious, we arrived ere long at a massy building which we were given to understand was the common jail. Into it the officers were thrust; while the men were moved off to a meeting-house hard by, where, under the close surveillance of a military guard, they passed the night.

People circumstanced as we then were, are not generally inclined to indulge much in conversation; though there were four of us together, the tenants of one small apartment, little of the spirit of companionship reigned among us. If our feelings were not precisely the same, there was nothing in the manner of one which contrasted in a remarkable degree with that of another. When we spoke at all it was in brief sentences,—from which all that could be gathered was, that we were equally miserable,—and even the important question, though occasionally broached—namely, how it behoved us to act relative to our parole, received that night slender consideration. It is worthy of remark that our captors took no pains to lighten our sorrows, or to reconcile us to our fate. We saw no one from the moment of our incarceration except the jailer, and neither supper nor beds were offered to us.

In this comfortless manner the night wore away, what little sleep any of us obtained being snatched upon the bare boards; but the morrow brought with it a change of circumstances considerably for the better. As if ashamed of the conduct of his subalterns, Colonel Thomas Crofts, the governor of the place, sent his aide-de-camp to assure us, that nothing but the lateness of the hour at which we arrived would have induced him to permit our being lodged in prison even for a single night; and that he was now ready either to release us on the customary terms, or to transfer us to a more commodious as well as respectable place of safe-keeping. We were at the same time invited to become his guests at breakfast; and offered every accommodation in the way of money and apparel of which we might stand in need. Now, as ours was not a situation in which it would have been prudent to indulge anything like bad humour, we agreed to gulp, as well as we could, the treatment of the past night; and followed without hesitation his well-bred messenger to the governor's quarters. But the subject of parole required further consideration, and both the aide-de-camp and his chief were too considerate to insist on a hasty determination.

The kind of reception which met us on our first arrival in Boston, had been such as to impress us with an unfavourable opinion of the American character: the behaviour of Colonel Crofts, and of the gentlemen attached to his household, went far to remove it. The former was not only hospitable and kind, but thoroughly well-bred. He apologised for the rudeness to which we had been subjected, and accounted for it by explaining, that we had fallen into the hands of privateersmen and other desperadoes, over whom his control was much more nominal than real. He hinted, indeed, that the breaking of the arms by our men was not quite fair, though he at once gave credit to our assertion that the officers had no hand in it; and he wound up all by alluding to the benefit which the republican cause had obtained, by the removal, from among its enemies, of so many gallant soldiers. In a word, he exerted himself so much to purpose, and made himself so agreeable, that whatever reserve it had been our purpose to maintain gradually melted away; and we were, before the conclusion of the meal, as completely at our ease, as if our acquaintance had been of a year's standing.

Among other topics of conversation it was natural that allusion should be made to the circumstances which led to our capture. We learned that General Howe, unable to maintain himself in Boston, had withdrawn so long ago as the preceding April. He had, however, stationed a cruiser in Nantucket Sound in order that stragglers from England and elsewhere might not run into danger. But the cruiser, overpowered by the fire of the same battery which had done us so much damage, had been forced off the coast only three days previous to our arrival; and as we unfortunately came up ere another had come to relieve her, we ran head foremost into the toils. This was but poor consolation to us; neither were we made happy by the narrative which the governor gave, of the views, both political and military, which marked the opening of the contest. Nevertheless we all felt, from the tone assumed by our host, that he spoke it out of no unworthy disposition to annoy. Whatever our sentiments might be in reference to others, towards himself our respect was undiminished.

All this was as it was meant to be, and the governor, seeing that he had made an impression, which was certainly not diminished by an offer to find out and to restore our private baggage, proceeded to speak on the subject of our future treatment. "It can be a matter of no moment to me," said he, "whether you avail yourselves of the indulgence of parole or not; for we have many depôts in which you can be safely kept: but for your own sakes I earnestly advise that the offer be not refused. Consider that you are at least two hundred miles from the nearest British post,—that of your recapture by force of arms there is not the most distant probability,—and that if you determine on keeping yourselves in a condition to attempt an escape whenever an opportunity shall offer,—you will lay me under the disagreeable necessity of treating you with a degree of restraint which I should be very unwilling to apply. No doubt it is mortifying to find your professional career cut short, just as the prospect of gathering laurels had opened; but the evil is without remedy, and a wise man always bends to events which he finds himself unable to control."

There was so much truth in these remarks, that, in spite of a half-formed determination to the contrary, we agreed to be guided by them. We gave our word of honour that we would not attempt to pass beyond a certain distance out of Boston, till the privilege of parole should be withdrawn, or an exchange of prisoners effected; and we became, in consequence, as much masters of our own time as was consistent with a moderate degree of surveillance. Besides, the kindness of Colonel Crofts did not end here: he caused excellent quarters to be assigned to us in the houses of certain families who were suspected of a leaning in favour of the royal cause; and he issued orders that our wants should be duly attended to, and the utmost respect paid to our persons. Here then, we were, prisoners at large, in a town famous, above all in the New World, for its hostility to the English, yet well treated both by the civil and military authorities; and with a fair prospect of spending our days among them till a war, just begun, should be brought, one way or another, to its close.

Of the manner in which my days were spent during many weeks of compulsory inaction, I kept no record. A captive among entire strangers, to whose habits and notions I found it impossible to assimilate my own, time rolled over my head as unsatisfactorily as possible; indeed, there were moments when I heartily repented that I had been cajoled into the acceptance of my parole, and pondered upon the best method of having the indulgence withdrawn. But my comrades, on all such occasions, withstood me, while they argued with great justice, that the

measure could tend only to alarm the suspicions of the enemy, and of course to bring down harsh usage upon the whole body of prisoners. Meanwhile we found what amusement we could in wandering over the town, and visiting the positions of Bunker's Hill, Breeds Hill, Dorchester, Charleston, and other points rendered memorable as the scene of recent operations. Among these, nothing struck us more forcibly than the site of the encampment which the Americans first occupied after the skirmish of Lexington. Many huts were yet standing in regular lanes or streets which crossed one another at right angles; and it was easy to perceive, that the same ingenuity which they were in the habit of excercising in the construction of their rude dwellings in the woods had been applied by the rebel heroes to the formation of their bivouac. We were forced to admit, while examining their lines, that in the use of the spade and the pickaxe—implements of war not less formidable than the musket and the cannon—our men would be no match for an enemy so skilful.

In this manner a whole month wore itself out, and listless indifference was beginning to mark the bearing of some, when an event befel which so far stood us in stead, that it furnished us, for a while, with a subject of conversation. On the 17th of July, the British officers on parole received each a card from the governor, requesting the honour of his attendance at a specified hour on the morrow, in the Town Hall. As rumours were already afloat touching the decided step that had been taken at Philadelphia, we were not without a suspicion as to the purport of this meeting; and we hesitated for a while, as to the propriety of giving the sanction of our countenance to a proceeding which we could not but regard as traitorous. Curiosity, however, got the better of scruples, which, to say the truth, were not very well founded; and it was resolved, after a brief consultation, that the invitation ought to be accepted. Accordingly, at the hour appointed, we set out, arrayed in the full dress uniform of our corps, and became witnesses to a spectacle which excited even in us feelings it would not, perhaps, be very easy to be defined. As we passed through the town, we found it thronged in all quarters with persons of every age, and both sexes. All were in their holiday suits, every eye beamed with delight, and every tongue was in rapid motion. King street, Queen-street, and the other streets adjoining the council chamber, were lined with detachments from two battalions of infantry, tolerably well equipped; while in front of the jail, a brigade of artillery was drawn up, the gunners standing by their pieces with lighted matches; nor, to do them justice, was there any admixture of insolence in the joy which seemed to animate all classes. Whether our lengthened residence among them, and the anxiety which we displayed never wantonly to offend their prejudices, had secured their esteem, or whether they considered it beneath the dignity of a grave people standing in a position so critical, to vent their spleen upon individuals entirely at their mercy, I do not know; but the marked respect with which we were treated both by soldiers and civilians could not be misunderstood. The very crowd opened a lane for us up to the door of the hall, and the troops gave us, as we mounted the steps, the salute due to officers of our rank.

On entering the hall we found it occupied by functionaries, military, civil, and ecclesiastical; among whom the same good humour and excitement prevailed, as among the people out of doors. They received us with great frankness and cordiality, and allotted to us such stations, as enabled us to witness the whole of the ceremony, which was as simple as the most republican taste could have desired. Exactly as the clock struck one, Colonel Crofts, who occupied the chair, rose, and silence being obtained, read aloud the celebrated Declaration, which announced to the world that the tie of allegiance and protection which had so long held Britain and her North American colonies together, was for ever separated. This being finished, the gentlemen stood up, and each repeating the words as they were spoken by an officer, swore to uphold, at the sacrifice of life, the rights of his country. Meanwhile the town-clerk read from a balcony the Declaration of Independence to the crowd; at the close of which, a shout, begun in the hall, passed like an electric spark to the streets, which rang with loud huzzas, the slow and measured boom of cannon, and the rattle of musketry. The batteries on Fort Hill, Dorchester Neck, the Castle, Nantucket, and Long Island, each saluted with thirteen guns—the artillery in the town fired thirteen rounds, and the infantry, scattered into thirteen divisions, poured forth thirteen volleys—all corresponding to the number of states which formed the Union. What followed may be described in a few words. There was a banquet in the council chamber, where all the richer citizens appeared—where much wine was drunk, and many appropriate toasts given. Large quantities of liquor were distributed among the mob, whose patriotism of course grew more and more warm at every draught; and when night closed in, the darkness was effectually dispelled by a general and what was termed then a splendid illumination. I need not say that we neither joined, nor were expected to join, in any of the festivities. Having sufficiently gratified our curiosity, we returned to our lodgings, and passed the remainder of the evening in a frame of mind, such as our humiliating and irksome situation might be expected to produce.

From the date of this banquet, during many, many days, our existence was like the Caspian—a sea without a tide. It is true, that the inhabitants were, after their own fashion, kind and hospitable; and that intelligence of the successes obtained by the royal arms elsewhere excited, from time to time, a faint hope that the war might roll southward, and restore us to freedom. But as week after week, and month after month stole by without bringing about the accomplishment of our wishes, we learned to feel how just is the observation of the wise man, "that hope deferred maketh the heart sick." For my own part, I became at last so desperate, so thoroughly reckless of consequences to myself and others, that I cannot tell what mad scheme I might have tried, had there not occurred at length a change in our mode of treatment, which put us, without any co-operation of ours, on our mettle. It was this:—

The winter of 1776, a season particularly severe in the latitude of Connecticut, had passed away, and the spring of 1777 was considerably advanced, when an officer of the garrison, with whom I had formed an acquaintance, made his appearance one morning at an unusually early hour, in my quarters. It was not difficult to make out, from the embarrassment in his manner, that he was the bearer of unpleasant news; and, as a matter of course, my curiosity was sharpened. I begged him to speak out; assured him, that whatever his message might be, I should never think of attributing to him any feeling but that of friendship, and declared my willingness to endure any hardships, provided only they would assure me of deliverance from the life of horrible monotony which I was now leading. My acquaintance seemed to derive great consolation from this avowal. "Then, my dear fellow," said he, "the orders of which I consider myself

unfortunate in being the bearer, will suit your fancy to a tittle. I am commanded to inform you and your brother officers, that your parole is withdrawn, and that you must make ready for an immediate march into the interior, where the accommodation afforded you will not, I am afraid, cause you to think lightly of Boston. This is very hard both upon you and us; but we are not to blame. Your chiefs have behaved with the most unjustifiable harshness to such of our officers as have fallen into their hands. Washington has remonstrated to no purpose; and now he is determined, though sorely against his principles, to try the effect of retaliation. In a word, I am sorry to tell you that one hour only will be afforded to pack your baggage, at the expiration of which you must quit this place under the care of an escort."

I assured the American officer that I not only did not lament my fate, but that I rejoiced in it; and having cordially shaken him by the hand, I ran to inform my friend Captain Menzies, with whom I principally lived, and consult with him as to what was best to be done.

For some weeks previous to this announcement, a similarity of feeling—an uneasiness under restraint which amounted almost to desperation—had brought Captain Menzies and myself into closer habits of intimacy than were kept up by others of our companions in misfortune. Menzies shifted his quarters, indeed, so as to be near me; and many an hour of the night we whiled away in concocting plans of escape, which as yet we had not found it practicable to realise. We had, however, gone so far as to provide ourselves with disguises; with sailors' dresses, rough jackets and trowsers, such as were worn by fishermen along the coast, and would therefore, we trusted, some day or another, do us good service. Havresacks also had been procured, in which a change of linen and provisions might be stowed away; and, above all, we had purchased, with a view of guarding against the worst, clasp-knives, with blades six inches in length. As we had repeatedly worn our seamen's garb already, we calculated on being able to do so now without exciting suspicion; and we accordingly, under the pretext of a desire to save our uniforms, packed them up in our trunks. In like manner, under the plea of disinclination to disturb our wardrobe on the march, we bestowed one or two light articles in our havresacks; and having some loose cash in our pockets, we trusted to the chapter of accidents for the purchase of provisions.

Yet there was a serious difficulty in our way after all: how should we manage to conceal from our comrades the resolution which we had formed? and if we did not conceal it, how could we possibly expect to carry it into effect? As the event proved, however, we had in this case taken fright very unnecessarily; for at the expiration of an hour the escort arrived; and we learned, little to our regret, that the men were gone no one knew whither, while the officers, separated into parties, were marched off by separate routes into the interior.

Our progress out of Boston partook somewhat of the passion for display which characterised the mode of our arrival; that is to say, we passed through the principal streets, surrounded by about sixty soldiers, and accompanied by not fewer than three officers, one of them a captain. Our baggage followed the column in a car, into which eight or ten knapsacks were likewise thrown; and we received, as we went along, greetings more or less kind from those with whom we hod associated. But we were scarcely beyond the Neck, ere a new arrangement took place, the whole of the escort, except half a dozen privates, a serjeant, a corporal, and a lieutenant, quitting us, and returning to the town. We were not sorry for this; partly because we judged that it would be easier to elude nine than sixty pair of eyes; partly because the captain being an old acquaintance, the idea of dealing unfairly by him went somewhat against the grain. Not that we should have scrupled, circumstanced as we were, to deceive him if we could; but it is better, in such cases, to deal with utter strangers, more especially if they chance to be, as our new commander was, brutes of the first order; for a brute of the first order he was. Prying, inquisitive, full of bluster and the lowest slang, he tormented us throughout the whole day's march with his conversation; which, whether it took the tone of insolent superiority, or of pretended commiseration and personal regard, was alike distasteful to us. But there is no such thing as rebuking into silence your thoroughbred Yankee; so we kept our temper as well as we could, and trudged on without appearing to feel either his compliments or his insults.

As it was nine o'clock before we started, our march that day carried us only to Lexington, a pretty village, built round a large green or common, in which were a church, an inn, and a blacksmith's forge. The inn was immediately taken possession of by the lieutenant; who, having assigned to us a chamber up stairs, and planted a sentry before the door, proceeded to make arrangements with a view to his own comfort. We had been struck, as we pursued our march, with the perfect familiarity which appeared to exist between him and his men: we were now to learn that a similar line of conduct was expected from us. After having been absent a few minutes, he returned, bringing with him the serjeant and corporal, both of whom he informed us, as well as himself, intended to favour us with their company at supper. It would have been quite useless and very impolitic to decline this arrangement, so we met the proposition with a ready acquiescence; and leaving it to the officer to order what viands he chose, we made up our minds to bear with patience whatever trial of temper might be further inflicted on us. The consequence was that an amply supply of coarse food was speedily furnished, and liquor in proportion, with a due accompaniment of pipes and tobacco following hard upon its heels, we saw with dismay that we were fairly set in for a night of carousing and debauchery.

As yet no opportunity had offered of holding even a moment's private conversation together; and Menzies and I were in consequence without any knowledge of each other's sentiments; but a glance, as the debauch went forward, sufficed to convince me that his thoughts ran in the same channel with my own. I accordingly pretended to relax from my usual coldness of manner, and took part by degrees in the conversation, such as it was, which our companions brought forward. Menzies did the same; and the Americans, gratified by what they regarded as a compliment to their powers of pleasing, became more and more loquacious every minute. Their stories were without number; each being more marvellous than that which preceded it. They had seen sights and performed exploits such as no other human being ever saw or ever could have performed; and in exact proportion to our astonishment was the satisfaction which they derived from describing them. Neither were they backward in their potations: they drank, they sang, they smoked, they boasted; and finding that we kept our temper even in the latter case, they became extravagant in their protestations of personal affection.

I need not say that, in submitting to all this, we had only one object in view—and we accomplished it. Carefully avoiding ourselves to drink, we plied them with

liquor, which, though its operation was slow, began at last to take effect. We watched it with intense interest; and after witnessing every gradation in the stages of drunkenness—from that of the quarrel, to maudlin sentimentality—we were in the end gratified by seeing them drop, one by one, on the floor.

It was now past midnight; and the silence which prevailed elsewhere gave notice that the people of the house, and probably the troops on duty, were all fast asleep. Scarce venturing, however, to hope that success would thus early attend us, we sat perfectly still for several minutes, at the expiration of which we rose softly and buckled on our havresacks. This done, Menzies passed on tiptoe towards the door, into the staple of which, so as to keep the latch from being lifted, he quietly thrust a knife. Meanwhile I stole to the window, and threw it open. The night was as dark as pitch; so dark indeed, as to render fruitless every endeavour to ascertain how far we were from the ground. There was not a star in the heavens; and over the village swept a low moaning wind, the sure prelude to a storm. In some respects all this was in our favour: the excessive darkness would help to baffle pursuit were we fairly in flight, and the wind would probably drown whatever noise we might make in descending. But to descend in total ignorance both of the spot which was to receive us and of the position of the sentinels, whom we could not doubt the officer had planted, was what we should have hesitated about doing had a less urgent necessity driven us on. All considerations of personal inconvenience, were, however, swallowed up in the dread of losing an opportunity; so, being nearest to the post of danger, I determined first to take the leap, let the consequences be what they might.

There was a sort of bench or low table in the window recess, upon which I prepared to mount; I laid my arm heavily upon it, and immediately a broken leg, which I had not observed, gave way, and it fell with a heavy crash; it fell, too, as bad luck would have it, upon the ankle of the lieutenant, who, roused by the force of the blow, sat up with a volley of oaths, and stared wildly round him. "Now then," thought I, "all is over: the miscreant cannot fail to observe that the window is open, even though he may not see that we are awake"—for we had both sunk into chairs, and laid our heads against the wall, when the crash occurred, and to close it would only confirm the suspicion which the circumstance must excite. What was to be done? Instinctively my hand grasped my knife—though whether I should have used it or not I cannot pretend to say; but before the blade could be drawn, the sentinel outside challenged, as if just roused out of a doze.

Heavens, what were then my feelings! The joyful prospect, which a moment ago danced before my eyes, had vanished; escape now was out of the question; and, what was worst of all, such precautions would henceforth be taken as to render the occurrence of a second opportunity impossible. Yet the event proved that we had laid upon Dame Fortune more than she was entitled to carry. So completely were the officer's senses confused, that he neither saw the open window nor paid the slightest regard to the broken table, except by kicking it aside; after which he muttered an oath or two in answer to the sentry's challenge, and stretching himself at full length along the floor, again closed his eyes. Once more we breathed, though it was faintly; and having paused what we judged to be a sufficient time to permit his slumber to be resumed, we returned, with all possible caution, to our former occupation.

I felt this time that we had not a moment to lose; so I mounted the ledge of the window, while Menzies stood close by in readiness to follow. To swing myself at full length by the hands was the work of one instant; and the next—though not without an increased pulsation at the heart—I let go my hold. A heap of rubbish received me as I fell, and a part of it giving way under my right foot, I became at once aware that my ankle had sustained an injury. But we were not in circumstances which would sanction any one in paying heed to trifles; so, having ascertained that the limb was not broken, I stood till Menzies should arrive. He was not tardy in following the example which I had set. Having ascertained, by the rustling noise, that I had reached the bottom, he threw himself after me; and falling more equally than I, he escaped unhurt. Now then was our flight begun in real earnest. The common was traversed, the church left behind, the high road abandoned, and we ourselves soon lost in the mazes of the forest. O.

From the London Quarterly Review.

Specimens of the Table-Talk of S. T. Coleridge. London, 1835. 2 vols. 12mo.

The editor of Spence's Anecdotes says in his preface, "The French abound in collections of this nature, which they have distinguished with the name of *Ana*. England has produced few examples of the kind, but they are eminently excellent. It may be sufficient to name Selden's Table-Talk, and Boswell's Life of Dr. Johnson." These Anecdotes of Spence, after having, while in MS., furnished much amusement and instruction to the literary antiquaries of the last generation, took their place at once, on being published *in extenso*, among the most valuable parlour-window books in this or in any other language. That volume, rich in the fire-side gossip of Pope, Swift, and Bolingbroke, may be said to bring us down almost to the commencement of Johnson's reign as the great master and retailer of literary anecdotes and reminiscences. In its perusal we feel ourselves at home with the members of the Scriblerus Club, and are even carried back, by their unstudied communications among themselves, to a personal familiarity with the worthies of the preceding cycle. To this source we owe more than half of the little that we do know of the personal manners of both Milton and Dryden. Of Boswell we need say nothing, except that his book, in many other respects unrivaled, has this great and almost entirely peculiar advantage, that it presents its talkers, in the strict sense of the word, *dramatically*. Every saying is rendered doubly interesting by our knowledge of the time, the place, the occasion, and of the person or persons addressed. In almost every other point of view as unlike Dr. Johnson as one man of great faculties and great virtues can be to another, Mr. Coleridge must be allowed to have been his legitimate successor as the great literary talker of England. Had he been fortunate to find a faithful chronicler twenty or thirty years ago, we have no doubt the ultimate record of his conversational wisdom and ingenuity would have occupied many goodly volumes well worthy of fully sharing in the popularity of Boswell. As it is. we have much reason to be

thankful that, during the last four or five years of his life, a young and affectionate kinsman, possessing the learning, the taste, and the feeling which qualified him to understand and appreciate his rich talk, happened to reside in his immediate neighbourhood, and kept a journal in which he commonly set down, before going to bed, what fragments he had been able to carry away.

It will be the natural wish of every reader that Mr. Henry Coleridge had at least tried to give more of a dramatic shape to his record. But all the same time, all who had the pleasure of Mr. Coleridge's acquaintance are well aware that his forte was more in monologue than dialogue; that he, on almost all occasions, lectured rather than conversed; his illustrations expanding and multiplying as he proceeded, not from the quickening collision of another mind, but the onward self-evolved excitation of his own. As respects his latter intercourse with his nephew, more especially, we can conceive that we may not have lost much by the omission of what may be well called *the stage directions*, so useful and entertaining in the case of Boswell. We are afraid that during the short period over which the present diary extends, the state of things was such, that we may but too completely fill up every blank by one melancholy formula—*place*, Mr. Coleridge's bed-room—*time*, night—*present*, the poet in his arm-chair, physically worn and exhausted by a day of pain, but refreshed and invigorated by the recent entrance of his dear young friend, to whom it is a sort of necessity of his nature that he should unburthen himself of some of the innumerable trains of thought and reflection that have been occupying him, as far as bodily sufferings might permit, since their last meeting. We hope other friends will be now encouraged to task their memories, and produce some reminiscences of those earlier days as to which it would be so agreeable to have more of the Boswellian sort of accompaniment. How delightful, for instance, is almost the solitary communication furnished to these volumes by another relative, Mr. Serjeant Coleridge, who places the old man before us as stopping short one Sunday morning as he entered the churchyard on Richmond Hill, and exclaiming, "I feel as if God had given man fifty-two springs in every year!"

Johnson's eulogy of Burke is in every body's recollection; viz. that if a barber's boy had stopped for ten minutes under the same shed with him during a shower of rain, he would have said, on going away, "That is an extraordinary man." Assuredly the same thing may be said with quite as much truth of Coleridge. The affluence of his mind could never be repressed, and such was the catholic humanity of his heart, the pure charity which mingled with every play even of his imagination, that no child of Adam ever seemed to him unworthy, we do not say of frank and kindly communication merely, but of the treatment of an equal. How completely, when once fairly in talk with any human being, no matter how lowly in condition, how deficient in education, he seemed to forget the intellectual gulph that separated himself from his auditor, we need not remind any one that knew any thing of his habits. When he carried it so far as not merely to adorn and embellish subjects of which *his* barber's boys might be supposed to have some feeling and comprehension, but to harangue them (as he often did) on topics and in a style which must to them have been like heathen Greek, the effect was at once so quaintly ludicrous and so gently amiable, that we cannot but wish some specimens of it had been preserved, as far as such things ever can be preserved by a mere record of words. The parties addressed, however incapable of fully understanding his drift, were always cheered and delighted with the evident kindliness of his whole spirit and intentions—while "he held them with his glittering eye," the cordial childlike innocence of his smile, the inexpressible sweetness of his voice, and the rich musical flow into which his mere language ever threw itself, were subsidiary charms that told even upon the dullest and the coldest. Had it been possible that such a man should ever have taken up the trade of a demagogue, either in the pulpit or on the hustings, what power must have been his! The more unintelligible his strain, the greater of course, so the watchwords were skilfully chosen, would have been its potency.

Those who are acquainted in general with what the course of Mr. Coleridge's personal history had been, and who are told *in limine* that the present work is made up of the confidential conversation of the sick-room in which he so lately breathed his last, but who never happened to meet with the man himself, will perhaps be agreeably surprised when they find that it contains no trace of murmuring, in as far as his own fortunes in the world were concerned. Upon the great political events of the few last years he indeed expresses himself occasionally—as what man of understanding and honesty has not been often heard to do?—in the language of regret and mournful anticipation. Once or twice, perhaps, he has allowed some fling of virtuous indignation to escape him with regard to the immediate actors in these miserable doings. But, with these exceptions, the whole book is radiant with the habitual benignity, charity, and hopefulness of the man; and indeed, even as to the excepted topics, he had so accustomed himself to trace external events to *remote* causes, and to rely on that Power which *can* and *will* bring good out of evil, that his general tone of feeling, as to the apparently guiltiest of our political culprits, was that of compassion; and that we much doubt if he ever seriously did believe that the constitution of England had been irretrievably undone.

The equanimity with which this record shows Mr. Coleridge to have looked back upon a life which any worldly person must have called eminently unfortunate, will not, as we have intimated, surprise any one who had the honour and privilege of his acquaintance. He was, in the first place, well aware that the main source of all his external mishaps was in himself—and this indeed he has plainly told us in one of the most interesting pages of his *Autobiographia Literaria*, a work which, however absurdly so named, as it is any thing rather than a narrative of the incidents of his own career, does nevertheless deserve to

be reprinted, not only on many other accounts, but for the vivid glimpses which it affords us of his intellectual habitudes, and the prevalent moods of his mind.

"NEVER," says the autobiographer, "PURSUE LITERATURE AS A TRADE. With the exception of one extraordinary man, I have never known an individual, least of all an individual of genius, healthy or happy without a *profession*, i. e., some *regular* employment, which does not depend on the will of the moment, and which can be carried on so far *mechanically*, that an average quantum only of health, spirits, and intellectual exertion are requisite to its faithful discharge. Three hours of leisure, unannoyed by any alien anxiety, and looked forward to with delight as a change and recreation, will suffice to realise in literature a larger product of what is truly *genial*, than weeks of compulsion. Money and immediate reputation form only an accidental and arbitrary end of literary labour. The *hope* of increasing them by any given exertion will often prove a stimulant to industry; but the *necessity* of acquiring them will in all works of genius convert the stimulant into a *narcotic*. Motives by excess reverse their very nature, and instead of exciting, stun and stupify the mind."—vol. i. p. 223.

And again:

"It would be a sort of irreligion, and scarcely less than a libel on human nature, to believe that there is any established and reputable profession or employment, in which a man may not contrive to act with honesty and honour; and doubtless there is likewise none which may not at times present temptations to the contrary. But woefully will that man find himself mistaken, who imagines that the profession of literature, or (to speak more plainly) the *trade* of authorship, besets its members with fewer or with less insidious temptations than the church, the law, or the different branches of commerce. . . . . Let literature be an honourable *augmentation* to your arms, but not fill the escutcheon!"—*Ibid*, p. 230.

We are well aware that, after Mr. Coleridge's opinions and habits were formed, it would have been extremely difficult to find any (properly so called) professional situation for him, unless he had chosen to take orders—and why he never did so we are altogether uninformed. He himself, in the very chapter from which we have been quoting, says of the church, that it presents to every man of learning and genius a walk of life in which he may cherish a rational hope of being able to unite the widest schemes of literary utility with the sirictest performance of professional duties. "There is," he says, "scarce a department of human knowledge without some bearing on the various critical, historical, philosophical, and moral truths, in which the scholar must be interested as a clergyman: no one pursuit worthy of a man of genius which may not be followed without incongruity." No doubt the motives that withheld the learned and devout churchman, who thus thought, from the service of the altar, must have been powerful—as little that they were honourable to his feelings; but who can cease to regret that Coleridge's life was not cast into the same happy course as that of Crabbe or Bowles? After all, if there was not, there assuredly ought to have been, some means of adequately providing for such a man, after his name and character were fixed and determined, either in some great metropolitan institution, or within the walls of one or other of our universities. If ever those magnificent national establishments are reformed to any good or real purpose, it will be from within, by the act of their own proper authorities; and we feel assured that, in any plan of internal reform likely to proceed from the eminent persons who at present guide their councils, a leading feature would be that of providing a greater number of stations in which men who have really distinguished themselves in science or literature might find honourable retirement and shelter for the evening of their days. We well know that Cambridge was proud of her Coleridge: he was almost worshipped there among both young and old;—his last visit, in particular, called forth a display of feeling which can never cease to be remembered, to their honour, by all who witnessed the scene.

Meanwhile, as Mr. Coleridge himself did not complain, we may spare ourselves the pain of any further comments on the dark and melancholy circumstances in which this great light of his time and country, this beautiful poet, this exquisite metaphysician, this universal scholar, and profound theologian, was permitted to pass so many years of his life. We shall not even be tempted to go beyond a mere allusion to the fact, that the only reduction of the pension list, which the late whig government ventured upon, was one which deprived ten meritorious men of letters, with Coleridge at their head, of a pittance of 100*l.* per annum, which had been accorded to them by King George IV.—the one reduction, we verily believe, which could not have been demanded or approved of by a single tax-payer of these kingdoms, whig, tory, or radical. Hear the dying poet's own comment on this and all other such mischances:—

COMPLAINT.

"How seldom, friend, a good great man inherits
Honour or wealth with all his worth and pains!
It sounds like stories from the land of spirits,
If any man obtain that which he merits,
Or any merit that which he obtains.

REPROOF.

"For shame, dear friend! renounce this canting strain!
What wouldst thou have a good great man obtain?
Place—titles—salary—a gilded chain?
Or throne of corses which his sword hath slain?
Greatness and goodness are not means but ends!
Hath he not always treasures, always friends,
The good great man?—Three treasures, Love, and Light,
And Calm Thoughts, regular as infant's breath;—
And three firm friends, more sure than day and night,
Himself, his Maker, and the angel Death."

Coleridge was, in truth, a high as well as a humble spirit, and he, no question, had a noble pleasure and pride in his belief—whether altogether well-founded or not we have some doubts—that he inherited not only this serene scorn of mere worldly distinctions, but a gallant indifference to immediate literary popularity, from the greatest of his poetical predecessors. We suspect that he might with more justice have compared himself on both of these heads to some of his own illustrious contemporaries, than to one at least of the immortal names to which he alludes

in a chapter of his *Autobiographia* already quoted by us. He there says:

"The men of the greatest genius, as far as we can judge from their own works or from the accounts of their contemporaries, appear to have been of calm and tranquil temper, in all that related to themselves. In the inward assurance of permanent fame, they seem to have been either indifferent, or resigned, with regard to immediate reputation. Through all the works of Chaucer there reigns a cheerfulness, a manly hilarity, which makes it almost impossible to doubt a correspondent habit of feeling in the author himself. Shakspeare's evenness and sweetness of temper were almost proverbial in his own age. That this did not arise from ignorance of his own comparative greatness, we have abundant proof in his sonnets, which could scarcely have been known to Mr. Pope, when he asserted, that our great bard 'grew immortal in his own despite.' Speaking of one whom he had celebrated, and contrasting the duration of his works with that of his personal existence, Shakspeare adds:

"Your name from hence immortal life shall have,
Though I once gone to all the world must die;
The earth can yield me but a common grave,
When you entombed in men's eyes shall lie.
Your monument shall be my gentle verse,
Which eyes not yet created shall o'er-read;
And *tongues to be* your being shall rehearse,
When all the breathers of this world are dead:
You still shall live, such virtue hath my pen,
Where breath most breathes, even in the mouth of men.

"In Spenser, indeed, we trace a mind constitutionally tender, delicate and, in comparison with his three great compeers, I had almost said, *effeminate;* and this additionally saddened by the unjust persecution of Burleigh, and the severe calamities which overwhelmed his latter days. These causes have diffused over all his compositions 'a melancholy grace,' and have drawn forth occasional strains, the more pathetic from their gentleness. But no where do we find the least trace of irritability, and still less of quarrelsome or affected contempt of his censurers. The same calmness, and even greater self-possession, may be affirmed of Milton, as far as his poems and poetic character are concerned. He reserved his anger for the enemies of religion, freedom, and his country. My mind is not capable of forming a more august conception, that arises from the contemplation of this great man in his latter days: poor, sick, old, blind, slandered, persecuted.

'Darkness before, and danger's voice behind,'—

in an age in which he was as little understood by the party *for* whom, as by that *against* whom he had contended; and among men before whom he strode so far as to *dwarf* himself by the distance; yet still listening to the music of his own thoughts, or if additionally cheered, yet cheered only by the prophetic faith of two or three solitary individuals, he did nevertheless

'Argue not
Against Heaven's hand or will, nor bate a jot
Of heart or hope; but still bore up and steer'd
Right onward.' "—*Autobiographia*, vol. i. pp. 32—35.

As we shall not be so superfluous as to attempt any orderly arrangement in an article on *table-talk*, we may as well quote here what Coleridge said, across the fire, nearly twenty years later, on the characteristics of Chaucer and Shakspeare:—

"I take unceasing delight in Chaucer. His manly cheerfulness is especially delicious to me in my old age. How exquisitely tender he is, and yet how perfectly free from the least touch of sickly melancholy or morbid drooping! The sympathy of the poet with the subjects of his poetry is particularly remarkable in Shakspeare and Chaucer; but what the first effects by a strong act of imagination and mental metamorphosis, the last does without any effort, merely by the inborn kindly joyousness of his nature. How well we seem to know Chaucer! How absolutely nothing do we know of Shakspeare!"—*Table-Talk*, *March* 15, 1834.

We cannot read the numerous fragments of delicious criticism on Shakspeare which are scattered over these volumes, as well as the Autobiographia, without remembering with sorrow that Coleridge's Lectures on Shakspeare, delivered before Schlegel's, and in the opinion of those who heard them at least as good as the enlightened German's, have never been collected and printed. Are they hopelessly lost? We know that one friend and admirer of our poet employed with his consent, a skilful short-hand writer to take notes of the whole course, and imperfect as these must no doubt have been, still they could scarcely fail to furnish most valuable materials for an editor such as H. N. Coleridge. We are sure Mr. Frere would be happy to place the MS., if now in his possession, at the disposal of one so well qualified to use it for the honour of the deceased, and the instruction of the world. But let us return to our extracts.

"I cannot in the least allow any necessity for Chaucer's poetry, especially the 'Canterbury Tales,' being considered obsolete. Let a few plain rules be given for sounding the final è of syllables, and for expressing the termination of such words as *oceäne*, *nation*, &c. as dissyllables,—or let the syllables to be sounded in such cases be marked by a competent metrist. This simple expedient would, with a very few trifling exceptions, where the errors are inveterate, enable any reader to feel the perfect smoothness and harmony of Chaucer's verse. As to understanding his language,—if you read twenty pages with a good glossary, you surely can find no further difficulty even as it is; but I should have no objection to see this done:—strike out those words which are now obsolete, and I will venture to say that I will replace every one of them by words still in use out of Chaucer himself, or Gower his disciple. I do not want this myself; I rather like to see the significant terms which Chaucer unsuccessfully offered as candidates for admission into our language,—but surely so very slight a change of the text may well be pardoned even by black-letterati for the purpose of restoring so great a poet to his ancient and most deserved popularity."*—*Table-Talk*, *April*, 1833.

* Our poet has elsewhere this beautiful passage on a cognate subject:—"In the days of Chaucer and Gower our language might be compared to a wilderness of vocal reeds, from which the favourites only of Pan or Apollo could construct even the rude Syrinx; and from this the *constructors* alone could elicit strains of music. But now, partly by the labours of successive poets, and in part by the more artificial state of society and social intercourse, language, mechanised as it were into a barrel-organ, supplies at once both instrument and tune. Thus even the deaf may play, so as to delight the many. Sometimes (for it is with similes as it is with jests at a wine-table, one is sure to suggest another) I have attempted to illustrate the present state of our language, in its relation to literature, by a press-room of larger and smaller stereotype pieces, which, in the present Anglo-

Something like what Mr. Coleridge here recommends for the popularisation of this great old poet has just been attempted by Mr. Charles Cowden Clarke, in a couple of small volumes, entitled "The Riches of Chaucer;" and notwithstanding this affected title, and a preface in which we find the venerable cockney school revived in all its glory, the editor appears to have acquitted himself of his task as regards the text of Chaucer, and the selection of glossarial notes, with considerable tact. Would that some really ripe and good scholar would undertake an annotated edition of the whole of Chaucer. We have no even tolerable edition of any of his writings except the Canterbury Tales; and great as Tyrwhitt was in more departments than one, much progress has been made in all of them since he wrote, and in none of them more than in the illustration of the old English tongue, especially by bringing to bear upon its obsolete forms the living commentary of comparatively unmixed Teutonic dialects. On the structure and varieties of his mother tongue we have never perhaps had a more admirable critic than has been lost to us in Mr. Coleridge.

To proceed with our *Ana*:—

"It may be doubted whether a composite language like the English is not a happier instrument of expression than a homogeneous one, like the German. We possess a wonderful richness and variety of modified meanings in our Saxon and Latin quasi-synonymes, which the Germans have not. For "the pomp and *prodigality* of heaven," the Germans must have said "the *spendthriftness*." Shakspeare is particularly happy in his use of the Latin synonymes, and in distinguishing between them and the Saxon."

—We wish Mr. Coleridge had worked out this last idea. We think it quite just; and feel, to give but one example, how admirably the bare simple strength of Saxon monosyllables is made to contrast with and heighten the effect of the most gorgeous Latin *sesquipedalia* in

"The multitudinous sea incarnadine,
Making the green one red."

Again he says:—

"Shakspeare is of no age. It is idle to endeavour to support his phrases by quotations from Ben Jonson, Beaumont and Fletcher, &c. His language is entirely his own, and the younger dramatists imitated him. The construction of Shakspeare's sentences, whether in verse or prose, is the necessary and homogeneous vehicle of his peculiar manner of thinking. His is not the style of the age. More particularly, Shakspeare's blank verse is an absolutely new creation. Read Daniel, the admirable Daniel, in his "Civil Wars," and "Triumphs of Hymen." The style and language are just such as any very pure and manly writer of the present day, Wordsworth, for example, would use; it seems quite modern in comparison with the style of Shakspeare. Ben Jonson's blank-verse is very masterly and individual, and perhaps Massinger's is even still nobler. In Beaumont and Fletcher it is constantly slipping into lyricisms.

"I believe Shakspeare was not a whit more intelligible in his own day than he is now to an educated man, except for a few local allusions of no consequence. As I said, he is of no age, nor, I may add, of any religion, or party, or profession. The body and substance of his works came out of the unfathomable depths of his own oceanic mind; his observation and his reading, which was considerable, supplied him with the drapery of his figures."—*August* 19, 1832.

What striking words are those of our table-talker; "how absolutely nothing do we know of Shakspeare!" He is indeed the immortal enigma of literary history: there is hardly a poetaster of his period of whom we do not know more than of the greatest genius that ever England or the world produced; and he lived and wrote in the same town with the brightest galaxy of wits, and scholars, and statesmen, that ever adorned any period of English history. He walked every day the same streets with the Cecils, the Bacons, the Raleighs—his eternal dramas were acted before two of the most accomplished sovereigns that ever sat on the English throne—nay, he was without a doubt the most popular dramatist of that splendid time—and yet there is not the shadow of evidence that any one of those of his contemporaries whose names can be said to survive, with the single exception of Ben Jonson, ever was within the walls of the same private chamber with Shakspeare. Surly Ben's well known disparaging sentence about his book learning, and the general but vague tradition of his sweet and gentle temper—these are absolutely the only traces that we have of Shakspeare as he personally moved among and impressed his fellow mortals in the London of Elizabeth and James I. Not one jot of his private conversation, not one scrap of his private correspondence—had been thought worthy of preservation. The first account of his life was the weak and credulous one by Rowe, published nearly a hundred years after his death. For all that we can discover, Shakspeare was actually—popular as his dramas were, not a whit a more important *individual* in the eyes of his contemporaries than any Buckstone or Moncrieff among the modern playwrights is now in our own:—

"For men, like butterflies,
Show not their mealy wings but to the summer;
And not a man, for being simply man,
Hath any honour; but honour for those honours
That are without him, as place, riches, favour,
Prizes of accident as oft as merit;
Which, when they fall, as being slippery standers,
The loves that lean'd on them as slippery too,
Do one pluck down another, and together
Die in the fall."———*Troilus and Cressida.*

It is common to say that Shakspeare was unconscious of his own greatness. The sonnet re-

Gallican fashion of unconnected, epigrammatic periods, it requires but an ordinary portion of ingenuity to vary indefinitely, and yet still produce something, which, if not sense, will be so like it as to do as well: perhaps better, for it spares the reader the trouble of thinking; prevents vacancy, while it indulges indolence; and secures the memory from all danger of an intellectual plethora. Hence of all trades, literature at present demands the least talent or information; and, of all modes of literature, the manufacturing of poems. The difference, indeed, between these and the works of genius is not less than between an egg and an egg-shell; yet at a distance they both look alike."—*Autobiographia*, vol. i. p. 39.

ferred to by Coleridge in a preceding extract is only one of many among those extraordinary and mysterious pieces that may be referred to as utterly destructive of that theory. Nor could he, who at an early period of his career so estimated himself, be unconscious of the prodigious extent to which his genius had expanded and strengthened as its exercise advanced. He could not look back from Macbeth, Lear, Othello, to his juvenile poems, his sonnets, his Love's Labours Lost, Two Gentlemen of Verona, and so forth, without a thorough consciousness that his had been always a growing mind. But then comes the grand puzzle of all. It seems to have been pretty well ascertained by Chalmers that Othello, which we agree with Mr. Coleridge in considering as the very highest triumph of his dramatic art, was also its last effort: that he produced it in 1611, at the age of *forty-seven*, and that immediately afterwards he withdrew from the stage, from literature, from London, we had almost said from the world, contented to linger on the remaining five years of his life in his native village, *oblituseque suorum obliviscendus et illis*, never once dreaming even of an edition of his works; nay, leaving many of the best of them to be printed for the first time seven years after his death. We can only account for this by the presumption that, great as Shakspeare was, and felt himself to be, he had in his mind an ideal of art far above what he supposed himself ever to have approached in his own best dramas. How surely is modesty the twin-grace with daring in the structure and development of every truly great mind and character!

We may take this opportunity, though somewhat irregularly, of noticing a strange little volume which lately issued from the press, entitled "Citation and Examination of Wm. Shakspeare, &c. before the worshipful Sir Thomas Lucy, Knight, touching Deer Stealing, 19th Sept. 1582, now first published from original papers: to which is added a conference of Master Edmund Spencer with the Earl of Essex, touching the state of Ireland." This performance is, as every reader will soon discover, from the pen of Mr. Landor, and like almost every other work of that pen, it presents a perplexing mixture of the quaint and the beautiful in its language, of the absurd and the profound in its meaning. The *citation and examination of Shakspeare* does not on the whole appear to us worthy of being classed with the best of Mr. Landor's efforts, though nothing can be more exquisite than some detached passages in the course of the dialogue. The *conference* between Essex and Spenser, again, seems to us an almost unrivaled specimen of Mr. Landor's purest and happiest vein,—that peculiar power of interweaving satire and pathos which forms the inimitable charm of many of his imaginary conversations. We propose ere long to review the various works, in verse and prose, which this author has produced since we last made him the subject of an article; but in the mean time are tempted to quote a few sentences from his epilogue to the *conference*, being an account of the circumstances under which one Jacob Eldridge, a lawyer's clerk, and native of Stratford-on-Avon, was employed by the Earl of Essex to act the part of a Gurney on that occasion; together with particulars of the funeral of Spenser, at which Eldridge attended within a few month after the *conference* took place. This fictitious Jacob, writing to a friend in Warwickshire, says:—

"Now I speak of poets, you will be in a maze at hearing that our townsman hath written a power of matter for the playhouse. Neither he nor the booksellers think it quite good enough to print: but I do assure you, on the faith of a Christian, it is not bad; and there is rare fun in the last thing of his about Venice, where a Jew, one Shiloh, is choused out of his money and his revenge. . . . .

"Master Greene may overrate him; but Master Greene declares that if William goes on improving and taking his advice, it will be desperate hard work in another seven years to find so many as half a dozen chaps equal to him within the liberties. Master Greene and myself took him with us to see the burial of Master Edmund Spenser in Westminister Abbey on the 19th of January last. The halberdmen pushed us back as having no business there. Master Greene told them he belonged to the queen's company of players. William Shakspeare could have said the same, but did not. And I, fearing that Master Greene and he might be halberded back into the crowd, showed the badge of the Earl of Essex. Whereupon did the serjeant ground his halberd, and say unto me, 'That badge commands admittance every where: your folk likewise may come in.' Master Greene was red-hot angry, and told me he would bring him before the *council*. William smiled, and Master Greene said, "Why! would not you, if you were in my place?' He replied, 'I am an half inclined to do worse —to bring him before the *audience* some spare hour.' At the close of the burial service all the poets of the age threw their pens into the grave, together with the pieces they had composed in praise or lamentation of the deceased. William Shakspeare was the only poet who abstained from throwing in either pen or poem, at which no one marveled, he being of low estate, and the others not having yet taken him by the hand. Yet many authors recognised him, not indeed as author but as player; and one, civiler than the rest, came up unto him triumphantly, his eyes sparkling with glee and satisfaction, and said consolatorily, 'In due time, my honest friend, you may be admitted to do as much for one of us.' 'After such encouragement,' replied our townsman, "I am bound in duty to give you the preference, should I indeed be worthy.' This was the only smart thing he uttered all the remainder of the day; during the whole of it he appeared to be half lost, I know not whether in melancholy or in meditation, and soon left us."—*Citation*, &c. pp. 278—281.

We have really very little doubt that this scene is such an one as might have occurred after Shakspeare had written half his tragedies. Mr. Landor adds, in the capacity of editor, the following very characteristic note:—

"He has been amused, in his earlier days, at watching the first appearance of such few books as he believed to be the production of some powerful intellect. He has seen people slowly rise up to them, like carp in a pond when food is thrown among them; some of which carp snatch suddenly at a morsel, and swallow it; others touch it gently with their barbe, pass deliberately by, and leave it; others wriggle and rub against it more disdainfully; others, in sober truth, know not what to make of it, swim round and round it, eye it on the sunny side, eye it on the shady; approach it, question it, shoulder it, flap it with the tail, turn it over, look askance at it, take a pea-shell or a worm instead of it, and plunge again

their contented heads into the comfortable mud; after some seasons the same food will suit their stomachs better. The editor has seen all this, and been an actor in it, whether at Chantilly or Fontainebleau, is indifferent to the reader; and it has occurred to him that Shakspeare and Spencer were thrown among such carp, and began to be relished (the worst, of course, first) after many years."—*Ibid.* pp. 250, 251.

We must indulge ourselves with a few more of Coleridge's *Shakespeariana*. We have seldom met with more profound truth, conveyed in the simplest language, than in the first of these sentences:—

"Men of humour are always in some degree men of genius; wits are rarely so; although a man of genius may, amongst other gifts, possess wit, as Shakspeare."

Consider, along with this high estimation of *humour*, our poet's judgment elsewhere as to the talent of *mimicry*.

"The talent for mimicry seems strongest where the human race are most degraded. The poor, naked, half-human savages of New Holland were found excellent mimics: and in civilised society, minds of the very lowest stamp alone satirise by *copying*."—*Autobiog. Lit.*, vol. i. p. 79.

The reader of the next paragraph will feel how true is the remark that it requires a poet to criticise poetry.

"In Shakspeare one sentence begets the next naturally; the meaning is all inwoven. He goes on kindling like a meteor through the dark atmosphere; yet when the creation in its outline is once perfect, then he seems to rest from his labour, and to smile upon his work, and tell himself that it is very good. You see many scenes and parts of scenes which are simply Shakspeare's disporting himself in joyous triumph and vigorous fun after a great achievement of his highest genius."—*Table-Talk*, 1833.

"Remark the use which Shakspeare always makes of his bold villains, as vehicles for expressing opinions and conjectures of a nature too hazardous for a wise man to put forth directly as his own, or from any sustained character."—*Ibid.*

On Shakspeare's villains there is, by the way, a subtle passage in the *Autobiographia*, which we must place in juxtaposition with this fragment of the *Table-Talk*.

"'We shall be as gods in knowledge,' was and must have been the *first* temptation; and the co-existence of great intellectual lordship with guilt has never been adequately represented without exciting the strongest interest, and for this reason, that *in this bad and heterogeneous co-ordination we can contemplate the intellect of man more exclusively as a separate self-subsistence, than in its proper state of subordination to his own conscience, or to the will of an infinitely superior being.* This is the secret charm of Shakspeare's male characters in general. They are all cast in the mould of Shakspeare's own gigantic intellect; and this is the open attraction of his Richard, Iago, Edmund, &c. in particular."—vol. ii. pp. 266, 267.

It is curious that, after all, the very worst of Shakspeare's villains (we do not speak of his ruffians) is his last, Iago. It is in the same piece, too, that he has given us the most dignified of his lovely women, and the most essentially generous and ideally chivalrous of all his heroes. Well may Coleridge say,—

"I still think the chronological order the best for arranging a poet's works. All your divisions are in particular instances inadequate, and they destroy the interest which arises from watching the progress, maturity, and even the decay of genius."—*Table-Talk, March*, 1834.

His own earlier definition of *genius* is probably in the recollection of many of our readers:—

"To carry on the feelings of childhood into the powers of manhood; to combine the child's sense of wonder and novelty with the appearances, which every day for perhaps forty years had rendered familiar,

'With sun, and moon, and stars, throughout the year,
And man and woman;'

this is the character and privilege of genius, and one of the marks which distinguish genius from talents."—*Autobiog. Lit.*, vol. i. p. 85.

But along with this it is well to keep in view a truth which he has briefly expressed in one of the volumes now before us, viz:—

"Genius must have talent as its complement and implement, just as in like manner imagination must have fancy. In short, the higher intellectual powers can only act through a corresponding energy of the lower."

We shall now put together a few of his *obiter dicta* on general literature. Coleridge could sometimes be a stern, and even cruel critic, (for example, witness the case of poor Maturin,) and he had some early prejudices which warped his judgment as to one or two of our own best and greatest poets, especially Pope; but, with rare exceptions, he brought to the consideration of literary works, whether old or new, not only great shrewdness and subtlety of thought and observation, but a most genial and generous tone of feeling.

DON QUIXOTE.

"When a man mistakes his thoughts for persons and things, he is mad. A madman is properly so defined. Don Quixote is not a man out of his senses, but a man in whom the imagination and the pure reason are so powerful as to make him disregard the evidence of sense when it opposed their conclusions. Sancho is the common sense of the social man-animal, unenlightened and unsanctified by the reason. You see how he reverences his master at the very time he is cheating him."

DRYDEN.

"You will find this a good gauge or criterion of genius, whether it progresses and evolves, or only spins upon itself. Take Dryden's Achitophel and Zimri—Shaftesbury and Buckingham; every line adds to or modifies the character, which is, as it were, a building up to the very last verse;—whereas in Pope's Timon, &c., the first two or three couplets contain all the pith of the character, and the twenty or thirty lines that follow are so much evidence or proof of overt acts of jealousy, or pride, or whatever it may be, that is satirised. In like manner compare Charles Lamb's exquisite criticisms on Shakspeare with Hazlitt's imitations of them.

"Dryden's genius was of that sort which catches fire by its own motion; his chariot wheels get hot by driving fast."

FIELDING.

"How charming—how wholesome—Fielding always is! To take him up after Richardson is like emerging from a sick-room heated by stoves into an open lawn, on a breezy day in May."

JOHNSON.

"Dr. Johnson seems to have been really more powerful in discoursing, *viva voce*, in conversation than with his pen in hand. It seems as if the excitement of company called something like reality and consecutiveness into his reasonings, which in his writings I cannot see. His antitheses are almost always verbal only; and sentence after sentence in 'The Rambler' may be pointed out, to which you cannot attach any definite meaning whatever. In his political pamphlets there is more truth of expression than in his other works, for the same reason that his conversation is better than his writings in general."

SCHILLER.

"The young men in Germany and England who admire Lord Byron, prefer Goethe to Schiller; but you may depend upon it, Goethe does not, nor ever will, command the common mind of the people of Germany as Schiller does. Schiller had two legitimate phases in his intellectual character; the first as author of 'The Robbers,' a piece which must not be considered with reference to Shakspeare, but as a work of the mere material sublime, and in that line it is undoubtedly very powerful indeed. It is quite genuine, and deeply imbued with Schiller's own soul. After this he outgrew the composition of such plays as 'The Robbers,' and at once took his true and only rightful stand in the grand historical drama—'The Wallenstein;' not the intense drama of passion—he was not master of that—but the diffused drama of history, in which alone he had ample scope for his varied powers. 'The Wallenstein' is the greatest of his works; it is not unlike Shakspeare's historical plays, a species by itself. You may take up any scene, and it will please you by itself, just as you may in 'Don Quixote,' which you read *through* once or twice only, but which you read *in* repeatedly. After this point it was that Goethe and other writers injured by their theories the steadiness and originality of Schiller's mind; and in every one of his works, after 'The Wallenstein,' you may perceive the fluctuations of his taste and principles of composition. He got a notion of re-introducing the characterlessness of the Greek tragedy with a chorus, as in 'The Bride of Messina,' and he was for infusing more lyric verse into it. Schiller sometimes affected to despise 'The Robbers' and the other works of his first youth; whereas he ought to have spoken of them as of works not in a right line, but full of excellence in their way. In his ballads and lighter lyrics Goethe is most excellent. It is impossible to praise him too highly in this respect. I like 'The Wilhelm Meister' the best of his prose works. But neither Schiller's nor Goethe's prose style approaches to Lessing's, whose writings, for *manner*, are absolutely perfect."

SCOTT.

"Dear Sir Walter Scott and myself were exact, but harmonious, opposites in this; that every old ruin, hill, river, or tree, called up in his mind a host of historical or biographical associations, just as a bright pan of brass, when beaten, is said to attract the swarming bees; whereas for myself, notwithstanding Dr. Johnson, I believe I should walk over the plain of Marathon without taking more interest in it than in any other plain of similar features. Yet I receive as much pleasure in reading the account of the battle in Herodotus as any one can. Charles Lamb wrote an essay on a man who lived in past time: I thought of adding another to it on one who lived not *in time* at all, past, present, or future, but beside or collaterally.

"When I am very ill indeed, I can read Scott's novels, and they are almost the only books I can then *read*. I cannot at such times read the Bible: my mind reflects on it, but I cannot bear the open page."

BYRON.

"How lamentably the *art* of versification is neglected by most of the poets of the present day: by Lord Byron, it strikes me, in particular, among those eminent for other qualities.

"Upon the whole, I think the part of *Don Juan*, in which Lambro's return to his home, and Lambro himself, are described, is the best—that is, the most individual thing in all I know of Lord B.'s works. The festal abandonment puts one in mind of Nicolas Poussin's pictures."—*7th June*, 1834.

BASIL HALL.

"The possible destiny of the United States of America—as a nation of a hundred millions of freemen—stretching from the Atlantic to the Pacific, living under the laws of Alfred, and speaking the language of Shakspeare and Milton—is an august conception. Why should we not wish to see it realised? America would then be England viewed through a solar microscope—Great Britain in a state of glorious magnification! How deeply to be lamented is the spirit of hostility and sneering which some of the popular books of travels have shown in treating of the Americans! They hate us, no doubt, just as brothers hate; but they respect the opinion of an Englishman concerning themselves ten times as much as that of a native of any other country on earth. A very little humouring of their prejudices, and some courtesy of language and demeanour on the part of Englishmen, would work wonders, even as it is, with the public mind of the Americans.

"Captain Basil Hall's book is certainly very entertaining and instructive; but in my judgment his sentiments upon many points, and more especially his mode of expression, are unwise and uncharitable. After all, are not most of the things shown up with so much bitterness by him mere national foibles, parallels to which every people has, and must of necessity have?"

MARRYATT.

"I have received a great deal of pleasure from some of the modern novels, especially Captain Marryatt's 'Peter Simple.' That book is nearer Smollett than any thing I remember. And 'Tom Cringle's Log,' in Blackwood, is also most excellent.'

Our readers will expect a few specimens of the Table-Talk on ancient literature. Here are a few—the shortest we could hit upon—and some of the best:—

"The old Latin poets attempted to compound as largely as the Greek; hence in Ennius such words as belligerentes, &c. In nothing did Virgil show his judgment more than in rejecting these, except just where common usage had sanctioned them, as omnipotens and a few more. He saw that the Latin was too far advanced in its formation, and of too rigid a character to admit such composition or agglutination. In this particular respect, Virgil's Latin is very admirable and deserving preference. Compare it with the language of Lucan or Statius, and count the number of words used in an equal number of lines, and observe how many more short words Virgil has.

"I cannot quite understand the grounds of the high admiration which the ancients expressed for Propertius, and I own that Tibullus is rather insipid to me. Lucan was a man of great powers; but what was to be made of such a shapeless fragment of party warfare, and so recent too! He had fancy rather than imagination, and passion rather than fancy. His taste was wretched to be sure; still the 'Pharsalia' is in my judgment a very wonderful work for such a youth as Lucan was.

"I think Statius a truer poet than Lucan, though he is very extravagant sometimes. Valerius Flaccus is very pretty in particular passages. I am ashamed to say I

have never read Silius Italicus. Claudian I recommend to your careful perusal, in respect of his being properly the first of the moderns, or at least the transitional link between the Classic and the Gothic modes of thought.

"I call Persius hard, not obscure. He had a bad style; but I dare say, if he had lived, he would have learned to express himself in easier language. There are many passages in him of exquisite felicity, and his vein of thought is manly and pathetic.

"*August* 15, 1833.—I consider the two works of Sallust which have come down to us entire as romances founded on facts; no adequate causes are stated, and there is no real continuity of action. In Thucydides, you are aware from the beginning that you are reading the reflections of a man of great genius and experience upon the character and operation of the two great political principles in conflict in the civilised world in his time; his narrative of events is of minor importance, and it is evident that he selects for the purpose of illustration. It is Thucydides himself whom you read throughout under the names of Pericles, Nicias, &c. But in Herodotus it is just the reverse. He has as little subjectivity as Homer, and, delighting in the great fancied epic of events, he narrates them without impressing any thing of his own mind upon the narrative. It is the charm of Herodotus that he gives you the spirit of his age—that of Thucydides that he reveals to you his own, which was above the spirit of his age.

"When I was a boy, I was fondest of Æschylus; in youth and middle age I preferred Euripides; now, in my declining years, I admire Sophocles. I can now at length see that Sophocles is the most perfect. Yet he never rises to the sublime simplicity of Æschylus—simplicity of design, I mean—nor diffuses himself in the passionate outpourings of Euripides. I understand why the ancients called Euripides the most tragic of their dramatists; he evidently embraces within the scope of the tragic poet many passions—love, conjugal affection, jealousy, and so on—which Sophocles seems to have considered as incongruous with the ideal statuesqueness of the tragic drama. Certainly Euripides was a greater poet in the abstract than Sophocles. His choruses may be faulty as choruses, but how beautiful and affecting they are as odes and songs! I think the famous Εὐίππου, ξένοι, in the Œdipus Coloneus, cold in comparison with many of the odes of Euripides, as that song of the chorus in the Hippolytus, Ἔρως, Ἔρως, and so on; and I remember a choric ode in the Hecuba which always struck me as exquisitely rich and finished—I mean where the chorus speaks of Troy and the night of the capture.

"There is nothing very surprising in Milton's preference of Euripides, though so unlike himself. It is very common—very natural—for men to *like*, and even admire, an exhibition of power very different in kind from any thing of their own. No jealousy arises. Milton preferred Ovid, too; and I dare say he admired both, as a man of sensibility admires a lovely woman, with a feeling into which jealousy or envy cannot enter. With Æschylus or Sophocles he might perchance have matched himself.

"In Euripides you have oftentimes a very near approach to comedy, and I hardly know any writer in whom you can find such fine models of serious and dignified conversation."

We now proceed to extract some half-dozen of Coleridge's remaks on subjects connected with the actual business of life—men and manners in general:—

I.—"A philosopher's ordinary language and admissions in general conversation or writings, *ad populum*, are as his watch compared with his astronomical time-piece. He sets the former by the town-clock, not because he believes it right, but because his neighbours and his cook go by it."

II.—"Men of genius are rarely much annoyed by the company of vulgar people, because they have a power of looking *at* such persons as objects of amusement, of another race altogether."

III.—"If a man is not rising upwards to be an angel, depend upon it he is sinking downwards to be a devil. He cannot stop at the beast. The most savage of men are not beasts; they are worse, a great deal worse."

IV.—"One mistake perpetually made by one of our unhappy parties—and with a pernicious tendency to Antinomianism—is to confound sin with sins. To tell a modest girl, the watchful nurse of an aged parent, that she is full of *sins* against God is monstrous, and as shocking to reason as it is unwarrantable by Scripture. But to tell her that she and all men and women are of a sinful nature, and that, without Christ's redeeming love and God's grace, she cannot be emancipated from its dominion, is true and proper."

V.—"How deep a wound to morals and social purity has that accursed article of the celibacy of the clergy been! Even the best and most enlightened men in Romanist countries attach a notion of impurity to the marriage of a clergyman; and can such a feeling be without its effect on the estimation of the wedded life in general? Impossible!—and the morals of both sexes in Spain, Italy, France, &c. prove it abundantly."

VI.—"To resolve laughter into an expression of contempt is contrary to fact, and laughable enough. Laughter is a convulsion of the nerves; and it seems as if nature cut short the rapid thrill of pleasure on the nerves by a sudden convulsion of them, to prevent the sensation becoming painful. Aristotle's definition is as good as can be; surprise at perceiving any thing out of its usual place, when the unusualness is not accompanied by a sense of serious danger. *Such* surprise is always pleasurable; and it is observable that surprise, accompanied with circumstances of danger, becomes tragic. Hence farce may often border on tragedy; indeed, farce is nearer tragedy in its essence than comedy is."

We have left ourselves little room for what occupies a very considerable portion of these most interesting volumes—namely, politics; we mean politics in the largest sense of that word, including, of course, political economy, and popular education:—

PUBLIC SCHOOLS.

"*July* 8, 1833—I am clear for public schools as the general rule; but for particular children private education may be proper. For the purpose of moving at ease in the best English society—mind, I do not call the London exclusive clique the best English society; the defect of a public education upon the plan of our great schools, and Oxford, and Cambridge, is hardly to be supplied. But the defect is positively visible in some men, and only negatively in others. The first *offend* you by habits and modes of thinking and acting directly attributable to their private education; in the others, you only regret that the freedom and facility of the established and national mode of bringing up is not *added* to their good qualities."

"One constant blunder of these New-Broomers or Broughamers, these Penny Magazine sages and philanthropists, in reference to our public schools, is to confine their view to what schoolmasters teach the boys, with entire oversight of all that the boys are excited to learn from each other and of themselves, with more geniality even *because* it is *not* a part of their compelled school knowledge. An Eton boy's knowledge of the St. Law-

rence, Mississippi, Missouri, Orellana, &c., will be generally found in exact proportion to his knowledge of the Ilissus, Hebrus, Orontes, and so forth; inasmuch as modern travels and voyages are more entertaining and fascinating than Cellarius; or Robinson Crusoe, Dampier, and Captain Cook than the Periegesis. Compare the *lads* themselves from Eton and Harrow, &c. with the *alumni* of the New-Broom Institution, and not the lists of school-lessons, and be that comparison the criterion."

INFANT SCHOOLS.

"*July* 24, 1832.—I have no faith in act of parliament reform. All the great, the permanently great, things that have been achieved in the world, have been achieved by individuals working from the instinct of genius or of goodness. The rage now-a-days is all the other way; the individual is supposed capable of nothing; there must be organization, classification, machinery, &c., as if the capital of national morality could be increased by making a joint stock of it. Hence you see these infant schools so patronised by the bishops and others, who think them a grand invention. Is it found that an infant-school child, who has been bawling all day a column of the multiplication table, or a verse from the Bible, grows up a more dutiful son or daughter to its parents? Are domestic charities on the increase amongst families under this system? In a great town, in our present state of society, perhaps such schools may be a justifiable expedient and choice of the lesser evil; but as for driving these establishments into the country villages, and breaking up the cottage home education, I think it one of the most miserable mistakes which the well-intentioned people of the day have yet made."

MALTHUSIANISM.

August 12, 1832.—Is it not lamentable—is it not even marvellous—that the monstrous practical sophism of Malthus should now have gotten complete possession of the leading men of the kingdom? Such an essential lie in morals—such a practical lie, in fact, as it is too! I solemnly declare that I do not believe that all the heresies, and sects, and factions, which the ignorance, and the weakness, and the wickedness of man have ever given birth to, were altogether so disgraceful to man as a Christian, a philosopher, a statesman, or citizen, as this abominable tenet. It should be exposed by reasoning in the form of ridicule. Asgill or Swift would have done much; but like the popish doctrines, it is so vicious a tenet, so flattering to the cruelty, the avarice, and sordid selfishness of most men, that I hardly know what to think of the result."

NEGRO EMANCIPATION.

"It is very strange that men who make light of the direct doctrines of the Scriptures, and turn up their noses at the recommendation of a line of conduct suggested by religious truth, will nevertheless stake the tranquillity of an empire, the lives and properties of millions of men and women, on the faith of a maxim of modern political economy! And this, too, of a maxim true only, if at all, of England or a part of England, or of some other country—namely, that the desire of bettering their condition will induce men to labour even more abundantly and profitably than servile compulsion,—to which maxim the past history and present state of all Asia and Africa give the lie. Nay, even in England at this day, every man in Manchester, Birmingham, and in other great manufacturing towns, knows that the most skilful artisans, who may earn high wages at pleasure, are constantly in the habit of working but a few days in the week, and of idling the rest. I believe Saint Monday is very well kept by the workmen in London. I think tailors will not work at all on that day, the printers not till the afternoon, and so on. The love of indolence is universal, or next to it."

COLONISATION.

"*May* 4, 1833.—Colonisation is not only a manifest experiment, but an imperative duty in Great Britain. God seems to hold out his finger to us over the sea. But it must be a national colonisation, such as was that of the Scots to America; a colonisation of hope, and not such as we have alone encouraged and effected for the last fifty years, a colonisation of despair."

MACHINERY.

"The wonderful powers of machinery can, by multiplied production, render the *arte facta* of life cheaper, but they cannot cheapen, except in a very slight degree, the immediate growths of nature, or the immediate necessaries of man. A coat and a pair of shoes are as dear now as ever they were, perhaps dearer, and no discoveries in machinery can materially alter the relative price of beef and mutton. Now the *arte facta* are sought by the higher classes of society in a proportion incalculably beyond that in which they are sought by the lower classes; and therefore it is that the vast increase of the mechanical powers has not cheapened life and pleasure to the poor as it has done to the rich. In some respects, no doubt, it has done so,—as in giving cotton [qu. *silk*?] dresses to maid-servants, and penny gin to all. A pretty benefit truly!"

NATIONAL DEBT.

"What evil results to this country taken at large from the national debt? I never could get a plain and practical answer to that question. As to taxation to pay the interest, how can the country suffer by a process under which the money is never one minute out of the pockets of the people? You may just as well say that a man is weakened by the circulation of his blood. There may, certainly, be particular local evils and grievances resulting from the mode of taxation or collection; but how can that debt be in any proper sense a burden to the nation, which the nation owes to itself, and to no one but itself? It is a juggle to talk of the nation owing the capital or the interest to the stockholders; it owes to itself only. It is really and truly nothing more in effect than so much money or money's worth raised annually by the state for the purpose of quickening industry."*

CORONATION OATH.

"*March* 12, 1833.—Lord Grey has in parliament said two things: first, that the coronation oaths only bind the king in his executive capacity; and secondly, that members of the house of commons are bound to represent in their votes the wishes and opinions of their constituents,

---

* Here the editor quotes in his note, and we willingly follow in part his example, a splendid passage from one of the Table-talker's early essays in "The Friend:"—

"A great statesman, lately deceased, in one of his anti-ministerial harangues against some proposed impost, said: The nation has been already bled in every vein, and is faint with loss of blood. This blood, however, was circulating in the mean time through the whole body of the state, and what was received into one chamber of the heart was instantly sent out again at the other portal. Had he wanted a metaphor to convey the possible injuries of taxation, he might have found one less opposite to the fact in the known disease of aneurism, or relaxation of the coats of particular vessels, in a disproportionate accumulation of blood in them, which sometimes occurs when the circulation has been suddenly and violently changed, and causes helplessness, or even mortal stagnation, though the total quantity of blood remains the same in the system at large."

and not their own. Put these two together, and tell me what useful part of the constitutional monarchy of England remains. It is clear that the coronation oaths would be no better than Highgate oaths. For in his executive capacity the king *cannot* do any thing, against the doing of which the oaths bind him; it is *only* in his legislative character that he possesses a free agency capable of being bound. The nation meant to bind *that*."

PRINCIPLE AND EXPEDIENCY.

"*March*, 1834.—Oh, for a great man, but one really great man, who could feel the weight and the power of a principle, and unflinchingly put it into act! See how triumphant in debate and in action O'Connell is! Why? Because he asserts a broad principle and acts up to it, rests all his body on it, and has faith in it. Our ministers, true Whigs in that, have faith in nothing but expedients, *de die in diem*. Indeed, what principles of government can they have, who in the space of a month recanted a life of political opinions, and now dare to threaten this and that innovation at the huzza of a mob, or in pique at a parliamentary defeat?" —

REFORMED HOUSE OF COMMONS.

"*April* 9, 1833.—I have a deep though paradoxical conviction that most of the European nations are more or less on their way, unconsciously indeed, to pure monarchy, that is, to a government in which, under circumstances of complicated and subtle control, the reason of the people shall become efficient in the apparent will of the king. As it seems to me, the wise and good in every country will in all likelihood become every day more and more disgusted with the representative form of government, brutalised as it is and will be by the predominance of democracy in England, France, and Belgium. The statesmen of antiquity, we know, doubted the possibility of the effective and permanent combination of the three elementary forms of government, and perhaps they had more reason than we have been accustomed to think.

"You see how this house of commons has begun to verify all the ill prophecies that were made of it; low, vulgar, meddling with every thing, assuming universal competency, flattering every base passion, and sneering at every thing noble, refined, and truly national! The direct and personal despotism will come on by and by, after the multitude shall have been gratified with the spoil and the ruin of the old institutions of the land."

1794 *and* 1834.

"Thirty years ago and more, Pitt availed himself, with great political dexterity, of the apprehension which Burke and the conduct of some of the clubs in London had excited, and endeavoured to inspire into the nation a panic of property. Fox, instead of exposing the absurdity of this, by showing the real numbers and contemptible weakness of the disaffected, fell into Pitt's trap, and was mad enough to exaggerate even Pitt's surmises. The consequence was a very general apprehension throughout the country of an impending revolution, at a time when, I will venture to say, the people were more heart-whole than they had been for a hundred years previously. After I had traveled in Sicily and Italy, countries where there were real grounds for the fear, I became deeply impressed with the difference. Now, after a long continuance of high national glory and influence, when a revolution of a most searching and general character is actually at work, and the old institutions of the country are all awaiting their certain destruction or violent modification, the people at large are perfectly secure, sleeping or gamboling on the very brink of a volcano."

Such were the sentiments expressed but a few months ago on some of the most important points of our national condition and prospects, by a wise, learned, and patriotic man, who looked earnestly at the busy word from "his loophole of retreat," and whose opinions may not perhaps be the less worthy of consideration because they were not influenced by the crowded, and therefore, in too many cases, fanatical atmosphere of clubs and meetings. They agree very much with the general results of our own observation and reflection. Yet we cannot permit ourselves to give up for lost a cause in defence of which some of the best and greatest of our countrymen have once more undertaken to assume the responsibility of office. The symptoms of a re-action among that class of the community in whom the main and ultimate direction of public affairs is now *de facto* vested, may have been unconsciously exaggerated on this occasion, but that such a re-action has been for some time going on, and is still in progress, there can be no doubt in any sincere mind; and based, as it must necessarily have been in its origin, not on passion but reflection, that it should not continue more and more to develope itself, we can hardly prevail on ourselves to think at all probable. Had Mr. Coleridge been alive now, we are inclined to believe he could not have failed to admit that there had opened upon us some glimpses at least of a better destiny than he ventured to anticipate in March and April last,

"When death was with him dealing."

We ourselves happened to have several long conversations with him on these momentous subjects, not many months before his illness confined him to his chamber; and then, in the open air, walking by the sea-side, his tone of prediction was undoubtedly more hopeful than the reader of his sick-bed *talk* might be likely to conjecture. We think it right to record that he more than once expressed his belief that, under the circumstances in which the Reform bill had placed the country, there was much more likelihood of good than of evil results from extending still further the electoral suffrage. The great mischief, he always said, had been placing too much power in one particular class of the population, the class above and below which attachment to our old institutions in church and state is most prevalent.

BASSO-RELIEVO. The marble basso-relievo of the holy family by Michael Angelo, bequeathed by the late Sir George Beaumont to the royal academy, has recently been placed in the council-room of the academy, and forms its chief ornament, with its pedestal inscribed "Michael Angelo, 1505," surmounted by his bust. In this favourable situation the light falls from the left, showing the more finished parts to advantage, and causing those less perfect to become masses of shadow, having, at a distance, all the effect of a rich picture in *chiaroscuro*. This beautiful work of art was entirely lost till accident discovered it in 1822, at which time Sir George Beaumont was in Rome. His good taste instantly led him to become its possessor, and it was purchased for him by his friend Canova, the sculptor, for 1500*l*. It soon became evident that it would have produced a much larger sum had it been more generally known, as many of the most tasteful of the English nobility were at that time in Rome.

RISE OF THE ROTHESCHILDES.

On the approach of the republican army to the territories of the Prince of Hesse Cassel, in the early part of the French Revolutionary wars, his serene highness, like many other petty Princes of Germany, was compelled to flee. In his passage through the imperial city of Frankfort on the Maine, he paid a hasty visit to one Moses Rotheschilde, a Jewish banker of limited means, but of good repute both for integrity and ability in the management of his business. The prince's purpose in visiting Moses was to request him to take charge of a large sum in money and jewels; amounting in value to several millions of *thalers;* a coin equal to our late three shilling pieces. The Jew, at first, point blank refused so dangerous a charge; but, upon being earnestly pressed to take it, at the prince's own sole risk; nay, that even a receipt should not be required, he, at length, consented.

The money and jewels were speedily, but privately, conveyed from the prince's treasury to the Jew's residence; and, just as the advanced *corps* of the French army had entered through the gates of Frankfort, Moses had succeeded in burying it in a corner of his garden. He, of course, received a visit from the republicans; but, true to his trust, he hit upon the following means of saving the treasure of the fugitive prince, who had placed such implicit confidence in his honour. He did not attempt to conceal any of his own property; (the whole of his cash and stock consisting of only *forty-two thousand thalers*, or six thousand pounds sterling;) but, after the necessary remonstrances and grumblings with his unwelcome visiters, and a threat or two that he should report them to the general-in-chief, from whom he had no doubt of obtaining redress, he suffered them to carry it all off.

As soon as the republicans had evacuated the city, Moses Rotheschilde resumed his business as a banker and money-changer; at first, indeed, in an humble way, but daily increasing and extending it by the aid of the Prince of Hesse Cassel's money. In the course of a comparatively short space of time, he was considered the most stable and opulent banker in all Germany.

In the year 1802, the prince, returning to his dominions, visited Frankfort in his route. He was almost afraid to call on his Jewish banker; apprehending that, if the French had left any thing, the honesty of Moses had not been proof against so strong a temptation as he had been compelled from dire necessity to put in his way.

On being introduced into Rotheschilde's *sanctum*, he, in a tone of despairing carelessness, said, "I have called on you, Moses, as a matter of course; but I fear the result. Did the rascals take all?"

"Not a *thaler;*" replied the Jew, gravely.

"What say you?" returned his highness. "Not a *thaler!* Why, I was informed that the *Sans-culottes* had emptied all your coffers and made you a beggar:—I even read so in the gazettes."

"Why, so they did; may it please your serene highness," replied Moses: "but I was too cunning for them. By letting them take my own little stock, I saved your great one. I knew that as I was reputed wealthy, although by no means so, if I should remove any of my own gold and silver from their appropriate bags and coffers, the robbers would be sure to search for it; and, in doing so, would not forget to dig in the garden; it is wonderful what a keen scent these fellows have got! they actually poured buckets of water over some of my neighbour's kitchen and cellar floors, in order to discover, by the rapid sinking of the fluid, whether the tiles and earth had been recently dug up! Well, as I was saying, I buried your treasure in the garden; and it remained untouched until the robbers left Frankfort, to go in search of plunder elsewhere. Now then, to the point: as the *Sans-culottes* left me not a *kreutzer* to carry on my business; as several good opportunities offered of making a very handsome profit; and as I thought it a pity that so much good money should be idle, whilst the merchants were both ready and willing to give large interest; the temptation of converting your highness's *florins* to present use haunted my thoughts by day and my dreams by night. Not to detain your highness with a long story, I dug up the treasure, and deposited your jewels in this strong box; from which they have never since been moved: I employed your gold and silver in my business; my speculations were profitable; and I am now able to restore your deposit, with five per cent. interest since the day on which you left it under my care."

"I thank you heartily, my good friend," said his highness, "for the great care you have taken and the sacrifices you have made. As to the *interest* of five per cent, let that replace the sum which the French took from you; I beg you will add to it whatever other profits you may have made. As a reward for your singular honesty, I shall still leave my cash in your hands for twenty years longer, at the low rate of two per cent interest per annum, the same being more as an acknowledgment of the deposit, in case of the death of either of us, than with a view of making a profit by you. I trust that this will enable you to use my *florins* with advantage in any way which may appear most beneficial to your own interest."

The prince and his banker parted, well satisfied with each other. Nor did the gratitude and good will of his serene highness stop there; on every occasion in which he could serve his interest he did so, by procuring for him, from the princes of Germany, many facilities both for international and foreign negotiation. At the Congress of Sovereigns, which met at Vienna in 1814, he did not fail to represent the fidelity of Moses Rotheschilde, and procured for him, thereby, from the Emperors of Russia, Austria, and other European potentates, as well as from the French, English, and other ministers, promises, that in case of loans being required by their respective governments, the "honest Jew of Frankfort" should have the preference in their negotiation.

Nor were these promises "more honoured in the *breach* than in the *observance*," as those of princes and courtiers are proverbially said to be. A loan of 200 millions of francs being required by the French government to pay the Allied Powers for

the expenses they had been put to, in the restoration of the Bourbons, one of old Rotheschilde's sons, then residing at Paris, was intrusted with its management. The same was accordingly taken at 67 per cent, and sold to the public in a very few days at 93! thereby yielding an immense profit to the contractor. Other loans followed with various powers, all of which turned out equal to the most sanguine expectations of this lucky family.

Our *English* Fortunatus, whose reputation for wealth and sagacity is such, that, by a discreet use of his *wishing cap*, he can at will change the destinies of the nations of Europe, or play at battledore and shuttlecock with their crowns and sceptres, was, during the war with France, a small cotton manufacturer in Manchester. Leaving that town for the capital, and assisted by his father and brothers, Solomon Moses Rotheschilde commenced business as an English and foreign bill and stock broker. By his immense resources and connections, he was soon enabled to carry all before him; but the bargains which he was enabled to make by his early information of the escape of the Emperor Napoleon from the Island of Elba, that is, twenty-four hours before the British ministry had received intelligence of the event, placed him at once at the top of the tree as a *negociant* and loan contractor.

Mr. Rotheschilde's manners and character have often been described: he is immensely rich, and is well entitled to the appellation of *millionaire*, being reputed to be in the absolute personal and *undivided* possession of *seven or eight millions sterling!* His brothers, likewise,—viz: Baron Andreas Rotheschilde, the present great banker of Frankfort, and Baron Rotheschilde of Paris, are in the possession of immense wealth; so that it is no wonder that kings and their ministers are proud of their acquaintance, seeing that, independently of occasional loans and accommodations, they are well aware that no throne nor government can stand long which has the misfortune to have the wealth and influence of the *three Rotheschildes* arrayed against them.

Our Rotheschilde is reputed to be a very charitable man; and those who know him intimately, affirm that he well deserves that character, both in regard to Jews and Gentiles. Nor is Mrs. Rotheschilde less so; many, though unostentatious, acts of kindness to the poor, being well known respecting her. Mr. Rotheschilde's manner of evincing kind feelings towards Solomon Herchel, the grand rabbin of Duke's Place, has something in it which is both singular and whimsical; when any good speculation is afloat, Mr. Rotheschilde deposits, on his account, a certain sum proportionate to *his own* risk, and whatever *per centage* or profits accrues therefrom, is carried by him to the rabbin, to whom he gives a full, true, and particular account, even to the utmost fraction! The *millionaire*, on such occasions, invariably dines with the Levite; and the day is usually passed by the two friends in innocent hilarity and pleasing conversation.

From the London Quarterly Review.

Wanderings in New South Wales, Batavia, Pedir Coast, Singapore, and China; being the Journal of a Naturalist during 1832, 1833, and 1834. By George Bennett, Esq., F.L.S., Fellow of the Royal College of Surgeons, &c. London. 2 vols. 8vo. 1834.

If our readers are as weary of new novels as we confess ourselves to be, they will thank us for pointing out a book of travels, which carries one rapidly and pleasantly over a wide diversity of sea and land; presents many objects of natural history, and traits of social peculiarity, well calculated to excite and gratify our curiosity; and is distinguished by a merit now exceedingly rare among writers of this once rough-spun class, namely, freedom from the slang and cant of sentiment. Mr. Bennett sometimes, no doubt, treats of serious subjects in too light a vein; but we acknowledge that, as his offences in this way are not numerous, we are willing to overlook them on account of the satisfaction which results from the absence of pseudo-poetical raptures about nothing. Most recent travellers seem to have been bit with the ambition of rivaling those overgrown babies, male and female, honourable and right honourable, who record the ecstacies of "what they call their minds" in the gilded pages of the annuals. We do not pretend to class Mr. Bennett, on the whole, with such authors as Captain Basil Hall and Sir Francis Head; but he has, in common with them, what must be felt as among their chief excellences—a manly temperament, and a thorough scorn of puerile rhetoric.

We are told little or nothing of Mr. Bennett's own condition or personal objects—and in this omission we acknowledge another wholesome deviation from the prevalent fashion. We infer, however, that he has been employed for some years as a surgeon in the merchant service; and are hopeful that his literary adventure may stimulate many of the well-educated gentlemen who in these piping days of peace are content with such employment, to improve the opportunities which their mode of life affords for the extension of natural science in almost all its departments. Humbly as their position may be thought of, we are of opinion that it is in their own power, by so doing, to elevate it very effectually in general estimation. The number of persons destined for this branch of the medical profession, who can afford to cultivate and expand their minds by extensive travel at their own charges, is extremely limited. A few voyages in a merchant ship afford a very good succedaneum, and may serve to fill up not only pleasantly, but in every sense of the word profitably, those years which hang the heaviest on the spirits, as well as the purse, of the young practitioner, whether in town or village. No professional man, it must be remembered, is so effectually fettered to the spot, after he has once settled himself in life, as he who labours in this honourable walk. The lawyer has his long vacation, and usually contrives, in these days of steam-boating, to refresh himself with an annual excursion, either to another of his majesty's kingdoms, or to some interesting part of the continent.

But a week after he has been bawling himself hoarse in the noisome atmosphere of Westminster Hall, he may be detected in eating *pâtés de chamois* on the Simplon, or dancing reels in the Hebrides, or gliding in a *carriole* amidst the gloom of a Norwegian forest; nay, by skilful management, he may re-appear at Michaelmas with a budget of good stories from Moscow or Constantinople—or even bring back with him from Jerusalem a legitimate claim to the style and title of *Hadgi*. Even the parish clergyman may occasionally command a furlough, and enlarge and strengthen his attachment to his own country and calling by a few months' perambulation of less favoured regions. But the country doctor is a complete fixture; nay, it is considered as the most hazardous thing in the world, even for the first rate physician or surgeon of London, to absent himself for a fortnight on end, even at the dullest season of the year, from the habitual scene of his exertions. We believe a Halford or a Brodie would no more dream of spending an August at Töplitz or Baden, than a Pemberton or a Follett of passing a winter at Washington or St. Petersburgh. In short, patients are apt to regard and resent it as a positive injury, when they are compelled, by the absence of a first confidant, to make their delicate discoveries to a second. On every account, then, the young Æsculapian, if he has any ambition to "survey mankind with extensive view," ought to make *carpe diem* his motto.

Mr. Bennett's title page has this defect—that it does not prepare us for finding a considerable portion of his book occupied with observations made neither in New South Wales, nor Batavia, nor China, but on ship-board, while far enough from any land whatever. This part of the work is, however, about the most interesting; and no wonder—for here he has had time and opportunity to test his first-sight impressions by subsequent remark and experiment, much more largely than with respect to any of the announced scenes of his "Wanderings." The mass of facts which he has brought together concerning the oceanic birds, in particular, appears to be highly curious. We shall not, however, in this place, consider critically what additions he has made to the materials of science strictly so called—we mean as to the addition of species, if not of genera, to the zoological system; but afford the general reader some specimens of the style in which he describes those incidents of his life at sea which he has turned to solid account in the technical sections of his Appendix.

We begin with a paragraph or two on that well known phenomenon which has so long perplexed and divided our philosophers,—the peculiar phosphoric light given out by the ocean, more especially and more brilliantly in tropical regions, during the absence of the sun's rays. Mr. Bennett had one splendid opportunity of witnessing this effect when traversing the bay of Manilla. He thus writes:—

"The wake of the vessel is one broad sheet of phosphoric matter, so brilliant as to cast a dull, pale light over the after-part of the ship; the foaming surges, as they gracefully curl on each side of the vessel's prow, are similar to rolling masses of liquid phosphorus; whilst in the distance, even to the horizon, it seems an ocean of fire—and the distant waves, breaking, give out a light of inconceivable beauty."—vol. i. p. 36.

"It must not be for a moment conceived that the light described as like to a sea of 'liquid fire,' is of the same character as the flashes produced by the volcano, or by lightning, or meteors. No: it is the light of phosphorus, as the matter truly is, pale, dull, approaching to a white or very pale yellow, casting a melancholy light on objects around, only emitting flashes by collision. To read by it is possible, but not agreeable; and, on an attempt being made, it is almost always found that the eyes will not endure the peculiar light for any length of time, as headaches and sickness are occasioned by it."—p. 38.

Having stated his concurrence in the opinion, that this brilliant appearance is mainly occasioned by shoals of the molluscous and crustaceous tribes, but that it may often be accounted for merely by the *débris* of dead animal matter with which sea-water is loaded—our author gives us the result of a practical experiment of his own on the 8th of June, 1832, after a large shoal of fish had been observed:—

"Late at night the mate of the watch came and called me to witness a very unusual appearance in the water, which he, on first seeing, considered to be breakers. On arriving upon the deck, this was found to be a very broad and extensive sheet of phosphorescence, extending in a direction from east to west as far as the eye could reach: the luminosity was confined to the range of animals in this shoal—there was no similar light in any other direction. I cast the towing-net over the stern of the ship, as we approached nearer the luminous streak, to ascertain the cause of this extraordinary and so limited phenomenon. The ship soon cleaved through the brilliant mass, from which, by the disturbance, strong flashes of light were emitted; and the shoal (judging from the time the vessel took in passing through the mass) may have been a mile in breadth: the passage of the vessel through them increased the light around to a far stronger degree, illuminating the ship. On taking in the towing net, it was found half filled with *pyrosoma atlanticum*, which shone with a beautiful pale greenish light—and there were also a few small fish in the net at the same time: after the mass had been passed through, the light was still seen astern until it became invisible in the distance, and the whole of the ocean then became hidden in darkness as before this took place. The scene was as novel as it was beautiful and interesting, more so from having ascertained, by capturing the luminous animals, the cause of the phenomenon."—vol. i. p. 39, 40.

Of the length to which albicores, bonitos, sharks, and dolphins will follow a ship, Mr. Bennett gives us many striking instances. One albicore having been wounded on the back by some sharp instrument, leaving a noticeable scar, first caught his attention on this voyage, 3° north latitude, and he continued to recognise it almost daily as far as latitude 11° south—a distance of eight hundred and fifty miles. The length of aerial voyages accomplished by the huge albatross and other oceanic birds is even more extraordinary. In reviewing Earle's residence at Tristan d'Acunha, a few numbers back, we extracted some curious details as to the habits of the albatross when on shore; but that writer said nothing of the real life on the wing. Mr. Bennett says:—

"It is pleasing to observe this superb bird sailing in the air in graceful and elegant movements, seemingly

excited by some invisible power—for there is rarely any movement of the wings seen, after the first and frequent impulses given, when the creature elevates itself in the air—rising and falling as if some concealed power guided its various motions, without any muscular exertion of its own—and then descending and sweeping the air close to the stern of the ship, with an independence of manner, as if it were 'monarch of all it surveyed.' It is from the very little muscular exertion used by these birds that they are capable of sustaining such long flights without repose."—p. 45.

The largest albatross shot by Mr. Bennett during this voyage measured fourteen feet, but we have seen distinct accounts of specimens reaching across the wings to full twenty feet. He proceeds to say:—

"When seizing an object floating on the water, they gradually descend with expanded or upraised wings, or sometimes alight, and float like a duck on the water while devouring their food; then they skim the ocean with expanded wings, as they run along for some distance, until they again soar in mid-air, and recommence their erratic flights. It is interesting to view them, during boisterous weather, flying with, and even against, the wind, seeming the 'gayest of the gay' in the midst of howling winds and foaming waves.

"To watch the flight of these birds used to afford me much amusement, commencing with the difficulty experienced by them in elevating themselves from the water. To effect this object, they spread their long pinions to the utmost, giving them repeated impulses as they run along the surface of the water. Having, by these exertions, raised themselves above the wave, they ascend and descend, and cleave the atmosphere in various directions, without any apparent muscular exertion. How then, it may be asked, do these birds execute such movements? The whole surface of the body in this, as well as, I believe, most, if not all, the oceanic tribes, is covered with numerous air-cells, capable of a voluntary inflation or diminution, by means of a beautiful muscular apparatus. By this power, the birds can raise or depress themselves at will; and the tail, and great length of the wing, enable them to steer in any direction. Indeed, without some provision of this kind to save muscular exertion, it would be impossible for these birds to undergo such long flights without repose as they have been known to do; for the muscles appertaining to the organs of flight, although large in these birds, are evidently inadequate in power to the long distances they have been known to fly, and the immense length of time they remain on the wing, with scarcely a moment's cessation.

"When several species of the albatross, as well as petrels and other oceanic birds, are about the ship at the same time, no combats have been seen to take place between them; but on the death of one, the others soon fall upon and devour it."—vol. i. pp. 46, 47.

Another great source of amusement was shark-fishing—of which sport Captain Hall's enthusiastic details must be in every reader's recollection:—

"The capture of one of these voracious animals often beguiles a tedious hour during a long voyage. Its struggles, when brought on deck, are very great, but a few severe blows on the nose soon disable it from further exertion. When seizing any object the animal turns on the side, not (as is generally supposed) on the back. The shark, judging by an European palate, is not good eating: the fins and tail are very glutinous, and are the portions most relished by the seamen; when dried, they form an article of commerce to China, where they are used in soups. . . . I have seen several sharks and bonitos about the ship at the same time, but I never observed the former degrees to molest the latter.

"Attending the shark is seen that beautiful little fish, the *gaste rosteus ductor*, or *pilot-fish*; which first approaching the bait returns as if to give notice, when, immediately after, the shark approaches and seizes it. It is a curious circumstance that this elegant little fish is seen only in attendance upon the shark. After the shark is hooked, the pilot-fish still swim about, and for some time after he has been hauled on deck; they then swim very near the surface of the water, and at that time I have seen them taken by a basket from the chains of the ship. When the shark has been hooked and afterwards escapes, he generally returns, and renews the attack with increased ferocity, irritated perhaps by the wound he has received."—vol. ii. p. 266.

The shark, Mr. Bennett says elsewhere, is more wary of taking the bait when unaccompanied by the pilot-fish; he will then come close, and withdraw again, several times before he ventures to seize it; but when the little pilot is in company, *it* hazards the first advances to the rancid beef or bacon, reconnoitres carefully, and at length reports the result at head-quarters, upon which the huge monster is seen at once to plunge onward, and makes his snap at the bait without hesitation.

"That which is termed muscular irritability, and which is met with in all cold-blooded animals, is well exemplified in the shark, which perhaps possesses it to a greater degree than other kinds of fish. I have seen a shark transfixed with a harpoon after it had been hooked, so as to cause the viscera to protrude; it was hoisted on deck, when, after a quarter of an hour had elapsed, the lower part was separated from the upper—the detached lower portion for a long time displayed great powers of vitality;—when the head and upper portion were afterwards thrown into the water, the pectoral fins were moved as in the action of swimming. How long this irritability continued I cannot say, (but from other instances that I had seen I should consider for a long period,) as it soon went astern of the ship. I have frequently seen the animal hauled on deck, the whole of the viscera extracted, and the body when thrown overboard, swim for some distance in this mutilated state. Again, a shark has been hung up with the abdomen ripped open, the whole of the viscera extracted, and the head detached; yet symptoms of vitality, or rather muscular irritability, remained for three hours from the time of its removal from the water; and this frequently occasions the spectators to consider that the animal is in a state of suffering. It is only in the cold-blooded animals that we meet with this to such an extent; in the warm-blooded animals it occurs, but in a very slight degree."—*Ibid*, pp. 270—272.

Blumenbach, in his Manual of Natural History, says,—"The extraordinary strength of the reproductive power in several amphibia, and the astonishing facility with which the process is carried on, depend, if I mistake not, on the great magnitude of their nerves and the diminutive proportion of their brain. The former parts are, in consequence, less dependent on the latter: hence *the whole machine* has less powers of motion, and displays less sympathy; the mode of existence is more simple, and approaches more nearly to that of the vegetable world than in the warm-blooded classes; but on the contrary, *the parts* possess a greater individual independent vitality. In consequence of this latter endow-

But . . . operate on one part, or on . . . immediately affect the whole . . . y, as in warm-blooded animals; . . . s that we are enabled to explain . . . enacity of life which is displayed . . . s circumstances in this class—as, . . . e, how frogs still continue to jump . . . r the heart has been torn out, and tur- . . . e lived for months after the removal of the whole brain from the cranium. The long-continued power of motion in parts which have been cut off from the body, as in the tail of the water-newt and blind worm, is to be explained upon the same principles."

The length of time during which this irritability exists in snakes has given rise to the opinion of the vulgar, that "if a snake is killed in the morning, it will not not die before sunset." Among numerous instances of such irritability even in the warm-blooded class, the human heart, for some little time after death has taken place, may be stimulated to perform its natural action by being punctured; and in a limb after amputation, the muscles are excited to contract by the plunge of a scalpel. Of the effects of galvanism we need say nothing.

Among other marine objects discussed in this chapter, we find "the Guinea-ship" of our old navigators—called, in the dialect of modern sailors, the "Portuguese man-of-war"—that beautiful molluscous animal the *physalia*, of which Lamarck enumerates four species, all inhabiting the tropical seas, but some of them seen occasionally in high latitudes during the summer months. They are, of course, more readily discerned in calm weather than in strong breezes, and have then a strong resemblance to a miniature vessel resting on the surface of the waters—whence their popular names, ancient and modern. The vulgar notion that the animal has the power of voluntarily collapsing its bladder-sail, and sinking to the depths of the ocean, when danger approaches, appears to have been for ever disposed of by our author's observations. He found several thrown on the shore of New South Wales in tempestuous weather, the bladder portion still remaining inflated; and while at sea he frequently landed them on deck from his hand-net in the same condition. The inflated membrane is evidently meant merely to keep the creature buoyant on the surface, while its long tentacula are extended below in search of prey. The bladder is of a light azure hue, streaked with delicate sea-green, and the most brilliant crimson—nothing can be more beautiful; but the long purple appendages below are dangerous instruments. They twine themselves instantly round their natural prey, or the hand of the rash captor, and inflict pungent and intolerable pain by means of their acrid exudation. Mr. Bennett appears to have subjected himself to a day of great agony by one of these experiments. For what purpose a similar property has been affixed to certain vegetable tribes is one of nature's mysteries.

On the "flying-fish" Mr. Bennet bestows several interesting pages; and he seems to have successfully combated the notion of Cuvier, that "the animal beats the air during its leap, alternately expanding and closing its pectoral fins." Our author says, "the structure of a fin is not that of a wing: the pectoral organs of the flying-fish are simply enlarged fins, capable of supporting, perhaps, but not of propelling, the animal."

"In fish, the organ of motion for propelling them through the water is the tail, and the fins direct their course; in birds, on the contrary, the wings are the organs of motion, and the tail the rudder. The only use of the extended pectoral fins in the fish is for the purpose of supporting the animal in the air, like a parachute, after it has leaped from the water by *some power* which is possessed even by the whale. From the structure of the fin, I cannot consider it at all calculated for repeated percussions *out of the water;* while in that fluid it continues its natural action uninjured; but it soon dries when brought into contact with the air, and the delicacy of the membrane between the rays would very readily become injured, were the organ similarly exerted in that medium. The greatest length of time that I have seen these *volatile* fish on the *fin* has been thirty seconds by the watch. . . . Their usual height of flight is from two to three feet; but I have known them come on board at a height of fourteen feet; and they have been well ascertained to come into the channels of a line-of-battle ship, *i. e.* as high as twenty feet and upwards. But it must not be supposed that they have the power of elevating themselves in the air, after having left their native element: on watching them I have often seen them fall much below the elevation at which they first rose from the water, but never in any one instance could I observe them raise themselves above that height: I therefore regard the elevation they take to depend on the power of the first spring or leap they make on leaving their native element."—vol. ii. p. 31.

The flight of these animals has often been spoken of as if it resembled that of birds; but our author says,—

"I cannot perceive any comparison—one being an elegant, fearless, and independent motion—whilst that of the fish is hurried, stiff, and awkward. Its repeated flights are merely another term for leaps."

Mr. Bennett laughs at the common talk about the severe *persecution* to which these poor things are exposed: he says they are no worse off than any other branch of the animated creation; but surely he himself paints their situation, when he saw a great shoal of them near the Cape Verd group, in December, 1832, as rather more distressing than is usual with either birds or fishes—pursued through the waves by a host of bonitos, and whenever they rose into air, pounced on by a flock of gannets and boobies. The sight of this double *chasse*, says the philosophical surgeon, "afforded much amusement and interest to those who beheld it."—(p. 35.)

But we must now get ashore, and attend Mr. Bennett in some of those "Wanderings in New South Wales" which occupy more than half of his book. He seems to have made good use of the time which his captain's stay at Sydney enabled him to bestow according to his own inclinations—in short, to have performed several long and laborious journeys to different points of the colony; exploring, to the best of his ability, the manners of all classes of its inhabitants, rational and irrational. On colonial politics he does not say much; and here we shall follow his

example. It is, however, his well-considered opinion, after all that he saw and heard, that convicts should no longer be sent to New South Wales otherwise than "for the purpose of being employed on the public works," and that free emigration ought to be strenuously encouraged. We are much inclined to believe that the time is come when the society of this colony should be delivered, if possible, from further influx of moral pollution, and a new penal settlement established on some other part of that vast continent. The population of the existing colony is now a large one; and it is the duty of government to give it the best chance of entirely shaking off the lamentable taint of its original formation, which it can scarcely be expected to do so long as a constant succession of fresh blackguardism is infused into the system. Who can doubt that this is a country which *must* make a great figure in the world, either for good or for evil, before three generations more shall have passed away? or contemplate without alarm the existence of a powerful nation born and reared amidst such a moral atmosphere as at present shocks every new visitant of Sydney, and is but too apt to corrupt and harden the whole being of any one who protracts his residence there? We believe that, if it were consistent with our feelings of duty to lay before our readers a detailed picture of real life, as it exists even among the upper classes of society in that colony, of the domestic crimes and tragedies which have been brought to light there even within the last few years; it would be readily allowed that no fiction could surpass the horrible truth of such a statement. The exceptions are, we well know, many; and we consider them as among the most honourable exceptions in the world; but the prevalent tone of that society in which incidents that we might particularise *could* have taken place, must be something quite beyond the reach of an unsophisticated English imagination.

But to waive these grave matters; the common stories about the extreme severity of labour in the penal *gangs* are considered by Mr. Bennett as gross and wilful exaggeration. He saw a farm-servant, who had for some misdeed been spending six weeks in one of the "iron gangs," on the day of his return to his usual employer's establishment. His fellow servants immediately remarked how much he had improved in appearance since he left them; and on being weighed, it turned out that the man had gained twenty pounds in the course of his unhappy six weeks.

What sort of convict makes the best shepherd? We venture to say no man could have guessed the fact, it is *the London pick-pocket!* He is the laziest of animals, and in that fine climate the shepherd's is the most indolent existence possible.

The surgeon gives us many painful and disgusting details about the aboriginal savages of this region, but has not, we think, added much to the stock of valuable information. He evidently contemplates their utter disappearance at no very distant date; and, in truth, we see no reason to differ from him on this head. These scarcely human tribes must go, almost as surely as the wild animals, their sport and prey. All attempts at civilisation have utterly and completely failed; they appear, indeed, to be very many degrees below even the worst of the New Zealanders; we mean morally and intellectually, for, as to physical structure, the New Zealanders are a very handsome race, these among the most hideous of all the living caricatures of humanity. They have, however, like all degraded human beings, their share of cunning; and we could not but smile at Mr. Bennett's account of his meeting with one of them, who took his black coat for an indication of the clerical profession, and immediately advanced a claim for a shilling, on the ground that government gives an annual grant of five hundred pounds for the promotion of Christianity in this quarter, of which, by conversing for a few minutes with the stranger "white feller" in the said black vestment, this shrewd "black feller" considered himself to have fairly earned a portion. Mr. Bennett explained the gentleman's mistake, and was curious to hear what his notion of a clergyman might really amount to. The answer brought out his pregnant definition:—

"He white feller belonging to Sunday, get up top o' waddy, pile long corrobora all about debbil, debbil, and wear shirt over trowsel."

He retails elsewhere an old but not a bad story of General Macquarie's attempt to induce the natives to cultivate the ground, by a distribution of seeds and implements:—

"Among the packets of seed sent for distribution were some which contained fish-hooks: these, together with the seeds, were given by the governor to the sable monarch, King Bungaree. Some time after the governor enquired of him whether the seeds had yet come up? 'Oh, berry well, berry well,' exclaimed Bungaree, 'all make come up berry well, except dem fish-hooks; dem no come up yet.'"—p. 338.

Wherever men can be compared with women, we are pretty sure to find the moral advantage with the latter; and here, it seems, is no exception to the rule. Mr. Bennett has one short story, which we shall allow to speak for itself—dismissing some flourishes with which, unlike himself, he introduces it:—

"A female of one of the aboriginal tribes in the Murrumbidgee country cohabited with a convict named Tallboy, who, becoming a bush-ranger, was for a long time sought after by the police for the many atrocities he had committed, but always eluded pursuit. This female concealed him with true native ingenuity, and baffled his pursuers—she would fish and hunt for him, whilst he remained secluded in the retreat she chose. She often visited the stock-keepers' huts at the different stations, and whatever provisions she received from them were immediately conveyed to the unworthy object of her devoted attachment. Although many knew she was privy to his concealment, yet it was found impossible to elude her vigilance; neither promises of rewards—enough to excite the cupidity of any individual, but one in whom a higher feeling was paramount—nor threats, could induce her to acknowledge that she was acquainted with his place of concealment. The brute, however, manifested no kindred affection, but would frequently beat and ill-use her. Whilst she administered to him the refreshing cup of kindness, he bestowed on her misery in return. Shortly after he had, in one instance, given way to his natural brutish disposition, by ill-treating the being who

had done so much for him—he was on the verge of discovery—indeed had himself given up all hopes of escape: when she again saved him, by engaging to point out to the police his place of retreat, and led them away, under that pretence, in a contrary direction, affording her paramour time and opportunity to seek out a safer asylum. When she arrived with the police at the spot where she had informed them he last was, he of course was not there, and a strict search in the vicinity was equally unsuccessful: she then left them to continue their pursuit, pretending to know nothing further respecting him. At last he was captured by venturing out too boldly during her absence, was tried, condemned, and expiated his offences on the scaffold at Sydney. She wished to follow him, on hearing he was a prisoner, but that was impossible; so, reclaimed by her tribe, she was obliged to become an unwilling wife of one of the blacks.

"This unfortunate female was ordered by her husband, whose word is law, to follow him at a time when she was rendered incapable by illness: on her hesitating, he, with savage barbarity, struck her with his tomahawk over the head and legs so severely, that she fainted from loss of blood. She was found lying on the ground, and taken to the house of a settler residing on the banks of the Murrumbidgee river, and every kindness and attention shown her; but after lingering, suffering severe mental and bodily anguish, she expired."

The *dingos*, or native dogs of New South Wales, are the wolves of the colony—they breed in the holes of rocks, attain great size and strength, commit grievous ravages among the herds and flocks of the settlers, and are hunted by whole packs of European dogs. The cunning of these animals, and the agony they will endure without any external indication of suffering, are favourite subjects with our author, and we must spare room for one or two of his anecdotes:—

"One had been beaten so severely, that it was supposed all the bones were broken, and it was left for dead. After the person had walked some distance, upon accidentally looking back, his surprise was much excited by seeing master dingo rise, shake himself, and march into the bush, evading all pursuit. One, supposed dead, was brought into a hut, for the purpose of undergoing 'decortication;' at the commencement of the skinning process upon the face, the only perceptible movement was a slight quivering of the lips, which was regarded at the time as merely muscular irritability: the man, after skinning a very small portion, left the hut to sharpen his knife, and returning found the animal sitting up, with the flayed integument hanging over one side of the face.

"Another instance was that of a settler, who, returning from a sporting expedition, with six kangaroo dogs, they met a dingo, which was attacked by the dogs, and worried to such a degree, that finding matters becoming serious, and that the worst of the sport came to his share, the cunning dingo pretended to be dead. Thinking he had departed the way of all dogs, they gave him a parting shake and left him. Unfortunately for the poor dingo, he was of an impatient disposition, and was consequently premature in his resurrection, for before the settler and his dogs had gone any distance, he was seen to rise and skulk away, but, on account of the rough treatment he had received, at a slow pace; the dogs soon re-attacked him, when he was handled in a manner that must have eventually prevented any resuscitation taking place a second time.

"These instances may account for the fact why skeletons of the animals are not found in places where they have been left supposed dead. I have more than once been taken where one had been *killed*, as I desired to have a skeleton, but no remains of the beast were visible; and crows and hawks do not devour animals, bones and all, in this country.

"The Australian dog never barks; indeed, it is remarked by Mr. Gardiner, in a work entitled The Music of Nature, 'that dogs in a state of nature never bark; they simply whine, howl, and growl: this explosive noise is only found among those which are domesticated.' Sonnini speaks of the shepherds' dogs in the wilds of Egypt as not having this faculty: and Columbus found the dogs which he had previously carried to America to have lost their propensity to barking. The barking of a dog is an acquired faculty—an effort to speak, which he derives from his associating with man." vol. i. p. 235.

In this, of course, as in every book about New South Wales, the kangaroo claims right to fill a considerable space. The chase, by no means a very safe amusement, of the "old man kangaroo," as the blacks call the full-grown male, seems to have found great favour with Mr. Bennett, and he sketches some scenes which, as he himself says, might have deserved to be immortalised by the pencil of a Landseer. We content ourselves, however, with one or two of his lighter pages. An Irishman of his acquaintance had a favourite dog, who rashly pursued a large kangaroo into a water-pool, and was ducked almost dead for his pains:—

"Pat, in a great rage at the threatened death of his dog, would have shot the kangaroo, but his gun missed fire; he then entered the water-hole 'to bate the brains of the baste out' with the but-end of the gun; but the 'baste,' not fancying to be thus treated, turned from the soused and now senseless dog to his more formidable adversary, and a struggle took place, in which the man was often thrust under water, and victory was promising much in favour of the kangaroo, when some of Pat's companions fortunately coming to his assistance, attacked and killed the animal with clubs, and rescued him in almost an insensible condition. I asked him how he felt when the beast hugged him; he replied, 'Not very comfortable—he tumbled me about famously; they are mighty strong bastes, and don't seem to like being meddled with.' Indeed, many persons when alone are afraid to face a large 'old man' kangaroo. A man, recently arrived in the colony, was sent after cattle; he returned in great terror, having come suddenly on the ranges upon a kangaroo, as 'large,' he said, 'as a horse.' I asked him the colour of the animal; he replied, that he did not *recollect* it; he only wished to get away from the beast, and, running down the hill, was glad when he saw the animal *warn't* following him. It is probable, when he went down one part of the range, the animal, equally, if not more frightened, descended another."—vol. i. pp 286.

"The part of the kangaroo most esteemed for eating is the loins; but the tail, which abounds in gelatine, furnishes an excellent and nourishing soup: the hind legs are coarse, and usually fall to the share of the dogs. The natives (if they can be said to have a choice) give a preference to the head. The flesh of a full-grown animal may be compared to lean beef, and that of the young to veal: they are destitute of fat, if we except a little occasionally between the muscles and integuments of the tail. The colonial dish, called a *steamer*, consists of the flesh of this animal dressed with slices of ham. The liver, when cooked, is crisp and dry, and is considered a substitute for bread."—*Ibid.* p. 289.

The passion of the aborigines for hunting kangaroos, opossums, and so forth, appears to be inextinguishable, but to be much more intimately

connected with the cravings of the stomach than with any of the nobler stimulants of the chase. The moment the kangaroo is killed, the struggle begins, not, as in an English field, for the brush, as a trophy, but for a limb, to be forthwith broiled (with the hair on) and devoured. Nay, in many cases, they do not even wait for any application of fire, but, tearing the animal joint from joint, knock off the end of a bone *instanter*, and begin sucking the marrow before it has time to get cold. No abundance of beef and potatoes seems to damp in the smallest degree these ancestral appetites; and no new artificial habits strike deep enough to interfere with their immediate indulgence when opportunity is afforded. A friend of our author observed a native woman, well clothed, and of really decent appearance, engaged in some domestic offices in the plentiful kitchen of a farmer on the Murrumbidgee. He expressed his satisfaction at what he saw, but was assured that, though she had just risen from a capital dinner, if she discovered an opossum on the top of a tree, she would instantly strip herself to the skin, and mount seventy or eighty feet into the air, rather than lose the chance of securing such a *bonne-bouche*.

We find it still more difficult to sympathise with these people in that rage for the flavour of pounded moths, which collects whole tribes of them as often as the proper season comes around, upon certain masses of granite, not far from the Been Station on the Tumat. Captain Cook was astonished, when at Thirsty Sound, with the profusion of butterflies—"the air absolutely crowded with millions of myriads of them for three or four acres together;" and Captain King, in his Survey of Australia (vol. i. p. 195), describes much the same scene at Cape Cleveland: "the stem," he says, "of every grass tree (*xanthorrhea*), which plant grows abundantly on the hills, was covered with butterflies, and on their taking wing, the air appeared as it were in perfect motion." We presume the two captains were not scientific enough to distinguish a butterfly from a moth, and that they both refer to the same species of insect, called by the natives *bugong*, of the grand annual capture and cookery whereof the present author had an opportunity to be an eye-witness.

"The bugong moths collect on the surfaces and also in the crevices of the masses of granite in incredible quantities; to procure them with greater facility, the natives make smothered fires underneath those rocks, and suffocate them with smoke, at the same time sweeping them off frequently in bushels-full at a time. After they have collected a large quantity, they proceed to prepare them, which is done in the following manner:—

"A circular space is cleared upon the ground, of a size proportioned to the number of insects; on it a fire is lighted, and kept burning until the ground is considered to be sufficiently heated, when, the fire being removed, and the ashes cleared away, the moths are placed upon the heated ground, and stirred about until the down and wings are removed from them; they are then placed on pieces of bark, and *winnowed* to separate the dust and wings mixed with the bodies: they are then eaten—or placed in a wooden vessel, and pounded into masses or cakes, in colour and consistence resembling lumps of dough made from smutty wheat mixed with fat. The bodies of the moths are large, and filled with a yellowish oil, resembling in taste a sweet nut. These masses will not keep above a week, and seldom even for that time; but by smoking they are able to preserve them for a much longer period. The first time this diet is used, violent vomiting and other debilitating effects are produced; but after a few days they become accustomed to its use, and then thrive and fatten exceedingly upon it.

"These insects are held in such estimation among the aborigines, that they assemble from all parts of the country to collect them from these mountains. The crows also congregate for the same purpose. The blacks (that is, the crows and aborigines) do not agree about their respective shares—so the stronger decides the point; for when the crows enter the hollows of the rocks to feed upon the insects, the natives stand at the entrance, and kill them as they fly out, and afford them an excellent meal, being fat from feeding upon the rich bugong. So eager are these feathered blacks after this food, that they attack it even when it is preparing by the natives; but as the aborigines never consider any increase of food a misfortune, they lie in wait for the crows, with waddies or clubs, kill them in great numbers, and use *them* as food.

"The quantity of moths which may be collected from one of the granite groups it is calculated would amount to at least five or six bushels. The largest specimen I obtained measured seven-eighths of an inch, with the wings closed, the length of the body being five-eighths of an inch, and of proportionate circumference; the expanded wings measured one inch and three quarters across; the colour of the wings dark brown, with two black ocellated spots upon the upper ones: the body filled with yellow oil, and covered with down.

"When the natives about the Murrumbidgee river heard, on my return, that I had visited the 'bugong mountain,' they expressed great delight, and wished to see what I had collected. On showing them the few insects I had, they recognised them instantly; but I thought there was a feeling of disappointment at their curiosity only, not appetites, being gratified by my little entomological collection."—vol. i. pp. 270—274.

We have stayed so long with Mr. Bennett at New South Wales, that we must make short work with the rest of his "Wanderings." He gives a full and livelier description of Macao, its inhabitants, Portuguese, English, and Chinese, than we have elsewhere met with; and of Canton itself he furnishes sundry sketches which will also reward the reader's attention. We were amused with the following *note*:—

"The brilliancy of the Chinese colours for painting, &c., has often been very highly extolled as being superior to the European. What surprise must it create, then, when we are informed that the colours used are of English manufacture, and the Chinese artists are eager for, and anxiously inquire after *them*! This reminds me of the gross ignorance displayed by one of our countrymen who purchased an elegant London clock in a shop at Canton, at a high price, to take to England as a specimen of China manufacture. But do not we see these follies committed by our countrymen almost every day at Paris?"—vol. ii. p. 61.

To be sure we do; and we have no doubt much use is made of English colours, as well as English clocks and watches, in China: but that the Chinese artists have some colours of their own which no European skill has as yet rivaled, is a fact as well ascertained as any in the world.

At Macao the two *lions* that principally occupied Mr. Bennett's leisure hours were the public

museum of rare animals, fossils, weapons, &c. &c., collected at the general expense of the English residents, and the aviary in the private gardens of one of our countrymen, a venerable gentleman of the name of Beale, who had spent forty years in this distant region, and spared no cost to assemble a vast population of Chinese, Javanese, and Indian birds, which appeared to occupy the whole attention of a considerable establishment of servants, and to be kept altogether in a style that would have done honour to the taste and munificence of any sovereign prince in the world. The recent change in the affairs of the East India Company must, as Mr. Bennett regrets to observe, put an end ere long to the *English Museum*—nor is it likely that, under any future circumstances, an individual resident will be found either disposed or enabled to rival the useful and elegant collection of Mr. Beale. Our author gives two amusing chapters to this old gentleman's aviary: we must be contented with extracting a single specimen of them—he is talking of the *mandarin duck*:—

"A drake was stolen one night, with some other birds, from Mr. Beale's aviary; the beautiful male was alone taken; the poor duck, in spite of her quacks during the distressing scene, was left behind. The morning following the loss of her husband the female was seen in a most disconsolate condition: brooding in secret sorrow, she remained in a retired part of the aviary, pondering over the severe loss she had just sustained.

"Whilst she was thus delivering her soul to grief, a gay, prim drake, who had not long before lost his own dear duck, which had been accidentally killed, trimmed his beautiful feathers, and, appearing quite handsome, pitying the forlorn condition of the bereaved, waddled towards her; and, after devoting much of his time and all his attention to the unfortunate female, he offered her his protection, and made a thousand promises to treat her with more kindness and attention than her dear, lost drake. She, however, refused all his offers, having made, in audible quacks, a solemn vow to live and die a widow, if her mate did not return. From the day she met with her loss, she neglected her usual avocations; her plumage became ragged and dirty; she forsook her food and usual scenes of delight.

"Some time had elapsed, when a person, accidentally passing a hut, overheard some Chinese of the lower class conversing together. One said, 'It would be a pity to kill so handsome a bird.' 'How, then,' said another, 'can we dispose of it?' The hut was noted, as it was immediately suspected that the lost mandarin was the subject of conversation. A servant was sent, and, after some trouble, recovered the long lost drake by paying four dollars for him. He was then brought back to the aviary in one of the usual cane cages.

"As soon as the bird recognised the aviary, he expressed his joy by quacking vehemently and flapping his wings. An interval of three weeks had elapsed since he was taken away by force; but when the forlorn duck heard the note of her lost husband, she quacked, even to screaming, with ecstasy, and flew as far as she could in the aviary to greet him on his restoration. Being let out from the cage, the drake immediately entered the aviary—the unfortunate couple were again united: they quacked, crossed necks, bathed together, and then are supposed to have related all their mutual hopes and fears during the long separation.

"One word more on the unfortunate widower, who kindly offered consolation to the duck when overwhelmed with grief. She in a most ungrateful manner informed her drake of the impudent and gallant proposals made to her during his absence;—it is merely supposition that she did so; but at all events the result was, that the recovered drake attacked the other the day subsequent to his return, pecked his eyes out, and inflicted on him so many other injuries as to occasion his death in a few days. Thus did this unfortunate drake meet with a premature and violent death for his kindness and attention to a disconsolate lady. It may perhaps be correctly written on a tablet over his grave—'*A victim to conjugal fidelity!*'

Since we are on the chapter of ducks, we may notice here our author's diverting account of the *duck-boats* at Whampoa and elsewhere in the neighbourhood of Canton. As is well known, the owners and their families inhabit the upper part of these vessels, while their innumerable flocks of feathered creatures are accommodated in the hold. Mr. Bennett was fortunate enough to inspect some of them just after the rice harvest had been gathered, which is the season of joy for the broad-bills, as they are then at liberty to fatten upon the rich gleanings of the paddy-fields.

"On the arrival of the boat at the spot considered proper for feeding the quacking tribe, a signal of a whistle causes the flock to waddle in regular order from their domicile across the board placed for their accommodation. When it is considered that they have gorged sufficiently, another signal is made: immediately upon hearing it, they congregate and re-enter the boat. The first duck that enters is rewarded with some paddy, the last is whipped; so that it is ludicrous to see the last birds (knowing by sad experience the fate that awaits them) making efforts *en masse* to fly over the back of the others, to escape the chastisement inflicted upon the ultimate duck."—vol. ii. p. 115.

Mr. Bennett had the good luck to sail, on his return from Canton to Macao, in company with Mr. Davis, the accomplished orientalist, then chief superintendent of the Honourable East India Company's establishment; and he appears to have owed much valuable information to that enlightened gentleman's conversation. But we have perhaps given as much space to this book as the nature of its contents may seem to justify—so we must now close our extracts with the surgeon's account of the mode in which the Chinese and Japanese produce those dwarf trees, which we mentioned in our last number when reviewing Messrs. Fischer and Meylan:—

"The Chinese procure the dwarf orange trees, laden with fruit, by selecting a branch of a larger tree upon which there may be a good supply of fruit: the cuticle being detached from one part of the branch, is plastered over with a mixture of clay and straw, until roots are given out, when the branch is cut off, planted in a pot, and thus forms a dwarf tree laden with fruit. Other means are adopted to give the trunk and bark an appearance of age; and these, with the dwarf bamboos and other trees, must certainly be regarded as the principal Chinese vegetable curiosities."

In Mr. Bennett's volumes, if our reader has been at all amused with what we have exhibited in this article, he may depend on finding a great deal more of at least as interesting matter: he will, in particular, be well entertained with the author's history of a favourite *Ungka ape*, which partook his cabin with him during his last voyage from Sincapore to London. This creature seems

to have been about the most intelligent and amiable specimen of the *turpessima bestia* hitherto recorded: he regularly dined with the doctor's mess, and was on intimate terms with most of the passengers—but more especially—which, indeed, will surprise none who have observed the manners of animals—with a child on board, whom it attended almost like a nurse. Ungka liked every thing in the way of eating and drinking that passes current among men—except only wine; but if he had any relish for tobacco, Mr. Bennett does not mention it. Some few years ago, however, a captain in the Company's naval service brought to this city an animal of (we believe) the very same species, who not only took snuff habitually, but indulged himself with a pipe or two every day after dinner, filling the bowl for himself, and even lighting it very knowingly. This little gentleman, too, was quite free from the Mahometan prejudice against the juice of the grape. A friend of ours visiting him the first week after his arrival in Cheapside, found him in the act of finishing his mutton chop and potatoes, and about to begin his usual pipe, with the accompaniment of some Madeira negus. He was sold for the high price of 500*l.*, but died very soon afterwards.

There are two or three monkeys now in the Zoological Gardens in the Regent's Park, whose passion for snuff affords much amusement to the visiters. They seem to rub it zealously into their eyes and ears, as well as their nostrils, and, after some minutes of triumphant sneezing and snorting, to enjoy the narcotic influence of the Nicotian weed, with the calm contentment of an old fashioned philosopher.

APPARITION OF MARSHAL NEY.

Some days after the execution of Marshal Ney, M. Bellart gave a grand *soirée*. Every one appeared to forget—and perhaps such was the case with himself—the event by which the name of the magistrate of 1815 had obtained so painful a celebrity.

In the course of the evening, and at the moment when the society was the most animated, a guest presented himself, and gave his name to the servant, in an unconcerned manner, viz., M. Maréchal Ainé. The domestic, whether from want of recollection, or from ignorance, threw open the folding-doors of the saloon, and announced M. Le Maréchal Ney!

It is impossible to describe the stupefaction that this cry occasioned among the guests—or to depict the electric tremour of the most indifferent, and the dismay and wild stare of the host. It appeared as though the whole assembly were astounded and struck dumb by the dread of seeing some horrible apparition. The panic was soon, however, dispelled by the entry of the ominous, but harmless M. Maréchal Ainé, although the gaiety which had reigned before his arrival, could not be restored—every countenance bore the stamp of a painful inward feeling—the *salons* were deserted at an early hour, and M. Bellart was left alone with his *souvenirs*, and perchance with his remorse.

From Blackwood's Edinburgh Magazine.

DANA'S BUCCANEER.

We have always respected, nay, admired, America and the Americans. Indeed, it would not be easy to hold cheap a whole world, and that a new one; if not spick and span fresh from nature, certainly teeming with novel and bold forms of life. After all, however, there is but one world on this earth good for much, and that is the world of the English language. Germany, and Italy, and France, and Spain, and Holland, and the Netherlands, and a few other countries, are all well enough in their way; but the outlandish lingos spoken there, if they do not altogether separate them from our sympathies, and nothing can do that with such capacious hearts as ours, greatly cool the warmth of our feelings, and to our ear carry with them an alien and estranging sound. This may be very unlike what might be expected from philosophers and citizens of the world; but we are far from laying any claim to such a character, and are a set of sturdy, prejudiced, bigoted, home-and-race loving Scotsmen. True that the people of Great Britain and Ireland were originally of various breeds; but we are all one now in the broad sense of one, and our twenty millions and upwards, all linked by the ties of kindred, are, or ought to be a band of brothers. We have our quarrels, and animosities, and feuds; even, alas! to the shedding of blood; but let any other nation wage war with us, and it will know once more what is the power and majesty of union. Now the Americans are Englishmen, and Irishmen, and Scotsmen; Jonathan is but John Bull, or Pat, or Saunders, under a somewhat different climate and a somewhat different form of government; and we look on the Atlantic but as the royal road connecting our islands and his continent, on which we pass to and fro, without crossing or jostling by wind or steam, and keep it up; may it be for ever, that friendship which, with those living at the other end of the highway, is an old inheritance bequeathed to them by the pilgrim fathers; and with us here a possession received from our blood relations on their frequent and welcome visits to this their ancestral land. As for national jealousies and the like, why, such feelings are natural and far from unbecoming; they spring on both sides from a proud consciousness of our own worth, and some occasional suspicion on the one side, that the mother has not forgiven, or at least forgotten the disobedience of her rebellious child—on the other, that the child, since she threw off her allegiance, has ceased to love the parent who was once also her queen. But all that is too absurd to be deeply rooted; and we firmly believe that there is a strong, a sacred attachment still between them whom so many things unite; and who are divided, though not much, indeed but nominally, only by the sea. May peace be between us while time endures; and though we should be unwilling to go to war with any body, yet if the American navy must have a brush with the French, and our national honour or interests demand or justify it, may a British squadron appear to windward, and the victory be to the stars and stripes, with or without the aid of the

leopards, not to the tri-color. No fear of that, for we know by proof the metal of American ships and American seamen, and they alone are worthy of sailing in the same line of battle with a fleet of that power, who so long has held the dominion of the seas.

"But hollo! my fancy, whither dost thou go?"

We had no intention of speaking about American ships and seamen, but of American poems and poets. Do our friends write as well as they fight? To say so would be to flatter them, we fear, far beyond the truth, but we see no reason to doubt, that the time may come when they will do so. Meanwhile, they fire away, both in prose and rhyme, with great spirit. To resume the image we have just laid down, with a view of getting rid of it, their small craft are equal to our own. They have a fine frigate or two afloat, and we should not wonder to see them construct, live oak is not wanting, if not a first rate a two-decker. The Bryant is at present their finest vessel, but the Dana is of the same class; and the two working together to windward, might, at this moment, be supposed in the sunshine but one gleam of sail.

Having with some difficulty dismissed that image, let us go to work on this volume of selections from the American poets; and first let us take a glance over the Editor's Introductory Remarks. They are well written, and prove him to be a man of talents; but he has forgot, if he ever knew it, the homely adage, "cut your coat according to your cloth;" and pronounces a panegyric on the peculiar and characteristic features of American poetry, which is far indeed from being supported by its face as reflected in this mirror.

"It has been asserted that no American poet has, as yet, produced a continued poem, capable of arresting attention, and entitled to rank among the leading poetic efforts of other countries. This is, in some degree, true; but if we look into the peculiar circumstances of that country, we shall observe the true causes which have operated to produce this result. We shall perceive, from examining the situation of the American people, that it is less attributable to a dearth of poetic talent, than to a combination of circumstances prejudicial to its developement; and we shall perhaps conclude, from an inspection of the specimens here collected, that American intellect is not incapable of producing poetry of a very high order; and of adapting its energies to the successful prosecution of even the most difficult enterprises of imaginative genius. We need not advert to their advancement in every branch of knowledge that can be rendered *profitable* by application to *practical* purposes—their success in the different professional departments, and their multitude of inventions and improvements in the mechanical arts; but we maintain that, when called forth by the necessary excitements, competition, the prospect of distinction, and a suitable reward, their talents would prove (as in some brilliant instances they have proved) equally successful in every department of literature. But, amid the cares of gain, the noise, the bustle, the distractions of agricultural, commercial, and political pursuits, which so universally, and, in some measure, necessarily, engage the undivided attention of the population of this new country—and with boundless resources, which daily afford new fields for speculation, and new channels for every species of active enterprise, polite literature can scarcely be expected to be cultivated, except as a matter of taste or amusement.

"We cannot, therefore, reasonably expect that, in such leisure moments as are snatched from constant and perhaps laborious occupations, and without a sufficient incentive of either rivalry, fame, or emolument, the American poet should, in many cases, produce poems requiring long, continued, and all-engrossing mental exertion. But even under these circumstances, the Americans have exhibited considerable poetic talent, and—not to mention living authors—Hopkins, Dwight, Barlow, Humphreys, Trumbull, Freneau, Sewell, Linn, Lathrop, Prentiss, Boyd, Clifton, Isaac Story, Allen, Osborn, Spence, and Brainard, have produced some performances which would be an honour to the poetical literature of any country.

"It is not the intention of the editor of this work, in the confined limits allotted to an introductory preface, to enter on a history of American poetical literature, or to point out its distinguishing characteristics, and the many circumstances which variously affect the American and British poet. This would occupy a volume; and that the ignorance which prevails on this subject might be left without excuse, it should be undertaken. At the same time, he would express the hope that these specimens will not be uninteresting of the poetry of a country, where the elements of visible nature afford altogether a different local habitation for the poet's thoughts. The wide prairie, with its 'wild flock, that never needs a fold'—the 'world of lakes,' with its bright expanse of waters—the high-roads of the future commerce of the world, where the navies of the earth might struggle for disputed possession, but where now,

'With tawny limb,
And belt and beads in sunlight glistening,
The savage urges on his skiff like wild bird on the wing;'

the interminable wood, with its savage inmates and aboriginal population, where

'The forest hero, train'd to wars,
Quiver'd, and plumed, and lithe, and tall,
And seam'd with glorious scars,
Walks forth amid his reign to dare
The wolf, and grapple with the bear'—

the legendary lore and romance of Indian life—the savage exploits of Indian warfare—the characteristics of their different tribes—the fierce valour of the Peguods, the terror and scourge of the early colonists—the number and strength of the Mohecans, Pokanokets, and Narragansetts, and the mystic superstitions of the Iroquois. The tide, again, of emigration, rushing with all the indomitable force of human enterprise into the hitherto impregnable fastnesses of nature's wild domains, to haunts where stood the Indian hamlet—

'Look now abroad—another race has fill'd
These populous borders—wide the wood recedes,
And towns shoot up, and fertile realms are till'd;
The land is full of harvests and green meads;
Streams numberless, that many a fountain feeds,
Shine disembower'd, and give to sun and breeze
Their virgin waters; the full region leads
New colonies forth, that tow'rd the western seas
Spread like a rapid flame among the autumnal trees.'—

Such themes as these, it is hoped, will be found more than an adequate exchange for the tamer beauties of a less luxuriant and various climate, and an over civilised and cultivated land. Moreover, the great modifying principles of human sentiment are not the same. The constitution of the American government, customs and whole polity—the manners and individual views of attainment, and all that moulds social character and gives form to the commerce of life—those, too familiar to be dwelt on, must needs operate largely on the mind in all

its varying occupations, and still most in poetry which so largely exhibits the features of the moral man.

"Such poems have been generally chosen (with due regard to their real merit) as were thought most likely, by their descriptive powers, to convey, through the medium of common associations, forcible and faithful impressions of the striking characteristics of the New World—the leading external features, and the internal operations of habits and institutions, on the moral character. In these selections will be felt and seen, the living spirit, the moving realities, and the striking natural features of America, more vitally preserved, and perceptibly true and characteristic, than in all the tours and sketches that have teemed from the press, on this topic, that at present engages so large a share of public attention; and that this praise is not the mere utterance of editorial partiality, will, it is trusted, be amply borne out by the contents of this work."

Now, we ask the clever editor what he would be at? "It has been asserted," he says, "that no American poet has as yet produced a continued poem capable of *arresting attention*, and entitled to rank among the *leading poetic efforts* of other countries." To speak plainly, and not after that absurd fashion, America has produced no great poem. Our friend says, "this is in some degree true;" but he should not speak nonsense. Joel Barlow's Columbiad has picturesque passages—but it is mortal dull. What follows is acute enough; but the critic carries his argument too far; for genius has devoted itself to poetry under circumstances even less favourable and fostering than in America—and achieved far greater triumphs. He "maintains" that, when called forth by the necessary excitements, American talents will be as successful in every department of literature, as in the professional departments and the mechanical arts. Why, any man may maintain any thing; but what we wanted from an editor of such a volume as this was not prophecy of the future—but a fair appreciation of the poetry already in existence. His pompous folly is here incredible. He says it would occupy a volume to point out the distinguishing characteristics of the American poetical literature, and the many circumstances which variously affect the American and British poet. Heaven forefend he should ever write such a tome! For the little he has said—as we hinted above—is humbug. American poetry, so far from being conversant familiarly or awfully with prairies, lakes, and woods, is provokingly barren of such imagery; and as for the "savage inmates and aboriginal population," though we quoted from Bryant, a year or two ago, some fine stanzas in which they were spoken of well, they seldom make any figure in American poetry, and when they do, are a set of foolish feathered failures. Campbell's Outalissi is worth them all many million times over—as their own best critics have confessed; and where our editor may have met with them we do not know, but certainly it was not in his own volume of Selections—"the fierce valour of the Pequods, the number and fatal strength of the Mohecans, Pokanokets, and Narragansetts, and the mystic superstitions of the Iroquois." Then he talks magnificently of the tide of emigration rushing with indomitable force into hitherto impregnable fastnesses; and of the great modifying principles of human sentiment, and so forth, all which, he declares with brazen-faced assurance, gives a character to American poetry distinguishing it remarkably from European. Fudge! There is nearly an utter, and a very woful, absence of all such characteristics; and when he says triumphantly, towards the close of his short preface, "that in these selections will be felt and seen the living spirit, the moving realities, and the striking natural features of America, more vitally preserved, and perceptibly true and characteristic than in all the tours and sketches that have teemed from the press," he utters a gross untruth—and he knows it. This may seem severe language, but he who practises deception must feel the knout. Let him repent, and cancel the preface, and we hope the public will soon buy the whole edition.

We remember some years ago having been greatly struck, in specimens of the American Poets—a collection in three volumes, which some consummate villain has stolen from us, with "The Buccaneer," by Richard H. Dana. It is included in this volume, and we pronounce it by far the most powerful and original of American poetical compositions. The power is Mr. Dana's own; but the style—though he has made it his own too—is coloured by that of Crabbe, of Wordsworth, and of Coleridge. He is no servile follower of those great masters, but his genius has been inspired by theirs, and he almost places himself on a level with them by this extraordinary story; we mean on the level on which they stand in such poems as the Old Grimes of Crabbe, the Peter Bell of Wordsworth, and the Ancient Mariner of Coleridge. The Buccaneer is not equal to any one of them, but it belongs to the same class, and shows much of the same power in the delineation of the mysterious workings of the passions and the imagination.

The opening is very beautiful.

THE BUCCANEER.

"The island lies nine leagues away,
Along its solitary shore,
Of craggy rock and sandy bay,
No sound but ocean's roar,
Save, where the bold wild sea-bird makes her home,
Her shrill cry coming through the sparkling foam.

"But when the light winds lie at rest,
And on the glassy, heaving sea,
The black duck, with her glossy breast,
Sits swinging silently;
How beautiful! no ripples break the reach,
And silvery waves go noiseless up the beach.

"And inland rests the green, warm dell;
The brook comes tinkling down its side:
From out the trees the sabbath bell
Rings cheerful, far and wide,
Mingling its sounds with bleatings of the flocks,
That feed about the vale amongst the rocks.

"Nor holy bell, nor pastoral bleat,
In former days within the vale;
Flapp'd in the bay the pirate's sheet:
Curses were on the gale;
Rich goods lay on the sand, and murder'd men;
Pirate and wrecker kept their revels then.

"But calm, low voices, words of grace,
Now slowly fall upon the ear;

A quiet look is in each face,
Subdued and holy fear:
Each motion's gentle: all is kindly done—
Come, listen, how from crime this isle was won."

Twelve years are gone since the king of this isle was Matthew Lee. Dana, with forceful touches, describes the murderer a dark, low, brawny man, with thick set brows, and small gray eyes. High cheek-bones he had too, we warrant him, and his face was broad across them, and hard, like hammered brass. Fierce both in mirth and toil;

"Yet like a dog could fawn, if need there were,
Speak mildly, when he would, or look in fear."

We have sat in condemned cells with a good many murderers of merit. All their eyes were gray, their voices soft, several had a lisp, and one, the cruelest of cut-throats, 'likewise a burr. They had all courteous manners; and, though with villanous low foreheads, did not seem to be deficient in understanding; while all of them were men of tolerably good education, and appeared to like reading the Bible.

How many murders Matt committed before he attained to the sole sovereignty of the island, we are not told; but the most lucrative is thus darkly hinted at in a few dismal lines.

"Amidst the uproar of the storm.
And by the lightning's sharp, red glare,
Were seen Lee's face and sturdy form;
His axe glanced quick in air.
Whose corpse at morn is floating in the sedge?
'There's blood and hair, Matt, on thy axe's edge."

"'Nay, ask him yonder; let him tell,
I make the brute, not man, my mark.
Who walks these cliffs, needs heed him well!
Last night was fearful dark.
Think ye the lashing waves will spare or feel!
An ugly gash!—these rocks—they cut like steel.'

"He wiped his axe; and, turning round,
Said with a cold and harden'd smile,
'The hemp is sav'd—the man is drown'd,
Wilt let him float awhile,
Or give him Christian burial on the strand?
He'll find his fellows peaceful 'neath the sand.'"

Matthew Lee was extravagant, his waste was greater than his gain, and he said to himself, "I'll try the merchant's trade." So he set sail in a well-manned and deep-laden vessel, resolved, by way of change, to circumvent, rather than to kill. But the sea has a way and a will of his own, and one night took high in dudgeon the laughing blasphemies of skipper and crew of the Fair Trader. So he woke his waves till

"Their white tops, flashing through the night,
Gave to the eager straining eye
A wild and shifting light."

The good ship having sprung a leak, and the pumps being choked, Matt had nothing else for it but to lighten her by throwing the cargo overboard to the devil, whom he heard riding on the blast.

"The sea has like a plaything toss'd
That heavy hull the livelong night.
The man of sin—he is not lost:
Soft breaks the morning light.
Torn spars and sail,—her cargo in the deep—
The ship makes port with slow and labouring sweep.

"Within a Spanish port she rides.
Angry and sour'd, Lee walks her deck.
'Then peaceful trade a curse betides?—
And thou, good ship, a wreck!
Ill luck in change!—Ho! cheer ye up, my men!
Rigg'd, and at sea, we'll to old work again?'"

What that old work was you can guess. But you cannot guess his next crime. Hitherto the tale has been told by glooms and flashes, that alternately strew darkness and light on the character and life of the Buccaneer. But now we have a more continuous and sustained strain, and we cannot help noticing the fine effect of the lyrical transition from the port of Spain to the condition of that country, and a tale of tears arising out of it, soon to be a tale of blood. We must, in justice to the poet, give the passage entire.

"A sound is in the Pyrenees!
Whirling and dark, comes roaring down
A tide, as of a thousand seas,
Sweeping both cowl and crown.
On field and vineyard thick and red it stood.
Spain's streets and palaces are full of blood;—

"And wrath and terror shake the land;
The peaks shine clear in watchfire lights;
Soon comes the tread of that stout band—
Bold Arthur and his knights.
Awake ye, Merlin! Hear the shout from Spain!
The spell is broke!—Arthur is come again!

"Too late for thee, thou young, fair bride;
The lips are cold, the brow is pale,
That thou didst kiss in love and pride.
He cannot hear thy wail,
Whom thou didst lull with fondly murmur'd sound—
His couch is cold and lonely in the ground.

"He fell for Spain—her Spain no more;
For he was gone who made it dear;
And she would seek some distant shore,
At rest from strife and fear,
And wait amidst her sorrows till the day
His voice of love should call her thence away.

"Lee feigned him grieved, and bow'd him low.
'Twould joy his heart could he but aid
So good a lady in her woe,
He meekly, smoothly said.
With wealth and servants she is soon aboard,
And that white steed she rode beside her lord.

"The sun goes down upon the sea;
The shadows gather round her home.
'How like a pall are ye to me!
My home how like a tomb.
O! blow, ye flowers of Spain, above his head—
Ye will not blow o'er me when I am dead.'

"And now the stars are burning bright;
Yet still she looks towards the shore
Beyond the waters black in night.
'I ne'er shall see thee more!
Ye're many, waves, yet lonely seems your flow,
And I'm alone—scarce know I where I go.'

"'Sleep, sleep, thou sad one, on the sea!
The wash of waters lulls thee now;
His arm no more will pillow thee,
Thy hand upon his brow.
He is not near, to hush thee, or to save.
The ground is his—the sea must be thy grave.

"The moon comes up—the night goes on.
Why in the shadow of the mast,

Stands that dark, thoughtful man alone?
Thy pledge, man; keep it fast!
Bethink thee of her youth and sorrows, Lee:
Helpless, alone—and, then, her trust in thee!

"When told the hardships thou hadst borne,
Her words were to thee like a charm.
With uncheer'd grief her heart is worn.—
Thou wilt not do her harm!
He looks out on the sea that sleeps in light,
And growls an oath—'It is too still to-night.'

"He sleeps; but dreams of massy gold,
And heaps of pearl. He stretch'd his hands.
He hears a voice—'Ill man withhold!'
A pale one near him stands;
Her breath comes deathly cold upon his cheek;
Her touch is cold. He wakes with piercing shriek.

"He wakes; but no relentings wake
Within his angry restless soul.
'What, shall a dream Matt's purpose shake?
The gold will make all whole.
Thy merchant's trade has nigh unmann'd thee, lad!
What, baulk thy chance because a woman's sad?"

"He cannot look on her mild eye—
Her patient words his spirit quell.
Within that evil heart there lie
The hates and fears of hell.
His speech is short; he wears a surly brow.
There's none will hear her shriek. What fear ye now?

"The workings of the soul ye fear;
Ye fear the power that goodness hath;
Ye fear the Unseen One, ever near,
Walking his ocean path.
From out the silent void there comes a cry—
'Vengeance is mine! Lost man, thy doom is nigh!'

"Nor dread of ever-during woe,
Nor the sea's awful solitude,
Can make thee, wretch, thy crime forego.
Then, bloody hand—to blood!
The scud is driving wildly over head!—
The stars burn dim; the ocean moans its dead.

"Moan for the living—moan our sins,—
The wrath of man, more fierce than thine.
Hark! still thy waves!—The work begins—
He makes the deadly sign.
The crew glide down like shadows. Eye and hand
Speak fearful meanings through that silent band.

"They're gone. The helmsman stands alone;
And one leans idly o'er the bow.
Still as a tomb the ship keeps on;
Nor sound nor stirring now.
Hush, hark! as from the centre of the deep—
Shrieks—fiendish yells! they stab them in their sleep.

"The scream of rage, the groan, the strife,
The blow, the gasp, the horrid cry,
The panting, stifled prayer for life,
The dying's heaving sigh,
The murderer's curse, the dead man's fix'd still glare,
And fear's and death's cold sweat—they all are there!

"On pale, dead men, on burning cheek,
On quick, fierce eyes, brows hot and damp,
On hands that with the warm blood reek,
Shines the dim cabin lamp.
Lee look'd. 'They sleep so sound,' he laughing said,
'They'll scarcely wake for mistress or for maid.'

"A crash! They've forced the door,—and then
One long, long, shrill, and piercing scream
Comes thrilling through the growl of men.
'Tis hers!—O God, redeem
From worse than death thy suffering, helpless child!
That dreadful cry again—sharp, sharp, and wild!

"It ceased,—With speed o' th' lightning's flash,
A loose-robed form, with streaming hair,
Shoots by.—A leap,—a quick, short splash!
'Tis gone!—There's nothing there!
The waves have swept away the bubbling tide,
Bright-crested waves, how proudly on ye ride!

"She's sleeping in her silent cave,
Nor hears the stern, loud roar above,
Or strife of man on land or wave.
Young thing! thy home of love
Thou soon hast reach'd!—Fair, unpolluted thing!
They harm'd thee not!—Was dying suffering?"

Murder she could not shun—but the sea received her unpolluted. Dana did right in saving her from violation—the sin of rape was on their souls, though her body was free from its stain—and pity is the more profound when not disturbed by horror. Why waxes Matthew Lee's dark face so white? He shudders in superstition. A spirit was it—who heard any tread on deck—any splash in the sea? But that fit is gone, and he is indecent on the dead.

"And then the ribald laughed. The jest,
Though old and foul, loud laughter drew.
And words more foul came from the rest
Of that infernal crew.
Note, Heaven! their blasphemy, their broken trust!
Lust hardens murder—murder panders lust."

No formal description is any where given of the crew—but we feel that they were judiciously chosen—and that they were not men to be afraid of ghosts. Not when at their cups—yet who knows but that each murderer in his birth had a visit every night from the night-mare; and that sleep lashed them all—naked—each bloody-hand by himself—with her cat-'o-nine tails, to hell! But now they are all broad awake, and have work to do, e'er they sit down to sup, and curse, and sing. They had murdered all below—except the white war horse, who used to carry the drowned lady's lover and her lord. Shall they cut his throat too? No. Let him have a swim. So overboard with him alive along with the dead bodies.

"Now slowly up they bring the dead
From out that silent, dim-lit room.
No prayer at their quick burial said—
No friend to weep their doom.
The hungry waves have seized them one by one,
And, swallowing in their prey, go roaring on.

"Cries Lee, 'We must not be betray'd.
'Tis but to add another corse!
Strange words, 'tis said, an ass once bray'd.
I'll never trust a horse!
We'll throw him on the waves alive! He'll swim;
For once a horse shall ride—we all ride him.'

"Such sound to mortal ear ne'er came
As rang far o'er the waters wide;
It shook with fear the stoutest frame—
That horse is on the tide!
As the waves leave or lift him up, his cry
Comes lower now—and now 'tis near and high.

"And through the swift wave's yesty crown
His scared eyes shoot a fiendish light,
And fear seems wrath. He now sinks down,
Now heaves again to sight,
Then drifts away; yet all that night they hear
Far off that dreadful cry.—But morn is near.

"O, hadst thou known what deeds were done,
When thou wert shining far away,

Would'st thou let fall, calm-coming sun,
Thy warm and silent ray?
The good are in their graves; thou canst not cheer
Their dark, cold mansions. Sin alone is here.

"'The deed's complete! The gold is ours!
There, wash away that bloody stain!
Pray who 'd refuse what fortune showers?
Now, lads, we'll lot our gain.
Must fairly share, you know, what's fairly got!
A truly good night's work! Who 'll say 'twas not?'

"There's song, and oath, and gaming deep—
Hot words, and laughter—mad carouse:
There's nought of prayer, and little sleep,
The devil keeps the house!
'Lee cheats!' cried Jack. Lee struck him to the heart.
'That 's foul!' one mutter'd. 'Fool! you take your part!'

"'The fewer heirs the richer, man!
Hold forth thy palm, and keep thy prate!
Our life, we read, is but a span.
What matters soon or late?
Death comes!' On shore, and ask'd how many died?
'That sickness swept near half,' said Lee, and sigh'd.

"Within our bay, one stormy night,
The isle's men saw boats make for shore,
With here and there a dancing light
That flash'd on man and oar.
When hail'd, the rowing stopt, and all was dark.
'Ha! lantern work!—We'll home!—They 're playing shark!'

"Next day, at noon, towards the town,
All stared and wonder'd much to see,
Matt and his men come strolling down.
The boys shout, 'Here comes Lee!'
'Thy ship, good Lee?' 'Not many leagues from shore
Our ship by chance took fire.'—They learnt no more.

"He and his crew were flush of gold.
'You did not lose your cargo, then?'
—'Learn, where all 's fairly bought and sold,
Heaven prospers those true men.
Forsake your evil ways, as we forsook
Our ways of sin, and honest courses took!

"'Wouldst see my log-book? fairly writ,
With pen of steel, and ink like blood!
—How lightly doth the conscience sit!
Learn, truth 's the only good.'
And thus with flout, and cold and impious jeer,
He flod repentance, if he 'scaped not fear."

Matt is now rich, and resolves to lead a life of pleasure on shore. We are not told whether he took a ready-made house, or built a new one—nor does Mr. Dana tell us whether its site had a southern or a northern aspect—only

"That riot reigns within,
And brawl and laughter shake that house of sin."

Matt is merry—or fain would be so—for the jolly dog

"Remorse and fear now drowns in drink."

Why, in such a case there was nothing else for it. But remorse is a perfect sand-bank that swallows the sea. He can drink a gallon of Glenlivet or Cognac without turning a hair. His head, however, can be made to swim at last—and his heart to quake—and then, Lord pity him! how he stares! He calls that singing! He has volunteered a solo of groans—set on four flats for the first bar or two—and then on a dozen sharps at the fewest. *Da capo.* Such laughter is really too bad—and his pals call it the devil's howl. But he is a great man nevertheless.

"Matt lords it now throughout the isle,
His hand falls heavier than before,
All dread alike his frown or smile,
None come within his door,
Save those who dipp'd their hands in blood with him;
Save those who laughed to see the white horse swim.

This very night last year was the night of that massacre, and the murderers must needs celebrate their anniversary. "Bring us women, bring us wine!" Was that the cry? No—no—they cannot now be pestered by the popinjays—besides, the pretty polls might prate and peach. So the party consists wholly of males and murderers. 'Tis now the very hour—the very minute—the captain kens by his gold chronometer—that the white horse was made to walk the plank—and was drifted away on the flowing foam, while far-off was heard that dreadful cry!—See! see! a red light on the waters. What may it mean? Matt's gray eyes are enlarged in green light—and burn as if they would set fire to his thick-set brows.

"Not bigger than a star it seems:
And, now, 'tis like the bloody moon:
And, now, it shoots in hairy streams
Its light!—'Twill reach us soon!
A ship! and all on fire!—hull, yards and mast!
Her sheets are sheets of flame!—She's nearing fast!

"And now she rides, upright and still,
Shedding a wild and lurid light
Around the cove, on inland hill
Waking the gloom of night.
All breathes of terror! Men in dumb amaze
Gaze on each other 'neath the horrid blaze.

"It scares the sea-birds from their nests.
They dart and wheel with deaf'ning screams;
Now dark,—and now their wings and breasts
Flash back disastrous gleams:
O sin, what hast thou done on this fair earth?
The world, O man, is wailing o'er thy birth.

"And what comes up above that wave,
So ghastly white?—a spectral head!
A horse's head!—(May heaven save
Those looking on the dead,—
The waking dead!) There on the sea he stands—
The spectre-horse!—He moves; he gains the sands!

"Onward he speeds. His ghostly sides
Are streaming with a cold, blue light.
Heaven keep the wits of him who rides
The spectre-horse to-night!
His path is shining like a swift ship's wake;
He gleams before Lee's door like day's gray break.

"The revel now is high within;
It breaks upon the midnight air.
They little think, 'midst mirth and din,
What spirit waits them there.
As if the sky became a voice, there spread
A sound to appal the living, stir the dead.

"The spirit-steed sent up the neigh.
It seem'd the living tramp of hell,
Sounding to call the damn'd away,
To join the host that fell.
It rang along the vaulted sky: the shore
Jarr'd hard, as when the thronging surges roar.

"It rang in ears that knew the sound;
And hot flushed cheeks are blanched with fear.
And why does Lee look wildly round?
Thinks he the drown'd horse near?

He drops his cap—his lips are stiff with fright.
Nay, sit thee down!—It is thy banquet night.

"'I cannot sit. I needs must go:
The spell is on my spirit now.
I go to dread—I go to wo!'
O, who so weak as thou,
Strong man!—His hoofs upon the door-stone, see,
The shadow stands!—His eyes are on thee, Lee!—

"Thy hair pricks up!—'O, I must bear
His damp, cold breath! It chills my frame!
His eyes—their near and dreadful glare
Speak that I must not name!'
Thou'rt mad to mount that horse!—'A power within,
I must obey—cries, "mount thee, man of sin!"'

"He's now astride the spectre's back,
With reign of silk, and curb of gold.
'Tis fearful speed:—the reign is slack
Within his senseless hold:
Nor doth he touch the shade he strides—upborne
By an unseen power. God help thee, man forlorn!

"He goes with speed: he goes with dread!
And now they're on the hanging steep!
And now! the living and the dead,
They'll make the horrid leap!
The horse stopt short:—his feet are on the verge.
He stands, like marble, high above the surge.

"And, nigh, the tall ship yet burns on,
With red-hot spars and crackling flame.
From hull to gallant, nothing's gone,
She burns, and yet's the same!
Her hot, red flame is beating, all the night,
On man and horse, in their cold, phosphor light.

"Through that cold light the fearful man
Sits looking on the burning ship.
Thou ne'er again wilt curse and ban.
How fast he moves the lip!
And yet he does not speak, or make a sound!
What see you, Lee,—the bodies of the drown'd!

"'I look, where mortal man may not—
Into the chambers of the deep.
I see the dead, long, long forgot—
I see them in their sleep.
A dreadful power is mine, which none can know,
Save he who leagues his soul with death and wo.'"

It is not now a stormy night, but a serene, and the last, low, melancholy ray of the waning moon shines towards him—but he sees but the ship. The night wears away, and the burning vessel grows less and less bright as the gray dawn returns.

"The spectre steed now slowly pales;
Now changes like the moonlit cloud;
That cold, thin light, now slowly fails,
Which wrapt them like a shroud.
Both ship and horse are fading into air,
Lost, mazed, alone, see Lee is standing there!"

The morning is fresh and fair, and beauty and happiness are circling in the air, floating on the sea, and wandering to and fro along the shore. But Lee is blind and deaf, and stirs not more than a stone.

"The hot sun beats upon his head,
He stands beneath its broad, fierce blaze,
As stiff and cold as one that's dead:
A troubled dreamy maze.
Of some unearthly horror, all he knows,
Of some wild horror past, and coming woes."

Evening comes, "the gull has found her place on shore" the sun sinks, all is still but the ocean's weary roar, and

"There stands the man unblest."

He looks round as if hoping to see his mates, but they come not; he finds power to walk homewards; and

"As he his door-stone past, the air blew chill.
The wine is on the board; Lee take thy fill."

Not a single soul in the house. Whither they have all gone he knows not, nor asks, but gone they are, and he never sees the face of one of them again in this world. 'Twas no vision of his own—the vision of the white horse from the sea, and of the fiery ship. They too saw it, they too heard it shriek, and the murderers, whom no fear of human law could appal, have drowned or hanged themselves, or have fled away from that intolerable island to wander over the unhaunted spots, if such there be, of some central wilderness beyond reach of the sea. "Lee, take thy fill of wine!" And he drinks despair. But there are some human hearts, Christopher North verily believes with Richard Dana, nor despair nor remorse can break. And if unbroken, however shook, sin will continue to have her dwelling there, and leave open the door, day and night, for the entrance of crime.

"He walks within the day's full glare
A darken'd man. Where'er he comes,
All shun him. Children peep and stare;
Then, frighted, seek their homes.
Through all the crowd a thrilling horror ran.
They point and say, 'There goes the evil man!'

"He turns, and curses in his wrath
Both man and child; then bastes away
Shoreward, or takes some gloomy path;
But there he cannot stay:
Terror and madness drive him back to men;
His hate of man to solitude again.

"Time passes on, and he grows bold,
His eye more fierce, his oaths more loud,
None dare from Lee the hand withhold;
He rules and scoffs the crowd,
But still at heart there lies a secret fear;
For now the year's dread round is drawing near."

Do the islanders, whose hands are clean, at least of blood, see the spectre-horse and spectre-ship? We know not. But they see Lee's eyes, and, full of horror as they are, they know that he is not insane. The day is come, and will he celebrate a second anniversary?

* * * * *

"He swears; but he is sick at heart;
He laughs; but he turns deadly pale.
His restless eye and sudden start,
These tell the dreadful tale
That will be told; it needs no words from thee,
Thou self-sold slave to fear and misery.

"Bond-slave of sin, see there—that light!
'Ha! take me, take me from its blaze!'
Nay, thou must ride the steed to-night!
But many weary days
And nights will shine and darken o'er thy head,
Ere thou wilt go with him to meet the dead.

"Again the ship lights all the land;
Again Lee strides the spectre-beast;

Again upon the cliff they stand,
This once thou'lt be released!
Gone horse and ship; but Lee's last hope is o'er;
Nor laugh, nor scoff, nor rage, can help him more.

"His spirit heard that spirit say,
'Listen!—I twice have come to thee.
Once more—and then a dreadful way!
And thou must go with me!'
Ay, cling to earth as sailor to the rock!
Sea-swept, suck'd down in the tremendous shock.

"He goes! So thou must loose thy hold,
And go with death; nor breathe the balm
Of early air, nor light behold,
Nor sit thee in the calm
Of gentle thoughts, where good men wait their close.
In life or death where look'st thou for repose?"

In our abridgment the tale has seemed allmost all one uninterrupted series of guilt and misery; but sweet and soothing imagery is sometimes very skilfully introduced for relief's sake, and sometimes, too, touches of tenderness that may awaken tears. We are brought at last almost to pity Matthew Lee—for at last he feels his sin with all the repentance in his power—he is very miserable—and "misery is a sacred thing"—even the misery of a murderer.

"Who's yonder on that long, black ledge,
Which makes so far into the sea?
See! there he sits, and pulls the sedge,
Poor, idle Matthew Lee!
So weak and pale? A year and little more,
And thou didst lord it bravely round this shore.

"And on the shingles now he sits,
And roll the pebbles 'neath his hands;
Now walks the beach; then stops by fits,
And scores the smooth, wet sands;
Then trics each cliff, and cove, and jut, that bounds
The isle! then home from many weary rounds.

"They ask him why he wanders so,
From day to day the uneven strand?
—'I wish, I wish that I might go!
But I would go by land;
And there's no way that I can find, I've tried
All day and night!'—He look'd towards the sea and sigh'd.

"It brought the tear to many an eye,
That, once, his eye had made to quail.
'Lee, go with us; our sloop rides nigh;
Come! help us hoist her sail.'
He shook.—'You know the spirit horse I ride!
He'll let me on the sea with none beside!'

"He views the ships that come and go,
Looking so like to living things.
Oh! 'tis a proud and gallant show
Of bright and broad spread wings,
Flinging a glory round them, as they keep
Their course right onward through the unsounded deep.

"And where the far off sand-bars lift
Their backs in long and narrow line,
The breakers shout, and leap, and shift,
And send the sparkling brine
Into the air; then rush to mimic strife.—
Glad creatures of the sea! How all seems life!—

"But not to Lee. He sits alone:
No fellowship nor joy for him.
Borne down by wo, he makes no moan,
Though tears will sometimes dim
That asking eye. O, how his worn thoughts crave—
Not joy again, but rest within the grave.

"The rocks are dripping in the mist
That lies so heavy off the shore.
Scarce seen the running breakers!—list
Their dull and smother'd roar!
Lee hearkens to their voice.—'I hear, I hear
You call.—Not yet!—I know my time is near!'

'And now the mist seems taking shape,
Forming a dim, gigantic ghost,
Enormous thing! There's no escape;
'Tis close upon the coast.
Lee kneels, but cannot pray. Why mock him so?
The ship has clear'd the fog, Lee, see her go!

"A sweet, low voice, in starry nights,
Chants to his ear a plaining song.
Its tones come winding up those heights,
Telling of wo and wrong;
And he must listen till the stars grow dim,
The song that gentle voice doth sing to him.

"O, it is sad that aught so mild
Should bind the soul with bands of fear;
That strains to soothe a little child,
The man should dread to hear!
But sin hath broke the world's sweet peace unstrung,
The harmonious chords to which the angels sung."

He often sits now, in a state of stupor, on some stone, within the savage sea-roar; and it might seem, to look at him, that he were more than half-dead—insensate now to the misery within as to the heat or cold, the sun, or the spray. But the doomed night comes that is again to bring the pale horse. An ass once brayed articulate speech—quoth Matt—and a horse may tell tales—and so saying, he showed him overheard. And odd enough, the identical animal does tell tales, and to Matt's feelings, beats Balaam's charger all to sticks.

"'Twice have I come for thee,' it said.
'Once more, and none shall thee behold.
Come! live one, to the dead.'"

The apparition of the ship again faintly illumines, and for the last time, the bay. Formerly she showed wide sheets of flame and shafted fire.

"But now she rolls a naked hulk, and throws
A rushing light; then, settling, down she goes."

"And where she sunk up slowly came
The spectre-horse from out the sea.
And there he stands! His pale sides flame.
He'll meet thee shortly, Lee.
He treads the waters as a solid floor;
He's moving on. Lee waits him at the door."

Matt is loth to mount—but mount he must—the night is black—but the horse is white—and

"Within that horrid light he rides the deep."

He goes by water to fire—and there is an end of the poem. We hope you like it—for we do very much; but our page is done—our candle burned out—our pen a blunt nose—and you must be your own critic. There is room and radiance but for the ultimate stanza.

"The earth has washed away its stain.
The seal'd up sky is breaking forth,
Mustering its glorious hosts again
From the far south and north.
The climbing moon plays on the rippling sea,
O! whither on its waters rideth Lee?"

No creature alive so loth to die as a candle

Thou hast no need thus to tremble on the brink of expiration, O innocent—yea, useful wick! Thy whole life has been spent in pouring lustre on peace. For rueful though the tale and ghastly, on which we have been poring in Dana's pictured pages, our heart all the while has been calm in its profounder depths, and from the stillness of its own regions has been listening to the rage of the wicked subsiding into sullenness, just like the rage of the sea. But the sea after storm is not long sullen—he soon grows serene—and is revisited by shadowy stars; whereas the wicked are to the last restless—and with moanings of misery disappear in the blind hollow of night.

Blickering yet! Nay resuscitated by the saveall—and absolutely showing off in a series of small blazes! We never use an extinguisher without a sigh. A natural death shalt thou be allowed to die. There—thou art dead. The change from light to darkness brings a change over the spirit of our dream. We have crossed the Atlantic—and are sitting with Bryant and Dana at a Symposium. "Christopher North in America." On our return to Europe we shall sell our journal to our good friends, the Blackwoods, for a ransom. But the question now is—how we are to find our way to bed? We must make up our minds to see death on the pale horse in our dreams. Dana! farewell.

Critical Notices.

A Voyage round the World; including Travels in Africa, Asia, Australia, and America, &c. &c.; from 1827 *to* 1832. By James Holman, R.N. F.R.S. &c. (Vol. II.) Smith & Elder.

The first volume landed our blind traveller at Rio Janeiro, and left him when he had just completed a trip to the gold mines, in company with Captain Lyon. The second opens with an account of his descent into one of the principal mines, and of his journey back to Rio; and narrates the results of his residence (can we say observation?) at this tropical city, until his departure in his majesty's brig Falcon for the Cape of Good Hope. It was intended in the voyage to call at Tristan d'Acunha; but the ship was obliged to pass the island in a fog, and sail direct for the Cape. Here, as in other places, the sad deprivation of our traveller, his reputation, and the singular task he had imposed upon himself—together, we suspect, with his cordial good feeling, and the gentle dependent manner of the sightless—procured him much attention; and, after traveling through the south and south east part of the colony into Caffre Land, he started for the Mauritius. His stay here was brief; for, taking advantage of the offer of a passage in a king's ship, he sailed for Madagascar and Mozambique; where the volume leaves him.

The reader who has perused Lieutenant Holman's works, or thought at all upon the nature of his achievements, will no doubt have been surprised, not only at his accomplishment of the journeys he has undertaken, but at the information and amusement contained in his books. By further thought and examination, the riddle is solved. What human being could throw an obstacle in the way of a blind man? Nay, how few exist who would not assist him to the utmost of their power? Traces of this are frequently met with, not merely in the connections he forms on shore, but in the more useful sea-friends he finds or makes,—for instance, all the voyages narrated in the present volume were prosecuted on board king's ships, where a common traveller could never have found admission. The matter and composition of his publications, if narrowly scanned, explain all points of wonder except the personal resolution and migratory spirit of the man. The character of the books bears the impress of the author. They do not deal in picturesque description, in sketches of external manners, or in the reflections such things excite. But if they lack their general brilliancy and force, they have none of their frequent vagueness. Unless a man looks upon nature and society with learned eyes, his observations are often too general to be distinct, or too common-place to be interesting. Deriving his information from others, Lieutenant Holman tested all that he received. Unless the ideas conveyed to him were specific and distinct, he at once perceived their uselessness: if the things he was told had no interest for him, he might judge they would have none for others. Hence the real and informing nature of his work; although it must be admitted, that at times there is a matter-of-fact air about it which has somewhat of the minuteness of a catalogue. We make this observation because we think it is the truth; and because it fitly introduces a passage which touchingly exhibits the amiability of the author, and apologises for his occasional dryness.

"There is a spirit of consolation in all things, if we only understood the moral alchemy by which it is to be extracted. The very calamity which condemns me to enquire and think, where others see and comprehend at once, has drawn around me an amount of attention to which I could not, otherwise, presume to lay claim. This is the end to which all writers, particularly travellers, direct their labours. When there is any point of value in a work, even if it bear as small a proportion to the worthless as Falstaff's bread did to his sack, it is put forth in vain if circumstances do not assist in procuring it a hearing. It is truly observed by Dr. Johnson, that the contemporary age employs itself in detecting an author's faults, and that posterity engages all its ingenuity in seeking after his beauties. The blemishes of a book, if I may be allowed to distort a fine thought of Shakspeare's into prose, are buried in the writer's grave, and all that is good in it lives after him. Without any pretension to the favour of the public beyond that which the anomaly that exists between my situation and my pursuits confer upon me, it would almost appear that this fate of authorship has been nearly reversed in my case. My readers, knowing the difficulties against which I have to contend, would seem to have forgotten every thing but the merit of perseverance under circumstances so adverse and repelling. I am too proud of this indulgence, even though I owe it to an accident, not to endeavour, as I proceed with my work, to deserve the kind thoughts of those who feel any pleasure in my narrative. But, anxious as I am that its intrinsic worth, whatever that may be, should increase as I advance, it must be evident that equivalent sources of interest are not always at my command; for the interest of a record of travels will inevitably vary the nature of the different subjects as they arise.

"In a work of imagination, the author is clearly responsible for the failure of his design; but in a relation of facts, the author is responsible only for his treatment of them. The novelist who invents impossibilities, or constrains his plot to produce effect, is censurable in the first degree: so too, the traveller or historian who misstates the character of a nation, the aspect of a country, or the moral and physical condition of any fraction of the great community: but he is not accountable for the individual attractions of the subject; he must take men, their customs and their localities, as he finds them; and if he discharges his office with fidelity, he performs all

that can be required at his hands. If the readers of these pages will but bear this distinction in memory, they will make for occasional weariness that excuse upon which alone I desire to rely. It is impossible to travel from Dan to Beersheba, without finding some barren spots: so, as the record of travels is but the reflection of the fluctuating varieties of soil and climate, usages and customs, government and national peculiarities, my journal, if it be faithful, which I can answer for, so far as my opportunities have reached, must exhibit a similar inequality of interest. Asking some indulgence on this score, I resume my narrative."

A Portuguese governor at Mozambique:

"We did not reach the ship until half-past five, when, after taking a hasty dinner, we proceeded to the government house; where we received such a description of his excellency's dinner that we had no reason to regret our absence. However, he made many apologies to Captain Lyons, for his cook, and the want of proper servants; and it must be owned that he did not complain without good reason, for out of the six that attended, there were only two who were fit to appear in the presence of civilised society, being scarcely one degree removed from a state of nudity, their whole attire consisting of a short coarse cloth tied round the loins, in the same manner as that usually worn by slaves; and it spoke little for the delicacy of the governor, to allow his daughters to be so attended, especially in the society of British officers, in a public dining-room. His excellency's domestic arrangements were, however, entirely exempt from all attempts at elegance; and the following specimen will afford a pretty correct notion of the ornamental part of the appendages. The sideboard was illuminated with four candles, stuck in—what think you, gentle reader?—do your sensitive nerves tremble with apprehension, of some violation of taste or fashion? What will you say, when I tell you that four claret bottles supplied the place of candelabras? How will you you be shocked when I add, that it was a barbarous indifference, and not by any means the exigency of necessity, that occasioned this want of comfort in the governor's appointments, for he could have been amply supplied with household comforts, for the mere trouble of an application in the proper quarter; but he was an easy man, who cared for nothing, beyond the accumulation of wealth, and of which he had acquired a very competent share, through his profits on the slaves that had been exported from his government, where he had been resident four years, and from which he was at this period in daily expectation of being relieved. It might be imagined that his daughters ought to have conducted their father's household in a more civilised fashion; but when we consider how much the mind is debased by association, we shall cease to wonder that young people, sprung from such a father, and so waited upon, should have few elegant ideas."

The most interesting parts in the book, on account of their novelty, are the chapters devoted to Madagascar. This fertile and slave-producing island, under the sway of Radama—a sort of Czar Peter in a small way—seemed to be in a fair train for improving; but Mr. Hastie, the British resident, and tutor to the monarch, died; and his royal friend seeking consolation in the bottle, shortly followed him; so that a reaction has taken place.—*Spectator.*

—

Lardner's Cabinet Cyclopædia.—Fall of the Roman Empire, comprising a View of the Invasion and Settlement of the Barbarians. By J. C. L. De Sismondi. Vol. II. London: Longman & Co. 1834.

The celebrated author of this work has, by it, supplied a most important and valuable addition to our historical literature, comprising within small bounds, a clear, grave, and accurate view of the longest and most universal of all the convulsions to which the human race has been exposed. The period he embraces extends to eight centuries, dating its commencement from the reign of the Antonines, when mankind seemed to have reached the highest point of prosperity, down to the almost total dissolution of all the old established associations of men, and to the re-construction of society from its very foundations. This period, commencing from the third century, and reaching to the close of the tenth, may here be viewed by the light and guidance of one who has devoted many years to the study of the revival of European civilisation, as well as to the overthrow of ancient culture. He states, that fifteen years have elapsed since he attempted to trace the course of the terrible revolution referred to, in a series of lectures pronounced before a small audience at Geneva. Encouraged by the interest he then excited, he preserved the vast picture, under the idea that at some future day he might exhibit it in one of the capitals of the world of letters. But advancing years warn him no longer to reckon on the possibility of oral instruction; and therefore, in the present form, he submits the information collected in the lectures spoken of. To Dr. Lardner's truly national work these volumes are a precious addition. No ordinary time or means have hitherto been necessary to obtain that which is here brought together. So that henceforward any person may, without other help than Sismondi's two neat volumes, come to a correct understanding of one of the most important and distinct, as well as dark, periods of time. The earlier half of the middle ages appear to our eyes as a chaos, but the author draws from it the most valuable reflections; one of which is, that the waters that once covered the earth may overflow it again. All that we possess at this day was possessed by the Roman world. The matters embraced and suggested by these volumes are therefore mighty: nor could any one handle them with greater power than the author, who has made them the theme of long study and deep research.

—

The Autobiography of Jack Ketch; with fourteen Illustrations, from Designs by Meadows. London: Clarton. 1835.

Talent, of which this volume contains undeniable proofs, both as respects author and illustrator, will not of itself render a book good or pleasant. Taste is also requisite, and this we think sadly violated in the handling, as well as the choice of the subject before us. From the portrait of the autobiographer, facing the title-page, all through to the end of the volume, one feeling of disgust has pervaded our perusal of it. Scenes of low and horrible amount cannot, when unrelieved by appeals to the nobler and finer sympathies of humanity, be regarded as instructive, even although they may be faithful. There is, to be sure, an amiable character introduced in Catherine, but it is a most improbable thing that any such being could be the wife of Ketch. The descriptions of the horrible events crowded into the work are made to be more revolting than necessary, even to their due effect, by a laborious use of extravagant phraseology. Take as a specimen the following passage:—

"I could not bear that look; but collecting all my force, thrust my antagonist from me, and dashed the knife into his throat—once, twice, and again the third time. My victim fell heavily to the earth, the blood gushing and rolling around him in frothy and bubbling profusion. I looked up, and the very heavens seemed to be, nay, were, rent asunder, and mingled blood and fire streamed with a hissing sound in the firmament!"

And this is no solitary example, but characteristic of the best portions of the book. There is, instead of a solemn lesson taught by such details, nothing but unutterable shudderings belonging to sights of butchery.

We observe that the author threatens the world with a publication of "The Ketch Papers," should the present work be favourably received: for be it known, that this autobiography comes down only to the period when Jack becomes a "finisher of the law." But we long not for them.

—

Three Years in the Pacific, containing notices of Brazil, Chili, Bolivia, Peru, &c. in 1831, 32, 33 *and* 34. By an officer of the United States Navy. 2 Vols. 8vo.*

This is one of the cleverest and most unpretending books we have read for a long time past. The author is a sensible, plain, straight forward, matter of fact man, who sees every thing with a cool, unprejudiced eye; has attached himself to facts, and divested his narrative of all political bias, and all vain theories. His object seems to have been the elucidation, by facts, of the social progress in South America, since those countries have shaken off the domination of Spain. There is much vigour in his descriptions, and the most delightful lucidity. The information he gives is in a great part new, although so much has already been published concerning the South American states. As in a commercial point of view these countries must interest us highly, the work before us is one of great and general utility. That it will be extensively read there can be no doubt, and we can assure our readers that, far from consisting of mere dry details, it is full of picturesque, animated, and highly interesting descriptions and anecdotes. To ourselves, it proved so attractive, that we read both volumes through at a single sitting, thereby depriving ourselves of sleep for a whole night.—*Court Magazine.*

—

Bowers's Naval Adventures †

"Five and thirty years' service and a lieutenant still! Marry, but this is the hardest of all fates, and in a land too where a sailor fills the throne! Lieutenant Bowers is as genuine a tar as we could wish to become acquainted with. He has all the characteristic marks of the true sailor about him, that is to say, a seaman from choice, and the love of adventure. His style is highly creditable to his talents and acquirements, and will surprise those who, like ourselves, will have learned to comprehend the extent of the attention which he was under the necessity of devoting to very different matters."—*London Monthly Review.*

Fine Arts.

STUMP-LITHOGRAPHY AND ZINCOGRAPHY.

A new mode of multiplying the *original* works of great artists, is valuable in proportion to its ease and effectiveness. Originality is a quality justly prized in a work of art. We prefer an original to a copy, as we should an author's own words to a translation; we have the artist's ideas developed in his proper style. The real lover of art would not exchange the slightest scrap of an etching by REMBRANDT, or of a sketch by any other fine painter, for the most finished engraving from one of their pictures. Etching was the only means open to the old painters of multiplying their designs; and it had these two objections—it required a considerable degree of mechanical skill and labour, and it obliged the artist to adapt his style to the material, so that his hand was not so apparent. The discovery of lithography gave to every artist who could handle a crayon or a pen the means of multiplying his sketches without altering his style. He had only to draw upon stone instead of on paper, and the printer did the rest. This facility has been made available to the production of *original* sketches by continental artists to a great extent; but British painters, who are less practised in the use of the crayon, have made comparatively little use of lithography for this purpose—which is one of its greatest advantages—and it has been chiefly employed by draughtsmen and copyists. This is in some degree accounted for also by the fact that many eminent artists, besides being so weak as to fancy that they would be descending from their dignity by having recourse to lithography, entertain the notion that by multiplying their sketches they would lessen the value of their finished pictures; which is certainly not paying their more elaborate works a very high compliment.

The success that attended the publication of his Sketches by Prout, has turned the attention of other talented artists to lithography as a medium for multiplying their works. John Lewis, whose scenes in Spain formed a prominent feature of the last water-colour exhibition, is about to publish lithographic fac-similes of his sketches of the Alhambra, made by Harding, Gauci, and others, under his direction, and partly by himself. By no other means could he have produced such perfect imitations of his first sketches: and by working on the stone himself, he is enabled to give, not only the precise effect he wishes, but his own peculiar touch.

Harding, whose fame is based upon his lithographic drawings, and whose practice as a draughtsman has combined with his original talent to give him an unrivaled mastery as a finished sketcher from nature, is also engaged in multiplying a selection from his "Sketches at Home and Abroad," in a style of lithography at once novel and beautiful in effect, and easy and rapid in execution; and in which he may boast of having produced the first successful attempt. We have called it stump-lithography, by way of distinguishing it from the crayon and pen-and-ink styles. It is an extension and improvement of the chalk manner, by introducing the use of the stump in blending and softening the tints. The effect is to combine something of the rich velvet smoothness of mezzotint, and of the purity and delicacy of aquatint engraving, with the vigour and crispness of crayon and the sharpness and decision of the ink touches. Thus every variety of texture as well as gradation of tint can be produced in one drawing. This style is susceptible of the utmost freedom of handling; and the ease and rapidity by which effects may be produced is surprising, and would alone entitle it to attention. Besides being a new feature in lithography, too, it extends its advantages to those artists who are unaccustomed to the use of the crayon in finished drawing, or are averse to the labour of working with the point. The specimen we have seen is remarkable for clearness and transparency of tint, brilliant effect, and a mellowness of tone that has rarely been seen in lithography. There is less than we should have expected of that smokiness which is in a degree inseparable from the use of the stump; neither is there such an appearance of smudginess as is observable, in the attempts at producing tints by rubbing, in some of Harding's Drawing-Books: in those he tried to accomplish with the ordinary chalk what is now produced with a softer material.

This mode of lithography has been often tried, but never successfully until now. The French could come no nearer than a coarse and smudgy mezzotint, produced by rubbing the tints of a drawing, after it was completed with the crayon, into one black smear, and then scraping out the forms in white and accenting the dark parts with touches of ink. But little labour was thus saved, and the effect was most disagreeable. In this new style, the stump is either used alone, in skies and distances, or is only applied to those touches of crayon which require blending into a mass; while in other parts, as the fore-

* Published by Carey, Lea, & Blanchard.

† Will be published immediately in Waldie's Select Circulating Library.

grounds for example, the crayon touches may remain in their original crispness.

To Hullmandel belongs the credit of having matured this new mode of lithography, which he first essayed twelve years ago. He has been greatly assisted, however, by Harding; who, perceiving the advantages promised by this addition to the powers of lithography, and being anxious to avail himself of them, went hand in hand with him in his experiments.

We have this week also seen a specimen of zincography, in which the defect of scratchiness, that we pointed out in the plates to Loudon's *Arboretum*, and which belonged to the material, as we suspected, is entirely avoided,—thus proving that for ordinary purposes zinc is as good as stone. Zincography only differs from lithography in the substitution of the zinc plates. These plates are granulated as the stones are; the same greasy chalk, or ink, is used for drawing; and the process of printing is the same. The advantages of zinc are, that the plates are much more portable and also cheaper than stone. Zinc also imbibes grease more greedily than stone; and, therefore, not only does the slightest touch print, but the plates consequently yield a much greater number of impressions than stone. These are points of preference, which for slight and ordinary chalk sketches, pen-and-ink drawings, and writings, render it superior to stone: but in the case of delicate and elaborate drawings its drawbacks would seem to more than counterbalance its advantages. Zinc does not appear to be susceptible of that deep grain so necessary for drawings to be highly wrought; and the cold leaden hue of the metal, so different from the pure warm neutral tint of the stone, makes it difficult for the artist to perceive the precise value of the tint he is producing. Unless these defects can be removed, it will be impossible to attain on zinc that perfect union of depth and delicacy which Lane has become so famous for producing on stone. Moreover, all the impressions we have hitherto seen from zinc have a dead and dull look; the dark tints are heavy and *muzzy*, producing a monotonous effect, very different from the variety and transparency of tint and brilliant effect of the finest specimens of Lane and Harding's lithography. This defect appears to be inseparable from the metallic substance.

Zincography is not a new discovery. Senefelder, the inventor of lithography, employed it; and sold his process to more than one person in London, where it was made trial of fourteen years ago. But zinc was abandoned for stone, on account of its defects, and that at a time when the difficulties of lithography were much more formidable, and its beauties far less conspicuous than now. As an adjunct to stone, as steel is to copper, zinc, however, is now likely to be extensively used for ordinary purposes, and where great numbers of impressions are required: the lithographers are all availing themselves of its advantages.

—

PICTORIAL PERIODICALS.

The embellishments of Allan Cunningham's edition of the Works of Burns, are now published separately, for the benefit of those who wish to ornament other editions. The *Landscape Illustrations of Burns*, will be completed in three parts, the first of which is before us. It contains Nasmyth's portrait of Burns,—which Allan tells us is the best and truest likeness of the poet, though it is too tame; a pretty view of the "clay biggin," where he was born, by Stothard; his monument, and three ornamental landscapes, by D. O. Hill,—who, with an ambition to emulate Turner, shows a poetical perception of nature, and power to do justice to it: witness the sun-light in the view of Lincluden College, and the stream and the distance in that of the Braes of Ballochmyle. His foregrounds, however, are very artificial; and he dresses up the dark and wild trusses of Scotia in the style of the trim foliage of Beulah Spa.

The popularity of George Cruikshank's *Scraps and Sketches*, and the success of Alfred Crowquill's imitations of them, has induced another anonymous etcher, who styles himself A Graver, to put forth a series of "facetious designs," as he complaisantly terms them, under the title of *Farcicalities*. They have neither the humour and point of the inimitable Cruikshank, nor the artist-like skill of Crowquill. Indeed, the graver does not hit off the comic points either of character, costume, or incident successfully. The only merit of the *Farcicalities* is in the punning titles; the best of which is "Ancient and modern *bill*-men,"—a group composed of a couple of soldiers armed with the weapon called a bill, a bill-sticker and placard-bearer.

Notabilia.

—

Agricultural Museums.—Much interest has been excited, and much utility is likely to be derived from the institution of agricultural museums; one on an extensive scale has been opened in Edinburgh by a Mr. Lawson, and several others exist in Great Britain. A mere catalogue of the names of the numerous and diversified productions of the wonderful globe we inhabit, could afford little interest; but in these museums short descriptions or notices respecting the properties of such as are most important are added, and the synopsis thus becomes useful. Mr. Lawson fitted up extensive apartments, and stocked them at great expense; they were first opened to the public in October, 1833; in the course of the season, the collection was inspected by upwards of two thousand individuals; it has since been greatly added to, possessing more than two thousand specimens of the various objects which interest the agriculturist, whether the produce of the soil, or the implements by which it is cultivated. Mr. L. has added a series of models; among these we notice in the catalogue "A shower machine for flower beds and fruit bushes, traps for vermin," &c.

To Extinguish Fires.—To extinguish fires one of the first objects should be the exclusion of all fresh, and the confinement of all burnt air; *suffocate* the flames, remembering that burnt air is as great if not a greater enemy to combustion than even water, the one, till again mixed with oxygen, can never support flame; therefore do not open doors and break windows, but shut all tight, stopping the tops of chimneys with wet rags, blankets, &c., and thereby confine a considerable quantity of burnt air.

Marl.—It is recommended in the Quarterly Journal of Agriculture, that marl be calcined before it is used; a hint for our Jersey farmers.

Itch Insect.—Drawings of the itch insect on a greatly magnified scale, have been laid before the French Institute. It has its forelegs strongly developed, while its hind quarters are comparatively feeble; it is thus enabled to burrow under the cuticle, and to make a road for itself as it proceeds.

Greek Antiquities.—The celebrated Bavarian architect, Von Klenze, has obtained from the Greek government an annual grant for the preservation of the antiquities of that country. Under his direction searches are making in the ruins of the Acropolis at Athens, and invalid soldiers are posted to protect them from injury. The modern fortifications of the Acropolis have been demolished, but the ancient works left. By this, it is hoped, these fine relics of art may be preserved from the dangers of a bombardment. The Parthenon will be cleared in three or four years; after which the Propylea and Erichtheon will be explored. Unfortunately M. Von Klenze cannot remain long in Greece, but must return shortly to Munich, to complete the numerous works begun there under his direction.

GRAND UNDERTAKING.—According to the last accounts from Alexandria, the barrage of the Nile is going on with the greatest activity. Upwards of 12,000 labourers are at work upon the two branches of Damietta and Rosetta, and the number will be further increased. Thus will be accomplished on this land of antiquity one of the most colossal undertakings ever attempted by human industry, and from which the prosperity of Egypt will become unbounded, by mastering the father of rivers, and regulating its inundations. This great work will be completed by the projected iron rail-road from Cairo to Suez.—*London paper.*

RELICS.—A very interesting little casket of relics has been sent us, by Mr. J. Doubleday, of Great Russell Street—a sort of *multum-in-parvo* memorial of the houses of lords and commons—the box itself is made from a beam of the painted chamber, with a brass escutcheon formed out of the relics of the chandelier of the house of lords—it contains an impression of the old seal of St. Stephen's chapel, from a charter of the time of Richard the Third, cast in lead from the roof of the building lately destroyed—and the authenticity of the materials is supported, by the order from the office of woods and forests, for their delivery, which has been offered for our inspection.

PORTRAIT OF COPERNICUS.—The original portrait of the famous astronomer, Copernicus, has been discovered at Dantzic, in moving a cabinet of curiosities and natural history.

HEBER'S LIBRARY.—The sale of the fourth part of Mr. Heber's library was concluded on Wednesday, and realised between seven and eight hundred pounds.

LAFITTE'S PICTURES.—The sale of M. Lafitte's pictures has terminated advantageously; the prices given were, generally speaking, rather high. The fine painting of the Virgin, by Andrea del Sarto, was knocked down at 42,000 francs (nearly 1,700*l.* sterling).

TURKISH JEST.—The khojah one day stole into a garden, and began to plunder it; he filled a sack with the turnips and carrots, and then began to thrust them into his bosom. In the midst of his work he was surprised by the proprietor, who furiously ran up, and seizing him, exclaimed, "What do you want here?" The khojah, at first quite confounded, at length mustered courage, and said, "A very violent blast of wind caught me up, whirled me through the air, and tumbled me down here." "Very well," said the gardener; "but (pointing to the vegetables) whence came these?" "Why," said the khojah, "the wind was so exceedingly violent that it tossed me about, and to steady myself I grasped these in my hand." "Good again," said the gardener; but can you tell me who filled this sack?" "Ah!" replied the khojah, "I was just considering how that question should be answered when you came."

HYDRO-OXYGEN MICROSCOPE.—The light which is used for the hydro-oxygen microscope is produced by the mixture of the two gases, which are ignited and projected upon a piece of lime, producing light of extraordinary brilliancy; this is the radiant, and the rays which flow from this point are collected by means of lenses, and condensed upon the objects. This light of overpowering brilliancy was first used by Messrs. Carey & Cooper, London. Some idea may be formed of the immense power of the illuminating lens, when the fact is known that various living objects are magnified from ten thousand to two millions.

IMPROVED METHOD OF TUNING PIANO FORTES.—Among the recent new inventions announced in Paris, is an improved method of tuning pianos, which is so simple that a person with a tolerable ear may tune the instrument himself. This is effected by means of a piece of mechanism formed of pressure screws, so that the large tuning key will be no longer wanted, and be superseded by one small enough to go into a lady's work box; and it is formed on such a principle, that the tone may be ascertained with the greatest nicety, and no risk of breaking the strings is incurred.—*Athenæum.*

DR. JOHNSON'S TOUR.—The original manuscript of Dr. Johnson's "Tour in Wales," which is the property of Archdeacon Butler, of Shrewsbury, is now in possession of Mr. Murray, of Albemarle Street. In this age of autographs it is a great literary curiosity.

MAGNA CHARTA.—A splendid illuminatod copy of Magna Charta is now in the market, which is stated to have been put together at a cost of five hundred guineas, the binding alone having cost fifty.

LIBRARY AT ALTHORP.—The library at Althorp occupies a suite of apartments on the ground floor, of which the entire length, from the extremity of the first apartment, called the long library, to that of the fifth, or last apartment called the Gothic library, cannot be less than two hundred and twenty feet. These rooms are filled to the very ceiling, and cannot contain fewer than sixty thousand volumes, now that the books have been removed thither from the mansion in St. James's place. They must have cost Lord Spencer considerably more than 200,000*l.* His lordship does not even mention his library in his last will; but the present earl, who was deeply and most affectionately attached to his father, although he does not appear to have devoted much time to the study of bibliography, is determined to preserve this imperishable monument of the fine taste and learning of his excellent parent entire.

POMPEII—*Naples, January.* The excavations at Pompeii have again produced very important discoveries. In the house called that of Ariadne a magnificent sacrarium has been found. The niche for the image of the tutelary divinity is at the back. On the sides are paintings of a Leda and a priestess, who is in the act of offering a sacrifice, assisted by a girl, who has the sacred utensils in her hands. Some ornaments, in a very elegant and delicate style, of a yellow colour on a red ground, are introduced as borders in the intervals of these representations.

In the house called that of Dædalus, the walls of a garden have been discovered. They are covered with magnificent landscapes. The first gives the prospect of a temple—which is extremely interesting on account of its details, and which seems to be dedicated to Apollo, whose statue stands near the entrance. On one side is a pond in which many wild ducks are swimming; and on the other a river in which are seen some cows. The second landscape is a delicious marine view in Sicily. Polyphemus is on the shore. Galatea, seated on a dolphin in the midst of the waves, seems to be listening to the singing of the Cyclops.

A combat of wild beasts in an amphitheatre is painted in large dimensions. A majestic bull is running from a lion which pursues him, but a tiger, more swift, has already seized him under the belly. Meantime a courageous *bestiarius* strikes with his lance a wild boar upon the snout, from which the blood spouts up. A little further off, a second huntsman has laid at his feet a bear, in whose body a spear remains, while another bear is flying in terror. Two stags are standing still, as if contemplating the destruction of their enemies. The compartments between the landscape and the hunting-piece are filled with figures of helmets, drums, and two small palms. The top of the wall is finished with some cornices of stucco, of elegant workmanship, and painted with various colours, which produce a wonderful effect.

ROYAL COLLEGE OF PHYSICIANS, *Feb.* 24.—Sir Henry Halford, Bart., President, in the chair. An interesting paper, by Dr. Macmichael, on the Harveian preparations, preserved in the museum of the college, was read. The preparations, which were exhibited in the gallery, consist of six large boards, upon which are laid the various blood vessels and nerves, carefully dissected from the human

body; in one of which the semilunar valves of the aorta are still distinctly to be perceived. They are supposed to have been made by the immortal discoverer of the circulation himself, or at least under his immediate inspection; and were presented to the college, in 1823, by the Earl of Winchelsea, the direct descendant of Harvey.

British Museum.—The receipts of this institution during the year 1833 have amounted to 23,220*l.*, including the parliamentary grant of 16,844*l.*; the expenses have been 19,484*l.*; leaving in hand a surplus of 3736*l.* Among the receipts is 462*l.* for the sale of museum publications, being 262*l.* more than the estimate. During the year, 2359*l.* was expended in the purchase of books and manuscripts, including 425*l.* for the price and framing of Egyptian papyri; 1840*l.* for antiquities and coins, with cabinets; and 1026*l.* for purchases in natural history. The estimated expenditure for the year 1834, will require a parliamentary grant of 17,017*l.*, the institution being provided with funds to cover the difference between that sum and the total estimated expenditure of 22,777*l.*

The number of persons admitted to view the British Museum has been more than doubled since 1831; it was in that year 99,912; in 1832, 147,896; and in 1833, 210,495. The number of visits to the reading rooms, for the purpose of study or research, was 46,800 in 1832, and 58,800 in 1833. The number of visits, by artists and students, to the galleries of sculpture, for the purpose of study, was 4740 in 1832, and 4490 in 1833. The number of visits to the print-room was about 4400 in 1832, and about 2900 in 1833.

New Mode of Embalming the Dead.—The public journals have already spoken of the new method of embalming, by which Dr. Tronihina, of Palermo, preserves a dead body for two months, free from any symptom of corruption. It has been said, that, without opening the body, he prepared a corpse in less than two hours, according to his method, and delivered it to the university, in order to remove every doubt of the efficacy of his proceeding. A letter from Palermo, of the 24th of May, confirms the result of the experiment upon a subject which had been embalmed two months and four days, and was in perfect preservation. Externally, a small incision, about half an inch in length, was observed in the neck; the face was rather dried, and also the toes, which seemed to be hard, and of a brownish colour; the pupils of the eyes were covered with a darkish wrinkled skin; the rest of the body retained its natural colour, and the perfect pliability of all the limbs. On opening the skull, the blood issued as red and as fluid as from a person just dead; the dura mater was white and shining; the mass of the brain beneath so fresh, that it could scarcely have been believed to belong to the dead: externally, it was gray, as usual; internally, throughout, white; and the veins as visible, red, and defined, as in a quite fresh brain. On opening the chest and abdomen, the heart and lungs where in the same natural state; and the intestines, which first turned black immediately after death, were precisely those that were in the best state of preservation—white, soft, shining, inodorous, though they contained some fluid matter which should have promoted their corruption. The liver, kidneys, &c. were quite fresh. The attentive silence with which all the spectators (about 500. persons, in the dissecting-room of the university) had regarded the examination was intermingled with true Italian vivacity, by long and repeated *evvivas* to the doctor.

Sweeps.—The chimney of a house in Devonshire Street, Lisson Grove, was found to be on fire, the other day; and a sweep, in the same neighbourhood was sent for to extinguish the flames. For this purpose he descended the flue from the roof; but when about half-way down, he stuck so fast that he found it impossible to move. His cries brought assistance; when it became necessary to break a hole in the chimney with pickaxes, &c. Full three quarters of an hour elapsed before he was released from his perilous and dreadful situation: he was found nearly suffocated, his clothes were on fire, and his person burnt in several places. Medical assistance was promptly procured, and he is now in a fair way of recovery.

Shocking Accident.—There is not, perhaps, on record, an accident attended by a more providential escape from instant death than the one we are about to speak of, which occurred at Pontefract, on the evening of Thursday, the 18th ult. A workman and a boy about fourteen years of age, an apprentice to Mr. Bevitt, iron founder, were engaged in making some alterations in a pump, in a well newly made, about twenty-three yards deep. The boy was holding a candle, and looking up to the mouth of the well at the moment that a pair of smith's tongs fell from the top. The tongs were, as usual, of iron, and one of the handles perforated the leather peak of the boy's cap, and entered just above the eyebrows, passing through the socket and the palate-bone into the mouth, opposite the second molar tooth, slightly wounding the tongue, through the muscles and skin, the iron appearing three inches below the under jaw, having just reached the sternum. In this situation was the poor boy, (with the tongs standing two feet above his head,) until the arrival of two medical men, several attempts having been made, in the interim, by the workmen to withdraw the iron tongs, but without effect. In the presence of the medical men, and by an immense force, they were extracted, and the lad appeared quite relieved. He afterwards walked nimbly up stairs to bed, and the proper dressings were applied, and since that time no untoward symptom has appeared. The eye seems to have sustained little injury.—*Doncaster Gazette.*

Serpent Stone.—Mr. Bennet, Jr. of Weymouth, has in his possession what has been sought after with the most persevering research by naturalists, but hitherto without success, the *head and shoulders of a fossil ammonite*, (serpent stone) in a wonderful state of preservation. The discriminating characteristics of the animal are as perfect as if taken from a recent subject, and present a specimen unique, and as beautiful as it is rare, of this interesting species, considered by many philosophers as an inhabitant of a former world, and at the present time totally extinct. The discovery will be of infinite importance in completing the class, genera, and species of this family, heretofore dubious for want of the desideratum now fortunately obtained.

Malthus.—The celebrated clergyman Malthus, recently dead at Bath, and the founder, or rather perfecter of a theory which has produced a greater sensation than all that has been written by other political economists, is scarcely cold in his grave before new aspirants come forward to claim a portion of the laurels which adorned his reputation. No greater compliment could be paid to the truth and profundity of the doctrines he advanced, however unpalatable and humiliating they may be to our vanity and pride. It now appears that Malthus, like Fulton, obtained his first notions from other writers, viz. Sir Matthew Hale, Ortes, an Italian, Townsend, several French writers, Moeser, a German, &c. &c.

Louis Philippe.—We take the following from the Spectateur of Dijon:—"A letter from Charolles states that on the 27th ult., towards the end of a patriotic dinner given in the town, at which a great many officers of the national guard were present, M. Vitrier, the clerk of a notary, wearing the uniform of the corps, rose, and brandishing his sabre, proposed in a loud voice, the following audacious toast—'*A celui qui plongera un poignard dans le sein de Louis Philippe!*' and, strange to say, not a single person present protested against this gross outrage. The public at large, however, are filled with indignation against the whole party, and the Procureur du Roi has instituted an enquiry into the matter."

Sisters of Charity.—The Lyons Journals give the following singular account of a rebellion by the Sisters of Charity attached to the Hospital of the Hotel Dieu in that city. One of the sisters was condemned to be expelled from the house for disobedience of the orders of the administration. The rest conceiving that the sentence was unjust, resolved to oppose its execution, and would not suffer the delinquent to depart. In the evening of the 31st ult., the Commissioner of Police went to enforce the order of expulsion. He, however, was immediately surrounded by the whole sisterhood, who attacked him with the two most cutting feminine weapons—their tongues and their nails. They even sounded the tocsin, and called the fevered patients of the house to their aid, so that the commissary was glad to escape from their clutches, leaving the refractory sisters and their *protégée* in possession of the field of battle.

Mrs. Siddons.—The London Courier furnishes the following hitherto unpublished statement from Mrs. Siddons, as her reasons for not having left more private details in her memoirs.

"The retrospect of my domestic life (made up of sicknesses, sorrows and deaths,) is too painful to my feelings to dwell upon; too sacred, also, and delicate for general communication. That of a less private nature, and of brighter events, would associate me with persons too august, too noble, and too illustrious, for me to presume to mingle them with the private details of so inconsiderable a person as myself; so that nothing remains for me to communicate, except mere common-place, and events already partly known. When I am laid low, however, even this imperfect sketch may perhaps have some interest for those very few persons who still survive to remember me; and by a very few, alas! can I or my particular qualities be at this time recollected."

Theatrical coloured Flame.—The Journal des Connaissances Usuelles gives the following processes for producing various coloured flames at theatres: flame of a red tinge, like carmine, is produced by burning three parts of alcohol with one of the nitrate or hydrochlorate of strontium. Red, the same proportion of cinnabar and alcohol; sulphate of soda with alcohol will produce the same light at a less intensity. Orange colour is obtained by the combination of alcohol with hydro chlorate of calcined soda. Yellow, by alcohol and nearly all the hydro-chlorates, in proportion of one of the first to three of the last. An emerald green, with alcohol and nitrate of copper; green, with alcohol and hydrochlorate of copper; blue, with alcohol and boracic acid.

Bellini.—Bellini, author of the music of the Puritani, has just been created a Knight of the Legion of Honour.

Campbell.—Campbell, the Poet has been for some time at Algiers studying the manners of the Arabs—preparatory, it is said to a poem which he has in contemplation; an announcement which all lovers of literature will be delighted to hear. It seems he has been enjoying, with all a poet's ecstacy, the novelties of Algiers and the splendour of its neighbouring scenery, which he has frequently explored in his rides among the hills, amid the magnificence of the lofty palm and banana, and the luxuriance of the vine, the fig-tree, and the myrtle. He is recovered from his illness, which was the effect of severe cold, and he returns by way of Tunis, Sicily, Greece, and Italy, to England, in the end of the month of May.—*Caledonian Mercury.*

British Surgery.—From the report of the proceedings of the institute of France, we learn that of fifty-seven members, forwarded by the competitors for the monthly legacy, the commission had decided that that of B. Phillips, Esq., of Wimpole-street, was entitled to the first plate. The subject of his essay was "a mode of curing aneurismal tumours, without ligature or the knife, by passing through the sac, one, two, or more, threads of silk."—*Medical Gazette.*

Illegitimates.—For the first time, a return was made in the last census of the number of illegitimate births occurring in Great Britain. There were 20,039 of them in the year 1830, in the proportion of 41 males to 40 females; as compared with legitimate births, they are reckoned as 1 in 18 for the whole of England and Wales. The minimum of illegitimate births is in Middlesex, and the maximum in Wales.—*Ib.*

Steam-Carriage.—M. Asda's steam-carriage departed yesterday from the Rue de la Chaussée d'Antin, and took its route through the Rue de la Paix, the Rue de Rivoli, and the Champs Elysées to Neuilly, where the ingenious proprietor was introduced to the king by Col. d'Houdetot, who after his majesty had minutely examined the construction and machinery, in all its details, entered the carriage, which ran a space of 1,600 metres in eight minutes. The king and queen congratulated M. Asda on the success of his invention, and presented him with a gold snuff-box ornamented with their initials, in testimony of their satisfaction. The carriage, in returning, took twenty-two minutes to run from the king's palace at Neuilly to the Place de la Concorde.

Homicide by a Physician.—A case was tried last week before the Correctional Chamber of Paris, involving a serious charge of homicide by imprudence. A medical man was called in to a child, three years and a half old, which was suffering under fever. A prescription was written, in which it was intended to order for a lavement eight grains of *sulphate of quinine*, with a few drops of laudanum. But the prescriber having just previously been engaged in a warm conversation with a medical friend concerning *acetate of morphine*, inadvertently wrote down that potent drug instead of the quinine in the prescription. The apothecary who dispensed it did nothing towards rectifying the error, except reducing the quantity to five grains. Scarcely was the lavement administered, when the child experienced a sinking sensation; the skin became of a violet hue, and was covered with large drops of perspiration. Convulsions ensued, and death with great agony in a few hours. The Court severely censured the apothecary for making up a prescription so palpably incorrect; but, owing to the mitigatory circumstances, the accused prescriber was let off with a fine of 600 francs, and costs.—*Medical Gazette.*

An Orthographical Sculptor.—The following is a genuine copy of a letter presented to the committee appointed by the Dublin Society for erecting a bust of the late Mr. Kirwan, the naturalist, who had been President of the Society:—

"To the Committee appointed to see Mr. Kirwan's bust dun by the Dublin Library Society. Plase your Honours, I seed no advertisement in the Freeman's Journald till yesterday, wherein I observed that all statuaries should send in their proposials for doing a bust of one Mr. Kirwan, what died lately in the toun. Now there's not a man in Dublin what could doo it cheaper nor neiter than I myself, and why? because I ave a boy that is just grown a man, and out of his time, named Tim, and can work as well as myself; and if your Honours wants to see any of my work, go any day to James' Church, where yule see a head stone whats lately put up over one Mister Banks, with death on one side, and Time with his our glass and sigh on the other. I did Death, and Tim did Time, and I defie any man to do them better. If your Honours intend to employ me, send to me at No. 23, Patrick's-close, one pair back, and if I or Tim be out, Misses Casee will take in any messuage."

Mr. Barrow no longer Mr. Barrow.—We have much pleasure in stating that the worthy secretary of the admiralty has been created a baronet, not only as a reward for his long public services, but as a distinction justly earned by his eminent literary and scientific ac-

quirements. To the honour of his majesty be it told, that it was altogether unsolicited.

Mr. Southey.—We have also reason to believe that the same distinction has been offered to Mr. Southey.

Dr. Robert Morrison.—Died on the 1st of August, at Canton, this most eminent of Chinese scholars. He had resided for many years at Macao and Canton as a protestant missionary; and to his learning and industry the world is indebted for the *Horæ Sinicæ*, the *Dictionary of Chinese*, and other works of great interest and value.

Fine Arts.—One of the most exquisite productions of modern art is a colossal group, modeled at Rome by a young French sculptor of the name of Itex, representing Cain after his sentence of reprobation, surrounded by his wife and children,—a work displaying the highest imaginative powers, and no less remarkable for knowledge of the art. This admirable work has now been twelve months in Paris, exciting universal admiration; but, unfortunately, the young sculptor has received no commission from government (and in France private patrons are rare) to embody his majestic design in marble. This effort will probably be left to the patronage of some English amateur. The group is of about the dimensions of the Laocoon, and is disposed somewhat after the *form* of Carew's Vulcan and Venus.

President of the United States.—Sir Edward Thomason has had the gratification to receive a letter from his excellency the President of the United States, expressing, in the most complimentary terms, his approbation of Sir Edward's medallic work, illustrative of the Holy Scriptures. The president has also done Sir Edward the honour to present him with a splendid portrait of himself, painted by the celebrated American artist, Colonel R. E. W. Earl. The president is painted in the military costume of the Revolution, as most appropriate, he being the Commander-in-Chief of the Army and Navy of the United States. On the back-ground of the picture is represented a distant view of the city of Washington, and on the scabbard of the sword is inscribed the celebrated sentiment given by the President, at the Jefferson birth-day dinner on the 13th of April, 1830—"The Federal Union must be preserved."—*Athenæum.*

Louis Philip's Patronage of the Fine Arts.—Louis Philip has lately sat to Gerard for his portrait, which is finished, and has been placed in the Louvre. Connoisseurs, however, say, that the artist has not treated the subject with his usual success, for though the portrait is a likeness, there is a stiffness and awkwardness about it, which have an unpleasing effect. The *artists*, in reference to this portrait, notices as a remarkable circumstance, that it is placed in the Louvre quite in an opposite direction to that where the portraits of Louis the Eighteenth and Charles the Tenth were hung. The King of the French patronises the fine arts to a greater extent than ever. When Duke of Orleans, he had a very fine collection of paintings, by Horace, Vernet, David, and various other modern artists, besides many of the old masters.

Quicksilver versus Steam Power.—The Earl of Dundonald, (better known as Lord Cochrane,) was examined, last session, before the commons' committee, on steam navigation to India. His lordship, among other matters, said he had projected "a substitute for steam," as well as "a new mode of propelling vessels." The substitute for steam is quicksilver; and he employs it "to produce power by exhausting one vessel and compressing air in another, thus forming an atmospheric *plenum* and a *vacuum*, which will produce the same effect as the plenum and vacuum formed by the generation of steam and its condensation. This plan, (superseding the necessity of carrying coals) he added, is peculiarly adapted to agitated water, like the sea. The plan may be wholly worked without fuel. The evidence and papers are too long for extract, but his lordship concludes this part of his evidence with stating, that "vessels filled with quicksilver apparatus might be provided with sails of the usual kind; there would be no smoke nor any fire, and there need be no indications from their external appearance that they are equipped in any other manner than as sailing vessels. As to the method of propelling *without paddle wheels*, (his lordship says) I should be happy to lay it before the committee, were my patent right secured."

Discoveries in India.—A French paper states, that a Russian traveller, M. Honigberger, who recently travelled through India, has made some curious discoveries. Besides a collection of antiques in marble, bronze, and sculptured stone, M. Honigberger has brought home some rare medals, two of which are of gold. One of these medals, which he found among the stone monuments, in the environs of Kabúl, may be regarded as an important discovery, as it bears the effigy *of* a king (Kadphises) with whose name, Europeans have hitherto been unacquainted; nor has it been mentioned in history; on the obverse is the bust of an old man. His head is bald, and there is no emblem of royalty about him. The head is surrounded by the legend "Kadphises Basileus," and some other letters are perceptible, but not very distinctly. The reverse exhibits the figure of a naked youth, whose head bears some remains of a cap. There is an inscription on this side, in ancient Pehlevi characters. Another medal which the traveller has brought with him, represents an Indian prince at full length, who has in his right hand a species of trident. The reverse bears the effigy of a man, by whose side is an animal with horns, supposed to be the Indian sacred cow. The other portion of M. Honigberger's collection consists of Bactrian medals in silver, a large size Demetrius, a small Euthydemus, and a small Hormis-das, all of which are in tolerable preservation.

Effect of Fear on a Tiger.—A correspondent transmits to us the following curious anecdote, which was extracted from a letter received from India:—During the dreadful storm and inundation in Bengal, in May, 1833, the estates of a Mr. Campbell, situated on the Island of Saugur, at the entrance of the river Hoogly, suffered so greatly, that out of three thousand people living on his grounds, only six or seven hundred escaped, and these principally by clinging to the roof and ceiling of his house. When the house was in this close crammed state, with scarcely room in it for another individual, what should come squeezing and pushing its way into the interior of the house but an immense tiger, with his tail hanging down, and exhibiting every other symptom of excessive fear. Having reached the room in which Mr. Campbell was sitting, he nestled himself into one of the corners, and lay down like a large Newfoundland dog. Mr. Campbell loaded his gun in a very quiet manner, and shot him dead on the spot.—*Examiner.*

Tapestry of the House of Lords.—On Friday, John Ware, the porter at the house of lords, who was charged at this office, a fortnight ago, with having feloniously obtained possession of a portion of the tapestry which formerly hung against the north wall of that building, appeared before Sir F. Roe, and was fully cleared from any imputation of dishonesty. It appeared Major M'Arthur's servant had no doubt acted very improperly in disposing of the tapestry without the knowledge or consent of his master, Major M'Arthur, but it appeared that he considered it of no value whatever, and sold it as he would have disposed of an old coat, or any other worn-out article. Sir F. Roe, therefore, agreeably to the pledge he had previously given, directed that the tapestry should be restored to Mr. Thorn. Mr. Thorn then expressed, through his solicitor, every desire to meet the wishes of the government by treating for the sale of the tapestry, and was willing to take from the government 300*l.* less for the tapestry than he considered he could make by it if he were

to exhibit it in public, or sell it to a private collector of valuable relics. A negotiation was entered into between Mr. Thorn and the gentlemen who have acted on behalf of government. Nothing, however, was decided.

Charles X.—The negotiations of the agent of Charles X, charged to purchase the grand domain of Nachod, situated on the frontier of the county of Glatz, encircling the magnificent castle of Ratiborschutz, with all its treasures of the fine arts of Italy, are still in progress. This domain belonged to Wallenstein, and latterly to the Prince of Picolomini. The exiled monarch is in a state of great activity, and his countenance is serene. The arrival of several strangers of distinction *has restored some hope to him and his attendants, who imagine that the ministerial crisis in two great states may exercise an influence advantageous for his cause*, and bring about, if not immediately and ostensibly, at least indirectly, a desirable amelioration.—*German paper.*

M. Thiers.—The reception of M. Thiers, as member of the French Academy, drew the crowd of curious folk from the chamber of deputies, and other scenes of usual interest, to the institute. So great was the crowd, that several of the illustrious were shut out. The *Garde de Sceaux* in vain endeavoured to get in; and M. Persil was, as usual, heard inveighing against the irreverence of the *press* for his person. M. Thiers rose at length, and indulged in a panegyric of the academy, which he chiefly lauded as contributing to that noble French *unity*—the peculiar characteristic and principal glory of the country. If the true object of human society be to unite together multitudes of men, to make them think, talk, and act as one individual, how magnificent must it be to behold thirty millions of men following the same law, using the same tongue, and marching together with the same step to the same end. He concluded by a touching allusion to Casimir Perier and Cuvier, both carried away in the pestilential time of the cholera. A comparison between the fates and the happiness of men of science and statesmen afforded the orator some happy phrases; and he terminated by giving his preference to the palms of Cuvier over those of Perier.

Billington and Catalani.—On the retirement of Mrs. Billington and Grassini, the first with her great powers totally unimpaired, Catalani burst forth like a meteor to the amazement and delight of the musical world. On looking back, we can only compare the sensation she excited, to that caused by the first appearance of that master-spirit of instrumentalists, Paganini. Lord Mount Edgecumbe does, indeed, bear his testimony against her "outrageous displays of execution," and adds an anecdote so droll, that there is no resisting it. It is given in a note to the opinion of a late noble statesman, who, hearing a remark "on the extreme *difficulty* of some performance, observed that he wished it was *impossible*."

"This *bon mot*," says Lord Mount Edgecumbe in a note, "has been given to Dr. Johnson—but I have reason to know it was said by the noble lord alluded to, of whom a similar one is recorded, confirming his distaste for music. Being asked why he did not subscribe to the ancient concerts, and it being urged as a reason for it, that his brother, the bishop of W*******'s did, 'Oh!' replied his lordship, 'if I were as deaf as my brother, I would subscribe too.'"

Steam Navigation upon the Danube.—Very gratifying accounts have recently been received of the progress of steam navigation upon this noble river. Under the auspices of the Austrian government, the whole region from Presburgh to the Black Sea, and even to Constantinople, a distance of *fifteen hundred miles*, has lately been opened to the influence of steam. This project was first undertaken by Count Szechengi, a Hungarian nobleman of great fortune and very enlightened mind, who, in quest of mechanical information, has made several journies to this country. Unlike the majority of the Hungarian nobles, the count has exhibited the most enthusiastic devotion to the improvement of his country, by the introduction of the useful arts, and his operations for improving the navigation of the Danube have been upon a scale so vast, as to entitle him to the appellation of the Bridgewater of the German States. After expending great sums from his private fortune, he has at length received assistance in his plans from the Prince Metternich. The most active exertions are accordingly to be made for the removal of the only formidable interruption which exists to the navigation of the Danube, the rocks at the rapids between Moldava and Glendova.

New Ball Projector.—A French agriculturist of the name of Billot, who has assiduously cultivated the mechanical arts, has invented a machine which will discharge two thousand balls, each eight ounces in weight, per minute, or one hundred and twenty thousand in an hour, and this without the slightest intermission. The action of this formidable machine may be arrested or continued at will; the balls are discharged from four different muzzles, which may be directed upon objects at a less or greater distance from each other, or they may be brought to bear simultaneously on one and the same point. Billot's machine, however, is not capable of carrying such balls a greater distance than one hundred metres (about one hundred and ten yards,) but he asserts that he can improve it, so as to impel the same balls a distance of four hundred and fifty yards, and with a velocity scarcely inferior to that imparted by gun-powder. In this case, he adds, that he will be obliged to increase its weight from eighty to three hundred and ten pounds. He does not employ either air, spring, or combustible matter in this new projectile; and his name is of some note among the French mechanics as the inventor of the two new levers, which are to be seen in the collection of the "Société d'Encouragement" at Paris.—*U. S. Journal.*

Africa.—At a recent meeting of the London Geographical Society, it was stated that it had been ascertained that some of the nations of the interior of Africa were comparatively in a state of civilisation, and that the governments under which they existed were stable. Lines of investigation had by the expeditions of various travellers, been marked out on the tract now sought to be more fully explored, from the east, the west, and the south; it was an expansion of those lines that was required; it was breadth in the future researches that must be given to those lines, and the angles contained between them must be filled up. The continent of Africa had already been penetrated 1,400 miles north from the Cape of Good Hope. The countries farther north were found to be the farthest advanced in the arts of civilised life. At the distance of 1,400 miles from the cape the arts of smelting iron and copper, and of carving in ivory, were known. Commerce had penetrated in that direction nearly 1,400 miles, and a trade to the amount of £1,600 had been carried on in one expedition, though under the disadvantage of the commodities of trade having been conveyed in wagons, and not by water.

Fossil Remains.—Some remarkable fossil remains have just now been discovered in Germany, at Sagan, Leignitz, about 120 miles from Berlin. One specimen is about two feet, of a large horn (probably of the ancient *Rhinoceros lopterkinus* of Cuvier,) and was imbedded at about the depth of twenty feet in a yellow sand. Another occurred near Soran, where a beautiful *Lepidopterolite* has been found at the depth of eighteen feet. The impression of the butterfly on the flotz is perfect; and it belongs to no living genus—resembling a moth more than a butterfly. A description in German, and an engraving of this interesting creature has appeared.—*London Lit. Gaz.*

Steam Engines.—Alluding to the statements which have appeared in some recent numbers of the Athenæum, relative to the condensation of steam, we are requested by a known correspondent to state, that an apparatus has been

constructed for the purpose of condensing the waste steam that would be otherwise blown off and lost, from boilers of marine engines, and thereby producing, by a very simple arrangement, a sufficient supply of fresh water for culinary purposes, and that a further supply can be procured from the same source, for occasionally filling the boilers with fresh water. It is stated that the apparatus in question answers the purposes required extremely well, and is not liable to objection on account of bulk or weight.

Fine Arts: Portraiture.—From the last Number (XIII) of the Repertory of Patent Inventions, &c. we observe that a patent has been sealed for a newly invented machine or apparatus, by means of which a perfect facsimile of the human countenance can be immediately produced, or the exact copy of a bust or sculptured figure, or of a living or other subject, taken. Another patent, of some interest to the literary, *alias* scribbling world, is for an improvement in steel or metallic pens; so that we may all become (a consummation devoutly to be wished) better writers.

Literary Intelligence.

The most important works which start with 1835, are two Dictionaries; one by Mr. Charles Richardson, the other by Mr. James Knowles, each possessing some distinctive feature of its own, although the palm must be yielded without hesitation to the first named work.

One of the novelties of the season is Mr. Colburn's improved edition of the Modern Novelists; a publication which is to consist of revised and illustrated editions of some of the best works of fiction, in a handsome shape, and at a moderate price. The external appearance of the first number is attractive; the printing and paper beautiful, and the execution of the engravings superior. The subject chosen to begin with is Pelham; one of the most successful works of the author, and in point of character the most unique and distinctly marked. The mixture of the dandy and the philosopher, the combination of the Benthamite and the man of a coterie, are new, yet true; and the lighter passages exhibit some of the most sparkling and successful satire of Edward Bulwer. Of course these observations apply to the gay; of the grave we think as we have always thought.

Besides the novel itself, we are presented with an introductory preface, which gives an account of the circumstances that turned Mr. Bulwer's mind to authorship, as well as of his first attempts, and his unsuccessful anonymous negotiation with a "celebrated publisher." Mortimer, or Memoirs of a Gentleman, the original tale on which Pelham was founded, follows the Preface; and is certainly one of the most singular curiosities of letters. We do not speak of its merit, but of the perfect germ which it exhibits of all this writer's qualities. The opening passages are those of Pelham, almost word for word; there is the accidentally foiled elopement of his mother; and, though not so full or so skilfully applied, the sarcasms on the system of education pursued at our public schools and colleges. In short, in this story of some five-and-thirty pages, we have in the lighter parts glimpses of his sparkle, his brilliancy, his satire, and even of his eloquence; in the serious, we see his exaggeration, his substitution of incidents for events, of devils for villains, and of startling and improbable charges for the truth and consistent development of a well-studied and natural course of action.

The sixth number of Social Evils and their Remedy, contains the best of the Rev. C. B. Tayler's tales we have yet read. The title is "Live and Let Live, or the Manchester Weavers;" the subject a strike, or rather a succession of strikes; the chief characters, a selfish unionist leader, who neglects his family for the paper and the pot-house—a weaver, who is a religious man and a teacher at a Sunday-school—and his friend, a deist, an influential man in strikes, but rational, and who is finally converted by Abel Cooper. In the introductory address, there is a little sinking of tone with regard to political economy, if compared with the author's former denunciations; and in the story itself he has consented to borrow some facts from Mr. Babbage, illustrative of the worldly evil of strikes.

The Annual Biography and Obituary, for the past year, contains eight-and-twenty memoirs, besides the usual brief notices of persons who had any kind of claim upon the public attention. The reading of the "Lives" is easy, and from the well-known character of the individuals, possesses a kind of personal interest; and the shorter "Deaths" have great variety.

The fourth volume of the History of England (in Lardner's Cyclopædia) is "continued from Sir James Mackintosh." It commences with the Spanish preparations for the invasion, and ends with the death of James the First. There is much specificality, and apparently a good deal of research, in this anonymous successor of Sir James. His style is neat, and his narrative distinct, without being very striking; but he has scarcely attained the mental height necessary for the historian.

A work has been published by the Rev. J. G. Lorimer, of Glasgow, called "The Past and Present Condition of Religion and Morality in the United States of America; an Argument not for Voluntary, but for Established Churches." It abounds in quotations from American writers, intended to show "the real religious state of the country."

There is to be published soon at Paris a Hieroglyphic Grammar, which, it is expected, will contain the conclusions established by Champollion himself and his learned coadjutors, and present the whole science of phonetic interpretation in a systematic and intelligible form, with rules clear and simple, and illustrated by plain and certain examples.

Mr. James Fennell, the writer of many interesting articles on natural history in the various periodicals devoted to that science, is preparing a work in which he proposes to display Shakspeare's knowledge of Natural History, Medicine, Chemistry, and other sciences.

Mr. Valpy has announced, in monthly volumes, a new and illustrated edition of Pope's Works; to be edited by Dr. Croly, with a new Life, Notes, and Critical Observations on each Poem.

Ancient Chronicles.—A Chronicle of the eleventh century has, it is stated, been brought to light, after having been supposed lost. It is the original MS. of the Cronique de St. Bavon; and has been found at Mechlin.

In the Press.

The Pilgrims of Walsingham, or Tales of the Middle Ages, an Historical Romance, by Agnes Strickland; the period that of Henry VIII.

A Journal of a Seven Years' Residence in New South Wales, by J. W. Ord, Esq., author of "England," a poem.

John Murray announces "A Tour to the Prairies," by Washington Irving; Specimens of the Table Talk of the late Samuel Taylor Coleridge, a History of Architecture, by the author of "Anastasius;" Barrow's Visit to Iceland; Laborde's Journey through Arabia Petrea; Excursions to the extreme southern and western settlements of the United States, by G. W. Featherstonhaugh; Scenes in Spain, by a Citizen of Louisiana; the Life and Correspondence of General Wolfe, edited by Dawson Turner and Robert Southey, Esq., and numerous new editions of standard works.

Sir Grenville Temple's Excursions in the Mediterranean, are nearly ready for publication in London.

From Fraser's Magazine.

COMTE D'ORSAY.

Comte D'Orsay, who stands opposite, was first ntroduced to the literary readers of these realms n the correspondence of Lord Byron, where he s designated as a *Cupidon déchainé*, and des-ribed as the ideal of a Frenchman before the evolution—that is to say, as a French gentleman, he breed of whom, gradually diminishing for nany years, has been at last pretty well ex-inguished by Louis Philippe, who certainly does ıot make any absurd pretensions to figure in the :haracter. His lordship was so kind as, in ınother letter, to describe Comte d'Orsay as one who seemed to have all the qualities requisite to ıave figured in his brother-in-law's ancestor's nemoirs—by which he means the memoirs of Count Grammont, perpetrated in or of the days of Charles II. by "Antonio Hamilton."

A dozen of years, wo for the time! have passed ıince these letters of Lord Byron were written; ınd the comte is nearer to that bourne from whence no traveller returns by what Tacitus would call "*ingens spatium humanæ vitæ.*" We nay freely translate the passage for the benefit of ıll concerned:

Believe me, dear comte, that twelve years do not pass,
And leave not some signs as they go;
They may fly with the wings of the hawk—but, alas!
They are marked by the feet of the crow.

But still the comte is in fine preservation, and nay be seen in all places where fine fellows do congregate as the observed of all observers. Hang it! after all, as Dr. Morriss (*i. e.* John G. Lockhart) says of old Potts, five-and-thirty is the very prime of life, and they know nothing of it who maintain the contrary. We appeal to several of the fairest judges in France or England.

The history of the comte, and his adventures n various courts, from that of William IV. or Charles X. to any other you would please to nention, in any quarter of London or Paris—in treet or rue, in place or square, whether St. ames's or Red Lion—has been written by so nany illustrious authors, especially of the heb-omadal press, that we willingly excuse our-elves from entering upon it here. He is the son f General Comte D'Orsay, commonly called, we elieve, Beau D'Orsay and brother of the beauti-ul Duchess of Guiche. As for the antiquity of ıis race, that is sufficiently indicated by its hav-ng given the name to the Quay D'Orsay; and when we recollect that Henry IV. and Louis XV. re (or were) content with being patrons only of ridges across the Seine, it is no small glory to hare with Voltaire the honour of being predo-ninant over a whole quay on its side. Our ıusiness with him is as an author. And yet we lo not know well how to inform our readers what ıe has written. He has most cleverly caricatured ınd peppered with *bon mots* all and sundry people who have come near him: the only Lord Byron hat ever gave the least idea of how the man eally looked, is by the comte. But where is his ook that his lordship took so much interest in? Where is the Journal, the extraordinary production, which gave "a most melancholy but true description of all that regards high life in England?" Where is the book which "a young Italian lady of rank, *tres instruite* also," namely, Guiccioli herself, was delighted with? Where is the Journal, of which Lord Byron says he never could have described what it attempted so well? To this effect, "Il faut etre Français."

Il faut être donc un de nos collaborateurs. Comte D'Orsay must send the Journal and its *continuation* to us; and having made him this proposition, we conclude by requiring the attention of all our male readers to the exquisite sketching of Croquis, our lady readers will need no bidding to look at what is under the hat of our Alfred, than whom, "since his majesty of the same name, there has not been a more learned surveyor of our Saxon society."

And so adieu—we shall no more say
About the whiskers of Comte D'Orsay.

From Blackwood's Edinburgh Magazine.

WILLIAM PITT.

PART II.

All the great questions of politics return periodically in England. For the wants, wishes, and passions of all generations are the same, and the liberty of England gives them all a tongue. The established church, the duration of parliament, the admission of Roman catholics to the legislature, the purification of the elective franchise, have all revolved through the circle of debate in successive times, since the days when England first had a constitution, the days of Elizabeth. They, or topics similar to them, will revolve while England possesses a constitution. But this arises less from the necessity of things than from the nature of debate. An English legislature has never existed, and never will exist without a conflict of parties. The new titles of faction are but a shifting of the oldest appellatives of party. There will always be found in a free legislature a body of men to whom freedom is a cloak for ambition; power is all in all; a ruined country over which they can rule, is better than the noblest national prosperity of which they have not the rule, that they may have the plunder. The political physiognomy of those men is known. Chiefly poor, and chiefly profligate in their personal lives, they have nothing to lose in property, and nothing to hurt in conscience. They are thus sent into the field prepared to accomplish the most violent change, by the most desperate means. This faction is small, cautious, and obscure, but it forms the *nucleus* of the revolutionary mind of the nation. It has a wonderful power of expansibility. It can sink altogether from sight, but when the hour for its evil is come, it is the cloud, no bigger than a man's hand, that distends over the whole political horizon, and pours down in a hurricane. This was the spirit of the American Revolution. Neither wrongs inflicted, nor rights denied, unfurled the banners of revolt beyond the Atlantic. It was the fury of a faction for power, inflaming

the passion of a populace for change. This was the spirit of the French Revolution. Neither domestic tyranny nor foreign insult sacrificed the king on the bloody altar raised to democracy. It was the fury of a faction for power, inflaming the passion of a populace for change. But in England, the character of the nation, grave, firm, and decorous, compelled this spirit to assume another shape. It never dared, as in America, to throw off the mask, and start from the supplicant into the revolter. It never possessed either the force or the effrontery, as in France, to exhibit its naked impurity before the people, and with the torch of a profane philosophy in one hand, and the cup of massacre in the other, lead off the new dance of death, secure of seeing every class and condition of man whirling after it in its grim festivity. Here, always vulgar, feeble, and obscure; nurtured among the lower haunts of the commonwealth, it has always found it politic to lurk under the various disguises of imposture, diffident of its means. It has appealed to the young, by their natural distaste for the wisdom of old institutions, to the generous by their scorn of political corruption, and to the patriotic by their zeal for the honour of the country. Thus, nearly every public man of decided ability commences his career by the adoption of a cause which his whole after life is employed in resisting. Thus we find men of the most powerful understanding, and the most patriotic views, the Chathams, Burkes, and Pitts, forced perpetually to contend against the imputation of having deserted principles, which they never held, of being traitors when they had only been betrayed, and of adopting for the bribes of office, the resistance to objects into which they could have been even ensnared only by the subtlest artifices of faction.

But in this decided and contemptuous judgment, we distinctly disclaim all idea of involving the body known by the general name of opposition. The changes of the public councils from year to year may throw into its ranks men incapable of political deviation. Some of the greatest names of our history have been numbered among the opposers of the cabinet for the time being; and it has been said, with a just knowledge of the English government, that the country might as well exist without a cabinet, as without an opposition.

Pitt had till now distinguished himself only as a subordinate. He had been content to follow the topics thrown out by the leaders of the house. But he had felt his powers, and he was now to lead. The first public question in which he thus advanced alone was parliamentary reform. There is strong temptation in the topic; it has always abounded in strong points of declamation, and it has always enlisted the popular feelings on the side of the orator. Of all the questions that have ever come before a senate, it is capable of the broadest colouring and the simplest tamperings with fact. But these were not the merits which won Pitt to its advocacy. The alleged venality of parliament during the long dictatorship of Walpole, its submission under the leaden sceptre of the Pelhams, and its apathy under the shifting of power from hand to hand of the Hollands, Grafton, and even Chatham himself, had roused popular contempt, and roused even more, the alarm of honest men and true patriots for the final fall of the legislature. From the accession of the first George to the commencement of the American war, in 1775, parliament had nearly abandoned all its influence in the government of the state. It was turbulent from time to time, but all its activity was impressed from without. The nation had begun to look upon it as a bed of justice, a French parliament, where the king alone was awake. But these were the feelings of quiet times, and the evil was endured. When the American war came to counsel the nation to look into its resources, whether of liberty or power, the singular adherence of parliament to Lord North generated a new order of suspicion, embittered by a new order of resentment. Exaggerated accounts of public disaster, acting upon feelings unused to disaster of any kind, turned all eyes upon the conduct of that legislature, from which they were constitutionally taught to expect defence. They looked in vain. The aspect of the war was darkening day by day, the arms of England were tarnishing in every quarter of the globe, allies were turning into neutrals, neutrals into open enemies. The star of the empire was palpably going down; but the minister and the parliament were still as firm allies as ever. The cry of indignant alarm rang from corner to corner of the land, but within the walls of the legislature all was confidence. Remonstrance was the language of every portion of the people; but the minister answered it by a majority. To drive Lord North from power now became the universal object; but before they could seize the criminal they must storm the stronghold. The apathy of parliament was attributed to its corruption, its corruption to the form of choosing its members; and men of the highest sincerity pledged themselves to a measure, whose avowed purpose was purifying the legislature, at once to rescue it from national odium, to restore it to constitutional energy, and to make it an instrument of national rights, instead of being a rampart of ministerial ambition.

It is not our desire to palliate the failings even of Pitt, though his fame is the fame of his country. Like inferior men, he was open to the errors of political inexperience, and had to learn from time the lessons that time alone can teach. In this zeal for parliamentary reform of a senator of twenty-three, much must be allowed alike to the ardour of youth, the temptations of party, and the rashness of immature knowledge. But those are not the charges brought against his memory. He is accused, in the bitterest tones of party, with abandoning his views. Let that be his panegyric,—let it be told to his honour that, when he saw the necessity for the change at an end, he gave up the change; that when parliament had, by the force of circumstances, resumed its full activity, he did not obstinately persevere in the regimen which was fit only to rouse it from a state of torpor; in fact, that in the midst of the French revolution he did not revolutionise England. Ten years had made the whole distinction. Before that period, brief as it was, popular

opinion made but a slight impression upon the legislature; after that period popular opinion threatened to become the tyrant of the legislature. The influence which was nearly dormant in the time of Lord North, menaced the constitution with overthrow in the time of the Pitt ministry. The fall of monarchy in France had removed the barrier between the populace and power; the republican spirit of France propagated republicanism in every kingdom of Europe. Was this a time to add to the popular predominance in England? The old bugbear had been the preservative; it was quietly laid in its grave. The new destroyer was democracy; was it folly to meet the evil with new weapons; to reject the insidious compromise between personal popularity and national downfall; to curb the license of the multitude as steadily as of old, the domination of the minister? This was the head and front of Pitt's offending, and for this, undying honour be to his grave. Hating corruption, he not less hated tumult; kindling the vigour of the legislature, he would restrain its violence; the champion of true liberty, he taught Englishmen to scorn the labours of revolution.

In 1782 the Rockingham cabinet was formed. The premiership had been first offered by the king to Lord Shelburne; but that nobleman declining it, and stating that, *for the present*, the Marquis of Rockingham alone could fill the situation, his majesty assented. Shelburne and Fox were named the secretaries of state, Lord John Cavendish was chancellor of the exchequer, Lord Camden president of the council, Conway commander-in-chief, Keppel first lord of the admiralty, and Dunning chancellor of the duchy of Lancaster. Thurlow was continued chancellor.

On the 7th of May, 1782, Pitt brought forward his motion for parliamentary reform, having been appointed for this purpose by the general meeting of the friends of reform at Richmond House. His speech recapitulated the alleged grievances of the representation. He declared that his object was simply to bring back parliament to its original system, and, by offering a reform at once moderate and substantial, relieve the state from those decays which threatened to destroy "the most beautiful fabric of government in the world." He pressed heavily on the palpable difference between the public opinion and the votes of parliament during the American war, and argued that this hazardous anomaly was to be rectified only by restoring purity of election. He enumerated boroughs which had lost all connection with the principle of constituency, places without trade, population, interest in the country, or any stake to entitle them to the distinction of sending representatives to parliament. At the same time he admitted, that "the corruption of which he complained was the natural effect of the wide limits of our empire, and of the broad and great scale upon which its operations were conducted; it had grown with our growth, and strengthened with our strength, but it had not decayed with our decay. It had supported a late administration against all the consequences of a mischievous system and a dismembered empire." He concluded by moving for a commitee to examine into the state of the representation. The motion was lost by 161 to 141.

The sweeping measure which has so lately passed in parliament renders this topic new once more. We have not come to its actual working yet, for no instantaneous change can be wrought upon the mind of England. We must speak of it still in theory: the future generation alone may feel the weight of its penitential practice. Examining it in the dispassionate light of a problem in political philosophy, and casting aside the prejudices alike of its advocates and its opponents, we can alone come to the true conclusion. The only legitimate objects of a change in the representation can be, to render the elector less corrupt, and the representative more efficient. Thus the question divides itself into two—the corruption outside the doors of parliament, and the inactivity within. Has Lord John Russell's bill met the first evil? All men of honesty and honour will acknowledge instantly, that the corruption of the elector is at once a personal crime and a public injury; for it implies in the elector a breach of conscience, and in the representative a readiness to take the bribe which he gives. He who buys will naturally sell. The dealer in corruption advertises himself. But has the reform bill increased or diminished the facility of electoral corruption? It has increased that facility on an enormous scale. By the ten-pound qualification, it has expressly lowered the whole elective franchise, and lowered it to a class peculiarly corrupt and *agitating*—the little shopkeepers. It is a principle of common sense, that the higher the qualification, the less liable to corruption. If the voters of a county were confined to a thousand gentlemen of a thousand a year each, they would be less accessible by corruption than a thousand of a hundred a year each, from the obvious circumstances, that they would be more conspicuous objects in the eye of their neighbours, have more character to lose, possess higher habits, and, even if they were inclined to sell themselves, would be less within the power of purchase, from the higher amount of their price. If the franchise were lowered from a hundred to ten pounds, it would fall constantly into a lower class, more easily purchaseable, from their being less marked by society in their proceedings, and from the smaller sum necessary for their purchase, the increase of their numbers not being in any degree a set-off against the decrease of the bribe. If the franchise were, again, lowered to five shillings or five farthings, it would at each descent sink into a still inferior class, more capable of corruption, and at a still cheaper rate. Of course, in these remarks, it is not meant to say that a poor man may not have as proud a spirit and as pure a conscience as a rich one. We speak not of the individual exception: we take society on its broad scale, and there we are fully entitled to pronounce, that poverty and obscurity are strong temptations to the readier ways of gain.

And this principle runs through every portion of the state. Why are members of parliament required to produce a qualification, three hundred a year in land for the borough member, and six hundred for the county member? Certainly not

for the absurd object, in a country essentially commercial, of excluding all but the agricultural interest;—certainly not of restricting the care of the constitution to the wisdom of the country gentlemen; but for the purpose of securing a house exempt from the actual wants which make corruption easy and acceptable. Property in land was justly deemed the best standard for this purpose, as being the most secure. The sum now appears small; but three hundred a year, even a hundred years ago, was equal to twice the sum now, and was a considerable fortune. The opulence of commerce floats and fluctuates, the landed property was permanent, and formed a solid ground of character. The clear intention of the law was, that men entirely and permanently above personal necessity should alone constitute the legislature.

But it is asserted that every man has a *right by nature* to a vote. No more than he has a right by nature to the British constitution, or the empire of China. A province in the moon would be as much the natural result of being born with two arms and two legs. All political rights are *conventional*. Man, by nature, has a right to nothing but what he can earn by his labour. Society is even so far from giving an enlargement of his natural right in this most essential instance, that it restricts the right. The savage in the wilderness has a right to all that he can hunt, fish, or till. The man of society is narrowed in all those rude privileges, his labour is put under guidance, his products are limited, his enjoyments are ruled, according to the general uses of the community. The whole revolutionary theory on this head is one successive blunder. In fact, when man has once coalesced with his fellow-men, all natural rights are rapidly extinguished. They are exchanged for one of more import than them all, but wholly growing out of his new association, the *right of being protected*. But this protection argues no right to civil office. On the contrary, society in all instances where wisdom has made the laws, enforces the demand of a qualification. The lawgiver knows that man is not, by nature, fit for power. He demands, therefore, that he shall exhibit his acquired fitness, before power can be entrusted to his hands. Prior to Lord John Russell's bill, that fitness was required in this country in various shapes, arising from various circumstances of life and history; in some instances, descent from a line of freemen, in others an apprenticeship of a certain number of years, implying regular habits and approved character; in others, purchase, which implies property, the chief stake required, and wisely required, for the security against the betrayal of trust, a negligence to public interest, or an abuse of power. All these are now merged in one, the ten-pound qualification; too low to constitute property, too high to let in what its authors call natural right; and after thus sinning against both principles, abolishing the whole system of securities derived from location, birth, industry, and character.

The new theory of parliament is equally a blunder. It pronounces the two houses "the great council of the nation, the supreme deliberative assembly, &c.; and its purpose is especially to make the house of commons the source of all government, the very head of active authority in the state." This is, in every point, a gross constitutional error. The king and his ministers are the "'great council of the nation." The parliament is simply the guardian of the constitution. The king and his ministers, having in their hands all the questions of policy, the making of war and peace, the greatest of all, with every other function of public rule, are the only *government*. Whatever body in the state possesses the *initiative* in public questions, is essentially the government. The business of the house is not to govern, but to guard. Our ancestors had too much the advantage of their posterity, to conceive the monstrous proposition, that the promptitude, secresy, or deliberation essential to the conduct of an empire, could be found in an open assembly of three hundred, or of six hundred and fifty-eight, more than in an assembly of as many millions. Its office is, therefore, not to originate measures of exigent counsel, but to check their invasions of national liberty; not to tyrannise, by absorbing the whole power of the state, but to *stand between the nation and tyranny*, let it come from what quarter it will, and with equal vigilance, whether from the cabinet or the multitude. And for this purpose it possesses one branch of power, and but one, the command of the national purse. Without money nothing can be done; and the minister who fails to justify his measure to the house, is thus instantly stopped in his career. It is true that, practically, to prevent subsequent disputes, the opinion of the house is asked in a variety of public affairs before their execution. But this is merely matter of ministerial convenience. The cabinet are not enjoined to make these communications, to ask this advice, to awake these debates. They may act, in the infinite majority of public transactions wholly on their own responsibility. The judgment of the legislature cannot anticipate, it must follow; it cannot prohibit, it can only punish. The king in council is the primary agent, the parliament is only a check on the minister if he comes to them for supplies; or, if he should not, a tribunal to impeach him for his negligence, incapacity, or treason.

The true office of parliament being thus defined, the only question at all times can be, on which side the danger of the constitution is most imminent. Two centuries ago, it was menaced most from the throne, and Charles, reigning for eleven years without a parliament, was, though a mild and even a reluctant despot, a despot in the full sense of the constitution. Yet we see with what terrible energy the power of the populace distended itself, even in those times of hereditary veneration for the throne. Under Charles the constitution slept. Under the parliament it was brought from its slumbers only to be torn to pieces. Under Cromwell it was completely lost to sight, buried, to all human view, in a returnless grave.

Time obliterated the lesson, and popular fears and popular oratory, for the hundred years that followed, could see no enemy but the prerogative. They were in perpetual terror of being crushed

by the little pinnacle of power above their heads, while they walked fearlessly on ground every foot of which was charged with the materials of explosion. The French republic at length showed the power of the populace, and the fears of all who were honest in their zeal for the constitution, fixed themselves in that gigantic shape, which starting up from beneath their feet, grew hourly, until its height overtopped all the ancient forms of authority, and menaced universal change. The war saved us. The wisdom of Pitt in that war raised a barrier, which the proud foot of Jacobinism dared not overleap. The clamours of conspiracy were extinguished in the magnanimous voice of the nation, called to buckle on its armour, and contend for the final stake of human kind. In that hour of general European difficulty, England, the true Achilles of a more authentic history, and a nobler time, forgetting all her injuries, all the discontents and slights of false friends and jealous rivals, saw nothing but the common cause, grasped the spear and shield, given by a higher than human hand, and springing on the last rampart of Europe, by her single shout restored the victory.

The point on which the wisdom of Lord John Russell's bill turns, is whether England is now in more peril from royal or from popular domination. A mob may be as much a tyrant as the most unbridled despot of Tartary. Whether was the English king or the English populace advancing more rapidly to illegal power? What man in his senses can hesitate to say, that the rapid increase of popular influence during the last twenty-five years has totally thrown the prerogative into the shade; that the true enemy which national freedom had to dread was the sovereignty of the populace; and that the reform bill, by giving that populace an extraordinary addition to its influence over the parliament, has actually to that full extent hazarded the safety of the constitution? If we are to choose between tyrannies, let us have the tyranny of a monarch; the rigid rule of a Peter or a Nicholas, rather than the sanguinary license of a Jacobin Club and a Robespierre; the iron sceptre of a fictitious divine right, rather than the capricious fury of popular passion, cupidity, and revenge, making a law of its will, and the anarchy of the million administering its wrath in the *nistralade* and the guillotine.

The present state of the representation in Great Britain and Ireland will be the clearest evidence of the formidable growth of this new authority.

ENGLAND.

In England, 40 counties return 144 members—the number of registered voters in 1832 being 344,564. Cities and boroughs, amounting to 185, return 227 members—the number of registered voters in 1832 being 274,649. Total, 471 members, and 619,213 voters.

WALES.

In Wales, 12 counties return 15 members—the number of registered voters in 1832 being 25,815; 14 districts of boroughs return 14 members—the number of registered voters in 1832 being 11,309. Total, 29 members, and 37,124 voters.

SCOTLAND.

In Scotland, 30 counties return 30 members—the number of registered voters in 1832 being 33,114; 76 cities and boroughs return 23 members—the number of registered voters in 1832 being 31,332. Total, 53 members, and 64,446 voters.

IRELAND.

In Ireland, 32 counties return 64 members—the number of registered voters in 1832 being 60,607; 34 cities and boroughs return 41 members—the number of registered voters in 1832 being 31,545. Total, 105 members, and 92,152 voters.

Thus in Great Britain, while the members for counties are but 189, the members for cities and boroughs are 364! The case is stronger still with respect to England, the most influential portion of all. There the county members being scarcely more than one-half the members for the towns, or 144 to 227! But even this view hardly shows the extent of the hazard. The population of the counties but slowly increases, while that of the towns is accumulating with hourly rapidity; the county population is, from its nature, nearly stagnant in point of political impulses, while the town population is perpetually urged to political movements, is constantly employed in speculations on public affairs, and from its habits of trade and manufacture, and its closer state of intercourse and communication, possesses tenfold the applicable power, and political excitability, and condensed force of the remaining population.

This is the true evil of the coming time, and the unanswerable argument against the measure. We are aware of the crowd of inferior objections urged, and justly urged, against its immediate working, its exclusion of nearly all but men of vast landed property, or furious demagogues, from parliament; thus shutting the doors upon nearly the whole class who once made the lights of the legislature, the Pitts, Burkes, Sheridans, Foxes, and every man who has but knowledge and genius to offer as his claims; its setting up the representation as a prize for the most extravagant popular charlatanry, until no man can enter parliament but with a pledge and without a character; its actually binding parliament down by the resolutions of every election rabble, and transferring all deliberation from parliament to the roarers of the hustings. All are present evils, and of a dark dye; but the great overwhelming evil is to be felt only in the course of years; the utter absorption of the whole power of parliament by the population of the towns, establishing a direct republican influence as the paramount authority of the house of commons, converting that house into a house of delegates, stripping the constitution on that side of all power, and, through the breach, invading the crown, the peerage, the cabinet, and all the few feeble remaining bulwarks of the monarchy.

Pitt had now evidently taken the lead of the patriotic party. Foiled in his attempt to obtain the reform of the electors, his next effort was to obtain the reform of the representative. This was now to be done only by restraining the term

of his power, and thus compelling him to return more frequently to his constituents. On the 17th of May, within ten days after his speech on reform, he powerfully sustained Sawbridge's motion, for "shortening the duration of parliaments." It was lost by a majority of 149 to 61. Still he was not exhausted. Within a month he came forward again, in support of Lord Mahon's bill for "preventing bribery and expense at elections." This he pronounced to be no innovation, but a restoration of the old constitutional practice and principle. Pitt has been named an apostate for his subsequent resistance to similar measures. But the ground of his change has been already assigned. He was no more an apostate than the man who lights a fire on his empty hearth is an apostate for extinguishing it when a barrel of gunpowder is brought into the room. What was safe in 1780 might be ruinous in 1790. It is observable, in honour of his sincerity, that his adoption of the subject must be exonerated from all personal motives, by the circumstances of his position. He was not, on the one hand, a factious tribune haranguing for place. He was not, on the other, a falling minister throwing out a lure for popular support. Attached to Lord Shelburne by personal regard, and to the ministry by public views, he was not labouring to float into possession on the wreck of their popularity. Politically hostile to Lord North and the opposition, whom he had strongly contributed to overthrow, he could look for their combination as little as he had reverenced their power. The ministry were in the full tide of their influence. No reverses had shaken them. They stood on a height altogether beyond the desultory shock of a young orator, yet known to the country only by name. Every argument is on the side of the assertion, that in those efforts Pitt was perfectly sincere, that he laboured to achieve a service for his country, and that he had no thought beyond achieving a service for his country.

But the position of his antagonist was more questionable. That antagonist was Fox. The later worshippers of that remarkable man must have looked back with astonishment at the versatility of his principles. He boldly pronounced the bill an attempt to draw an unnatural line of separation between the constituent and the representative. Was the house to lend itself to a system for circumscribing the few remaining privileges of the electors? "Nothing could more enhance the natural independence of English electors more than the power of *obliging their friends*." As to the expenses of the candidates, he "was not fond of recurring to those times when representatives were paid for their trouble by those they represented. That house was then of little or no weight in the government of the country. And those arguments which referred to such ancient usages could be of no other use than to put the house in mind of its ancient insignificance." On this occasion Pitt succeeded by 60 to 59. But an important clause being rejected in the committee, the bill was withdrawn.

Pitt's official life was now to begin. The Rockingham cabinet contained jarring elements. The clear, dexterous, and accomplished mind of Shelburne already contemplated supremacy. The loose, but powerful genius of Fox, scarcely enduring a rival, disdained to suffer a superior. The character of the Marquis of Rockingham, supine but estimable, and conciliating yet dignified, restrained open jealousies; but his death, in July 1782, dissolved the cabinet at once, and gave its quarrels to the world.

The king instantly renewed the offer of the premiership to Lord Shelburne. It was accepted. Fox and Lord Cavendish angrily threw up their offices. Conway openly charged Fox in the house with disappointed ambition. Fox, thus forced to explain, declared that the motive for his resignation was the appointment of Lord Shelburne as first lord of the treasury, instead of the Duke of Portland, the natural successor of the Marquis of Rockingham in the confidence of the whig party. This acknowledgment brought down a storm of reprobation, in which Pitt led the way. He charged Fox "with hazarding the honour of the government for personal motives, and the safety of the country for pique. With the phrase of 'measures and not men' perpetually on his lips, he had acted on the principle of 'men and not measures.' He had thrown up office to embarrass the minister the moment he found that he could not degrade him, and rather than narrow the extravagance of his ambition, he had abandoned the sincerity of his principles, and when he found that he could not rule the government with unbounded sway, under the mask of another, he adopted the daring resolution of flinging it down and standing forth in the attitude of an assailant." Thus began the open conflict between those two eminent men, which lasted until they were in their graves.

Pitt was now presented to the nation as a minister. The resignation of Fox and Lord John Cavendish made way for new appointments, and Pitt was named chancellor of the exchequer, at twenty-three. Thus, scarcely beyond boyhood, he rose at once to the most difficult office of the state, to the conduct of the whole finance of the empire, and the leadership of the house of commons. None of the chief statesmen of the century had obtained power at his age, nor had obtained it but through the gradations of office. Godolphin, Oxford, Bolingbroke, Walpole, Pelham, Chatham, North, and Fox, had all served in subordinate offices. Pitt alone stood in the foremost rank at his first step, and every subsequent hour of his life justified his sense of his unrivaled talents, and the proud prognostics of his country.

The reign of the Brunswick line was characterised by a feature new to English government. Their predecessors had retained a large portion of individual power. The Brunswick reign was the reign of ministers. Realising for the first time the true theory of the constitution, that all power should be responsible for its acts, the acts thenceforth originated with those who were personally responsible. Thus the hazardous collision of the national feelings with the royal privilege of impunity ceased to exist, and the fall of a cabinet was the substitute for a revolution. Yet the personal inclinations of the monarch mus-

always be of high importance, and it was remarked that during the long reign of George III. in all his feelings the most *constitutional* of monarchs, no cabinet was able to stand its ground against the personal impressions of the king. The Rockingham cabinet was forced upon him, and it was on the point of perishing even before the death of its premier; it was extinguished within a year. The Fox cabinet of 1806 was forced upon him; it too was on the point of perishing before the death of Fox, and it too was extinguished in a year. The king's displeasure against Fox was among the most prominent causes of his exclusion during a whole life of the public display of great abilities, and unwearied appetite for power. The king's personal respect sustained Pitt against the early difficulties of his ministry, successive majorities in parliament, and the loudest outcry of party through the nation. His personal attachment upheld Lord North in his ministry, and protected him when out of it. The gentleness and good-nature, added to the unquestionable integrity of Lord North's character, endeared him to the sovereign; and this regard he seems to have extended to the members of his cabinet. A little anecdote exhibits this disposition in its most graceful point of view. Early in the period when the fall of Lord North's ministry was inevitable, the king received Lord George Germaine in his closet for the purpose of giving up the seals of his department. Germaine was a man of elegant manners and striking abilities, a powerful debater, and possessing great weight in the cabinet. The stain fixed on his character by the battle of Minden, and the sentence of the court-martial which followed, had been partially cleared away by his parliamentary distinctions, if not still more advantageously by the gradual public acknowledgment, that his disobedience on that memorable day had arisen much less from personal timidity than from disgust at the arrogance of his German commander. Lord George's resignation of the American secretaryship was the first direct omen of the breaking up of the ministry, and the interview was marked by unusual emotion on both sides. The king, after expressing his regret for the disastrous state of the cabinet, and his sense of Lord George's services, asked, "if there was any thing he could do, to express his sense of them, which would be agreeable to him."—"Sir," was the answer, "if your majesty will raise me to the dignity of the peerage, it will form at once the best reward to which I can aspire, and the best proof of your approbation of my past exertions in your affairs." "By all means," the king replied, "I think it very proper, and shall do it with pleasure." The conversation continued, in the course of which Lord George requested that the creation should be of a viscounty, for if raised only to the barony, "his own secretary, his own lawyer, and his father's page, would all take rank of him." The king, struck with this curious combination, enquired into the particulars. "The first," said Lord George, "is Lord Walsingham, who was long under-secretary in my office, when Mr. De Grey. The second is Lord Loughborough, who has been always my legal adviser. The third is Lord Amherst, who, when page to my father, the late Duke of Dorset, has often sat on the braces of the state coach that conveyed him, as lord-lieutenant of Ireland, to the Parliament House in Dublin." The king smiled, and added, "What you say is very reasonable; it shall be so, and now let me know what title you choose?" Lord George asked permission to take the title of Sackville, as having been compelled to renounce his family name for the estate of Drayton left to him by Lady Betty Germaine. "I quite approve of that idea," said his majesty, "and if you will state to me your title, I shall write it down myself, before we part, and send it directly to the lord chancellor." The king immediately placed himself at a table, took the pen and ink lying upon it, and having committed the viscounty to paper, asked him what barony he chose. Lord George answered, Bolebrook, in Sussex, as being one of the most ancient estates belonging to his family, and contiguous to Buckhurst, the original peerage conferred by Queen Elizabeth on his ancestor, the first Duke of Dorset. When the king had written the name, he rose, and with the kindest expressions, mingled with concern, ended the interview. The character of George III. was so often charged with harshness and impatience, that it is only justice to a sovereign estimable in every point of view, to give a trait which exhibits so much personal urbanity and royal condescension.

On the accession of the Fox ministry in 1806, the caricaturists amused themselves with depicting the sudden change of the whig costume for the dress of the levee. The same metamorphose had amused the public fourteen years before. When the house of commons met for the despatch of business, on the change of administration, every eye was turned with wonder to the treasury bench. Lord North had so long kept possession, that to the rising race of members it had seemed his by inheritance. But a new tribe were now masters, and it was equally difficult and ludicrous to discover the members of the old opposition in the new equipment of office. At that period it was the custom for ministers to attend in full dress. On one side Lord North and his friends were scarcely to be recognised in their opposition dishabille, great coats, frocks, and boots. Still more astonishment was excited by the spectacle of the old file of opposition throwing off their usual habiliments, and instead of the ancient blue and buff, which often bore signs of long service, and in the instance of Fox, was remarkable for its negligence, flourishing in lace and embroidery; with silk, swords, and hair powder. The change was the subject of frequent pleasantry in the house, but a remark of Lord Nugent's one night threw it into universal laughter. Just as the new ministry had first made their appearance, it happened that his lordship's house in town had been broken into, and robbed of a variety of dresses, and among other things many pairs of laced ruffles. The particulars were advertised, and the robbery, of course, was generally known. Coming down to the house immediately after the recess, a member who sat next him casually asked, "Whether he had yet made any discovery of the robbers." "Not yet of the robbers, but probably enough of the receivers," said his lordship. The member

enquired again. "I shrewdly suspect," said his lordship, glancing at the ministers, "that I now see some of my ruffles on the treasury bench." Fox and Burke were sitting at the moment in their court dresses opposite to him. The allusion spread instantly, and the house was "in a roar."

This was the era of ministerial change. Shelburne was destined to share the fate of his predecessors. No example can be stronger, that the power of acquiring popular approbation is a talent peculiar and most incommunicable. Shelburne seemed to possess every quality that could raise him to the height of public favour. He was a singularly accomplished personage, of remarkable sagacity, promptitude, and force in debate, an excellent general scholar, and fond of sustaining his early literature; handsome and dignified in his exterior; animated and graceful in society; powerful and impressive in the house, and continually reinforcing his acquirements from every source of literary association and personal study. On the foreign relations of England his knowledge was indisputable. He was conceived to be more intimately acquainted with the springs and circumstances of the foreign cabinets than any statesman in Europe. Altogether he was a fine specimen of the foremost race of mankind, an accomplished English nobleman. No man was more made for power.

But he was not made for popularity. Continually soliciting it, he uniformly failed. Some unaccountable suspicion of insincerity attached itself to every step of his progress, and while the nation forgave in Fox the most frequent and open lapses, it watched with a jealous eye the decorous life of a statesman immeasurably his superior in all that constitutes a claim to the confidence of a manly people.

The charges now brought against Lord Shelburne at this crisis turned on his known aversion to acknowledge American independence. It was from this argued, that his proposals of peace were a mask, and that the nation was to depend on caprice and contingency for a benefit which the general voice pronounced essential. Lee, the ex-solicitor-general, a man of rough manners, but of considerable legal character, openly assailed the government in the house of commons, declaring the premier destitute of common honesty in public transactions. The sound was caught by the populace, and echoed in every shape of contumely. The newspapers were filled with lampoons, and the shops with caricatures of the new minister. One of the most popular of those pictured libels represented him as Guy Faux, lantern in hand, stealing under the treasury to blow up the resources of the nation.

In England the popular voice must always be powerful, and no man was more conscious of its power than Shelburne. He weathered the storm boldly through the session, but on its close, he consulted with his colleagues on the expediency of strengthening the cabinet from the ranks of opposition. In this instance, we meet an additional proof of the manliness of Pitt. He instantly gave his decision against any junction with Lord North. He declared, that it was totally impossible for him, with any remaining sense of public duty, to suffer the renewal of influence in hands whose misconduct had already brought the empire into danger; or, with any remaining sense of personal honour, to be seen coalescing with one whose principles he had so constantly and so strongly reprobated; this opinion he further declared to proceed not from any personal dislike to Lord North, with whom he had never had any personal intercourse, but simply from his conviction that a total change of system was necessary for the safe government of the empire.

It was then determined to apply to Fox, against whom none of those objections lay. An interview took place accordingly. It was marked by the characteristics of the two personages. Pitt waited on Fox by appointment. Fox asked at once whether, in the preposed negotiation, Lord Shelburne was to remain premier? Pitt answered, undoubtedly! Fox hotly replied that nothing could induce him to belong to any ministry of which Lord Shelburne was to be premier. Pitt, with equal promptitude, retorted, that if that were the case, all further discussion must be waste of time, for "*he did not come to betray* Lord Shelburne." They parted instantly, and never again met under a private roof, for the rest of their lives. The sword was drawn by both, and it was never sheathed by either.

A slight, yet curious example of the inconvenience arising from changes in the old arrangements of office, attracted public conversation at this period. On the king's going to prorogue parliament, it was indispensable to send the crown and sceptre to Westminster. Burke's reform bill had suppressed the jewel office. But the suppression was so recent, that no new official regulation had been adopted relative to the conveyance of the jewels on public occasions. Egerton, the former master of the jewel office, was superseded by the bill. The next resource was an application to the lord steward, and the lord chamberlain. But those lords were not satisfied of their power to interfere, and would not interfere. The next resource was the secretaryship of state, and from him an order to the keeper of the jewels in the tower was at length obtained for their transmission. Another difficulty now arose. From the irregularity of the whole transaction, none of the king's carriages, the customary conveyance, were forthcoming, and the secretary was reduced to the rude expedient of summoning the Bow Street magistrates to his aid. Half a dozen of their constables, in a couple of hackney coaches, were sent to the Tower, and in this hazardous style the crown jewels were despatched on their way. All due precautions were taken to conceal the nature of this valuable convoy, and all was necessary. Any one of the hundred, or the thousand gangs of London plunderers would have easily stripped royalty of its ornaments. The coaches were driven, with the blinds up, along the outskirts of London, re-entering it by Portland Street, and then hurrying down to Westminster. After the ceremony, they were reconveyed to the Tower with the same secresy and rapidity, and fortunately without any further obstruction. Another Colonel Blood might have made the risk memorable.

Of all human subjects, politics present the most exciting aspect to man; and it is to the honour of English intelligence that they supremely attract the man of England. Always abounding in novelty, yet always referring to experience, they meet at once the natural curiosity of the human mind, and give a vigorous exercise to its judgment. But to the man of England they have the higher interest of involving the principles of that freedom, which is not more the national boast than it is the national security. Thus, to the philosopher offering the finest spectacle of abstract truth brought into practical action—to the man of ability the broadest field for the display of his intellectual strength—and to the freeman the great tribunal in which the cause of national freedom is perpetually tried and defended. Politics offer not merely an exhaustless stimulant to our natural love of the strange, the capable, and the animating, but a noble study to minds which look above novelty—to the most enlarged and most permanent interests of mankind.

In recalling the contests of Pitt and Fox, we are not recalling the obsolete struggles of two great statesmen, long since gone to that place of rest where the passions of the world stop short, and an epitaph is all their fame. Under the names of those two men, we are speaking of the struggles which exist at this hour, and which will exist during every hour of the history of Britain—of struggles, too, which are essential to the continuance of her freedom—the currents which keep the national mind from stagnation—the muscular impulses which urge the circulation of her heart's blood—the winds which, blowing as they list, and sweeping her surface with what violence they may, yet purify the political atmosphere from the silent and yet unsparing pestilence of inaction, impurity, and slavery.

The cabinet was now to meet parliament. No position could be more surrounded with difficulties. In front was the powerful party of Lord North, by long possession of power shooting its branches through every department of the country, and by long habit trained to public business. The failure of the negotiation with Fox had still more formidably reinforced the opposition. It had given them the talents of a man framed above all men of his time to make an opposition master of the state. Of all the great names of senatorial eloquence, Fox seems to have been the first parliamentary speaker. In passing down the picture-gallery of the last century, a nobler memorial to the glory of England than all her conquests, we see nothing equal to the parliamentary figure of Fox. The Bolingbrokes, Walpoles, Poulteneys, and Townsends have long since lost both colour and outline, and are sunk into indiscriminate shade. The bold proportions of Chatham still arrest the eye, but they are the proportions of an orator of Greece—classic, graceful, and full of life, but belonging to times and thoughts past away. Burke stands wrapt in the robe which might have alternately covered the limbs of a Plato and an Aristotle—a philosopher, in his finer meditations, soaring into the very heaven of magnificent invention, yet in his intercourse with men and things capable of bringing the subtlest abstractions into the service of common life—still too philosophic, lofty, and retired from common impulses, to be the true pleader with the people. Pitt is the orator of Rome, in the finest spirit of the portraiture. Superb, yet glowing,—grave, yet strenuous, with, at once, the Ciceronian love for liberty,—the Ciceronian hatred of the arts and violences which usurped its name,—he might have stood beside the great patriot of Rome, if his firmness did not strip the Roman of his laurel. Still, either his faculties, his position, as the appointed antagonist of popular caprice, or the reserve imposed upon him as the leader of British council, forbade that flexibility, variety, and reckless candour which belong to the *plenitude* of popular impression. It was there that Fox never found a rival. No man ever threw himself into debate with so apparent a reliance on the simple strength of his cause, and so apparent a forgetfulness of any aid which the cause might derive from the superiority of the advocate. With sufficient scholarship to avoid disgusting the accomplished part of his auditory, with sufficient general knowledge to avoid the ridicule of men of business, a reasoner without the formality of argument, and a keen and subtle sophist, under the guise of the most affecting simplicity, drawing all his illustrations from the common things of life, and professing, in all instances, to strip public matters of their coverings of office and artifice, and speak plain things to plain men, Fox was the true orator of that confused and miscellaneous assemblage of refinement, rudeness, ignorance, knowledge, public feeling, and keen self-interest, frigidity, and enthusiasm, which makes a British house of commons. As this assemblage has never had a similar in the world, its orator must be left without a parallel. If we were to compress into a single phrase the qualities of the four great speakers whom this period brought into action, we might pronounce that Burke spoke to astonish, Sheridan to charm, Pitt to enlighten, Fox to subdue.

It is remarkable, and important as a guide to the true perfection of popular speaking, that the printed speeches of those eminent men have met with a fate nearly the reverse of their effect when spoken. Burke's form one of the proudest monuments of human genius, and are read at this hour, and will be read while eloquence is dear to the heart of man, with an increasing homage to his name. Pitt's live to us chiefly as specimens of forcible argument and manly conceptions. Fox's are scarcely available to either the student or the statesman, and lie before us as great masses of thought, rudely flung together, and incapable of order or use. Sheridan's have almost wholly sunk into oblivion: his finest efforts, the speeches on Hastings, were extinguished by his own act, from the evident consciousness that their material was not fit for posterity. As airy, fantastic, and brilliant as the palaces of necromancy, they were dissolved by the touch of the necromancer. The result of this examination, and of all examination into the great science of national appeal, is, that of all qualities for impression on a mixed multitude, and pre-eminently on a British house of commons, the most irresistible is feeling. In all

other points of the orator, few men were less gifted than Fox. To the last day of his life, he was not fluent: the perpetual practice of thirty years had not given him the mastery of the English language. He hesitated, was often at a loss for words, turned back upon his steps, and increased his embarrassment by his unwieldy efforts at extrication. All that belongs to attitude and exterior was entirely against him. But his singular faculty of throwing his feelings into his speech turned his very defects into sources of his success. When he had once seized on the popular sympathy, if he lost words, it was from his absorbing interest in his cause; if his arguments were perplexed, it was from the weight of his matter. The sudden failures of his voice, his ungainly gestures, and all his innumerable sins against oratorical dignity, were attributed to a force of sincerity, which overpowered all his perception of minor things; the burst of a natural and swelling sensibility, which justly swept away the trifling observances important only on trivial occasions and to trivial men. Fox has, more than once, shed tears in the house; a spectacle ridiculously frequent among foreigners, but so rare among the manlier minds of Englishmen, that it only added to his triumph.

With an antagonist of this rank, armed with specious topics, and with every specious gift to make those topics successful, Pitt had to fight the solitary battle of a cabinet which had scarcely tasted of power when it was loaded with unpopularity. By a singular addition to the difficulty of the cabinet, all the usual hopes of enfeebling opposition by an offer of power were confessedly extinct, or rather the hope was converted into incurable hostility. It was known to Lord North that Pitt had resolutely insisted on his exclusion. It was equally known to Lord Shelburne that Fox had violently protested against connections with him as a minister. Thus, with public ambition, sharpened by personal resentment, the parties came into a conflict which threatened to be the most envenomed and hazardous to the vanquished since the days when the fall of a ministry only ushered them to the scaffold.

One of those extraordinary events, which make politics a scene of the highest instruction, was now at once to change the aspect of affairs, to throw an indelible stain on the rival of the young minister, and to fix the character of that minister in a still more striking rank of national honour.

During the period of the session which followed the fall of the Rockingham Cabinet, some slight compliments had for the first time passed between Lord North and Fox. But the open and furious assaults which Fox had constantly made on the character of Lord North, and his direct hints of bringing him to the block, rendered all idea of their junction, under any contingency, extravagant. At the opening of the session in December, 1782, they were still evidently wide asunder. Fox attempted to divide the house on the American articles, and was left in a minority of forty-six, while Lord North, carrying over his strength to the ministry, swelled their majority to 219. The true detail of the "*Coalition*," so memorable in its day, and transmitted to the contempt of all posterity, has not even yet been distinctly delivered. But we have its outline sufficiently clear. The determined resolution of the cabinet against North and Fox individually awoke a determination on their part to take it by storm, let the means be what they might. It was proposed that the parties should combine. Lord North on this occasion was comparatively guiltless; he had at no time exhibited enmity to Fox. He had received his attacks with the habitual patience of his nature, and retorted them with the harmless dexterity of a wit, who regarded them merely as the customary sallies of political opponents. Fox, on the contrary, was pledged by every demonstration that could express implacable scorn and indignant hatred. Yet a negotiation was begun; the Honourable George Augustus North, conducting it for his father, and the Honourable Colonel Fitzpatrick acting for Fox. Mr. Eden, afterwards Lord Auckland, was considered the chief author of the proceeding. The matter pressed, and the negotiation was carried on with singular diligence on both sides. The debate on the peace, the great question of the time, was fixed for the 17th. It was not until nearly four in the morning of the 16th, that, after many visits between the negotiators, and various messages between St. James's Street and Grosvenor Square, where North resided, that the business was brought to a completion. The arrangements were, that on the overthrow of the cabinet by their union, the Duke of Portland should have the treasury, and Lord North a cabinet office, while the remaining employments should be divided between the leading members of both parties. Within little more than twelve hours was to be the trial of strength, and they retired to prepare for an evening momentous to the ambition of each, and still more momentous to their character.

The rumour of the coalition had gained ground during the day, and the house was crowded. Upwards of four hundred members were present at the division at eight in the following morning. On Fox's rising, the universal attention was drawn to him. He seemed perfectly unfatigued by the labours of the night before, and spoke with his usual vigour, and even more than his usual daring. He boldly avowed the coalition, scoffed at the idea of eternal political enmities, and pronouncing a panegyric on those who could trample under their feet all personal recollections when they interfered with the good of their country, sat down in the midst of a roar of applause from opposition.

The appearance of Lord North was equally a source of curiosity. He had come down to the house at an early hour in the evening, but, from age, heaviness of frame, and the sleeplessness of the past night, had not been able to keep his eyes open. To avoid the appearance of this indecorum, he went up to the members' gallery, and there gave way to sleep, desiring some of his friends who were near him to awake him when any thing occurred of importance for him to hear. As the debate proceeded, it became more violent, and Lord North's slumber spared his ears many a bitter expression. At length he awoke, obtained

from those around him a sketch of the progress of the speeches, went down into the body of the house, and took his seat beside Fox. While the members were gazing on this unusual juxtaposition, he rose, and, to the astonishment of all who had seen him slumbering through the debate, went through its whole course with incomparable skill, stirred a gloomy and anxious house into perpetual laughter at his wit, and confessedly made the most animated, dexterous and impressive speech of the night. His amendment was carried by 224 to 208.

But no eloquence could rail the seal off the bond. The character of the transaction, at least on the side of Fox, was indelible. On him poured the whole tempest of indignation, in and out of the house. His actions, his pledges, his express words, were flung in his teeth; he was contemptuously asked, whether it was *he*, who, scarcely a year before, had in that house declared that, "whenever he should be found entering into any terms with an individual of the noble Lord (North's) cabinet, he should rest satisfied to be called the most infamous of mankind." He was asked, whether, as if in contemplation of the very measure which now covered his name with eternal obloquy, he had not declared, that—"he never could suffer the idea of a connection with the members of that cabinet to enter his mind, a connection with men who had shown themselves devoid of the common principles of honour and honesty, and in whose hands he could not venture to trust his own honour." To this no reply was made. He was next asked, with no less asperity and truth, whether he had not inveighed against the system, the principles, and the person of Lord North more bitterly than against the detail of his measure. Whether he had not pronounced him—"the great criminal of the state, whose *blood* must expiate the calamities he had brought upon his country; the object of future impeachment, whom an indignant nation must in the end compel to make such poor atonement as he might on a *scaffold;* the leader and head of those weak, wicked, and incapable advisers of the crown, who were the source of all the public misfortunes, and whom he and his friends would *proscribe* to the last hour of their lives."

Another debate on the terms of the treaty took place on the twenty-first. Pitt greatly signalised himself on this night. His speech examined the grounds of the treaty, and defended the policy of the administration, with admirable perspicuity and force of argument, attributing all that was erroneous in the negotiation to the errors of Lord North. He finely said, "Those are the conditions to which this country, engaged with four powerful states, has thought fit to subscribe for the dissolution of that confederacy, and the immediate enjoyment of peace. Let us look to what is left, with a manly and determined courage. Let us strengthen ourselves against inveterate enemies, and reconciliate ancient friends. The misfortunes of kingdoms, as well as individuals, which are laid open and examined with true wisdom, *are already more than half redressed;* and to this great object should be directed all the virtue and all the abilities of this house. Let us feel our calamities, but let us bear them like men."

He then cast some of those sarcastic stings at Fox, which no man could send more surely to the mark, yet with less of the common vice of the sarcastic, the loss of grace and dignity. "The honourable gentleman (Fox) has virtually declared, that because he was prevented from prosecuting the noble Lord (North) to the satisfaction of public justice, he will *heartily embrace him as his friend.* So readily does he reconcile extremes, and love the man whom he *desired to impeach.* In the same spirit, I suppose, he will cherish the peace, *because he abhors it.*" Then speaking more directly of the coalition—"If, however, that baneful alliance is not already formed, if that ill-omened marriage is not already solemnized, I know a just and lawful impediment—in the *name of the public safety,* I forbid the banns." Pausing a moment during the tumult of approbation which followed this strong image, he turned to his personal circumstances.

"My own share in the censure pointed by the present motion against his majesty's ministers, I shall bear with fortitude, because my heart tells me I have not acted wrongly. To this monitor, which never did, and, I trust, never will deceive me, I shall confidently repair, as to an adequate asylum, from all the clamour which interested faction can raise. * * * * * * I can say with sincerity, that I never had a wish which did not terminate in the dearest interests of the nation. I will, at the same time, imitate the honourable gentleman's candour, and confess, that I too have my ambition. High situations and great influence are desirable objects to most men; objects which I am not ashamed to pursue, which I am even desirous to possess, whenever they can be *acquired with honour* and *retained with dignity.* But even those objects, I can cheerfully relinquish, the moment my duty to my country, my character, or my friends, renders such a sacrifice indispensable. Then, I hope to retire, not disappointed, but triumphant; triumphant in the conviction, that my talents, humble as they are, have been zealously employed in promoting the truest welfare of my country, and that nothing can be imputed to my official capacity, which bears the most distant connection with an *interested, a corrupt,* or *a dishonest mind.* * * * * * But I shall not mimic the parade of the honourable gentleman, in avowing and inviting others to an indiscriminate opposition to whoever may succeed. I shall march out with no warlike, no hostile, no menacing protestations." The close of the speech has been recorded as an instance of classic grace and pathetic power. Standing at his full height, and casting a lofty look round the house where every eye was now fixed on him, and every ear was straining to catch his accents, he loudly uttered:—"I appeal to this house, to both sides of this house, for the consistency of my public conduct. It is impossible to deprive me of the feelings which must always result from sincerity. You may take from me, sir," he exclaimed, pointing to the chair, "the privileges and honours of place, but you shall not, you cannot, take from me those habitual and warm re-

gards for the prosperity of my country, which constitute the pride of my life, and which, I trust, death alone can extinguish. And with this consolation, the loss of power, and the loss of fortune, though things which I affect not to despise, are things which I hope I shall soon be able to forget.

> Laudo manentem; si celeres quatit
> Pennas, resigno quæ dedit"——

The words which follow in the original, "Et mea virtute me involvo," might have seemed self-praise; but Pitt stopped short at the instant, and cast his eyes on the floor. The classical members of the house were anxious to see how he would extricate himself. The others were equally interested by his sudden cessation. The silence was universal. After an interval of a few moments, slowly drawing his handkerchief from his pocket, passed it once or twice across his lips, and then, as if recovering from his temporary embarrassment, he added with emphasis, striking his hand upon the table:

> "Probamque
> Pauperiem sine dote quæro."

The effect was incomparable. An eye-witness has described it as "a piece of masterly and beautiful acting, if acting it were, not surpassed by any thing in antiquity." The house was lost in one feeling of admiration. But this night decided the fate of Lord Shelburne. He was left in a minority of seventeen in a house of 397.

The triumph of the coalition now appeared complete. But the history of politics is a history of unexpected difficulties. The peace had been condemned out of the mouths of the very men who had for years been raising an outcry for it at all hazards. "Peace," was Fox in the habit of exclaiming, "peace for a year, for a month, for a day, peace for any time, or on any terms!" But the cabinet still stood. Opposition began to dread that the blow, as in 1779 and in 1780, had not been heavy enough; and that a majority had again lost its power. But their hopes were buoyed up again by Lord Shelburne's sudden resignation. Ill-luck clung to this minister. The name of "Malagrida" was fastened on him. His accession to authority was charged with intrigue, his possession of it with faithlessness, and his abandonment of it with fear. Suspicion of artifice, even in a still more painful point of view, began to gather round him. It is notorious that no minister can become rich by the mere salary of office, yet Shelburne was said to have grown suddenly and excessively opulent. Dealing in the funds, connected with the negotiations for peace, were surmised to be the source of this unusual wealth. The populace, never slow to adopt suspicions against a minister, were accustomed to point to Lord Shelburne's house in Berkeley Square, (which had been built by Lord Bute, a minister similarly charged,) and say, that "As it had been built by one peace, it had been paid for by another." Yet of such suspicion it must be said, that as there is nothing easier to originate, so there is nothing more difficult to refute. No proof of its reality was ever brought, at a time when it might have been most effectively adduced, and at a time when the rage of party would have rejoiced in the possession of an instrument which so effectually prostrates the character of a public man. It should be observed also, that Pitt openly characterised those charges as acts of defamation, and that in the year after, one of the first acts of his ministry was to raise Shelburne to the marquisate. Yet it was remarked that thenceforth all ministerial connection was broken off between them, that the marquis never held any cabinet office, and that his political life was thus abruptly closed, while he was in the full vigour of his abilities. The history of this statesman is yet to be written. It belongs to one of the most interesting eras of British politics. Some responsibility also rests on those who can vindicate his personal character, yet leave it to the chances of rumour. His son, the present Marquis of Lansdowne, a man of intelligence and honour, is the natural depositary of such a task. None could perform it with more advantages; of none can it more fairly be required.

A still wider scene of distinction now opened upon Pitt. The king, revolting from the name of Fox, who had loaded him with personal insult: and wearied with the fickleness of North, who had shrunk from him in his hour of difficulty; offered the government to Lord Gower. But that noble person acknowledging that he possessed no means of diminishing the hostile majority, the offer was withdrawn. The Duke of Portland and Lord North were then sent for, but the king insisted that Lord Thurlow should retain the Chancellorship. Fox, hating Thurlow equally in his public and private character, and pronouncing him at once intractable as a member of the cabinet, and dangerous as a spy at St. James's broke off the negotiation. The king now cast his eyes on the only man in the nation whom parliament and the people equally respected. He offered the places of first lord of the treasury and chancellor of the exchequer to Pitt, with full power to nominate his colleagues.

The king's embarrassment was well known to Pitt, and his first impulse was to comply with the royal wishes. The advice of his friends was unanimously that he should undertake the formation of a ministry. For four-and-twenty hours, during which Mr. Dundas had obtained an adjournment of the house, (from the 25th to the 28th,) he paused. But the formidable majority was still before him. His singular sagacity also told him, that his throwing down the gauntlet to them, while they were yet flushed with victory, would only cement their connection, while office would as certainly produce jealousies and divisions among men who were connected only by the pursuit of place. The result was a refusal of the king's offer. The splendours of royalty may attract the envy of mankind, but the diadem has troubles of its own. His majesty thus forced to change his purposes, and still strongly averse to any intercourse with Fox, whom he looked on as equally obnoxious by his politics and his private life, sent for Lord North, and proposed the treasury to him. North declared that he was bound

not to negociate without Fox. Fox was reluctantly admitted into the negociation, and the Duke of Portland was proposed as premier. But this arrangement broke down, by the demand on the part of the coalition, to have the entire appointment of the household. The king, disgusted with what he conceived an attempt to bind him hand and foot, again turned to Pitt, had several conferences with him, and summed up his objects in a letter from Windsor, (March 24, 1783,) which, after stating his complaints of the conduct of opposition, concludes in these words:—"I trust, therefore, Mr. Pitt will exert himself to-morrow, to plan his mode of filling up the offices that will be vacant, so as to be able, on Wednesday morning, to accept the situation which his character and talents fit him to hold, when I shall be in town before twelve, ready to receive him."

Nothing could be more flattering to young ambition. But Pitt's judgment was already mature. He instantly sat down, and answered by the following letter:—"Mr. Pitt received this morning the honour of your majesty's gracious commands. With infinite pain, he feels himself under the necessity of humbly expressing to your majesty, that with every sentiment of dutiful attachment to your majesty, and zealous desire to contribute to the public service, it is utterly impossible for him, after the fullest consideration of the situation in which things stand, and of what passed yesterday in the house of commons, to think of undertaking, under such circumstances, the situation which your majesty has had the condescension and goodness to propose to him. As what he now presumes to write is the final result of his best reflection, he should think himself criminal, if, by delaying till to-morrow, humbly to lay it before your majesty, he should be the cause of your majesty's not immediately turning your royal mind to such a plan of arrangement, as the exigency of the present circumstances may, in your majesty's wisdom, seem to require."

To form a just idea of the vigour of mind displayed in this decisive transaction, we are to remember that it was the act of a statesman in his twenty-fourth year, of a bold and lofty spirit, surrounded by a crowd of friends and adherents, eagerly urging him to accept of power; of an orator, who never rose in the house without commanding universal admiration, and of the son of the most renowned minister of England, by his birth emulous of public distinction, and by his talents heir to all his father's fame.

The king's situation was now personally trying in the extreme. The weight of government was actually thrown back on him alone. Regarding Fox as a demagogue, and Lord North as his slave, the honest heart of George III. could not brook the abandonment of the state into such perilous hands. It is said that, in a struggle of generous despair, he meditated retirement to Hanover from a crisis in which he could neither resist with hope, nor yield with honour. To Thurlow was attributed the change of this hazardous mark of displeasure. "Your majesty may go to your electoral dominion," said the chancellor, with his habitual roughness; "nothing is easier; but you may not find it so easy to return when your majesty grows tired of staying there. James II. did the same. Your majesty must not follow his example." Harsh as the style was, the king acknowledged its wisdom. Thurlow, with strong penetration, further assured him, that the coalition could not be in power without committing some act, which would lay them open to crimination. He bade the king, therefore, "wait patiently, and try the work of time." A short period was more than sufficient to vindicate the chancellor's prediction.

His majesty at length yielded to the force of circumstances. Pitt, on the 31st of March, declared to the house, that he had resigned the office of chancellor of the exchequer. For the six weeks which had intervened since the retreat of Lord Shelburne, the whole business of the government and the house had been transacted by him alone, for Townsend, the secretary of state, though nominally *manager* of the house, had been almost wholly silent, and on the 4th of March had gone up to the peers, being created Lord Sydney. During this period, the important subjects of the annual estimates, the mutiny bill, and the issue of exchequer bills, had been carried through, and various debates on the articles of the treaty, and the ministerial negotiations, had been conducted by him; in every instance exhibiting a presence of mind, a solid knowledge, and a dignified and high-toned spirit of debate, which continually increased the public admiration. It was said of him, that, "while Pitt was in the house, there was no want of a ministry." He seemed to fill up all the vacancies of the treasury bench, and when at length he took his stand no longer there, the feeling of regret was national. It was expressed on all sides, that whatever might be his political party, powers of such rare and universal extent ought not to be lost for a moment to the service of the nation. But a new era of his life was about to dawn, exhibiting higher efforts, effecting more substantial services, and extending his fame, his labours, and his triumphs, to the civilised world.

THE RIVER AMAZON.—We learn from the *Hampshire Telegraph* that Lieut. Wm. Smythe, and Mr. Frederick Lowe, mate of the *Samarang*, were left at Callao, when that vessel sailed for England—they having volunteered their services, at the request of the Peruvian government, to proceed to Lima, for the purpose of embarking on one of the branches of the river Amazon, to explore their way until its junction with the main stream, down which they are to voyage to the sea. The object is to ascertain by survey, the practicability of bringing goods up the river Amazon, to within twelve days' journey of Lima,—thus opening a new channel for the commerce of Europe with Peru, without the danger and loss of time consequent on a passage round Cape Horn. The Peruvian government has promised every assistance in their power, and an escort of soldiers, under the command of an intelligent native officer of engineers. Commodore Mason was, therefore, induced to give permission to those officers to remain for that purpose; and from the known skill, energy and perseverance of Mr. Smythe, who was with Captain Beechey in the *Blossom*, on her voyage of discovery along the north-west coast of the South American continent, there is good reason to expect these enterprising officers will succeed in their useful though arduous attempt.

From Tait's Edinburgh Magazine.

NAPOLEON AT FONTAINEBLEAU.

Forests are supposed to constitute the exclusive domain of romance writers; even as lakes have been appropriated by poets and ballad-mongers. The Schwarzwald and the Odenwald extend their gloomy shades through many a horrification in three volumes, or even five. Sherwood and Needwood, with the connivance of the Minerva press, have bid us "Stand and deliver" till we trembled at the very sight of a furze bush; while twenty romancers have made us as sick of "The New Forest," as a season at Southampton. Since Sir Walter's "Ivanhoe" presented the world with a view of forest scenery, more picturesque than the sketches of Gilpin, or the realities of Hobhima, we have been favoured with such a tedious infinity of copies, that we verily believe we could travel from Dan to Beersheba, (*i. e.* from Sand-pit Gate to Fern Hill,) in the lordly shades of Windsor, and find "all barren!"

Nevertheless, there *does* exist a forest for which we must admit an especial predilection;—within the limits of civilisation—no entrenchment on the property of Fenimore Cooper—no section of the ground of Himalaya Fraser,—nay! within a morning's drive of a capital city; yet possessing features as wild and characteristic as Rosa might have delighted to paint, or Ariosto to depict, as the rendezvous of some half-chivalrous, half-magic encounter. The forest of Fontainebleau,—still savage in its scenery as when the crusader king, St. Louis, was wont to term it "*Ses déserts chéris*,"—still lonely as when Napoleon, who loved it with a similar predilection, used to prick forward in advance of his officious court, to enjoy his reveries in its *haute futaie*,—is now depopulated even of the superfluity of game, which, during the ascendency of the elder Bourbon princes, and the hunting days of the booby-hero of the Trocadero, was supposed to threaten it with extinction. Were all the royal forests of France equally devastated, the office of grand verderer would become a sinecure; for, unless when that equivocal compeer of the Montmorencys and St. Simons, the Duc de Stackpoole, contrives to unite with his own pack of stag-hounds the *meutes* of two or three neighbouring nobles, to get up a chevy chase, grievously resembling the Epping hunt, the ancient oaks of Fontainebleau forget the very echo of a reveillóe! The tumult of hounds and horns, however, is of rare occurrence; and during the summer season, not a soul is stirring in the forest, unless some botanical student from the *Pays Latin*, with his wallet on his shoulder and his herbal in his hand; or some disciple of Camille Roqueplan or Isabey, standing rapt and inspired among the rocks of Franchard, or the precipices of La Salle, to dash into his book of studies the light outline of some weeping birch, or hint the solemn grandeur of that kingly stem,—unique even among oaks,—*le bouquet du Roi*.

Yet even these metropolitan loungers, and the cockney hunting-train of a Birmingham duke, are incapable of deteriorating the venerable grace of Fontainebleau. Its masses of granite resembling colossal heads of druids, peeping forth from the shade, speak of times long anterior to the voluptuous triumphs of Diana of Poitiers, whence date the meretricious splendours of the palace; and the *Galerie des Cerfs*, which witnessed the wanton murder of Christina of Sweden's Monaldeschi, or the *Galerie de Henri IV.*, where Sully pleaded in vain a remission of Biron's sentence of execution, are things but of yesterday, compared with the Gordes d'Apremont, or the crags of the Mont-Aigu.

The palace of Fontainebleau, indeed, in spite of every emendation perpetrated by every prince succeeding the brother-in-law of our own bluff Harry, retains a most antique and quaint appearance; yet antiquated as it is, its peaked roofs and overhanging bartizans are a world too modern for the mossy frame of sylvan verdure with which the picture is encircled. Pious anchorites have sanctified themselves in the recesses of the forest, as the hermitages of the Weeping Rock, and of La Madelaine, remain to attest; and hermits might fast and pray there still without much molestation from the children of this world. Charles X., had he been inclined to emulate the example of the Corsican, and execute his abdication in the palace of the Fountain of Fine Water, or *Fontaine Belle Eau*, might have retired thereafter to one of its sylvan lodges, and ended his days as holily as Charles V., in his peevish cell of St. Just. The royal forest might have formed an appropriate retreat for the repentance of a sovereign;—lordly, lofty, gloomy, worthy to overshadow the spirit of the blood-stained *Roi de la Mitraille!*

It was during the brilliant ascendency of Napoleon, however, that Fontainebleau attained its highest pitch of dignity,—at the period when a vicar of God was brought captive to its gates, and kings and princes yielded tribute to the foot-stool of its warrior-sovereign,—or as Béranger describes it,—

> "L'époque où, fécondant l'histoire,
> Sa grande épée, effroi des nations,
> Resplendissante au soleil de la gloire,
> En fit sur la France rejaillir les rayons!"

It was to afford a fitting asylum to Pius VII. when he visited France to place the imperial crown upon the brows of the hero of Marengo, that the palace of Fontainebleau was raised from the degradation into which it had fallen at the period of the first revolution; and its reparations were completed, in order to adorn, with becoming splendour, the prison of the same spiritual prince, when, eight years afterwards, he was installed there in durance, with the view of intimidating the vicegerent of christendom into the cession of his temporal sovereignty. There, too, Charles V. abode in temporal seclusion, after abdicating the government of Spain and the Indies to the imperial conqueror. Fontainebleau appeared to have been transformed into a sort of regal *Salpetrière*, for the reformation of offending potentates.

But if an especial suite of apartments became consecrated to this important purpose, the main

body of the building (which has been compared by English travellers to a *rendezvous* of palaces, rather than a single and seperate edifice) was still occupied as the imperial residence of the most brilliant court of modern Europe. Thither, every autumn, the emperor repaired, as to a favourite hunting seat; and the days seemed come again when Louis XIV., gliding with histrionic dignity through the stately saloons of Versailles, the palace of his own creation, made it his pride to be accosted by his courtiers with intercessions for the honour of "following the court in its ensuing journey to Fontainebleau;" an event which, at one time, constituted one of its chief enlivenments. Brilliant, however, as was that scene of the eighteenth century,—when Moliere commemorated the sojourn of his royal patron by the production of the "Tartuffe," and Racine, by bringing forward some tragic *chef d'œuvre*,—the *Cours des Fontaines* exhibited a still gayer pageant, when crowned by the unparalleled *cortêge* of courtiers, which enabled the Emperor of France to create an antechamber for the kings that waited at his levee! The two Henrys of France and the first Francis may have added to the regal edifice the splendid galleries still bearing their names; but it remained for the son of a Corsican notary to form the *Antechambre des Rois!* Beautiful women—and the most beautiful among them were the nearest kindred of Napoleon,—men of renown—and the most famous were those who had confronted danger nearest to his person,—thronged the antique saloons of Fontainebleau; the golden bees embroidered upon whose canopies of velvet seemed distinctive of a new era in the history of the government of the country. The whole scene presented a gorgeous masque of mimic majesty,—chivalrous as the court of Francis I., magnificent as that of Louis le Grand, and a thousandfold more animated than either.

It was, perhaps, that the personages of the drama, less perfect in their parts, were more attentive to the getting up of the piece—it was, perhaps, that their physical and moral impulses, unsubdued by the influence of the indolence divine of royal nature, betrayed a stronger and more vivid temperament; but certain it is, that never were fetes so brilliant—never courts so stirring, as those presided over by Josephine, and graced by the charms of the Reine Hortense, and the Princesses Pauline, Elisa, and Caroline, the sisters of Napoleon. The Bourbons might, and may, exhibit their household splendours as ceremoniously as they will; but those levees of upstart kings—those quadrilles of plebeian queens—those *carrousals* of *parvenu* knights, whose spurs were in reality the meed of valour,—exceeded all preceding pomps, as well as any that may have subsequently supplied their place. They rode, they danced, they dressed, they curtsied, they *congeed*, as if they could not too strenuously exercise the privileges of the greatness so singularly thrust upon them; and, spurred on by reminiscences of the sordid penury with which their youth had been environed—or, perhaps, by a prescience of the utter ruin ultimately to be called down on their heads by the ambition of the insatiable invader of thrones and dominions,—sported on painted pinions in the sunshine of Napoleon's glory, so long as it was permitted to irradiate their remarkable destiny.

Nor were their capacities of enjoyment ever more liberally taxed than at Fontainebleau. *There*, the emperor, luxuriating in momentary relaxation from the toils of sovereignty, and giving access only to those ministers with whom it was indispensable to be in immediate communication, indulged less eagerly in the recreation of the chase, than in the pleasures of unrestrained intercourse with such persons as really shared his confidence and affection; and the calumniated Napoleon was a man of warm and strong affections. Those who approached nearest his person, and who have not yet betrayed him by manufacturing a book at his expense, admit that he was the honestest man and *le plus bon homme* of all the imperial court; or, to borrow the expression of his brother Jerome, "*mieux que tout ce qui l'entourait.*" Though notoriously the victim of Josephine's coquetry during their early days of marriage, how fervent and honourable is the affection poured forth by the husband, in the correspondence between them published by her daughter Hortense!—what truth—what simplicity, in every expression!—what nobleness of purpose in every counsel imparted! While the finical and *minaudière* ex-marchioness addressed herself to the task of conciliating the French nation by the graces of her smile and the richness of her laces and cachemires, *he* was bidding her be "generous but economical:"—economical of her money, which was the people's—of her tenderness, which ought to have been *his;* and of her time, which she was too apt to bestow upon every obsequious courtier and gossiping dowager. How patient, too, did he show himself under the thwartings occasioned by the intriguing spirit of his brothers!—how blinded by his affection for his sisters!—and when enlightened by the officious jealousy of Josephine, how susceptible to their shame—how gentle in their condemnation! Above all, how doatingly—how thoroughly—a *father!*

Meanwhile, amid all his policy,—all his tact,—all his dexterous appeals to the national vanity of the French, in the pomp and splendour of his court,—it was, in truth, with a view of gratifying the predilections of the empress and her female train,—the Mesdames Junot, Maret, Marmont, Duchâtelet, Regnault, St. Jean d'Angley, Visconti, and others,—that the halls of Fontainebleau were occasionally illuminated for the display of masks and festivals; and its forest causeways leveled and made smooth, to admit their participation in the pleasures of the chase.

At the close of one of these festivals,—a ball given preparatory to the departure of the emperor for a new campaign, a *fête*, (no offence to the Montmorencys, the Noailles, or the Grammonts,) as graceful and brilliant as the more legitimate courts of Fontainebleau ever witnessed,—the gay circle was dissolved, the lights extinguished, and the ushers and chamberlains, having paraded the state apartments to ascertain if all was safe, had retired in their turn to rest. Nothing remained

in evidence of watchfulness but the captain of the guards yawning at his post, the numerous sentries *en faction* in the various quadrangles of the palace, with here and there a light streaming from the windows of some vestibule or staircase, such as in the abode of even the most frugal and self-secure of sovereigns,—of a citizen king, for instance,—gives evidence that there must be *no night* within the purlieus of a palace—that perpetual vigil is indispensable to secure the safety of an anointed head!

All was quiet, save the tinkling of the Fountain of Ulysses in the great court, and the harsh croaking of the frogs in the adjoining lake; when, on a sudden, a slight tumult became perceptible in the *Cour de la Fontaine;* and a few stragglers, in complete dishabille, were seen hurriedly traversing the corridors leading to the *Aile des Princes.* Sentries were challenged, and gates unclosed! The stir and bustle increased. Corvisart, the emperor's favourite physician, had been hastily summoned from his bed;—what, *what* could be the matter? Was Josephine, whom often already a remote hint of the premeditated repudiation had thrown into hysterics, again attacked with *migraine?* Had Madame Mère fasted too long over her beads? Or was the Princess Borghese suffering from some of her imaginary heart-aches or head-aches? Vain toil to guess! Some hundred or so of young and fanciful beauties just then lodged under the peaked roofs of Fontainebleau, were enough to afford practice and perplexity to Galen and all his sons!

But it was not for the sake of any thing in the shape of woman,—no! not even of Madame de Waleska herself,—that Constant would have presumed to steal down the little circular staircase leading from the emperor's apartment to the *Cabinet Topographiques;* where, on the eve of his departure for the grand army, he was engaged in investigating a map, pricked out subsequently to the Military Council of the morning, by the hands of Baron Fain, and Baron Bacler d'Albe.

Leaning over a table overhung by a shaded lamp, and covered with maps and plans, Napoleon's attention was engrossed in dictating notes to his aide-de-camp, when a slight knock at the door announced some privileged person; and, with a face foretelling the nature of a tragic volume, the *premier valet de chambre* made his appearance.

"What is the matter, Constant?" cried the emperor, hastily, apprehending he knew not what from this unprecedented interruption.

"Sire, with your majesty's gracious permission, I have ventured to intrude, in order"——

"Bah! Speak out, to the point!—What has happened?"

"Cardinal Caprara, sire, is expiring!"

"*Apres?*" enquired Napoleon, calmly insinuating his forefinger into his waistcoat pocket, and regaling himself with a pinch of snuff, as irreverently as if the "*apres*" of the act of dissolution of a member of the Sacred College could possibly fall within the precognition of a valet-de-chambre!

"Sire! your majesty's goodness will, I trust, pardon my officiousness; but I consider it my duty to acquaint your majesty, previous to the fatal catastrophe, that——"

"Bah!" again interrupted the emperor,—never so completely "*le petit caporal,*" as with a military map before him, and a perspective of triumph opening from its indications.

—"That his eminence has fallen a victim to *poison,*" continued Constant, satisfied that it was his business to persevere in his relation.

"*To poison?*" ejaculated Napoleon, turning round short on the valet-de-chambre.

"*To poison?*" reiterated Fain. "Poisoned in the Royal Palace of Fontainebleau!—a prince of the Holy Roman Church—the nuncio of the pope—poisoned!—*Quelle horreur!*"

"This becomes serious," said the emperor, coolly. "Who is with him?—Who has been sent for?"

"The bishop of Meaux, sire, is with his eminence."

"A bishop!—why not a physician?—Where is Corvisart,—where is Ivan?"——

"And the almoner of her imperial majesty," continued Constant, "is about to administer"—

"Extreme unction, no doubt! when an emetic might prove the cardinal's salvation!"

"Meanwhile, if your majesty will permit me to observe," said the aide-de-camp, abruptly, "this unfortunate event may lead to most calamitous conclusions. Cardinal Caprara possesses the personal regard and confidence of his holiness; and his mission in France, bearing references, might possibly arise."

"You are right!" cried the emperor, "I should be on the spot! and the more so that the cardinal appears to be surrounded by a tribe of fools, more idiotic, if possible, and old-womanish than himself. Constant,—my hat. Be in waiting in the library until my return."

And having hurriedly traversed the corridor leading from the royal library to a small door opening under the grand staircase of the *Fer à Cheval,* the emperor hastened across the courts of the two intervening quadrangles with such rapidity, that the sentry at the first post had scarcely carried his hand to his musket to present arms, when his majesty reached the second. All was in confusion round the entrance, and on the staircase leading to the cardinal's apartments. The doors of the ante-chamber stood wide open, and two *garçons de bain* were squabbling in the saloon; every person in authority having pushed forward to the bedside of the dying churchman.

"Did Caprara sup with me to-night?" enquired the emperor, as he crossed the vestibule, to Fain who was closely following.

"Your majesty forgets, perhaps,—the *fête*—the ball——"

"True, true!—He was served, then, in his own apartments?" continued Napoleon, addressing a domestic in the livery of the household, who was about to scud away on recognising the emperor. "Where did his eminence sup to-night?—who was present?—who furnished the repast?"

"His eminence supped in his own chamber sire, attended by his own almoner, on dishes especially prepared by his own domestics," interposed the aide-de-camp, who had overheard the question, and was aware of Napoleon's fondness for succinct intelligence.

"So much the better!" muttered the emperor, taking breath. "It is probable, then, that there may be no poison in the case. He may be dying of a surfeit."

But when, in another minute, Napoleon penetrated into the bed-chamber, there was no mistaking the symptoms of the nuncio for those of an indigestion!—churchman or layman—*gourmand* or anchoret—short necked or long—it was no ordinary seizure which had rendered his face so livid, his lips so black, his nostrils so distended, nay, his eyes so fixed and sightless, that even the entrance of the emperor produced no change of countenance in the moribund!

"Alas! alas! dying without the consolation of the church!" sighed the bishop of Meaux, as he let fall upon the coverlid the hand he had been holding in his own, in the hope of discerning some token of amendment.

"Dying before half the objects of his mission were accomplished!" murmured his eminence's secretary, who had expected to find his own services in the affair requited with a full benefice.

"Dying in a foreign country, so far from our *bella Italia!*" faltered a poor Neapolitan *marmiton* of his suite, who had crept towards the room, and was blubbering unheeded on the threshold.

"What was served to the cardinal at supper?" enquired Napoleon of the latter, tapping him smartly on the shoulder, ere his own entrance was noticed by those administering to the dying man, or at least fixing their whole attention on his countenance.

"*Ahi, ahi!*" sobbed the lad, suddenly looking up, and trembling with consternation on perceiving by whom he was so cavalierly accosted. "*Madre di Dio!—Sua Maesta!*"

"I asked you what was served to his eminence at supper?" persisted the emperor. "Answer quickly and briefly, for his sake and your own!"—

"Mushrooms, sire!" interposed Fain, who had already obtained from the cardinal's *maitre d'hotel*, the desired intelligence. *Des oronges sautés a l'huile, a l'Italienne*, by his own cook."

"*Coglioni!*" ejaculated Bonaparte, all the Corsican kindling in him at the word. "Not a genuine orange is to be found on this side the Alps! They have poisoned him with some noxious fungus!—*Des oronges sautés a l'huile!*—Let Paulet be instantly sent for. It may not yet be too late to try a counter-poison."

And satisfied that a supper of stewed mushrooms would afford a very natural cause to misgiving Europe for the sudden demise even of a cardinal, the emperor returned to his surveys as speedily as he had quitted them.

"So, then, *Monsieur le Drole!*" cried he, seizing Constant by the ear as he traversed the *bibliothéque*, where the valet-de-chambre was in waiting, to enter the topographical study,—"You think proper, it seems, to break in upon my privacy, because a pampered priest chooses to overeat himself?"

And Constant, discovering in an instant from the familiar mode of his imperial majesty's address, that he considered Caprara in no real danger, and was no little pleased to find the case less urgent than he had been led to expect, ventured to reply, that "another time, under such circumstances, he would show more discretion."

"Another time, under such circumstances, (if ever another cook should be found in the palace, of sufficient ignorance to serve up toadstools as an *entremet*,) do as I have done now—send for Doctor Paulet, who has passed his life *à s'enchampignoniser*, in studying the nature and properties of mushrooms, and do not interrupt *me, till* the ipecacuanha has done its worst."

"See Doctor Paulet to-night, before he quits the cardinal, that you may be prepared with particulars when you wake me in the morning," was Napoleon's final adjuration, when, having officiated at his master's toilet, Constant was about to retire for the night, to receive the same services from his own valet-de-chambre, leaving the door of the imperial chamber to the guardianship of the faithful Rostan.

Unhappily, further intelligence on the subject awaited the *reveil* of the emperor! Two words from Constant would have sufficed to acquaint the world that Paulet had administered an antidote, and that the cardinal was out of danger; but while a page of the household was offering formal condolences and formal compliments to the prince of the church, on the part of their imperial majesties, the Duc d'Otrante had arrived from Paris, and was about to be admitted to an audience of the emperor!—the Duc d'Otrante,—the Joseph Fouché,—the minister of police,—whose name has been damned to everlasting fame in France, as the able originator of a system of espionage, unique in the odium of its efficiency; and who was at that period forestalling the desires and projects of Napoleon, by preparing the way for his divorce, and the formation of a more auspicious matrimonial alliance.

"This is a sad affair, sire, of the Cardinal Caprara," observed the *chef de police*, having completed the transactions which had motived his journey from the capital.

"*Sad?*" reiterated the emperor. "I understood from Constant that Paulet answered for his life?"

"I met Dr. Paulet, sire, as I entered the *Cour d'Honneur*."

"Well?"

"He assured me that there were no grounds for alarm,—that in a day or two his eminence would be as well as ever"——

"And capable of supping a second time on a ragout of *fausses oronges!*—Jackass!"

"But is it *proved*, sire, that the mushrooms *were* pernicious?"——

"*Proved!* You should have seen the cardinal's face!—*purple* as his stockings! Many an unfortunate *gamin* has been deposited in the dead room of the Morgue, with twice as much life in his frame! *Pernicious!*—Nothing but Paulet's skill could have saved him."

"Your majesty mistakes me. *Poisoned*, I admit him to have been; but my people here assured me they have procured evidence that the mushrooms picked and selected yesterday, at the cardinal's own suggestion, during a promenade to the Rocher de Montigny, were of the true and genuine orange species. It seems that his eminence's *piqueur*, aware of the ridicule incurred during their

stay at Paris, by Caprara's proverbial parsimony, not choosing to be seen entering the palace gates, charged with a pannier of mushrooms, like the *baudet* of a market-gardener, entrusted them accordingly to the hand of a wood-cutter working near the spot, who engaged to convey them to the cardinal's kitchen. By this individual they were assuredly changed on the road."

"Bah!" cried the emperor. "Would you and your *mouchards* have me believe Caprara is a sufficiently great man, to have enemies among the wood-cutters of Fontainebleau?—Poison a cardinal?—They could no more for me!—Besides, the people of these cantons still smack of Bourbon patronage, and are as pious as the prudes of the Faubourg St. Germain. I would warrant every knave of them to kiss the hem of the petticoat-tail of the smallest member of the sacred conclave. Poison a cardinal! They would as soon think of denying St. Peter!"

"Nevertheless," pursued Fouché, "my agents assert that Cardinal Caprara is detested by the people, as the supposed bearer of his holiness's promise of assent to the project of your majesty's divorce;" (involuntarily Napoleon turned his eyes towards the door affording access to his apartments, from those of the susceptible Josephine;) "nor need I remind you, sire, that the extreme popularity of the empress"——

"I know, I know!" interrupted Napoleon, who was indeed aware that the rumour of his repudiation of Josephine had created a most unfavourable impression throughout the kingdom. "But do you pretend to insinuate that the French nation has entered into a conspiracy to poison Caprara, for having been the mere state-courier of Pius VII!—*Que diable!*—Josephine's party must, in that case, be stronger and more redoubtable than I have ever had cause to think it!"

"The young man pointed out to suspicion as the bearer of the mushrooms from Montigny to the palace," resumed the Duc d'Otrante, repressing the sneer of his imperial master, by proceeding at once to *facts*, is one to whom the attention of my people at Fontainebleau has been previously directed, as dangerous and involved in mysterious connections.

"Under *surveillance*, then?"

"Under *surveillance*."

"And yet employed in the public works? Why, under such circumstances, allow him to be retained by the inspector of the royal forests?"

Fouché replied only by a smile, manifestly implying, "To keep him under the cognisance of the police."

"True!" replied the emperor, replying to this tacit reply. "But it might be desirable that your people kept their *hands* as well as their eyes upon the fellow, instead of leaving him at liberty to spoil the supper and night rest of a prince of the church. *Cospetto!* These mushrooms may yet chance to figure in a papal bull!"

The breakfast hour was now approaching, the one of all the four-and-twenty when Napoleon was most accessible to familiar intercourse; and Fouché seemed to profit by his increasing good-humour, in order to push still further the subject under discussion.

"In the apprehension that an unfavourable view of the affair might reach the court of Rome," said he, "I have already caused this young man, this Guillot, to be arrested. It is a token of respect due to the rank of Cardinal Caprara."

"Respect due to a broomstick!" muttered the *Petit Caporal*.

"Which motive might perhaps be held insufficient," pursued Fouché; "but that in spreading a net over a minnow, I hope to secure as fine a cock-salmon as ever wagged a fin within the meshes of the police!"

"Aha!" cried Napoleon, who had been traversing the room, and now stopped short opposite the official operative, who might well be called (as Victor Hugo terms our English hangman) "*the royal right arm!*"

"Within the last six weeks," continued Fouché, "a mansion situated near the ferry of Valvin, which your majesty once entertained thoughts of hiring, (but that the situation was scarcely secluded enough for the purpose,) as a residence for Madame de——"

"I know, I know!" hastily interrupted Bonaparte, vexed to find the organisation of his secret police so admirable, that not even a casual expression of his own could escape its scrutiny. "Who lives there now?"

"The English *detenu*, sire!—Monsieur le General R——."

"*An English family at Fontainebleau?* An English *detenu*—an English general officer? You must have planned this, sir, for my especial annoyance! *Sacre nom de Dieu!*—Have I not expressly desired that these people might be kept out of my way? Last year, as we drove near the bridge at Verdun, on our way to Mayence, had not the English prisoners the audacity to greet me with hisses, and opprobrious epithets?"

"Which offence against your imperial majesty's person, half-a-dozen of them are still expiating in the dungeons of Bitche," replied Fouché, coolly. "But General R—— is scarcely to be classed among a tribe of fool-hardy midshipmen, such as the lads in question. For several years he has resided in all honour and tranquillity at Verdun; and it was but a few months ago that I received an application for a *permis de voyage* for his family, to pass two months at Fontainebleau, in order to try the effects of the *cure de raisin* for his only daughter, stated to be in the last stage of a decline. There was no plea for withholding from *him* a favour frequently conceded to English prisoners on parole; especially as your majesty had then announced your intention of dividing the autumn between Rambouillet and St. Cloud. A passport was accordingly granted, and General R—— established himself at the Pavilion de Valvin"——

"At least, while residing so near the palace, you have placed his correspondence under scrutiny?"

"More particularly, sire, since the general's lady, who is daughter to a member of the English cabinet, keeps up constant intercourse with her family."

"And has any thing—*transpired?*" said the

emperor, fixing a scrutinising eye upon Fouché's countenance.

"Nothing, sire," he replied, preparing to touch a point on which Napoleon was just then *peculiarly* sensitive to the sneers of the English press. "Nothing,—unless a few idle comments in the letters of Lady Emily R——, upon the age and personal coquetry of the empress, as well as her unaccountable influence and popularity with the nation."

"Mere flippant woman's gossip!" said Napoleon, having recourse to his snuff-box.

"But exactly of the kind to obtain ready currency in London; where any absurd slander relating to your majesty's domestic circle is voraciously swallowed. I have, therefore, suppressed the letters."

"Good!—but better still, had you kept these people away from Fontainebleau altogether. Send them back to Verdun without loss of time."

"I understand your majesty's departure to be fixed for to-morrow? The young lady is seriously indisposed; and, as a week remains unexpired of the general's *permis de séjour*"——

"At least, do not let it be *renewed*," cried Napoleon, and let me hear of no more English prisoners at Fontainebleau. "If they fall sick, let them find some *orviétan*, less obnoxious to me than a course of Chasselas grapes. *En attendant*, what has this general to do with Caprara's mushrooms?"

"The young man named Guillot having been arrested this morning before day-break, and his papers secured——"

"Papers?—The *papers* of a wood-cutter?"

"We find reason to believe him a man of birth and education," continued the minister of police; —bearer of a false passport; nay! *pour trancher le mot*,—the son of the emigrant Duc de la Roche Allier,—and here on a rendezvous with his friend General R——, for the purpose of effecting negotiations——"

"With the English government?" cried Napoleon.

"No, sire;—with the people at Hartwell!"

"An emissary of the Bourbons—a secret emissary—*a spy*;—yet bearing the name of a family which dates its chivalry from the first crusade!"

"The young count has learned his lesson, sire, in England; where, under your favour, spies are treated with the reverence due to the hazards of their arduous vocation. Andre, whom the Americans hanged, has a monument in the Royal Abbey of Westminster."

"My poor Fouché! which of your hangers-on has regaled your wounded vanity by that piece of information?" enquired the emperor, laughing heartily at the fact so *naively* boasted by his *chef le mouchards*. "But no matter! What have you done with this individual!"

"Sent him forward to Bicetre."

"Have you reason to suppose he has connections in the Faubourg St. Germain?"

"The most important!—nay, suspicious point; the very household of the empress. Those two old jackanapes, the chamberlains, Count ——, and ——, cannot get rid of their Bourbon hankings."

"And General R——?" demanded Napoleon, amused to perceive the pertinacity of Fouché's antipathy to every thing and every body connected with Josephine.

"Has rejected the proposals with which he was insulted. A paper in his handwriting, sire, was found in the cottage of the *soi-disant* Guillot,—a letter desiring him to set foot in his house no more. English officers possess a nice sense of honour; and this R—— appears to be *un homme de bien!*"——

"*Comme un autre*, I suppose! But if young Allier's mission was thus infructuous, what has kept him at Fontainebleau?"

The young man's *arrière-pensées* are not easily to be developed," said the Duc d'Otrante. "It is probable he had an ulterior object in wishing to obtain access to the palace, which he hoped to secure by offering his services to the cardinal's people,—having previously been frustrated by the intervention of mine. I need scarcely, however, point out to your majesty, that an emissary of the Bourbons may be inferred to cherish no great predilection for his eminence, as being the avowed friend to a measure likely to give an heir to the empire, and secure the downfal of their dynasty."

"Away with you!" cried the emperor; "Asses as they are, the Bourbons and their agents are scarcely likely to fancy, that by poisoning a single cardinal, they could circumvent all amicable intercourse between the Tuilleries and the Vatican. Your people have outshot their mark. We have to thank Caprara's gluttony, as the accidental means of unraveling an execrable plot; but if the mushrooms *were* of a pernicious kind, trust me his eminence has no one to thank for the mistake, but the pur-blind, half-witted rascals of his own scurvy suite."

"As your majesty pleases," replied the minister, taking his portfolio under his arm, preparatory to the ceremony of taking leave. "In that case, all further interference in the business is superfluous."

The emperor, meanwhile, had taken his resolution. The day not being one of those set apart for the chase, he was comparatively master of his time; and having signified to the empress at her toilet, an intention to ride towards Melun, accompanied only by the Grand Marshal, Duroc, and the aide-de-camp on duty, he quitted the palace in the afternoon, without cortege or attendants. Having reached, at full speed, the Croix d'Augas, and thence diverged into one of the lateral alleys leading to the foot of the rocks crowned by the *Calvaire*, Napoleon suddenly drew up; acquainted the Duc de Frioul that he had a visit to make privately in the neighbourhood; and, having demanded the least frequented route to the village of Valvin, dismounted, and gave his horse to the aide-de-camp. Duroc, suspecting some intrigue of gallantry, involuntarily smiled as he offered his services as guide; and, having fastened his horse to a tree, and recommended, *en passant*, to the young Count Flahault, (whose looks betrayed no small curiosity concerning his imperial majesty's proceedings,) not to grow *too* impatient during their absence, he set off in the direction of the river, through one of those beautiful green

alleys, entangled with juniper and broom, and overgrown by the greatest variety of wild flowers ever collected together in one of nature's uncultivated *parterres*,—which constitute a peculiar charm of the forests of Fontainebleau. Duroc, although admitted to the most familiar intimacy with the emperor, was, of course, too good a courtier to hazard an enquiry touching the *object* of their route; while Napoleon, by his comments on the scenes they were traversing, and a learned discussion, into which he diverged, touching the new system of silvan-culture introduced by Violaines, for the regeneration of the royal forests, was evidently anxious to evade all allusion to the subject.

"Yonder, sire, is Valvin," said the grand marshal, as a few scattered cottages at length appeared at the end of an avenue of young plane-trees, beyond which glittered the blue waters of the Seine.

"Return, then, and await me in the forest," replied Napoleon hastily. "And, should any one belonging to the court come across you, be especially careful to give no indication of my destination."

And immediately, with a second smile, which he tried to render as little significant as possible, Duroc, (who, on more than one previous occasion, had been the confidant of an imperial or consular *amourette*,) returned towards the place of *rendezvous*, leaving Napoleon to pursue his unmolested way, "*sous l'orme*." The grand marshal's interest in the mystery might have been, perhaps, more strongly excited, had he seen the emperor with his hat pulled over his face, to avoid recognition, trudge onward, till he reached the wicket gate of a large garden, surrounding the mansion known by the name of the Pavilion de Valvin, and notoriously inhabited by an English *detenu*.

"Is the general visible?" enquired he abruptly of the servants, who answered his hasty summons at the door bell;—and, without waiting for a reply to his query, he entered the hall.

"Whom shall I announce?" demanded the amazed domestic.

"No matter,—a stranger!"—replied Napoleon, persuaded that his person was unknown to his conductor. And following him closely, they entered together a small saloon overlooking the garden; and, as Napoleon concluded, the presence of General R——.

But he was mistaken. There was no general —no *man* in the room—to warrant the loud step and haughty countenance of the intruder; but close beside the open window, and in an attitude of despair, sat Lady Emily; supporting on her shoulder the feeble head of the fairest creature on whom the hero of Marengo had ever looked. Her cheeks were colourless, indeed,—colourless as those of the dead; and her air so languid, that even her light brown ringlets seemed to hang in utter lifelessness round her face. But it was as it were the face of an angel! and so potent was the influence of her unearthly delicacy and loveliness, that even as the law-giver of Israel put his shoes from off his feet, when he found that the place whereon he was standing was holy ground—so, overcome by the purity of her aspect, did Napoleon lay aside the sternness of his demeanour. The eyes of both mother and daughter were swollen with weeping; and Lady Emily, though evidently recognising the person of her visiter, made no effort to rise which could disturb the gentle sufferer, whose head rested on her bosom. Her whole heart, her whole soul was with her afflicted child! How different a scene from the tumultuous disorder prevailing round the death-bed of the cardinal!

"I have a thousand excuses, madam, to offer," said the emperor, in a subdued voice, advancing towards the window where they sat. "I had expected to find General R——."

"My husband has only just quitted the room," said Lady Emily, hesitating what title to assign to her unceremonious guest.

"In that case, allow me to seek him elsewhere. The presence of a stranger may be painful to the young lady, your daughter, whom I grieve to find so much more seriously indisposed than I had been led to anticipate."

"No!" faltered Miss R——, in a tremulous voice, overcoming at once her natural timidity and her horror of the name of Bonaparte, in the consciousness that the man before her was sole arbiter of the destinies of her family. "My father will be here immediately. Do not leave us."

Unaccountably touched by the feeble accents of the gentle voice which thus addressed him, Napoleon instantly accepted the seat, pointed out by Lady Emily with as dignified a gesture as if *he* were a prisoner in the land, and *she* its sovereign.

"My daughter is suffering from the results of severe agitation," said his high-bred hostess, in a hurried voice, as if eager to conciliate her visiter, previous to the general's arrival. "A recent event,—the arrest of an intimate friend"——

But the words were suspended on her lips; for at that moment, undisturbed in countenance, unexcited in demeanour, the cold-blooded General R—— entered the apartment. Bonaparte rose, and advanced to meet him; and the salutations exchanged between them, were simply those of gentlemen and equals. Even when the emperor re-seated himself, uninvited, the British general did the same; thus tacitly expressing his intention to see, in the anointed of the pope, a sovereign still unrecognised by the government of his own country.

"The object of my visit here, sir," said Napoleon, his *hauteur* returning, as he foresaw this determination on the part of his host, "was to express my satisfaction that an officer—a brother soldier—should have escaped the snares laid for his honour by the deposed family of Bourbon; a circumstance which transpired this morning, in the seizure of certain papers belonging to a young traitor, who should bear a less noble name, or pursue a less ignoble line of conduct!"

"You allude, of course, to Count Julius de la Roche Allier," replied the general, with a coolness amounting to irony. "But I am at a loss to understand in what manner *my* connections with him can have become interesting to the existing government of France."

"I allude," interrupted Napoleon, "to your refusal to become a party to a conspiracy planned by the traitors at Hartwell, and confided to the intermediation of Count Jules de la Roche Allier; who has been arrested on other charges, by the vigilance of my minister of police."

"Count Jules de la Roche Allier an agent of the Bourbons—a spy in the land? Your majesty has been cruelly and grossly deceived!" interrupted Emily, indifferent even to her father's displeasure at such a crisis.

"You are, indeed, in error, General Bonaparte," said R——, pertinaciously marking his dissent from the mode of address adopted by his daughter. "Whatever may be my ground of enmity against the young man, I believe him to be innocent of the madness imputed to him. Suffer me, meanwhile, to thank you"—a bitter sneer passed over his countenance as he spoke—"for believing a British soldier, at large on parole, to be incapable of plotting against the government which has become the depository of his honour."

"And what, then, was he doing at Fontainebleau?" cried Napoleon, rising angrily from his seat, without even hearing the taunt of his ill-judging host. "It is true this young man was arrested on mere suspicion. But a false passport, his papers, your own letter?"

"A *letter?*"

"Desiring him to set foot in your house no more, and referring to his negotiations——"

"For the hand of my daughter. Know, sir——"

"A few words may suffice to explain this vexatious business," interrupted Lady Emily, trembling at the thought of the indiscretions into which her husband might be betrayed by his two-fold aversion to the Emperor of France, and the adherents of its fallen kings. "The family of La Roche Allier having resided, during its period of emigration, in Edinburgh, was welcomed in the higher circles of that city with the deference due to the unfortunate. In the common course of hospitality, Count Jules was introduced to our house, formed an attachment to my daughter, and eventually made overtures for her hand——"

"Overtures peremptorily declined by her father," interrupted the general; "by her father, who could not justify it to himself to bestow the inheritance of one of the most ancient families in Scotland upon an alien, a foreigner, a man who neither spoke its language, nor——"

"Professed its creed! I understand your scruples, sir," said Bonaparte, whose looks, ever and anon reverted, during the explanation, to the pure pale face of the young English girl,—so mild, so full of resignation, so different from the meretricious beauties of his own dissolute court.

"Pardon me,—we are all alike of the church of Rome," said the less petulant Lady Emily, willing to insinuate a word in extenuation of her daughter's preference.

"I must conclude, then, madam, that General R—— had personal reasons for declining the alliance of the house of Roche Allier?"

"It is enough that he saw fit to exercise the authority of a parent over his child," said the general, harshly. "Unwilling, however, to tax my daughter's submission by leaving her exposed to this presuming young man's assiduities, I prepared my family for a continental tour; and it was then that, while, under sanction of our international treaty, we traversed France, the arrest and detention of every British subject who had been rash enough to confide in the good faith of the republic, consigned us prisoners to Verdun! *There*, separated from her home, her country, her friends, my daughter's health, already impaired by pulmonary attacks, has gradually declined; and though," he continued, struggling to assume a more cheerful tone, lest the admission of his forebodings should prove injurious to the invalid, "though I am assured by Miss R——'s medical attendants that the system we are trying at Fontainebleau will, in a short time, complete her restoration——"

"No, father, no!" faltered Emily, involuntarliy interrupting him. "You do not so deceive yourself,—you, cannot so deceive me; I am dying; yes, I know it. I am dying! Roche Allier's arrival here, (disguised, and at the risk of life and honour,) convinced me that my mother's letters had already conveyed to our friends in England the knowledge of my rapid decline; and that poor Jules was periling all, in hopes that the presence of one so dear might avail to suspend the fatal blow. But he came;—and my father interdicted our meeting—my father was still inexorable! And now, Jules is a prisoner—and I on the brink of the grave!"

There was a momentary silence; for the hollowness of Emily's voice conveyed a fearful confirmation of her assertions.

"But I have not been disobedient,—have I father?" she resumed, perceiving some indication of emotion in her father's countenance. "I shall not bequeath you the memory of a rebellious child? From the day of receiving your commands, I have held no communication with him; and now all risk is over of thwarting your wishes. I shall see his face no more. I am dying!"

And again she bowed her head on the bosom of her afflicted mother; who was no longer able to repress the tears with which she had been struggling.

"If you could suggest any thing in my power to alleviate your suffering," said the emperor, deeply touched, but too much habituated to the control of his feelings to evince any symptom of emotion; "if, consistently with my duty to the nation——" He hesitated. He felt that it was not for *him* to propose the liberation of an emigrant royalist.

"You could do *much*," said Emily, striving to speak more firmly. "You could release my father and mother from captivity. When I am gone, it would be a grievous thing for them to be fixed in France, in incessant contemplation of the grave of their only child. *Promise* me that you will release them, that you will send them home to Scotland—to their friends——"

"And Count Jules de la Roche Allier?" exclaimed Napoleon, sympathising in her filial devotion.

"For *him* I have nothing to ask," said poor

Emily. "He is innocent, and therefore you dare not injure him."

"Are you aware, madam, that his family is especially excluded from the act of grace conceded to the emigrants?—that he has brought a proscribed head within reach of the retributive justice of the French government?" added the emperor, willing to probe to the utmost the heroism of the courageous young girl.

"Release my father and mother," she faintly reiterated, clasping her hands as she spoke. "I leave the rest to God."

"I am at liberty, then, to do my worst," said Napoleon; "since even his friends refuse to plead in his behalf."

"I would pledge my life and honour on the innocence of young Roche Allier!" interrupted the general. "Of fraud or treachery he is incapable. His attachment to my daughter has alone brought him into his present predicament."

"Give her to him, then, and end it!" said Napoleon abruptly; having already seated himself at a writing-table, to accomplish the petition of his interesting prisoner. "Return to England, Monsieur le General, with your family, and relieve me from the presence of this rash young man, by carrying him with you as your son."

And while General R——— hesitated whether to accept or reject the benefits thus cavalierly conferred, the emperor rose and presented two folded papers to the hands of Emily."

"Both of these are yours," said he, with one of those radiant smiles which sometimes brightened his sallow visage. "*One* of them regards your father, and one——your husband. So dutiful a daughter will make the best of wives."

"It is too late! Alas, alas! it is too late! Yet a few hours, and my heavenly Father will receive me to his mercy!" faltered Emily, now almost exhausted by the agitation of continual emotion. "Accept, however, the thanks of one about to be released from all earthly bondage, that you have imparted peace and consolation to her dying hours!"

And big tears rolled down the pale cheeks of the sufferer, as she extended her slender hand, as a parting token, towards the emperor. Profoundly touched, he raised it to his lips; and ere General R—— recovered his self-possession sufficiently to explain or remonstrate, Napoleon, after a respectful obeisance to Lady Emily, had quitted the room.

"She will not die," muttered the despotic Napoleon to himself, as he pushed his way back through the gathering twilight, towards the spot, in the forest of Fontainebleau, where Duroc was in waiting. "She *must* not die! I will send Corvisart to her!" And with an impetuosity equal to that of Uncle Toby, when he swore that Le Fevre should live, the emperor, as he strode along, crunched down, with his iron heel, the branches of the juniper and heather bushes that impeded his way. "All girls are apt to fancy they are dying when they are crossed in love. Besides the cold-blooded old fool will think better of it. Sacrifice such a girl as that to a whim—a prejudice? Why, even I could scarcely hold out against that noble countenance, and that persuasive voice."

"Send the Duc d'Otrante hither," said his majesty, when he entered his *cabinet de travail*, at the close of a state dinner, a few hours after his return to the palace. "So,—you are here, sir! Come to offer your apologies, I trust, for the blundering officiousness of your people in causing the arrest of Jules de la Roche Allier, on such insufficient testimony? Another time I advise you to select fellows possessing eyes, ears, and some small portion of understanding!"

"Your majesty having, I find, already despatched a courier to Bicetre with orders for the count's release, I may rather tender my apologies to himself on his arrival at Fontainebleau, to accompany his father-in-law to England, in pursuance of the engagements, sire, into which your majesty has deigned to enter, this afternoon, with the family at the Pavilion de Valvin."

"*Comment donc coquin?*" cried the emperor, relaxing into a hearty laugh. "Are you already so well informed? The lubberly lacquey, then, over whom I stumbled in the ante-chamber of the Pavilion, was——"

"Precisely one of those fellows without eyes or ears, whom your majesty has commissioned me to discharge."

"*A la bonne heure, mon cher duc!* Since the fellow was an eavesdropper, I am glad he was a rascal of your own. Let him be as discreet as he has shown himself expert, and he may claim promotion. Understand, however, that this Valvin transaction is not to transpire: I do not wish to have it said in the Faubourg St. Germaine that I have been courting conciliation with the English cabinet, by an act of magnanimity towards the daughter of one of its members. But what *fete* is there to-morrow—what *veille* to-night?"

"None, sire; neither *fete* nor *veille*."

"Do you mean to tell me that I do not hear the bells of the *Sainte-Trinite?* What should they be ringing at this hour of the evening?"

"The passing bell, sire, of the English general's daughter. The curé of the *Sainte-Trinite* was her director; and Corvisart has just returned with him from Valvin, with intelligence of the young lady's dissolution."

"Already!" ejaculated Napoleon, throwing himself into a chair. "Poor girl! Poor unhappy mother!"

"On the other hand, I have the satisfaction to acquaint your majesty that Dr. Paulet announces the Cardinal Caprara to be out of danger."

"*Au diable le cardinal*," ejaculated Napoleon, with one of his fiercest looks. "I would have given twenty cardinals for power to save the life of the daughter of the English *detenu!*"

ANTEDILUVIAN PLASTER.—We are almost ashamed to be the first to publish the fact, but it is publicly and confidently stated, that the "splendid Saurian" remains, lately purchased by the trustees of the British Museum for five hundred pounds, or guineas, is nothing else than—*plaster*.

Athenæum.

From Blackwood's Edinburgh Magazine.

Poems by William Stanley Roscoe. London. William Pickering. 1834.

This pretty little unpretending volume, in its gray garb, without any ornament to attract gewgaw loving eyes, almost like a quakeress in her every day attire among a bevy of females of some other very different persuasion bedizened for a ball, does not look as if it desired the general gaze; yet from the placid smile it wears, it seems like some uncloistered and home-loving social nun in her meek humanities, unconscious neither of its own modest virtues, nor mayhap even of its own beauties; nor yet unwilling to receive—not the homage of admiration—for it leaves that to be paid to higher claims—but the incense of love breathed from humble and happy hearts, like the scent of violets from lowly places in nature's retired nooks, haunted only by the pious children of nature.

In plainer but not simpler words, there is much beautiful poetry in this volume; but it is of a kind that may not be greatly relished by the million. The million hunger and thirst after the stronger and darker passions: nothing will go down with them but pure Byron. They are intolerant—or careless—or even ashamed of those emotions and affections that compose the blessing of our daily life, and give its lustre to the fire on the hearth of every Christian household. Yet, for all that, they are inexperienced in those same stronger and darker passions of which they prate, and know nothing of the import of those pictures of them painted, with background of gloom and foreground of fire, in the works of the truly great masters. The disturbed spirit of such delineations is far beyond the reaches of their souls; and they mistake their own senseless stupor for solemn awe—or their own mere physical excitement for the enthusiasm of imagination soaring through the storm on the wings of intellect. There are such things in "Satan's Invisible World Displayed" in poetry, as strong and dark passions; and they who are acquainted with their origin and end call them *bad* passions; but the good passions are not dark, but bright; and they are strong too, stronger than death or the grave.

All human beings who know how to reap

> "The harvest of a quiet eye,
> That broods and sleeps on its own heart,"

feel, by the touch, the flowers of affection in every handful of beauty they gather up from those fortunate fields on which shines for ever through all seasons the sun of life. How soft the leaves! and as they meet the eye how fair! Framed, so might it seem, of green dew consolidated into fragrance! Nor do they fade when gently taken from their stalk on its native bed. They flourish for ever if you bruise them not—sensitive indeed—and if you are so forgetful as to treat them rashly—like those of the plant that bears that name—they shrink and seem to shrivel for a time, growing pale as if upbraiding your harshness; but cherished, they are seen to be all of

> "Immortal amaranth, the tree that grows
> Fast by the throne of God;"

for the seeds have fallen from heaven to earth, and for eighteen hundred years have been spreading themselves over all soils fit for their reception—and what soil is not fit? Even fit are stony places, and places full of thorns. For they will live and grow there in spite of such obstruction—and among rank and matted weeds will often be seen peering out like primroses gladdening the desert!

Is this the nature of the poetry in this volume? Unless we do very greatly deceive ourselves—it is; but we shall let you judge for yourselves by a few specimens. We confess that we opened the volume with a disposition to be delighted; but had we not been so, the sadder would have been our disappointment. For we love the author—personally but little known to us—because he is his father's son. Twenty years and five have flown since we walked among the "alleys green" of Allerton with William Roscoe the elder—and who ever conversed with him for a few hours in and about his own home—where the stream of life flowed on so full and clear—without carrying away impressions that never seemed to become remembrances? So vivid have they remained amidst the obscurations and obliterations of time, that sweeps with his wings all that lies on the surface of the soul, but has no power to disturb, much less destroy, the records printed on the heart's core—imperishable even here—and hereafter to be brightened, we believe, into a splendour far exceeding what could have belonged to them in this fluctuating life!

The family of the Roscoes have not been degenerate from the virtues of their parents. The name is now honoured for their own sakes; in them talents and genius are seen to be hereditary; and he will have much to contend against and overcome, who, belonging to that line, shall ever act so as to make men bring to mind with angry sorrow the character of his illustrious ancestor. All the Roscoes now alive are known in our literature; Thomas, who, if we mistake not, is one of the younger brothers, has already achieved much reputation; and William Stanley, the eldest, long admired in a wide circle of friends as a man of the finest faculties, and far beyond it as gifted with true poetical sensibility and fancy, will now be regarded by all who love poetry rather than praise it, as a contributor to its stores of not a few strains of the true inspiration. He seeks not to soar into "the highest heaven of invention;" for he knows his own powers, and wisely uses them in their own sphere—the sphere nature has chosen to allot them—and in that quiet domain "Beauty pitches her tents before him"—removing, as her happiness bids, from vale to vale—and often resting, with her calm encampment, by the side of some sylvan stream, where the scenery seems to sleep in perpetual sabbath.

Here are a few—a very few lines—written nearly thirty years ago—

> "In life's morning march when his spirit was young;"

and yet they are felt by us to be inspired by that presageful spirit which, in early genius, often brings over the dreams of rising youth the sombre shadows, that might seem in nature to belong

but to those of declining age. "Most musical, most melancholy"—a simple air indeed—but as it listens, the heart feels it comes from the heart.

LINES WRITTEN IN PASSING THROUGH VALE CRUCIS, IN OCTOBER, 1806.

"Vale of the cross, the shepherds tell
'Tis sweet within thy woods to dwell!
For there are sainted shadows seen
That frequent haunt thy dewy green;
In wandering winds the dirge is sung,
The convent bell by spirits rung,
And matin hymns and vesper prayer
Break softly on the tranquil air!

"Vale of the cross the shepherds tell
'Tis sweet within thy woods to dwell!
For peace hath there her spotless throne,
And pleasures to the world unknown;
The murmur of the distant rills,
The Sabbath silence of the hills,
And all the quiet God hath given
Without the golden gates of heaven!"

The lines "To a Lily flowering by Moonlight" were, we believe, written in Mr. Roscoe's seventeenth year—or even earlier; and though they are universally known, that is no reason why we should not transfer them to our pages. Proud thought, and far better than proud, for a man to know that his name may be embalmed in the memory of one strain—which he knew not, as he breathed it, whether the next hour might not consign to oblivion! The moon was bright and the lily was fair, and the boy gave vent to his heart in verse. Into that verse flowed all that was purest in the multitude of thoughts within him—and many long years afterwards, the man is happy to recognise what he once was in the feelings hovering over the immortal image of the dead flower, and to know that they have added loveliness even to the lily. If you think that exaggeration—why then brush scornfully away all the beautiful little poems and fragments of poems, in which they who made them wished but to utter the gratitude of their joy, or the resignation of their sorrow.

"O why, thou Lily pale,
Lov'st thou to blossom in the wan moonlight,
And shed thy rich perfume upon the night,
When all thy sisterhood,
In silken cowl and hood,
Screen their soft faces from the sickly gale?
Fair horned Cynthia woos thy modest flower,
And with her beaming lips
Thy kisses cold she sips,
For thou art aye her only paramour,
What time she nightly quits her starry bower,
Trick'd in celestial light,
And silver crescent bright.
O ask thy vestal queen,
If she will thee advise
Where in the blessed skies
That maiden may be seen,
Who, like thee, hung her pale head through the day,
Lovesick and pining for the evening ray;
And lived a virgin chaste amid the folly
Of this bad world, and died of melancholy?
O tell me where she dwells;
So on thy mournful bells,
Shall Dian nightly fling
Her tender sighs to give thee fresh perfume,
Her pale night lustre to enhance thy bloom,
And find thee tears to feed thy sorrowing."

Perhaps none among us ever wrote verses of any worth, who had not been, more or less, readers of our old ballads. All our poets have been so—and even Wordsworth would not have been the veritable and only Wordsworth, had he not in boyhood pored—oh, the miser!—over Percy's Reliques. From the highest to the humblest, they have all drunk from those silver springs. Shepherds and herdsmen and woodsmen have been the masters of the mighty—their strains have, like the voice of a solitary lute, inspired a power of sadness into the hearts of great poets that gave their genius to be prevalent over all tears, or with a power of sublimity that gave it dominion over all terror, like the sound of a trumpet. The Babes in the Wood! Chevy Chase! Men become women while they weep—

"Or start up heroes from the glorious strain."

We have seldom read a modern composition so "tender and so true" to the spirit of those old ballads, which one might think were written by Pity's self, as this dirge.

DIRGE.

"O dig a grave, and dig it deep,
Where I and my true love may sleep!
We'll dig a grave, and dig it deep,
Where thou and thy true love shall sleep!

"And let it be five fathom low,
Where winter winds may never blow!—
And it shall be five fathom low,
Where winter winds shall never blow!

"And let it be on yonder hill,
Where grows the mountain daffodil!—
And it shall be on yonder hill,
Where grows the mountain daffodil!

"And plant it round with holy briers,
To fright away the fairy fires!—
We'll plant it round with holy briers,
To fright away the fairy fires!

"And set it round with celandine,
And nodding heads of columbine!
We'll set it round with celandine,
And nodding heads of columbine!

"And let the ruddock build his nest
Just above my true love's breast!—
The ruddock he shall build his nest
Just above thy true love's breast!

"And warble his sweet wintry song
O'er our dwelling all day long!—
And he shall warble his sweet song
O'er your dwelling all day long.

"Now, tender friends, my garments take,
And lay me out for Jesus' sake!—
And we will now thy garments take,
And lay thee out for Jesus' sake!

"And lay me by my true love's side,
That I may be a faithful bride!—
We'll lay thee by thy true love's side,
That thou mayst be a faithful bride!

"When I am dead and buried be,
Pray to God in heaven for me!—

Now thou art dead, we'll bury thee,
And pray to God in heaven for thee!
——Benedicite!"

We know not how it is—or rather we should say, we do know how it is—but cannot tell how—it is impossible for any poet to please us—let him write ever so well—in writing about—the lakes. We mean, of course, the English lakes—the lakes of Westmoreland, Lancashire, and Cumberland—for although the lakes of Scotland in themselves are all that lakes can be, they are not so to us—heaven bless them! nor, although we are all that we can be, are we so to them—heaven bless us! else why so seldom do they visit us in our sleep? But every other night we are at Orresthead! Windermere murmurs "come! lie upon my breast!" William Roscoe, therefore, must pardon us for thinking but poorly of his "Lines to the river Brathay, in Langdale." True they were written in 1797, before we were wedded (think not, though for a season separated, that we are divorced—divorce were death!) in Bowness church, to Windermere, to the queen of the lakes. Look at these lovely young isles now tossing their tresses in the breeze, now braiding them in the sunshine, they are the children of that marriage. Believe that but for the love of the Naiad for North, they had never been born; not one of them, all would ever have hung floating in its cradle of water-lilies among those charmed clouds! Nay! William Stanley Roscoe! Thou hast no business with the river Brathay but to walk by her side along the meadows. We have lipped her in secret among the clouds, we have cleaved to her on her rock-bed in the woods, we have blended with her bosom in sunless chamber cliff-roofed of the same stone that frowns from the blind face of Pavey-Ark; and with whom, pray, hadst thou dined the day thou sawest the Brathay lost in Grassmere? Ask the two giants, and they will nod their wooded heads, as much as to say, "Our Brathay, under heaven, belongs to Windermere."

For the same reasons, and a thousand others, we have merely looked at the "Lines written in the Woods of Rydal-Hall," and think we saw mention made of the Druids. They are dated 1804; and why did Mr. Roscoe take no notice of Lady Diana Fleming's white pea-fowl, sitting on the limbs of that huge old tree like creatures newly alighted from the isles of paradise! All undisturbed by the waterfalls, which, as you kept gazing on the long depending plumage illumining the forest-gloom, seemed indeed to lose their sound, and to partake the peace of that resplendent snow so beautiful; each splendour a wondrous bird! For, lo! they stretch themselves all up, with their graceful crests, o'ercanopied by the umbrage draperied as from a throne! And never surely were seen in this daylight world such a show of unterrestrial creatures; though come from afar, all happy as at home in the Fairies' Oak!

Having thus vented our spleen, we are as amiable as ever; and, though our haunts, when we wore the gown, were among the groves of Isis, (and sweetly, too, flows the Cherwell round the fields of St. Mary Magdalene, in summer as steady and as silent as the dream-land of sleep,) yet with such an accomplished scholar as William Stanley Roscoe, we fly back through a long, glimmering vista of years, and sit with him among the whispering reeds on the low banks of the Cam. But the towers, how high! and how high the spirit that inhabits them, let poets, and divines, and orators, and statesmen speak, in many an inspired page that never will the muses let die till they themselves be dead! "To spring on the banks of the Cam." 'Tis a classic strain, such as young Collins might have sung by the sister stream,—the boy Milton murmured by the same sedgy brink, when "the dim woods were still."

We should have expected a man of such fine taste as Mr. W. S. Roscoe, and such true feeling, to write good sonnets; and he has done so, making allowance for a want of variety in the pauses, but they are too few in number. We have transcribed three of them into the album of one most dear, in which no worthless matter can ever find its way, and here they are, that you and others may do likewise.

TO MY FATHER.

"Stay thine o'ershadowing wings, relentless Time,
Nor shed those auburn locks with falling gray,
That o'er my father's frownless forehead play
Graceful and fair, as in youth's golden prime.
Stay thy rude hand, and he thro' many a clime
Shall teach thee to retrace thy distant way
To the bright regions of historic day!
Or he shall charm thee with prophetic rhyme,
Swept from the strings of Freedom's holy lyre,
Or call the muses from th' Ausonian land,
And with the strains their breathing lips inspire,
Win thy cold ear, and check thy ebbing sand!
Vain is my prayer—already o'er my sire
Thou, ruthless power, hast stretch'd thine iron hand!"

TO A BIRD SINGING ON A STORMY DAY.

"Sweet bird, that in the pauses of the blast
Lovest thy simple melody to pour,
Regardless of the winter's icy hour;
And ever as the sky is overcast
Shroudest thyself; and when the storm is past
Warblest afresh, forth from thy blanched bower,
Trusting that Spring shall wake the slumbering flower,
Nor adverse seasons so for ever last;
So I amid the beating storms of life
Turn to the climes where Memory's daughters dwell,
And yield each calm day of a vain world's strife,
To the sweet labours of the vocal shell;
With fond hope worshipping those better Nine,
And the twin god who rules with bolt divine."

TO THE HARVEST MOON.

"Again thou reignest in thy golden hall,
Rejoicing in thy sway, fair queen of night!
The ruddy reapers hail thee with delight,
Theirs is the harvest, theirs the joyous call
For tasks well ended ere the season's fall.
Sweet orb, thou smilest from thy starry height,
But whilst on them thy beams are shedding bright,
To me thou com'st o'ershadowed with a pall!
To me alone the year hath fruitless flown,
Earth hath fulfill'd her trust thro' all her lands,
The good man gathereth now where he had sown,
And the great master in his vineyard stands;
But I, as if my task were all unknown,
Come to his gates, alas, with empty hands."

A few minutes ago, we were endeavouring to work ourselves up into a rage with Mr. Roscoe, for daring to write during Wordsworth's life *and ours!* (oh! what a fall was there, my countrymen!) about our lakes. For Windermere, as all the world knows, is our wife; and as for Wordsworth, why he has been for years—(we were the first to apply to himself his own grand line, regarding Dunmil, who sleeps in the Raise,)—

"Sole king of rocky Cumberland."

But we could not do it, and dismissed him with a poetical reproof. The simple truth is, that poetry is but experience spiritualised; and our friend—if he will let us call him so—never was much among our mountains. But let him meditate on well-known and dear loved places and the muse fills his heart with tenderest emotions, that take to themselves expression that must tell on every heart—for every heart has its own well-known and dear-loved places—to which it transfers whatever of beauty or of pathos it meets with in strains sincere; and thus are there holy abiding spots for all our being's best affections, in which they live for ever apart from all noise, and preserve all their pristine fervour. Such is the character of the exquisitely mournful stanzas, "To a Deserted Country Seat."

"Hail to thy silent woods,
Thy solemn climate, and thy deep repose,
Where the west wind as he goes
Moans to the falling floods,
That through the forest glide,
And journey with a melancholy tide!

"Hail to thy happy ground,
Where all is steep'd in stillest solitude;
And no unhallowed sound
Wakes nature from her holy mood;
Here let me waste away
The little leisure of life's busy day!

"Thy lone and ancient towers
Shall be my only haunt from youth to age;
The wild grown garden bowers
Shall shelter me in life's long pilgrimage;
And I will think me blest,
For ever in thy peaceful bounds to rest.

"On thee the sunbeam falls
In silence all the solitary year;
And mouldering are thy walls
That echoed once with hospitable cheer;
And all is past away
That stood around thee in thy prosperous day.

"But I may seek thy shades,
And wander in thy long forgotten bowers,
And haunt thy sunny glades,
Where the mild summer leads the rosy hours,
And mingled flowers perfume
The noontide air,—a wilderness of bloom.

"For nature here again
With silent steps repairs her woodland throne,
Usurps the fair domain,
And claims the lovely desert for her own,
And o'er yon threshold throws
With lavish hand the woodbine and the rose.

"Deep silence reigns around,
Save when the blackbird strains his tuneful throat,
Then the old woods resound,
And the sweet thrush begins his merry note;
And from some scathed bough
The murmuring ring-dove pours her plaintive vow.

"Here at the break of morn,
No hunter wakes the halloo of the chase,
Nor hounds and echoing horn
Fright from their quiet haunts the silvan race.
Rest, happy foresters, for ye shall be
In these green walks for ever safe and free!

'Wave, laurel, wave thy boughs,
And soothe with friendly shade my wearied head;
Come, sleep, and o'er my brows
With gentle hand thy dewy poppies shed.
Here shall be well forgot
The many sorrows of this earthly lot.

"Haunts of my early years,
Amid your sighing woods O give me rest;
Unnotic'd be the tears,
Unknown the grief that fill this aching breast,
While shelter'd in your bowers.
With patient heart I wait the suffering hours.

"How soon the morn of life,
The beam, the beauty of our days is o'er,
Amid a world of strife
The heart's young joys, shall bud, shall bloom no more!
Yet tranquil be the day
That lights the wanderer on his homeward way.

"Lo! where the lord of light
In setting splendour pours his crimson beams,
And at the approach of night
Bathes his bright orb amid the ocean streams,
And sinks into the west,—
So still, so peaceful be my hour of rest

We cannot doubt for a moment tha the specimens we have now given have justified all we have said of this writer's taste, sensibility, and fancy; nor do we hesitate to say, that they show he is a man of genius. Much has been said and sung of late years, about the nature of genius: and about its distinction from talent. All people feel, though few people perhaps know, what it is and we are, we confess, among the self-satisfied ignorant with respect to the mystery of its genesis, growth, and kind. But we have gained by our criticism some credit with the world for understanding something of its works, and a work of genius we pronounce the following *Monody*, which to our ears has a truly Miltonic flow of music; and now that we have read it aloud to ourselves for the second time in the silence of our sanctum, we exclaim, as we replace the volume in its narrow chasm in the compact shelf, "That strain I heard was of a higher mood."

"Umbrageous woods, that lift your aged arms,
And brave the ruthless tempests of the sky;
Storms that despoil the valley's fading charms,
And chase the summer's dying melody;
Ye old retreats of solitude,
Where nought but grief might e'er intrude,
Ere the dark winter spreads his latest gloom,
To your wild reign I come,
To pour the sad and unavailing tear
O'er Henry's early bier,
With deep entranced spirit, dark, yet holy,
And haunt your silent shades in strictest melancholy.
Oh! where, sooth shepherd, are those joyous strains
That charmed so oft our plains?
While every silvan dell, and sculptured cave,
With wood o'erhung, or wash'd by ocean wave,

Sang to the echo of thy summer reed,
For Pan to thee decreed
An oat to win the ear of morn,
Sweeter than harp or horn;
Old Mersey listening hush'd the hollow roar
Of his high waves, and bade them on the shore
Fall with a shallow tide,
And soft and slowly glide;
The ladies of the flood,
Emerging from their coral haunt,
Upon the golden briny waters stood,
In mute astonish'd mood,
To hear thy verses blither than the chant
Of blue-eyed syrens in their oozy courts,
Where aged Nereus oft resorts
To chide the ocean maids that keep
The fountain waters of the deep;
And oft with mermaid voice would lure thee to their cells,
Waking the hidden voice that dwells
In pearly chambers of their wreathed shells.

Oft at the shut of even,
When through the path of heaven
Hesper went forth in starry mantle bright,
And silence slumber'd in the arms of night,
Thy melody would call
Echo from her vaulted hall!
Even the gray hermit in his amice weeds,
With hoary staff and beads,
Brushing the forest dews with sandal'd feet,
Thy pastoral hymn would greet,
And bend his ear to mortal strains so sweet.
Alas! might nought avail thy gentle rhyme,
To soothe the rigour of our ruder clime;
Cold blew the frost winds on thy tender flocks,
That on the tempest beaten rocks,
Or in the wintry vale below,
Perish'd in drifts of frozen snow,
While through thy sorrowing heart disease had spread
The parting throb, and hollow sigh of death,
And thou, lone shepherd, hung thy sickly head,
And all untimely pour'd thy tuneful breath.

Ah me! that thou hadst sought the sunny groves
Of fair Ausonia, and the pasture land
Of Tuscany, where every shepherd roves,
And sings propitious loves;
Or the green marge of Arno's flowery strand,
Or mountain caves of Sicily,
Where, on some olive-shrouded steep,
Thy blue eyes flung across the deep,
Thou hadst awoke the Doric melody,
Or listen'd to the syren's song,
That chant their crisp'd waves among,
Or breathed the fragrant wind that blows
Amid the laurel's rustling boughs,
Then hadst thou never died unsung,
And many a votive wreath had o'er thine urn been hung.

"O vain presumptive thoughts, thy rigorous doom
Is dealt by fate, and I am come
On travel'd feet, to strew thy hearse
With wild untutor'd verse,
For I had wander'd to the willowy shore
Of hoary Camus, fraught with ancient lore;
Where with due feet I wont to tread
His antique walks, and orchard bowers,
Girt with sunny walls and towers,
Conversing with the dead,
Oft till the accustom'd vesper bell
Toll'd the swift flight of meditative hours,
And warn'd my slow feet to the studious cell;
And oft I join'd the ardent crowd,
That at the shrine of science bow'd,
But oftener wander'd to explore
Those woods and deep banks, where of yore
The dark orb'd priest of poesy
First smote his holy minstrelsy,
Yet had I ripen'd hopes with thee to dwell,
Sooth shepherd, in thy ever-shaded cell,
With thee as erst upon the eastern lawn,
To wake the blue lids of the cloudy dawn,
On some green hill where the deep fountain runs,
To watch the crimson light of setting suns:
With thee as erst to tread
The forest's leaf-strown bed,
And trace the violet, tempest-born and pale,
Scenting with its thin breast the wintry gale;
With thee to visit in the haunted dell,
Storied tower, or fabled well;
With thee, on the far mountain's solitude,
To court the golden cinctured sister brood,
Jove's high honour'd progeny,
Daughters of Mnemosyne,
And breathe with trembling lips my verses rude.
And am I only come,
To shroud thee, shepherd, in thy timeless tomb,
To see thy bier with cypress garlands drest,
And the cold turf laid on thy hallow'd breast?
Whilst the rude tempests o'er me rave,
I tear, amid the forest's shelter'd walk,
The last late flowers of summer from their stalk,
With sorrowing hand to scatter on thy grave.
O winds that rage along the autumnal sky,
The south may woo you to her rustling bower;
O woods that strew your leaves to fade and die,
Your boughs may flourish in the vernal hour;
O tender families of herb and flower,
That sink and slumber in the cradled earth,
You may again burst forth in purple birth;
O thou lone bird, that mourn'st the dying year,
Shivering and cold amid the stormy night,
For thee revolving planets may appear,
And summer stars may shed their rising light;
O weeping season, dark and wintry now,
The spring may bind her roses on thy brow,
But who shall wake the eyes that sleep in death,
Or bid the pale lip bloom with purple breath?
O shepherd, dost thou slumber in the vale,
Freshen'd by the immortal gale?
Or midst unnumber'd worlds, that roll
And glitter underneath thy feet,
Seest thou the dark earth's dim discover'd pole,
And many an orb her sister planets meet
Beneath the curtain'd canopy of night;
And the fair seasons take their flight
To the azure realms of day;
And the blithe hours foot their silent way,
Down to the low earth's bourne,
To trace their fateful round, and up to heaven return?
Or wondering at thy heavenly birth,
Broodest thou o'er the distant dream of earth,
And wanderest on the solitary shore,
Fast by the eternal ocean's roar,
Whose golden tide interminably rolls
Upon the shadowy land of souls,
Asking his falling waves to waft to thee
Tidings of mortality!
Shepherd, I bid thee now a long farewell,
Yet while these eyes behold the orb of day,
At noon and eve on thee my thoughts shall dwell,
Till death enshroud me in his robe of clay.
"Whether he call me to the fated tomb,
Like thee in youth's prime bloom,
With locks of auburn, or with tresses hoar,
Thee will I mourn, sweet shepherd, thee deplore.
—Sorrowing, he sung, and then declined his head;
And now the queen of heaven had westward led

Her starry ocean, and the streams of night;
And now had risen the still morn's liquid light.
The sunbeams playing on his dewy locks,
The shepherd woke at the gray dawn of day,
Drove through the hoary mist his breathing flocks,
And o'er the uplands took his solitary way."

From the New Monthly Magazine.

CHARLES LAMB.

HIS LAST WORDS ON COLERIDGE.

Charles Lamb's first appearance in literature was by the side of Samuel Taylor Coleridge. He came into his first battle, as he tells us, (literature is a sort of warfare,) under cover of that greater Ajax. The small duodecimo volume in which their poems first appeared, and which is now exceedingly scarce, lies before us. It was printed and published in Bristol, in the year 1807, by "N. Biggs for T. Cottle." In the preface, Coleridge speaks with affectionate warmth of his "friend and old schoolfellow, Charles Lamb." "He has now communicated to me a complete collection of all his poems,—quæ qui non prorsus amet, illum omnes et virtutes et veneres odere." On the title-page there are words of more touching interest—"Duplex nobis vinculum, et amicitiæ et similium junctarumque Camœnarum; *quod utinam neque mors solvat, neque temporis longinquitas!*" The wish has been strikingly fulfilled. Their friendship in life survived all the accidents of place and time; and in death it has been but a few short months divided.

We should like to see this remarkable friendship (remarkable in all respects and in all its circumstances) between two of the finest and most original geniuses in an age of no common genius, worthily and lastingly recorded. It would outvalue, in the mind of posterity, whole centuries of literary quarrels.

Lamb never fairly recovered the death of Coleridge. He thought of little else (his sister was but another portion of himself) until his own great spirit joined his friend. He had a habit of venting his melancholy in a sort of mirth. He would, with nothing graver than a pun, "cleanse his bosom of the perilous stuff that weighed" upon it. In a jest, or a few slight phrases, he would lay open the last recesses of his heart. So in respect of the death of Coleridge. Some old friends of his saw him two or three weeks ago, and remarked the constant turning and references of his mind. He interrupted himself and them almost every instant with some play of affected wonder, or astonishment, or humorous melancholy, on the words "*Coleridge is dead.*" Nothing could divert him from that, for the thought of it never left him. About the same time, we had written to him to request a few lines for the literary album of a gentleman who entertained a fitting admiration of his genius. It was the last request we were destined to make, the last kindness we were allowed to receive! He wrote in Mr. Keymer's volume—and wrote of Coleridge. This, we believe, was the last production of his pen. A strange and not unenviable chance, which saw him, at the end of his literary pilgrimage, as he had been at the beginning,—in that immortal company! We are indebted, with the reader, to the kindness of our friend for permission to print the whole of what was written. It would be impertinence to offer one remark on it. Once read, its noble and affectionate tenderness will be remembered for ever. Let it be placed over the mortal grave of Coleridge.

"When I heard of the death of Coleridge, it was without grief. It seemed to me that he long had been on the confines of the next world,—that he had a hunger for eternity. I grieved then that I could not grieve. But since, I feel how great a part he was of me. His great and dear spirit haunts me. I cannot think a thought, I cannot make a criticism on men or books, without an ineffectual turning and reference to him. He was the proof and touchstone of all my cogitations. He was a Grecian (or in the first form) at Christ's Hospital, where I was deputy Grecian; and the same subordination and deference to him I have preserved through a life-long acquaintance. Great in his writings, he was greatest in his conversation. In him was disproved that old maxim, that we should allow every one his share of talk. He would talk from morn to dewy eve, nor cease till far midnight, yet who ever would interrupt him,—who would obstruct that continuous flow of converse fetched from Helicon or Zion? He had the tact of making the unintelligible seem plain. Many who read the abstruser parts of his "Friend" would complain that his works did not answer to his spoken wisdom. They were identical. But he had a tone in oral delivery, which seemed to convey sense to those who were otherwise imperfect recipients. He was my fifty years old friend without a dissension. Never saw I his likeness, nor probably the world can see again. I seem to love the house he died at more passionately than when he lived. I love the faithful Gilmans more than while they exercised their virtues towards him living. What was his mansion is consecrated to me a chapel.

"Chs. Lamb.

'Edmonton, November 21, 1834."

Within five weeks of this date Charles Lamb died. A slight accident brought on an attack of erysipelas, which proved fatal; his system was not strong enough for resistance. It is some consolation to add, that, during his illness, which lasted four days, he suffered no pain, and that his faculties remained with him to the last. A few words spoken by him the day before he died showed with what quiet collectedness he was prepared to meet death.

These are strange words to be writing of our old friend! We can scarcely think yet he has left us; so intimately does he seem to belong to household thoughts, and to the dear things of heart and hearth, which his writings have made yet dearer. We cannot fancy him gone from his folios, his "midnight darlings," his pictures, chit-chat, jokes, and ambiguities;—and yet it is so. Every thing that was mortal of him is gone, except the tears and the love of his friends. His writings remain, to be the delight of thousands to come.

Charles Lamb was born in the Temple, in February, 1775. We are not going to give any biography of him, but we name the day of his birth, because the birth-day of such a man is pleasant to remember. "'Tis my poor birth-day," says a letter of his we have lying before us, dated the 11th of February. The day will be rich hereafter to the lovers of wit and true genius. The place of his birth had greatly to do with his personal tastes in after life. Every one who has read "John Woodvill' cannot fail to have been struck (as in that loveliest of passages on the 'sports of the forest") with its exquisite sense of rural beauty and imagery. But Mr. Lamb's affection nevertheless turned townwards. Born under the shadow of St. Dunstan's steeple, he retained his love for it, and for the neighbouring town-streets, to the last; and to the last he loved the very smoke of London, because, as he said, it had been the medium most familiar to his vision. Any thing, in truth, once felt, he never wished to change. When he made any alteration in his lodgings, the thing sadly discomposed him. His household gods, as he would say, planted a terrible fixed foot.

This early habit, however, and this hatred of change, were not the only sources of his attachment to London, and to London streets. We have hinted at the melancholy which was so often the source of Mr. Lamb's humour—which, indeed, almost insensibly dashed his merriest writings—which used to throw out into still more delicate relief the subtleties of his wit and fancy, and which made his very jests to "scald like tears." In London there was some remedy for this, when it threatened to overmaster him. "Often," he said, "when I have felt a weariness or distaste at home, have I rushed out into her crowded Strand, and fed my humour, till tears have wetted my cheek for unutterable sympathies with the multitudinous moving picture, which she never fails to present at all hours, like the scenes of a shifting pantomime." This is a great and wise example for such as may be similarly afflicted.

Mr. Lamb's earliest associates in London were Wordsworth, Coleridge, Southey, Charles Lloyd, and others, who "called Admiral Burney friend." They used to assemble weekly at Burney's house, at the Queen's Gate, to chat and play whist. Or they would meet to discuss supper, and the hopes of the world, at the Old Salutation Tavern. This was the "* * * * * Inn," to which Mr. Lamb makes so affectionate a reference in the dedication of his poems to Coleridge; this was the immortal tavern, and these were the "old suppers in delightful years," where he used to say Coleridge first kindled in him, if not the power, yet the love of poetry, and beauty, and kindliness;—quoting, with true enthusiasm,

> "What words have I heard
> Spoke at the Mermaid!"

Life was then, indeed, fresh to them all, and topics exhaustless; but yet there was one preferred before all others, because it included all. Mr. Lamb once reminded Southey of it in a letter which was written in answer to a reproach the poet laureate should have spared his old friend. He speaks of Coleridge,—"the same to me still as in those old evenings, when we used to sit and speculate (do you remember them, sir?) at our old tavern, upon Pantisocracy and golden days to come on earth."

Mr. Lamb was at this period, indeed from the time he quitted Christ's Hospital to within nine years of his death, a clerk in the India House. It is scarcely pleasant to think of his constant labours there, when we think of the legacy of nobler writing of which they may have robbed the world. What have we to do now with all his

> "drops of labour spilt
> On those huge and figured pages,
> Which will sleep unclasp'd for ages,
> Little knowing who did wield
> The quill that traversed their white field."*

But we have the better reason, perhaps, to be grateful for what has nevertheless been bequeathed to us. These are:—the poems we have mentioned, collected with several others, and dedicated to Coleridge in 1818; a tale of wonderful pathos and sweetness, "Rosamund Gray," published with "Old Blind Margaret," in (we believe) 1800; "John Woodvil," a tragedy, published with "Fragments of Burton," in 1802: "Mr. H——," a farce, acted at Drury Lane in 1806; "Specimens of the old Dramatic Poets," with those immortal criticisms on them, which appeared in 1808; a series of noble prose papers, including those on Hogarth and the tragedies of Shakspeare, with several essays and poetical criticisms, which were sent to the "Reflector" in the year 1811; the celebrated "Essays of Elia," published between 1820 and 1833, at different periods, in the London, New Monthly, Blackwood's, Englishman, and other Magazines, and two volumes of which have been collected and separately published; with a vast number of his sayings and deep-thoughted articles, scattered about without a name (and yet uncollected) in periodicals celebrated and obscure—in miscellanies remembered and forgotten. We find we have omitted in this list to mention his "Tales from Shakspeare," his "Adventures of Ulysses," and a volume unworthily named "Album Verses,"—inasmuch as it contained some few poems as fine as any that ever flowed or sported from his pen. We hope to see all his productions recovered, and published under the superintendence of some competent person. His occasional theatrical criticisms in the "Examiner" should not be forgotten: they are exquisite, and will be recognised at once by any one acquainted with his style. It will startle some of his friends, perhaps, to be told that he has even done such a thing in years long past, as write a sort of poetical political libel for that distinguished journal.

Of the genius of Mr. Lamb as developed in these various writings, we may speak at greater length hereafter. It takes rank with the most original of the age. As a critic, he stands *facile princeps*, in all the subjects he handled. Search English literature through, from its first begin-

* "Poetical Epistle," by Procter, who repaid Lamb's affection, felt towards him to the last, in a manner worthy of the hearts and genius of both.

nings till now, and you will find none like him. There is not a criticism he ever wrote that does not directly tell you a number of things you had no previous notion of. In criticism he was indeed, in all senses of the word, "a discoverer—like Vasco Nunez or Magellan." In that very domain of literature with which you fancied yourself most variously and closely acquainted, he would show you "fresh fields and pastures new," and these the most fruitful and delightful. For the riches he discovered were richer that they had lain so deep—the more valuable were they, when found, that they had eluded the search of ordinary men.

As an essayist, Charles Lamb will be remembered, in years to come, with Rabelais and Montaigne, with Sir Thomas Browne, with Steele, and with Addison. He unites many of the finest characteristics of these several writers. He has wisdom and wit of the highest order, exquisite humour, a genuine and cordial vein of pleasantry, and the most heart-touching pathos. In the largest acceptation of the word he is a humanist—no one of the great family of authors, past or present, has shown in matters the most important or the most trivial so delicate and extreme a sense of all that is human. It is the prevalence of this characteristic in his writings which has subjected him to occasional charges of want of imagination. This, however, is but half-criticism; for the matter of reproach may in fact be said to be his triumph. It was with a deep relish of Mr. Lamb's faculty that a friend of his once said—a friend, we may add, ever loved and admired by him through life, and worthy of all the love and admiration that are due to genius, to learning, and to virtue—it was with a fine appreciation of the characteristics of his genius in criticism that T. N. T. said, "he makes the majesties of imagination seem familiar." It is precisely thus with his own imagination—it eludes the observation of the ordinary reader in the very modesty of its truth, in its social and familiar air. His fancy as an essayist is distinguished by singular delicacy and tenderness; and even his conceits, when they occur, will generally be found to be, as those of his favourite Fuller (the church historian) often are, steeped in human feeling and passion. The fondness he entertained for Fuller, for the author of the "Anatomy of Melancholy," and for other writers of that class, was a pure matter of temperament. His thoughts were always his own; even when his words seem cast in the very mould of theirs, the perfect originality of his thinking is felt and acknowledged—we may add, in its superior wisdom, manliness, and unaffected sweetness. Every sentence in those Essays may be proved to be crammed full of thinking; the two volumes which contain them will be multiplied, we have no doubt, in the course of a few years, into as many hundred; for they contain a stock of matter which must be ever suggestive to more active minds, and will surely revisit the world in new shapes—an everlasting succession and variety of ideas. Yes, and help on the world; for is it to be asserted that because Mr. Lamb was chiefly devoted to the past, that he may not therefore advantage the present, and help on the future? The past to him was not mere dry antiquity; it involved a most extensive and touching association of feelings and thoughts, reminding him of what we have been and may be, and therefore seeming to afford a surer ground for resting on than the things which are here to-day and may be gone to-morrow. We know of no inquisition more curious, no speculation more lofty, than may be found in the Essays of Charles Lamb. We know no place where conventional absurdities are so shattered—where stale evasions are so plainly exposed—where the barriers between names and things are at times so thoroughly flung down. And how could it indeed be otherwise? For it is truth which plays upon his writings like a genial and divine atmosphere. No need is there for them to prove what they would be at by any formal or logical analysis—they "feel the *air* of truth;" no need for him to tell the world that this institution is wrong and that doctrine right—the world may gather from his writings their surest guide to judgment in these and all other cases—a general and honest appreciation of the humane and true.

As a poet, Mr. Lamb has left several things "the world will not willingly let die." Shall we not name first his prose tale of "Rosamund Gray," which we have read a dozen times, as well as we could for our tears? We will match this tale against the world for unequaled delicacy and pathos. Shall we not treasure up too in our heart of hearts the memory of "John Woodvil," of him who offended and was forgiven—and of the angelic, ever-honoured Margaret, whom miseries could never alienate nor change of fortune shake, whom her lover's injuries "and slights (the worst of injuries)" could not, in his days of shame, when all the world forsook him, make *her* forsake, or cease to cling with love stronger than death to her dear heart's lord, life's pride, soul honoured John! These are destined to be everlasting creatures—once known, taken to the memory for ever. How exquisite is the tenderness with which, when questioned on John's neglect, she only turns aside for a moment with a tear, and afterwards resumes her conversation cheerfully. How sublime is the reach of pathos with which Sir Walter Woodvil, betrayed to his enemies by his son, breaks his heart without uttering a single word. When the charge of an imitation of the elder poets is brought against Charles Lamb, it is generally brought in ignorance. His style, it is true, smacks to us of the antique; tasting with a genuine Beaumont and Fletcher flavour: but this was because his way of thinking was like theirs; there is no imitation in it, setting aside the occasional indulgence of his love for them, which we all feel to be delightful. We could fancy their loving *him* just in the same way, because he lived in precisely that world of thought which was chiefly theirs, and which changes not with the alterations of age or style, but is everlasting, and changes never. Mr. Hazlitt tells a story of a rural description out of "John Woodvil," quoted anonymously in a modern book, meeting the eye of Mr. Godwin, who was so struck with the beauty of the passage, and

with a consciousness of having seen it before, that he was uneasy till he could recollect where, and after hunting in vain for it in Ben Jonson, Beaumont and Fletcher, and other not unlikely places, sent to Mr. Lamb to know if he could help him to the author! We should have recommended him in his search to look out for a higher sort of Heywood, some one between Heywood and Fletcher. When the day of popularity for these great writers shall come round again, Mr. Lamb's poetry will be popular too. His minor pieces are full of delicacy and wit, and read occasionally like one of his Essays.

But it was not as a critic, it was not as an essayist, it was not as a poet, fervently as we entertained for him in these characters the admiration we have poorly endeavoured to express—it is not in any of these that we felt towards him the strongest feeling of devotion—we loved THE MAN. He was the most entirely delightful person we have ever known. He had no affectation, no assumption, no fuss, no cant, nothing to make him otherwise than delightful. His very foibles, as is remarked in a recent publication*, were for the most part so small, and were engrafted so curiously upon a strong original mind, that we would scarcely have desired them away. They were a sort of fret-work, which let in light, and showed the form and order of his character. They had their origin in weakness of system chiefly; and that which we have heard by the unthinking condemned as wilful, in terms of severe reproach, was in the first instance nothing but a forced resort to aid that might serve to raise his spirits in society to what was no more than the ordinary pitch of all around him without it. Never should the natural temperament against which Mr. Lamb had to struggle be forgotten by those who are left to speak of his habits and character. Of all the great and peculiar sorrows he was fated to experience through life, (and there were many to which even an allusion may not here be made, and for which nearly his whole existence was offered as a willing and devoted sacrifice,) the sorrows with which he was born were the greatest of all. His friends, whom he delighted by his wit and enriched by his more serious talk, never knew the whole price he paid for those hours of social conversation. "Reader," he once said in a paper which, with some dash of fiction, conveyed his saddest personal experience, (a paper which is now, we believe, exceedingly scarce, as he would not consent to reprint it,) "Reader, if you are gifted with nerves like mine, aspire to any character but that of a wit. When you find a tickling relish upon your tongue disposing you to that sort of conversation, especially if you find a preternatural flow of ideas setting in upon you at the sight of a bottle and fresh glasses, avoid giving way to it as you would fly your greatest destruction. If you cannot crush the power of fancy, or that within you which you mistake for such, divert it,—give it some other play. Write an essay,—pen a character or description;—*but not as I do now—with tears trickling down your cheeks.*" We retire with reverence before the trials of such a spirit as this.

No one in conversation said such startling things as Lamb. No one was so witty or so sensible. No man ever had him at a disadvantage, except the man who did not understand him. He had a severe impediment in his speech, but this gave even an additional piquancy to the deep and eloquent things he said. After the stammering and hesitation, a half sentence would burst forth at the close, and set every body laughing or thinking. And they would laugh at it, and think about it the next day, and the day after that. "Lamb probes a truth," said Hazlitt, "in a play upon words." "He was of the genuine line of Yorick," says the delightful writer of the "London Journal." He was indeed;—or still more of the family of that ever-faithful and devoted "fool" in "Lear," with his sayings of wisdom and snatches of old songs—"Young Lubin was a shepherd boy." Who that was admitted to the intimacy of his acquaintance does not remember that and many others, and feel his heart sink with grief at our recent loss, though to rise again with pride in the consciousness of having been once admitted to such a friendship? We needed not to have made the restriction. Every one who knew him, knew him intimately. He had no concealment, for he had nothing to conceal. He had the faculty,—as was remarked of him the other day, in the "Times" newspaper, by an old friend of his,—of turning "even casual acquaintances into friends." When you entered his little book-clad room, he welcomed you with an affectionate greeting, set you down to something, and made you at home at once. His richest feasts, however, were those he served up from his ragged-looking books, his ungainly and dirty folios, his cobbled-up quartos, his squadrons of mean and squalid-looking duodecimos. "So much the rather their celestial light shone inward." How he would stutter forth their praises! What fine things had he to say about the beautiful obliquities of the "Religio Medici," about Burton, and Fuller, and Smollet, and Fielding, and Richardson, and Marvel, and Drayton, and fifty others, ending with the "thrice-noble, chaste, and virtuous, but again somewhat fantastical and original brained Margaret Duchess of Newcastle!" What delightful reminiscences he had of the actors, how he used to talk of them, and how he has written them down!* How he would startle his friends by intruding on them lists of persons one would wish to have seen,—such odd alliances as Pontius Pilate and Doctor Faustus, Guy Faux

* See a very delightful paper in the "Athenæum." It has since been followed by the first of a series on the personal and intellectual characteristics of Mr. Lamb, which promises to do justice to the subject, and to confer a distinguished honour on that journal.

* See his papers on the "Old Actors." "I was always fond," he says, in the charming little story of "Barbara," which has immortalised an anecdote from the life of an eminent living actress, "of the society of the players; and am not sure that an impediment in my speech, (which certainly kept me out of the pulpit,) even more than certain personal disqualifications, which are often got over in that profession, did not prevent me at one time of life from adopting it."

and Judas Iscariot!—But the evenings passed with him are not for the hasty mention of such articles as this. The pleasure of recording some of them, and some of the exquisite sayings he seldom failed to send away his friends with, may be claimed by us from the editor of this magazine at some future time.

Mr. Lamb's personal appearance was remarkable. It quite realised the expectations of those who think that an author and a wit should have a distinct air, a separate costume, a particular cloth, something positive and singular about him. Such unquestionably had Mr. Lamb. Once he rejoiced in snuff-colour, but latterly his costume was inveterately black—with gaiters which seemed longing for something more substantial to close in. His legs were remarkably slight—so indeed was his whole body, which was of short stature, but surmounted by a head of amazing fineness. We never saw any other that approached it in its intellectual cast and formation. Such only may be seen occasionally in the finer portraits of Titian. His face was deeply marked and full of noble lines—traces of sensibility, imagination, suffering, and much thought. His wit was in his eye, luminous, quick and restless. The smile that played about his mouth was ever cordial and good-humoured; and the most cordial and delightful of its smiles were those with which he accompanied his affectionate talk with his sister, or his jokes against her. We have purposely refrained from speaking of that noble-minded and noble-hearted woman, because in describing her brother we describe her. Her heart and her intellect have been through life the counterpart of his own. The two have lived as one, in double singleness together. She has been, indeed, the supplement and completion of his existence. His obligations to her had extended beyond the period of his memory, and they accompanied him to his grave. Yet he returned them not unfittingly! The "mighty debt of love he owed" was paid to her in full. When he says otherwise in his charming sonnets to her, he merely expresses the ever unsatisfied longings of true affection. Coleridge and she had the first and strongest holds upon his heart. The little volume to which we referred in the commencement illustrates this in an affecting manner. In the pride of that first entrance into the world under the protection of his greater friend, he had not forgotten his sister. He dedicated all he had written to her. "The few following poems," he says, "creatures of the fancy and the feeling, in life's more vacant hours, produced for the most part by love in idleness, are, with all a brother's fondness, inscribed to Mary Ann Lamb, the author's best friend and sister." When, in after life, he had the power of acquitting his debt to her more nobly, by dedicating his whole existence to hers, he presented the offering of his poetry to Coleridge. Well might he express that strange and most touching wish, after the life they had led—"I wish that I could throw into a heap the remainder of our joint existences, that we might share them in equal division. But that is impossible!" It was indeed, and the survivor is not the most fortunate. Never more shall we see the picture they used to present—worth a hundred common-places of common existence—when they paid the occasional visits they both loved to London! never more see the affectionate and earnest watchings on her side—the pleasant evasions, the charming deference, and the little touches of gratitude on his! We recollect being once sent by her to seek "Charles," who had rambled away from her. We found him in the Temple, looking up, near Crown-office-row, at the house where he was born. Such was his ever-touching habit of seeking alliance with the scenes of old times. They were the dearer to him that distance had withdrawn them. He wished to pass his life among things gone by, yet not forgotten. We shall never forget the affectionate "Yes, boy," with which he returned our repeating his own striking lines,—

> "Ghost-like I paced round the haunts of my childhood,
> Earth seemed a desert I was bound to traverse!"

This paper, long as it has already proved, must not be finished without the mention of one most honourable characteristic in which Mr. Lamb has stood alone, amidst all the political strife and personal bickerings of modern literature. He put himself in personal opposition to no one. He would recognise no difference of opinion as a plea against social meeting and friendly fellowship. "It is an error," he said, in a spirit of deep philosophy (the passage does not appear in his published writings), "more particularly incident to persons of the correctest principles and habits, to seclude themselves from the rest of mankind, as from another species, and form into knots and clubs. The best people, herding thus exclusively, are in danger of contracting a narrowness. Heat and cold, dryness and moisture, in the natural world, do not fly asunder, to split the globe into sectarian parts and separations; but mingling, as they best may, correct the malignity of any single predominance. The analogy holds, I suppose, in the moral world. If all the good people were to ship themselves off to terra incognitas, what, in humanity's name, is to become of the refuse?" Charles Lamb wrote in periodicals of all opinions, and held all differing friends firmly and cordially by the hand, as if indeed of one family of brothers. His friendship with Southey did not shake his intimacy with the editor of the "Examiner," or move him one jot from the side of Hazlitt. Lamb first met that great writer at Mr. Godwin's house, when one of those meaning jests he used to blurt out so often bound at once the far-sighted metaphysician to his side. Holcroft and Coleridge happened to be there, and were as usual engaged in a fierce dispute. The question between them was as to which was best, "man as he was, or man as he is to be," and it was at its highest when Lamb stammered out, "Give me a man as he is *not* to be!" The friendship, however, which this saying commenced, was once interrupted for some time by some wilful fancy on the part of the irritable and world-soured philosopher. At this time Southey happened to pay a compliment to Lamb at the expense of some of his companions, Hazlitt among them. The faithful and unswerving

heart of the other, forsaking not, although forsaken, refused a compliance at such a price, and sent it back to the giver. The character of William Hazlitt, which he wrote at the same time, may stand for ever as one of the proudest and truest evidences of the writer's heart and intellect. It will be reprinted, we trust, in the edition of his collected works. It brought back, at once, the repentant offender to the arms of his friend, and nothing again separated them till death came. Charles Lamb was, we believe, the only one of his old associates seen at the grave of Hazlitt.

And now the grave has received Charles Lamb. We stood near as it was closed over him—never closed it over a better or wiser spirit. May he who has given so much happiness to others be now more truly happy—possessing the great reward which all his life has deserved that he should win!

From the Asiatic Journal.

HURDWAR AND JUGGURNAUT.

These celebrated places of Hindoo pilgrimage are, at peculiar periods of the year, highly attractive to European visiters, more particularly Hurdwar, which lies almost in the route of those who are traveling to or from the Himalaya, and which possesses, in addition to its other claims to notice, picturesque beauties which can scarcely be surpassed. It is at this hallowed spot that the sacred river, emerging from its mountain birth-place, enters upon the wide plains of Hindostan, a clear, beautiful, but rather shallow stream, and, though somewhat rapid, affording, at the period of the annual fair, no indications of the fury and velocity with which, during the rains, it pursues its headlong course until it meets the sea.

The town of Hurdwar, which is distinguished by a handsome range of buildings, backing an esplanade which runs along the bank of the river, occupies ground only partially cleared from the neighbouring forest. The deep and dense woods of the terrace sweep down to the western suburb, uniting their verdant avenues to the arched gateways and pillared colonnades of the streets. The pass, or gorge, leading to the valley of the Dhoon, presents landscapes of almost incomparable beauty, while the splendid piles of mountains, rising in the background, give a wild sublimity to the scene, which can scarcely fail to inspire with enthusiastic delight every breast not entirely indifferent to nature's wonders. We know not whether the fine bursts of scenery, which greet the eye at every point, have any part in the attachment manifested by the pilgrims to Hurdwar: the natives in general, and more particularly the lower classes, are singularly deficient in their perceptions of inanimate beauty; indeed, it is doubtful whether they are much attracted by loveliness in any form, or whether they do not, either in their wisdom, or their want of relish for the poetry of life, always prefer the *utilis* to the *dulcis*. A tree to them is chiefly, if not entirely, valuable for its shade; a stream is associated solely with the pleasure of quenching the thirst, and cooling the parched brow; and if a wife be docile, and fully equal to her household duties, it matters little what her claims to beauty may be. Yet, though more than ordinarily free from poetical influences, some portion of the rapturous delight with which the Hindoo devotees hail the first sight of the Ganges, as it issues forth from the Alpine solitudes beyond Hurdwar, must be attributed to the enchantment produced upon the eye by the loveliness of the combinations of hill, and wood, and gushing river. Shouts of "*Mahadeo Bol!*" of "*Bol! Bol!*" and "*Ram! Ram!*" rend the skies, as the worshippers of the sacred waters approach the place of their pilgrimage. The road is covered for miles with traveling parties: rich, poor, of both sexes and all ages, crowd to this oriental carnival, and there is scarcely any part of Asia which does not send forth a deputation; the commercial speculations and traffic, incidental to the fair, being quite as attractive to the worldly minded, as purification to the devotee.

In former times, the meeting of so vast a multitude was productive of many hostile collisions. The rage of different sects was excited against each other, and quarrels were followed up by blows and bloodshed. The accounts given by the few European spectators who, before the occupation of the country by the British government, chanced to visit the strange and wondrous scene, were absolutely terrific. At that time, holy mendicants, and men who could command bands of armed retainers, tyrannised over less fortunate persons; while professional robbers openly pursued their calling, plundering with impunity those who were unable to defend themselves. Affairs now wear a much more peaceable aspect, and the order and tranquillity which prevails reflects the greatest credit upon the civil and military authorities, upon whom the task of maintaining harmony amidst such jarring materials devolves.

The town of Hurdwar does not afford accommodation for the tenth part of the numbers who crowd to its ghauts, but Asiatics are independent of lodging-rooms; the rich carry their canvass dwellings along with them, and the poor are contented with the shelter of a tree. The country round about is formed into one vast camp, in which Arabs, Cingalese, Persians, Tartars, mingle with Seiks, people from Cutch, Guzerat, Nepaul, and all other provinces of India; while, a little removed from the din and clamour of the Babel-like assemblage, are to be seen the tents of European visitants, ladies, who venture fearlessly into the hubbub, sitting as much at their ease as the dust, the myriads of flies, and the intolerable clamour, will admit.

The fairs of India differ in many particulars from those of Europe; though jugglers and tumblers are to be found, together with snake-charmers and others who procure their subsistence by the exhibition of slight-of-hand or tricks of cunning, there are, properly speaking, none of the shows which attract so much attention at home. The articles intended for sale are arranged with more regard to convenience than taste, either strewed promiscuously upon the ground, or hidden in the tents; the various wild animals, which form a part of the merchant's speculations, are openly exposed to public view, and, though gazed at with wonder and amazement by strangers from distant lands, are not rendered more profitable by being exhibited for money. The passion for sight-seeing may be equally strong in India as in England, but it is chiefly confined to the pageants displayed at festivals, and as yet curiosity has not been much excited by the wonders of nature. The cattle-department, at the fair of Hurdwar, is the most attractive, both to Europeans and natives, being considered the best in India; horses are brought from Kattiawar, Cutch, Persia, and the shores of the Red Sea, perfect in blood and bone, proud in their bearing, swift as the wind, and suited to warriors and cavaliers: these fine animals are contrasted with a race less showy, but equally useful, the small compact and sturdy breeds of Cashmere and Cabul, and the mountain ghoonts, of which M. Jacquemont has lately made such honourable mention. Elephants also rear their gigantic forms in the encamping grounds of the dealers. Like the horse, they are distinguished by their good points: the tusks should be perfect, and they are greatly esteemed when the tail is of the orthodox dimensions, and furnished with a flat tuft of hair at its extremity. The difference of appearance between an elephant destined for the pad, or as the caparisoned bearer of princes

and nobles, is very great, but will bear no comparison with that which is displayed in the camel. At Hurdwar, every description of this animal may be seen, from the uncomfortable-looking, dejected beast of burthen, to the thorough-bred *hircarrah*, which can maintain its speed during a hundred miles without pause or rest: a winged messenger, which none but the best trained and hardiest of riders can venture to mount. For a very long period, the camel and the dromedary were supposed to be distinct animals, but modern naturalists have decided that there is in reality no difference between them, the single and double-humped being merely a variety, and the fleetness and intelligence of both depending upon early education. Buffalos, cows, and sheep, are likewise exhibited for sale, the list of domestic animals closing with dogs and cats, the beautiful races of Persia, so much sought after in India, make their appearance by the side of some huge elephant. Monkeys, which may be said to occupy a sort of debateable ground between the wild beasts of the field and the quadrupeds which man has enlisted into his service, are brought in great numbers to Hurdwar; bears, leopards, and cheetas are likewise numerous, and deer of every kind, from the stately nylghau, to that diminutive species which can be so rarely preserved in a state of captivity, even in India, are purchaseable; the yak is also sometimes to be found at Hurdwar, though the advance of the season renders their appearance rare, since they are unable to bear the heat of the plains. The most valuable articles of commerce procurable at this fair, are the gems and precious stones of all descriptions which lapidaries bring from every part of Asia; the shawls and cloths from Cashmere and Thibet rank next; the same dealer may also have a stock of English woollens upon hand; and perfumery and *bijouterie* of every kind from London and Paris find their way to this remote market.

In former remarks upon the subject of the extraordinarily low prices at which European goods are sold by native dealers, and the consequent losses sustained by speculations made at a venture, we have mentioned the heterogenous mixture of articles in the possession of Indian venders, and their extreme ignorance of the intrinsic value of each. Many of the investments sent out to India are utterly useless to the great bulk of the population; and so little have the climate, habits, and wants of the people been studied by European traders, that cargoes of Irish butter have been despatched to Calcutta, and, as a matter of course, nothing but the casks remained at the end of the voyage, the contents having exuded at every crack. It was at one time thought by the worthies of Glasgow, that the natives of India would gladly exchange their muslin turbans for a covering of felt; and accordingly a ship was freighted with round hats, articles only prized by the *topee wallahs* (hat fellows), the term commonly used to designate an European. We do not know whether the information upon this important subject, communicated in the Madras and Calcutta papers, has traveled to England, but in speaking of the commodities which are to be met with at Hurdwar, it will not be out of place to mention those which would be most likely to find purchasers at fair prices. In the cutlery department, there should be scissors, pen-knives, and razors; next, common padlocks, and cheap locks of every description; red and blue broad-cloth, and serge, with woollen caps, such as sailors wear. In cotton and silk, care should be taken to select articles which would make up readily into turbans and *sarees;* the former should be white, scarlet, or crimson, plain or flowered, twenty yards long by twelve inches; cloths for the deputtee six yards long and one and a-half broad, plain, or white, or those with coloured borders, which are much in request; also chintses of gaudy patterns, which, as the fashions in India are unchangeable, would secure a constant sale. Stationary is in considerable demand, but it should consist of very cheap paper, both foolscap and post, French and Italian, it is said, answering best, in consequence of the low price at which they are manufactured; quills, red wafers, and black-lead pencils, complete the list in this department. The catalogue of English books is rather amusing; in addition to school dictionaries, that of Mylius, and that by Fulton and Knight being recommended; Murray's grammar, spelling-book and English reader: the list contains an abridgment of the *Spectator*, *Arabian Nights*, *Chesterfield's Letters*, the whole or abridged; English Dialogues, the *Young Man's Best Companion*, and the *Universal Letter Writer*. These are eagerly sought after, but as yet, as far as regards the generality of Indian students, the remaining portion of English literature has been written in vain, and will not find native purchasers beyond the presidencies. Watches of silver or yellow metal, costing from thirty shillings to five pounds, are greatly in demand; also good spectacles, in cheap mountings of silver or metal, plated ware not finding a ready sale in India; small mirrors in plain frames, and lanthorns of a common sort, fitted up with lamps for oil. Patterns of hardware manufactory should be procured from India, for the natives will not eat or drink out of new-fangled utensils, however convenient they may be; plates, dishes, basins, and bowls, of iron, copper, and tin, should be fashioned after a peculiar manner, as also the *lota*, or jug, from which if an unpractised European were to attempt to drink, he would inevitably spill every drop of the liquor. In medicine, there is an incessant demand for the following articles: bark-powder and quinine, jalap and cream of tartar, essence of peppermint, brandy disguised as a medicine, eau de Cologne, lavender-water, and strong sweet water, such as eau de mille fleurs. This list will appear very scanty, but the gentleman who furnished it assures us that it will not be expedient to add any thing to it for the purpose of supplying the wants of the interior: he caused it to be examined and corrected by several opulent and respectable natives, who were well acquainted with the actual state of the country, and with what would be most likely to sell amidst the great mass of the people; many of the most respectable classes being poor, and content with the commonest conveniences of life. In our anxiety to promote the interests of commerce, we subjoin the concluding paragraph of this interesting article upon the subject of India trade: "One point, however, must not be forgotten; most invoices are sold at Madras, where the prices maintained are very moderate. They seldom reach the interior, where a better price would be easily found, and when carried up the country by hawkers and petty dealers, the price becomes exorbitant. To obviate these inconveniences, the exporter should provide cases containing small miscellaneous invoices, *made up in England*, and these should be landed at various parts of the coast, so as to be conveyed straight to the best market; as, for instance, Tanjore, Madura, Trichinopoly, Nagpore, Seringapatam, or Hyderabad. At these places and many more (the names of which will be gradually ascertained by the merchant), a ready-money price will be immediately obtained; the cost of inland carriage will not average more than two per cent. on the prime cost, while the profits will be from one hundred to three hundred per cent."

The English visiters at Hurdwar are made to smile at the base uses to which the refinements of European luxury are degraded; nothing appears to be employed for the purpose for which it was originally intended: table-covers of woollen with printed borders, black and crimson, or yellow and blue, figure upon the shoulders of the poorer classes, who have purchased them for next to nothing, tables being at present unknown in the houses of the natives, while prints are offered for sale upside down, and hung up in the same manner when purchased. A taste for the fine arts is still a desideratum in India, and from our own knowledge of the difficulty of

explaining the most obvious pictorial subject to an uneducated native, we much question the probability of conveying instruction through the medium of paintings.

There is of course nothing like neatness or order in the arrangement, of the stalls of the merchants at Hurdwar. Each strives to make the merits of his commodities known by clamorous commendations. It is necessary to be a good judge of every article to avoid being taken in, and to be tolerably expert at driving a bargain: the venders demanding exorbitant sums, which they lower gradually when convinced that they have no chance of succeeding in obtaining more than a tenth part. The art of selling a horse is well understood in India, and persons ought to be well acquainted with the secrets of the trade to deal with such experienced jockeys. The dexterity with which they show off the animal's accomplishments, and the extraordinary degree of training and doctoring which they undergo, deceive the inexperienced and the presumptuous youths, who fancy that they may credit the evidence of their senses. An incorrigibly vicious beast, which nothing but a native of the Pampas could ride, is drugged with opium until he appears to be of lamb-like gentleness; while stimulants are administered to the weak and sluggish, which give them a temporary show of vigour and activity. Some of the finest Arabs bear very high prices; the principal merchant, during the writer's residence in India, asked £800 for a beautiful milk-white charger, and could not be induced to take a smaller sum: the price of a good camel is £8, but the sums given for elephants vary as much as those at which horses are sold.

The waters of the Ganges are supposed to derive additional sanctity at the expiration of every twelfth year, and the concourse of pilgrims is much greater upon these anniversaries. The astronomers in attendance calculate the precise moment in which ablution is particularly beneficial, and, at the sounding of the Brahminical shell, the anxious crowds precipitate themselves into the water. In consequence of the narrowness of the principal ghaut, this simultaneous rush was formerly attended with great danger, and frequently with loss of life. A dreadful concussion, in which numbers perished, determined the British government to remedy the evil; a more commodious passage to the river was constructed, and the returning pilgrims, when they saw the preparations made to secure their safety, mingled shouts and blessings upon their human benefactors, with their acclamations to Mahadeva. The liveliness with which the Hindoos express their gratitude, and their quick sensibility to kindness and attention to their convenience and comfort, seem incompatible with the apathetic temperament manifested upon many occasions. The prejudices of caste, and the influence of predestinarianism, which render them indifferent to suffering, are the causes of this inconsistency, and, so great is their effect, that it is difficult to imagine that one and the same person could display such contrary feelings,—so much coldness and torpor at one period, and so much emotion and vivacity at another. At Hurdwar, all the enthusiastic elements of the native character are called into action; the pilgrims and merchants are lively and energetic beyond the sober conceptions of the English spectators, who look on half-stupified by the clamour, and all astonishment at the power of the human lungs exhibited in a manner almost exceeding belief. The noises incidental to a crowded Indian assemblage have been too often described in the pages of the *Asiatic Journal*, to need repetition here; but they are so supereminently astounding at Hurdwar, that no account of the ordinary din and dissonance can afford the faintest notion of the uproar which prevails. The ringing of bells, the firing of cannon, and the loud huzzas of European multitudes, however deafening, are nothing to the wild and continuous discord which assails the ear at this meeting. The bawling and drumming of the fakirs never appear to cease during a single instant; then, in addition to the most horrid blast the direst trumpet ever blew, we have the Brahminical shell, the nobut, the dhole, and the gong. The animals terrified by the confusion around them, neigh, bellow, grunt, and roar, with more than usual vehemence, and this tumult continues, night and day, without the slightest interval of peace.

The only ceremonial used by the bathers is that of ablution, which consists merely in dipping in the Ganges, and in paying the tribute, collected carefully by the attendant Brahmins. Those who are desirous of securing a large share of the good things of this and of the next world, are proportionably liberal to the religious mendicants, who form the most conspicuous figures in the scene. The more dreadfully degraded from the dignity of men, the more filthy, squalid, and indecent in their appearance, the higher is the veneration with which these fakirs are regarded. Though sufficiently numerous in other places, they repair in troops to Hurdwar, occupying the verandahs, galleries, and roofs of the principal buildings, and stages of bamboo erected for their accommodation in the centre of the stream, superintending the devotions of the bathers, which are however, generally speaking, confined to manifestations of joy at having obtained the end and object of a long and toilsome pilgrimage. The latest accounts from India state that the fair at Hurdwar is upon the decline, and that many of the Brahmins, who were formerly attached to its temples, have taken service under Europeans. By some, this falling off in religious enthusiasm is attributed to the conviction (mainly produced by the subjection of Bhurporte), that it is impossible to withstand the power of the Christians, who will sooner or later induce all India to conform to their creed, and this idea has doubtless considerable weight with a superstitious people. But, however, in remarking upon the lukewarmness observable, all over Hindoostan, towards festivals formerly exciting the highest degree of reverential regard, the labours of the missionaries must not be wholly overlooked and forgotten. Since the period in which the English first obtained a footing in India, the efforts of these zealous disciples have been unremitting; they are always to be found in large and promiscuous assemblies, standing at the ghauts, or sitting in the porches of the temples, distributing tracts to the passers-by, and expounding the Scriptures to such as will listen to them. Not discouraged by their apparent want of success, they have continued to exercise the duties of their calling with untiring activity, and we should do great injustice to the intellectual powers of many of the classes of the natives, if we did not suppose that the perusal of such portions of the Holy Writings as have been placed for the purpose in their hands, has not had the effect of disturbing their belief in the monstrous fallacies of the Hindoo religion. Captain Skinner assures us that the sikhs, in particular, evinced the greatest anxiety to possess themselves of the tracts offered to them by a missionary at the fair of Hurdwar. "I stood," observes the above-mentioned authority, "near the spot where he was sitting, without, I believe, being perceived by him, and was astonished at the attention which they all paid to the few words which he was able to address to them. A middle-aged man, with several of his family about him, came up to me with his book, and repeated the words the 'Padre Sahib' had spoken to him on presenting it, and, as if really anxious to have them corroborated, asked with much earnestness if it were true—'*Sach bat*?' I assured him it all was,—'Then,' said he, 'I will read the book to my family when I get home.'"

The new ghaut is exceedingly wide and handsome, not less than a hundred feet in breadth, and descending by a fine flight of about sixty steps into the water; it is covered at every hour of the day with multitudes of bathers,

ascending and descending and uttering *Wah! wah!* as they contrast the present facilities with the former difficulties of the approach.

The annual fair at Hurdwar affords abundant opportunity for the exercise of dacoity; it is here that the highest dexterity in the art of thieving is displayed. It is said that, like the vampire-bat, which lulls its victim to sleep by gently fanning him with its wings while it sucks the vital current from his veins, these accomplished marauders employ some soothing art which deepens the repose of the slumberer, while they possess themselves of every article belonging to him, even to the very sheet on which he may be lying; stripped to the skin, and their bodies rubbed with oil, no snake can be more smooth and supple, or more quiet in its movements. They will glide into a tent, in spite of the utmost watchfulness of the sentinel appointed to guard it; and so impossible is it to prevent the entrance of such intruders, that the only method to preserve the property is to keep it all upon the outside, under the charge of the sentry, who must neither slumber upon his post nor stir for a single instant from the spot.

At all periods of the year, the ghauts at Hurdwar are frequented by pilgrims; but they are few in number compared to the tide which rushes down the mountain gorge and along the lower plains, at the anniversary of the fair.

Very different from Hurdwar is the aspect of Juggurnaut. This celebrated temple is erected upon the sea coast of Orissa, in the district of Cuttack, the first Indian land which the passengers of a ship sailing direct from England to Calcutta espy. The dark and frowning pagoda, rising abruptly from a ridge of sand, forms a conspicuous object from the sea, its huge and shapeless mass not unlike some ill-proportioned giant, affording a gloomy type of the hideous superstitions of the land. While gazing on this mighty Moloch, the mind is impressed with a strange awe, the bright and golden sunshine above, and the waving foliage below, only serve to deepen its horrors; it looks like a foul blot upon the fair face of nature, a frightful monument of man's success in marring the designs of his Creator. At Hurdwar, it is not only very possible to sympathise in the feeling of the multitudes, whose adoration is called forth by the bright river, one of the greatest blessings which the Almighty has bestowed upon the burning soil, but to go even farther, and lift up your thoughts, amidst the most beautiful scenes of nature, unto nature's God. At Juggurnaut, there is nothing save unalloyed horror. Frightful idols enclosed in an equally frightful shrine, and seen when viewed from the land to be surrounded by a waste of sand hills, revolt the mind, and give to superstition its most disgusting aspect; and the disagreeable impression, which a distant prospect excites, is increased upon a nearer approach to a scene associated with all that is most fearful and disgusting in religious error. Every known rule of architecture being set at defiance, it would be difficult, without the aid of the pencil, to convey an idea of the half-tower, half-pyramidical style of the great pagoda; it is built of a coarse red granite brought from the southern parts of Cuttack, and covered with a rough coating of Chunam. The tower containing the idols, which is 200 feet high, and serves as a land-mark to the mariner, stands in the centre of a quadrangle, enclosed by a high stone wall, extending 650 feet on each side, and surrounded by minor edifices of nondescript shapes. The magnitude of these buildings forms their sole claim to admiration; they are profusely decorated with sculpture, but so rudely carved as to afford no pleasure to the eye, the only object worthy of praise being a pillar of black stone beautifully proportioned, and finely designed, which has been brought from the black pagoda in the neighbourhood, and placed in front of the principal entrance. The outer-gateway and the great portal of the temple are ascended by broad flights of steps, and the interior is described as being very curious and well worthy of inspection, a sight which, however, is very rarely enjoyed by Europeans. The Brahmins in attendance take care to exclude all profane footsteps; but it is said, upon the authority of Major Archer, that a young officer of a native corps, a peculiar favourite with the sepoys under his command, was at one time smuggled into the sanctuary by the connivance of the soldiers, who dyed his skin of the proper hue, dressed him in full costume, and painting the peculiar marks of their caste upon his forehead and nose, crowded round him upon all sides, and, thus secured from detection, brought him into the very presence of the idol. A distant view, notwithstanding the zeal of his conductors, was all that he obtained; and either there not being a great deal to attract his attention, or a sense of danger preventing him from feeling sufficiently at his ease to make many observations, the information acquired from his account was very scanty; he told his friends that he saw nothing but large courts and apartments for the priests.

The festival of the *Rath Jatra* takes place every year; but, as at Hurdwar, it increases in sanctity at peculiar periods, every third, sixth, and twelfth anniversary, the latter more particularly, being considered of greater importance than those that intervene. The concourse of pilgrims is still exceedingly large, and numbers, as in former times, never return, leaving their bodies to fester on the neighbouring sands, victims to a horrible superstition, though not, as heretofore, sacrificed under the suicidal wheels of the cruel idol's car. Such immolations are becoming very unfrequent; but fatigue, hardship, want of food, and the various diseases brought on by exposure to the pestilential atmosphere of the rains, make fearful havoc among the miserable wretches who hasten onwards to the holy precincts of the temple, in the hope of obtaining a panacea for all their woes.

A favourite method of approaching to Juggurnaut, by those who have either great offences to expiate, or who are desirous of obtaining a more than ordinary portion of beatitude, is to measure the length the whole way from some extraordinary distance. The pilgrim lies down, marks the spot which the extremity of his hands have touched, and rising rests his feet upon the spot, and, again prostrating himself, repeats the same process. Five years are sometimes consumed in this manner, and, as the penance may be performed by proxy, it is often volunteered for a certain sum of money, the wages being most scrupulously earned by the person who undertakes the duty. In no part of the world is gold so all-powerful as in India; upon the morning of an intended execution, a stranger appeared in the place of the criminal, and declaring that he had for a certain consideration agreed to suffer for the person who had made the bargain, seemed quite astonished to find any hesitation on the part of the authorities to execute the sentence, remonstrating with them upon the folly of their scruples, since he was ready and willing to perform his part. Fortunately for him, he had not to deal with his own countrymen, who, provided that somebody died, would have cared very little whether it was the offender or his substitute.*

The great temple of Juggurnaut was erected in the twelfth century, under the auspices of the chief minister of the rajah of the district. The idols have nothing to distinguish them save their size and their deformity; the principal one, Krishna, is intended as a mystic representation of the supreme power, for the Hindoos are unanimous in declaring that they worship only one God, and that the images which they exhibit, and to which they pay the most reverential homage, are merely attributes of a deity pervading the whole of nature; he is associated with the two other personages of the Hindoo triad, and

* Such substitutions are not uncommon in China.—Ed.

every one of the idols particularly venerated by the numerous tribes and sects of Hindoostan, obtains a shrine within the precincts of this huge temple, so that all castes may unite in celebrating the great festival with one accord. The installation of the great idol upon his car or *rath*, and the procession attendant upon his triumphal march to a country residence about a mile and a half distant, a journey which occupies three days, are performed with many ceremonies, though not all of a very respectful nature. Previous to this grand ovation, the images are taken from their altars to be bathed, and are then exhibited to public view upon an elevated terrace. These gigantic busts, hideously ugly, and scarcely bearing the rudest lineaments of the human form, are seen mounted upon pedestals, the latter being concealed by muffling draperies. The hands, feet, and ears of the great idol are of gold, but these are kept in a box by themselves, and are only fastened into their sockets after Juggurnaut has been safely deposited upon his car. While seated in state upon the terrace, a canopy, gay with cloths of various colours, is raised over the heads of the triad, and crowds of Brahmins are in attendance with punkahs and chowries, to beat off the flies. Occasionally, the sudden flash of a vivid fire-work sheds a momentary ray upon the horrid countenances of these Dagons, and in the next instant all is again involved in the indistinct gloom of an eastern twilight, dimly revealing the huge forms of the idols, and the eager gesticulations of their misguided votaries. The unwieldiness of Juggurnaut and his companions, and the absence of the machinery necessary to effect their removal in a proper and decorous manner, occasions a scene which scandalises European eyes, but which the natives, accustomed to the doctrine of expediency, survey without feeling that they are offering any indignity to the objects of their worship. The only method of transport, which has been yet devised, is by means of ropes fastened round the necks and feet of these cumbrous images, which are thus dragged from their high places down the steps, and through the gateways of the temple, and are afterwards hauled up in the same manner upon the *raths*, without regard to mud or dust.

The car of Juggurnaut is a monstrous vehicle, gigantic in its dimensions, and associated in the mind with images of horror; it is a sort of platform, forty-three feet in height and thirty-five feet square, moving upon sixteen wheels, each six feet and a half in diameter: the ornaments with which it is decorated are by no means splendid, its principal attraction being a covering of striped and spangled broad-cloth. The villagers of the neighbouring pergunnahs have their fields rent-free upon the condition of attendance at the cars of the idols. This duty, at present esteemed a privilege, is not exclusively confined to those who are so well rewarded for its performance, but, before the whole ceremony concludes, the zeal of many of the devotees is so completely exausted, that the *raths* would scarcely reach their destination were it not for the services which the Brahmins can command. It takes fifteen hundred men to put each of the cars of Juggurnaut in motion, and, when the idols are fairly established in their places, the shouts and cries of the frenzied multitude are such as to lead us to fancy that the whole of Pandemonium had been let loose, an idea which is strengthened by the fiend-like figures of the Jogies, Gossains, and other religious mendicants, whose grim visages, lighted up with a frantic joy, give them a super-human appearance, as they cheer on their insane followers to acts of horror. Though the ponderous wheels of Juggurnaut no longer go crushing over the bodies of prostrate victims, the fury and excitement, with which the assembled crowd rush to the car, are absolutely appalling. In places of very inferior note, there is something frightful in the noisy lumbering progress of the cumbrous *rath*, surmounted by a hideous idol, dragged about in honour of the festival; but in the very heart and centre of this abominable superstition, the celebration becomes perfectly terrific, and the senses overwrought, faint, and sicken at the view. The scenery of the place, its bare sands, the surging of the ocean in the distance, the drenching rains, damp gales, and sudden tempests of the fitful atmosphere, add to the wild horrors of this awful pageant. Each day the exhibition becomes more ghastly, as the wan victims of famine and disease drop exhausted around, making a golgotha of the unhallowed precincts.

The most sacred portion of the soil round the temple of Juggurnaut extends to a circle of about eight miles, though the land is considered holy to a much greater distance; and the whole, during sickly seasons, may be said to be covered with the dead bodies of the pilgrims, who, unequal to encounter exposure to the inclemency of the weather, sink under accumulated hardships, to form a frightful banquet for carrion birds and beasts of prey. Most authorities agree that the tax, which was levied by the government upon the pilgrims to Juggurnaut, here as well as at Allahabad, tended to diminish the number of persons resorting to the festival, and also the amount of suicides. Still a good deal of scandal was excited by the support of an establishment, by Christian rulers, of a stud of elephants, horses and other equipments for the service of the idol; and the annual waste of life, though not occasioned by actual offerings to the blood-stained wheels of the demoniacal car, is nearly equally shocking, as the result of one of the most frightful delusions that ever spread its curse upon the human race. The country about Juggurnaut consists of low sand-hills covered by a thick, but not tall, forest of trees, the gigantic vegetable products of the soil not being found so near the coast: about a mile from the sea, cultivation abruptly ceases, the intervening space being a waste of deep and loose sand, extending along the desolate shore. The town of Pooree is situated upon the margin of this desert; but the European cantonments, with greater regard to comfort and convenience than picturesque beauty, occupy a high ridge, which is perfectly destitute of verdure, fronting the sea, and having the benefit of all its cooling breezes. Pooree is, in consequence, notwithstanding its desolate appearance and its isolated situation, a desirable quarter; punkahs are scarcely necessary at any period of the year, and, worn out by the oppressive heat of Bengal and Hindoostan, many are delighted to loiter away the time on the health-inspiring, though solitary, shores of Cuttack. The beach is destitute of shells, or of any marine production interesting to the naturalist; the neighbouring sea, however, abounds with fish; and oysters, crabs, and lobsters, which are never attainable at Calcutta in their freshest state, are taken with the greatest ease. They are not generally supposed to be equal in flavour to those found in England, but this idea is in all probability more occasioned by the want of appetite, and consequent relish, of the sojourners of a tropical clime than any real inferiority on the part of the fish. During the monsoon, the surf rises with great vehemence, presenting breakers equally formidable with those of Madras, and effectually preventing any thing save boats of native construction from holding communication with ships in the offing. It sometimes happens that officers, who have nearly outstayed the period permitted for absence in England, prevail upon the captains who bring them out to land them at Pooree, whence they can report their return to head-quarters long before the ship can reach its destined port; and as at all times the European outward-bound appear within sight of the black pagoda, or the temple of Juggurnaut, and not unfrequently hold communication by signal with the harbour master of Pooree, the inhabitants of the station look out with great anxiety for passing vessels, and derive their greatest enjoyment

from the expectation of obtaining news from England before it can arrive at Calcutta.

The sand is ill adapted either for walking or for riding, and in boisterous weather becomes so great a nuisance as more than to counterbalance the advantages of the sea-breeze. The houses are not built with the attention to comfort which characterises those of the interior; they are more in the style of the primitive bungalow, pervious to every wind from heaven, and gritty in every quarter from the drifting sand. The interior parts of the district abound in game; but in the immediate neighbourhood of Pooree, the ardour of the most determined sportsman is soon quenched by the difficulties which surround him, and the worthlessness of the prizes which reward his toil. But while the mightiest hunter is obliged to remain inactive, a wide field is opened to the antiquary, who may spend the whole period of a protracted sojourn in examining and enquiring into the relics of Hindoo antiquities which are to be found in every part of the hallowed soil. There are several pagodas, occupying a considerable tract of ground, scattered amongst the sand-hills which have heaped themselves along the coast. Many of these are protected from the encroachments of the drift, by massy walls; but others, not having the same facilities for keeping the space clear around them, are almost swallowed up in the sand. All are exceedingly picturesque in their appearance, and their gaunt and withered inhabitants, only a little less infernal in their aspect than the deformed objects of their worship, sprawling on the floors, or grinning from a niche, combined with the dreariness of the land scene, and the loud roar of the ever-sounding surf, altogether form a picture of wild sublimity, which leaves an indelible impression upon the mind.

The black pagoda or temple of the sun, one of the most splendid Hindoo remains which India can boast, and which is an object of great attraction to all the intellectual visitants of Pooree, is situated about sixteen miles to the north of the native city, in the midst of a wilderness of sand, with which the jungle has struggled, not always unsuccessfully, for the ascendancy; here and there patches of verdure make their appearance, and the gentle risings of the ground relieve the dull monotony of the adjacent plains. It is of much earlier antiquity than Juggurnaut, but has lost its sanctity in the eyes of the multitude, and is now deserted and left to ruin. The roof is pyramidal, rising from a square building of great solidity; but owing to a defect in the architecture, a large portion of this massive edifice is in ruins, and it is somewhat difficult to comprehend its original design. Weeds, the gigantic product of a most prolific soil, prickly pear, and copse-wood, have spread themselves over and amidst the enormous masses of recumbent ruins, above which the surviving portion of the temple rears itself, and from the summit of an elephant mound, bids defiance to the encroaching sand, and lifts its head proudly as a beacon to the wanderers of the wave. Those who have closely examined the numberless sculptures which adorn that once splendid temple, report them to be of exquisite beauty; the choice of subject, however, in many must prevent them from being made better known by the aid of drawings; but this unhappy taste does not pervade the whole edifice, and some of the colossal remains, especially of elephants and griffins, are magnificent. Any attempt at minute description would occupy many pages, while it must utterly fail in conveying an adequate idea of the lonely majesty of this desecrated pile. A few fakirs, looking more like wood demons than men, share the shelter afforded by the numerous cavernous chambers, with the porcupines and bears composing the principal population of the place: tigers occasionally join the assembly, though the latter intruders, arousing the spirit of adventure in the youth of the neighbouring station, are speedily put to the rout.

The intolerance of the Musulmans, and their determination to overthrow idolatory in the seat of their conquests, obliged the Brahmins of Juggurnaut, upon more than one occasion, to resort to stratagems for the preservation of their sacred images. Twice have they been carried away and hidden amongst fastnesses beyond the Chilka lake, (a neck of the sea about seventeen miles to the south of Pooree,) and there enshrined until better times enabled them to return: but even the servants of the prophet, tired of the attempt to force their religion upon the still more bigoted followers of Brahma, came at length to a compromise, and turned the object of their antipathy into a source of profit, by instituting a tax, which was continued by the British government. Formerly, the concourse of pilgrims was so great as to yield a revenue of nine lacs of rupees; but the receipts have dwindled yearly, during a considerable period, and the progress of civilisation and of knowledge is now extending so rapidly, that at no very great distance of time we may hope that the fearful orgies celebrated at Juggurnaut may be looked upon as bygone things, and that a purer creed will be established upon the ruins of that monstrous fabric of superstition, which has so long tyrannised over the mental faculties of the Indian world.

STANZAS FOR MUSIC.

We parted in silence, we parted by night,
On the banks of that lonely river,
Where the fragrant limes their boughs unite,—
We met, and we parted for ever.
The night-bird sang, and the stars above
Told many a touching story,
Of friends long past to the kingdom of love,
Where the soul wears its mantle of glory.

We parted in silence,—our cheeks were wet
With the tears that were past controlling;
We vow'd we would never—no never forget,
And those vows at the time were consoling:
But the lips that echoed the vow of mine,
Are cold as that lonely river;
And that eye, the beautiful spirit's shrine,
Has shrouded its fires for ever.

And now on the midnight sky I look,
And my heart grows full to weeping;
Each *star* is to me as a *sealed book*,
Some tale of that loved one keeping.
We parted in silence, we parted in tears,
On the banks of that lonely river;
But the odour and bloom of those bygone years
Shall hang round its water for ever.

COMBATIVENESS.

One of the most efficacious modes employed by Dr Gall to determine the functions of the different parts of the brain, was to observe, at every opportunity, the heads of persons distinguished by any peculiarity of disposition or talent, and to note in what particular region a large developement appeared in them all. Having, in the course of his researches, collected in his house a number of persons belonging to the lower ranks, such as porters and hackney-coachmen, his attention was drawn to the fact, that while some individuals were spoken of by their comrades as remarkable for provoking disputes and contentions, there were others, of a pacific disposition, who they regarded with contempt, and called poltroons. "A the most quarrelsome," says Gall, "found great pleasure in giving me very circumstantial narratives of their ex-

ploits, I was anxious to see whether any thing was to be found in the heads of these heroes which distinguished them from those of the poltroons. I ranged the quarrellers on one side, and the peaceable on the other, and examined carefully the heads of both. I found that, in all the quarrellers, the head, immediately behind and on a level with the top of the ears, was much broader than in the poltroons. On other occasions, I assembled, separately, those who were most distinguished for their bravery, and those who were most distinguished for their cowardice. I repeated my researches, and found my first observations confirmed. I therefore began to conjecture that an inclination to contention (*penchant aux rixes*) might really be the result of a particular organ. I endeavoured to find out, on the one hand, men of acknowledged superior bravery, and on the other, men known to be great cowards. At the combats of wild beasts at that time still exhibited in Vienna, there appeared a first-rate fighter of extreme intrepidity, who often presented himself in the arena to sustain, alone, a fight with a wild boar or a bull, or any ferocious animal whatever. I found him in the region of the head, just pointed out, very broad and rounded (*bombée*). I took a cast of this head, and likewise of those of some other *braves*, that I might run no risk of forgetting their particular conformations. I examined also the heads of some of my comrades who had been expelled from several universities for continual duel-fighting. Among these was one who knew no greater pleasure than that of establishing himself in an ale-house, and mocking the workmen who came thither to drink,—and when he saw them disposed to come to blows, putting out the lights, and giving them battle in the dark, chair in hand. He was, in appearance, a little weakly man. He reminded me of another of my comrades, a Swiss, who used to amuse himself at Strasburg by provoking quarrels with men much stronger and larger than himself. I visited several schools, and had pointed out to me the scholars who were the most quarrelsome, and those who were the most cowardly. I prosecuted the same observations in the families of my acquaintance. In the course of my researches my attention was arrested by a very handsome young woman, who, from her childhood, had been fond of dressing herself in male attire, and going secretly out of doors to fight with the blackguards in the streets. After her marriage, she constantly sought occasion to fight with men. When she had guests at dinner, she challenged the strongest of them, after the repast, to wrestle with her. I likewise knew a lady who, although of small stature and delicate constitution, was often judicially summoned, because of her custom of striking her domestics of both sexes. When she was on a journey, two drunken wagoners, having lost their way in the inn during the night, entered the chamber where she was sleeping alone: she received them with such vigour with the candlesticks, which she hurled at their heads, and the chairs with which she struck them, that they were forced to betake themselves to flight. In all these persons I found the region in question formed in the manner above described, although the heads were shaped in other respects quite differently. These observations emboldened me, and I began thenceforth to speak, in my lectures, of an *organ of courage*, as I then called it.—*Phrenological Journal.*

Judgment of Books.—I have no other rule by which to judge of what I read, than that of consulting the disposition in which I rise up from my book; nor can I well conceive what sort of merit any piece has to boast, the reading of which leaves no benevolent impression behind it, nor stimulates the reader to any thing that is virtuous or good.—*Rousseau.*

From the New Monthly Magazine.

MY HONOURABLE FRIEND BOB.

It was at a public school that I first became acquainted with my friend Bob Burnaby; he was then a little round-faced, curly-pated boy about ten years of age; and I, being two years his senior, and there existing some intimacy between our parents, he was put under my especial protection. Bobby had been a spoiled child, (the only one possessed by Mr. and Mrs. Burnaby,) and until his tenth year the world had been to him a world of pies and tarts, of comfits and comforts; his *will* had been the regulator of the paternal mansion, and his *pleasure* the main object promoted by his mother.

All this ended (that is as far as the young gentleman's residence at Burnaby Hall was concerned) in those roots of all evil, idleness and ignorance: and some rash and glaring acts of insubordination having brought upon Bob's head the wrath of his father, (whose head, by the by, was more in error than his son's,) the young reprobate had sudden notice to quit, and in spite of the threats, entreaties, and hysterics of Mrs. Burnaby, he was immediately borne off to the academic shades superintended by the Rev. Dr. Rearpepper.

I soon became very fond of Bob; we naturally feel attached to those who cling to us for support, and every thing was so new to him, poor fellow, that without me he was miserable. By day and by night he was my appendage; he sat on the same form, at the same desk, casting up his little sums, or writing his little exercises; and at night his little bed was close to mine, and he used to talk to me about his papa and mama, and the big dog Pompey, till he talked himself to sleep. At that very early age Bob had acquired a taste for extravagance; his money always burned a hole in his little breeches pocket, and when it was gone many a shilling did he borrow of me, and more did he owe to Mrs. Puffy, the fat vender of pastry, whose residence was "down the street."

These premature extravagances, pretty as they certainly were, of course led to little difficulties; and perhaps the worst result likely to arise from early embarrassments is, the habit of fibbing, and making a mystery and a concealment of troubles, which nothing but candour could really remedy. And thus it was with Bob: had I not loved him and been a real friend, he would have forfeited my friendship a hundred times; so often did he borrow, and so often did he promise repayment, and so often did he forget to fulfil the promises he voluntarily made. But no, I wrong him, he did *not* forget; I always saw that he felt infinitely more annoyed than I did, when he stood before me a defaulter, and his flushed cheek and moistened eyes proved that he endured humiliation, and that at heart he was even then my *honourable friend.*

At sixteen I left Dr. Rearpepper's establishment, and many were the tears that poor Bob shed at my departure: he said nothing about the nine shillings and fourpence that he owed me, but when I said, "Bob, be sure you write to me," I suspect that he almost expected me to add, "and don't forget to enclose the money."

During my residence at Oxford we never met; at first our interchange of letters was frequent, and the style of our communications most affectionate, but gradually a change came over the spirit of our dream, and for a whole year I heard nothing of him. At length, by the coach came a splendidly bound copy of a work which he knew to be my favourite, and in the title-page was written my name, and underneath the words, "from his affectionate and grateful friend, Bob."

"Yes," thought I, as I read the inscription, "and thou art still my honourable friend." Bob, after so long a period had elapsed, was naturally ashamed to send me the few shillings which he owed me; but he could not be happy till he had spent many pounds on a gift which was intended to repay me. With the parcel I received a letter announcing his having entered the army, and adding, that he was about to join his regiment, which was then on a foreign station. He entreated me not to suppose from his long silence that he had forgotten me; and in short, there was so much warmth of heart in the whole letter, that Bob was reinstated in my good graces, and I wrote him a most affectionate reply, assuring him that whenever we met he would find me unaltered.

After quitting Oxford, I traveled on the continent for many months, and on my return to England I found my friend Bob at an hotel in Bond street; and in every sense of the word "a gay man about town."

Ours was more like the re-union of boys after a summer's vacation, than the meeting of men who had seen something of the world; we could talk only of the past, of frolic, and of fun; and while arm in arm we ranged the streets of the west end, we laughed almost as much, and were really nearly as thoughtless, as in the days when together we ranged the playground of old Rear-pepper.

Whatever *I* may have been, Bob was indeed unchanged, and not alone in spirits and temper, for I soon found that his old habits had grown with his growth, and strengthened with his strength. He still retained his "sweet tooth," and daily did he lead me in to Gunter's or Grange's, (nay often into both in turn,) and there I saw him indulge, as he used of old in the habitation of Mrs. Puffy; the only difference was that his dainties were somewhat more refined, and more expensive; for, alas! I soon saw that the old injunction, "Put it down to my bill," had by no means fallen into disuse. I also saw, with regret, that all other tradespeople were most impartially dealt with by Bob in the same way; and I saw him take possession of trinkets, coats, hats, and boots, without considering it requisite to take his purse out of his pocket.

Now I knew that Bob would eventually, in all probability, be exceedingly well off, but I greatly doubted his having it then in his power to pay for one fourth of the valuable articles which I saw him so unceremoniously take possession of. I one day ventured to speak to him on the subject, and from his embarrassed manner, and the deepened colour in his cheek, I saw he felt the truth of what I said; but I soon found that with the old error, he still retained the old bad habit of fibbing to endeavour to conceal it; and the consequence was that we spent our evening together with much more reserve than usual. The next morning I forgot all that had passed, for Bob ran to my bedside to inform me that he was ordered to India, and must leave London in a day or two: he showed me his letters, and it was evident that he must prepare for his immediate departure. We breakfasted together, and during the repast the waiter was continually presenting him with wafered notes, and it appeared that several persons had called very earnestly, wishing to see him. I had my suspicions about these visitations, but said nothing.

Immediately after breakfast Bob took my arm, and requested me to walk with him; and after passing through several streets and squares in unusual silence, and with an appearance of agitation in his manner, he suddenly addressed me.

"There is no alternative," said he, "I must go."

"You must, indeed, Bob," I replied, "unless you are *detained*."

"*Detained!*" said Bob, blushing, "how do you mean?"

"Pardon me," I answered, "but really few young men could go on as you have lately done, and be prepared for a departure so sudden; now, my dear Bob, you know what my finances are; you know I have literally *nothing* to spare, but if knowing this, you think I can be of temporary use to you, command me."

Bob grasped my arm, and his eyes watered, but he was ashamed to own the extent of his incumbrances: he therefore hastily answered—

"This is like yourself, my dear friend, and at the moment you may indeed serve me by putting your name to a bill."

"Not of large amount, Bob, I trust?"

"No—yes—larger, I fear, than——"

"If it be a large sum, Bob, you know that if your draft is not honoured when it is due I shall go to prison instead of you."

"Never," said Bob, with a fervour and an evidence of deep feeling which I could not distrust.

"Well, then, what is the sum?" said I.

"First let me tell you some circumstances which press heavily on my heart," said Bob; "not here—come with me this way."

And in solemn silence he led me to Park-lane.

"What can all this mean?" said I, at last.

"Hush!" said Bob, "you see that house?"

And he pointed to a very handsome and well-appointed mansion. Two footmen in splendid liveries were standing at the door, receiving cards from the window of a coroneted carriage.

"See the house?" I replied; "to be sure I do; and what then?"

"That house is owned by one of the richest commoners in England."

"I should think so," I answered.

"He has an only daughter," said Bob.

"Has he?" said I.

"His sole heiress," added Bob.

And again I answered, "What then?"

"I am ashamed of having concealed all this so long from so dear a friend," murmured Bob.

"All what?"

"But the secret was not my own."

"What secret?"

"That lovely girl!"

"Upon my word, Bob," I cried, "you put me out of all patience."

"I have won that girl's affections."

"The heiress?" said I.

"She loves me," whispered Bob.

"My dear fellow," I exclaimed, "this is news indeed. You have no occasion for assistance from a poor fellow like me."

"Oh!" said Bob, "you have not heard all; she loves me—to madness loves me—poor dear girl! But rich as her father is, were he to suppose that I am involved, he would forbid the match."

"A very sensible old man."

"That may be; but there is another obstacle—my rank. Clara will not consent to marry any thing below a captain."

I could not repress a laugh.

"It is a foible perhaps," said Bob, rather piqued; "but it is her only one, and I must humour it; but my promotion depends on my going to India, and——"

"Well, well," said I, "I understand all this; but tell me at once what you wish *me* to do for you?"

"To put your name to a draft for one hundred and ninety pounds," faltered Bob.

"Mercy on me! what a sum!" said I; "however, it must be done, and when the draft becomes due——"

"I will honourably pay it."

"If not, to prison I go; and now let us return to our hotel."

"One moment," said Bob; "I love to look at the house."

"At the casket which contains the gem?" said I.

"Yes, and for your sake too I love to look at it. You see those three windows shaded with sky-blue silk curtains? Oh! such a little room that is! and that room I always mean to be your own *exclusively*, when I am master of the mansion. Such a room! the furniture so exquisite! and such a view of the park! But come, we'll talk all that over while we are at dinner."

Before that meal was half finished, Bob seemed quite to have recovered his spirits; and I could not help suspecting, that as the prospect of an immediate separation did not seem to depress him, he loved the *lady* less than he loved her *gold*.

"I can't imagine, Bob," said I, "when you contrived to win your divinity; you and I have been for months almost inseparable, and——"

"Ask no questions," said Bob; "the secret is not my own."

"Not entirely, certainly," I replied; "so I will not interrogate you farther. Is she to inherit that house in Park-lane from her father?"

"To be sure she is; and such a house as it is! and that room which I mean for you! you are fond of a hot bath?"

"Very."

"There is a sky-blue silk sofa in that room, and when you touch a spring, it flies up (I don't exactly know how), and turns into the most delightful white marble bath?"

"How very nice!" said I.

"Yes, and so very complete! three cocks!"

"Three!" said I; "two you mean."

"No, no, three," replied Bob; one for hot water——"

"Yes," said I.

"And one for cold——"

"Well, that makes two," said I.

"And one," said Bob, for "eau-de-Cologne."

In the evening I put my name to Bob's draft, and the next morning we parted with mutual expressions of regret.

I missed him sadly, and it so happened that after he went, many untoward circumstances occurred, which having first materially lowered my resources, next effectually lowered my spirits, and I used to saunter through our old haunts looking like the ghost of his companion.

When he was gone I became acquainted with many circumstances connected with his expenditure which perfectly astounded me, and at the end of four months (exactly two months before it was to become due,) I had every reason to doubt whether the draft for one hundred and ninety pounds would ever be paid. I was conscious of my own utter inability to pay it; and I therefore existed for a week or two in a state of mental excitement not to be described. One day after breakfast I sallied forth more dolorous than usual, and after wandering about for some time, I found myself in Park-lane, opposite the identical mansion inhabited by Bob's intended.

"Ah!" thought I, "were Bob now in possession of that house, all would go well with us; his heart is in the right place, poor fellow, but, alas! before he puts me in possession of that sky-blue apartment, with the hot water, and the cold, and the eau-de-Cologne, I may be in prison, and my name disgraced."

As I looked towards the balcony of the drawing-room, I saw a female watering some geraniums; and suddenly turning her head towards me, she seemed to recognise my person, and gave me a familiar nod.

I soon discovered it was my old friend and near connection, Mrs. Simmons, and beckoning me to the window, she exclaimed, "Oh! I'm delighted to see you—we only came to town yesterday—we are on a visit to Mr. Molesworth—pray come in, and I'll introduce you."

I knocked at the hall door in a state of mind not to described; the hall door of a house in which I (*by anticipation*) already possessed a room of my own, with sky-blue curtains, and a bath overflowing with eau-de-Cologne! I walked up stairs, and my friend Mrs. Simmons received me at the drawing-room door, and introduced me to Mr. Molesworth (an old gentleman in a pair of gouty shoes) and his only daughter (a lovely fair-haired girl of about eighteen).

In this family I spent many happy days; and being, though unknown to her, so well acquainted with the secret of the young lady's heart, I became more intimate with her than I could have been with any one else without incurring the imputation of "serious intentions." In this instance,

however, my knowledge of the fair heiress's engagements to another person made me feel perfectly at my ease; and we became the talk of all our acquaintances, without my being the least aware that we were engaged even in a little flirtation.

To my utter astonishment, Mrs. Simmons came to me one day (it was the day before that on which Bob's draft was to become due), and with a knowing look asked me why I was so out of spirits; I gave an evasive reply, for I did not choose to own the paltry pecuniary difficulty which was threatening to overpower me.

"Nonsense," said Mrs. Simmons, "go boldly and make your offer; your connections are unexceptionable, and whatever your present income may be, your prospects are excellent; besides she has enough for both."

"And pray," I replied, "what do you mean by *she*?"

"Miss Molesworth, to be sure," said my friend, "I am sure she is attached to you, and———"

"You know nothing about it," said I, "for I can tell *you* that———"

I hesitated, for I had no right to betray Bob's secret.

"Well," said Mrs. Simmons, "here she comes, and I will leave you together."

With these words *exit* Mrs. Simmons at one door, and at the same moment *enters* Miss Molesworth at the other.

"What is the matter?" said the young lady, earnestly, "you seem agitated! what has happened?"

"Are we alone?" said I, after a pause. "It is better that I should be explicit."

Miss Molesworth started, coloured, and cast down her eyes. Had I been a favoured lover on the point of making my avowal of attachment, she could not have been more embarrassed.

"Do not be alarmed," said I, "I am Bob's best friend; and I know your secret."

"My secret!" cried Miss Molesworth.

"Yes, dear lady," I answered, "I am, as I told you before, the intimate friend of Bob."

"Of Bob!" said she.

"Yes," I answered, taking her hand, "I'm Bob's old school-fellow.

"And pray, sir," said she, withdrawing her hand, "who is Bob?"

"Do not distress yourself," I whispered, "do not think it necessary to conceal any thing from me; before he left England, Bob told me all."

"All what?" cried Miss Molesworth.

"Your mutual attachment—your engagement," I replied.

Miss Molesworth started up, colouring crimson; at first she could not articulate, but at last she said—"I know not, sir, to what I am to attribute this conduct. I have been attached to no one—engaged to no one—I know not of whom it is you speak. I had considered you, sir, in the light of a friend; but now, sir, now———"

She could say no more, but sank on a chair beside me in a flood of tears. A mist at the moment fell from my eyes; at once I saw the full extent of Bob's unpardonable falsehood, and the distressing certainty flashed on my mind, that his draft would be dishonoured.

Mrs. Simmons entered at the moment, and found us both apparently plunged into the depths of despair. Miss Molesworth was in an instant weeping on her shoulder, and before a quarter of an hour had elapsed, without my knowing exactly how it happened, I found myself breathing forth vows of love to the young lady, and exulting in my discovery that her engagement to my friend Bob was a fable.

Miss Molesworth referred me to her father, but I read in her large blue eyes that she did *not* dislike me; I therefore retired to my bed that night full of love and hope, and dreamed of driving my wife in a chariot drawn by six dragons, over the mangled body of Bob Burnaby.

The next morning my first thoughts was of my approaching interview with Mr. Molesworth; but, alas! it was soon followed by my recollection of Bob's draft, and the too great probability that, before night, I should be in durance vile for the amount. My own resources were at the moment inadequate to meet the demand, and could I ask a rich man to let me marry his daughter, and expect that his first act would be to pay one hundred and ninety pounds to extricate me from a prison!

At length I made up my mind to walk to Bob's banker's, and at once ascertain the worst; I did so, and on my arrival I was astonished at being informed by a clerk, that "Mr. Burnaby had provided funds for the payment of his draft."

So far I had wronged my honourable friend; and I was therefore able to appear in Park-lane in excellent spirits. "The course" of my "true love" did, for a wonder, "run smooth," and all our preliminaries having been finally arranged, the Molesworths left town for the family seat in Wiltshire, and I remained to arrange some legal and other matters which would in all probability detain me for a couple of months. I was sitting in my own room rather out of spirits the morning after my true love's departure, when the door opened and in came Bob. He was so evidently delighted to see me again, that I could not help receiving him kindly. He spoke of the obligation I had conferred on him previous to his departure: and after frankly acknowledging the gratification I had felt at his punctuality, I said—"And now, Bob, that you have the rank of captain, nothing can interpose to prevent your marriage."

"My marriage!" said Bob, blushing all over.

"Yes," I replied, laughing *in my sleeve*, "your marriage with the heiress of Park-lane!"

"Oh!" cried Bob, starting from his chair and pressing my hand, "never—never, I entreat you, mention that subject again."

"Why so?" said I.

"It is all off," sighed Bob.

"Off!" I exclaimed.

"Yes," said Bob, "the traitress! but I cannot speak on the subject—never name it again."

I, of course, promised to obey him, and for some days we enjoyed ourselves very much in the old way. One morning he came to me in real distress, and told me that his tailor had threatened to arrest him for the amount of his bill; I offered

o go and speak to the man, and endeavour to ersuade him to give Bob time.

"If he will only give me a month," said Bob.

"Well," I replied, "I can but try him;" and way I went.

The tailor was inexorable; but he told me that f I would become responsible for the payment of he debt in a month, he would consent to wait; f not, he was determined to arrest Bob that day.

hesitated for a moment, and then recollecting is prompt payment of the hundred and ninety ounds, I made myself responsible for the amount f the bill, and then returned to congratulate my riend. When I had told him what I had done, e started up and exclaimed—"You do not mean t; you cannot have made yourself responsible or the amount of that fellow's bill?"

"I have, I assure you," said I.

"Then," said Bob, "you will have to pay it; I hall not have the money myself—I never asked ou to incur the responsibility—I never expected t, and all I can say is, that you will have to pay."

"My dear Bob," said I, "it will not be in my ower—I am peculiarly situated; at the end of a nonth I shall be most particularly engaged, and aying this will be out of the question."

Still Bob protested that he had never asked me o become responsible, and it ended in his leaving ne in a very ill humour. My engagements with egal persons employed me for days together in he city, and I saw very little of Bob. When we lid meet, my manner was cold and constrained, nd it was not till within a day or two of the ex- iration of the month that I had time to think of he very inopportune and annoying responsibility which I had incurred. That very day I met Bob, and spoke to him very earnestly and eriously about the payment; but he sighed most leeply—told me how much he lamented my aving engaged to make the payment, and pa- hetically bemoaned the emptiness of his own ockets. The next morning I called on the ailor, earnestly requesting him to renew the raft for a month, and was then told that my onourable friend had called that very day, and ad placed in his hands the sum for which I was esponsible.

I went instantly to call upon him, and he eceived me with laughter, in which I could not esist joining; but I must confess I laughed the nore from the recollection that my hour of re- enge was at hand.

About a fortnight afterwards (the family of my ntended having arrived in town for the wedding, which was to take place the next morning at St. George's church, Hanover-square,) Bob enquired *what* it was that seemed to occupy me from morning till night, and *why* it was that we so seldom met?"

"My dear Bob," said I, "it has been a secret, ut I will now hide no secrets from you; I am going to be married to-morrow."

"Married to-morrow!" cried Bob, "tell me all about it; who is she? Where does she live? Is she pretty? Is she rich?"

"There is no time," said I, "to answer your questions at present, I dine with the family at six, and mean to take you with me; go and dress, and in half an hour I will call for you in a carriage."

"Where does your intended live?" said Bob, as we drove along Oxford street.

"Time will show," I replied.

"Where are we going now?" said Bob, as the carriage made a sudden turn.

"We are in Park-lane," I replied.

"And the lady lives——?" faltered Bob.

"In Park-lane," said I.

Bob sat in a state of evident confusion; and when the carriage stopped at Mr. Molesworth's house, he said, "I deserve this—I am quite ashamed of myself—come, come, turn back, and drive home."

"By no means," I replied, as the servant gave a thundering knock at the door, and then let down the steps of the carriage.

"Why, you won't go in!" cried Bob, as he breathlessly ran up the steps after me, and vigorously pulled at the tail of my coat.

"Go in," said I, "to be sure, and you will meet old friends, and show me the room with the bath, and the——"

"You are going too far," whispered Bob. "I see my error—I uttered what was false—forgive me. But these servants, and the inmates of the house, will think us mad."

"Not at all," I replied; "speak the truth in future as I have done to you."

I pressed his hand, and led him up the stairs; I saw that he was depressed and humiliated, and when we got to the drawing-room door, he murmured, "And do *they* know it? I cannot face them."

"They know *nothing*," I replied, "and shall never know from me any thing discreditable to my honourable friend Bob."

"I will never utter a falsehood again," said Bob; and I firmly believe that he adhered to his resolution. T. H. B.

ON THE REMOVAL OF SOME OLD FAMILY PORTRAITS.—AUGUST, 1834.

Silent friends! fare ye well—
Shadows! adieu.
Living friends long I've lost,
Now I lose you.

Bitter tears many I've shed,
You've seen them flow;
Dreary hours many I've spent,
Full well ye know.

Yet in my loneliness,
Kindly, methought,
Still ye looked down on me,
Mocking me not,

With light speech and hollow words,
Grating so sore
The sad heart, with many ills
Sick to the core.

Then, if my clouded skies
Brighten'd awhile,
Seem'd your soft serious eyes
Almost to smile.

Silent friends! fare ye well—
Shadows! adieu.
Living friends long I've lost,
Now I lose you.
Taken from hearth and board,
When all were gone;
I looked up at you, and felt
Not quite alone.
Not quite companionless,
While in each face
Met me familiar
The stamp of my race.
Thine, gentle ancestress!
Dove-eyed and fair,
Melting in sympathy
Oft for my care.
Grim knight and stern visaged!
Yet see, I could
(Smoothing that furrow'd face)
Good-will to me.
Bland looks were beaming
Upon me I knew,
Fair sir!—bonnie lady!—
From you, and from you.
Little think happy ones,
Heart-circled round,
How fast to senseless things
Hearts may be bound;
How, when the living prop's
Moulder'd and gone,
Heart-strings, low trailing left,
Clasp the cold stone.
Silent friends! fare ye well—
Shadows! adieu.
Living friends long I've lost,
Now I lose you.
Often, when spirit-vexed,
Weary and worn,
To your quiet faces, mute
Friends, would I turn.
Soft as I gazed on them,
Soothing as balm,
Lulling the passion-storm,
Stole your deep calm—
Till, as I longer look'd,
Surely, methought,
Ye read and replied to
My questioning thought.
"Daughter," ye softly said—
"Peace to thine heart:
We too—yes, daughter! have
Been as thou art,
"Toss'd on the troubled waves,
Life's stormy sea;
Chance and change manifold
Proving like thee.
"Hope lifted—doubt depressed—
Seeing in part—
Tired—troubled—tempted—
Sustained as thou art—
Our God is *thy* God—what He
Willeth is best—
Trust him as we trusted: then
Rest, as we rest."
Silent friends! fare ye well—
Shadows! adieu—
One friend abideth still
All changes through.

C.

From the London Metropolitan.

THE BATHS OF PFEFFERS.

BY JAMES JOHNSON, M. D., PHYSICIAN EXTRAORDINARY TO THE KING, &c. &c. &c.

Among the strange places into which man has penetrated in search of treasure or health, there is probably not one on this earth, or under it, more wonderful than the Baths of Pfeffers, situated in the country of the Grisons, a few miles distant from the Splugen road, as it leads from Wallenstadt to Coire. They are little known to, and still less frequented by, the English; for we could not learn that any of our countrymen had visited them during the summer of 1834.

Having procured five small and steady horses accustomed to the locality, a party of three ladies and two gentlemen,* started from the little town of Ragatz on a beautiful morning in August, and commenced a steep and zig-zag ascent up the mountain, through a forest of majestic pines and other trees. In a quarter of an hour, we heard the roar of a torrent, but could see nothing of itself, or even its bed. The path, however, soon approached the verge of a dark and tremendous ravine, the sides of which were composed of perpendicular rocks several hundred feet high, and at the bottom of which the Tamina, a rapid mountain torrent, foamed along in its course to the valley of Sargans, there to fall into the upper Rhine. The stream itself, however, was far beyond our view, and was only known by its hollow and distant murmurs. The ascent, for the first three miles, is extremely fatiguing, so that the horses were obliged to take breath every ten minutes. The narrow path (for it is only a kind of mule-track) often winded along the very brink of the precipice, on our left, yet the eye could not penetrate to the bottom of the abyss. After more than an hour of toilsome climbing, we emerged from the wood, and found ourselves in one of the most picturesque and romantic spots that can well be imagined. The road now meanders horizontally through a high, but cultivated region, towards the village of Valentz, through fields, gardens, vineyards, and meadows, studded with chaumiers and chalets, perched fantastically on projecting ledges of rock, or sheltered from the winds by tall and verdant pines. The prospect from Valentz, or rather from above the village, is one of the most beautiful and splendid I have any where seen in Switzerland. We are there at a sufficient distance from the horrid ravine, to contemplate it without terror, and listen to the roaring torrent, thundering unseen, along its rugged and precipitous bed. Beyond the ravine we see the monastery and village of Pfeffers, perched on a high and apparently inaccessible promontory, over which rise alpine mountains, their sides covered with woods, their summits with snow, and their gorges glittering with glaciers. But it is towards the east that the prospect is most magnificent and varied. The eye ranges, with equal pleasure and astonishment, over the valley of Sargans, through which rolls the infant Rhine, and beyond which the majestic

* Mr. and Miss Hayward, Mrs. and Miss Johnson, and myself.

ranges of the Rhetian Alps, ten thousand feet high, rise one over the other, till their summits mingle with the clouds. Among these ranges the Scesa-plana, the Angstenberg, the Flesch, (like a gigantic pyramid,) and in the distance the Alps that tower round Feldkirck, are the most prominent features. During our journey to the baths, the morning sun played on the snowy summits of the distant mountains, and marked their forms on the blue expanse behind them, in the most distinct outlines. But, on our return, in the afternoon, when the fleecy clouds had assembled, in fantastic groups, along the lofty barrier, the reflections and refractions of the solar beams threw a splendid crown of glory round the icy heads of the Rhetian Alps—changing that "cold sublimity," with which the morning atmosphere had invested them, into a glow of illumination which no pen or pencil could portray. To enjoy the widest possible range of this matchless prospect, the tourist must climb the peaks that overhang the village, when his eye may wander over the whole of the Grison Alps and valleys, even to the lake of Constance.

From Valentz we turned abruptly down towards the ravine, at the very bottom of which are the Baths of Pfeffers. The descent is by a series of acute and precipitous tourniquets, requiring great caution, as the horses themselves could hardly keep on their legs, even when eased of their riders. At length we found ourselves in the area of a vast edifice, resembling an overgrown factory, with a thousand windows, and six or seven stories high.

It is built on a ledge of rock that lies on the left bank of the Tamina torrent, which chafes along its foundation. The precipice on the opposite side of the Tamina, and distant about fifty paces from the mansion, or rather hospital, rises five or six hundred feet, as perpendicular as a wall, keeping the edifice in a perpetual shade, except for a few hours in the middle of the day. The left bank of the ravine, on which the hospital stands, is less precipitous, as it admits of a zig-zag path to and from the baths. The locale, altogether, of such an establishment, at the very bottom of a frightful ravine, and for ever chafed by a roaring torrent, is the most singularly wild and picturesque I had ever beheld; but the wonders of Pfeffers are not yet even glanced at.

From the western extremity of this vast asylum of invalids, a narrow wooden bridge spans the Tamina, and by it we gain footing on a small platform of rock on the opposite side. Here a remarkable phenomenon presents itself. The deep ravine, which had hitherto preserved a width of some one hundred and fifty feet, contracts, all at once, into a narrow cleft or crevasse, of less than twenty feet, whose marble sides shoot up from the bed of the torrent, to a height of four or five hundred feet, not merely perpendicular, but actually inclining towards each other, so that, at their summits, they almost touch, thus leaving a narrow fissure through which a faint glimmering of light descends, and just serves to render objects visible within this gloomy cavern. Out of this recess the Tamina darts in a sheet of foam, and with a deafening noise reverberated from the rocks within and without the crevasse. On approaching the entrance, the eye penetrates along a majestic vista of marble walls in close approximation, and terminating in obscurity, with a narrow waving line of sky above, and a roaring torrent below! Along the southern wall of this sombre gorge, a fragile scaffold, of only two planks in breadth, is seen to run, suspended—as it were—in air, fifty feet above the torrent, and three or four hundred feet beneath the crevice that admits air and light from heaven into the profound abyss. This frail and frightful footpath is continued (will it be believed?) nearly *half a mile* into the marble womb of the mountain! Its construction must have been a work of great difficulty and peril; for its transit cannot be made even by the most curious and adventurous travellers, without fear and trembling, amounting often to a sense of shuddering and horror. Along these two planks we crept or crawled, with faltering steps and palpitating hearts. It has been my fortune to visit most of the wonderful localities of this globe, but an equal to this I never beheld.

"Imagination," says an intelligent traveller, "the most vivid, could not portray the portals of Tartarus under forms more hideous than those which nature has displayed in this place. We enter this gorge on a bridge of planks (pont de planches) sustained by wedges driven into the rocks. It takes a quarter of an hour or more to traverse this bridge, and it requires the utmost precaution. It is suspended over the Tamina, which is heard rolling furiously at a great depth beneath. The walls of this cavern, twisted, torn, and split (les parois laterales contournée, fendues, et dechirées) in various ways, rise perpendicular, and even incline towards each other, in the form of a dome; whilst the faint light that enters from the portal at the end, and the crevice above, diminishes as we proceed; the cold and humidity augmenting the horror produced by the scene. The fragments of rock sometimes overhang this gangway in such a manner, that the passenger cannot walk upright: at others, the marble wall recedes so much, that he is unable to lean against it for support. The scaffold is narrow, often slippery; and sometimes there is but a single plank separating us from the black abyss of the Tamina.* He who has cool courage, a steady eye, a firm step, ought to attempt this formidable excursion (épouvantable excursion) in clear and dry weather, lest he should find the planks wet and slippery. He should start in the middle of the day, with a slow and measured step, and without a stick. The safest plan is to have two guides supporting a pole, on the inside of which the stranger is to walk."

We neglected this precaution, and four out of the five pushed on, even without a guide at all. At forty or fifty paces from the entrance the gloom increases, while the roar of the torrent beneath, reverberated from the sides of the cavern, augments the sense of danger and the horror of the scene. The meridian sun penetrated sufficiently through the narrow line of fissure at the

* "Le pont est etroit, souvent glissant, et quelquefois on n'est separé que par une seule planche du noir abime de la Tamina."

summit of the dome, to throw a variety of lights and of shadows over the vast masses of variegated marble composing the walls of this stupendous cavern, compared with which, those of Salsette, Elephanta, and even Staffa, shrink into insignificance. A wooden pipe, which conveys the hot waters from their source to the baths, runs along in the angle between the scaffold and the rocks, and proves very serviceable, both as a support for one hand while pacing the plank, and as a seat, when the passenger wishes to rest, and contemplate the wonders of the cavern. At about one third of the distance inward, I would advise the tourist to halt, and survey the singular locality in which he is placed. The inequality of breadth in the long chink that divides the dome above, admits the light in very different proportions, and presents objects in a variety of aspects. The first impression which occupies the mind is caused by the cavern itself, with reflection on the portentous convulsion of nature which split the marble rock in twain, and opened a gigantic aqueduct for the mountain torrent.* After a few minutes' rumination on the action of subterranean fire, our attention is attracted to the slow but powerful operation of water on the solid parietes of this infernal grotto. We plainly perceive that the boisterous torrent has, in the course of time, and especially when swelled by rains, caused wonderful changes both in its beds and its banks. I would direct the attention of the traveller to a remarkable excavation formed by the waters on the opposite side of the chasm, and in a part more sombre than usual, in consequence of a bridge that spans the crevice above, and leads to the convent of Pfeffers. This natural grotto is hollowed out of the marble rock to the depth of thirty feet, being nearly forty feet in width, by twenty-six feet in height. It is difficult not to attribute it to art; and, as the whole cavern constantly reminds us of the Tartarean regions, this beautifully vaulted grotto seems to be fitted for the throne of Pluto and Proserpine, or, perhaps, for the tribunal of Rhadamanthus and his brothers of the Bench, while passing sentence on the ghosts that glide down this Acheron or Cocytus—for had the Tamina been known to the ancient poets, it would assuredly have been ranked as one of the rivers of hell.

One of the most startling phenomena, however, results from a perspective view into the cavern, when about midway, or rather less, from its portal. The rocky vista ends in obscurity; but gleams and columns of light burst down, in many places, from the meridian sun, through this "palpable obscure," so as to produce a wonderful variety of light and shade, as well as of bas-relief, along the fractured walls. While sitting on the rude wooden conduit before alluded to, and meditating on the infernal region upon which I had entered, I was surprised to behold, at a great distance, the figures of human beings, or thin shadows, (for I could not tell which,) advancing slowly towards me—suspended between heaven and earth—or, at least, between the vault of the cavern and the torrent of the Tamina, without any apparent pathway to sustain their steps, but seemingly treading in air, like disembodied spirits! While my attention was riveted on these figures, they suddenly disappeared; and the first impression on my mind was, that they had fallen and perished in the horrible abyss beneath. The painful sensation was soon relieved by the reappearance of the personages in more distinct shapes, and evidently composed of flesh and blood. Again they vanished from my sight; and, to my no small astonishment, I beheld their ghosts or their shadows advancing along the opposite side of the cavern! These, and many other optical illusions, were caused, of course, by the peculiar nature of the locality, and the unequal manner in which the light penetrated from above into this sombre chasm.

Surprise was frequently turned into a sense of danger, when the parties, advancing and retreating, met on this narrow scaffold. The "laws of the road" being different on the continent from those in Old England, my plan was to screw myself up into the smallest compass close to the rock, and thus allow passengers to steal by without opposition. We found that comparatively few penetrated to the extremity of the cavern, and the source of the Thermæ—the majority being frightened, or finding themselves incapable of bearing the sight of the rapid torrent under their feet without any solid security against precipitation into the infernal gulf. To the honour of the English ladies, I must say, that they explored the source of the waters with the most undaunted courage, and without entertaining a thought of returning from a half-finished tour to the regions below.*

Advancing still farther into the cavern, another phenomenon presented itself, for which we were unable to account at first. Every now and then we observed a gush of vapour or smoke (we could not tell which) issue from the further extremity of the rock on the left, spreading itself over the walls of the cavern, and ascending towards the crevice in the dome. It looked like an explosion of steam; but the roar of the torrent would have prevented us from hearing any noise, if such had occurred. We soon found, however, that it was occasioned by the rush of vapour from the cavern in which the Thermal source is situated, every time the door was opened for the ingress or egress of visiters to and from this natural vapour-bath. At such moments the whole scene

* It is surprising that the author of the "Voyage Pittoresque en Suisse," and even Dr. Ebell, should have been led into the monstrous error of imagining that the torrent of the Tamina had, in the course of ages, hollowed out of the marble rock this profound bed for itself. We might just as well suppose, that the bed of the Mediterranean had been scooped out by the waters of the Hellespont, in their way from the Black Sea to the Atlantic. The mountain was rent by some convulsion of nature, and apparently from below upwards, as the breadth, at the bed of the Tamina, is far broader than the external crevice above.

* This has not always been the case. The talented authoress of "Reminiscences of the Rhine," &c. appears to have lacked courage for this enterprise, though her beautiful daughters advanced to the further extremity of the gorge.

is so truly Tartarean, that had Virgil and Danté been acquainted with it, they need not have strained their imaginations in portraying the ideal abodes of fallen angels, infernal gods, and departed spirits, but painted a Hades from nature, with all the advantage of truth and reality in its favour.

Our ingress occupied nearly half an hour, when we found ourselves at the extremity of the parapet, on a jutting ledge of rock, and where the cavern assumed an unusually sombre complexion, in consequence of the cliffs actually uniting, or nearly so, at the summit of the dome. Here, too, the Tamina struggled, roared, and foamed through the narrow, dark, and rugged gorge with tremendous impetuosity and deafening noise, the sounds being echoed and reverberated a thousand times by the fractured angles and projections of the cavern. We were now at the source of the Thermæ. Ascending some steps cut out of the rock, we came to a door, which opened, and instantly enveloped us in tepid steam. We entered a grotto in the solid marble, but of what dimensions we could form no estimate, since it was dark as midnight, and full of dense and fervid vapour. We were quickly in an universal perspiration. The guides hurried us forward into another grotto, still deeper in the rock, where the steam was suffocating, and where we exuded at every pore. It was dark as pitch. An owl would not have been able to see an eagle within a foot of its saucer eyes. We were told to stoop and stretch out our hands. We did so, and immersed them in the boiling—or, at least, the gurgling, source of the Pfeffers. We then quaffed at this fountain of Hygeia.

Often had we slept in damp linen, while traveling through Holland, Germany, and Switzerland. We had now, by way of variety, a waking set of teguments saturated with moisture *ab interno*, as well as *ab externo*, to such an extent, that I believe each of us would have weighed at least half a stone more at our exit than on our entrance into this stew-pan of the Grison Alps.

On emerging into the damp, gelid, and gloomy atmosphere of the cavern, every thing appeared of a dazzling brightness after our short immersion in the Cimmerian darkness of the grotto. The transition of temperature was equally as abrupt as that of light. The vicissitude could have been little less than fifty or sixty degrees of Fahrenheit in one instant with all the disadvantage of dripping garments! It was like shifting the scene, with more than theatrical celerity, from the Black Hole of Calcutta to Fury Beach, or the snows of Nova Zembla. Some of the party less experienced in the effects of traveling than myself, considered themselves destined to illustrate the well-known allegory of the discontented—and that they would inevitably carry away with them a large cargo of that which thousands come here annually to get rid of—Rheumatism. I confess that I was not without some misgivings myself on this point, seeing that we had neither the means of changing our clothes nor of drying them—except by the heat of our bodies in the mountain breeze. The goddess of health, however, who is nearly related to the genius of traveling, preserved us from all the bad consequences, thermometrical and hygrometrical, of these abrupt vicissitudes.*

We retrograded along the narrow plank that suspended us over the profound abyss with caution, fear, and astonishment. The Tamina seemed to roar more loud and savage beneath us, as if incensed at our safe retreat. The sun had passed the meridian, and the gorge had assumed a far more lugubrious aspect than it wore on our entrance. The shivered rocks and splintered pinnacles that rose on each side of the torrent, in gothic arches of altitude sublime, seemed to frown on our retreating footsteps—while the human figures that moved at a distance along the crazy plank, before and behind us, frequently lost their just proportions, and assumed the most grotesque and extraordinary shapes and dimensions, according to the degree of light admitted by the narrow fissure above, and the scarcely discernible aperture at the extremity of this wonderful gorge. The Tamina, meanwhile, did not fail to play its part in the gorgeous scene—astonishing the eye by the rapidity of its movements, and astounding the ear by the vibrations of its echoes. It seemed to growl more furiously as we receded from the depths of the crevasse.

At length we gained the portal, and as the sun was still darting his bright rays into the deepest recesses of the ravine, glancing from the marble rocks, and glittering on the boiling torrent, the sudden transition from Cimmerian gloom to dazzling daylight, appeared like enchantment. While crossing the trembling bridge, I looked back on a scene which can never be eradicated from my memory. It is the most singular and impressive I have ever beheld on this globe, and compared with which, the Brunnens are "bubbles" indeed.†

---

* This circumstance illustrates, in a very remarkable manner, the effects of passing from a hot, or vapour-bath, into cold air or water. The immunity is nearly certain. The hotter the medium from which we start into the cold, the less danger there is of suffering any inconvenience. This principle in Hygiene is more understood than practised.

† Lest I should be suspected of exaggeration, in this account of the baths of Pfeffers, I shall here introduce a short extract from "Reminiscences of the Rhine," &c. by Mrs. Boddington—a work eulogised to the skies in the Edinburgh Review, and its author represented (and, I understand, deservedly) as a lady of very superior talents and of strict veracity. After some slight notice of the bath-house, Mrs. B. proceeds thus:—

"Behind rolls the stormy Tamina, hemmed in at one side by the dark bath-house and the impending cliffs, while, on the other, a giant wall of perpendicular rock, starting up daringly, and shutting out the world—almost the light of Heaven—closes up the scene. Our guide proposed that we should visit the mineral springs that boil up from the depth of an awful cavern, several hundred paces from the bath-house. A bridge, thrown from rock to rock, crosses the flood, and a narrow ledge of planks, fixed, I know not how, against the side of the rock, and suspended over the fierce torrent, leads through a long, dark chasm to the source. I ventured but a little way; for, when I found myself on the terrifying shelf, without the slightest balustrade, and felt it slippery, from the continual spray, and saw nothing between us and the

While examining the waters, the baths, and the internal economy of the vast VALETUDINARIUM that stands in this savage locality, the bell announced the approach of the second, or superior dinner, which happened that day rather later than usual. The salon, overlooking the torrent of the Tamina, was soon replenished with guests of the better order; the canaille, or swarm of inferior invalids, having dined two hours or more previously, in the common *salle à manger*. It needed but little professional discrimination to class and specify them. The majority proclaimed the causes of their visits to the Pfeffers. Rheumatism, scrofula, and cutaneous diseases, formed the prominent features in this motley assemblage. Invalids, with chronic complaints, real or imaginary, such as abound at all watering-places, foreign and domestic, were mingled in the group; while a small portion, including our own party, evinced any thing but corporeal ailments—unless a "CANINE APPETITE," at a genuine German *table d'hôte*, may be ranked among the evils to which English flesh is heir. Some monks, from the neighbouring monastery, (to which the baths belong,) took rank, and indeed precedence, in this small division. The mountain breeze and fervid sun of the convent of Pfeffers had bronzed them with much of that nut-brown complexion, which traveling exercise in the open air had conferred on their British visiters; while their sleek cheeks and portly corporations proved, almost to a demonstration, that the holy fathers descended into the profound ravine of the Tamina to give their benediction to the waters, rather than to drink them—and to add a sacred zest to the viands of the refectory, by the alacrity with which they swallowed them. Their appearance illustrated the truth of the adage, "What will not poison will fatten."

Among the "miseries of human life" might be ranked that of dining, or rather starving, at a German *table d'hôte*—and that, too, in the midst of plenty! It is in such a place that the paradox is explained—*inopem me copia fecit*. Sir F. Head has remarked, that "the dish that is not acid is sure to be oily." If this were all, we should have small reason to complain. The misfortune is, that not only oils and acids are liberally distributed among his messes, by that infernal agent, the *Maitre de Cuisine*, but every loathsome ingredient that the three kingdoms of nature can furnish, is crammed into every pot and saucepan in his subterranean dominion. Some philosophers have endeavoured to distinguish man from other animals, and elevate him on the scale of created beings, on account of his *cooking* propensities. I think they entitle him to an additional seven years in purgatory, if there be such a place, as our catholic brethren affirm there is! One thing is clear, however, that he is punished here below for the crimes which he commits against nature, by "torturing dishes from their native taste," and mingling all unutterable things in that box of Pandora—his accursed culinary cauldron.

The succession is not less abhorrent to the English palate than the composition of continental dishes. It is generally believed that animal and vegetable food is designed to be eaten together; otherwise nature would have furnished one side of the mouth with incisors and the other with grinders. In the "continental system" they take a very different view of things. When the vegetables (rather less than half-boiled, and swimming in oil) are on the table, there is no animal food—none, at least, that has not undergone more transubstantiations than Vishnou, and more metamorphoses than are recorded by Ovid. When meat smokes on the board, the vegetables have disappeared. The animal that was browsing or bleating on the mountains the preceding day, and slaughtered in the night, is burnt to a cinder, or boiled till little more than bones and sinews are left; in either case, it is some degrees harder and tougher than well-tanned sole-leather. As for poor chanticleer, his ablation from the roost—decapitation in the court-yard—*auto da fé* in the kitchen—dissection in the *salle à manger*—and sepulture in some dark recess of a German stomach, occupy about three quarters of an hour—the five acts of the tragedy being often enacted *after* the soup has gone its round of the *table d'hôte*. If the uninitiated Briton sometimes screws his courage up to make an attack on one of those petty fortresses of filth, called "MADE DISHES"—or if he endeavours to stifle the cravings of nature on sour bread, sour krout, or sour wine, he stands a fair chance to be visited with colic, if not cholera, before the day is over. Placed thus between Scylla and Charybdis—between the tortures of hunger and the terrors of poison, an oasis in the desert does sometimes greet his eye—a good substantial dish of capon, veal, or mutton. By an instinctive impulse, he brandishes his couteau, or solicits to be *helped* by a brother guest. But the fate of Tantalus is his doom. Just as the prize appears to be within his grasp, it vanishes with as much celerity as the dishes of poor Sancho did by the conjuror's wand, in the island of Pandataria. The malicious waiter, aware of John Bull's propensities, never takes his eye from the savoury viand till he snatches it off the table, for dissection at the sideboard. It is two to one that John Bull never tastes the desired fare. It is handed round to every one, before the *disjecta membra* reach him—if they ever do reach him, which is very problematical. Many a time have I seized the dish at the same moment with the waiter, and captured the prize by an unequivocal threat to chop off two or three of his fingers with my knife, if he persisted in his unhallowed "abduction."

Long experience has taught me, that the best plan for an Englishman, whose stomach does not measure three feet in circumference, and who does not possess some secret antidote against all kinds of poisons, is to secure his place at the *table d'hôte*, and, when the soup comes in, to take a walk of full an hour round the town, and then come back to his place, when he may probably find a dish of some kind of animal food

yawning gulf, to which darkness, thickening at every step, gave increased horror, I made a few rapid reflections on foolhardiness, and retreated."

biped or quadruped, with sour bread, on which he may dine. The "vin ordinaire" is, of course, ordinary destruction to all stomachs which have not capacity for a pint of oil to qualify a quart of acid.

The foregoing sketch is not drawn from the ordinary of the Pfeffers—where, indeed, we had better fare than in many places of higher pretensions—but will apply very generally to the continent. I am well aware that great numbers of my countrymen have become *acclimaté* (if I may use the expression) to foreign cookery—or, more properly speaking, *denaturalised*, as to every thing which they put into their stomachs. By such folks I have been often asked, "How is it that the people of the continent live and thrive on the provender which you condemn?" My answer has been very short—and I have never received a satisfactory rejoinder. They do *not* live and thrive on the cookery which they use. On the contrary, they wither and die on it. The bills of mortality, in the most favoured parts of the continent, as compared with the same gloomy registers in England, prove, beyond contradiction, the shorter range of existence enjoyed by the inhabitants of the former, notwithstanding their advantages in respect of climate: while the unhealthy aspects, the stunted growth, and the large proportion of deformities, that meet the eye and attract the notice of English travellers in every part of Europe, attest the deleterious agency of some general cause on the human frame. As that agency can hardly be sought either wholly, or even principally, in the climate, the soil, the air, or the water, (excepting, of course, certain malarious and goitrous localities in Italy and the Alps,) we have fair reason to attribute much of the curtailment of life and deterioration of health to the denaturalisation of their food by complicated cookery, to their inordinate addiction to tobacco, to *malpropre* habits, and to the quality of their drink. If oily, acid, or rancid dishes, elaborated "de omnibus rebus et *quibusdem aliis*," half-boiled vegetables, meat just killed and then cinderised, with sour wine, be wholesome and nutritious, then the people of the continent ought to live to the age of the anteliluvians.

Another fallacious argument has been adduced in favour of continental cookery and continental habits: namely, that the English enjoy good health while traveling, or even sojourning there. This may be true to the full extent, without invalidating the arguments adduced above. The English owe this improvement of health to climate, to change of air and scene, to the exercise of traveling, to earlier hours than they kept at home—and perhaps, in some degree, to the excitement resulting from novelty, and intercourse with strangers. I maintain that their health is neither improved nor sustained by the adoption of continental habits in eating, drinking, smoking, and some others which I shall not describe.

From Fraser's Magazine.

"QUARRELS OF" ZOOLOGISTS.

We have been selected as the organ of communication between the public and our old friend Charley Waterton, "the wanderer of South America," who, it would appear, has a crow to pluck with the illustrious ornithologist and "museum keeper," Jemmy Jameson, professor, &c., of Edinburgh. The following letter from that distinguished "traveller" to that equally eminent "naturalist" will be perused by the learned with increasing veneration for the acquirements of modern "professorship;" and the public at large will hence derive vast edification with no small share of amusement. The letter of our South American "wanderer" is written, we need not say, in the genuine *Tierra del Fuego* style, and is likely to make the professor's chair too hot to hold him. The marvellous topics discussed, and the wonderous natural phenomena, introduced in the course of this epistle to James, will remind the reading public very forcibly of the startling stories recounted by Mr. Waterton himself, in his celebrated quarto volume of adventures in another hemisphere; for now that he is domesticated among us, he is determined that we shall not lose the recollection of Charley "over the water." To have bestridden the scaly back of a crocodile, and thus crossed the Oronoko, would be a feather in any man's cap; and to say the truth of Charley, in the words of Junius, "it becomes him, and he wears it well." Long ago, Horace had told us, that the east wind was possessed by a singular propensity for taking a ride on the waves of Sicily—

"Per Siculas equitavit undas;

but commentators had been left in the dark as to the sort of steed used in this feat of equestrianism, a point, we conceive, on which, since the exploit of the "wanderer," there can be no longer any difficulty.

To draw a long bow, or, referring again to Horace,

"Equitare in *arundine longa*,"

is an Indian accomplishment of which Mr. Waterton has made himself perfect master during his rambles in Paraguay. In the present instance, poor Jameson is the target of his archery. We cannot but admire the hardihood, nay, the temerity, displayed in the selection of a butt to ordinary aggressors made sacred and inviolate by all the congregated titles of all the academies of Europe; for it is a fact, that not even the profound, modest, and sagacious Dinny Lardner can exhibit such a constellation of letters as form the attendant train of the Edinburgh professor: from Dresden to New York, from "Senkenberg" to Montreal, from Newcastle to Naples, every learned distinction (including an honorary membership of the ROYAL CORK INSTITUTION!) has been culled and interwoven into a garland for his brow; notwithstanding which, his wig is assailed with all the ferocity of a Carribee. Heaven defend us from the tomahawk of Charley Waterton! who informs us, *en passant*, that "many quadrupeds, many reptiles, and above five thousand birds,

have grassed under his dissecting knife." He no doubt keeps a catalogue of all his victims; but it would be a curious enquiry to ascertain (now that he has fairly dissected the professor) in which class of "quadruped," "reptile," or "bird,"—owl, snake, or jackass, he has registered the anatomy of the unfortunate Jemmy Jameson.

We ought to apologise to the lovers of fun for thus detaining them from the enjoyment of "inextinguishable laughter:" the scientific reader will be in time to draw quietly his own conclusions; but as for the critic, we think it right to give him warning of the peril attendant on the exercise of his functions in the case of "the wanderer." Let all such beware how they give utterance (in print) to any strictures or comments calculated to rouse the dormant anger of so tremendous an antagonist: let them dip cautiously into Charley's flood of eloquence, and eschew the jaws of the crocodile.

> "Canes currentes bibere in flumine Nilo
> A crocodilis ne rapiantur traditum est.

So sayeth Phædrus, a great naturalist in his day, and whose inventive faculty, like that of Waterton and Jameson, disported itself among birds and beasts.

—

"A LETTER TO JAMES JAMESON, ESQUIRE.

Regius Professor of Natural History, Lecturer on Mineralogy, and Keeper of the Museum in the University of Edinburgh; Fellow of the Royal Societies of London and Edinburgh; of the Antiquarian, Wernerian, and Horticultural Societies of Edinburgh; Honorary Member of the Royal Irish Academy, and of the Royal Dublin Society; Fellow of the Linnean and Geological Societies of London; Honorary Member of the Asiatic Society of Calcutta; of the Royal Geological Society of Cornwall, and of the Cambridge Philosophical Society; of the York, Bristol, Cambrian, Northern, and Cork Institutions; of the Natural History Society of Northumberland, Durham, and Newcastle; of the Royal Society of Sciences of Denmark; of the Royal Academy of Sciences of Berlin; of the Royal Academy of Naples; of the Imperial Natural History Society of Moscow; of the Imperial Pharmaceutical Society of Petersburgh; of the Natural History Society of Wetterau; of the Mineralogical Society of Jena; of the Royal Mineralogical Society of Dresden; of the Natural History Society of Paris; of the Philomathic Society of Paris; of the Natural History Society of Calvados; of the Senkenberg Society of Natural History; of the Society of Natural Sciences and Medicine of Heidelberg; Honorary Member of the Literary and Philosophical Society of New York; of the New York Historical Society; of the American Antiquarian Society; of the Academy of Natural Sciences of Philadelphia; of the Lyceum of Natural History of New York; of the Natural History Society of Montreal, &c.

"BY CHARLES WATERTON, ESQUIRE, OF WALTON HALL.

"'O candour! whither art thou fled?—certainly not to Walton Hall.'—*Jameson's Journal for January*, 1835.

"SIR,—If it be any satisfaction to you, I beg to inform you, that I feel the full force of your apostrophe. You have aimed a severe blow at me, which I did not expect from you; nor do I think that I have deserved it, as I am not aware that, in all my life, I have ever written or spoken one unfriendly word against you. Too often it happens, that many a poor humble bee is trodden under foot which never stung the passing traveller.

"Through Audubon, you have aimed a blow at me;—through Audubon, I will level a shaft at you in my turn, with aim so just and true, that it will be utterly out of your power to ward it off.

"It is a matter of perfect indifference to me, whether you praise or condemn Mr. Audubon: that is entirely your own affair. Had you not condescended to have noticed me, in your recent review of his second book on the biography of birds, you might have given your lucubrations to the world without animadversion from me; and continued them, on any future day, without ever meeting my censure or applause. If, however, my opinion were asked, I should say, that I do not consider you qualified to review a work of ornithology. Somehow or other, I happen to have acquired just a sufficient stock of ornithological knowledge to enable me to perceive errors and misrepresentations innumerable in Audubon's pages; and I have seen a work, recently from America, which convinces me, more than ever, that his statements are not to be relied upon.

"Judge Hall, in the *Western Monthly Magazine* for July, 1834, p. 347, says of Audubon's biography of birds, 'The exaggerations contained in these sketches are such as to weaken our confidence in the entire work.' Judge Hall then pronounces 'the death of Mason' (Audubon has not even spelled the name right) to be 'altogether fabulous.' He remarks and proves, further on, that the whole account of the 'booming flood' of the Mississippi is 'overdrawn, and calculated to mislead.' In the affair of the hurricane, the judge shows by facts, that Audubon 'forfeits all claim to the reader's credence.' He goes on to state, that Kentucky was *not* discovered by Boon; and that Boon's stature did *not* approach the gigantic;* nor 'did his *muscular powers display* themselves in the manner pretended.' In a word, the judge remarks, that 'this propensity for exaggeration is apparent throughout Mr. Audubon's book; and that, however accurate his sketches may have been originally, he has coloured them so highly as to deprive them of all resemblance of truth; and no western man can read his descriptions without a smile of incredulity.' But to the point.

"I rubbed my eyes, and began to suspect their powers of vision, when I read the following precious morsel of absurd fabrication in the *New Edinburgh Philosophical Journal of Science*, for April and June, 1827, conducted by James Jameson, Regius Professor of Natural History in the College of Edinburgh.

"'To give you an idea of the long time this poison retains its property, I shall relate a curious but well authenticated series of facts, which took place in a central district of the state of Pennsylvania, some twelve or fifteen years ago. A farmer was so slightly bit through the boot† by a rattlesnake, as he was walking to view his ripening corn-fields, that the pain felt was thought by him to have been from the scratch of a thorn, not having seen or heard the reptile: upon his return home, he felt, on a sudden, violently sick at stomach, vomited with great pain, and died in a few hours. Twelve months after this, the eldest son, who had taken his father's boots, put them on, and went to church at some distance. On his going to bed that night, whilst drawing off his boots, he felt slightly scratched on the leg; but merely mentioned it to his wife, and rubbed the place with his hand. In a few hours, however, he was awakened by violent pains, complained of general giddiness, fainted frequently, and expired before any succour could be applied with success; the cause of his illness also being quite a mystery. In course of time his effects were sold, and a second brother, through filial affection, purchased the boots; and, if I remember rightly, put them on about two years

---

* "Audubon tells us, in page 503 of his *Biography*, that 'the stature and general appearance of this wanderer of the western forests approached the gigantic. His chest was broad and prominent, his muscular powers displayed themselves in every limb,' &c., &c."

† "I know the thickness of an American farmer's boot; and I also know, that the largest rattlesnake of America cannot strike his fang through it so that the aperture, through which the poison issues, can be seen inside the boot."

fter. As he drew them off he felt a scratch, and com-lained of it; when the widowed sister, being present, ecollected that the same pain had been felt by her hus-and, on the like occasion: the youth went to bed, suffer-d, and died in the same way that his father and brother ad before him. These repeated and singular deaths eing rumoured in the country, a medical gentleman alled upon the friends of the deceased to enquire into he particulars, and at once pronounced their deaths to ave been occasioned by venom. The boots that had een the cause of complaint were brought to him, when e cut one of them open with care, and discovered the xtreme point of the fang of a rattlesnake issuing from he leather, and assured the people that this had done all he mischief. To prove this satisfactorily, he scratched with it the nose of a dog; and the dog died in a few hours from the poisonous effect it was still able to convey.'

" Pray, sir, where were your brains (whither had *they* fled?—certainly not to Walton Hall), when you un-luckily received and approved of a narrative at once so preposterous, and so palpably fictitious! I have too high an opinion of your well known integrity even to sus-pect, for one moment, that you inserted it in your jour-nal with the most distant intention of misleading your readers. I attribute the rash deed solely and wholly to your ignorance;—ignorance quite unparalleled, and un-pardonable in a REGIUS PROFESSOR OF NATURAL HISTORY.

" If I am rightly informed, sir, you are proprietor of a MUSEUM; wherefore you must have had much more frequent and much better opportunities of improving yourself in ZOOLOGY, than generally fall to the lot of other scientific gentlemen.

" Has, then, the dignity of the Regius-professorship lulled you into such a fatal security, that you have never once thought it necessary to examine the formation of a serpent's fang? which had you done, you never would have admitted Audubon's account of the rattlesnake into your journal; and thus you would have avoided that which, when this letter appears, must fill your friends with pity, and your admirers with regret.

" Audubon expressly states, that it was the *extreme point* of the fang which had done all the mischief; and in order to prove the correctness of his 'curious, but well authenticated [mind that, sir!] series of facts,' he introduces, to his everlasting confusion, a medical gen-tleman, who most opportunely discovered the *extreme point* of a rattlesnake's fang sticking in the boot which he had cut open; and then this said medical gentleman (who was he?) gravely told the bystanders, that this 'extreme point' had done all the mischief. By way of putting beyond all doubt his important discovery, 'he *scratched* with it the nose of a dog, and the dog died in a few hours.'

" Now, sir, as we are upon snakes, let me ask you in the name of the old sarpent (as Jonathan calls him), when you had read this blundering narrative did you not recollect, that the *extreme* point of *all* serpents' fangs is a solid bone? and that the aperture through which the poison flows, when the snake is alive, is on the *convex* side of the curved fang, at a *distance* from the point? This being an absolute fact, it is utterly impossible that a dog could have been poisoned by a scratch. Suppose, for an instant, there was poison in the aperture, that poi-son was in a dried state; and before it could have been moistened, the booby of a doctor would have had to have thrust the broken fang into the nose, till the orifice was covered: and there it must have remained for some time before its contents could be in a state to enter the circu-lation. Again, sir, did it not occur to you, that the wound which the farmer received, and which was so slight, 'that the pain felt was thought by him to have been from the scratch of a thorn,' could not, by any chance, have been from the bite of a serpent? as you must have known, or, at least, you ought to have known, that a sting from a snake's fang always causes instantaneous and most ex-cruciating pain. So does the sting of our wasps and bees, which are mere pigmies to the smallest of the poi-sonous snakes. The *tooth* of a snake is fixed in the socket; the *fang* of a snake is moveable, and invariably on the upper jaw. Now I am decidedly of opinion, that no rattlesnake could strike the point of his fang through an American farmer's boot. But granting that Audu-bon's snake did it in this case, then the point of the fang must have been rankling in old Jonathan Clodpole's flesh all the time he was walking home; for the boot would fit just as closely to his leg *after* he had received his wound, as it had done *before* he received it.

" What I have said of the dog will equally apply to the two younger Doodles, who got their deaths by jump-ing into their father's boots.

" But, sir, when you came to that part of the narra-tive where you are told that the eldest son, twelve months after, put on his father's old tormentors, and walked to church in them, did you not marvel how he could walk and sit in them all day, and only just get a *slight scratch* on the leg when pulling them off at night to go to bed? And when the other brother put them on about two years after, and got his death also by *a scratch*, did you not wonder from whence the poison came?*

" However, sir, to cut the matter short, and in order that I may not run the risk of annoying you by too many questions, I beg to assure you, that the story of this depopulating Munchausen boot, which you have swallowed without straining, was current when I was a boy. With the exception of a few interpolations by Audubon, this very same story (which he had the effrontery to tell you all in Edinburgh was well authen-ticated, and 'took place in a central district of the state of Pennsylvania, some twelve or fifteen years ago') was considered a good joke, some fifty or sixty years back. The late Professor Barton, of the university of Pennsyl-vania, investigated it at the period of his publishing his pamphlets on the rattlesnake; and it turned out to be AN ARRANT YANKEE-DOODLE HOAX!

" I have done, sir, for the present, though I have a scourge of fearful asperity ready for other parts of 'Mr. Audubon's notes on the rattlesnake,' which he saw swallow a large American squirrel *tail-foremost*; to say nothing of the passenger pigeon, &c. &c.

" Some time or other, but not now, I may have occasion to comment on other papers which have appeared in your Journal with the signature of Audubon attached to them; and I may yet consider it necessary to show to the public, that you are no better qualified to review a work on birds than you are to lecture on the poisonous fangs of snakes.

" Cervantes formerly exclaimed:—'Para mio solo nacio Don Quixote, y yo para el. El supo obrar, y yo escrivir. Solos los dos somos para en unio.'† As far as a knowledge of the true habits of rattlesnakes is concerned, this quotation may be aptly applied to James Jameson, Esq., Regius Professor of Natural History in the College of Edinburgh, and to Mr. John James Audubon, Fellow of the Royal Society of London.

" If the contents of this letter should sting you, pray reflect, sir, that you deserve to smart a little for your

---

* " Here we have two men and a dog poisoned by scratches. I challenge the *whole world* to produce one solitary instance of any animal being poisoned by the scratch of a rattlesnake's fang, or any other poisonous snake's fang. The formation of the fang itself shows beyond all doubt whatever that this cannot possibly be the case. The wound is *always* a puncture, as though it had been done by the point of a pin."

† " Don Quixote was born for me, and I for him. He knew how to manufacture, and I to write. We were just the boys for each other."

wanton imprudence in holding up to public animadversion the conduct of a gentleman, who has never used you unkindly, either by word or deed. You are a Regius Professor, with above forty honorary titles after your name; I am a private individual scarcely known, whose care it is through life never to be the aggressor; but who will always resist to the utmost any attack made upon him, come from what quarter it may.

"I gratefully attribute whatever knowledge I may possess to the learned and inestimable fathers of the Society of Jesus at Stonyhurst, in Lancashire. I have traveled in far distant countries to study animated nature; and many quadrupeds, many reptiles, and above five thousand birds, have passed under my dissecting knife; so that I ought to know something of zoology; and were I not fearful of being thought vain, I would add that I consider myself your superior in that department of natural history.

"Should you honour me with a reply, I promise you that I will take an immediate and dispassionate notice of it; and I will address to you a second, a third, and a fourth letter, and so on. As you have first attacked me through Audubon, through him I will continue to point my dart at you. It shall be done in the following manner: I will take passages from some of his faulty pages, and then comment upon them—his bird of Washington, for example, in which I shall have to remark on the drawing, or the humming-bird, which he tells us can fly in *six* days after it is hatched, &c. &c.

"This mode of carrying on the warfare will answer well my ends. It will give me an opportunity of again bringing upon the stage certain individuals with whom I have not yet quite squared up accounts; and, at the same time, I trust it will be to you a kind of '*cave ne titubes*'—that is, a hint, a warning, lest you make another false step, in your exertions to sound again in the public ear, 'O candour, whither art thou fled?—certainly not to Walton Hall.'

"I have the honour to be, sir,
your very obedient and humble servant,
"CHARLES WATERTON.

"*Walton Hall, Jan.* 27, 1835."

INTERESTING ANTIQUES.

In digging lately at Kertch, in order to make a new pavement, a coffin was discovered of rather an ordinary description, made of freestone, about two archimes long, one wide and one thick. On opening the coffin, a superb black urn was found, of the Etruscan form, and of large dimensions, ornamented with bas-reliefs, and gilt in some part. It was placed at the feet of the corpse, upon whose head was a golden laurel crown, beautifully executed, and weighing thirty-six zolotnitks, or about thirteen ounces of the purest gold. Near to one of the shoulders, a round piece of gold was found, bearing some resemblance to a medal, having on one side the figure of a woman in relief, and on the other that of Mercury clothed as a shepherd. There are also in the tomb a strigil of iron, and another object of the same metal surrounded by copper rings. Upon the coffin-lid there was a common urn of potter's clay, full of the bones of birds, which had probably been sacrificed to the manes of the deceased. These discoveries were made under the superintendence of M. Kareicha, who is occupied in making archeological researches for the Emperor of Russia. This gentleman caused the ground in the neighbourhood to be examined; and after some hours' research, a second coffin was discovered, similar to the first; but it contained a much greater number of objects, and of very superior workmanship to the first.—*Journal d'Odessa.*

From the London Metropolitan.

JAPHET IN SEARCH OF A FATHER.

BY THE AUTHOR OF "PETER SIMPLE," &c.

(Continued from p. 436.)

And as I lay in bed, thinking that I was now nearly twenty years old, and had not yet made any discovery, my heart sank within me. My monomania returned with redoubled force, and I resolved to renew my search with vigour. So I told Timothy the next morning, when he came into my room, but from him I received little consolation; he advised me to look out for a good match in a rich wife, and leave time to develope the mystery of my birth; pointing out the little chance I ever had of success. Town was not full, the season had hardly commenced, and we had few invitations or visits to distract my thoughts from their object. My leg became so painful, that for a week I was on the sofa, Timothy every day going out to ascertain if he could find the person whom we had seen resembling me, and every evening returning without success. I became melancholy and nervous. Carbonnell could not imagine what was the matter with me. At last I was able to walk, and I sallied forth, perambulating, or rather running through street after street, looking into every carriage, so as to occasion surprise to the occupants, who believed me mad; my dress and person were disordered, for I had become indifferent to it, and Timothy himself believed that I was going out of my senses. At last, after we had been in town about five weeks, I saw the very object of my search, seated in a carriage, of a dark brown colour, arms painted in shades, so as not to be distinguishable but at a near approach; his hat was off, and he sat upright and formally. "That is he!" ejaculated I, and away I ran after the carriage. "It is the nose," cried I, as I ran down the street, knocking every one to the right and left. I lost my hat, but fearful of losing sight of the carriage, I hastened on, when I heard a cry of "Stop him, stop him!" "Stop him," cried I, also, referring to the gentleman in black in the carriage.

"That won't do," cried a man, seizing me by the collar; "I know a trick worth two of that."

"Let me go," roared I, struggling; but he only held me the faster. I tusseled with the man until my coat and shirt were torn, but in vain; the crowd now assembled, and I was fast. The fact was, that a pickpocket had been exercising his vocation at the time that I was running past, and from my haste, and loss of my hat, I was supposed to be the criminal. The police took charge of me—I pleaded innocence in vain, and I was dragged before the magistrate, at Marlborough street. My appearance, the disorder of my dress, my coat and shirt in ribbons, with no hat, were certainly not at all in my favour, when I made my appearance, led in by two Bow street officers.

"Who have we here?" enquired the magistrate.

"A pickpocket, sir," replied they.

"Ah! one of the swell mob," replied he. "Are there any witnesses?"

"Yes, sir," replied a young man, coming forward. "I was walking up Bond street, when I felt a tug at my pocket, and when I turned round, this chap was running away."

"Can you swear to his person?"

There were plenty to swear that I was the person who ran away. "Now, sir, have you any thing to offer in your defence?" said the magistrate.

"Yes, sir," replied I; "I certainly was running down the street; and it may be, for all I know or care, that this person's pocket may have been picked—but I did not pick it. I am a gentleman."

"All your fraternity lay claim to gentility," replied the magistrate; "perhaps you will state why you were running down the street."

"I was running after a carriage, sir, that I might speak to the person inside."

"Pray who was the person inside of it?"

"I do not know, sir."

"Why should you run after a person you do not know."

"It was because of his *nose*."

"His *nose*?" replied the magistrate, angrily. "Do you think to trifle with me, sir? You shall now follow your own nose to prison. Make out his committal."

"As you please, sir," replied I; "but still I have told you the truth; if you will allow any one to take a note, I will soon prove my respectability. I ask it in common justice."

"Be it so," replied the magistrate; "let him sit down within the bar till the answer comes."

In less than an hour, my note to Major Carbonnell was answered by his appearance in person, followed by Timothy. Carbonnell walked up to the magistrate, while Timothy asked the officers in an angry tone, what they had been doing to his *master*. This rather surprised them, but both they and the magistrate were much surprised when the major asserted that I was his most particular friend, Mr. Newland, who possessed £10,000 per annum, and who was as well known in fashionable society, as any young man of fortune about town. The magistrate explained what had passed, and asked the major if I was not a little deranged; but the major, who perceived what was the cause of my strange behaviour, told him that somebody had insulted me, and that I was very anxious to lay hold of the person, who had avoided me, and who must have been in that carriage.

"I am afraid, that after your explanation, Major Carbonnell, I must, as a magistrate, bind over your friend, Mr. Newland, to keep the peace."

To this I consented, the major and Timothy being taken as recognisances, and then I was permitted to depart. The major sent for a hackney coach, and when we were going home he pointed out to me the folly of my conduct, and received my promise to be more careful for the future. Thus did this affair end, and for a short time I was more careful in my appearance, and not so very anxious to look into carriages; still, however, the idea haunted me, and I was often very melancholy. It was about a month afterwards, that I was sauntering with the major, who now considered me to be insane upon that point, and who would seldom allow me to go out without him, when I again perceived the same carriage, with the gentleman inside as before.

"There he is, major," cried I.

"There is who?" replied he.

"The man so like my father."

"What, in that carriage? that is the Bishop of E——, my good fellow. What a strange idea you have in your head, Newland; it almost amounts to madness. Do not be staring in that way—come along."

Still my head was turned quite round, looking at the carriage after it had passed, till it was out of sight; but I knew who the party was, and for the time I was satisfied, as I determined to find out his address, and call upon him. I narrated to Timothy what had occurred, and referring to the Red Book, I looked out the bishop's own address, and the next day after breakfast, having arranged my toilet with the utmost precision, I made an excuse to the major, and set off to Portland Place. My hand trembled as I knocked at the door. It was opened. I sent in my card, requesting the honour of an audience with his lordship. After waiting a few minutes in an ante-room, I was ushered in. "My lord," said I, in a hurried manner, "will you allow me to have a few minutes' conversation with you alone?"

"This gentleman is my secretary, sir, but if you wish it certainly, for although he is my confidant, I have no right to insist that he shall be yours. Mr. Temple, will you oblige me, by going up stairs for a little while?"

The secretary quitted the room, the bishop pointed to a chair, and I sat down. I looked him earnestly in the face—the nose was exact, and I imagined that even in the other features I could distinguish a resemblance. I was satisfied that I had at last gained the object of my search. "I believe, sir," observed I, "that you will acknowledge, that in the heat and impetuosity of youth we often rush into hasty and improvident connections."

I paused, with my eyes fixed upon his. "Very true, my young sir; and when we do we are ashamed, and repent of them afterwards," replied the bishop, rather astonished.

"I grant that, sir," replied I; "but at the same time, we must feel that we must abide by the results, however unpleasant."

"When we do wrong, Mr. Newland," replied the bishop, first looking at my card, and then upon me, "we find that we are not only to be punished in the next world, but suffer for it also in this. I trust you have no reason for such suffering?"

"Unfortunately, the sins of the fathers are visited upon the children, and, in that view, I may say that I have suffered."

"My dear sir," replied the bishop, "I trust you will excuse me, when I say, that my time is rather valuable; if you have any thing of importance to communicate—any thing upon which you would ask my advice—for assistance you do not appear to require, do me the favour to proceed at once to the point."

"I will, sir, be as concise as the matter will admit of. Allow me, then, to ask you a few questions, and I trust to your honour, and the dignity of your profession, for a candid answer. Did you not marry a young woman early in life? and were you not very much pressed in your circumstances?"

The bishop stared. "Really, Mr. Newland, it is a strange question, and I cannot imagine to what it may lead, but still I will answer it. I did marry early in life, and I was at that time not in very affluent circumstances."

"You had a child by that marriage—your eldest born is a boy?"

"That is also true, Mr. Newland," replied the bishop, gravely.

"How long is it since you have seen him?"

"It is many years," replied the bishop, putting his handkerchief up to his eyes.

"Answer me, now, sir;—did you not desert him?"

"No, no!" replied the bishop. "It is strange that you should appear to know so much about the matter, Mr. Newland, as you could have hardly been born. I was poor then—very poor; but although I could ill afford it, he had £50 from me."

"But, sir," replied I, much agitated; "why have you not reclaimed him?"

"I would have reclaimed him, Mr. Newland—but what could I do—he was not to be reclaimed; and now—he is lost for ever."

"Surely, sir, in your present affluence, you must wish to see him again?"

"He died, and I trust he has gone to heaven," replied the bishop, covering up his face.

"No, sir," replied I, throwing myself on my knees before him, "he did not die, here he is at your feet, to ask your blessing."

The bishop sprang from his chair. "What does this mean, sir?" said he, with astonishment. "You my son!"

"Yes, reverend father—your son; who, with £50 you left——"

"On the top of the Portsmouth coach!"

"No, sir, in the *basket*."

"My son! sir,—impossible; he died in the hospital."

"No, sir, he has come out of the hospital," replied I; "and as you perceive, safe and well."

"Either, sir, this must be some strange mistake, or you must be trifling with me," replied his lordship; "for, sir, I was at his death-bed, and followed him to his grave."

"Are you sure of that, sir?" replied I, starting up with amazement.

"I wish that I was not, sir—for I am now childless; but pray, sir, who, and what are you, who know so much of my former life, and would have thus imposed upon me?"

"Imposed upon you, sir!" replied I, perceiving that I was in error. "Alas! I would do no such thing. Who am I? I am a young man who is in search of his father. Your face, and especially your nose, so resembled mine, that I made sure that I had succeeded. Pity me, sir—pity me," continued I, covering up my face with my hands.

The bishop, perceiving that there was little of the impostor in my appearance, and that I was much affected, allowed a short time for me to recover myself, and then entered into an explanation. When a curate, he had had an only son, very wild, who would go to sea in spite of his remonstrances. He saw him depart by the Portsmouth coach, and gave him the sum mentioned. His son received a mortal wound in action, and was sent to the Plymouth hospital, where he died. I then entered into my explanation in a few concise sentences, and with a heart beating with disappointment, took my leave. The bishop shook hands with me as I quitted the room, and wished me better success at my next application.

I went home almost in despair. Timothy consoled me as well as he could, and advised me to go as much as possible into society, as the most likely chance of obtaining my wish, not that he considered there was any chance, but he thought that amusement would restore me to my usual spirits. "I will go and visit little Fleta," replied I, "for a few days; the sight of her will do me more good than any thing else." And the next day I set off to the town of ——, where I found the dear little girl, much grown, and much improved. I remained with her for a week, walking with her in the country, amusing her, and amused myself with our conversation. At the close of the week I bade her farewell, and returned to the major's lodgings.

I was astonished to find him in deep mourning. "My dear Carbonnell," said I, enquiringly, "I hope no severe loss?"

"Nay, my dear Newland, I should be a hypocrite if I said so: for there never was a more merry mourner, and that's the truth of it. Mr. M———, who, you know, stood between me and the peerage, has been drowned in the Rhone; I now have a squeak for it. His wife has one daughter, and is *enceinte*. Should the child prove a boy, I am done for; but if a girl, I must then come in to the barony, and £15,000 per annum. However, I've hedged pretty handsomely."

"How do you mean?"

"Why they say that when a woman commences with girls, she generally goes on, and the odds are two to one that Mrs. M——— has a girl. I have taken the odds at the clubs to the amount of £15,000; so if it be a girl I shall have to pay that out of my £15,000 per annum, as soon as I fall into it; if it is a boy, and I'm floored, I shall pocket £30,000 by way of consolation for the disappointment. They are all good men."

"Yes, but they know you never pay."

"They know I never do now, because I have no money; but they know I will pay if I come into the estate; and so I will, most honourably, besides a few more thousands that I have in my book."

"I congratulate you, with all my heart, major. How old is the present Lord B——?"

"I have just been examining the peerage—he is sixty-two; but he is very fresh and hearty, and may live a long while yet. By the by, Newland, I committed a great error last night at the club. I played pretty high, and lost a great deal of money."

"That is unfortunate."

"That was not the error; I actually paid all my losings, Newland, and it has reduced the stock amazingly. I lost £750. I know I ought not to have paid away your money, but the fact was, as I was hedging, it would not do not to have paid, as I could not have made up my book as I wished. It is, however, only waiting a few weeks, till Mrs. M——— decides my fate, and then, either one way or the other, I shall have money enough. If your people won't give you any more till you are of age, why we must send to a little friend of mine, that's all, and you shall borrow for both of us."

"Borrow!" replied I, not much liking the idea; "they will never lend me money."

"Won't they," replied the major; "no fear of that. Your signature, and my introduction, will be quite sufficient."

"We had better try to do without it, major; I do not much like it."

"Well, if we can, we will; but I have not fifty pounds left in my desk; how much have you?"

"About twenty," replied I, in despair at this intelligence; "but I think there is a small sum left at the banker's; I will go and see." I took up my hat and set off, to ascertain what funds we might have in store.

I must say, that I was much annoyed at this intelligence. The money-lenders would not be satisfied unless they knew where my estates were, and had examined the will at Doctors' Commons: then all would be exposed to the major, and I should be considered by him as an impostor. I walked down Pall Mall in a very unhappy mood, so deep in thought, that I ran against a lady, who was stepping out of her carriage at a fashionable shop. She turned round, and I was making my best apologies to a very handsome woman, when her earrings caught my attention. They were of alternate coral and gold, and the fac simile in make to the chain given by Nattee to Fleta. During my last visit, I had often had the chain in my hand, and particularly marked the workmanship. To make more sure, I followed her into the shop, and stood behind her, carefully examining them, as she looked over a quantity of laces. There could be no doubt. I waited till the lady rose to go away, and then addressed the shopman, asking the lady's name. He did not know—she was a stranger; but perhaps Mr. H———, the master, did, and he went back to ask the question. Mr. H——— being at that moment busy, the man stayed so long, that I heard the carriage drive off. Fearful of losing sight of the lady, I took to my heels, and ran out of the shop. My sudden flight from the counter, covered with lace, made them imagine that I had stolen some, and they cried out, "Stop thief," as loud as they could, springing over the counter, and pursuing me as I pursued the carriage, which was driven at a rapid pace.

A man perceiving me running, and others, without their hats, following, with the cries of "Stop thief," put out his leg, and I fell on the pavement, the blood rushing in torrents from my nose. I was seized, roughly handled, and again handed over to the police, who carried me before the same magistrate in Marlborough street.

"What is this?" demanded the magistrate.

"A shoplifter, your worship."

"I am not, sir," replied I; "you know me well enough, I am Mr. Newland."

"Mr. Newland!" replied the magistrate, suspiciously; "this is strange, a second time to appear before me upon such a charge."

"And just as innocent as before, sir."

"You'll excuse me, sir, but I must have my suspicions this time. Where is the evidence?"

The people of the shop then came forward, and stated what had occurred. "Let him be searched," said the magistrate.

I was searched, but nothing was found upon me. Are you satisfied, now, sir?" enquired I.

"By no means. Let the people go back and look over their laces, and see if any are missing; in the mean time I shall detain you, for it is very easy to get rid of a small article, such as lace, when you are caught."

The men went away, and I wrote a note to Major Carbonnell, requesting his attendance. He arrived at the same time as the shopman, and I told him what had happened. The shopman declared that the stock was not correct; as far as they could judge, there were two pieces of lace missing.

"If so, I did not take them," replied I.

"Upon my honour, Mr. B——," said the major, to the magistrate, "it is very hard for a gentleman to be treated in this manner. This is the second time that I have been sent for to vouch for his respectability."

"Very true, sir," replied the magistrate; "but allow me to ask Mr. Newland, as he calls himself, what induced him to follow a lady into the shop?"

"Her ear-rings," replied I.

"Her ear-rings! why, sir, the last time you were brought before me, you said it was after a gentlemen's nose—now it appears you were attracted by a lady's ears; and pray, sir, what induced you to run out of the shop?"

"Because I wanted particularly to enquire about her ear-rings, sir."

"I cannot understand these paltry excuses; there are, it appears, two pieces of lace missing. I must remand you for further examination, sir; and you also, sir," said the magistrate, to Major Carbonnell; "for if he is a swindler, you must be an accomplice."

"Sir," replied Major Carbonnell, sneeringly, "you are certainly a very good judge of a gentleman, when you happen by accident to be in his company. With your leave, I will send a note to another confederate."

The major then wrote a note to Lord Windermear, which he despatched by Timothy, who, hearing I was in trouble, had accompanied the major. And while he was away, the major and I sat down, he giving himself all manner of airs, much to the annoyance of the magistrate, who at last threatened to commit him immediately.

"You'll repent this," replied the major, who perceived Lord Windermear coming in.

"You shall repent it, sir, by God," cried the magistrate in a great passion.

"Put five shillings in the box for swearing, Mr. B——. You fine other people," said the major. "Here is my other confederate, Lord Windermear."

"Carbonnell," said Lord Windermear, "what is all this?"

"Nothing, my lord, except that our friend Newland is taken up for shoplifting, because he thought proper to run after a pretty woman's carriage; and I am accused by his worship of being his confederate. I could forgive his suspicions of Mr. Newland in that plight: but as for his taking me for one of the swell mob, it proves a great deficiency of judgment; perhaps he will commit your lordship also, as he may not be aware that your lordship's person is above caption."

"I can assure you, sir," said Lord Windermear, proudly, "that this is my relative, Major Carbonnell, and the other is my friend, Mr. Newland. I will bail them for any sum you please."

The magistrate felt astonished and annoyed, for after all he had only done his duty. Before he could reply, a man came from the shop to say that the laces had been found all right. Lord Windermear then took me aside, and I narrated what had happened. He recollected the story of Fleta in my narrative of my life, and felt that I was right in trying to find out who the lady was. The magistrate now apologised for the detention, but explained to his lordship how I had before made my appearance upon another charge, and with a low bow we were dismissed.

"My dear Mr. Newland," said his lordship, "I trust that this will be a warning to you, not to run after other people's noses and ear-rings; at the same time, I will certainly keep a look out for those very ear-rings myself. Major, I wish you a good morning."

His lordship then shook us both by the hand, and saying that he should be glad to see more of me than he latterly had done, stepped into his carriage and drove off.

"What the devil did his lordship mean about ear-rings, Newland?" enquired the major.

"I told him that I was examining the lady's ear-rings, as very remarkable," replied I.

"You appear to be able to deceive every body but me, my good fellow. I know that you were examining the lady herself." I left the major in his error, by making no reply.

When I came down to breakfast the next morning, the major said, "My dear Newland, I have taken the liberty of requesting a very old friend of mine to come and meet you this morning. I will not disguise from you that it is Emmanuel, the money-lender. Money you must have until my affairs are decided one way or the other; and, in this instance, I will most faithfully repay the sum borrowed, as soon as I receive the amount of my bets, or am certain of succeeding to the title, which is one and the same thing."

I bit my lips, for I was not a little annoyed; but what could be done? I must have either confessed my real situation to the major, or have appeared to raise scruples, which, as the supposed heir to a large fortune, would have seemed to him to be very frivolous. I thought it better to let the affair take its chance. "Well," replied I, "if it must be, it must be; but it shall be on my own terms."

"Nay," observed the major, "there is no fear but that he will consent, and without any trouble."

After a moment's reflection I went up stairs, and rang for Timothy. "Tim," said I, "hear me; I now make you a solemn promise, on my honour as a gentleman, that I will never borrow money upon interest, and until you release me from it, I shall adhere to my word."

"Very well, sir," replied Timothy; "I guess your reason for so doing, and I expect you will keep your word. Is that all?"

"Yes; now you may take up the urn."

We had finished our breakfast, when Timothy announced Mr. Emmanuel, who followed him into the room. "Well, old cent per cent, how are you?" said the major. "Allow me to introduce my most particular friend, Mr. Newland."

"Auh! Master Major," replied the descendant of Abraham, a little puny creature, bent double with infirmity, and carrying one hand behind his back, as if to counterbalance the projection of his head and shoulders. "You vash please to call me shent per shent. I wish I vash able to make de monies pay that. Mr. Newland, can I be of any little shervice to you?"

"Sit down, sit down, Emmanuel. You have my warrant for Mr. Newland's respectability, and the sooner we get over the business the better."

"Auh, Mr. Major, it ish true, you was recommend many good—no, not always good, customers to me, and I was very much obliged. Vat can I do for your handsome young friend? De young gentlemen always vant money; and it is de youth which is de time for de pleasure and enjoyment."

"He wants a thousand pounds, Emmanuel."

"Dat is a large sum—one tousand pounds! he does not vant any more?"

"No," replied I, "that will be sufficient."

"Vell, den, I have de monish in my pocket. I will just beg de young gentleman to sign a little memorandum, dat I may von day receive my monish."

"But what is that to be?" interrupted I.

"It will be to promise to pay me my monish, and only fifteen per shent, when you come into your own."

"That will not do," replied I; "I have pledged my solemn word of honour, that I will not borrow money on interest."

"And you have given de pledge, but you did not swear upon de book?"

"No, but my word has been given, and that is enough; if I would forfeit my word with those to whom I have given it, I would also forfeit my word with you. My keeping my promise, ought to be a pledge to you that I will keep my promise to you."

"Dat is vell said—very vell said; but den we must manage some oder way. Suppose—let me shee—how old are you, my young sir?"

"Past twenty."

"Auh, dat is a very pleasant age, dat twenty. Vell den, you shall shign a leetle bit of paper, that you pay me £2,000 ven, you come into your properties, on condition dat I pay now one tousand. Dat is very fair—ish it not, Mr. Major?"

"Rather too hard, Emmanuel."

"But de risbque—de risbque, Mr. Major."

"I will not agree to those terms," replied I; "you must take your money away, Mr. Emmanuel."

"Vell, den—vat vill you pay me?"

"I will sign an agreement to pay you £1,500 for the thousand, if you please; if that will not suit you, I will try elsewhere."

"Dat is very bad bargain. How old, you shay?"

"Twenty."

"Vell, I shuppose I must oblige you, and my very goot friend, de major."

Mr. Emmanuel drew out his spectacles, pen, and ink-horn, filled up a bond, and handed it to me to sign. I read it carefully over, and signed it; he then paid down the money, and took his leave.

It may appear strange to the reader that the money was obtained so easily, but he must remember that the major was considered a person who universally attached himself to young men of large fortune; he had already been the means of throwing many profitable speculations into the hands of Emmanuel, and the latter put implicit confidence in him. The money-lenders also are always on the look-out for young men with large fortunes, and have their names registered. Emmanuel had long expected me to come to him, and although it was his intention to have examined more particularly, and not to have had the money prepared, yet my refusal to sign the bond, bearing interest, and my disputing the terms of the second proposal, blinded him completely, and put him off his usual guard.

"Upon my word, Newland, you obtained better terms than I could have expected from the old hunks."

"Much better than I expected also, major," replied I; "but now, how much of the money would you like to have?"

"My dear fellow, this is very handsome of you; but, I thank heaven, I shall be soon able to repay it; but what pleases me, Newland, is your perfect confidence in one, whom the rest of the world would not trust with a shilling. I will accept your offer as freely as it is made, and take £500, just to make a show for the few weeks that I am in suspense, and then you will find, that, with all my faults, I am not deficient in gratitude." I divided the money with the major, and he shortly afterwards went out.

"Well, sir," said Timothy, entering, full of curiosity, "what have you done?"

"I have borrowed a thousand to pay fifteen hundred when I come into my property."

"You are safe then. Excellent, and the Jew will be bit."

"No, Timothy, I intend to repay it as soon as I can."

"I should like to know when that will be."

"So should I, Tim, for it must depend upon my finding out my parentage." Heigho, thought I, when shall I ever find out who is my father?

I dressed and went out, met Harcourt, dined with him, and on my return the major had not come home. It was then past midnight, and feeling little inclination to sleep, I remained in the drawing-room waiting for his arrival. About three o'clock he came in, flushed in the face, and apparently in high good humour.

"Newland," said he, throwing his pocket-book on the table, "just open that, and then you will open your eyes."

I obeyed him, and to my surprise took out a bundle of bank-notes; I counted up their value, and they amounted to £3,500.

"You have been fortunate, indeed."

"Yes," replied the major; "knowing that in a short time I shall be certain of cash, one way or the other, I had resolved to try my luck with the £500. I went to the hazard table, and threw in seventeen times—hedged upon the deuce ace, and threw out with it—seila. They won't catch me there again in a hurry—luck like that only comes once in a man's life; but, Japhet, there is a little drawback to all this. I shall require your kind attendance in two or three hours."

"Why what's the matter?"

"Merely an affair of honour. I was insulted by a vagabond, and we meet at six o'clock."

"A vagabond—but surely, Carbonnell, you will not condescend—"

"My dear fellow, although as great a vagabond as there is on the face of the earth, yet he is a peer of the realm, and his title warrants the meeting—but after all, what is it?"

"I trust it will be nothing, Carbonnell, but still it may prove otherwise."

"Granted; and what then, my dear Newland? we all owe heaven a death, and if I am floored, why then I shall no longer be anxious about title or fortune."

"It's a bad way of settling a dispute," replied I, gravely.

"There is no other, Newland. How would society be held in check if it were not for duelling? We should all be a set of bears living in a bear-garden. I presume you have never been out?"

"Never," replied I, "and had hoped that I never should have."

"Then you must have better fortune, or better temper than most others, if you pass through life without an affair of this kind on your hands. I mean as principal, not as second. But, my dear fellow, I must give you a little advice, relative to your behaviour as a second; for I'm very particular on these occasions, and like that things should be done very correctly. It will never do, my dear Newland, that you appear on the ground with that melancholy face. I do not mean that you should laugh, or even smile, that were equally out of character, but you should show yourself perfectly calm and indifferent. In your behaviour towards the other second, you must be most scrupulously polite, but at the same time never give up a point of dispute, in which my interest may be concerned. Even in your walk be slow, and move, as much as the ground will allow you, as if you were in a drawing-room. Never remain silent; offer even trivial remarks, rather than appear *distrait*. There is one point of great importance—I refer to choosing the ground, in which, perhaps, you will require my unperceived assistance. Any decided

ine behind me would be very advantageous to my adversary, such as the trunk of a tree, post, &c., even an elevated light or dark ground behind me is unadviseable. Choose, if you can, a broken light, as it affects the correctness of the aim; but as you will not probably be able to manage this satisfactorily, I will assist you. When on the ground, after having divided the sun fairly between us, I shall walk about unconcernedly, and when I perceive a judicious spot, I will take a pinch of snuff and use my handkerchief, turning at the same time in the direction in which I wish my adversary to be placed. Take your cue from that, and with all suavity of manner, insist as much as you can upon our being so placed. That must be left to your own persuasive powers. I believe I have now stated all that is necessary, and I must prepare my instruments."

The major then went into his own room, and I never felt more nervous or more unhinged than after this conversation. I had a melancholy foreboding—but that I believe every one has, when he, for the first time, has to assist at a mortal rencontre. I was in a deep musing when he returned with his pistols and all the necessary apparatus, and when the major pointed out to me, and made me once or twice practise the setting of the hair triggers, which is the duty of the second, an involuntary shudder came over me.

"Why, Newland, what is the matter with you? I thought that you had more nerve."

"I probably should show more, Carbonnell, were I the principal instead of the second, but I cannot bear the reflection that some accident should happen to you. You are the only one with whom I have been on terms of friendship, and the idea of losing you, is very, very painful."

"Newland, you really quite unman me, and you may now see a miracle," continued Carbonnell, as he pressed his hand to his eye, "the moisture of a tear on the cheek of a London *roué*, a man of the world, who has long lived for himself and for this world only. It never would be credited if asserted. Newland, there was a time when I was like yourself—the world took advantage of my ingenuousness and inexperience; my good feelings were the cause of my ruin, and then by degrees became as callous and as hardened as the world itself. My dear fellow, I thought all affection, all sentiment, dried up within me, but it is not the case. You have made me feel that I have still a heart, and that I can love you. But this is all romance, and not fitted for the present time. It is now five o'clock, let us be on the ground early—it will give us an advantage."

"I do not much like speaking to you on the subject, Carbonnell; but is there nothing that you might wish done in case of accident?"

"Nothing—why yes. I may as well. Give me a sheet of paper." The major sat down and wrote for a few minutes. "Now, send Timothy and another here. Timothy, and you, sir, see me sign this paper and put my seal to it. I deliver this as my act and deed. Put your names as witnesses." They complied with his request, and then the major desired Timothy to call a hackney-coach. "Newland," said the major, putting the paper, folded up, in my pocket, along with the bank-notes, "take care of this for me till we come back."

"The coach is at the door, sir," said Timothy, looking at me, as if to say, "What can all this be about?"

"You may come with us and see," said the major, observing Tim's countenance, "and put that case into the coach." Tim, who knew that it was the major's case of pistols, appeared still more alarmed, and stood still without obeying the order. "Never mind, Tim, your master is not the one who is to use them," said the major, *patting him* on the shoulder.

Timothy, relieved by this intelligence, went down stairs with the pistols; we followed him. Tim mounted on the box, and we drove to Chalk Farm. "Shall the coach wait?" enquired Timothy.

"Yes, by all means," replied I, in a low voice. We arrived at the usual ground, where disputes of this kind were generally settled; and the major took a survey of it with great composure.

"Now observe, Japhet," said he, "if you can contrive——; but here they are. I will give you the notice agreed upon." The peer, whose title was Lord Tineholme, now came up with his second, whom he introduced to me as Mr. Osborn. "Mr. Newland," replied the major, saluting Mr. Osborn in return. We both took off our hats, bowed, and then proceeded to our duty. I must do my adversary's second the justice to say, that his politeness was fully equal to mine. There was no mention on either side of explanations and retractions—the insult was too gross, and the character of his lordship, as well as that of Major Carbonnell, was too well known. Twelve paces were proposed by Mr. Osborn, and agreed to by me—the pistols of Major Carbonnell were gained by drawing lots—we had nothing more to do but to place our principals. The major took out his snuff-box, took a pinch, and blew his nose, turning towards a copse of beech trees.

"With your permission, I will mark out the ground, Mr. Osborn," said I, walking up to the major, and intending to pace twelve paces in the direction towards which he faced.

"Allow me to observe that I think a little more in this direction, would be more fair for both parties," said Mr. Osborn.

"It would so, my dear sir," replied I, "but submitting to your superior judgment, perhaps it may have not struck you that my principal will have rather too much of the sun. I am incapable of taking any advantage, but I should not do my duty if I did not see every justice done to the major, who has confided to me in this unpleasant affair. I put it to you, sir, as a gentleman and man of honour, whether I am claiming too much?" A little amicable altercation took place on this point, but finding that I would not yield, and that at every reply I was more and more polite and bland in my deportment, Mr. Osborn gave up the point. I walked the twelve paces, and Mr. Osborn placed his principal. I observed that Lord Tineholme did not appear pleased; he expostulated with him, but it was then too late. The pistols had been already loaded—the choice was given to his lordship, and Major Carbonnell received the other from my hand, which actually trembled, while his was firm. I requested Mr. Osborn to drop the handkerchief, as I could not make up my mind to give a signal which might be fatal to the major. They fired.—Lord Tineholme fell immediately—the major remained on his feet for a second or two, and then sank down on the ground. I hastened up to him. "Where are you hurt?"

The major put his hand to his hip—"I am hit hard, Newland, but not so hard as he is. Run and see."

I left the major, and went up to where Lord Tineholme lay, his head raised on the knee of his second.

"It is all over with him, Mr. Newland, the ball has passed through his brain."

I hastened back to the major, to examine his wound, and, with the assistance of Timothy, I stripped him sufficiently to ascertain that the ball had entered his hip, and probing the wound with my finger, it appeared that it had glanced off in the direction of the intestines; the suffusion of blood was very trifling, which alarmed me still more.

"Could you bear removal, major, in the coach?"

"I cannot tell, but we must try; the sooner I am home the better, Japhet," replied he faintly.

With the assistance of Timothy, I put him into the hackney-coach, and we drove off, after I had taken off my hat and made my obeisance to Mr. Osborn, an effort

of politeness which I certainly should have neglected, had I not been reminded of it by my principal. We set off, and the major bore his journey very well, making no complaint, but on our arrival he fainted as we lifted him out. As soon as he was on the bed, I despatched Timothy for a surgeon. On his arrival he examined the wound, and shook his head. Taking me into the next room, he declared his opinion, that the ball had passed into the intestines, which were severed, and that there was no hope. I sat down and covered up my face—the tears rolled down and trickled through my fingers—it was the first heavy blow I had yet received. Without kindred or connections, I felt that I was about to lose one who was dear to me. To another, not in my situation, it might have only produced a temporary grief at the near loss of a friend; but to me, who was almost alone in the world, the loss was heavy in the extreme. Whom had I to fly to for solace—there was Timothy and Fleta—one who performed the duty of a servant to me, and a child. I felt that they were not sufficient, and my heart was chilled.

The surgeon had, in the mean time, returned to the major, and dressed the wound. The major, who had recovered from his weakness, asked him his candid opinion. "We must hope for the best, sir," replied the surgeon.

"That is to say, there is no hope," replied the major: "and I feel that you are right. How long do you think that I may live?"

"If the wound does not take a favourable turn, about forty-eight hours, sir," replied the surgeon; "but we must hope for a more fortunate issue."

"In a death-bed case you medical men are like lawyers," replied the major, "there is no getting a straight forward answer from you. Where is Mr. Newland?"

"Here I am, Carbonnell," said I, taking his hand.

"My dear fellow, I know it is all over with me, and you of course know it as well as I do. Do not think that it is a source of much regret to me to leave this rascally world—indeed it is not; but I do feel sorry, very sorry, to leave you. The doctor tells me I shall live forty-eight hours; but I have an idea that I shall not live so many minutes. I feel my strength gradually failing me. Depend upon it, my dear Newland, there is an internal hemorrhage. My dear fellow, I shall not be able to speak soon. I have left you my executor and sole heir. I wish there was more for you—it will last you, however, till you come of age. That was a lucky hit last night, but a very unlucky one this morning. Bury me like a gentleman."

"My dear Carbonnell," said I, "would you not like to see somebody—a clergyman?"

"Newland, excuse me. I do not refuse it out of disrespect, or because I do not believe in the tenets of Christianity; but I cannot believe that my repentance at this late hour can be of any avail. If I have not been sorry for the life I have lived—if I have not had my moments of remorse—if I have not promised to amend, and intended to have so done, and I trust I have—what avails my repentance now? No, no, Japhet, as I have sown so must I reap, and trust to the mercy of heaven. God only knows all our hearts, and I would fain believe that I may find more favour in the eyes of the Almighty, than I have in this world from those who—but we must not judge. Give me to drink, Japhet—I am sinking fast. God bless you, my dear fellow."

The major sunk on his pillow, after he had moistened his lips, and spoke no more. With his hand clasped in mine he gradually sank, and in a quarter of an hour his eyes were fixed, and all was over. He was right in his conjectures—an artery had been divided, and he had bled to death. The surgeon came again just before he was dead, for I had sent for him. "It is better as it is," said he to me. "Had he not bled to death, he would have suffered forty-eight hours of extreme agony from the mortification which must have ensued." He closed the major's eyes and took his leave: I hastened into the drawing-room and sent for Timothy, with whom I sat in a long conversation on this unfortunate occurrence, and my future prospects.

My grief for the death of the major was sincere; much may indeed be ascribed to habit from our long residence and companionship; but more to the knowledge that the major, with all his faults, had redeeming qualities, and that the world had driven him to become what he had been. I had the further conviction, that he was attached to me, and, in my situation, any thing like affection was most precious. His funeral was handsome, without being ostentatious, and I paid every demand upon him which I knew to be just—many, indeed, that were not sent in, from a supposition that any claim made would be useless. His debts were not much above £200, and these debts had never been expected to be liquidated by those who had given him credit. The paper he had written, and had been witnessed by Timothy and another, was a short will, in which he left me his sole heir and executor. The whole of his property consisted in his house in St. James's street, the contents of his pocket-book entrusted to my care, and his personal effects, which, especially in bijouterie, were valuable. The house was worth about £4,000, as he had told me. In his pocket-book were notes to the amount of £3,500, and his other effects might be valued at £400. With all his debts and funeral expenses liquidated, and with my own money, I found myself in possession of about £8,000—a sum which never could have been credited, for it was generally supposed that he died worth less than nothing, having lived for a long while upon a capital of a similar value.

"I cannot but say," observed Timothy, "but this is very fortunate. Had the major not persuaded you to borrow money, he never would have won so large a sum. Had he lived he would have squandered it away; but just in the nick of time he is killed, and makes you his heir."

"There is truth in your observation, Timothy; but now you must go to Mr. Emmanuel, that I may pay him off. I will repay the £1000 lent me by Lord Windermear into his banker's, and then I must execute one part of the poor major's will. He left his diamond solitaire as a memento to his lordship. Bring it to me, and I will call and present it."

This conversation took place the day after the funeral, and, attired in deep mourning, I called upon his lordship, and was admitted. His lordship had sent his carriage to attend the funeral, and was also in mourning when he received me. I executed my commission, and after a long conversation with his lordship, in which I confided to him the contents of the will, and the amount of property of the deceased, I rose to take my leave.

"Excuse me, Mr. Newland," said he; "but what do you now propose to do? I confess I feel a strong interest about you, and had wished that you had come to me oftener without an invitation. I perceive that you never will. Have you no intention of following up any pursuit?"

"Yes, my lord, I intend to search after my father, and I trust that, by husbanding my unexpected resources, I shall now be able."

"You have the credit, in the fashionable world, of possessing a large fortune."

"That is not my fault, my lord: it is through Major Carbonnell's mistake that the world is deceived. Still I must acknowledge myself so far participator, that I have never contradicted the report."

"Meaning, I presume, by some good match, to gain the advantage of the supposition."

"Not so, my lord, I assure you. People may deceive themselves, but I will not deceive them."

"Nor undeceive them, Mr. Newland?"

"Undeceive them I will not; nay, if I did make the attempt, I should not be believed. They never would believe it possible that I could have lived so long with your relative, without having had a large supply of money. They might believe that I had run through my money, but not that I never had any."

"There is a knowledge of the world in that remark," replied his lordship; "but I interrupted you, so proceed."

"I mean to observe, my lord—and you, by your knowledge of my previous history, can best judge how far I am warranted in saying so—that I have as yet steered the middle course between that which is dishonest and honest. If the world deceives itself, you would say that, in strict honesty, I ought to undeceive it. So I would, my lord, if it were not for my peculiar situation; but at the same time I never will, if possible, be guilty of direct deceit; that is to say, I would not take advantage of my supposed wealth, to marry a young person of large fortune. I would state myself a beggar, and gain her affections as a beggar. A woman can have little confidence in a man who deceives her before marriage."

"Your secret will always be safe with me, Mr. Newland; you have a right to demand it. I am glad to hear the sentiments which you have expressed; they are not founded, perhaps, upon the strictest code of morality, but there are many who profess more who do not act up to so much. Still I wish you would think in what way I may be able to serve you, for your life at present is useless and unprofitable, and may tend to warp, still more, ideas which are not quite as strict as they ought to be."

"My lord, I have but one object in allowing the world to continue in their error relative to my means, which is, that it procures for me an entrance into that society in which I have a moral conviction that I shall find my father. I have but one pursuit, one end to attain—which is, to succeed in that search. I return you a thousand thanks for your kind expressions and good will; but I cannot, at present, avail myself of them. I beg your lordship's pardon, but did you ever meet the lady with the ear-rings?"

Lord Windermear smiled.. "Really, Mr. Newland, you are a very strange person; not content with finding out your own parents, you must also be searching after other people's; not that I do not commend your conduct in this instance, but I'm afraid, in running after shadows, you are too indifferent to the substance."

"Ah, my lord! it is very well for you to argue who have had a father and mother, and never felt the want of them; but if you knew how my heart yearns after my parents, you would not be surprised at my perseverance."

"I am surprised at nothing in this world, Mr. Newland; every one pursues happiness in his own way; your happiness appears to be centred in one feeling, and you are only acting as the world does in general; but recollect that the search after happiness ends in disappointment."

"I grant it but too often does, my lord; but there is pleasure in the chase," replied I.

"Well, go, and may you prosper. All I can say is this, Mr. Newland; do not have that false pride not to apply to me when you need assistance. Recollect it is much better to be under an obligation, if such you will consider it, than to do that which is wrong; and that it is a very false pride which would blush to accept a favour, and yet not blush to do what it ought to be ashamed of. Promise me, Mr. Newland, that, upon any reverse or exigence, you will apply to me."

"I candidly acknowledge to your lordship that I would rather be under an obligation to any one but you, and I trust you will clearly appreciate my feelings. I have taken the liberty of refunding the £1,000 you were so kind as to place at my disposal as a loan. At the same time I will promise, that if, at any time, I should require your assistance, I will again request leave to become your debtor." I rose again to depart.

"Farewell, Newland; when I thought you had behaved ill, and offered to better you, you only demanded my good opinion; you have it, and have it so firmly, that it will not easily be shaken." His lordship then shook hands with me, and I took my leave.

(To be continued.)

From the London Quarterly Review.

RECENT GERMAN BELLES-LETTRES.

Zur Geschichte der Neueren Schönen Literatur in Deutschland, von Henri Heine. Th. 1 und 2. Paris and Leipzig. 1833.

It has frequently been made a question, whether the Germans have any well-founded pretensions to wit: and it seemed till lately pretty generally agreed that the maintenance of the national honour in this respect had devolved exclusively on Jean Paul, whose sallies come flashing through his mysticism, like lightning through clouds. Within the last five years, however, a new star has appeared in the literary hemisphere of Germany,—malign in its influence, wavering in its orbit, and unsteady in its light, but sparkling all over with a brilliancy which soon occasioned all eyes and glasses to be turned upon it. Henry Heine came out as a poet and prose writer—first with his *Reisebilder*, next with his contributions towards the literary history of his contemporaries—and speedily gained for himself the reputation of being one of the cleverest, if not wittiest, writers of his day. We say, for himself—no man having ever been more exclusively the architect of his own reputation than Heine; for at starting he wantonly provoked a whole host of detractors by his impertinences—and, by his hardly concealed contempt for existing creeds and establishments, he has often managed to reduce even his most ardent admirers to the condition of apologists. At the present moment, he is regarded as a regular outlaw, a downright *caput lupinum*, in the literary circles of Germany, where, "his hand is against every man, and every man's hand is against him." Yet we believe him to be possessed of many noble and generous qualities (as, indeed, what man of true genius is not?)—we are told that he is now eagerly striving to work himself pure—and nourish a strong hope that he will come round, ere long, to a due sense of the evil of his ways. But the undoubted ability of his writings, apart from their tendency, will amply justify the passing notice we are about to take of the volume named at the head of this paper—a work much better fitted for our purpose than the *Reisebilder*, which, as the name partly imports, is a mere collection of thoughts, fancies, images, and descriptions, picked up or suggested during journeys to well-known places of resort—acute, lively, and graphic, but wild, wandering, and desultory. The volume now before us, on the contrary, is the commencement of a regular critical history of the recent German literature, addressed, indeed, to French readers, and professedly composed as a supplement to Madame de Staël's celebrated "De L'Allemagne,' but not the less adapted to England on that

account; for we believe the two nations (always excepting our inner circle of adepts) are much upon a par as regards the peculiar kind of information conveyed by Heine, and still look equally to Madame de Staël as their principal authority on all matters connected with the belles-lettres and philosophy of Germany. Yet it is clear to demonstration, that mighty changes have been effected since she wrote; and it would be by no means difficult to prove that she had at best but a superficial acquaintance with the subjects about which she discourses so pleasantly. Robert Hall says he threw aside the book disdainfully on finding her, in her account of the metaphysicians, coolly setting down a well-known idealist among the realists;* and it is still related, as characteristic of her style of enquiry in Germany, that her first address to Schelling was:—*Monsieur, voudriez-vous bien m'expliquer votre système en peu de mots?*† Her accounts of books, also, are singularly defective; her analysis of *Faust*, for instance, shows that she had never read above a third of it. But on the subject of Madame's merits and demerits Heine himself shall speak—

"Madame de Staël's *Germany* is the only comprehensive piece of information which the French have received as to the intellectual life of Germany; and yet, since the appearance of this book a long period has elapsed, and an entirely new literature has developed itself in Germany. Is it but a transient literature? Is it already in the sere and yellow leaf? Opinions are divided upon these points. Most believe that, with the death of Goethe, a new literary period begins in Germany; that old Germany is gone with him to the grave; that the aristocratic season of literature is at an end, the democratic beginning; or, as a French journalist lately expressed it, 'The spirit of individuals has ceased, the spirit of all has commenced.' As to myself, I cannot so confidently decide on the future evolutions of the German mind. The termination of the *Goethe period of art*, by which name I first designated this period, I had for many years foreseen. I might well prophesy! I had a thorough knowledge of the ways and means of those unquiet ones, who would fain make an end of the Goethe dynasty; and in the risings of that time against Goethe, I myself was certainly to be seen. Now that Goethe is dead, a strange pang comes over me to think of it.

"As I announce these pages as a continuation, in some sort, of Madame de Staël's work, I am obliged, whilst honouring the instruction derivable from it, to recommend, notwithstanding, a certain caution in the use of it, and most particularly to proclaim it a *coterie* book. Madame de Staël, of glorious memory, has here, in the form of a book, opened, as it were, a drawing-room, in which she received German authors, and gave them an opportunity of familiarising themselves with the civilised world of France; but in the hubbub of the most various voices which cry from out this book, clear above all is heard the fine descant of Mr. A. W. Schlegel. Where she is all herself, where the magnanimous madame speaks out directly with her own whole heart—even with the entire fire-work of her own brilliant absurdities—there, good and excellent is the production. But so soon as she lends an ear to others' whisperings; so soon as she does homage to a school, whose very existence is altogether foreign and incomprehensible to her; so soon as, by extolling this school, she is detected in forwarding certain ultramontane tendencies, which are in direct contradiction with her own protestant clearness—then, is her book poor and uncongenial."

The school in question is the romantic school: but this differed very widely from the romantic school in France, of which Victor Hugo is now regarded as the chief:

"But what was the romantic school in Germany? It was nothing else but the re-awakening of the poetry of the middle ages, as manifested in their songs, paintings, buildings, in their art, and in their life. But this poetry had proceeded from Christianity; it was a passion-flower, sprung from the blood of Christ. I know not whether the melancholy flower, which we call passion-flower in Germany, bears the same name in France, nor whether the same mystic origin is attributed to it by popular tradition. It is that strangely coloured flower in whose chalice we see copied the instruments of martyrdom employed at the crucifixion, namely, hammer, pincers, nails, &c.—a flower which is not altogether hateful but only spectral, nay, whose aspect actually excites a gloomy pleasure in the soul, like the convulsively sweet sensations which spring from pain itself. In this point of view this flower would be the most appropriate symbol for Christianity, whose most awful charm consists in the very enjoyment of pain.

"Although in France the Roman faith alone is understood to be included under the name of Christianity [!!!] I must most particularly declare beforehand that I am speaking only of the Roman Catholic faith. I speak of that religion in whose first dogmas a proscription of all flesh is contained; which not merely assigns to the spirit a dominion over the flesh, but even aims at totally depriving the one of life, to give supremacy to the other; I speak of that religion through whose unnatural exposition sin and hypocrisy came into the world, since even by the proscription of the flesh the most innocent sensual gratifications become sin, and, in consequence of the impossibility of being all spirit, hypocrisy inevitably sprung up: I speak of that religion which likewise, through the doctrine of the utter worthlessness of all earthly goods, through the dog-humility and angel-patience enjoined by it, soon became every where the most approved prop of despotism. Men have now learnt the real nature of this religion; they are no longer to be satisfied with pointings to heaven; they know that the material, too, has its good, and is not entirely of the devil; and they now vindicate the enjoyment of earth, this lovely garden of God, our inalienable inheritance. Simply because we now so thoroughly comprehend the consequences of that absolute spirituality, may we also believe that Roman Catholic Christianity, as regards its worldly policy, has reached its acmé. For every age is a sphynx which throws itself from the rock as soon as its riddle has been guessed.

"I am here, however, by no means denying the benefits conferred on Europe by Catholicism. It was necessary as a wholesome reaction against the gloomy colossal materialism which had unfolded itself in the Roman empire, and threatened to annihilate all the spiritua-

* He added, when something was said about the flights of her fancy, that for his part, he could not admire her flights, for to him she was generally invisible; not because she ascended to a great height above the earth, but because she invariably selected a foggy atmosphere."—*Gregory's Life of Hall*, p. 235.

† The same mode of enquiry seems to have been adopted by M. Thiers during his ten days' journey to England in 1833, in which time he pledged himself to the citizen-king to learn all that was worth learning concerning us. He wrote as follows to a gentleman then connected with the treasury:—

Mon cher Monsieur,—Pourriez-vous me donner un petit quart d'heure pour m'expliquer le système financier de votre pays? Tout à vous, THIERS.

xcellence of man. As the loose memoirs of the pre-eding century form, as it were, the *pièces justificatives* f the French revolution; as the terrorism of a commit-ee of public safety appears to us a necessary medicine, fter reading the confessions of the patrician world of rance subsequent to the regency; just so is the whole-omeness of the ascetic spirituality recognised after eading *Petronius* or *Apuleius*, books which may be egarded as the *pièces justificatives* of Catholicism. The flesh had become so wanton in this Roman world, hat the monastic discipline might well be necessary to nortify it. After the feast of a Trimalchion, there was ieed of a fasting regimen."

He proceeds to specify the effects of this spirit pon the romantic literature of the middle ages, n which he thinks self-denial too rigidly incul-ated; excepting, however—he might have made bundance of exceptions—Gottfried of Strasburg, who, by the way, is supposed to be the author of he book which lured Dante's Paulo and Fran-esca into sin. Music, painting, and architecture, *uffered*, he says, from the same cause; but it will be sufficient to quote what he says about the ast:—

"The art of building bore the same character as the ther arts in the middle ages; as, indeed, at that time ll manifestations of life harmonised most surprisingly with one another. Here, in architecture, is exhibited he same parabolical tendency as in poetry. When we ow enter an old cathedral, we hardly feel any longer he exterior sense of its stone-work symbolicism. Only he general impression strikes immediately into the soul. We here feel the elevation of the spirit, and the prostra-ion of the flesh. The interior of the cathedral is itself hollow cross, and we there walk in the very instrument f martyrdom; the variegated windows cast their red ights upon us, like drops of blood; funeral hymns are rembling round us; under our feet, tombstones and orruption; and the spirit struggles, with the colossal illars, towards heaven, painfully tearing itself asunder rom the body, which drops, like a worn-out garment, o the ground.

"When we look upon it from the outside, this same othic cathedral, these enormous piles of building, which are so airy, so fine, so ornamental, so transpa-ently elaborated, that one might suppose them carved ut—that one might take them for Brabant points of narble—then do we first truly feel the power of that ge, which knew how to obtain such a mastery over tone itself, that it seems almost spectrally instinct with pirit, that this hardest of material things expresses the piritualism of Christianity."

Coleridge had probably something of the same ort in his mind, when he said that an old gothic athedral always looked to him like a petrified eligion. Heine continues:—

"But the arts are nothing but the mirrors of life, and s catholicism was extinguished in life, so also did it row faint and die away in art. At the time of the re-ormation, the catholic poetry gradually disappeared in Germany, and in its place we see the long expired Greek poetry revive. It was, indeed, but a factitious pring, a work of the gardener and not of the sun; and he trees and flowers were stuck in narrow pots, and a lass heaven sheltered them from the chill north wind. In actual history every event is not the immediate con-equence of another; all events act and re-act upon one nother, and it was not through the Greek scholars, who migrated to us after the taking of Byzantium, that the ove of Greek and the desire of imitating it became uni-versal amongst us; but a contemporary protestantism at that time was stirring in art equally as in life. Leo the Tenth, the magnificent Medici, was every bit as zealous a protestant as Luther; and as the one was protesting in Latin prose at Wittemberg, just so did the other pro-test in stone, colours, and *ottave rime*, at Rome. Do not Michael Angelo's marble images of power, the laughing nymph-like faces of Giulio Romano, and the gladness, drunk with life, of Master Ludovic's verses—do not these form a protesting contrast to the old gloomy grief-consumed catholicism? The glowing flesh on the paintings of Titian—this is all protestantism. The limbs of his Venus are far more solid theses than those which the German monk fixed on the church door of Wittemberg. It was then as if men felt themselves suddenly freed from an oppression of a thousand years; the artists, above all, breathed freely again, as the Alp of catholicism seemed rolled from the breast; they plunged enthusiastically into the sea of Greek gladness, out of whose foam the goddess of beauty again emerged for them; the painters painted again the ambrosial joy of Olympus; the sculptors chiseled again, with the same pleasure as of old, the ancient heroes out of the marble block; the poets celebrated again the house of Atreus and Laius; the period of the new classical poetry arose.

"As in France, under Lewis the Fourteenth, modern life was cultivated to the highest pitch, just so did that new classical poetry here (in France) likewise obtain a cultivated completion, nay, in some sense, an independent originality. Through the political influence of the great monarch, this new classical poetry was diffused through the rest of Europe; in Italy, where it had already domesticated itself, it received a French colouring; with the Anjous went also the heroes of French tragedy to Spain; they went to England with Madame Henriette; and we Germans, it is hardly necessary to say, we erected a clumsy temple of our own to the powdered Olympus of Versailles."

Lessing is described as the literary Arminius by whom this freshly imported faith was overthrown. The change effected by him was effected not less by his own original productions than by his criticisms;* and he has been aptly enough compared to those pious Jews, who, being often disturbed during the second building of the temple by invasion, fought with one hand against the enemy, and with the other continued their work. Lessing and Herder are great favourites with Heine, who thus most *Germanicè* apologises for introducing them:—

"The history of literature is the great *Morgue* where every one seeks out his dead, those whom he loves or is related to. When I see there, amongst so many insignificant bodies, Lessing or Herder, it sets my heart a beating. How could I proceed, without gently kissing your pale lips as I passed!"

This tribute paid, he passes on to catalogue their more distinguished contemporaries. Goethe, according to this dashing judge, *was a name in literature, but not by any means a supereminent one.* His *Goetz von Berlichingen* and *Werther* had attracted great attention, but more on account of their subject-matter, than of their merits as productions of consummate art, which few at that period discerned in them. Lafontaine wrote

* Lessing's best dramatic pieces are *Emilia Galeotti*, (a modern Virginia,) *Minna von Barnhelm*, and *Nathan the Wise*. His best critical work is Laocoon, an Essay on the boundaries of Painting and Poetry.

oftener, and was therefore more celebrated than Goethe. Wieland was the great poet of the day; at least Rammler alone could have disputed the palm with him; the theatre was subjected to Iffland, with his lachrymose dramas, and to Kotzebue, with his trifling, though witty farces. These are Heine's opinions, not ours. Some of Iffland's comedies have great merit; and Kotzebue cannot justly be set down as a mere writer of witty farces. Mr. W. Taylor, of Norwich, calls him "the greatest dramatic genius that Europe has evolved since Shakspeare," and, understood with peculiar reference to stage-effect, this praise is not so much exaggerated as may be thought. His life and conduct will long prevent full justice being rendered to him in Germany.

The remarks on these writers are prefatory to a more minute account of the growth of the romantic school, with the two Schlegels, Augustus William and Frederick, for its chiefs. Their then place of residence, Jena, was its seat; at Jena also resided the celebrated metaphysician Schelling, by some supposed to have afforded a philosophic ground-work to the romantic school, which Heine denies. "Schelling, however," he adds, "exercised, undoubtedly, great personal influence on the romantic school; he is also, what is not known in France, a bit of a poet, and it is reported that he is still in doubt whether he shall not publish his collective philosophical doctrines in a poetical, nay metrical, dress. This doubt characterises the man."

But although the school was founded neither on Schelling's, nor on any other philosopher's philosophy, the founders amply compensated the defect, by setting up the best works of former times as models, and making them accessible to their disciples. With this view A. W. de Schlegel is said to have undertaken his admirable translation of Shakspeare, lately completed and illustrated by Tieck. A version by the same hand of some of the best plays of Calderon was another fruit of the theory, of which Germany has good reason to be glad.

The overweening passion of this school for *simplicity* is illustrated amusingly enough:—

"'Our poetry,' said the Messieurs Schlegel, 'is antiquated; our muse is an old woman with a distaff; our hero no fair boy, but a shriveled dwarf with gray hair; our feelings are withered, our fancy is dried up; we must refresh ourselves, we must seek again the neglected fountains of the *naive* simple poetry of the middle ages; there the draught of renovation bubbles up for us.'[!!] The dry parched people did not wait to be told so twice; those thirsty souls, in particular, who were sitting up to their necks in sand, longed to be as the blooming and youthful, and they plunged in search of those wondrous springs, and gulped, and sipped, and swallowed, with extraordinary zest. But it chanced to them as to the old chambermaid, of whom it is related as follows: She had remarked that her mistress possessed a wonderful elixir, which restored youth. In the absence of the lady, she took the phial containing the elixir from her toilet-table, but instead of drinking a few drops, she took so great and long a draught, that, through the highly concentrated magic power of the renovating drink, she not only became young again, but was changed into a little child. Truly it chanced somewhat similarly to M. Tieck, the best poet of the school; he had drunk so deep of the popular books and poems of the middle ages, that he also became a child again, which result Madame de Staël found such difficulty in admiring. She is obliged to own that it struck her as curious, to find a modern drama opening with, *I am the bold Boniface, and I come to tell you*, &c."

Tieck also sought to revive the same taste for simplicity in the sister arts, and Frederick Schlegel and Görres are described as "rummaging" all the old towns upon the Rhine for remains of the old German school of painting and sculpture, which, like holy relics, were superstitiously adored. But our author forgets to commemorate the beneficial influence of this rummaging upon art; though had F. Schlegel and Görres done no more than bring Albert Durer into fashion, they would have done enough to justify their enthusiasm; an observation which any one may verify by simply analysing the effect of an intense study of Albert Durer upon Retzsch. The following parallel, apropos of the enthusiasm in question, is curious:—

"I have just now compared the German Parnassus of those days with Charenton (the bedlam of France). But I am inclined to think I have said far too little. A French madness is not near so mad as a German madness; for in the latter, as Polonius says, there is method. With a pedantry quite *sui generis*, with a terrible conscientiousness, with a grim earnestness of which your superficial French lunatic cannot so much as form a notion, was that German madness carried on."

No less curious, and perhaps not more fantastical, is the parallel drawn between the patriotism of the two countries. The period taken is that immediately preceding the first effective rising of Germany against Napoleon:—

"Patriotism was the word, and we became patriots: for we do every thing which our princes bid us. But the same feeling must not be understood by this patriotism as bears the name in France. The patriotism of the Frenchman consists in this—that his heart warms, is stretched and grows wider by this warmth, so that it no longer embraces merely its nearest relations, but all France, the whole civilised earth, with its love. The patriotism of the German, on the contrary, consists in this—that his heart grows narrower; that it contracts, like leather in the cold; that he detests what is foreign; that he wishes to be no longer a citizen of the world, no longer a European, but merely a narrow German. There was now to be seen the ideal churlishness, which Mr. Jahn reduced to a system,—the paltry, dirty, unwashed opposition began against the most glorious and sacred feeling that ever originated in Germany, namely, against that humanity, against that universal spirit of fraternisation, against that cosmopolitism to which all our great spirits, Lessing, Herder, Schiller, Goethe, Jean Paul, to which all the cultivated minds in Germany, have ever done homage. What soon after came to pass in Germany, is too well known to all of you. When God, the snow, and the Cossacks, had destroyed the best energies of Napoleon, we Germans received the most gracious command to free ourselves from the yoke of the foreigner, and we flamed up in manly indignation against the all too long endured subjection, and we encouraged ourselves by the good melodies and bad verses of Körner's songs, and we reconquered our freedom; for we do every thing which our princes bid us."

It may here be as well to remind Mr. Heine and his friends, that patriotism, as well as glory.

is like a circle in the water, which by too much spreading may disperse itself to nothing. We much fear that *his* has already undergone this process, and that he has got simply a maudlin sort of French philanthropy, a feeling between vanity and egotism, in the place of it. As regards literature, we ourselves are cosmopolites, in the widest sense of the term, but the very notion of cosmopolitan patriotism is a baneful absurdity.

"At the period (he continues) when this battle was preparing, a school which was hostile to all things French, and trumpeted forth the praises of all that was characteristically German, necessarily met with the most flattering prosperity. The romantic school marched hand in hand with the exertions of the governments and the secret societies, and Mr. A. W. Schlegel conspired against Racine at the same time that the minister Stein conspired against Napoleon. The school swam with the times, namely, with the stream which streamed backwards towards its source. When, in the end, German patriotism and German nationality had obtained a complete victory, the national Germanic Christian romantic school, the new German religious patriotic art, definitively triumphed too. Napoleon, the great classic, as much a classic as Alexander and Cæsar, was hurled to the ground, and Messrs. Augustus William and Frederick Schlegel, the little romanticists, about as romantic as Tom Thumb and Puss in Boots, arose as conquerors."

Heine means these allusions as a sneer, but the Schlegels would probably have adopted them as a compliment; for Tom Thumb and Puss in Boots were, according to their notions, amongst the best and purest early creations of romance, and both, along with Bluebeard and Little Red Riding Hood, have been beautifully dramatised by Tieck in his Phantasies.*

Passing over the other exploits of the romantic school, as the conversion of Frederick Schlegel and some other of its members to actual catholicism, we come to Voss, one of the most dangerous of their rivals and fellest of their foes. The following comparison is spiritedly drawn, though Schlegel, as usual, is unduly depreciated:—

"To Frederick Schlegel, the intoxicated singer of the wantonly romantic (or romantically wanton) Lucinda,† how fatal must he have been,—this sober Voss, with his chaste Louise and his old respectable Vicar of Grunau! Mr. A. W. Schlegel, who never meant so honestly by wantonness and catholicism as his brother, could harmonise much better with old Voss, and there arose between these two only a translating rivalry, which moreover was of the greatest advantage to the German language. Voss had already, before the birth of the new school, translated Homer; he now translated with unwearied exertion the remaining heathen poets of antiquity; whilst A. W. Schlegel translated the Christian poets of the romantic catholic age. The choice of works was in either case determined by the private polemical object. Voss wished to advance the classical poetry and mode of thinking by his translations; whilst A. W. Schlegel sought to make the Christian romantic poets accessible in good versions to the public, for them to imitate and form themselves by. Nay, their antagonism showed itself in their very forms of speech: whilst Schlegel was ever polishing his words more and more sweetly and trippingly, Voss was growing harsher and coarser in his translations; the latter, on account of the roughnesses filed into them, are almost unpronounceable; so that, if one was likely to trip on the smooth polished slippery mahogany floor of Schlegel's verses, one was no less likely to stumble over the clumsy marble blocks of old Voss.* At length, out of rivalry, Voss determined on translating Shakspeare, which Schlegel, in his first period, had so excellently done into German; but this turned out very ill for old Voss, and still worse for his publisher; the production was a total failure. Where Schlegel possibly translated too effeminately, where his verses are not unfrequently like whipt cream, with regard to which one hardly knows, when carried to the mouth, whether it is to be eaten or drunk; in all these places, Voss is as hard as stone, and a man runs the risk of breaking a jaw-bone in pronouncing his lines."

It was Goethe, however, who gave the finishing blow to the romantic school; and exceedingly ungrateful of him it was, for they worshipped him as the first of moderns, and held him up as a model for posterity.

"They had him, too," says Heine, with his wonted malice, "so immediately at hand. From Jena to Weimar the road lay through an avenue of pretty trees—on which grow plums, very pleasant to the taste, when one is thirsty from the heat; and the Schlegels traveled this road very frequently; and at Weimar they had many a colloquy with Privy Counsellor Goethe, who was always a great diplomatist, and quietly listened to the Schlegels, smiled assentingly, often gave them a dinner, did them now and then a favour, and so forth."

They are also accused of making court to Schiller, who, if they did so, certainly rejected their advances, and applied to them, as appears from his correspondence, terms expressive of no very qualified contempt. One of the principal causes of A. W. Schlegel's present unpopularity in Germany (which seems to have escaped Heine) is an attempt made by him to revenge himself on Goethe and Schiller by epigrams, not certainly in the best possible taste, though the provocation was great.

The plums, which were so attractive to the Schlegels, appear to have made a strong impression on Heine himself, for they play a prominent part in his first interview with Goethe; the account of which, as well as the personal description preceding it, are amusing enough:—

"The accordance of personal appearance with genius, such as is required in extraordinary men, was conspicuous in Goethe. One might study Grecian art in him, as in an antique. His eyes were tranquil as those of a god. Time had been powerful enough to cover his head with snow, but not to bend it; he carried it ever proud and high: and when he spoke, he seemed to grow bigger; and when he stretched out his hand, it was as if he could prescribe, with his finger, to the stars in heaven the way they were to go. When I visited him in Weimar, and stood face to face with him, I looked involuntarily around in search of the eagle with the thunderbolts in his beak.

* "Who could have supposed that a tragedy, no mock heroic, but a real tragedy, calculated to affect and excite us, could have been erected on the ground-work of a nursery tale? Yet let any one read *Blaubart* in the Phantasies, and say whether this is not accomplished."—*Carlyle's Specimen of German Romance*, vol. ii. p. 14. The peculiar satirical object of these pieces does not appear to have struck Mr. Carlyle.

† F. Schlegel wrote a poem so called, not remarkable for delicacy.

* This may remind the reader of Johnson's celebrated parallel between Dryden and Pope.

I was on the very point of addressing him in Greek; but, so soon as I observed that he understood German, I related to him, in my own mother tongue, that *the plums upon the road between Jena and Weimar tasted very nice.* So many long winter nights had I thought it over—how many deep and sublime things I would say to Goethe when I saw him: and when, at length, I did see him, I said to him—that Saxon plums tasted very nice! And Goethe smiled—he smiled with the same lips with which he had once kissed the fair Leda, Europa, Danaë, Semele, and so many other princesses and ordinary nymphs besides."

All this is thoroughly German—but no one who ever saw Goethe can deny that he was in reality a most sublime specimen of the human race.

Were we to linger over all the piquant passages in this book, we might be lured on to extract at least a third of it; but we have only room for one extract more, and after duly deliberating, we have resolved on giving the preference to the following observations on the relative merits of Goethe and Schiller, the two great candidates for the literary throne of Germany; where a republic of letters (for the present confusion of ranks and absence of rulers rather resembles an anarchy) has been hitherto unknown. Like a steady, prudent, thinking people as they are, they have always insisted on a king, and have never shown themselves very anxious to impose limitations on his authority.* Our readers will not fail to compare the passage we are about to extract with a paragraph on Goethe and Schiller from Mr. Coleridge's "Table-Talk," which we have printed in a preceding article. We cannot but suspect that Coleridge, in assigning a higher rank to Schiller than to Goethe, was unconsciously influenced by the recollections of his own early intercourse with the former, and more especially of his splendid exertions in the English "Wallenstein." Heine says—

"Although at one time I was myself an adversary of Goethe, I did not approve the coarseness with which Menzel criticised him, and I lamented this want of feeling. I observed—Goethe is at all events the king of our literature; when we apply the critical knife to such a one, we must never permit the least diminution of the courtesy due to his rank; like that executioner who had to behead Charles I., and before he discharged his duty, kneeled down before the king, and prayed his most gracious pardon.

"*Entre nous*, Goethe's enemies formed a very mixed assemblage. What came before the world I have sufficiently indicated;—it is more difficult to guess the particular motive of each in publishing his anti-Goethean convictions. There is only one person whose precise motive I know; and as I myself am that person, I will honestly confess it was—envy. To my praise, be it spoken, however, that in Goethe I never attacked the poet, but only the man. I have never censured his works; I have never been able to discover faults in them, like those critics who, with their finely-ground glasses, have observed specks even in the moon. The sharp-sighted folks! what they regard as specks are blooming groves, silver streams, lofty mountains, laughing vales. Nothing is sillier than the depreciation of Goethe in favour of Schiller, by whom they never meant honestly, and who has always been exalted for the mere purpose of degrading Goethe. Or were people really ignorant that those high-renowned, high-ideal forms, those altar-pieces of youth and morality, which Schiller set up, were far easier to produce than those sinful, polluted creatures of the little world, of which Goethe gives us glances in his works? Can they, then, be ignorant that mediocre painters for the most part paint the figures of saints as large as life, but that many a great master makes it his study to paint, with natural truth and artist-like propriety, possibly a Spanish beggar-boy lousing himself, a low-country boor vomiting or having a tooth drawn, and ugly old women, as we see in small Dutch cabinet pictures? The great and fearful is much more easily represented in art than the little and complete..... Rail as you will against the vulgarities in Faust, against the scenes on the Brocken, in Auerbach's Cellar!—rail against the irregularities in Wilheim Meister!—all that, however, is precisely what you cannot imitate. But you are not desirous of imitating it; and I hear you exclaiming with disgust—We are no conjurers! we are good Christians! That you are no conjurers, I admit!

"Goethe's greatest merit is the completeness of every thing he produces; there are no points which are strong whilst others are weak; there is no part fully painted whilst the other is only sketched. Every character in his romances and dramas is treated, where it occurs, as if it was the principal character: it is so with Homer—so with Shakspeare. In the works of all the great poets there are, properly speaking, no inferior characters at all: every figure is a principal character in its place. When, once upon a time, a French ambassador mentioned to Paul of Russia that *a man of consequence* in St. Petersburgh was interesting himself in some matter or other, the czar vehemently interrupted him with these remarkable words—'There is no *man of consequence* in this empire but him with whom I am actually speaking, and so long only as I am speaking to him is he of consequence.' The absolute poet, who has likewise received his power from heaven, considers in the same style those members of his intellectual empire as of the most consequence, whom he is at the moment causing to speak, who have just grown under his pen; and out of this true despotism of art springs that wonderful completeness of the smallest figures in the works of Homer, Shakspeare, and Goethe."

The last paragraph of this extract is excellent; though we should be inclined to qualify that portion of it which makes the merit depend wholly on the execution, and little, if at all, on the choice of objects of art. It was Pasta, we believe, who said of a rival, that she was first in her line, but that her line was not the first; and the remark suggests a distinction which the reader will find no difficulty in applying for himself. We, on the whole, consider Wallenstein as a grander and a finer *drama* than any of Goethe's—but shall never be able to believe that Schiller was as great a poet as Goethe—as original in his creations—as wide in his scope of feeling—or as exquisitely felicitous in his management of their common language.

* "Tieck (said Goethe) was emperor, too, for a time: but it did not last long, he was soon deposed. They said there was something too Titus-like in his temper: he was too mild and good-natured. In the present state of things the empire requires a rigorous sway, and what may be called a sort of barbaric grandeur. Next came the reign of the Schlegels. Things now went on better. August Wilheim Schlegel, the first, and Frederick, the second of the name, both ruled with becoming severity; not a day passed in which some one was not sent into exile, or in which a few executions did not take place. Perfectly right! Such rulers have, from time immemorial, been immense favourites with the people."—*Characteristics of Goethe, by Mrs. Austin.*

Heine has candidly confessed the motive of his hostility to Goethe. It were to be wished that he had been equally candid with regard to Schlegel, whom he keeps on plying with every species of ill-natured allusion which the wanton wickedness of wit can suggest. In addition to the sarcasms already mentioned, the dress and personal appearance of this distinguished writer, his mode of lecturing, the furniture of his lecture-room, the circumstances of his marriage, &c. &c., are all deemed fit subjects for quizzing. We are told (what cannot be true) that, unable to live without the pomp and circumstance of reception, to which he had been accustomed as the companion of Madame de Staël, he offered, after her death, to attend Catalini in her progresses; and in reply to Schlegel's assertion, that he saw neither poetry nor poets during his last visit to Paris, Heine says that this is easy of explanation, as Schlegel did nothing the whole time but admire himself in a pocket looking-glass. He even dares to question the great critic's age: "Mr. A. W. Schlegel is therefore now (1833) sixty-four years old. Mr. Alexander von Humboldt and other *naturalists* maintain, however, that he is older. Champollion also was of the same opinion." Schlegel, however, may well afford to laugh at such pleasantries as this.

The rest of the book deals chiefly in individual portraiture. He adds to his list of the chief adversaries, a similar catalogue of the chief supporters of Goethe—amongst whom Varnhagen von Ense is characterised as "a man who carries in his heart thoughts which are as great as the world, and expresses them in words which are as precious and polished as gems." Varnhagen von Ense is really an admirable critic, who deserves to be better known in this country than he is. Sketches are given of Steffens, Görres, Hoffman, Novalis, Brentano, Von Arnim, &c.; and slight notices of the leading modern metaphysicians—Fichte, Schelling, Böhme, and Hegel—are interwoven, where it becomes necessary to explain their influence upon literature.

A continuation is promised; and on its appearance we shall probably return to this lively and entertaining work. We have, in our translations, studied to be *liberal*—not at all to be elegant—for we wished to give our English readers some notion of what the modern German style of expression is. We are sorry to add that, though Heine's vein in this book is far less irreverent than in his *Reisebilder*, we have been obliged to *mutilate* some of the passages which seemed to us deserving of quotation.

Novel Machine.—A novel machine was a few days ago exhibited in the Kennington and Clapham roads. It consisted of a sort of carriage-wheel which carries a *railroad* for itself, upon which the carriage travels with great facility and quickness. It was composed of a jointed square instead of a circle, and has four rollers, not touching the road, and four feet which alternately come to the ground, producing a kind of walking and escaping obstacles. We understand it is the invention of Lewis Gomperiz, Esq. Should these machines be adopted, probably common railroads may be partially or wholly dispensed with.

SHAKSPEARE IN GERMANY.—PART I.

SHAKSPEARE'S TRAGEDIES—HAMLET.

Some years ago, we remember, there was a grievous alarm among the geologists, at the prospect that our whole stock of coals would, at no distant period, be consumed. The mines, we were told, were well nigh wrought out; in a dozen years or so the world would be nothing more than an exhausted coal waste; and as we were scarcely prepared "to wallow naked 'midst December's snow, by thinking on fantastic summer's heat," the prospects of society for a time certainly looked black and comfortless enough. But some more adventurous miner bethought him, that though the surface hitherto opened up might be nearly exhausted, yet by penetrating a little deeper than his fellows, he might arrive at "fresh fields and strata new;" by the aid of the wonder working spirit steam, the object was accomplished; new and endless veins of black diamonds were detected, and now our apprehensions of a second plague of darkness, or of being doomed to dwell "in thrilling regions of thick-ribbed ice," are postponed at least for another century.

The case seems to be somewhat the same with the deep and ever fertile mind of Shakspeare. After a hundred years of commentary and criticism, is the field exhausted, or the new acquisitions which are won from it becoming less brilliant or less valuable? We think not. True, the more palpable and superficial treasures which it presented have been collected long ago; we have had many well-written and eloquent dissertations on the more obvious characteristics of Shakspeare's universal mind, and much of that which Schlegel justly calls the cheapest of all criticism, the studied and laborious exposition of the beauties of individual descriptions, incidents, images, and expressions. In regard to the former, Johnson's preface left little to be added; and after the volumes without number which have been devoted by commentators to the latter, in which poor Shakspeare may be said, like Actæon, to have been almost devoured by his own dogs, men might have been excused for believing that little more was to be gleaned where so many industrious reapers had gone before. And yet ever and anon, and particularly of late, arises some new adventurer, who, either by penetrating more deeply into the poetic spirit of individual parts, detects undiscovered meanings, new shades of feeling, or delicacies of allusion, in passages which had seemed time-worn and hackneyed; or elevating himself to that higher and more comprehensive point of view, from which objects are seen in their just relation and proportion to each other, is enabled, by a large and reconciling criticism, to blend in harmonious union many elements which had appeared inconsistent, and in what had seemed to common eyes little better than a magnificent but chaotic mass, the result of blind chance, and ill-directed power, to exhibit the goodliest proportions, the most profound and refined adaptation, and the most unerring dramatic skill in awakening and developing the leading impression which the whole was intended to produce upon the mind.

To the poetical mind, Shakspeare is, and ever will remain new; and though any criticism on such a subject which is now likely to be read, demands in the critic a very different intellectual constitution of mind from that which went to the composition of a Johnson, a Malone, a Warburton, or a Stevens, there is assuredly no want at present of that more enlarged and penetrating criticism, from which alone any valuable or original contributions to our views of Shakspeare's genius can be expected.

But besides the lights which the more imaginative spirit of modern criticism will, we doubt not, continue to throw upon the works of our great dramatist, another source of freshness and novelty is gradually becoming more and more available to us, derived from the criticisms and translations of Shakspeare in foreign languages. Every one must have felt how often a favourite author actually becomes more intelligible to him, or at least the full force and meaning of many passages are more palpably brought home to him, by reading in a foreign language those ideas which, by repetition, had become matter of rote, and ceased to strike with their original force in our own. Like flowers which, from being too much handled, have begun to lose their scent and bloom, but which revive again when plunged into water, so ideas and images, which from familiarity had lost their charm, regain their freshness and vigour in the new element of translation. In a still greater degree is this effect of novelty felt, when we peruse the foreign criticisms as well as translations of our great national poet, and see in what a different aspect, incidents, characters, and sentiments, nay, even the moral tendency of the piece, or the idea which it embodies, present themselves to those who view them from a position whence we are excluded by habit and education;—under the influence produced by other climates, manners, prejudices, or sympathies, and through an atmosphere so different from our own; whether it be the clear cold sparkle of a French sunshine, the rosy glow of Spanish or Italian skies, or the misty grandeur, the wavering splendour, and gloomy shadows of a German clime.

Of all the continental critics on Shakspeare, Germany has certainly furnished incomparably the most original, the most profound, and the most eloquent; indeed, we may say, the only critics who have studied Shakspeare in the right spirit; that is to say, with the feeling and the conviction that the gigantic genius who could produce so many characters and passages, the clear and obvious excellence of which had extorted the admiration of all mankind, could scarcely be supposed to be without a deep meaning and significance in others, where the purpose was less transparent; that as eyes accustomed to darkness begin to discover a thousand minute features in what had seemed at first to be but the palpable obscure; so by studying Shakspeare in a reverential and admiring spirit, and bringing the inward light of a warm sympathy and poetic feeling to bear upon his darker passages, they might discern in them much which had been imperceptible to less patient and loving observers, and satisfy the hasty critic, that Shakspeare was always consistent with himself, with nature, and dramatic propriety. This reverential tone is indeed the most striking characteristic of the German criticism on Shakspeare. In England, in general, our commentators, with few exceptions, have placed themselves almost on a level with the poet; nay, some of them, from the patronising style of their remarks, would even appear to look down upon him from a higher eminence. Johnson's preface certainly is sufficiently eulogistic as to Shakspeare's genius, but this general eulogy is almost immediately neutralised by the depreciating tone of the short summaries which he has attached to the separate plays. Dr. Johnson is a fair representative of his brethren. Something of this balancing system, this union of general expressions of admiration, with strong censure, or cold approbation of individual plays or characters, pervades all our earlier, and most also of our more recent criticism on the subject. Yet when applied to such a mind as that of Shakspeare, such a system of criticism leads to the falsest and most unsatisfactory results. If Shakspeare be the great mind which Johnson admitted, and the admiring world acknowledges him to be, it is impossible that he should have fallen into the violations, not merely of history or costume, but of nature, propriety, and good taste, which are ascribed to him. The existence of a mind, now rising to almost superhuman excellence, or reveling in the richest stores of beauty, simplicity, or sublimity, and the next moment sinking into depths of bombast, or sloughs of bad taste, with an utter unconsciousness and indifference whether he treads the clear empyrean or the muddy floor of earth, is a moral and poetical impossibility. The principle of the German critics is the truer one, that if Shakspeare be great, he is great in all, at least, in all essentials; that, viewed in the proper light, the errors, the inconsistencies, or the offences against good taste, disappear;—as lines which, in some optical puzzles, appear meaningless and distorted in one point of view, become straight when placed at the proper distance, assume a determinate expression, and are found to blend harmoniously into impressive forms of beauty or terror.

Their dissertations, therefore, on Shakspeare, are not so much criticisms, in the ordinary sense of the word, as admiring and reverential expositions of his beauties. He is the apocalypse from which the revelations of poetry and nature are to be gathered, and they are but the priests who humbly minister at the altar, and with such share of clearness and comprehension as nature has allotted to them, give forth his oracles. Instead of measuring him by standards derived from others, he becomes the universal standard by which all others are tried; every word, every quibble or pun, every jest of clown or serving-man, is viewed as indispensable; his violations of historical fact, or national costume, are proved to be committed on system, and to conduce to the true objects of the romantic drama; and the result of the whole is, that Shakspeare is in all things but another word for nature, poetry, truth.

That this enthusiastic and undeviating admiration of Shakspeare has led to not a few absurdi-

ties in German criticism is indisputable; and probably, in the course of the present and some future articles on the subject, will be only too apparent to our readers. It seems strange indeed, for instance, after the investigation which Shakspeare's learning has undergone, and the thousand proofs of his ignorance of mere details both of geography, history, and chronology, that any one should gravely maintain the desperate proposition which some of the German critics have attempted to support; that Shakspeare knew these matters quite as well as his critics, but either despised them or systematically and purposely neglected them. One may conceive, with Schlegel, that in sending Hamlet to study at the University of Wittenberg, long before Wittenberg itself was in existence, Shakspeare merely selected that university as the one probably best known in England at the time of the reformation, and one, where the speculative and polemical course of study which prevailed was most likely to have either created or fostered a state of mind like that of Hamlet. In the same way it is not perhaps difficult upon romantic principles to vindicate the practice of making the mobs of Rome, or the tailors and joiners of Athens, speak like their brethren of East Cheape. In all this Shakspeare may be supposed to have adopted his plan not from ignorance of facts, but from conviction of its superior dramatic propriety. But when he bestows sea-ports upon Bohemia, and lions in the forest of Ardennes, ascribes the death of Richard Cœur de Lion to the Duke of Austria, and then names that duke Limoges—(while the fact was that Richard met his death not from the duke, but from the hand of Bertrand de Gourdon, while besieging Vidomar Viscount of Limoges in the castle of Chaluz)—when copying his model in the old play, he introduces, for no apparent purpose, in Richard the Third, Margaret of Anjou, who, after her ransom by her father after the battle of Tewksbury, never again revisited England—in these, and many other instances of the same kind, it is difficult to see how his anachronisms or violations of history can be ascribed to any deeper cause, or more recondite origin than his ignorance of the fact. True, these and all the variations from history or costume which occur in Shakspeare, are in the last degree unimportant; they never in the slightest degree interfere with the current of our sympathies, but are swept out of sight at once by the torrent of Shakspeare's strong conceptions; and it would have been far wiser if the German critics, instead of attempting to maintain that they were deliberately adopted, had rather rested the defence of Shakspeare on the total insignificance of the blunders into which he is accused of having fallen.

Even in Germany, however, this tone of enthusiastic admiration is not of very ancient date; it cannot be carried farther back than that general burst of poetical feeling which about fifty years ago gave a new character to the literature of Germany. There, as in England, Shakspeare at first made his way slowly and with difficulty, from toleration to admiration, and from admiration to idolatry. The first notice of his existence is to be found in Morhof's *Deutsche Poeterei*, about 1700, where he is mentioned along with Beaumont, Fletcher, and Otway; but it is evident that the old scholar knew nothing more of him than the name. In 1741 a free translation of his Julius Cæsar in Alexandrines (then the common German dramatic measure) appeared at Berlin; and shortly afterwards attention was still farther called to the subject, by an Essay on Shakspeare by Elias Schlegel, pretty much in the style of our own dissertations about the same period, in which he is viewed as a man who, under the influence of a certain wild inspiration, certainly at times uttered very extraordinary things, but was utterly destitute of taste, regularity, or reading. He compared him—and probably thought he conferred high honour upon him by the comparison—with the well known old German dramatist, Andreas Gryphius, with whom, it seems to us, that he had not one point of connection, save that the latter happened to be born on the day the former died, and that both dealt largely in apparitions.

One would have supposed Elias Schlegel's estimate of Shakspeare's genius sufficiently cool and moderate; but cautious as it was, it seemed little less than a damnable heresy to the "Philistine" school of Gottsched, who viewed the matter as a contest *pro aris et focis*, and endeavoured by a melancholy mixture of pedantry and stale jests to annihilate any little impression which even the lifeless pleading of Schlegel might have made upon the public. "The English," says Gottsched, in his "Handlexicon der Schönen Wissenschaften," obviously thinking he had disposed of Shakspeare's claims in a single sentence, "the English are loud in praise of his dramatic poems, which are numerous. But a certain Mrs. Lennox has of late exposed the errors even of his most celebrated pieces." Poor Mrs. Lennox! "Non tali auxilio," we fear, was Shakspeare to be dethroned from his supremacy in English literature. For a time, however, Gottsched and his brethren seem to have succeeded. We may take the account of Shakspeare, given by Jocher in his Lexicon (1760,) as containing a fair summary of the current information and opinions at that time prevalent, in regard to the subject of his biography.

"Shakspeare, (William,) an English dramatist, born at Stratford, 1564, was ill educated, and understood no Latin, but made great progress in poetry. He possessed a certain comic humour, but could at the same time be serious, excelled in tragedies, and had many ingenious and subtle contests with Ben Jonson, though neither gained much thereby. He died at Stratford, 1616, 23d April, in his 53d year. His plays and tragedies, of which he wrote many, are printed in London in four parts."

In 1762, a complete translation of Shakspeare was for the first time undertaken by Wieland; perhaps the very last person whose genius and habits of thinking qualified him for such a task. How the German Voltaire should ever have felt that admiration of his author which could animate him to undertake an enterprise of such certain difficulty and such doubtful popularity, is not easy to comprehend. He was not, indeed, as yet the

poet of the Comic Tales, the Idris and Zenide, or Agathon,—but even from the first, we cannot but feel, that between him and Shakspeare there was a great and deep gulf fixed, and wonder that he should have ever attempted, with his feeble wings of French wax, to overpass it. It can occasion no surprise, however, that a task so uncongenial was soon abandoned, and that Eschenburg was obliged to complete the translation which Wieland had begun.

Viewing this translation in comparison with its successors, it appears rude and unsatisfactory enough; but considered as the first attempt to Germanise Shakspeare, it is by no means destitute of merit. Even in the homely garb of prose in which Eschenburg has clothed the energetic versification of Shakspeare, the native beauty or sublimity of the thoughts shines translucently through; a certain vigour and musical rhythm frequently lends a charm to the prose, which, in some measure, supplies the want of verse; while the translator himself, as he proceeded with his task, seems to have felt the conviction dawning and growing upon him, that, in this "wild and irregular genius," who had neither taste nor Latin, the most consummate beauty in the form was united with perfection in the substance, and that all attempts to embody the subtle essence and charm of the original in prose was a hopeless struggle. He himself makes this admission in regard to two of the plays, Midsummer Night's Dream and Richard the Third (Romeo or Hamlet, we think, might, with more justice, have suggested the remark than the latter); and accordingly, in these two instances, he has attempted a poetical version, which, even beside the closer and more masterly translations of modern days, maintains a respectable position.

The translation, however, on the whole, was coldly received. It was praised and—not read. But a new impulse was now given to the study of Shakspeare by the Dramaturgie of Lessing,—the first piece of German criticism in which the vast superiority and profound art of Shakspeare's dramatic powers were distinctly or adequately maintained.

Lessing is, in German criticism, not unlike Johnson in English—a clear and logical thinker, with a mind of great range and comprehension, learned and acute, a consummate master of polemical criticism, and not without a strong sense and feeling of poetry, though too calmly clear and cold to be himself poetical. No man perhaps ever approached so near to the promised land of poetry, without entering it, as Lessing. Like Johnson he saw and felt the mastery of Shakspeare's genius in the main; his quick perception could not overlook the magnificence of its proportions, nor his just taste and right feeling be insensible to the unerring truth and sagacity with which his inspiration was calculated to reach the heart. It is true that into much that was of a subtle and more etherial texture he could not enter; his plummet, though it reached farther than that of his predecessors, was never made by nature to fathom the full depths of Shakspeare's "infinite;" his sight is clear, piercing, and correct, in matters of life, but he has nothing of the deuteros copy of the true poet, which enables him to look beyond into the world of imagination, and to think and reason with the same certainty with regard to the visionary creations with which it is peopled, as if with regard to the things and beings of real life. Yet even the criticism of Lessing was a prodigious advance; the shallowness, the pretence, and false principles of the French dramatic school he detested, and devoted his whole powers of reasoning and sarcastic illustration (and who that has either read his Dramaturgie, or his famous controversy as to the Wolfenbuttle MSS., can have forgotten with what caustic vigour he could wield the weapons of controversy?) to exposing with relentless severity its conventional and unnatural character, and endeavouring to lead his countrymen to the appreciation of higher things, by the study of the English school of dramatic poetry, and above all, of Shakspeare.

It is no doubt to be regretted, that so small a portion of the Dramaturgie is occupied by Shakspeare, and so much wasted on pieces of which the very names are now forgotten; but the criticisms on Romeo, Othello, and Richard the Third, must be always regarded as containing the first outlines of an enlarged, independent, and philosophical criticism of the great dramatist.

Perhaps the first effect of Lessing's adventurous criticism was rather to startle than convince, but it now became necessary at least to *read* Shakspeare in order to refute the supposed literary heresies of his advocate, and the fruits of this increasing study were soon visible in new translations, essays, and commentaries. The translation of Love's Labour's Lost (an unfortunate choice) by Lenz, the Criticisms of Gerstenberg, (the author of Ugolino,) and of Herder, following each other in rapid succession, indicate the steadily advancing interest with which Shakspeare was now regarded in Germany. But the sphere of a foreign poet's influence is most effectually and speedily enlarged, when a native poet of kindred and congenial talent condescends to borrow inspiration from his labours, and instead of critical estimates of his genius, presents his countrymen with pictures conceived in the same spirit; at once imitations as regards their source, and originals in their whole treatment and execution. Who can doubt that Goetz of Berlichingen, that living picture of the sixteenth century, with its religious convulsions, its struggles between feudal and imperial despotism, its iron-handed, yet gentle-hearted, warriors, its noble simple-minded maidens, who with such bewitching and trusting openness bestow their hands without hesitation where they have placed their hearts,—its weak wavering, or deceitful court minions,—its luxurious abbots—its noisy pageants of banquet and battle—its sweet transitions to the stillness and solitude of the ancestral castle, o'erhanging the silver-blue Mayn or winding Rhine;—who can doubt that that most powerful and touching picture owes its origin to those striking condensations of the spirit of English history, afforded by Shakspeare's King John, King Richard II., and the bloodstained chronicle of the Wars of the Roses? As little can any one hesitate to recognise in the Robbers of

Schiller the influence of Macbeth, (which Schiller has very beautifully translated), of Richard III., and of Hamlet. The scepticism takes a more clamorous and despairing turn, the villany is more ostentatious, more logically consistent, more utterly unredeemed, consequently more unnatural; the spirit of a modern philosophy, and modern relations of society, somewhat alters or hides the forms which occupy the foreground; but "Shakspeare's shadow" still hovers behind those creations, and points at them for his: and still, under every disguise, "we know the man, by the Athenian garments he hath on." From the same source—only with a somewhat more turbid and noisy current—flowed the endless stream of chivalrous dramas (*Ritter-Stucken*) from Otto of Wittlesbach to Adelaide of Wulfingen, with which Germany was for some years inundated.

It may probably be said, that Shakspeare, like Falstaff, had in this matter no great reason to be proud of his followers, who, in their chivalrous panoramas, present us, not so much with men, as with dramatic automata covered with suits of mail, overtopped with helm and plume, and figuring about, lance in hand, by means of some strange internal machinery within the skeleton, but without one symptom of life, one breath of spontaneous and natural inspiration. This is quite true, but the error lay simply in this, that they did not truly *study* Shakspeare, though they copied him; they were contented, like Wallenstein's soldiers, if they succeeded in spitting and coughing like their general; his bustle and rapidity of movement, his daring mixture of tragic and comic emotion, in short, the mere wardrobe and *properties* of his drama, they could admire and transfer to their own with no inconsiderable dexterity; but this was generally the limit of their endeavours; and, with few exceptions, they penetrated no farther than the external and accidental qualities—the internal and essential lay equally beyond their perceptions and their powers. Rude, however, and unsatisfactory as these performances of the rack and tournament, bowl and dagger school must now be accounted, we are rather of the number of those who view them as indicating on the whole a decided advance in the right path. Otto of Wittlesbach, to be sure, shows poorly beside Goetz and Egmont and the still more Shakspearean Wallenstein, but what is its position when compared with the Richard III. of Wiesse, "a very pretty fellow in his day," or the cold elaborate imitations of the French school by Elias Schlegel?

When an author has reached the distinction of having his tragedies represented as *stock pieces*, to use the theatrical term, upon a foreign stage, his dramatic fame may be considered as pretty securely established. Such was now the situation of Shakspeare. Schröder, one of the most accomplished of the German actors, probably feeling how much his professional talent was fettered by the limited and conventional range of the dramas of the day, being accidentally attracted to the study of Shakspeare, was induced to attempt the introduction of his plays on the stage; though, in order to suit them to his notion of stage effect, he certainly handled them with a cruelty worthy of Procrustes himself, here expanding, there contracting, striking out without mercy many of the finest passages, because they did not advance "*the progress of the piece*," and reducing almost to shadows many of those most exquisite creations to which Shakspeare's genius had given colour and a body. Hamlet, the melancholy Hamlet, to whom Denmark has ceased to be any thing else than a prison, and the world itself seems but as a grave, in Schröder's version closes the scene by mounting the throne amidst goodly protestations of his patriotic intentions; and the poor heart-broken and life-sick Lear, victorious over his rebellious subjects, instead of invoking heaven's vengeance over the body of Cordelia, lives to reassume the sceptre of Britain, and to share his dominion with his dutiful daughter. Yet even thus maimed and dislocated—shorn of many of their most etherial and exalted beauties—Shakspeare's characters, so instinct with an inward principle of life and thought, so different from the mechanical steam-engine productions of the French school, made their way triumphantly into the hearts of the people, though some of them, such as the Merchant of Venice, and Julius Cæsar, and Measure for Measure, at first unaccountably failed. Yet Lear, Hamlet, Macbeth, and Othello, and others, became instantly popular, and from that moment Shakspeare might be considered as naturalised on the German, scarcely less than on the English stage.

Still there was wanting that which alone could exhibit Shakspeare in his true light—a translation at once faithful and poetical. No constitution of mind is more rare than that which is required to form an accomplished translator; a mind of highly original and inventive cast, like that of Goethe, will not descend to the task; it may adapt and alter, as in the Iphigenia in Tauris, but it cannot literally transfuse into its own language the thoughts and conceptions of another. Yet to do this thoroughly requires a plastic power, a delicacy of perception, a tempered warmth rather than fire of imagination, and a command of expression which is seldom found save in connection with the higher order of mind. Now and then, however, instances do occur of minds of this peculiar construction—adjective rather than substantive—who have little original poetical power, but the most remarkable facility in giving effect to the views and feelings of other beings, seemingly intended by nature herself as mediators between the past and the present, and between the inhabitants of different climes; and who seem to resemble parasitical plants, which require to wreath themselves round some old trunk for their support, but repay the obligation by adorning it anew with the richest verdure, and propping it by their interlacing stems, when it verges towards decay. Such in poetry at least, was Augustus William Schlegel; as the poet of "Alarcos," certainly occupying no very distinguished portion among the dramatists of his country—as the translator of Shakspeare entitled—we say it deliberately—to the very proudest elevation yet awarded to any European translator. His translation approaches, as nearly as we can conceive any translation can, to an absolute transcript of the original; the rose-

ate glow of love in Romeo and Juliet—the glimmering haze in which hover the elves of Midsummer Night's Dream—the wayward gloom of Hamlet, a reflection as it were from the fantastic and uncertain skies of the north—the dew-besprinkled woodland freshness and pastoral melancholy of As You Like It—the magic atmosphere of virgin solitude and purity that envelopes the Tempest—the element of music and moonlight in in which Twelfth Night and Merchant of Venice appear to float—the broad and boundless flood of humour that interpenetrates the two parts of Henry the Fourth—are all caught and reflected with a truth of perception and beauty of finish, which, when the reader is tolerably familiar with the German, not unfrequently lead him almost to forget that he is not perusing Shakspeare himself. As yet the translation, unfortunately, is incomplete; indeed we believe, Schlegel has added nothing to it since 1801, save the translation of Richard the Third, but we would still hope that he may be induced to resume the task; and to leave to his countrymen and to the world a complete, and as nearly as the differences of languages will permit, a perfect translation of Shakspeare.

In giving this decided preference to the translation of Schlegel, we are far from meaning to deny the great merits of that begun, but never likely to be completed, by John Henry Voss, and his sons Henry and Abraham Voss. But no one can compare the two without feeling, that, though there may be in the latter apparently a more close and literal rendering of every word, there is a want of that spirit of poetry, that power of seizing and giving back the very impression caused by the changing tone of the original, which is so obvious in Schlegel's. In translation, cases of difficulty must often occur, where either the letter must be sacrificed to the spirit, or the spirit to the letter: in such cases Voss adopts the latter course, Schlegel the former. Voss's translation looks more like an exact echo of Shakspeare, but, like other echoes, fainter and weaker than the original: in Schlegel's, we think we hear the voice of Shakspeare himself. Voss, however, has not even the merit of being uniformly consistent to his principle of translation; he sometimes uses a more refined expression, where that used by Shakspeare was infinitely more forcible and picturesque. When Othello, overhanging the bed on which lies the body of Desdemona, breaks out into that affecting apostrophe,—

"Now, how dost thou look now? O ill-starr'd wench!
Pale as thy smock," &c.

Voss does not venture to translate the word "smock" by the natural expression *hemd* or *weiberhemd*, but substitutes the vague generality of "*tuch*," any sort of clothing. Yet, is there not something ghastly, corpse-like, in this familiar term? Does it not carry our thoughts at once back to the desolate bridal bed, and forward to the swiftly coming grave?

Of the later translation by Otto Von Benda, which we believe is the only complete translation of Shakspeare by a single hand, we cannot speak, having had no opportunity of consulting it; nor of the numerous translations of single plays, which have been executed with more or less success in Germany. We turn now to the critical essays on Shakspeare, which naturally kept pace with the increasing interest and popularity of the original; and of which it is our object in the present, and some succeeding papers, to exhibit specimens. With the views of Goethe on Shakspeare, and particularly on the character of Hamlet, our readers are probably familiar, from the excellent translation of Wilhelm Meister by our friend Mr. Carlyle; and the eloquent dramatic criticisms of Augustus William Schlegel are already pretty well known to the English reader. Of those of Tieck, however, to whom, we will venture to say, Shakspeare is better known than to most of our countrymen, and still more of Franz Horn, the latest and the most elaborate expositor of Shakspeare's dramatic characters, little or nothing is known in England; and we cannot but think we shall render an acceptable service to our readers in presenting them with some liberal extracts from their criticisms. We shall begin with Hamlet, to which Horn has devoted an essay of nearly 100 pages, to say nothing of a supplement of about half that length.*

Why do we begin with Hamlet? What is the secret charm which irresistibly attracts the readers of Shakspeare to this tragedy? We should say, its baffling mystery, its inscrutable character. Could we fathom the principles of Hamlet's character; could we reduce to any logical scheme or plan the strange anomalies it presents, it might still remain, as now, an object of admiration, but not of that awful curiosity, mingled with love, which it at present excites. Our imagination is excited by it as by the contemplation of a mystic and enigmatical character in real life, which we know to be a reality, whose actions we feel must have their sufficient causes, but whose secret springs of action, "the fountain from the which his current runs," lie too deep for discovery. The play resembles some enchanted region looming before us in wild magnificence; as we approach we feel the solid earth beneath us, yet we know that we are treading haunted ground; on all sides the prospect fades away into the undefined and illimitable; and even those objects which had at first seemed cleared, waver and grow dim, or change their shapes, even while we gaze upon them. In vain we endeavour to find some position from which a clear view of the whole domain may be obtained. The mist is only dispelled from one quarter to settle down upon another; and to every new wanderer in this realm of shadows, do the shapes which inhabit it, and the scenes which it presents, show themselves in some new form of sublimity and beauty.

Is there at this moment one important point in Hamlet's character which is clear and undisputed? His sanity or madness? Great names are not wanting either on the affirmative and negative side of the question; and, to say the

* Shakspeare Erlautert von Franz Horn. Leipzig. 5 vols.

ruth, the argument is capable of being main-ained almost with equal plausibility on either. His love for Ophelia? Was it but "the trifling of his favour"—the mere temporary escape and elaxation of a mind habitually a slave to other and deeper thoughts; or was it indeed a love, of which "forty thousand brothers" could not make up the sum? Was Hamlet really destitute of energy and moral courage, or was his conduct merely the result of a position in which, by one too "much reflecting on these things," no one course could be chosen, because all seemed equally advisable, or equally dangerous? On these subjects no two men think, or probably ever will think, alike. The circumstances of Hamlet's life, exhibited by Shakspeare, do not afford the conditions out of which the problem of his character is to be evolved. Hence it will ever, as Schlegel truly and beautifully says, remain like those irrational equations, in which a fragment of unknown magnitude remains, that will in no manner admit of solution.

The charm, therefore, lies mainly in its mys-tery; but the mystery of Hamlet's character is but the type and shadow of the still greater mys-tery and perplexity of existence itself—a thought which meets us at every turn as we peruse this tragedy, and haunts us like a spectre that will not depart. In Hamlet we see a picture of hu-manity "in single opposition, hand to hand," with a merciless and iron destiny, which, even from our own breasts, from the very nobility and activity of our faculties, draws forth the armoury of slings and arrows, with which it harasses, and eventually overpowers us. Could Hamlet have dulled the edge of that apprehension that makes him "like a god;" could he have said to his rest-less intellect, "Peace, be still;" could he have been contented with the outward shows and most obvious consequences of things, instead of endeavouring to exhaust all their remote and possible relations, all might have been well—for then the power of free action might have remain-ed to him, and in freedom of action he would have been happy. But this he cannot do: his intellect demands exercise, and he cannot live except in an element of enquiry. Thus labour-ing with his finite though noble faculties against infinity and eternity, the result is universal doubt. One by one all the props on which he leaned have given away. His mother's guilt has unhinged his confidence in the stability of the moral world; and now nature herself seems to abandon the even tenor of her course, since the dead have burst their cerements and are per-mitted to revisit the glimpses of the moon. The moral confusion in his mind is now complete; for all without and all within have alike lost their fixity. Nothing now seems to be good or bad, "but thinking makes it so," and every course of action alike, since in none is certainty or tranquillity to be obtained, and all seem to lead only to the brink of the limbo of doubt. Sick at last of the whirl that surrounds his ves-sel, he throws down the helm of free-will in despair, and seems to feel a wild exultation in drifting, at the will of chance, over the boundless ocean of possibilities.

And blindly and fearfully, indeed, does chance deal with him, and all around him, from the commencement of the play to the close. In all Shakspeare's other dramas there appears some-thing elevating, something consoling, amidst the depths of suffering. Even in Lear, where per-haps the tragic gloom is more uniform than in any other of his plays, the moral and physical tempest which rages through the four first acts drops into a solemn and soothing stillness in the last. Lear and Cordelia perish, it is true, but not until their destiny is fulfilled. The daugh-ter's work of love and duty is done. The poor discrowned old man has revived to reason, and regained his daughter. What had life to offer to either, that could leave on the heart a more deep though chastened impression of sorrow? After life's fitful fever, they sleep well; and from the battle-field on which their mortal forms are lying, the imagination sees their "delighted spirits" reascending, hand in hand, to that heaven whence they had their birth, and where they are again to find their home. In Hamlet alone the tragic night which wraps the catastrophe is un-broken, "and darkness is the burier of the dead." Chance reigns relentless through the whole. On an "envious sliver" of willow hangs the life and death of Ophelia; it breaks by chance, and she is drowned. Chance brings back the ship-wrecked Hamlet to her funeral, and impels him to the quarrel with Laertes above her grave; chance produces the change of rapiers, which involves Laertes in the fate he intended for his victim; chance commends the poisoned chalice to the lips of the queen; and chance, at last, not all the subtle conceptions and long cherished plans of vengeance over which Hamlet had brooded, accomplishes his great revenge, by ex-citing him to that ecstacy of horror and despair at his mother's death, in which he plunges his sword into the body of the adulterous and mur-derous king. The young, the good, the noble, the impetuous, the innocent, are taken; the weak, the worthless, the aged, the commonplace, are left. Hamlet and Ophelia fall, that such as Horatio and Osric may do the honours of their funeral. The catastrophe reminds us of what we have somewhere read of the descent of a mountain avalanche on some peaceful Swiss vil-lage, at the foot of the Righi, crushing every human being beneath its mass, yet sparing some insignificant cur to bay the moon uninjured from above the ruins.

Were this unmitigated and remorseless dis-play of destiny the general characteristic of Shakspeare's plays, their effect on the mind would be oppressive and appalling. Frederick Schlegel, indeed, (the brother of Augustus Wil-liam,) in his parallel between Shakspeare and Calderon, has most unjustly attributed to all of them this tendency, which, in any true sense, is applicable only to Hamlet. "Shakspeare," says he, after an animated eulogium on that principle of divine faith and purification which pervades Calderon's plays, and of which the most perfect examples are afforded by the constant prince, and the devotion of the cross, "has exactly the opposite fault of too often placing before our

eyes, in all its mystery and perplexity, the riddle of life, without giving us any hint of its solution." True it is, that in many of them the labyrinth of life is laid before us dark and dreary enough, and from within we hear the Sphinx propounding her fearful riddles; but it is not true in general that we are left without a clew to its mazes, or an Œdipus to solve the enigma. The solution may not always be complete; but it is sufficient to leave behind that tragic *consolation*, which it is the aim of the dramatist to produce; for in this world we live, in all things, in hope, not in certainty: and it is enough for us, if athwart the shadows of the night which still lie heavy on all beneath, we can trace on high the glimmering light, "and golden exhalations of the dawn."

Even as to Hamlet, however, it will be seen that Horn, who is the most thoroughgoing admirer of Shakspeare we have yet met with, will not admit that such is the case. He contends that even there sufficient indications of this higher principle are to be found in the appearance of the ghost, with which the piece opens, and the arrival of Fortinbras, the representative of a new order of things, with which it closes. On this we shall have a word to say afterwards.

It is time, however, to come to the observations of the German critics on the character of Hamlet, and the conduct of this most remarkable play. The germ of Goethe's estimate of Hamlet's character, and of the leading idea which Shakspeare intended to convey, is contained in the following paragraph:—

> "'The time is out of joint; O, cursed spite!
> That ever I was born to set it right.'

"In these words, I imagine, will be found the key to Hamlet's whole procedure. To me it is clear, that Shakspeare meant in the present case to represent the effects of a great action laid upon a soul unfit for the performance of it. In this view the whole piece seems to me to be composed. An oak-tree is planted in a costly jar, which should have borne only pleasant flowers in its bosom; the roots expand, the jar is shivered. A lovely, pure, noble, and most moral nature, without the strength of nerve which forms a hero, sinks beneath a burden which it cannot bear, and must not cast away. All duties are holy for him—the present is too hard. Impossibilities have been required of him; not in themselves impossibilities, but such for him. He turns, and winds, and torments himself; he advances and recoils, is ever put in mind, ever puts himself in mind; at last does all but lose his purpose from his thoughts: yet still without recovering his peace of mind." This is finely thought and imagined, but it gives too favourable an impression of Hamlet's character, which at no time could have been of that pure and perfectly amiable kind which is here represented. On the contrary, good and evil must have been largely mixed in him from the very first, though the activity of the worser part of his nature may have been more formidably developed by his misfortune. Schlegel's estimate seems to be nearer the truth.* "Respecting Hamlet's character I cannot, according to the views of the poet as I understand them, pronounce altogether so favourable a sentence as Goethe's. He is, it is true, a mind of high cultivation, a prince of royal manners, endowed with the finest sense of propriety, susceptible of noble ambition, and open in the highest degree to enthusiasm for the foreign excellence in which he is deficient. He acts the part of madness with inimitable superiority; while it convinces the persons who are sent to examine him of his loss of reason merely because he tells them unwelcome truths, and rallies them with the most caustic wit. But in the resolutions which he so often embraces, and always leaves unexecuted, the weakness of his volition is evident: he does himself only justice when he says there is no greater dissimilarity than between himself and Hercules. He is not solely compelled by necessity to artifice and dissimulation: he has a natural inclination to move in crooked ways; he is a hypocrite towards himself; his far-fetched scruples are often mere pretexts to cover his want of determination; thoughts, as he says on a different occasion, which have

> 'But one part wisdom,
> And ever three parts coward.'

He has been chiefly condemned for his harshness in repulsing the love of Ophelia, to which he himself gave rise, and for his unfeelingness at her death. But he is too much overwhelmed with his own sorrow to have any compassion to spare for others; his apparent indifference by no means gives us the measure of his internal perturbation. On the other hand, we evidently perceive in him a malicious joy when he has succeeded—more through necessity and accident which are alone able to compel him to quick and decisive measures, than from the merit of his courage—in getting rid of his enemies; for so he expresses himself after the murder of Polonius, and respecting Rosencrantz and Guildenstern. Hamlet has no firm belief either in himself or in any thing else; from expressions of religious confidence he passes to sceptical doubts; he believes the ghost of his father when he sees it, and as soon as it has disappeared it seems to him a deception."

The colouring which Tieck has thrown around the character is perhaps still gloomier. We shall afterwards see that he imputes to him, in one particular, a degree of baseness, which, if his conjecture is well founded, would sink his character so much as to deprive him of all our sympathies. Of the mixture of qualities in the character generally, he says,* "Contempt of life, mingled with a certain nervous clinging to it, characterises Hamlet in most of the scenes: a distinctive feature in those minds, which have lost the first bloom of existence through offended pride and mortified feeling, and the calm steadiness of belief through restless investigation. In this troubled state of being all the passions shew themselves in gloomy colours,—rage, revenge, cunning, envy, pride, and ambition, stand fearfully prominent, and yet so relieved and trans-

* Dramatic Lectures, lect. 13.

* Dramaturgische Blatter, vol. i. p. 120.

igured as it were by feeling, wit, taste, knowledge, ınd personal dignity, that this wonderful appear- ınce fascinates and fetters the mind: nay, even ts most repulsive features appear not without a :ertain show of splendour and magnificence. This strange unfathomable union of folly and wisdom, of greatness of soul and pusillanimity, of love and hatred, of vanity and true pride; this over, who shows passion, yet on whose love we :an place no reliance; who speaks and feels like ı faithful and noble friend; whose attractive ami- ableness renders him, when he pleases, the popu- ar idol, who, in a certain sense, perceives so :learly all the relations by which he is surround- ed, and yet is deceived by every one; this mix- ure of heterogeneous positions, which, though in ı less degree, we so often meet with in real life; hose wonderful contradictions, under which every nind of high endowment more or less labours; ıll these combined features afford the key to the ıniversal popularity of this tragedy and this cha- acter."

Horn, in his treatment of Hamlet, has some- what varied from his usual course. Instead of aking the characters one by one and attempting ıt once to sketch their outlines, he in this case ollows the course of the scenes, interspersing his exposition only with such observations as arise ıut of the partial lights which these scenes pre- ient. He attempts no formal summary of the ıtrange whole, probably because he felt that any ıuch must necessarily be either paradoxical, and ıartially untrue, or so vague and general, as to ıave little meaning or significance; but leaves the eader to combine for himself, in the best way he :an, all the lights and shadows which he has ouched into such a whole as best harmonises with his individual feeling.

The singular felicity of dramatic exposition which the first scene in the spectre-haunted plat- orm of Elsineur affords; the consummate skill ıy which every thing that can awaken curiosity ınd terror is combined;—midnight, the glimpses ıf the moon above, the timeworn towers behind, he hollow murmur of the sea beneath,—the cold, hat makes the very soldier sick at heart,—the ıminous stroke of the bell, the shadowy stalk of he buried majesty of Denmark;—all these fea- ures were too obvious not to be acknowledged ınd dwelt on by critics of every nation. But how inely, after these ghostly terrors, is the mind led ıack to cheerfulness and confidence by Horatio's ıbservation on the crowing of the cock, and Mar- cellus's allusion to the protecting influence of Christmas.*

"The coming of the friendly day is indicated, and the overcharged heart seems already to see its light, and to be refreshed by the influence of the morning breeze. Marcellus gives additional exultation to this feeling by his allusion to Him, through whose appearance a higher light has been vouchsafed to all; and though his refer- ence be only to a childish belief, that on this sacred night no evil spirit dare walk abroad, ("so hallowed and so gra- cious is the time;") yet even this recollection is enough to fill the heart with a grateful and consoling feeling. It is enough to indicate a divinity, and the poet well knew that, without such an indication, the terrors of the night would be felt to be too powerful. Horatio, however, whose attention is more directed to the external, contin- ues his allusion to the daybreak in those exquisite lines—

'But see the morn in russet mantle clad,
Walks o'er the dew of yon high eastern hill'—

Thus it is. Nature is still the old, the true, the ever-re- novating friend of man;—whatever may be the changes and chances of life, however deep and fearful the secrets with which the spirit of man may have to deal, she keeps her ancient unaltered course; and after the spectral night of the grave, the morning, bright as ever, like a young and blooming deity, walks purple-clad over the dews of the eastern hill."

From the dusky platform of the palace we are led to the audience-chamber, into the presence of the king and queen, glittering in all their bridal pomp, while beside them stands the melancholy Hamlet—his "inky coat" an emblem of the dark- ness of his mind. The ambassadors are despatch- ed to Norway; Laertes takes his leave for France; and then, for the first time, the king addresses Hamlet. His dress—his manner—his proposal of returning to Wittemberg, have all been rank- ling in the mind of the king, and his feelings break out through all the assumed composure and condescension of his address. Tieck is singularly at issue with Horn, and we suspect with the whole world beside, in his estimate of Claudius, both in this scene and throughout the play; and proba- bly most of our readers, after perusing his remarks on the character, will think him at issue also with himself.*

"The king, sprung from a family of heroes, has many great and excellent qualities, though these are doubtless outweighed by many bad and base ones. Yet he is throughout kingly and dignified; he can be guilty of wicked and ruthless deeds, but he cannot appear insig- nificant; treachery is his nature; his very being is made up of equivocation and perfidy: yet all these revolting qualities he clothes with an air of nobleness and amia- bility. He is strong and large of stature, but handsome; even the ghost describes him as in the highest degree seductive; and Hamlet, though behind his back he paints him as every way mean and detestable, yet feels himself always rebuked and confused in his presence, and cannot make good before his opponent the high-sounding terms of which he is so liberal when alone. The usurper is neither so contemptible, nor the murdered monarch so excellent, as the son under the influence of passion re- presents them in the awful scene with his mother.

"When the king first appears, we see in him all the dignity of a king; his address is pointed, his bearing noble; he despatches business and ceremony with tact, decision, and skill. He then turns with something of exaggerated courtesy and condescension to Laertes, flat- ters him, and still more his father, Polonius, whose fa- vour and attachment he is naturally anxious to conciliate. Laertes obtains, without requiring even to ask for it, the trifling favour of being allowed to revisit France; and now the king turns with friendly and gentle address to Hamlet. Affectionate as the opening is, the very cir- cumstance that Hamlet is the last person who is address- ed, sufficiently shows the degraded position of the prince. He answers little or nothing, and breaks forth with in- tentional vehemence, when his mother, whom he de- spises, attempts to console him by some trivial common-

place. The king is naturally offended, and Hamlet must submit with patience to be schooled in a speech, which, however, contains much that is in itself just and well-founded. He is obliged to yield to the apparent entreaty of the king, and to remain. The king celebrates this occasion, as he seems to do every other, by a revel. He is a debauchee, a drinker—he is immoderate in all his pleasures; but even the ghost complains, that he too had been cut off 'in the blossoms of his sin.' There is a resemblance between the two brothers, and also between them and Hamlet; all of them are fond of hearing themselves talk, and they talk well. They deal in sentences and maxims, and the defective character which is perceptible in Hamlet characterises more or less all the other personages of the play."

We have quoted this passage, certainly not because we agree with the opinion it contains, but as a specimen of the strange conceits into which the anxiety to be original sometimes seduces critics. Every other critic had, as in duty bound, abused Claudius. Tieck, therefore, it seems, must defend him; but really the defence seems either to contain its own refutation, or is based on so slender a foundation that we cannot but wonder that such a theory should have been adopted, or at least that if adopted, it should not have been better defended. Of Hamlet's father, any thing either hinted or expressed, gives the highest idea; his heroism, his nobleness of character, his affection for the queen, his perfect union of the majestic and the amiable, are not to be mistaken. That he describes himself as cut off in the blossom of his sin, is but the confession which the best of us must make, who has been surprised by the sudden stroke of death, "unhousel'd, disappointed, unaneled." But in the treacherous murderer who succeeds him, what one quality—we do not say to engage our love—but to mitigate our dislike and contempt, can be found? where are the "*great and excellent*" qualities that his apologist ascribes to him? Are such indeed consistent with the moral conception of a being whose whole existence is admitted to consist in treachery, equivocation, and perfidy? Is there even an attempt made by Tieck himself to enumerate them? We look in vain for a reference to any but his kingly bearing, his eloquence, and his self-possession, when Laertes, incensed by the news of Ophelia's death, and his father's murder, bursts into the palace, and threatens the anointed majesty of Denmark. The first is hardly worth contesting; for, assuredly, so factitious and accidental a point can scarcely be seriously mentioned as a redeeming quality; his eloquence, again, we are disposed to think with Horn, consists generally of mere rhetorical commonplaces, which neither come from, nor reach the heart; and, as for his dignified confidence, when assailed by Laertes, we would say, he knew his man well—he knew him to be a mere brawling gallant of the day, as weak, unprincipled, and vacillating, as he was noisy and wordy; he knew there is a certain "divinity doth hedge a king;" and confident of the strength by which he was supported, and of the moral weakness of his adversary, he remains untroubled. Is there any thing in all this that for one moment gives us an idea of any real courage, or any true self-reliance in his character?

But to return to the progress of the play. The scene in the audience-chamber is followed by the monologue,

"O, that this too, too solid flesh would melt!"

a monologue expressive of the profoundest melancholy and disgust of life, yet immediately succeeded by the scene with Horatio, which opens in a cheerfully—almost jesting tone. "It is a traditional, and almost ineradicable error," says Horn, "that a serious and melancholy character can never, either in speech or action, be other wise than melancholy. Nature and truth know nothing of such a position, but the very reverse. As an eye directed for twenty-four hours without interruption to a single point would become blind, so the mind of the unfortunate would destroy itself if his grief could find no relaxation; if wit and humour did not stand so close even to the deepest melancholy. Experience should have taught us that there is nothing wittier than—despair!"

Polonius comes next upon the scene, and here again Tieck differs from most other commentators, and we think, also, from common sense. Not contented with trying to repel the exploded idea of Polonius being a mere buffoon, he is determined to exalt him into a most profound, respected, and able statesman. True, Polonius may have been a very excellent privy counsellor in his day—though even then no Solomon—but he is evidently *passé;* he draws on his memory, not his judgment, for his wise saws and excellent advices to his son and daughter, which no one can doubt he is now delivering for the thousand and first time. But Ophelia;—here, indeed, is metal more attractive—what is her situation? What is the nature of that relation in which she stands to Hamlet? Of all Tieck's offences, what we can least forgive him is his treatment of the character of Ophelia, and of that of Hamlet, in his supposed relation to her. He begins, of course, after the manner of commentators, with finding all his predecessors totally in the wrong.

"Of all the characters, that of Ophelia appears to me to have been the most misunderstood. It may be difficult, since the poet has rather hinted at than expressed it, to give any clearness to this enchanting combination, in which vanity, coquetry, the influence of the senses, love, art, and seriousness, deep melancholy, and madness, show themselves in succession, or at the same moment. If, however, I do not misapprehend his purpose, the poet meant through the whole piece to indicate, that she had, in the intoxication and abandonment of passion, already yielded to the prince so much, that the warnings and hints of Laertes come too late. It is worthy of the great poet, that this relation of the parties, like so many others in the piece, remains an enigma; but it is only in this point of view that Hamlet's conduct attains its full bitterness, or Ophelia's grief and madness its consistency."

We will do Tieck the justice to add, that his proofs are ingeniously put together—though, after all, they prove nothing. What point in Ophelia's character is not sufficiently explained by the simple consideration, that she had early surrendered her young heart to the "rose and expectancy of the fair state;" that he in happier times had loved her once, and led her to believe so; that now, with a heart lacerated by misfortune, distracted by

doubt, oppressed by the load of a mighty undertaking laid upon it, without the power of execution, he seems to have forgotten the past, and that his language breathes only bitter irony, suspicion of female virtue or constancy; that this wild commotion of mind in her supposed lover soon appears converted into madness; that her father is dead, murdered by that lover—her brother gone—not a friend left to protect, to advise, or to console? Is there not in all this, working on a frame of unusually nervous tenderness, a sufficient explanation of her grief and madness, and in the madness itself a sufficient explanation of all these equivocal expressions which escape from her in the eclipse of reason? Is it necessary to add to all this, as a cause, the consciousness of guilt, the misery occasioned by seduction?

But Tieck not only gratuitously and most indefensibly assumes the guilt of Ophelia, but as a consequence goes on to deny that Hamlet really feels any affection for her: he maintains on the contrary, that throughout the piece Hamlet expresses nothing but contempt both for her and her father, whom he looks upon as a mere go-between, who had sacrificed his daughter to his own ambition. Horn remarks with more justice, "The extent and degree of Hamlet's love it may be difficult to determine, but he who loved his great father with such reverential tenderness, could not in another and voluntary attachment be false to himself. It may be admitted that filial tenderness occupies the first place in his mind, and it is true that when this father, his prop and stay, is gone, though his love for Ophelia is not extinguished, the element of peace and tranquillity in which it might have flourished, disappears. Still, however, I would repeat, that even the circumstance that Hamlet pours out all the weight of his despair and his incipient madness upon Ophelia, speaks in favour of his love; though love indeed in its most miserable form, which existing in a wounded spirit cannot help lacerating in turn." "The dialogue with Ophelia is the sequence of the soliloquy 'To be or not to be,' and borrows from it its tone and colouring. In the state of mind in which Hamlet feels himself, love appears something too lovely for this miserable world; despair dare not love, but rather finds a wretched pleasure in tormenting the object of its affection. It is thus that Hamlet breaks out, in the bitterness of his agony, against her and against himself; and that the nunnery seems to him the only refuge to which he can advise her to fly. The tragic pity which this produces is raised to its height by the concluding words of Ophelia: she is now as desolate as he, nay, perhaps more so; she has not lost her lover; he is not dead; for that might, through a deep, calm, and perennial sorrow be endured—but the object of her affections is suddenly converted before her eyes into a frightful and grinning maniac. She laments his madness, and is unconscious how soon she is herself to become its victim."

Even the strangely cold expression of Hamlet on hearing of Ophelia's death, "What! the fair Ophelia"—affords no argument against the reality or the original depth of his affection. At this moment he is a fugitive escaped from shipwreck, sick in body and in mind, his thoughts are occupied with a thousand things, his spirits as in a dream are all bound up; the words at first awaken no sensation, he replies to them in a state of half consciousness—but when the reality breaks upon him, when he sees the innocent object of his youthful affection, whose heart he had helped to break, laid in the cold grave before him, then the torrent bursts through the icy crust that covers it, and even in the passionate vehemence, exaggeration, and insane violence of the scene that follows, the wildness of his language, and the scuffle in the grave, we perceive exactly the result which love, remorse, disgust at the factitious exhibition of feeling by her brother, and some tinge of incipient insanity in himself, might, under such circumstances, be expected to produce in a mind like that of Hamlet. But if it be not easy to account for Hamlet's apparent indifference to the tidings at first, how much would the difficulty be increased on the supposition of Tieck? How deep would then be our contempt for his selfishness and cruelty throughout in his treatment of his victim! But we need say no more of a conjecture which is felt at once to revolt against the views of Shakspeare, as well as all the better feelings of our nature.

No part of Schlegel's criticism is more characteristic than his observations on the speech recited by the player in the scene which follows Ophelia's description of Hamlet's interview with her. To most readers, it certainly appears a piece of unmeaning bombast. On this Schlegel remarks, "As one example of the many niceties of Shakspeare which have never been understood, I may allude to the style in which the speech of the player respecting Hecuba is conceived. It has been the subject of much controversy among the commentators whether this was the composition of Shakspeare himself, or borrowed from others, and whether, in the praise of the piece of which it is supposed to be a part, he was speaking seriously, or merely meant to ridicule the tragic bombast of his contemporaries. It never occurred to them that this speech must not be judged of by itself, but in connection with the place where it was introduced. To distinguish it as *dramatic* poetry in the *play* itself, it was necessary that it should rise above the dignified poetry of the play, in the same proportion that the theatrical elevation of the rest does above simple nature. Hence Shakspeare has composed the play in Hamlet altogether in sententious rhymes, full of antitheses. But this solemn and measured tone did not suit a speech in which violent emotion ought to prevail; and the poet had no other expedient than the one of which he made choice—overcharging the pathos. The language of the speech in question is certainly falsely emphatical; but yet this fault is so mixed up with true grandeur, that a player, practised in calling up in himself artificially the imitated emotions, may certainly be carried away by it. Besides, it will hardly be believed that Shakspeare knew so little of his art as not to be aware, that a lengthened epic relation of a transaction that happened so long before as the destruction of Troy, could neither be dramatic nor theatrical."

Of the play itself which follows,—the device by which Hamlet resolves "to catch the conscience of the king,"—Tieck observes, "It is in the power of the performer of the part to render this scene one of the most striking in the piece. The king has again collected his energies. If he is still troubled, he is able at least to conceal it in the presence of the court. He talks in a friendly manner to Hamlet, jests with the queen, or with the other ladies and nobles. He is so occupied, indeed, with merriment and conversation, that he pays no attention to the pantomime, in which, according to the custom of the old English theatre, the whole coming incidents of the play were shadowed out. But Hamlet's repeated hints at last awaken his attention. Since Hamlet cannot control his emotion, he feels there must be something of importance in the piece, something which has some allusion to himself. When the poisoner enters—when the brother is murdered, even as he had murdered his own—when he sees this, and cannot doubt at the same time that his crime is no longer a secret, then conscience outbreaks through all his hypocrisy; he flies in terror as before a spectre. The development, the artful preparation for this event—and yet its sudden and striking arrival, must, if well represented, give an extraordinary interest to the scene, and render the king unquestionably the chief object of interest. But to bring out the full effect, it would be well if the scene could be arranged as it was in the theatre of Shakspeare. The king and queen should be seated on a raised bench behind, but not at too great a distance from the spectators—Ophelia by their side—Hamlet on a stool at her feet: then we should escape the sight of the small stage behind, which ruins the poet's intended effect. Shakspeare, on the contrary, intended this second tragedy to be played in the foreground, without curtain, or any preparation whatever. The king and queen in this miniature tragedy played in profile; and indeed the audience were not particular even if they occasionally turned their backs on the assembled court. Thus the king and his attendant party were always kept fully before the eye of the spectators."*

Tieck, indeed, is always happy when he has to speak of stage effect, or propriety of representation. His observations on the ghost are full of good sense. He blames the monotonous recitation which is common in the part. "The dead Hamlet, it is true, has no longer flesh and blood, but he has all the human passions of anger, jealousy, and desire of revenge. Even though modified, therefore, the pathos of the part must shine through—there must be anger in his words, and vehemence in his gestures. In London, the ghost was absolutely ridiculous in both theatres, so unmeaningly did he stalk up and down, and repeat his part as if he had been reading a lecture." In the famous dialogue between Hamlet and his mother, the ghost, he thinks, ought to appear not in armour as is usually the case, but in his ordinary dress.† Ghosts like men have a sense of propriety and fitness; the spirit appeared in arms upon the platform, among the armed guard, because in such garb it had been usually seen by them, but in the bed-room of the queen he ought to appear in the dress most suited to the place, "in his habit as he lived."

We think there is much ingenuity in another of Tieck's conjectures as to the proper manner in which the fencing scene between Hamlet and Laertes ought to be represented. The difficulty arises from the stage-direction. "In scuffling *they change rapiers*, and Hamlet wounds Laertes." Every one feels that there are strong improbabilities connected with the supposition, that an actual change of the rapiers should take place during the scuffle; besides, that the change not being of a kind which can be made palpable to the audience, must be considered as an entirely undramatic incident. Tieck's conjecture (which, by the way, adds another base feature to the character of his *protegé* the king) is, that Claudius, since the occasion when Laertes, at the head of the populace, had made his way into his palace, and threatened his person, has become almost as great an object of hatred and jealousy to the king as Hamlet; his wish therefore is, like that of Iago in speculating on the chances of the encounter between Roderigo and Cassio, that in the duel both should fall. "Either way it makes for him." He supposes, therefore, what certainly appears by no means improbable, that after each stage of the assault the rapiers are laid by for a time, while the combatants refresh themselves by walking up and down, and that by the contrivance of the king the page or attendant to whom in the mean time they are intrusted, on a sign from him, makes the exchange, and delivers the poisoned foil to Hamlet. In this way the puzzling word, "they change," is supposed to refer not to the combatants but to the attendants.

But in making this passing observation we are anticipating:—for we have yet got no farther in the regular course of the play than the masterly scene of fiery eloquence, deep pathos, and spiritual terror—in the apartment of the queen. Hamlet has left the chamber where Claudius is vainly attempting to pray; he will not kill him in a situation where the chance is, that if dismissed from earth he "goes to Heaven;" he will wait till he can find him "drunk, asleep, or in his rage," engaged in some act "that has no relish of salvation in it—then trip him, that his heels may kick at heaven." But in all these purposes of refined and fearful revenge, these resolutions to kill the soul as well as the body, Hamlet is, in truth, representing his own state of mind and his own determination as darker and more hideous than they are. Could we believe them to be real, our pity for him would merge in horror and disgust; but, in truth, he shrinks from murder, above all from murder while the victim is communing with Heaven; he feels he cannot now do the deed, he puts off its execution indefinitely, and then endeavours to excuse his delay and irresolution even to his own mind, by dwelling on the more complete and awful vengeance which the future may afford.

On his mother's summons he enters her apartment, where the unfortunate Polonius is concealed.

* Dramaturgische Blatter, vol. i. p. 69.

† Tieck's view is supported by the stage-direction, in the quarto edition of 1603, "Enter the ghost in his nightgown."

"The queen begins the conversation, exactly as is generally the case in real life under similar circumstances. Feeling the consciousness of her own crime, she takes the initiative in reproach, for she knows her son's weakness, and how easily he may be shaken from his purpose. For once, however, she errs, for he is now at the highest pitch of his moral strength; and terrified by the unusual force of his expressions, she cries for help. Polonius, concealed behind the arras, hurries to her assistance, and is stabbed by Hamlet. This situation may be said to embody one of the profoundest tragic epigrams which ever poet devised. The poor, half honest, half prudent, half witty, half foolish old man, so in love as it were with life, might have plausibly calculated on some ten or twenty years longer of existence; and now in a moment he is hurried off, entangled in his own intrigues, detected in the *honourable* employment of listening—an undertaking which he had volunteered merely to draw some fresh complimentary phrase from the flattering king: while again, in regard to Hamlet, the most energetic moment of his life is lost,—since he accomplishes nothing by the only *action* to which he rouses himself but a miserable murder, a crime which is only productive of farther misery. He wishes to hurl the cruel usurper from his throne; and at this moment he might have done so, for he has for the first time screwed his courage to the sticking point: but a ruthless fate mocks the waverer; and he wastes the whole fulness of his strength in killing —a fly, which he might have swept away with his pocket handkerchief.

"Hamlet at the moment feels but imperfectly the crime of which he has been guilty; nay, he seems at first to succeed in making it the subject of brief but bitter jests, before he addresses himself to rouse and shake the heart of his mother. He does so with an eloquence, whose fire, like that of Hecla, breaks through snow, and rages the more fearfully that it has been so long suppressed. The queen is unable to stop the stream of his discourse; but her son can say nothing more cutting than what, in the few moments of clear perception which remain to her, she had doubtless often said to herself. But now in the moment of the most vehement excitement of the nephew against the uncle, the spirit of the ancient monarch appears again to whet his blunted purpose, a moment which, for its simple and touching greatness, is perhaps unparalleled. Gertrude, however, perceives not the spirit—for impurity can perceive nothing spiritual: she believes on the contrary, that her son's language is that of madness; and though he establishes the contrary by the clearest proofs, the scene ends without any determinate counsel on his part or any decided resolution on hers."*

With the fourth act of the tragedy the progress of the piece begins to lag; and Horn justly remarks, that both the fourth and fifth acts partake fully as much of the character of the epic poem or romance as of the drama. We see in them little more than rapidly succeeding events, situations, flashes of character, incidents brought about without the will of the actors or against it. No clear aim or object any where appears in view. Something of mental disease seems to pervade every one of the actors in these scenes as well as Hamlet; a feeling of general inconstancy, incincerity, and treachery, begins to oppress the mind with despondency, and prepares for us that rapidly succeeding series of mortal catastrophes which crowd the latter pages of this tragic volume. In such a mood, we are in a humour to talk of graves;" and the scene with the grave-digger in the churchyard, with its strange current of mad humour flowing across the darkest channels, and making matter for merriment out of every thing calculated to awe and appal the mind, seems only in keeping with the chaotic and mouldering nature of all around us.

"The scene with the grave-digger, in the commencement of the fifth act," says Horn, "has always been popular. Who, indeed, could resist this philosopher, who turns all philosophical thinking into jest; this wit, who scatters his sallies, his quirks, and quiddities abroad, as he casts the earth about with his shovel? Let us not, however, rest satisfied with being merely delighted, for a deep tragic meaning is to be found lurking in the background.

"It seems to me as if the whole foundation of this great world-drama were breaking up at the close of the fourth act; it shakes beneath us at every step, and as from some soil of naphtha, flames burst forth at the tread of every powerful footfall. The world, as Hamlet himself says, is out of joint, and none is near to bring the confusion into order (except Fortinbras, who is still occupied with his expedition against Poland.) The miserable usurper has entered into a new scheme of poisoning, with the scarcely less miserable Laertes, and both have displayed no inconsiderable accomplishments in that detestable study. A country so situated may be said to be without a government, and fast hurrying to decay. What consequences can follow? Methinks there is nothing we should more naturally look for under such circumstances than a churchyard scene; and there is an agreeable relief in meeting there with one sound and healthy being among so many diseased, who even from the grave itself can jest at the grave and all the world. In the scene with his assistant, and afterwards with Hamlet and Horatio, he appears with the pride and the complacency of a king: he aspires to play the despot; he lays down the laws of suicide in all time coming—declares himself and his own trade to be the noblest in the world—treats his assistant like a bondman—gives his opinion roundly as to Hamlet's folly, and still more so as to that of all Englishmen; and all this the sneering insolent rogue is allowed to do, because he is the only sound-hearted and sound-headed being whom we meet.

"It may be asked, what has Hamlet to do in a churchyard? How came he there?—for as yet he knew not that the funeral procession of Ophelia was to follow. Hamlet is indeed intent upon one object, the punishment of the king; but fully aware of his own weakness, he seems willing to leave the execution of his intent to fate or chance; he, who never completely lived, is now, as it were, half dead, and feels himself most at home among the dead and the tombs. He broods with a real pleasure over ideas of corruption, yet even here the perfect individuality of his character is never forgotten, as for instance in his allusion to the jawbone of Cain, the first murderer. Not only, however, does the intervention of the grave-digger prevent any feeling of monotony in these contemplations of death and decay, but the presence of Horatio—present apparently against his will—assists in relieving the funereal effect upon the reader The excellent, but somewhat limited Horatio, obviously dislikes the whole scene by which he is surrounded; his practical turn of mind shows him immediately, that all those fine speculations of Hamlet on death and on the different skulls which he handles, lead to nothing, and he is anxious to be gone, Instead of endeavouring, by any high idea, to elevate his speculations above the corruption by which they are surrounded, he never appears so poor and destitute of ideas as now. His exclamations, —'It might, my lord'—'Ay, my lord'—'Not a jot more, my lord,' &c. are the miserable commonplaces of the barrenest conversation—nay, he appears in the light of

* F. Horn, vol. ii. p. 61.

a ridiculous pedant, when in reply to Hamlet's question, 'Is not parchment made of sheepskin?' he replies, with the most technical gravity, 'Ay, my lord, and of calves' skins too.' This question he can resolve, but it is plain that Hamlet's beautiful address to the skull of Yorick makes little or no impression on his mind.

"And now Ophelia's funeral procession enters. We had loved her living; we are now to receive assurance that she no longer needs our pity, and can strew fairer flowers on her grave than those which the queen scatters there. For the last time, at the sight of her pale corpse, is Hamlet roused into noble energy, as all true grief is, when it stands side by side with the loud, but empty affectation of sorrow. If we feel a momentary emotion when Laertes springs into his sister's grave, it is dispelled the instant he begins to talk of Pelion and Olympus. It is by this empty and hollow show of grief that Hamlet is excited; he feels that, ill as he may have often acted, *his* grief is purer, deeper, and more real; he feels that he, too, has often dealt too much in words—but always in solitude—in self-delusion; he has never laid claim to the character of a hero by the wordy vehemence of his language in public, or the theatrical exaggeration of his feelings. Hence the moral, if not physical, superiority he maintains over Laertes in the contest in the grave—hence the interest awakened by his touching protestation,

> 'I loved Ophelia; forty thousand brothers
> Could not, with all their quantity of love,
> Make up my sum.'"

Horn sees, in the arrival of Fortinbras, and his elevation to the Danish crown by the dying voice of Hamlet, that principle of consolation which, to most readers, appears to be so much wanting in Hamlet; that prospect of calm feeling and steady action on which the mind seeks to repose after the sea of troubles in which it has been involved. An edifice of gigantic proportions, but of no coherence or regularity, which must shortly have crumbled into dust of its own accord, has just been crushed to pieces; but out of its ruins is to arise one more firmly based, more compactly built, beneath whose roof men feel that they can seek for shelter, against whose solid pillars and strong built walls they can lean with safety. As Hamlet is speculation personified, so Fortinbras is the representative of action; he says little or nothing. Yet from first to last he is represented as an important character; and his appearance at last upon the scene of slaughter, treachery, and crime, is like the return of sunshine after a tempest—of order after convulsion. All this is doubtless true, so far as it goes. But after all, the gloom of the tragedy is too deep to be dispelled by this ray of consolation; our thoughts are rather in the coffin with Hamlet and Ophelia, than on the throne with Fortinbras; there is nothing by which they are elevated "above the smoke and stir of this dim spot, which men call earth"—changeable and troubled "as in the best it is"—to the sphere where the wicked cease from troubling, where the weary are at rest, where the enigma of existence is rendered clear; for clouds and thick darkness rest over it even to the last, and the hollow voice of blind chance alone replies to our anxious questionings of the future in the words of the dying Hamlet—"The rest is *silence*."

From the United Service Journal.

POLAR SCENES.—NO. II.

Have any of my friends ever traveled three hundred miles in the depth of winter, without inwardly rejoicing the moment they passed the one hundred and fiftieth mile-stone—or, have they ever made a voyage from Bristol to Cork without marking, if they were not too miserably sea-sick, the progress of the packet as she passed Lundy Island? I, myself, once made a trip to China; and I well remember how impatiently anxious we were to turn, as it were, each corner-stone in our voyage. There was, to begin with, the Land's End—then Madeira—the Equator and St. Helena—then the stormy Cape—the equally Isle of Madagascar—the straits of Sunda, and finally the Bouge of Tigris, all were duly and joyfully noted as so many chapters finished in the journal of our voyage. But what had the polar adventurers to cheer them through their dark and dreary winter? Had we the power of locomotion? Assuredly not; for our ships were as firmly locked in the ice as if they had grown there; and the novelty of changing the scene, even from the Atlantic to the Pacific, with which we should have been quite content, was effectually denied us by the impenetrable barrier which nature had thrown in our way. What had we to distinguish the day from night? not the light from heaven, for it was removed to a happier clime; nor the domestic morning cries of the dustman, the milkman, or the baker—we had not, in fact, any vestige of the busy haunts of man to indicate a living world—all was hushed in the long uninterrupted stillness of a midnight scene, more like the silence of death than the existence of life; and it would seem that we had nothing left but to brood on our recollection of nature in its civilised state; but such was not the case.

It is an essential part of the character of a sailor rather to look forward with hope, than back with despair; and as it is his province to be as anxious to-day to glide with the current, which to-morrow he may have to stem, so it should be as much his object to turn to advantage the resources of the present, as it is his duty to trim his sails to catch the ever-varying breeze. And thus it was with us—for each succeeding day brought with it some little event which, happily for us, we contrived to make the most of—and these casualties, trifling as they were, served to lighten, in some degree, the prolixity of those moments in which we were not speculating on the progress we should make in the ensuing season towards Icy Cape.

At the period of which I am now writing, the moon shed its pale light throughout the day, so like the cold frosty nights of January in England, that we could only distinguish the diurnal part of our existence by the usual meal hours which called us together. And here it may be asked, How could we possibly amuse ourselves throughout the day? In the first place, we had an excellent library, which comprised eighteen hundred volumes of the most esteemed authors; then, again, each had formed for himself some pursuit which perhaps his natural instinct, more than the intervention of acquirements, led him to adopt. One, for instance, set about building a miniature of the Fury, which he already imagined in an ornamental glass case in a conspicuous part of his father's mansion; another taught himself, or tried to teach himself, the violin—and well we knew it; a third went through a course of mathematics, the most useful of the whole; a fourth was eternally mending his old clothes—he should have been a tailor; a fifth excelled every one else in skinning birds, and thought of nothing but the museum he would have to show his admiring friends when he took a small half-pay box in the outskirts of London—somewhere about the Old Kent Road—Lee, or Lewisham; a sixth kept a private journal like myself, intending to show off in the periodicals, as I am anxious

o do; a seventh—and he was an odd fellow—shut himelf in his nest of a cabin, five feet by three in length and readth—with the thermometer at ninety, from which he merged, with a sickly jaundiced hue, only to devour a ortion of food worthy a more active calling; but he was n exquisite draughtsman, a good surveyor, and a capital ater-drinker. Poor fellow! he was sanguine about his romotion—never got it, and I am told he died of a bro- en heart. Then we had an occasional siesta after din- er—a casual bear-hunt—an evening school for the instruction for those of the crew who could neither read nor rite—sociable concerts twice a week in Sir Edward arry's cabin, and an extra glass of grog every Saturday ight to sweethearts and wives.

About this period, notice was given that a grand Veitian carnival or masquerade would be held on board he Fury, to commence at six in the evening, and sancioned by authority. It was also stated in the programme, that all the musical talent in the country was ngaged for the occasion, and every attention would be aid on the part of the stewards to promote the conviiality of the evening—no one to be admitted except in haracter or domino—and no bad characters eligible. his notice was pasted up in the most conspicuous part f the ship, with a lively sketch appended to it, of a blind iddler à la Cruikshank, led by a tottering old woman, vith the sorry remnant of a soldier's coat on her back, nd a round hat—no mean resemblance of Liston as Moll laggon, but infinitely less portly and swaggering, for in his sketch the feebleness of old age and meekness of overty were apparent in the curved form and lank isage of the fiddler's wife.

Novelty has more or less its charms every where and or every one—from London to its antipodes and back gain. On the present occasion, its influence in facilitating our ways and means was singularly successful. lasks and caps made of paper, wigs made of oakum, alse hips and bustles, false fronts and false calves, bonets, shawls, gowns, and petticoats, were eagerly sought fter, and as ingeniously contrived. In fact, the lower eck every evening presented a more than usual scene of usy animation—patching, darning, and transforming, ld clothes; making liveries out of red and green baize, awyers' gowns of black bunting, and ladies' stays of ood stiff number-one canvass—paste, putty, vermilion, nd ivory-black, with features of mystery and cunning, ome working dexterously with smiles of self-satisfaction, thers perplexed and embarrassed in their schemes, and ll equally anxious to disguise as much as possible the lress in which they hoped to disguise themselves.

A masquerade in the polar regions! Who ever heard f such a thing? It was as little thought of when we eft England, as our attending the carnivals of Venice luring our absence; and had the idea then occurred to s, we should have thought the first as improbable, as ve knew the second to be impossible. In amateur plays, he difficulty of disguising one's self, and the still greater lifficulty of casting the characters, may have suggested his kind of amusement; but I should have deemed it mpossible to evade the lynx-eyed scrutiny of my comanions, when the few places of concealment which a hip affords is considered. With respect to habiliments, hose who found it difficult to contrive a dress suitable o the character they wished to appear in, naturally regretted they had not had a hint of the affair before we eft England; and those who complained most were on he female side of the question; and this was also natu- al, as the difficulty, to do justice to the bust, seemed at irst insurmountable. This perplexing affair, however, ike many others, was conquered with sailor-like ingeuity.

I believe that when a case of necessity is made known n board a man-of-war, and particularly upon an occaion of this kind, which is yet more singular, there are few things which may not be procured without stirring one foot from the vessel, however ridiculous their being in the possession of a sailor may appear; and it was laughable enough to find our wants relieved as they became public—that is, indirectly—through the medium of one, two, and often three agents, to escape detection. When, for instance, the plays were first introduced on a former voyage, an amateur wanted a pair of spurs to complete his costume. Who could have imagined that such an article would have found a resting place in one of the discovery ships! The armourer set to work, when, to the astonishment of every one, an old sailor, who had never trusted himself on the back of a horse in his life, produced a pair from the bottom of his chest, wrapped in a piece of flannel, as highly polished as if they had done duty at the Horse Guards the week before. Upon the present occasion, a mask, a domino, a lady's fan, and some other things of an equally novel nature, were found by one of the officers, which, we concluded, must have been dropped into his trunk by his fair fille-de-chambre, when she packed it for him. Will you lend me this, or that? Have you such a thing in your possession as an old pattern for a petticoat or a gown? Can you inform me where I'll get a bunch of false ringlets, or how I shall manage without a chemise, or an under-garment of some kind to conceal an old pair of trowsers which are covered with tar? These were the constant questions of emissaries in every quarter; and the week preceding the masquerade appeared the shortest in our calendar since we left England.

At last the eventful evening arrived, and no schoolboys ever broke loose from the trammels of their pedagogue with more searching anticipation of Christmas enjoyments, than did our seamen. The arrangements on board the Fury were too good to pass unnoticed, every thing was so well adapted for the purpose for which it was designed. A rough sign over a raised platform, at the extreme end of the central part of the forecastle, exhibited the jolly sailor just landed from his voyage of discovery, with a well-filled purse in one hand, and a long pipe in the other. He had his blooming wife under his arm, and the Hecla and Fury were visible in the background. It is almost needless to add, that the jolly-faced landlady of the jolly sailor did ample justice to the good humour which rallied round her. At the farther end of the quarter-deck, another rude sign announced that the celebrated Swiss giantess, lately exhibited at most of the courts in Europe, patronised by his Royal Highness the Duke of Clarence, and never before seen in the polar regions, to which she had been imported at very considerable risk and expense, might be viewed by the public for the trifling sum of one shilling; children admitted for half price, and an excellent band in attendance. Walk up, ladies and gentlemen, walk up, and see the wonderful Swiss giantess! A ludicrous group of Greenwich and Chelsea pensioners, enjoying themselves over some of Barclay, Perkins & Co.'s entire, was naturally caricatured by one of our officers, in a transparency opposite the jolly sailor, and in the centre of the room. The orchestra was fitted up, in which the performers were instrumental in enlivening the scene. A reception room was prepared on the lower deck for rheumatic or frostbitten amateurs, or fashionable dandizettes, whose curtailed garments were not proof against the harsh clime of the polar regions.

The characters began to assemble at six o'clock, and the busy scene of merry-making was soon at its meridian. The first who appeared was an elderly gentleman, whose dress, although somewhat the worse for wear, bespoke respectability, and whose peruke announced him a strict observer of old times. He regretted the indisposition of one of his carriage horses, owing to the badness of the roads, and deplored the uncivilised state of the country, not affording the common convenience of a

sedan chair, or even a jarvey. This character was admirable throughout, and not recognised until the close of the evening, to be Sir Edward Parry's steward. A lady of distinction in an evening ball dress of light blue silk, with flounces of cut paper to imitate Brussels point, was followed by her servant, a native of Africa, in livery,—green baize, turned up with silver,—the embroidered parts a little tarnished,—were by Captain Hoppner and Mr. Crozier. A strolling fiddler whose admirably constructed crutch well supplied the loss of his left leg, which he had left on the plain of Waterloo, and whose military attire presented a sorry remnant of the uniform of the regiment he had served in,—solicited alms for the support of nine starving children,—and his wife received the charity of the benevolent in an old hat, —exceedingly well supported by Sir Edward Parry and Mr. Halse. The next group which appeared excited marked attention, and many were the efforts made to discover who they were; but they were secure in the success of their impenetrable disguise. It consisted of a hawking umbrella-mender, with his wife and daughter, as itinerant ballad-singers,—the latter, so sensitively tenacious of her charms, that she constantly appealed to her mother, under whose cloak she endeavoured to hide herself, to protect her delicate frame from the rude overtures of the men. The produce of a small basket of tape, thread, and needles, helped to support this indigent family; and the style of their dialogue was in perfect keeping with their appearance. I never saw a better group than this,—and I once paid an exorbitant sum for seeing many worse. There was a good deal of low wit and good humour in their individual parts, which was well supported by Lieutenant Sherer and two of the Hecla's seamen. A miserably-clad old soldier, whose exertions in keeping a pathway across the street clean, for the convenience of the public, which, by the by, he had previously strewed dirt over, to their no small annoyance, that he might have something to sweep,—went off with *eclat*, by Lieutenant Ross. And a wandering Jew, whose promissory notes were issued with characteristic caution, by a seaman of the Fury. A dialogue between a Scotish laird and a southern middleman, on the value of land, the breed of black cattle, and the average market-prices. was inimitably kept up by two of our sailors. There was a clown, whose buffoonery in descanting on the wonderful merits of the Swiss giantess was worthy a disciple of Grimaldi himself. He was quick at repartee, and yet he acknowledged himself as great a fool as any of the company. We had also a country practitioner in medicine, who was excellent; and a widow of one of the seamen of the last expedition, who made many appeals in a pathetic tone in behalf of her infant, which she carried in her arms,—urging its weak state, for it was not yet weaned,—"Rest thee, babe," in a shrill squeaking voice, with a strong nasal twang, quieted the sleeping innocent. Watchmen, riotous sailors with more money than wit, chimney-sweepers, young ladies upon the debateable principle, and a recruiting party, filled up the amusements of the evening, with a number of songs in character. Each man had three tickets, which entitled him to three glasses of rum or brandy punch; and the jolly sailor, before alluded to, was the rallying point throughout the evening, and so well attended, that the landlord and his wife, who, by the by, were capital in their station, had no sinecure. Precisely at ten o'clock the company retired—the sailors well pleased with their evening's frolic, and the officers to discuss the merits of a good supper, and the various characters who had exhibited on the occasion.

There was not throughout the festive scene a single instance of inebriation on the part of the seamen. The rooms, as I have elsewhere stated, were tastefully fitted up, and of the hundred who were present, it would have been difficult to find one who had not banished all care from his mind that night. The difference of the temperature between the lower and upper deck was seventy degrees.

A few nights after the masquerade we had a magnificent bear-hunt, amidst scenery which, although sterile and familiar to us, was sufficiently sublime to awaken a strong feeling of admiration in our minds. In our solitary position, when, after the crew had retired to rest, the stillness of death prevailed, any—even the least discernible object that approached the ships,—stealthily, as they usually did, was sufficient to cause a kind of momentary thrilling sensation, which can only be accounted for by the extreme loneliness of the scene, and the calm, quiet silence of night. On the present occasion, when every thing about the ship was hushed in repose, a large bear was discovered by the solitary officer of the watch, within a few yards of the gangway. Cautiously descending the ladder, lest the slightest noise might frighten the animal, he aroused a party of the officers and seamen, who were joined by an equal number from the Hecla. The dogs were put on the slip, and in a few minutes the whole party sallied forward. The night was rather fine than otherwise, but the sudden gusts of wind from the deep ravines on either side almost indicated the approach of a snow storm. The moon was near her meridian, and the light which she shed on the surrounding objects afforded those who had hurried on deck a transient view of the animated scene; but the men and dogs were soon lost to our view. We listened watchfully and in silence to the distant shouts, as they yielded gradually to the hollow dismal sound of the mountain blast, until they were altogether lost in the distance; and the sudden violent gusts which broke mournfully on our ears made us apprehensive for the safety of our comrades.

The bear took a southerly course, and finding himself nearly surrounded by his pursuers, who had systematically formed themselves into a semicircle, made a bold effort to ascend the steep face of the mountain up a precipitous cliff, over which the snow had frozen to a considerable depth. It is scarcely possible to conceive how so unwieldy an animal could have accomplished an ascent, which one would have thought might have baffled the light spring of a greyhound: nevertheless he succeeded in gaining an astonishing height; and the most extraordinary part of the affair was, that the dogs rolled repeatedly down the face of the cliff in their ineffectual efforts to turn him, whilst he not only held his footing, but continued, although with evident labour, to make his way toward the top. At length one of the dogs, with singular sagacity, finding himself defeated at that part of the cliff, ran along the base of the mountain until he arrived at a spot less difficult of ascent, and gliding swiftly along the abutment of a high ledge of rocks which overhung that part of the cliff, he was in a minute above the bear and within a few feet of him. Again the instinct of this fine animal availed him, for had he attempted to descend from the comparatively secure position he had thus gained, he would have been hurled by his powerful enemy to the bottom of the cliff; he therefore deployed, as it were, along the brink of the precipice, seemingly content in checking the farther progress of the bear. Poor Bruin, finding himself thus baffled, and being much exhausted from his efforts to gain the dizzy height, stood or rather balanced his unwieldy body with astonishing ease, as if doubtful what course he should next take, and the panting dog lay couched within a few yards of him, guarding the only spot by which he could have made his escape.

The moon, which had hitherto been partially obscured by the misty haze of the night, now shone forth at the moment one of the officers had contrived to climb to the top of some shelving rocks within about eighty yards of the bear. From this position he might have taken tolerable

aim, but the faithful Esquimaux dog lay in nearly a direct line, and apparently within a few feet of the bear, and so insecure was his own footing that he doubted whether he could stand even the slight recoil of his rifle. The contending party were thus placed at bay, and the temporary rest seemed grateful to all. At length the dog changed his position, and the marksman, no longer able to withstand the tempting opportunity, leveled his gun and struck the animal between the shoulders. He made a convulsive spring from his resting-place, and a crash, loud and frightful, announced his destruction, as he tumbled headlong down the precipice, dashing with violence against the projecting buttresses, and burying himself deep in the snow underneath. The pause of death was succeeded by shouts of victory from the hardy adventurers, many of whom, from the little attention they had given to their dress leaving the ship, were severely frost-bitten. The thermometer stood at 30° below zero.

From Tait's Edinburgh Magazine.

EGO!

"Mother," cries the young Marquis of Makeweight to his beautiful preceptress, the Duchess of Curtinsight, "what is an egotist? My tutor, Mr. Prosem, says that Cobbett (the fellow about whom there is so much fuss in the papers) is a disgusting egotist. Did I ever see an egotist?"

"An egotist, my love," replies the duchess, with a most Edgeworthian air of maternal wisdom, "is a man who is always talking about himself. The late Lord Erskine, generally esteemed an able politician, completely lost himself in public life by this foible. It was always 'I—I—I' in his speeches. Egotism is a fault, as common as it is vulgar. I know hundreds of people who are always talking of themselves; but you may have observed, my dear, that the word *I* is almost banished *my* vocabulary. While other people in society bring it into conversation half a dozen times in a minute, *I* am studiously careful to avoid it, by the use of impersonal phrases—such as, 'It is said,' 'They say,' or 'There is reason to believe.' I have a horror of the very sound of 'I;' and invariably set down an egotist as an ill-bred person. Be careful, therefore, my dear Makeweight, by following *my* example, to avoid this odious imputation."

"I wont forget, mother—I certainly will not forget," replies the little marquis. "I should be very sorry to be called an egotist. How dreadfully hot it is this morning! The thermometer stands at 88!"

"Dreadfully, indeed. Even with my bonnet I could scarcely stand the sun on the conservatory this morning. I was obliged to run through into the library for fear of a *coup de soleil*."

"What weather for the harvest people! It will throw them all into a fever!"

"They are used to it."

"Not to this excessive heat—it is so rare in England. And do you see in the papers what frightful accounts from Italy? That last eruption of Vesuvius appears to have done a great deal of mischief."

"Why do people buy estates in the neighbourhood of a volcano?"

"I suppose the estates descend to them like Curtinsight Castle to my father. You know, when you so often express your dislike to living in Lancashire, he tells you it is the fault of some ancestor of ours in the reign of Henry VIII. These poor Neapolitans were born on the mountain, and have become attached to the soil. After all, it requires some heroism to expose one's self to such a fearful risk. Think of being awakened out of your sleep by the roaring of a volcano and finding a stream of burning lava pouring down upon your house!"——

"Do we know any one at Naples just now?" enquires the duchess, languidly. "Lady Emeline was there last winter, and the Duke of Rawdon, and several of our friends. But they have been all returned this age. No one of any consideration remains at Naples at this season of the year. Every body is *in villeggiatura*, or at the baths of Lucca or Albano, or somewhere or other. I am glad there is no person I care about on the spot."

"But the poor people"——

"If the truth must be owned, I have little sympathy for what is called the people—*en masse*. I have just that sort of susceptibility, that, to be interested about a person, it is necessary that I should know something about them, or have had something to do with them," drawled the duchess, with equal disregard of grammar and consistency. "How is it possible to care for those whom one has never seen, and shall probably never see?"

And her grace's noble disciple admired the *impersonal* phrase, without perceiving the chilly egotism it tended to disguise. "Pray, my love, go and dress!" was his mother's concluding admonition. "You have been poring over that newpaper these ten minutes, in your shooting-jacket; and it has struck seven."

"My clothes are not damp—you need not be afraid of my taking cold," was the reply of the marquis, (accustomed to those officious attentions on the part of his mother, which, in certain English circles, betray a most dowagerly but very unwomanly degree of sympathy with the heir-apparent of the house, in preference to all its minor olive branches; and supposing her grace's uneasiness to be caused by his own predicament!) "Burton brought me my slippers as I came through the vestibule."

"But you do not consider, that till Burton sees you in the drawing-room, he never orders the second dinner bell rung? and poor Le Mollette's *entrées* are invariably cold in consequence. Yesterday the *purée aux marrons*, in which the cutlets were served, were just of the consistency of mortar, while the pheasant was roasted perfectly brown. You know I detest a *diner retardé*. You ought to be more considerate of the feelings of other people."

"Just one minute! I am looking over the advertisements for a specific for the toothache, which I think I saw announced the other day."

"The *toothache!* My dear love! you do not tell me that *your* teeth are going? I will write to Cartwright directly. There is no one of any consequence in town just now. I daresay he would come down for a day. The toothache!—at fourteen!—and *I* am nearly four-and-thirty, and have never so much as felt a pain in mine; except, indeed, once, when I caught cold waiting for the carriage at the opera, that night the coachman ran over the drunken Irishman, and the people had the impudence to force the servants to Bow street. And how long have you had this horrible toothache?"

"My dear mother, *I* have no toothache,"

"I am sure you said so. You have almost induced me to fancy I felt something in mine! What made you talk about specifics?"

"Do you not remember telling my father at breakfast that Victorine had not been able to sit up for you last night, because she has not slept this week past from a violent toothache?"

"Oh!—Victorine!—tiresome creature! Yes! she has thought proper to tie up her face, till she looks just like one of those frightful figures one sees peeping over the blinds of St. George's Hospital, as one drives through the Park. They really ought not to have an hospital so near a public promenade: it is quite disgusting!"

"I suppose the air is purer for the invalids."

"Is that a reason why it should be contaminated, to make it intolerable for *us*?"

"Ah! here is the advertisement for the elixir."

"Well, write me where the medicine is sold on a slip of paper; and tell Burton to send off one of the grooms for a bottle, *instantly*!"

"There! did you see the lightning? What a tremendous storm is coming! Had he not better wait?"

"Oh, dear, no! *They* will take care to send only one of the helpers, and on a horse of no particular value. I *must* have this clixir before night!"

"Does your pain increase, then?" . .

"*My* pain! Pray, my dear Makeweight, be more cautious what you say, or people will really fancy something is the matter with *my* teeth. Of course I want this remedy for Ma'amselle Victorine."

"How kind of you! Poor Victorine! I will go directly. Lend me your Bramah pen. *Poor* Victorine! she is such a good creature!"

"She is a very stupid creature! What business had she to go and catch cold? It must have been carelessness, or pure perversity, at this season of the year! And now, unless I can manage to get her the elixir before night, I must again submit to the services of that odious Wingfield, who puts in a *papillote* with just as much fear and trembling as *I* should make up a Congreve rocket. I keep scolding her all the time; but to what purpose? It is so insupportable to have a person about one who is evidently frightened to death. I hope to goodness we shall be able to cure Victorine's *mal de dents*. I dare say it is half fancy."

"She looks dreadfully ill. I met her in the gallery this morning; and when I asked her how she had rested, and whether she felt better, I assure you I could scarcely understand her answer; I never saw a face so swollen."

"Five *I*'s in five seconds! My dear love, you are growing as sad an egotist as Lord Erskine! Now, go and dress—if you keep dinner waiting to-day, you are inexcusable. Pray, observe, by the way, that my wishes are expressed without a single use of your own horrible —Ego!"

From the London Metropolitan.

'TWAS EVENING WHEN I LEFT THE VALE!

Air—"*The Maid of Snowdon.*"

'Twas evening when I left the vale,
That nursed my boyish years—
My father's manly cheek was pale,
My mother's wet with tears;
Then borne upon the breeze of night,
I heard the distant bells
Come o'er those waters, coldly bright,
With all their breathing spells;—
Sweet village bells! sweet village bells!
With all their breathing spells.

The stars are in the blue sky set,
And light is on the sea,
And some that parted—now are met—
But who shall welcome me?
They light not home's unwreathed bowers,
Of whom my spirit tells,
Nor come, as when in happier hours
I heard those village bells;—
Sweet village bells! sweet village bells!
With all their breathing spells.

From the United Service Journal.

TRADITIONS OF THE AMERICAN WAR OF INDEPENDENCE.—NO. III.

Every one who has witnessed a campaign, or stood upon a ship's deck amid a storm, knows that men under the influence of violent excitement will accomplish feats, from the bare contemplation of which in more quiet moments they would turn away. How often have we seen the fragile youth toil on during the hurried march, keeping pace with the most robust of his comrades, or, it may be, leaving them behind! How often have we beheld with admiration the delicate boy, the child of his mother's most doating affections, and the pampered of his father's love, patient under cold and hunger, and weariness and watching—the feeble frame borne aloft by the gallant spirit—the body forgetting its weakness, because the mind was noble and brave! And how often, when the season of repose came back—when the battle had been fought, and the victory won or lost—how often have we seen the same high-minded youth wither and fade, like a flower in early autumn! If all this be the mere effect of what philosophers call organisation; if it be not rather, as the Scriptures have it, "the spirit of man that sustaineth his infirmities," then shall we greatly thank these same philosophers if they will have the goodness to explain to us what the phrase organisation means. For, as far as my own experience goes, I never could discover that the blood vessels changed their order, or the muscles their arrangement, according as we chanced to be busy or idle; though I have always found that hardships, and even pain itself, were taken into account only after the mind had relaxed from its tension, and leisure was given for thinking of such things, and of the effects which they ought to produce.

If ever there existed a living proof of the correctness of any theory, I was this night a breathing exemplar of my own. When I dropped from the window of the inn, I was conscious that I had severely hurt myself. My left ancle bent awkwardly under the weight of my body, and a sharp shooting pain ran through the whole frame; yet I thought of the circumstance only for an instant, and had forgotten it long ere Menzies reached the ground. No conversation, therefore, passed between us as we hurried across the green, making, at the top of our speed, for the skirts of the forest; nor for some time after we had dived within the thick wood was a word spoken. But in proportion as danger seemed to diminish, and we penetrated farther into its recesses, the mind lost its control over the body, and I was sensible of my real condition. "For God's sake, stop one moment!" said I; "I fear that I have broken my leg; at all events, I cannot move another step without resting." "I hope not," answered Menzies, still continuing to advance; "besides how could you run thus far on a broken limb?" "That I cannot tell," cried I, now almost fainting with agony; "but it is quite certain that to go farther passes my ability." As I said this, I threw myself on the ground; and every other consideration became immediately forgotten in a sense of excruciating bodily torture.

Nothing could exceed the kindness of Menzies at this trying moment. He knew that all was at hazard, for we were as yet but a little way from Lexington; and it could not be doubted that pursuit would begin with the first discovery of our flight. Yet he instantly stopped, sat down beside me, laid my head on his lap, and strove by every expression of friendship and pity, to comfort me in my distress; for excessive as the pain was, it did not long hinder me from perceiving that my first misfor-

tune was likely to prove the least serious. "What an unlucky wretch am I!" was my exclamation. "Just as the chance for which we have so long pined is thrown in my way, here I am, incapable of taking advantage of it. My God! what a hard fate! I would rather die where I am, than go back to drag out another year as a prisoner among these cursed Yankees; and you, too, Menzies—but you must not think of me. It would do me no good were you also retaken; so go, my dear fellow; go, and leave me to my fate: it is better that one should escape than both be taken; and I perceive that for me to move even a rod farther is quite out of the question." I said this, in consequence of the examination which I had taken with my hand of the wounded limb. The ancle was swelled to twice its natural thickness; and there was a throbbing at the heart which brought over me every moment a sensation of nausea and giddiness that was altogether overwhelming.

I soon found, however, that in proposing to my friend to abandon me, I was making a suggestion which he was not the sort of person to obey: he positively refused to budge a step. "What! go and leave you to perish in this wilderness?" cried he. "In heaven's name! what do you take me to be? For as to the Yankees discovering us in this thicket, my firm persuasion is that the thing is impossible. So cheer up, my boy! Who knows whether, after all, this misfortune of yours may not prove a gain, barring always the pain of the moment: for it is my belief that Jonathan will never think of looking sharp about him till he is at a distance from Lexington; and I doubt whether we be as yet fairly out of eye-shot from it." There was some justice in this conclusion; at least I was willing to accept it as probable; so I consented to put our affairs into Menzies' hands, as indeed, for the most obvious reasons, I was bound to do, being myself wholly incapable of exertion.

The first thing which my friend did was to pull off his neckcloth, and to bind up with it, as tightly as he could, the injured ancle; his next, to put to my lips a flask of brandy, of which I drank a little, and was revived. Meanwhile the wind, which had sighed and wailed for some time, began to gather strength; and large drops of rain fell, with a plashing sound, among the foliage. Far off, too, we could hear the growling of thunder, and one or two flashes of lightning cast a momentary glare through the deep forest. It was by the light of one of these that we were made aware of the extreme insecurity of our position. We were lying in a sort of open glade, in which the forest-trees stood far apart from one another! and throughout which neither bush nor brake could be seen; and the thought rose painfully into our minds that in point of fact we had no shelter. "Could you not crawl a very little farther?" said Menzies. "Desert you I never will; and therefore whatever fate you suffer I will share it. But if the rascals do chance to come in this direction, it is certain that they must discover us." I attempted to rise, but the effort proved useless. I fell to the ground again, and lost my recollection.

The misery of that night was extreme. The storm did not indeed increase on us; for it seemed to move in an opposite direction; and the rain became just sufficiently heavy to moisten our garments: neither could eye nor ear detect, amid the thick darkness, the approach of an enemy. But between the agony of my sprain, and the conviction on my mind that our sole chance of escape lay in the failure of the pursuers to take up our track, I thought at the moment, and I think still, that the cup of my wretchedness was full. Menzies, on the contrary, either did not share my alarm, or he concealed his feeling; for he never spoke, except in a cheering tone, and rallied me as often as I began to murmur.

Morning at length began to break; and distressing as my situation was, I could not avoid being struck with the phenomena which ushered in the day. The rain having ceased, no sooner was the eastern sky faintly illuminated, than the air above us seemed to be alive. Thousands of wings were rustling over head, and thousands of birds poured out their notes, altogether different from those to which, in my own country, I had been accustomed. There was indeed very little harmony in this early concert; amid which the parrot chattered, the grakle screamed, and the manakin whooped; yet was the effect singularly striking, so much so as to draw us for an instant into forgetfulness of the perils by which we were surrounded. But in proportion as the sky became more and more bright, and the tall trees, putting off their grotesque shapes, appeared in their proper colouring, every other sense was swallowed up in that of intense anxiety. It may be conceived how we gazed around, in the hope of discovering some more secure place of retreat, while each object in the distance was converted into the form of an American militia-man; and when at last the former seemed to meet our gaze, while of the latter no trace could be made out, our joy became acute in proportion to the utter despondency under which we had hitherto laboured.

About three hundred yards from the spot where we lay, the increasing day-light showed us a gentle undulation in the soil, which was thickly overgrown at the summit by brush. Menzies instantly suggested that we should at all events move thither; and finding me still quite incapable of walking, proposed to carry me. He was a robust, well-made little man, so I did not affect any squeamishness on the occasion; but getting on his back, endured, even in that attitude, so much pain, that it was with difficulty I retained my senses. On we went, however, he trudging stoutly over the long rank grass, and I clinging to his neck, with desperate grasp, till, having gained the ridge of the slope, he there laid me down, while he himself went forward to reconnoitre. He was not long absent; and when he did come back, there was an expression of hearty satisfaction in his countenance. "Couldn't be more fortunate," cried he: "under that mound there is a stream; its banks are low here, but a little farther up they seem to be rugged and steep; and above all, I perceive, in the distance, symptoms of a farm-house, and I already begin to feel that we can't live without eating. So mount once more; and when we fix upon our lair, we shall next take into consideration how the *creature* is to be supported till your ancle recover its vigour." I did mount, and we resumed our progress.

The slope of the ascent was not very steep; and the thicket, though dense, was pervious; so that, at the cost of a few scratches, and one or two smart flips from twigs forced out of their legitimate position for a moment, and suddenly recoiling, we forced our way through. Beneath us ran a clear stream of water over a channel of rough stones, the opposite bank of which was, like the soil behind us, covered with tall rank grass. A good way in front, signs of a clearing presented themselves. There were spots of land, here and there, delivered from the incumbrances of forest, though the stumps of trees were still standing. A log-house, also, with one or two ruder edifices, caught the eye, and a sort of enclosure, probably a sheep-pen, or cattle-fold, stood near them. As yet, however, we were much more anxious to avoid

than to discover the haunts of man; and good fortune so ordered it that a place of concealment was not far off. Casting my eyes to the left, I perceived that the banks of the rivulet became, as Menzies had described them, precipitous and rocky; and I readily acceded to his proposal of seeking there the sort of hospice of which we were in need.

Down, therefore, we went, till we reached the stream, into which Menzies plunged; and I took it for granted that he was about to cross, because there seemed to be a more open path on the other side, but I was mistaken. He paced upwards in the water, and began to battle stoutly in mid-channel, against the combined inconveniences of an opposing stream, and a broken and rugged bottom. "Why don't you land?" said I, the pain of my hurt being considerably increased by his staggering and uneasy motion. "You will never get along so; and you see that the other shore is smooth and unbroken; why don't you make for it?"

"Because I have not tracked the red-deer in the snow so often, without being aware that the only way in which the beast ever throws off his pursuers is by taking to the water. It is very unlikely, I admit, that the Yankees will take up our foot-marks at all; but if they should, we have here an additional means of giving them the slip. So hold on, as well as you can, and sit steady." I did not answer, and we straggled forward as heretofore.

As we advanced up the stream, and the banks became on either side more precipitous, the depth of water considerably increased. Menzies was in consequence covered to his fork, and my feet and ancles dragged of course in the stream, which, on rounding an angle, showed itself in the shape of a deep dark pool, closed in by rocks of red sand-stone, and shadowed over by hanging brushwood. Along each edge there was, however, a narrow path, formed, as it seemed, out of the soft rock by the wear of the water when flooded; and towards one of these my bearer made his way, setting me down, as soon as he had reached it, on a stone. It was impossible, indeed, to carry me farther: for in the first place the ledge of rock was narrow; in the next place it passed abruptly into a gulf which seemed unfathomable; and, lastly, the arch of the cliff overhead would have effectually hindered a loaded man from making his way beneath it. Another council of war was accordingly held, and I promised, in case a desirable retreat lay beyond, that at all hazards I would make an attempt to walk. This done, Menzies quitted me. He balanced himself nicely, doubled round a projecting rock, and for five minutes, or something more, was out of sight. But I saw from the expression of his countenance as soon as he reappeared, that his search had not been fruitless, and his tongue was not slow in confirming what his eyes had spoken.

"If we had searched all Connecticut," exclaimed he, "we could not have found a more admirable retreat. So exert yourself, my dear fellow, only for a few moments. There—there, now—that is right; hold on by the rock, and—then——" But before this sentence was complete, my experiment had ended as might have been foretold: my sprained ancle sunk under me, and I fell with a splash into the water.

Menzies, as I afterwards learned, was terribly frightened. Unable to swim himself, he gave me up as lost; but neither he nor I knew till that moment how much more practicable it is for an animal which is dead lame to move in water than on land. I struck out without hesitation, and retaining my self-command, made, not for the nearest shore, but for the promontory behind which our promised place of shelter lay. It would be impossible to conceive any spot of earth better adapted to purposes of concealment: a cave, running under the rock, just above water-mark, from the arch of which hung down a tree so as entirely to screen its entrance against such as looked downwards, lay before me. I made for it; and being joined there by my companion, felt at once, that as far as shelter from the observation of pursuers could insure safety, we were perfectly safe. Menzies, however, was not even now satisfied. He hurried down the stream again; took up the trail at a point exactly opposite to that by which we had entered, trod down the long grass for a short way, bore round in a semicircle; and finally, having re-entered the water considerably below the spot of original incidence, waded up the channel till he gained the cave. "Now, the deuce is in it," said he triumphantly, "if I haven't give them something to do and to talk about. Were there but a lump of bread and cheese in our havresacks, we might wait here snugly enough till the storm blew over. But if this goes on much longer, it must come to a toss whether I am to eat you, or you to eat me."

We had occupied the cave about half an hour, when Menzies, who from time to time looked out through the overhanging branches, suddenly drew back as if in great alarm. He laid his finger on his lip at the same time in token of silence, and motioned with his hand when I attempted to crawl towards him. Both, therefore, remained perfectly still; and as the water in the deep pool made no noise, and the leaves scarcely rustled in the calm that prevailed, we were soon able to distinguish noises, which caused our hearts to beat uneasily. There was a sound as of people pushing through the underwood. By and by voices were heard, and the figures of two men became perceptible on the top of the bank, exactly opposite to the place where we lay. We held our breaths and listened—for the men were in earnest conversation—and the ravine being narrow, it was easy to catch a portion of what they said. Nor was our uneasiness diminished when we had ascertained that we were ourselves the subject of discussion. "Isn't it tarnation odd," said the one; "I guess as how them chaps can't be far off, at no rate, for the lair was warm, and if there's more nor one trail yonder, I'm d——d to all eternity. Look sharp there, Tom—I calculate it won't do to grope in the dark this bout."

The men passed down from us as these words were uttered, and the next moment we heard a shout and a rush as if they had discovered something, and were hurrying in pursuit. A chill came over me, which, however, subsided as the noise became fainter every instant, and then died away. It was certain that our cave had either not attracted their attention, or that they believed it to be empty. Nobody came back to the edge of the pool, and we felt we were safe. But in proportion as the dread of immediate discovery wore out, other wants become more pressing. Not from pain only, but from hunger now I began to suffer; and as for Menzies, he vowed, that rather than stay to die by starvation, he would go and deliver himself up to the enemy. Nevertheless, we judged it prudent to keep quiet the whole of that day and night; at the close of which our case was become so desperate, that further endurance seemed impossible.

The sun had risen some time without the occurrence of any alarming incident, when Menzies, who had sat gloomy and silent in the corner of the cave, announced his determination of going forth in quest of provisions. I made no opposition to the design, and he accordingly

quitted me, promising to use all possible precautions in the conduct of the enterprise, though resolute to procure food at every hazard. During the three hours that intervened between his departure and return, my situation was not, as may be imagined, very enviable. Utterly hopeless, chilled with having spent so much time in wet clothes, and suffering still a great deal from my ancle, my thoughts naturally took a very gloomy turn, and I conjured up a thousand frightful images, of which not the least obstinate in the hold which it took of my imagination was that of my poor friend seized, and put to death on the spot. At last, however, the sound of one advancing along the narrow path caught my ear. It was Menzies himself, who bore in his hand a jug of milk, a cheese, a couple of loaves of rye bread, and some heads of Indian corn. His tale was a simple one. Advancing stealthily towards the clearing, he had secreted himself among the branches of a tree, which gave him a complete command of the motions of the inmates, and observing that all, except a single female, went abroad as if to labour, he had given up his undivided attention to her proceedings: he saw her milk some cows within the fold, carrying the pails to a log-hut hard by, and afterwards withdraw within the dwelling, from which she by and by issued forth again, bearing a tub and a quantity of foul linen. Having watched till she became fairly engaged in washing, he slid from his place of ambush and slunk round to the milk-house. It contained, besides milk, a store of bread, cheese, and other viands—but fearful of exciting suspicion, he took only the articles now produced, with which he succeeded in returning unnoticed to the cave. I need scarcely add, that we enjoyed a hearty meal, and that our sleep that evening was sounder and more refreshing than it had been since we quitted Boston.

In this manner several days were spent, Menzies going forth every morning soon after dawn to forage, and I waiting patiently the progress of a cure, which was doubtless not the less rapid in consequence of my spare diet. We were even beginning, in some degree, to relish the excitement of our position; for the weather was remarkably beautiful, and my hurt mended hourly—when, on a certain occasion, my friend did not return as was his custom. At first, I flattered myself that my impatience was deceiving me; I then thought over every conceivable cause of delay, including all possible changes in the domestic arrangements of the family; but when noon came and went, without bringing Menzies back, fear gained the mastery over hope, and I became convinced that he had been taken. Every body knows what the effect of a harrowing idea is, both upon the mind and the body. I determined to go in search of him; I rose from my sitting posture for the first time since our arrival in the cave, and was scarcely surprised to find that I could walk, though uneasily. Groping along the narrow path, I soon gained the open channel of the stream where a thick screen of underwood concealed it; and not caring to take the circuitous route which Menzies had been in the habit of following, I pushed through. In my immediate front was the settlement; but after a careful examination I could not discover between me and the horizon any traces of a human being; I therefore screwed my courage to the sticking-place, and advanced towards the building.

My clasp-knife was of course unsheathed, and thrust up the sleeve of my right arm, and my eyes were very active in searching the face of the country, but no interruption befell, till I attained the farm-house. I had taken care not to approach in front, but leaving it on the right, gained the gable end, in which there was no window, nor any other aperture than such chinks as are apt to creep into the wall of an edifice made entirely of wood, and constructed with little skill. To one of these I applied my eyes, and the very first object that encountered it was the form of Menzies, not bound hand and foot, as I expected to find him, but seated between a man and a woman at a little round table, and carousing out of a tin-pot, apparently in the highest glee imaginable. Well, thought I, this is strange enough; but at all events, he must have found friends in this place, so I may as well enter and cast in my lot with his.

I walked round to the door with a dauntless step, and finding it ajar pushed it open. In an instant there was a complete change of scene. Menzies and his hosts started to their feet; the strange man made a grasp at a long duck-gun which rested against the rude chimney-piece, while the woman set up a scream that penetrated my brain like a rifle-ball, while Menzies, without the slightest ceremony, hit his pot-companion a douse in the chaps which sent him rolling all his length on the floor. I saw at once that this was no time to preserve a neutrality, so I also sprang forward, and throwing my arms round the woman's waist, forced her to resume her seat. "That's right," cried Menzies; "tie the she-devil to the stump of that bed, and thrust the coverlet in her mouth, while I take the liberty of rendering my friend here harmless, by passing his own cravat round his arms." As he spoke he sprang upon the prostrate carcass of the American: and in five minutes, both lady and gentleman were in a position which rendered them perfectly harmless, at least for the moment.

"In heaven's name," cried I, "what does all this mean?"

"O, never mind, my dear fellow—never mind for the present; only be so good as to fill your havresack with some of their vivres; and as we pursue our journey you shall be enlightened. And now, worthy dame and master," continued he, turning to the prostrate couple, "lie there, and make yourselves happy till your hopeful son returns. In the meanwhile, I wish you all manner of comfortable thoughts, such as cannot but light upon the minds of a couple so honest and hospitable."

Having filled our bags, we sallied forth, when the first question that Menzies put to me was, whether I thought myself strong enough to continue our journey. I answered in the affirmative, and we struck off, under the guidance of our pocket-compasses, in the direction of Providence River. We persuaded ourselves that if we could once reach the coast at a sufficient distance from Boston to forestall the rumour of our escape, some sort of vessel might be found in which we could take a passage to New York; and though it was still a painful exertion to walk, I was a great deal too impatient of further restraint to sink under it. On we went, therefore, Menzies informing me by the way of the circumstances which placed him in the strange predicament in which I had discovered him. They were these; he had been surprised in the milk-house by the woman. Not knowing how to act, he had thrown himself on her compassion, and she, pretending to pity his case, had invited him to her house, where she left him for a few moments: but she returned soon afterwards with her husband and a stripling, both of whom eyed him suspiciously, though they did not venture to commence hostilities. The result was, that, sending the lad off to Boston, the worthy couple had watched him so closely, that he found it impossible to return to the cave, and was, therefore, content to partake of their insidious hospitality, in the

hope of being able, during the progress of the entertainment, to effect his escape. In this case he would have hovered about the spot till night-fall, then find his way back to me—or, if that should be prevented, had made up his mind rather to give himself up, than leave me to perish alone. But my unlooked-for arrival at the scene of action had given a totally new aspect to the face of affairs; and it now only remained for us to improve our good fortune by pushing forward as rapidly as possible.

The sun was getting far into the west when we found ourselves in the vicinity of a large village, through which ran a public road. As we were not pressed for the means of subsistence we determined to avoid it, and made a wide detour to the right, so as to place a skirt of forest between us and the fields by which the village was surrounded; and, having discovered a clear stream of water, sat down by its bank, and ate—especially I, who had fasted since the preceding day—a hearty meal. This done, we attempted to renew our journey; but my ancle again entirely failed me, and I was unable to budge. While we were deploring this circumstance, and hesitating what course to adopt, two men, armed with rifles, suddenly confronted us, on their way, as it appeared, from the forest to the village. They stopped, and immediately began to put questions, which we answered by representing ourselves as sea-faring men, who, finding it impossible to get employment in the north, were going southward in quest of a ship.

"And why don't you seek it in the field?" said one.

"Because I, at least," was my answer, "am in no condition to serve. You see that my lameness is such as to hinder me from proceeding even to that village for the night. What sort of a recruit should I make?"

"I'm blessed, if they arn't the very chaps, Joe!" said the other stranger, who had hitherto eyed us in silence. "Just read this here paper:—'One considerably taller than the other; dressed in frieze jackets and trowsers; supposed to pass themselves off as sea-faring men.' I say, masters, did you ever wear King George's livery?"

"What should make you think so?" replied Menzies with great self-possession.

"Just this here bit of paper you see," was the answer; "and case it should be so, I'll trouble you to come back with me to Holleston, that is, unless you want a brace of balls through your body."

It was to no purpose that we protested against so unreasonable a demand, or threatened to bring those who urged it to justice. "They knowed what justice was as well as we; and they weren't going to miss the reward, or to let two runaway prisoners escape for a little bit of bluster."

Here then we were—resistance being useless—once more in durance vile; for the brutes compelled me to rise, made me lean upon Menzies' arm, and marched us back triumphantly to the village, in one of the public houses belonging to which we were lodged under a proper guard for the night.

It will easily be imagined that our thoughts were not, under such circumstances, of the most cheering kind. Converse together we could not, for a sentry kept post in our room, and a degree of vigilance was exerted throughout which convinced us that we had no resource except patience. Yet I was more than once tempted to believe that we were not without friends neither, though of their power to serve us effectually I could not entertain a hope. The landlord, a grey-headed man, spoke kindly to us, as he brought in our supper; and his daughter, who attended to remove the fragments, looked as if she pitied our mishap. But neither the words of the one nor the glances of the other, sufficed to reconcile us to our condition, or make us forget that we were once more prisoners. Strange to say, however, we both slept soundly; and the morning was considerably advanced ere the guard awoke us.

I was still so lame that our captors did not suspect me of using any deceit when I declared myself incapable of traveling on foot. On the contrary, they appeared to acquiesce in my statement very readily, while they ordered the host, in terms not the most conciliatory in the world, to get his car ready, and to prepare himself for conveying their prisoners to Boston. The man remonstrated; but finding remonstrance of no avail, withdrew to make preparations for his journey; which, either from design or accident, occupied so much time, that our friends of the rifle corps lost all patience. Their oaths and execrations I will not defile my paper by transcribing; but the result was to satisfy both Menzies and myself that our host entertained loyal sentiments, and that we were mercifully dealt with, not for our own sakes, but as a means of annoying him. We were therefore strongly tempted to relieve the poor fellow from his inconvenience by volunteering to travel on foot; and we should have done so, had not a fresh trial convinced me that the thing was impracticable.

The better portion of the day had passed before we were in a condition to move; for the landlord's horse was abroad and could not be found; and when it was found, the harness required mending, and the car itself stood in need of repair. At last, however, our preparations were complete; and Menzies mounting first, I was in the act of following, when our host's daughter, who waited to bid her father farewell, whispered in my ear. I could only catch a portion of the sentence, and that tended rather to excite than to allay my curiosity. Something there was about being overheard, and then an expression to this effect—"You will see that justice is done to him." I could not pause to question the girl, for our guards were shouting to move on; so I contented myself with giving the girl a kind look, and mounted the car. Our march began immediately.

We were escorted on this occasion by the two worthies that surprised us, and three stout yeomen besides, each armed with a rifle and a long hunting-knife. The landlord drove the car; and after we had cleared the village some time, mounted beside us, a proceeding to which the escort did not object. By and by, likewise, when those on foot began to straggle, he evinced a disposition to converse; but he had scarcely done so when one of the men stepped up to the car, and hitting him a violent blow on the shoulder with the butt of his musket, knocked him from his seat. "Take that, you d—d infernal tory whelp," cried he, "as a specimen of what you may expect when we get you safe in Boston!" The old man uttered no cry, nor indulged either in complaint or threatening, but, turning to us, said in a low tone, "This is what they call liberty." He rose in evident pain as he spoke, and dismounting, continued to trudge on close to the horse's head.

The sun had not set, but was shedding his rays obliquely over the surface of the earth, when our little procession entered upon a sort of open common, broken here and there into little eminences, and feathered with clumps of trees. Our escort had again begun to straggle, when a solitary Indian made his appearance, advancing from the right, and making, as it appeared, in the same direction with ourselves. His dress was neither that of a warrior nor of a runner; for the red paint was melted on his face as if from severe exertion; and though

he wore the scalping knife in his belt, balanced on the other side by a tomahawk, he carried no rifle, nor any other missile weapon. Walking briskly, it seemed his design to pass us, had not the yeomen closed together, and entered into conversation with him. He then slackened his pace; and as he spoke a sort of broken English, while they understood something of the Indian dialect, we were enabled to gather, as much from their questions as from his replies—that he was on his way to Boston. Our guards, like genuine Yankees, seemed full of curiosity. The stranger, a true-bred Mohawk, was cautious and wary; all therefore that they drew from him was an intimation that he had left the neighbourhood of Daubeny two days ago; that there had been severe fighting, in which the English proved victorious; that many houses were burned, and considerable stores destroyed; and that the chief of the defeated party there had instructed him to convey a written communication to the great warrior at Boston. Our companions in vain endeavoured to draw more out of him, or to keep him at their own pace. He evaded further enquiries; and remarking that the runner could not delay, pushed on, without wasting a single glance at the car or those who sat upon it. The Indian moved with great rapidity, and gaining an angle of the road, was soon lost to our view. For a few minutes afterwards he continued to furnish matter of discussion to the escort, who spoke of him as of an animal every way different in nature from themselves, and expressed something like regret that they found no opportunity to kill him. But the brutes were not very talkative, except when curiosity swayed them, and they gradually relapsed into silence.

Such was our condition,—the car moving first, the five militia men loitering close in the rear,—when just as we rounded the copse beyond which the Indian had disappeared, the sharp crack of a rifle was heard, and the fellow who had beaten the old driver received a ball in his temple. Without a cry or a groan he fell, and not a muscle quivered afterwards. Astonished, but as it seemed nothing dismayed, by the fall of their companion, the remaining four brought their muskets to the trail, and springing forward, placed the car between them and the point from which the fatal shot had come. But the movement, though judicious, was of little avail. There arose a wild whoop—a cry as hideous and terrible as ever rang in mortal ears,—and half a dozen savages, led on, as it appeared, by a young white man, rushed from the thicket. I must say that the behaviour of our guards was not only spirited but cool. They took deliberate aim, fired with great precision, and brought down two of the Indians while springing across the road. The rest, however, closed upon them, and there began a struggle of the fiercest and most desperate kind, in which each man fought and seemed aware that he was fighting for life or death.

Though the assailants were still superior in numbers, and, as it seemed, noways inferior in activity, it may be doubted how the encounter would have ended, had not the savages received unlooked for support. "Now is your time, gentlemen!" cried the old driver, quitting his horse's head, and seizing the uplifted arm of one of his countrymen just as he was about to bury his knife in the throat of a prostrate Indian. "By my faith, I think so too," exclaimed Menzies, leaping from the car, and tripping up the heels of another Yankee. The two red men, thus suddenly freed from the gripe of their more robust adversaries, were not slow in turning the advantage to account: each plunged his knife into the body of his man; and each, in the space of half a second, flourished a scalp in his left hand.

All this passed so rapidly that, before I could drag my wounded limb from the car, the battle was ended. The persons who had guarded us from Holleston lay dead, and their bare and bloody crowns presented a spectacle revolting in the highest degree. Nor were we long left in doubt as to the effect which the fray would produce on our own fortunes. The white man by whom the Indian party was led on proved to be the son of our host, who had taken up arms on the side of the king's government, and held a sort of commission among the savages, and who, informed of the dangers which menaced his father, had for some time hovered about the neighbourhood of Holleston, with the view of removing him to a place of greater safety. For the old man, though he took no ostensible part in the quarrel, was an object of more than suspicion to the republicans, the offences of the son being visited on the head of the father—whether justly or not no one seemed anxious to enquire. At last, having heard of our capture, and of the dispositions made to remove us to Boston, young Simcoe, for that was his name, made the bold dash which I have just described; a movement which not only enabled him to accomplish the wish that lay nearest to his heart, but gave him the opportunity of setting up a claim of merit in the liberation of two king's officers.

Under the escort of Simcoe and his Indians, we passed through a large tract of wild country. So intricate, however, were the paths, and so dense the underwood, that it soon became necessary to leave horse and car behind, when a litter being formed of branches, I was, when unable to walk, quietly carried on the shoulders of two of my companions. Our food, again, consisted principally of parched corn, with such berries and wild fruits as grew in the forest; and our drink was supplied by the various streams and rivulets which we passed by the way. As may be imagined, such a mode of existence was regarded by Menzies and myself as full of hardships; indeed, I question whether our physical powers would have borne up under so spare a diet, had we been doomed for any protracted period of time to depend upon it. But a three days' journey brought us safely to the banks of the Connecticut, where we found a considerable settlement of friendly Indians; and where, for the present, our labours came to an end: for the kindness of these people could not be exceeded. The most skilful of the squaws was employed to nurse me; and under her judicious treatment my limb soon recovered its vigour,—while the only subject of uneasiness among them appeared to be lest we should not find ourselves happy, and as a necessary consequence, desire to depart.

I am not going to describe our mode of existence during the weeks which we spent in this Indian village. Rude it doubtless was, and wild, but full of excitement; and as far as the absence of the vices which are common in more civilised states goes, perfectly innocent. The women, though gentle and affectionate, and peculiarly grateful to us for the kindness of our manner towards them, were not vicious. The men, either because they could not obtain spirits, or were under some vow of abstinence, were sober. Every morning the hunters went forth to procure food, Menzies generally accompanying them; and when they returned in the evening, the produce of their skill was dressed, and all ate in common. Nor were we quite free from the bustle of military operations. More than once Simcoe led out a petty expedition, which was seen, by the bringing back

of a scalp or two, not to have been entirely bloodless; while once the alarm of an enemy reached us, and we packed our wigwams and made ready for a removal. But no enemy came; and matters returned, in the course of a few hours, to the exact position in which they had previously stood. All this was agreeable enough as long as it was new; but we found, at the end of the third week, that we had enough of it,—and my uncle being then perfectly sound, we proposed to make our way to New York. The hospitable Indians would have fain dissuaded us,—their old men offering us their daughters to wife, and their young men imploring us to become brothers. But we explained to them, through Simcoe, how we were circumstanced; and at last they consented to let us go. Our parting was full of regret,—on their parts, as is their custom, expressed only by words,—on ours by a language more expressive than that of words. We mutually swore eternal friendship, an oath which by neither side would have been forgotten, had fortune so ordered it that we were ever to meet again. But we never did meet. Two of their body became indeed our guides; and having conducted us through what seemed to be pathless forests, carried us safely to Kingsbridge, where, delivering us over to our own outposts, they bade us farewell.

I have only to add, that our reception in New York was of the most gratifying nature; and that to old Simcoe such a provision was afforded as made him cease to think of the inn at Holleston with regret. His son continued to serve with the Indians till the close of the war, when he became, if I recollect right, a settler in Lower Canada.

From the New Monthly Magazine.

THE CONFESSIONS OF WM. SHAKSPEARE.

CHAPTER II.

It has scarcely ever failed to be the lot of poets to play, at some period or other of their lives, the self-deceiving part of Pygmalion. They form their Galateas, and animate them to their wishes for a time, happy, if in the end, they find them no worse than stone!

I am about to add the name of Shakspeare to the list of those who have suffered from such unhappy and ill-starred passion. The story is a very strange one, and will startle many; but it is a story which must be told, even to the ears of the least charitable. We may refuse some work of fancy admission to our minds and hearts, but let us never shut out the truth. Truth once lost or wilfully rejected, leaves a chasm never to be filled.

Shakspeare, I have said, quitted Stratford in 1586. He left behind him his wife, three children, his father, one sister, and a brother—named Edmond. The latter, however, must soon have been induced to try his fortune also in London; for we can trace him there as an actor in 1603; and, on the last day of 1607, it would appear that William Shakspeare buried his brother, "Edmond Shakspeare, a player," at the church of St Saviour, in Southwark. Such is the entry on a parish register there. The wife of the poet, at the period of his quitting Stratford, was thirty years old. She had just borne him twins—the second and last issue of the marriage. Anne Hathaway, after her husband left Stratford for London, though he visited that place annually, had no more children. I do not instance this circumstance as any presumption of actual disagreement between them; for I am inclined to think they lived together kindly to the last. I take even the celebrated interlineation in his will, which has been urged so often as a piece of coldness or contempt towards her, to mean something very different,—"Item, I give unto my wife my second-best bed, with the furniture." It should not be forgotten, in reference to this seemingly poor bequest, that Anne Hathaway had been, at the death of her father, who was a substantial yeoman of Shottery (a village near Stratford), very amply provided for. Bearing this in mind, I should have accompanied Shakspeare through his affectionate bequests to his elder child, Susannah, and to his dear daughter Judith (more dear that her twin-brother had been taken by death),—even supposing he had omitted all mention of their mother, without the slightest suspicion of any coldness or indifference betwixt them. As the real circumstances are, however, I take the interlineation as a singular proof the other way,—as an especial and, as it were, undeserved self-rebuke—a recollection where he need not have recollected. And why does Mr. Malone harp so on its being his "second-best bed?" Why does he persist in adducing that as a proof of contempt and slight—as though Shakspeare wished to leave the mother of his children the scurviest thing he had? I entreat the reader rather to join with me in turning this reproach into kindness and affectionate remembrance. That "second-best bed" might have had dearer associations with it than the first best. May it not have been—

> "The very bed that on his bridal night
> Received him to the arms of Belvidera?"

In no part of Shakspeare's life do we see coldness or indifference to old associations, however loosened in their grasp by change or time. He never deserted his birthplace; he "was wont to go to his native countrie once a yeare," says Aubrey; and it is certain that when his "task was smoothly done," and he had won himself an independence, as well as an immortal name, he retired to Stratford, that he might enjoy the one and listen to the music of the other, and finish life as he had begun it, with the soft flowings of his native Avon murmuring in his ear.

I dwell upon this characteristic, and upon these domestic circumstances, for a reason that will soon be obvious to the reader. If he has agreed with me thus far, he will perhaps not hesitate to accept the limitation I am now anxious to make. The turnings of such a heart as Shakspeare's require a subtle and delicate touch. Admitting that he remained on kind and familiar terms with Anne Hathaway, it is clear that her love was not of the character that his imagination, when awakened to its power, must have felt a thirst and longing for. He was a boy when he married her, she was a woman. His senses there took place before his imagination. It remained for his imagination afterwards to take the place of his senses, and to make his will a party against itself,—to engender passions which, hate them as he might, he yet, perhaps, would not willingly have parted with; and which, thwarting his purposes and disturbing his repose, continued still, it might be, scarcely less welcome inmates in his bosom than the hope and joy which they had dispossessed, to make room for sorrow and for shame! When Anne Hathaway bade him farewell at the door of their house in Stratford, as he left it first to plunge himself into the world, she must have felt that circumstances were bringing some change between them—that the sentiment she entertained for him could scarcely hope any longer for entire sympathy or unconditional return,—that her dream of joy, if joy it had been, was almost out,—and that she might even then pronounce the sentence of willing divorcement, which Isabella utters to Brachiano,—

> "Sir, let me borrow of you but one kiss—
> This is the latest ceremony of my love."

It is unlikely that she ever offered to follow him to Lon-

don; it is certain she never went there. She remained in her home, and consoled herself with her children; willing thereafter, we are to suppose, to enjoy their father in them alone, and to wait patiently for their sakes his realisation of those hopes which his imagination must already have shadowed forth to her;—preparing herself, meanwhile, to meet him at his return as they had never met before, but yet to meet him kindly and as a friend.

To London we have already followed Shakspeare. We have seen the glories he achieved there, and the gentle unassumingness with which he wore them—we have passed him on the stage at the Globe—we have sat with him at the Mermaid—we have thrown a glance after him into the solitude of his home. Were such anticipations then as we have placed into the heart of Anne Hathaway indeed realised? This it is now my business to show. I shall now follow him into the most private recesses of his life—trace him into the very depths of his spirit—"hang upon the beatings" of his heart, which are visible and audible still! He who has been known only as the painter of the passions of every nation and of every man, shall now describe his own: he who in his intellectual character stood, as it has been said, above the world, like a magician, penetrating with a glance all the depths, and mysteries, and perplexities of human character, and with a word calling forth into open day the darkest workings of the human heart—shall now be followed into private life and seen "constrained by mastery"—the mastery of strange individual sympathies and strange individual passions—helpless in control of them, weak and powerless as we! We shall not love him the less for this, but the more; when we have passed, even with him, such struggles as mortals ever seem destined to endure, he shall not appear a less powerful master, a less beneficent teacher; he will have earned a better right, as it were to conduct us, at the close, to his immortal lesson—to the great world of his everlasting thoughts, and from them, to the haven we still desire to rest in—that middle ground between sympathy and intellect, the arms of dear humanity.

Shakspeare had not been long in London, when, with a restless pen, he was doomed to confess to himself such secrets as these—

> "Two loves I have, of comfort and despair,
> Which like two spirits, do suggest me still;
> The better angel is a man right fair,
> The worser spirit a woman coloured ill."

These two loves, and the remarkable circumstances which attended them, I shall now proceed to describe. I may first mention, once for all, that my source of information is the sonnets of Shakspeare. The circumstances which shall be stated have been derived from a very careful consideration, and a repeated perusal, of the sonnets *entire*. I have not opened them at random, and read now one and then another, as chance might be; when I looked into them in that fashion, I recollect having always left them uncertain and dissatisfied, and with no definite idea in my mind of their purpose or meaning. It must have been thus that the late Mr. Hazlitt regarded them, since that subtlest of critics has left an intimation in one of those masterly books of his, which will live as long as the immortal things they talk about, that he was able to make "neither head nor tail of their ultimate drift." Nor, I confess, was the present writer, until he had repeatedly read the volume which contains them from its beginning to its close, and had discovered the strange and confused jumble of arrangement, or rather non-arrangement, into which the printer has flung them. The circumstances of their publication, already alluded to, sufficiently explain the cause of this, and there is no need, after what we have seen and said of the commentators with reference to these sonnets, to explain the cause of *their* stupidity. If the proof which I have already given, presumptive of their not having even read the matter they took under criticism, did not exist, the simple assertion made by every one of them that the first hundred and twenty-six sonnets are all addressed to a man, would quite amply prove it. An accomplished friend of mine has indeed suggested that these gentlemen may have had an especial purpose to serve in their treatment of the sonnets of Shakspeare—namely, that of deterring readers, so far as they could, from enquiry and perusal. This view of the matter is possibly the true one; for though I cannot understand why any enquiry into such confessions as those of Shakspeare should be fenced off, I can easily understand why the commentators should think so. Partial knowledge is more dangerous than absolute ignorance, and a mystery had far better remain one than that we should pluck only half its heart out. There are differences too in the minds of men. While the indulgent reader learns wisdom and charity from the record of passionate experiences, folly and hypocrisy shall only cry out aloud, "We are contaminated."

In describing these "loves" of Shakspeare, it will be necessary to keep always in mind his peculiar character. We have already endeavoured to describe this, and need only repeat here the isolated position in which he would seem to have stood with reference to any thing like intimate friendship with any of the great men of the time. What a want in that respect must his have been! Fancy his bosom almost bursting with visions of such as his own Horatio, and yet obliged to walk through his daily life without a shadow of their beauty there to comfort him and cheer him on. Had this continued, life would have been insupportable. A man of genius, indeed, to whom the consciousness and exercise of his powers had brought with it also an extreme sense of his own identity and exertions, might not have felt it necessary, or even possible, to expend any portion of his heart in sympathy on another; but Shakspeare, whose genius was universal, the creatures of whose intellect are as various as the creatures of the world, who passes through every variety of untried being, and shadows forth the inmost movings of the souls of all—must have felt it as though a fatal, inevitable necessity hanging over him, to connect his heart in some way with some beings of the actual world, and so satisfy those individual yearnings and sympathies which still, with all his power above the earth, kept him bound a prisoner upon it; and which, in all the intellectual triumphs to which they served to contribute, found yet no outlet for themselves.

First, then, in accordance with this want, he sought round him for a *friend*. It is a wonderful evidence of the sweetness and refinement of his nature that he should have selected, to answer his necessity in respect of friendship, a youth unknown (when he first saw him) save by his virtues, and by the form of beauty which gave warrant of the beauty within. It is to this youth he addresses a vast number of the sonnets in question. This is his love "of comfort."

It is the attribute of genius to give life for ever to the objects it deigns to associate with itself, for good or evil. This youth, whose name we do not know, and cannot even guess at, is yet immortal—

> "'Gainst death, and all-oblivious enmity,
> Shall you pace forth"—

says one of the sonnets addressed to him; and so it has proved. He was the friend of Shakspeare, and with the name of Shakspeare he must live for ever. Every emotion of the poet's heart was poured forth to this youth; emotions the intensest and most profound, acute sometimes even to selfishness, but expressed at all times with unequal tenderness, modesty, purity, and love. Having selected him from out of the world he saw around, he

communicated to him thereafter all he felt—all he thought—all he suffered. Here was the pillow his spirit reposed on—here was the object to which he clung, as connecting him in actual life with the moral beauty and sweetness of the world. Here was at last some peculiar and captivating medium, through which he could even look out upon the creatures that walked the street before him, and feel one of them not only in sympathy and love, but in the positive scale of being, without remorse or uneasy shame. All that his great heart sought for, he set up here. Here was something that it had thirsted for in vain among his fellow actors and fellow writers; something he might cordially trust to; something which in its very simplicity was worthy to take place even in his intellectual judgment, of the learning of Ben Jonson, or the wild genius and wilder passions of Marlowe. Nothing can be conceived finer, and more full of a noble purpose, than the alliance of Shakspeare with this youth. When I come to describe the confidences and peculiar thoughts he reposes in him, the reader will judge this with me. It is, in all its results, as much an emanation of his moral and intellectual nature, and of the finest parts of it, as of his sensitive. Knowing and feeling this, it is really a matter of more than ordinary regret and shame to have to notice a suggestion that has been once or twice thrown out with reference to it, reflecting in a strange and unmanly way on the character of Shakspeare; thrown out, however, it is some consolation to add, by persons who cannot have read more than the innocent words that suggested such thoughts, and who must have been as utterly ignorant of the usages of the time, as they were eagerly suspicious of evil, and anxious to suggest it where they sought in vain to find it. Judge such expressions of the sonnets of Shakspeare, as "sweet love," "my love," "lord of my love," by the usages of modern times in reference to manly friendships; and in the same sentence, pray judge the plays of Shakspeare by the laws of Aristotle. The objection and the baseness founded on it, is not worth so much thought as that which was urged against Theodore Beza, and is laughingly alluded to by Voltaire, because he wrote in something of this strain in his Latin verses on Candidus. Recollect the language put into the mouth of Portia—

"This Antonio
Being the bosom lover of my lord."

Recollect the rough Menenius in the Roman play—

"I tell thee, fellow,
Thy general is my lover."

And observe in every letter of the time the phrases in common and most abundant use. The learned and rugged Ben Jonson is the ever-true lover of Dr. Donne; and Drayton shall write to Drummond to tell him that Mr. Davies (Joseph Davies) is in love with him. But it is unnecessary to say more on this point. Before these papers are concluded, the reader will have evidence before him against which all such false and ignorant insinuations shall avail nothing. And with whom, among those who are acquainted with the ever-prevailing characteristic of Shakspeare's genius, can such have ever for a single moment availed? From all the coarseness which prevailed in his age how wonderfully was he free! Read Beaumont and Fletcher, and read Shakspeare! Look at the women of the one, and the women of the other! Though he might, as the distinction has indeed been made, occasionally offend a sense of delicacy, he never injured the mind: he caused no excitement of passion which he flattered to degrade; never used what was faulty for a faulty purpose; carried on no warfare against virtue by which wickedness might be made to appear any thing but wicked, and in which sympathy was to be entrapped by the misfortunes of vice. With Shakspeare "vice never walked as it were in twilight." Every thing thing with him is flat sincerity.

And so in the case of the sonnets to which I am alluding. In every sentiment he utters throughout them, there is evidence of the deepest sincerity. The language in which they appear has been called hyperbolical, but, setting aside the usages of the time, I cannot discover the hyperbolism. In the expression of the individual feelings of Shakspeare, it is true, we find, as should surely be expected from a man of such imagination—that uneasy but exquisite sense of beauty and power which cannot be contained within those feelings merely; which is impatient of such actual restraint; which strives to link them with other images of kindred loveliness or beauty; and thus moulds them by the fresh thoughts the last inspire, into an infinite variety of shapes and combinations. But through all the unity is still preserved—the oneness of sincerity and passion.

The first four years of this remarkable friendship would seem to have passed without a cloud. I shall for the present therefore also pass them—with the world of noble and beautiful, as well as deeply interesting thoughts that they gave birth to. These shall form a separate chapter in exhibition of the moral and personal feelings of Shakspeare—and of the extreme sense of refinement with which he seems to have set up this youth, and to keep him ever present in his mind, as a sort of abstraction of the finest particles of earth—something that stood between his own mortal and immortal thoughts, partaking of many of the characteristics of either, and reconciling both. At present I am anxious more particularly to furnish to the reader, with as little interruption as possible, that particular portion of Shakspeare's *actual life* which is supplied by these confessions—to mark its actual course, so far as we may follow it—to tell the story of these two loves, "of comfort and despair," how strangely they crossed each other, and how they affected the feelings and the life of the author of "Hamlet."

The first intimation of any thing having come between Shakspeare and his young friend, to interrupt the most equable course of devotion, of confidence, and faith, is given in the sonnet which stands forty-first in the collection. Here, after glancing at some youthful gallantries which his friend seems to have been seduced into, and which the humane and good-natured poet alludes to with the most generous sweetness, he proceeds thus—

"Ah me! but yet thou mightst, my sweet, forbear,
And chide thy beauty and thy straying youth,
Who lead thee in their riot even there
Where thou art forced to break a two-fold truth."

Where had they led him? *To the affections of the mistress of his friend, to the possession of the very object of Shakspeare's strongest personal passion!*

This opens to me a strange story. The woman here alluded to, it is now my duty to trace through the confessions, for she occupies one of the most important places in them. Her strange history can be followed from the very commencement of Shakspeare's connection with her, through all its gradations and most passionate interest, to what we must deem its disastrous close. This is she to whom I alluded in the commencement, "the woman coloured ill," the genius of the poet's despair.

I shall have to describe the commencement of his passion for her—the void in his senses which she filled, as his young friend had occupied the vacant sympathies of his heart. I shall have to shadow forth its close, its desperate close, which saw the unhappy poet for a time—

"Frantic mad with ever more unrest!"

And what an interval is that between! Even in his unsuspecting days, her black eyes, in their glancing of some strange expression, alarming him with scarce the knowledge why—then the strange and sudden falling of his friend into her power—the rumours of her character

which reach him afterwards, thickening and blackening as they come, while her spells all the while only bind him in the faster—his final discovery of her wretched nature—his affecting portraiture of the hell in which he then found himself, but which he could not quit—and the exquisite self-excuse with which he half strives to reason the cause of his mistake of her, for how could

"Love's eye be true,
That is so vex'd with watching and with tears?"

It is certain, as I am now about to prove, in following out this strange history from first to last, that Shakspeare had no reason to suppose this woman other than good and true hearted when he first formed a connection with her. So shocked is he when the full discovery comes, that he compares his thoughts and his discourse, as they had been, with such as they have been forced to turn to, and calls them those of a madman,

"At random from the truth vainly expressed—"

for, he rejoins bitterly,

"I *have* sworn thee fair, and thought thee bright,
Who art as black as hell, and dark as night."

But let me not anticipate. I state this as a matter of fact merely, for in truth, had it been otherwise, I could scarcely have claimed exemption in his case, from a lot which has befallen so many men of genius. How sadly, in matters of this sort, have they been ever the creatures of excited imagination and unreasoning self-will! Fielding, in a very curious passage in his "Journey to the other World," has perhaps touched upon one of the secret causes. Mr. Lamb, in one of his masterly articles, has also alluded to it.* And is it surprising? Accustomed so much to the ever constant action and excitement of their never resting fancy, should we wonder that at last their attachment to certain objects should be far oftener in proportion to the strength of the impression they were likely to make, to their power, in fact, by any means, of riveting and fixing the attention, than to the pleasure or gratification they might look to derive from them? The subtle metaphysician will perhaps remark that we are more apt to dwell upon circumstances that excite and shock our feelings than on those of an agreeable nature. Besides, poetry and poets have worlds and beings of their own, or at least enjoy them as such, until they are awaked by sad reality. Their eyes even are made the fools of the other faculties. Nor does the delusion end here. "Poetry," says Bacon, "conforms the show of things to the desires of the soul."

[We regret to be obliged, from unavoidable circumstances, to postpone the conclusion of this paper until next month. It will be prefixed to the third chapter of the series.—*Ed. New Monthly Magazine.*]

* I may perhaps be allowed this opportunity of stating, that an edition of such of the late Mr. Charles Lamb's writings as can be recovered by his executors, with a large selection from his correspondence, is now preparing under the superintendence of Mr. Sergeant Talfourd, and will be accompanied by a notice from that learned and accomplished gentleman, of the life and genius of his deceased friend.

Noble Occupation for the Leisurely.—Whenever you have nothing else to do—in other words, whenever you have no particular object in view, of pleasure or profit, of immediate or remote good—set yourself to do good in some shape or other;—to men, to sensitive beings, rational or irrational; to one or to many; to some individual, or to the whole race.

Bentham.

LITERATURE FOR THE BLIND.

Historical Sketch of the Origin and Progress of Literature for the Blind; and practical Hints and Recommendations as to their Education. With an Appendix, containing Directions for teaching Reading and Writing to the Blind, with or without a regular Teacher. By James Gall. 1 vol. 8vo. Edinburgh: 1834.

The blind, for generations to come, will have to thank James Gall, printer, in Edinburgh, for his labours in their behalf. He is a thorough zealot; he has toiled for many years hard and perseveringly; he has spent his time, risked his money, and impeded his business; and the result of his labours is now before us. The patient investigator, who hunted out a grain of wheat in a bushel of chaff, was justly recompensed with the produce of his discovery for his pains; and Charles the Second ordered that the man who climbed to the top of Salisbury steeple should be rewarded with a patent, enjoining that no man should climb there but himself. Mr. Gall has been as persevering as the former, and has placed his acquisitions, by means of the press, on a higher eminence than the latter; and we wish that we could reward him according to his merits, by making him patent printer to the blind for many years to come, so as to ensure him a handsome return for his labour and expense. We doubt, however, whether the patent is needed, as his inventions and improvements, we should hope, will ensure a large demand for his "Literature for the Blind;" and he need not be afraid of any formidable rivalry, the comparatively small number of blind readers, their general poverty and scattered condition, and the expense of the printing apparatus and typography necessary for their use, not rendering competition very flattering.

The serious privations of the blind are not generally known, even by benevolent persons. A portion of them are seen congregated in comfortable asylums, where they are fed, and clothed, and taught, and have appropriate occupations assigned to them, and enjoy the privileges of cheerful society, with far less of care, vexation, or toil, than usually falls to the lot of the rest of mankind. But this sheltered portion of the blind constitutes but a small part of the aggregate of sufferers, of whom Mr. Gall computes that there are at least thirty thousand in different places who speak the English language. For the most part they are thinly scattered, in cheerless loneliness; one here and there in a village or parish, scarcely observed or thought of; fixed to one spot; compelled to secluson in cottages, or buried in the "solitude of cities;" presenting no prominent mass of wretchedness to the public eye, yet for the most part surrounded by wants and privations of the severest kind, and which are not known or thought of beyond the immediate circle of their relations and friends. Some, we have said, are collected by the hand of charity in appropriate asylums; some are mendicants; and a small number are able to gain a precarious livelihood as musicians, and, of late years, by simple handicraft trades; and a few are in easy circumstances of life; but in general the calamity is

found chiefly among the poor, whose children are exposed to greater casualties than those of the rich, and are not so skilfully attended in their ailments; and their frequent inability, either to earn their bread, or to amuse or even to occupy their leisure, causes much wretchedness among them.

We recollect a friendly argument between two young ladies, the one blind and the other deaf (though not dumb, her deafness not having been congenital), in which they contrived—the blind by finger speaking, and the deaf by oral speaking—to apprise each other of their mutual sympathies. The blind thought herself happy that she could sing and play on the piano-forte, and converse with her friends; the deaf, that she could read and write, or walk about and enjoy the charms of nature, and behold the gladness of "the human face divine;" and each felt acutely for the privations of her companion. But who can doubt but that the blind was far the most afflicted? Even where dumbness is added to deafness, so that the calamity becomes greatly aggravated, the arts of reading and writing afford constant facilities for instruction and amusement; but the blind are excluded from these resources; to them, the whole world, except as accessible by the direct organs of contact, or taken in by report through the ear, is an unknown region. They vegetate in night upon the spot where they tread; dependent upon others; usually incapable of procuring food or clothing; living in continuous childhood; knowledge shut out at its widest portal; and even the volume of eternal life rendered a sealed book, except as charity orally conveys, and memory treasures, its sacred contents.

But their case, though pitiable, is not hopeless; and the present volume conveys the cheering intelligence that even the arts of reading and writing are within the attainment of every blind person of ordinary capacity, by moderate exertion of mind, and within a space of time far more brief than could have been reasonably anticipated. There have been many contrivances to find employment for the blind, so as to occupy their time pleasantly, if not usefully; but an idea of establishing for them a permanent literature is not known to have been suggested till about fifty years ago, when some unknown individuals in Paris devised a plan to teach them to read, and to print books for their use, by means of letters in relief; the idea of which originated in seeing a leaf of paper coming from the press printed on one side, and the letters appearing embossed, but in reverse order, on the other. Some blind persons had previously been taught to read by the aid of wooden or metal types, pins, and similar contrivances; but these had no reference to books. The words or sentences set up were neither permanent nor diffusable; the types were wanted to make new words and sentences; and the words and sentences set up could not be multiplied, like sheets of printed paper. But the new discovery gave rise to sanguine hopes; for all that seemed requisite was for a blind person to learn to read the letters by feeling, either in their reverse order, as above mentioned, or in their direct order, by having types cast for the purpose direct, instead of reverse, and then sheets might be printed off to suit their convenience.

Such was the theory; but the experiment was beset with difficulties. The first consisted in the character of the ordinary letters used in printing, which, from their rounded forms and too intricate shapes, are not adapted for easy discrimination by the sense of feeling. On this account, though the conductors of the Blind Asylum in Paris began to print with great zeal, the objects of their benevolent solicitude reaped little benefit from their labours; and the scheme at length died away, and was forgotten. Similar attempts were made in this country, but they shared the same fate; and as the art of reading by means of books printed in embossed letters was thus abandoned as a hopeless attainment, that of writing, which seemed still less easy, perished with it.

About the year 1826 or 1827, when the whole matter had been long forgotten, Mr. Gall happened to alight upon some memorial of it, and began to consider the cause of the failure of the experiment, which he attributed to the unsuitableness of the ordinary typographical characters for manual reading. The extremities of the letters, and the termination of the curved lines, he found, were the only parts which the nerves of the fingers could accurately discriminate; the remainder was lost in barren generality of contact. Considerable practice might indeed surmount this difficulty, just as an experienced compositor can read with his fingers; but it was not to be expected that the blind generally would have the perseverance to master the difficulty, especially as they would not at first be aware of the pleasure and benefits to be derived from the exercise of the art.

The use of capital letters was another obstacle, both as it diminished the size of the type—since the small letters must be kept down, to allow contrast to their more important neighbours—and also still more as it gave fifty-two letters to be discriminated instead of half that number; and even a very few additions, it was found, added greatly to the difficulty of discrimination.

To remedy the impediment arising from the curved forms of the letters, Mr. Gall began to give to them an angular character. An O changed into a square or diamond, was readily detected by the touch; and the other letters, by good management, it was hoped, could be rendered discernible without losing their identity.

But there was a still shorter path; for arbitrary characters might be devised so simple and distinct that the finger could readily detect them; and this idea presented itself so strongly to some of the friends of the blind in Edinburgh, that they contrived several alphabets, with greater or less degrees of merit; but with one defect common to them all—that they were arbitrary; and that, therefore, though the blind might learn to read them with facility, initiated teachers would be wanting to instruct them; and how were these to be procured in remote places, or any where but in blind asylums? Mr. Gall, therefore, with great sagacity and firmness, resisted this specious temptation; justly considering, that, if a character could be devised which the blind could readily

discriminate, while at the same time it approximated sufficiently to the ordinary Roman character to be read, after a few minutes' trial, by any person who might wish to instruct them, every advantage would be gained, and the scheme would not wear the repulsive air of an unintelligible mystery. A blind child in a retired village might be taught by a friend or neighbour, who would never have thought of mastering a new character, as remote from common use as the Chinese hieroglyphics.

But this was not the only, or the most important, consideration; for the author proposed to teach the blind to write as well as to read; and if the letters employed by them were not intelligible to all the world, of what use would be their labours. The plan of writing, we may here add, as long projected, and now under Mr. Gall's system, carried to a high state of advancement, is by means of a number of little types, or punches, having the letter formed with sharp edges, or points; which, being pressed on, or stuck in, the paper, form the letter in relief on the reverse side, as children often do with pins for amusement. There is a frame for the purpose, with a parallel guide for the letters, and other conveniences; so that the blind person may write what he wishes with great facility. We receive scores of letters directed and franked in symbols meant for letters, far less decipherable than Mr. Gall's blind man's characters.

By Mr. Gall's modifications of the common alphabet, the tangible powers of the several letters is so great and nearly equalised, that the characters are easily distinguished; so that a blind person may learn the alphabet by the touch as speedily as another person by the eye; while, at the same time, sufficient similarity is kept up to enable any teacher to recognise the letters, after a few minutes' observation. The alphabet serves equally for all countries where the Roman character is used. The expense, Mr. Gall says, is not much greater than that of common printing.

Mr. Gall describes as follows the difficulties he met with in prosecuting his experiments to a successful issue.

"The failure of the friends of the blind on the continent, suggested to the writer the propriety of taking nothing for granted, and of making the ground sure before advancing upon it. He therefore resolved to trust to no theory, however plausible; but to proceed in the path which a fair deduction from his experiments might suggest. These experiments, however, involved in their nature very serious difficulties; difficulties which, as we shall immediately see, would, in ordinary cases, have been all but insurmountable. The full extent of these, indeed, cannot very readily be comprehended by an ordinary reader; although he may form some idea of their nature, when it is considered, that the experiments on any alphabet could be conducted only by means of books, none of which were as yet printed—to print these books, for this special purpose, required types, none of which were as yet in existence—and, what was still worse, the types could not be cast for the purpose of printing, even one page for an experiment, till punches had been cut, matrices sunk, and all the expense had been incurred which are necessarily involved in the founding of types for a new language. And even when all this had been once accomplished, the experiments had yet to begin. These extensive operations were but *preparatory* to them; and all the improvements and alterations which might be suggested by the experiments that were to follow, necessarily involved a *repetition* of the greater portion of them, as if they had never been accomplished. Every alteration of a letter, if it should be but one, required the total demolition of every book or page, which had previously been printed, as well as of the punches, matrices, and types cast, of the letters to be improved. The work had each time to commence in some measure anew; improved punches had to be cut, matrices to be sunk, types cast, and books printed, before even one other experiment could be commenced, with the chance still that the altered letter, when tried, might still prove defective, and the whole series of changes fail. The experiments, after all this, might again proceed; but the same routine must necessarily have taken place at every alteration.

"All this, as the reader will perceive, must, in ordinary circumstances, have rendered any extensive series of experiments in such a course, important as it was, next to impossible; and this easily accounts for the failure of our friends on the continent. But in the case of the writer, a happy combination of circumstances rendered such a course of experiments practicable. He has all along, for his own amusement, had a small work-shop, turning lathe, and various tools; and he had added to his printing establishment, some time before, the arts of wood-engraving and stereotyping; and to this uncommon, and rather novel union of several arts under one roof, the blind are indebted for their books and their literature. The types were first engraved on wood, and then composed into pages by his own workmen; and as the great pressure necessary to form the relief upon paper would have crushed the wooden types, he got stereotype casts from them in hard metal, from which a sufficient number of pages were printed for the experiments to proceed. In this manner, the alterations upon the several letters were successively made, again tried, and again altered, at very little expense; an expense, in comparison, exceedingly trifling indeed, and not amounting to much more, perhaps, than one per cent. of what it must have cost him had metal types at first been his only resource."—pp. 44—46.

In 1827 the characters, by means of these wooden types, were so far in advance as to warrant the regular printing of a "First Book," by means of which the ulterior experiments could be conducted by the aid of the blind themselves. To effect this object, the managers of the Edinburgh Blind Asylum gave the assistance of their pupils, and afterwards reported most favourably of the success of the undertaking. In 1828 a committee was formed—composed of Dr. Baird, the principal of the University of Edinburgh, Sir. H. Jardine, and professors Pillans, Wilson, and Johnston—who stated that the blind children whom they examined were able to read in a few weeks with their fingers, as well as other children with their eyes; and as Mr. Gall declined receiving any pecuniary acknowledgment except what might accrue to him from the eventual sale of publications, they strongly recommended the extensive circulation of an edition of the Gospel according to St. John, which he proposed printing, and which the subscribers might either retain as a literary curiosity, or distribute among the blind. Another committee, at Glasgow—among whom was Dr. M'Farlan, the principal of the University—reported in a manner equally favourable. But, notwithstanding

these encouragements, the scheme had nearly failed from the want of a sufficient number of subscribers to the projected publication. Mr. Gall determined, however, to persevere, though at a serious pecuniary risk; and he even in a manner began the whole anew, by a series of experiments with a view to reduce the types to the smallest convenient dimensions. In the course of these experiments, constant improvements, suggested by repeated trials, took place in the formation of the characters; and each alteration led to renewed trouble and expense in re-modeling the types. At length, when Mr. Gall thought the state of advancement of the characters sufficient to warrant the casting of a fount of metal types, he was impeded by the jealousies and secrets of trade; for type moulds, and the other apparatus of type-founding, are not articles of ordinary manufacture, but are constructed privately and confidentially upon the premises of the type-founders. He however ultimately cleared his way, and completed his first fount of types, of the size called Double-English. The metal types being more sharp and regular than their wooden precursors, the blind could distinguish them more readily; he therefore thought he might now venture on a smaller size; and he therefore, after a new serious of experiments, cast a fount of Double Pica, which fully answered its purpose. But the reduction of size detected some defects in the form of several of the letters, which were less distinguishable than others; he therefore went to work again, and, having corrected the evil, ventured on a fount of still smaller size, Great Primer, which is but one size larger than that in which Scotish law papers and church Bibles are printed. By these improvements a book for the blind would be brought into one third of the size at first thought necessary for legibility.

The printing and paper required many experiments. As the letters are formed, not with ink, but by relief caused by pressure, great mechanical power was requisite, and also an improved press; but these difficulties were surmounted by printing only a page at a time, so that any press will now answer the end, The thick, heavy, expensive paper originally employed for embossed printing, it was found might be dispensed with, since any good thick printing paper, with a little more size than usual in its composition, would answer the purpose. The letters in relief may be rudely handled, and even forcibly rubbed and pressed, without injury. The paper may be printed upon on each side; and, to complete the improvements, a suitable method of binding the volumes has also been devised, so as to reduce them to a convenient bulk without injury to the raised letters.

In 1831 Mr. Gall was requested to visit the School for the Indigent Blind in London; and his success in teaching the pupils to read was such as to call forth the warmest approbation of the committee, who requested him to accept a purse of fifty guineas, as a mark of their respect and gratitude, but he declined it. In January, 1832, the Gospel according to St. John was printed, being the first portion of the sacred Scriptures ever printed for the use of the blind, or capable of being read by them. Five or six other books, elementary and educational, have since been printed; but it does not appear from Mr. Gall's account that he has any immediate prospect of receiving an adequate return for what he has actually expended, much less any solid pecuniary reward for his labours. We trust that the publication of his volume will aid his object; and we shall feel happy if our notice of it shall conduce to the same end. Sixpence will put a blind person, or a dozen blind persons in succession, in possession of the "First Book," consisting of the alphabet, the Lord's Prayer, and a few short useful sentences; and this being mastered, the whole field of literature, sacred and secular, so far as books may hereafter be published, is open before him. No blind person in Great Britain, or in any place where the English language is spoken, needs remain a stranger to the benefits now within his reach. The portions of sacred scripture already printed, to which others will be added as the demand increases, are a treasure of infinite value.

We recommend Mr. Gall, or rather the conductors of some of the institutions for the blind, to advertise these publications, so that any person who has a blind friend or neighbour may know how to procure them through the booksellers. To one who desires to follow the example of his Divine Master, it is a new pleasure to be informed of a new act of Christian charity within the compass of his attainment; and we should not think our exhortation lost if we stimulated only some little child, to whom the above facts were related, to teach a blind boy or girl to read the gospel of the beloved disciple.

From the Court Magazine.

VILLAGE CHORISTERS.*

BY THE AUTHOR OF "THE USURER'S DAUGHTER."

A pig in a string is a troublesome article to manage, two pigs in a string are more troublesome still, to a degree, perhaps, in proportion to the squares of their distances—a ram in a halter is also proverbial for obstinacy,—mules are celebrated for their pertinacity, and donkeys for their stupidity; but all the pigs, rams, mules, and asses in the world, put together, would be more easily managed than a company of singers in a village church. About four miles from Loppington there is a village called Snatcham. The living is but small, and the rector resides and performs his duty without the aid of a curate. You cannot imagine a milder and more gentle creature than this excellent clergyman. He is quite a picture, either for pen or pencil. He is not more than five feet four inches in height, somewhat stout, but not very robust; he is nearly seventy years of age—perhaps quite by this time; his hair, what little is left of it, is as white as silver; his face is free from all wrinkles either of care or age; his voice is slender, but musical with meekness. The practical principle of his demeanour has

* "From a work now in the press, entitled "Provincial Sketches."

ılways been—any thing for a quiet life. He would ıot speak a harsh word, or think an unkind hought to or of any human being; but he is now ınd then tempted to think that when the apostle ?aul recommended the Christians to live peace-ıbly with all men, he put in the saving clause 'if possible," with particular reference to village :horisters. Snatcham choir is said to be the best n the county; such, at least, is the opinion of the :horisters themselves;—and he must be a bold nan who should say to the contrary. They are ıo doubt very sincere when they say that they ıever heard any better than themselves; for, to udge from their singing, one would not imagine hat they had ever heard any one else. Snatcham :hurch does not boast an organ, and it is well it loes not, for if it did the whole choir would insist ıpon playing on it all at once; but instead of an ɔrgan it has a band of music, which has been ɡradually increasing for some years past. It com-nenced, about thirty-five years ago, with a pitch-ɔipe, which was presently superseded by a flute. :t was soon found, however, that the dulcet notes ɔf a single flute were quite lost amid the chaos of ;ounds produced by the vocal efforts of the choir, ;o a second flute was added by way of reinforce-nent; but all the flutes in the world would be no natch for the double bass voice of Martin Grubb he Snatcham butcher, under whose burly weight ınd hurly-burly notes the whole music-gallery rembled and shook. To give pungency to the nstrumental department, therefore, a hautboy was added; but the vocalists felt it a point of ho-ıour to outscream the instruments, and the mis-:ellaneous voice of James Gripe, the miller's son, who sang tenor, treble, or counter-tenor, just as t happened, was put into requisition for extra luty to match the hautboy. James Gripe could ing very loud; but the louder he sang, the more rou heard that kind of noise that is produced by ;inging through a comb. It used to be said of ıim that he sang as if he had studied music in a nill during a high wind. To the two flutes and he hautboy were added two clarionets, because wo of Gripe's younger brothers were growing up, ınd had a fancy for music. Young Grubb, the on of the butcher, began soon to exhibit musical alents, and accompanied his father at home on he violoncello, which instrument, with the leave ɔf the rector, was added to the church band in a very short time,—a time too short, I believe, for he perfection of the performance.

The rector, dear good man, never refused his eave to any thing, especially to what the singers ısked; they might have had leave to introduce a wagon and eight horses if they had asked; but ;till the rector did not like it, and every time he was called upon to christen a child for one of his ɔarishioners, he trembled lest the young one ıhould have a turn for music, and introduce into he gallery some new musical abomination. It was next discovered that only one bass to so nany treble instruments was not fair play, so to he violoncello was added a bassoon, and to the ɔassoon a serpent. What next?—nothing more ıt present; but if the movement party retains its ıscendency, triangles and kettle drums may be :xpected. The present state of Snatcham choir is as follows. In the first place there is Martin Grubb, the butcher, a stout robust man of about fifty years of age, having a round head and a red face, with strong, straight, thick brownish grey hair, combed over his forehead, and reaching to his very eyebrows. He is the oldest, the wealthi-est, and the most influential man in the choir. He sings bass, and is said to be the life and soul of the party, though there are no great symptoms of life and soul in his face, which is about as full of expression as a bullock's liver. Then there is young Martin Grubb, who is a bit of a dandy, with black curling hair, and whiskers of the same pattern, pale face, thin lips, long chin, and short nose; his instrument is the violoncello. James Gripe is leader of the treble voices, with occasional digressions as above noticed. And, in addition to the two younger Gripes, Absalom and Peter, who play the two clarionets, there are Onesiphorus Bang, the shoemaker, who plays the first flute; Issachar Crack, a rival shoemaker, who plays the second flute; Cornelius Pike, the tobacco-pipe maker, who plays the bassoon; Alex-ander Rodolpho Crabbe, the baker, who plays the hautboy; Gregory Plush, the tailor, who plays the serpent, together with divers others, men, boys, and girls, who make up the whole band.

This renowned choir has for a long time con-sidered itself the *ne plus ultra* of the musical profession, and consequently equal to the perform-ance of any music that was ever composed. The old fashioned psalm tunes are therefore all ban-ished from Snatcham church, to the great grief of the worthy rector, whose own voice is almost put out of tune by hearing Sternhold and Hopkins sung to the tunes of "Lovely nymph, assuage my anguish," and such-like Vauxhall and Sad-dler's Wells music. The members of the choir too, like other political bodies, have not much peace within unless they have war without. If any attack be made upon their privileges they stick together like a swarm of bees; but at other times they are almost always at loggerheads one with another. Old Martin Grubb wields a pre-carious sceptre, for James Gripe is mightily tena-cious of his rights, and resists, tooth and nail, the introduction or too frequent use of those tunes which superabound with bass solos. Grubb and Gripe, by way of an attempt at compromising the matter, have latterly been in the habit of taking it by turns to choose the tunes; and their alter-nate choice puts one very much in mind of the fable of the fox and the stork, who invited one another to dinner, the fox preparing a flat dish, of which the stork could not avail himself, and the stork in return serving up dinner in a long-necked bottle, too narrow to admit the Fox's head. When James Gripe chooses the tune, he flourishes away in tenor and and treble solos, leaving the butcher as mute as a fish; but when the choice devolves on Martin Grubb, he pays off old scores by a selection of those compositions which most abound in bass solos. And in such cases it not unfrequently happens that Martin, in the delight-ed consciousness of a triumph over his tenor, treble, and counter-tenor rival, growls and roars with such thundering exultation, that the gallery quivers beneath him, while his son saws away

at his violoncello as though he would cut it in half from very ecstacy. Cornelius Pike and Gregory Plush also spend as much breath as they can spare, and perhaps a little more than they can spare conveniently, in filling the vast cavities of their respective serpent and bassoon.

All this disturbs and distresses the feelings of the worthy pastor, who thinks it possible and feels it desirable, that public devotion should be conducted with a little less noise. It appears, indeed, and no doubt the choristers one and all think so, that Snatcham church and Sternhold and Hopkins's psalms were all made to show forth the marvellous talents of the Snatcham choristers. They think that all the people who attend there come merely for the music, and that the prayers and the sermon have no other use or object than just to afford the singers and other musicians time to take breath, and to give them an opportunity of looking over and and arranging their books for the next outbreak of musical noise. So little attention do the Snatcham choristers pay to any other part of the service than that in which themselves are concerned, that during the whole course of the prayers, and in all the sermon time, they are whispering to one another, and conning over their music books, sometimes almost audibly buzzing out some musical passage, which seems to require elucidation peradventure to some novice; and Master Grubb the younger is so delighted with his violoncello, that he keeps hugging the musical monster with as much fondness and grace as a bear hugs its cubs, and every now and then, in pleasing anticipation of some coming beauties, or in rapturous recollection of some by-gone graces, he tickles the sonorous strings with his clumsy fingers, bringing forth whispers of musical cadences loud enough to wake the drowsy and to disturb the attentive part of the congregation. And then the good rector casts up to the music-gallery a look, not of reproof, but of expostulation, and thereupon Master Grubb slips his hands down by his sides, and turns his eyes up to the ceiling, as if wondering where the sound could possibly come from.

The supplicatory looks of the music-baited clergyman are on these occasions quite touching and most mutely eloquent: they seem to say—"Pray spare me a little:—suffer me to address my flock. I do not interrupt your music with my preaching, why should you interrupt my preaching with your music? My sermons are not very long, why will not you hear them out? I encroach not on your province, why will you encroach on mine? Let me, I pray you, finish my days on earth as pastor of this flock, and do not altogether fiddle me out of the church." But the hearts of the "village musicianers" are as hard as the nether millstone; they have no more bowels than a bassoon, no more brains than a kettle drum.

Another grievance is, that these Snatcham choristers have a most intense and villanous provincialism of utterance: it is bad enough in speaking, but in singing they make it ten times worse; for they dilate, expand, and exaggerate their cacophony, till it becomes almost ludicrous to those who are not accustomed to it. The more excited they are, whether it be by joy or anger, the more loudly they sing, the more broadly they blare out their provincial intonations; and it is very seldom indeed that they ascend their gallery without some stimulus or other of this nature. If they be all united together in the bonds of amity and good-will; if Martin Grubb have suspended his jealousy of Gripe, and if Gripe no longer look with envy and hatred upon Grubb; if some new tune be in preparation wherewith to astonish and entapture the parishioners; if there be in the arrangement tenors and trebles enough to satisfy the ambition of Gripe, and bass enough to develop the marvellous powers of Grubb:—there is a glorious outpouring of sound and vociferation, which none but the well-disciplined ears of the Snatcham parishioners can possibly hear. The walls of Snatcham church must be much stronger than those of Jericho, or they would have been roared to rubbish long ere this. But if the agreement of the choir be the parent of noise, their disagreement is productive of much more. More than once the Gripe and the Grubb factions have carried their animosity so far as to start two different tunes at the same time. And what can be done in such a case? Who is in the wrong? If the Grubb faction were to yield, they would betray a consciousness that they had not acted rightly in their selection of a tune; and if the Gripe faction were to withdraw from the contest, or to chime in with the Grubbs, they would seem to show the white feather: so they battle it out with all their might and main, and each party must sing and play as loud as possible, in order to drown the noise of the other. After church time the Grubbs throw all the blame upon the Gripes, and the Gripes retort the charge upon the Grubbs, and a man had need have the wisdom of a dozen Solomons to judge between them. So excited with passion and puffing, and singing, and playing, have the parties sometimes been after a *flare-up* of this kind, that they have looked as tired as two teams of horses just unharnessed from two opposition stage-coaches;—nay, the very instruments themselves have appeared exhausted, and an active imagination might easily believe that the old big burly bassoon, standing in a lounging attitude in one corner of the gallery, was panting for want of breath. Such explosions as these, however, do not frequently occur, and it is well they do not: when they do, a reconciliation generally takes place soon after, and an apology is made to the good pastor, more, perhaps, from compassion to his infirmities than out of respect to his office or his years; and his mild reply is generally to the following effect—"Ah! well, my good friends, I think another time you will find it more easy to sing all one tune: I marvel much that ye don't put one another out by this diversity of singing."

There is also another mode in which the parties manifest their discrepancy of opinion, or discordancy of feeling, and that is by the silence of half the choir. Now one would think that such an event would be a joy and a relief to the good man, who loves quiet; and so it is physically, but not morally: for though his ears are relieved from one half of the ordinary musical infliction, yet he is mentally conscious that evil thoughts are

cherished in the breasts of the silent ones, that they who sing are not praising God in their songs, and that they who sing not are not praising him by their silence.

But the climax of the abominations of the Snatcham choristers I have yet to record, and I hope that by their follies other choirs, if there be any so absurd, will take warning. It has been already said that this celebrated Snatcham choir made it a great point to obtain leave from their rector for all the abominations and absurdities which they were accustomed to inflict upon the parish under the guise of music; but the arrogant importunity of their solicitation was such that they seemed to bid defiance to refusal, so that their asking leave was after the fashion of the beggar in Gil Blas, who held his musket in the direction of the donor's head. At a large town in the county in which Snatcham is situated, there had been a musical festival, the directors of which, in order to give *eclât* to their advertisements, had used all manner of means to swell the number of the performers. For this purpose they had sought every hedge and ditch, and highway and by-way in the county, to pick up every individual who had the slightest pretension whatever to musical talent. In such a search, of course the Snatcham choir could not by any possibility be overlooked. They were accordingly retained for the choruses, in consequence of which they underwent much musical drilling; nor were they a little pleased at the honour thus thrust upon them. They of course distinguished themselves, though I must say that the wisest thing chorus singers can do is not to distinguish themselves; but the Snatcham choir, it is said, actually did distinguish themselves, especially in the Hallelujah Chorus, and so fascinated were they with that chorus, and their own distinguished manner of singing it, that they resolved unanimously to perform it at Snatcham church. This was bad enough; but this was not the worst, for nothing would serve them but they would have it of all days in the year on Good Friday!

On the evening of the day before, the whole body of the choristers, vocal and instrumental, went up to the rectory, and demanded an audience of their worthy pastor. The good man trembled at their approach, and his heart sank within him at the announcement that they had something very particular to say to him. He thought of harp, flute, psaltery, dulcimer, sackbut, and all kinds of music, and his ears tingled with apprehension of some new enormity about to be added to the choir, in shape of some heathenish instrument. It was a ludicrous sight, and enough to make the pastor laugh, had he been at all disposed to merriment, to see the whole choir seated in his parlour, and occupying, after a fashion, every chair in the room; for if they were never harmonious in any thing else, they were perfectly harmonious as to their mode of sitting: they were all precisely in the same attitude, and that attitude was—sitting on the very outward edge of the chair, with their hats carefully held between their knees, their mouths wide open, and their eyes fixed upon vacancy. At the entrance of the clergyman they all rose, bowed with simultaneous politeness, and looked towards Martin Grubb as their mouth piece. Martin Grubb, with his broad heavy hand, smoothed his locks over his forehead, and said—"Hem!"

"Well, Mr. Grubb," replied the rector, "you and your friends, I understand, have something particular to say to me."

"Why yes, sir," said Mr. Grubb, "we are called upon you by way of deputation like, just to say a word or two about singing; and for the matter of that, we have been practising a pretty-ish bit of music out of Handel, what they sung at the musical festival, called the Hallelujah Chorus; and as our choir sung it so well at the festival as to draw all eyes upon us, we have been thinking, sir, with your leave, if you please, and if you have no objection, that we should just like to sing it at church."

"At church?"

"Yes, sir, if you please, at church to-morrow. The Hallelujah Chorus you know, sir, being part of the Messiah, we thought it would be particular appropriate; and we are all perfect in our parts, and there's two or three chaps out of the next parish that are coming over to Snatcham to see their friends, and they'll help us you know, sir, and every thing is quite ready and rehearsed and all that; and we hope, sir, you won't have no objection, because we can never do it so proper as with them additional voices what's coming to-morrow, and there will be such lots of people come to church on purpose to hear us, that they will be all so disappointed if we don't sing it."

Here James Gripe, somewhat jealous of his rival's eloquence, and taking advantage of Martin's pausing for a moment to recover breath, stepped forward, saying—"No, sir, we hope you won't refuse us your leave, because all the people so calculate upon hearing it, that they will go away in dudgeon if so be as they are disappointed, and mayhap they will never come to church again, but go among the methodishes or some of them outlandish sexes; and it would be a pity to overthrow the established church just for the matter of a stave or two of music."

The rector sighed deeply but not audibly, and replied, saying, in a tone of mild expostulation—"But to-morrow, my friends, is Good Friday, a day of extraordinary solemnity, and scarcely admitting even the most solemn music in its service."

"Exactly so," interrupted Martin Grubb, "that's the very thing I say, sir, and therefore the Hallelujah Chorus is the most peculiar appropriate: it's one of the most sollumest things I ever heard,—it's quite awful and grand—enough to make the hair of one's head stand upright with sublimity."

"'Tis indeed, sir," added James Gripe, "you may take my word for it, sir."

"Perhaps," returned Martin Grubb, "your reverence never heard it; now if it be so as you never heard it, mayhap you don't know nothing about it, in which case we can, if you please, with your permission, sing you a little bit of it, just to give you an idea of the thing."

The poor persecuted pastor looked round upon his tormentors in blank amazement, and saw them with their ruthless mouths wide open, and ready

to inflict upon him the utmost penalty of their awful voices. In tremulous tones the worthy man exclaimed, "No, no, no, pray don't—pray don't—don't trouble yourselves—I beg you will not. I know the piece of music to which you refer, and I think if you could perform it on any other day than Good Friday——"

Singers are a peculiarly irritable class of persons, and the slightest opposition or contradiction irritates and disturbs them, so that at the very moment that the rector uttered a sentence at all interfering with their will, they all surrounded him with clamorous and sulky importunity, and set to work with all diligence to demolish his objections.

"Please, sir," said Martin Grubb, shaking his big head with a dogged wilfulness, "I don't see how it's to be done. The Hallelujah Chorus requires a lot of extra voices what isn't to be got every day; and if we tells them chaps as is coming over to-morrow to help us, that we don't want their help, they may take tiff, and never come over to Snatcham again."

"But perhaps," the pastor meekly replied, "they may assist you in the grave and sober singing of some serious and well-known psalms in which all the congregation may unite."

On hearing this, the broad-faced butcher expanded his features into a contemptuous sort of a grin, and said—"Come, now, that is a good one, as if reg'lar scientific singers would come all the way to Snatcham just to sing old psalm tunes!"

Mr. Gripe also said—"He! he! he!"

"He! he! he!" is a very conclusive kind of argument; and so the rector of Snatcham felt it to be, for he could not answer it, nor refute it, nor evade it. He looked this way and that way, up to the ceiling and down to the floor, towards Mr. Gripe and towards Mr. Grubb; but neitheir ceiling nor floor, nor Gripe nor Grubb, afforded him any relief from his painful embarrassment. The exulting singers saw that he was posed, and that now was the time to push home their victory, and overwhelm the rector by their united importunities. So they all crowded round him at once, and almost all at once began to assail him with such a torrent of reasons and argumentation that he had not a word to say for himself.

"Please, sir," said Onesiphorus Bang, "I ha'n't got nothing else ready to play."

"Nor I neither," said Issachar Crack.

"Please, sir," said Alexander Rodolpho Crabbe, "we never like to do nothing without your leave, and we hope you won't compel us to do so now. My wife says she'll never come to church again, if the Hallelujah Chorus is not performed to-morrow."

"And I declare," said Gregory Plush, "that for my part I never wish to touch the serpent again, if we mayn't do that piece of music."

Absalom and Peter Gripe also said the same as touching the clarionets; and James Gripe then looked at the rector with a quaintly interrogative aspect, which, without uttering a word, seemed to say—"There, sir, what will you do without Absalom and Peter's clarionets." Now, for his own part, the worthy pastor would have been glad to get rid of the whole clamour of their music, for these choristers were always at loggerheads either with one another, or with all the rest of the parish.

The rector thus overwhelmed with argument and eloquence, with pathos and importunity, found himself compelled to yield, which he did with the worst grace imaginable. Away went the choristers, rejoicing in the triumph of music, and full of glee at the thought of the wonderful figure they should cut on the morrow, when, assisted by the "chaps from the next village," they astonished the natives with the Hallelujah Chorus.

That night neither the singers nor the rector slept: the former were kept awake by the anticipation of musical glory, and the latter was made restless by the dread of musical absurdity. Good Friday came:—the whole village looked more like a scene of festivity than of fasting. The "chaps from the next village," as Martin Grubb called them, were as gay as so many larks: there was such a display of blue coats and yellow buttons as never was seen before. The singing gallery was full to suffocation, and the church itself was crowded. The squire of the parish was present, and his family also were with him, and the singers were so happy that they could hardly contain themselves. They did not mind the prayers; they had heard them before, and did not think them half so well worth hearing as the Hallelujah Chorus. There was such a rustling of leaves of music books, and such a buzz of whispering voices, that the worthy rector could hardly be heard. The choristers had arranged that the Hallelujah Chorus should be sung immediately before the sermon, and they thought that the prayers would never be over: they were as impatient as a young horse in harness.

At length the prayers were finished, and the merciless choristers let loose upon the congregation to inflict whatever musical torture they pleased. Away they burst with relentless and resistless fury. There was such scraping, and blowing, and roaring, and growling, and screaming, as never was heard; the powers of every voice, and of every instrument, were exerted to the utmost of their capability—there was such an infinite variety of articulation of hallelowya, halleluyear, allyluger, and ahmen, and awmen, and ameen, that none but the initiated could form a guess what the singers were about. The patient and afflicted rector sat still in the pulpit, waiting till the storm should be over: he knew that it could not last for ever, and that they must soon sing themselves hoarse or out of breath. There is an Irish proverb which says "Single misfortunes never come alone:" this was verified in the present case; for a misunderstanding occurred, which produced a double infliction of the music. Messrs. Grubb, Gripe, Crabbe, Bang, Crack, and their friends, when performing at the cathedral, had observed that one or two parts of the performance had been encored by a signal from his grace the Duke of ——, who was present as patron, and this signal consisted of the silent waving or lifting up of a white pocket-handkerchief. Now, unfortunately, just as the band was bringing its mighty performance to a close, the squire of the parish most innocently drew his handker-

chief out of his pocket; but happening to draw it forth with a peculiar grace, or with what Mr. Grubb and his friends thought a peculiar grace, they were most graciously pleased to take it for granted that it must be a signal for a repetition of the chorus, and therefore, just at the moment when the good rector was pleasing himself with the thought that the absurd display was over, they all burst forth again with renewed vigour. He thought they were absolutely mad; he looked; he sighed; he shook his head; but he was only answered by halleluyear, allyluger; and when they had finished the second time, he was half afraid that they would begin again, and sing it the third time. When the service was over, the good man took the liberty to hint to his musical parishioners that he thought they had performed a work of supererogation in performing the chorus twice. They themselves felt that they had somewhat encroached, but they laid the blame upon the squire, whose slightest wish they thought should be obeyed. The squire was very sorry when he found what mischief he had inadvertently done, and promised that he would take care, in future, not to pull out his handkerchief again in singing time.

BEFORE THE DRAWING-ROOM.

BY THOMAS HAYNES BAYLEY.

I must be presented to-day, Lady Susan,
I must be presented to-day,
I *must* be presented, or what will my cousin
The bride, Lady Mackintosh, say!
She married a man who was knighted last season
For carrying up an address;
If *she's* a great lady, you'll own there's no reason,
My lady, why *I* should be less!
I must be presented to-day, Lady Susan,
I must be presented to-day.

Now pray, Lady Susan, don't say that you're poorly,
'Tis plain that you wish to withdraw;
You married my brother, and I've a right, surely,
To go with my sister-in-law!
And though you consider us vulgar relations,
Some proper repayment there'll be,
For Brother Bob's *diamond* and *pearl* presentations,
In this presentation of *me*.
I must be presented to-day, Lady Susan,
I must be presented to-day.

Look at me, my lady,—'tis silly to quarrel,
You'll own that I'm fit to be seen;
My yellow silk petticoat loop'd up with laurel,
(*So* elegant, yellow and green!)
My train of blue satin! (judiciously chosen,
'Twill make a pelisse in the spring,)
And then my red feathers! I'm sure, Lady Susan,
I *must* be remarked by the king.
I must be presented to-day, Lady Susan,
I must be presented to-day.

A train may look very magnificent, flowing
Behind one in folds, I dare say,
But as for a hoop! Oh, I could not bear going
To court in that *round-about way!*
My lappets! nice lace!—what's the use now of buying
Three yards?—it is quite a take-in;
And why did you laugh when you saw I was tying
Them gracefully *under my chin?*
I must be presented to-day, Lady Susan.
I must be presented to-day.

And what's to be done when I stand in the presence?
Pray tell—I rely upon you;
Must I civilly say, as I make my obeisance,
"Your majesty, how do you do?"
To be kiss'd by the king! Lady Susan, assist me,
I shall not be fit to be seen!
What! kiss me in public! Oh! when he *has* kissed me,
I sha'n't dare to look at the queen!
I must be presented to-day, Lady Susan,
I *will* be presented to-day.

From the New Monthly Magazine.

FRANCIA, DICTATOR OF PARAGUAY.

BY THE HON. MRS. ERSKINE NORTON.

Among the great political changes that have taken place during the last half-century, and which, for good or for evil, must necessarily influence the condition of those who succeed us, to remote generations, few are more interesting and important than the secession of the Spanish colonies of South America from the weak yet oppressive sway of their mother country.

At the time when the English colonies of North America achieved their independence, and France was progressing in her frightful revolution, Spain, in lieu of profiting by the lessons imparted by these events, and which all who opened their eyes might read—in lieu of turning her closest attention towards her western empire, redressing its grievances, facilitating and protecting its commerce, educating its youth, improving its laws and institutions, and at the same time keeping it in due submission by the strongest control of her authority and exertions of her power—instead of all this, what did she? She continued to creep on in the old worn-out path, to govern unjustly, injuriously, rapaciously, and at the same time so weakly, that her colonies had only to will their freedom, and they were free. With stupid wonder, Spain, herself on the verge of ruin, saw them shake her yoke from their necks almost without an effort.

They obtained their liberty; they did not exactly understand what that was, but they were as proud and as pleased as though they did; still less did they know what use to make of it, and instead of trying to find out, they talked in their assemblies of Greece and Rome, Cæsar, Pompey, and the Gracchi—gave themselves high-sounding republican titles—quarreled with their neighbours and with each other—and finally—look at them now—at the expiration of five or six and twenty years, what are they?—a mere prey to the spoiler.

These states are not fitted for republicanism: that form of government, it would appear, suits best a nation in its first vigour, emerging from barbarism, while yet free from the taints of luxury and ambition. The states of South America are not forming from the strength of youth, but from the decrepitude of old age; they are remnants of the two most degenerated nations of Europe, the Spanish and the Portuguese, with their negro mixtures. The Portuguese, it is true, have as yet no republic, but their taste is decidedly

that way. One cannot choose but laugh at spying the pig-tail, huge cocked hat, and tarnished embroidery of the old Spaniard and Portuguese protruding through the hastily-assumed toga of republican Rome—the ass in the lion's skin.

The author of this sketch will not apologise to her readers for presuming that they know but little about either Paraguay or Francia. Not even the detention of M. Bonpland, and the efforts made in Europe by his family for his release, could attract the public attention towards this secluded territory and its ruler. A small volume has been published by Messrs. Renger and Longchamps, Swiss gentlemen, travelling as naturalists, who were detained at Assumption (the capital) as unjustly as was M. Bonpland, from 1819 to 1825. This narrative is written with much good sense and simplicity, and its account is confirmed by the information personally received by the present writer from two other gentlemen who had been in Paraguay, one of them as a *detenu* for five years. From these sources is derived the following sketch, with the anecdotes which accompany it.

Paraguay is an inland state of nearly the size of England, with a salubrious climate and rich soil, watered by fine navigable rivers, with a population of about five hundred thousand.

After some puerile attempts to establish a few republican forms and names, consuls, a legislative assembly, &c., the whole state sunk in the short space of four years under the absolute control of one master-mind; Gaspard Roderick de Francia was created dictator, at first for three years, and at the expiration of that time for life.

Francia was born in Paraguay, and has never been beyond the Spanish colonies of South America. His father is supposed by many to have been a Portuguese, but he prefers to have it believed that he is of French origin; his mother was a creole of Paraguay, and he was one of several children.

He was intended for the church, but his destination was changed, and he embraced the profession of the law. He received the first rudiments of his education from the monks at Assumption; he then studied at the University of Cordova du Tucuman, where he was admitted doctor of theology, and he is usually denominated Doctor Francia.

In the exercise of his profession as a lawyer, and especially as a judge, he was remarkable for his integrity and disinterestedness. He was elected a member of the *cabildo*, and afterwards succeeded to the office of *alcaldi*. He was exceedingly independent, flattered no party, and professed his sole political object to be the entire separation of Paraguay from Spain, and its formation into a republican state.

When the revolution was effected, a junta was established, to which Francia was appointed secretary, with a deliberative voice; but all was in confusion; the army, as usual on such occasions, seemed inclined to take the lead, and for a time terror and dissension alone prevailed. Francia, however, at that critical moment, obtained an ascendancy he never afterwards lost: his superior talents, address, and information were constantly appealed to, and nothing of any importance could be transacted without him.

At length it was settled that the government should be *consular;* Francia and a colleague were appointed consuls for one year, each in supreme command for four months at a time: Francia took care to secure to his share the first and the last four months of the year. Two curule chairs were prepared on this occasion; upon one was inscribed the name of Cæsar, and on the other that of Pompey: Francia eagerly took possession of the first.

But the grand blow yet remained to be struck. by the most consummate art and management and by the influence he had obtained over the troops, he got himself at the end of the year proclaimed dictator, and, as before said, at the end of three years, dictator for life. The first nomination took place in 1814, when Francia was about 53 years of age.

From the moment he found his footing firm, and his authority quietly submitted to, his whole character appeared to undergo a remarkable change without faltering or hesitation, without a pause of human weakness or a thrill of human feeling, he proceeded to frame perhaps the most extraordinary despotism that has ever been submitted to. In Paraguay there exist at present but two classes—the dictator forms one, and the populace the other: in the dictator is lodged the whole power, legislative and executive, of the state; the populace has no power, and only one duty—to obey. All was done rapidly, boldly, and powerfully; he well knew the character of the weak and ignorant people at whose head he had placed himself, and who had had the temerity to presume that they possessed energy and virtue enough for a republic.

As the result of this remarkable effort, the middling orders are destroyed; there is no gradation between the ruler and the people—a man may be richer or better educated than his neighbour; but if these advantages be not quite as useful to the dictator as they are to their possessor, they only render him liable to become an object of distrust and oppression.

Even that most difficult of all powers to control—the power of a bigoted but dissolute clergy over a deceived and ignorant people—Francia has entirely mastered; not a monastic institution now exists in Paraguay. The poor old bishop appointed by Spain has been long in a state of derangement, brought on by his horror at the revolution and its consequences; his place is filled by a vicar-general, a creature of the dictator's. No processions of any kind are allowed to take place except that of the *Fete Dieu*, and the sabbath is the only religious holiday permitted to be observed. The dictator nominates all the curates throughout the country, and withdraws them at his pleasure. He proclaims that every individual in Paraguay may adopt any creed he pleases; he may even be a Mahometan or a deist—any thing but an atheist.

He has long since put an end altogether to the municipal body termed the *cabildo*, not only in the capital, but in every town in Paraguay; in the former he has replaced it by a couple of

alcaldes, a *fiel executor* (head of the police,) and an advocate for minors; they are all dependent on him in every respect.

The dictator is the sole receiver and disposer of all the revenues of the state; he observes great secresy concerning them, so that it has not yet been found possible to make a just estimate of their amount. The minister of finance is merely a principal clerk; he cannot make the smallest payment, or the most trifling delivery of stores, without the authority of the dictator, whose economy is ludicrously minute. The only branch of expenditure on which he appears to be liberal is the provision of the warlike stores, which he is aware, in the event of an invasion, could not be procured; but although the supply is amply kept up, it is only by oppressing the foreign merchant or the native artisan. The salaries of the public functionaries are very moderate—many have none but their fees of office; the clergy are almost all supported by voluntary contributions. The public works are carried on by prisoners, or by means of forced labour, the master workmen alone receiving salaries.

The revenues of the state arise from tithes, a tax upon shops and store-houses in the capital, an import and export duty, the sale duty, stamps, postage of letters, fines, confiscations, the produce of the national domains (which are very extensive), and the *droit d'aubaine*.

Of these taxes the most severe are the import duty and the *droit d'aubaine;* the latter is one of the most wicked and unjust oppressions of this nature ever invented: by it, the state becomes the heir of all foreigners who die without legitimate children *born in Paraguay*. As the poor stranger breathes his last, he beholds the myrmidons of government in his house, taking inventories and affixing their seals—he is obliged to declare upon oath the amount of his property, without even deducting his debts; although he may be in the agonies of death, he is removed from his bed into another apartment, while his chamber undergoes the same scrutiny as the rest of his habitation; if yet likely to live for a few days, a small pittance is doled out from his own purse to supply him with mere necessaries; there is not left even sufficient for his interment, which is usually done by subscription, while his widow and foreign-born orphans are turned destitute from their roof.

The army is the dictator's instrument of power —it consists of only five thousand regular troops and twenty thousand militia; the levies of both carefully exclude young men of education, or who belong to wealthy families. Among the regulars, all must serve at first, without exception, in the ranks, from whence they are raised, at the pleasure and choice of the dictator, to fill the station of officers—that is to say, of ensigns and lieutenants, not more than half a dozen individuals at most possessing the rank of captain, beyond which there is no promotion. A soldier of the line can only be tried for any serious crime by the dictator in person. Very strict discipline is enforced in all that regards their conduct as soldiers; but when off duty, they are at perfect liberty, lead licentious lives, and are seldom reprimanded for any misconduct towards the citizens.

There are at the capital two kinds of prisons; the public prison for criminals and debtors, and the state prison for offenders against the government. In the first, the prisoners are crowded together in the most unwholesome and miserable manner, without distinction of age, rank, sex, or species of crime; but their condition is not so hopeless and heart-breaking as that of the state-prisoners, who languish for years in darkness, chains, and solitude: not sickness, nor even the approach of death itself, occasioning more than a slight amelioration in their treatment. A Doctor Sabaler, who was as an especial favour allowed to be visited by one of the Swiss travellers in his medical capacity, died with the *grillos* on his feet, and was not allowed even to receive the sacrament.

But the most singular feature in the government of Francia is the perfect isolation in which he has succeeded in placing Paraguay. In the attainment of this object he has been no doubt assisted by the peculiar situation of the country: in the midst of an immense and thinly populated continent, it stands alone and impenetrable: its large rivers, extensive forests and morasses, together with the vigilant measures adopted by the dictator, render it next to impossible for a single individual to escape from his dominions; the attempt is perilous in the extreme: those who make it have to encounter the dangers of entirely losing every clue to their destination in the wilds; of being destroyed in one of the immense and frequent conflagrations of the forest; of excessive fatigue and exposure; of starvation, and of attacks from serpents, wild beasts, and savages: if they are brought back, instant execution, or chains and imprisonment await them.

The only possibility of escape is during the time that the river Paraguay overflows the surrounding plains; it is then *just* practicable, and *has been* effected: but the Swiss travellers give an interesting account of an attempt to escape during that time, in 1823, which failed. The fugitives, however, showed great want of foresight in their preparations: they had neither fire-arms nor fishing-tackle, both indispensable either to their defence or subsistence. The party consisted of a Mr. Escaffier, four free negroes, and a negress in a state of pregnancy. One of the men died from fatigue, another from the bite of a serpent; at one time they were surrounded by a conflagration, at another involved in an immense glade in the midst of a forest, where they wandered about for fifteen days, seeking the only outlet it contained, namely, the one by which they had entered it. At last they were taken by a serjeant of militia; they were in so reduced a state that the whole party were quite incapable of defending themselves against one man: they were imprisoned and tortured, but ultimately treated with more lenity than might have been expected.

This singular system of national imprisonment extends not only to the natives of the *free republic* of Paraguay, but also in a most unjust and extraordinary degree to the foreigners residing there. The two Swiss gentlemen already alluded

to were traveling for scientific purposes in these vast and unknown regions. At Corrientes, which was in a state of commotion, they were detained eight months, before being permitted to re-embark on the Parana, which conveyed them into Paraguay, and to Assumption its capital, in July 1819. Here they were presented to the dictator, and were told not to concern themselves about his government, but in all other respects to do as they pleased; and it appears that no obstacle was thrown in the way of their researches for which long excursions into the country must have been necessary.

In consequenee of a conspiracy being detected, and of some other commotions on the frontier, occasioned by the banditti of Artigas, who after a life of general plunder, upon all estates and parties, was forced to take refuge in Paraguay from his own troops—the port was closed, and all foreign communication put an entire stop to. This was a sad blow to the Europeans in Assumption, who now amounted to about forty persons, English, French, Swiss, and Italian; all merchants, except the two Swiss gentlemen and an English physician. Still, however, they experienced no molestation, until the arrest of M. Bonpland, at his establishment on the frontier, dispelled their illusion. The excuse was that he had held communication with the rebel troops of Artigas, and that his establishment was formed less for commercial or scientific objects than to facilitate an invasion. A party of his Indians were massacred by the soldiers of the dictator; M. Bonpland himself, although apparently unarmed and unresisting, was wounded; his property was plundered, and, without any pity for his sufferings, they conducted him with irons on his feet to Santa Maria. In the course of this painful journey, he forgot, like a good Christian, that he was among his enemies, and attended in his medical capacity the soldiers whom the Indians had wounded in their own defence. However, as soon as the dictator was apprised of the treatment M. Bonpland had received, he ordered his irons to be removed, and restored to him such of his property as had escaped the plunder of the soldiers; but he was not permitted to come to the capital; a residence was assigned to him near Santa Maria, where he remained a prisoner for many years: the more interest that was made for him, either by governments or individuals, the more Francia appeared to rejoice at having him in his power.

At length, having received an official notification of the acknowledgment of the South American republics by England, accompanied by a request that the English in Paraguay might be permitted to leave the country whenever they pleased, with their effects, the dictator ordered them to get their vessels ready. The Swiss gentlemen thought it a favourable moment to apply for the same benefit, which, after the delay of a couple of months, when they were beginning quite to despair, was suddenly granted. Passports were given to them at eleven o'clock in the forenoon, with orders to sail by a vessel that was to depart at *one* the same day—*two hours* allowed them to settle their affairs, make their preparations, and, above all, to pack up their collections of objects of natural history, several of which were of a very fragile nature. There is no spur like necessity. Leaving much in the hands of confidential persons, they went on board, and sailed at the prescribed hour, amidst the good wishes of a multitude of spectators of all ranks; after a sojourn of six years in Paraguay—two years voluntarily, and four by forcible detention.

While on the subject of the treatment of foreigners in Paraguay, it will doubtless not be uninteresting to present an account of the reception there of a countryman of our own. He is one of the two gentlemen (the *detenu* for five years) already mentioned as having afforded to the writer of this the advantage of personal information. The account which follows is in his own words.

"It was late in the evening that the little sloop in which I took my passage had entered the waters of Paraguay. On the approach of night we secured our bark, as is the custom in that river, to a tree, in order to await the dawn of the next morning. We had not been long in this situation, when a certain noise, repeated and answered at intervals, attracted our notice. We had on board an Indian who was returning to his native country, in the capacity of our pilot; he told us that the noise proceeded from the encampment of a tribe of Indians who occupied the right bank of the river, and were then at war with Paraguay. This intelligence caused us some uneasiness. After supper, our men had scarcely retired to rest when a canoe came rapidly down the stream, and was alongside before the person on watch had discovered it. The noise made by him to arouse the people, seemed to have alarmed the persons in the canoe; they let go our chains and were gliding along with the current, when my fowling-piece, which happened to be at hand loaded with bird-shot, was discharged in their direction; they returned us the compliment once with ball, and left us to digest as we might this nocturnal encounter. Presuming that they would return during the night with additional force, we made some little preparation to receive them. We were not disturbed, however, until day-break, when a canoe was seen coming up the stream; after a cautious approach, the persons in it hailed, and came on board; they enquired who was *patron* or master, and on the poor fellow going forward, they assaulted him with their sabres in the most brutal manner. I enquired the cause of such violent conduct; but the only answer I could get from them, was the frequent repetition, in a very agitated manner, of the words, 'You will see presently.'

"I thought that our hour had come—that the villains were going to take us on shore among the bushes, and shoot us at once. The pilot, who spoke of course the Paraguay language, was asked who I was; on being told, I suppose they considered me entitled to equal attention with the master; so they took hold of me, but without striking, they tied both hands behind my back, as they had already done to him.

"In this situation an *eclaircissement* took place: instead of Indians as we had supposed them, our nocturnal visiters happened to have been free Paraguayos taking their rounds in their capacity of river patrol, or guard. Our small shot had spread so much that it slightly wounded three of the men, who in their terror took us for a man of war; and the silly fellows, under that impression, proceeded straight to the nearest piquet, where they made their report accordingly. The officer on guard, without waiting for further investigation, sent an express with the awful intelligence to the commandant of the district, who in his turn was equally expeditious

in sending it on to the capital. I requested our captor (from whom we got the first part of this intelligence, and who was by degrees becoming less choleric and more disposed to hearken to reason) to ease the ties on our hands as much as was consistent with the security of our persons. As the master, smarting under the excruciating pain produced by the brutal manner in which they had tied him, was crying aloud like a child, he was ordered to be untied altogether. My release soon followed: on the removal of the cords, and the re-action of the blood, the sensation was most unpleasant: for a moment or two I lost my sight, and could scarcely stand; my hands were swollen and much discoloured.

"The master fainted away on being untied, and was obliged to be carried below. On his recovery we were ordered into the canoe—conducted a few miles up the river—landed and lodged in a guard-house, where the master was immediately placed in the stocks. My time had not yet arrived. The serjeant who conducted us had, during our intercourse, become somewhat less hostile towards me, and wishing to save me the indignity of the stocks, desired me to sit down in the porch of the guard-house, under the eye of the sentinel.

"The commander of the detachment forming this guard now made his appearance, not at all in a disposition to deprive me of the benefit of a repose in the stocks. His orders in this respect were soon complied with; but accident brought about my release sooner than either the fellow wished or I anticipated. As the affair of the previous night had now assumed quite a different shape to what had been originally given to it, it became the commander's duty to forward, without delay, a fresh bulletin, together with the papers and manifest of the vessel, as well as the correspondence, of which I might be the bearer. I told him he could have none of those papers unless I went on board. Persisting in this, I soon found myself at comparative liberty, accompanying the officer to the vessel. By the time we had returned to the guard-house his temper was somewhat mollified, and he did not insist on a second lodgment in the stocks. The rest of the day was passed in much preparation, and it must have been about ten o'clock at night when the master was roused from his slumbers in the stocks; we mounted on horseback, and, strongly escorted, traveled all night. At day-break we were in sight of, and not very distant from Neembucii, the residence of the commandant of the district,—a halt was ordered, and a person approached, who told me with civility that he must secure my hands before we entered the town. I desired him to do his duty; he then fixed a cord to my arms above the elbows, leaving sufficient play to guide the horse: the master was served in like manner. This individual, a native of Portugal, had hitherto wished to pass himself off upon me as the bravest of the brave; but ever since our capture he had behaved in a very pusillanimous manner, often crying aloud, entreating the mercy of the brutal Paraguayos, and ever and anon using earnest supplication to the Virgin Mary.

"We were very soon conducted to the presence of the awful commandant of Neembucii; a tall, lank, elderly man, and with his arm stretched out very like a cross-road sign-post. On our approach, he apparently assumed his most imposing manner, and asked 'how we had the temerity to fire on his people?' I replied, 'that we did not know them to be his people—that they came alongside and attempted to board in a dark night without hailing; a conduct so unusual, that we took them to be some of the barbarous Indians, whose signals we had heard a little time before, and that under similar circumstances we should again act in the like manner.' After expressing his indignation, he ordered our bonds to be removed, sent the master to the common prison, and placed me under the surveillance of a guard stationed on the bank of the river, to keep a look-out for such vessels as might be passing either up or down. I passed about a week in this situation, but that week produced a great change in our affairs. Francia had received in due course the intimation of the presence of an enemy's vessel in the river, and lost not a moment in adopting defensive measures. Six hundred men were under marching orders for the frontier, when the intelligence reached him that the terrible man-of-war had dwindled down into an insignificant merchantman, and that his men had been accidentally wounded with bird-shot, for having attempted to board at night without hailing. He was very angry with his people on this occasion, and particularly chagrined at the want of etiquette which had caused them to be taken for barbarous Indians: 'Would to God,' he exclaimed, 'that the Englishmen had sunk them!'

"About one half of the troops assembled were sent after all to Neembucii under a new commander, so that I had the pleasure to see the old one removed in disgrace. His successor treated me with civility, placed me in possession of my vessel, and restored me the master.

"From this place we had a long passage of about three weeks to the capital, where I found that the sensation produced by our rencontre with the canoe was very great. Much speculation was afloat about the reception I was to meet with from the dictator.

"On landing, I was conducted by a soldier to the government-house, where my arrival was announced. I had not to wait long before I was requested to enter; the day was cold and rainy—I was dressed in a body-coat buttoned, over which I wore a great coat—my pocket-handkerchief, for convenience of access, was pushed in between the buttons of my coat at the breast. The officer requested me to take off my great coat, and, without saying a word, he pulled out my pocket-handkerchief—then, without further ceremony, requested me to enter.

"At the end of a long interior corridor I saw a thin, spare man, not very tall, with a pen stuck behind one ear. His coat, which was made of light gray cloth, might be said to be neither civil nor military; a little stripe of lace on the shoulder was all that distinguished it from any common garment of the same class. Not taking this personage for the dictator, I hesitated to proceed, but he beckoned and I advanced. I told him I was an Englishman just arrived; he asked me when I had left Buenos Ayres? why I had remained so long on the way? and many other questions. He spoke of England and the English people with great affability and frankness of manner.

"I have heard that persons admitted to his presence have been required to stand, and to place their hands in a certain position; I studied no particular posture, nor did he seem to pay the least attention to it. He told me that I had several countrymen in the city, some of whom were then about returning to Buenos Ayres: he then dismissed me in a manner indicating kindness and friendship more than any thing else. He made no allusion to the affair of the canoe, and in that respect I thought it prudent to follow his example; although, if it had come from himself, I was rather desirous to speak to him on the subject.

"The Paraguayos are a kind and hospitable people, and during the many pleasant excursions I made into the interior of the country, they amply atoned to me, by their attention and civilities, for the barbarous manner in which I was treated on entering their country."

This gentleman intended to have stayed two months in Paraguay; he was detained *five years*, only receiving his release at the time I have alluded to, when permission was granted to the English to quit, and in which permission the two Swiss gentlemen Messrs. Renger and Longchamps, were so fortunate as to get themselves

included. There were also some French merchants who had already been detained some years, and who *have not yet* effected their release; a representation on the subject is at this moment making to the French minister at the court of Rio de Janeiro.

Another class of persons whose situation in Paraguay calls for the commiseration of all, is that of the Spaniards. Against them the suspicion, jealousy, and hatred of Francia are particularly directed; as in Brazil the Portuguese are the chief objects of enmity, and as in the United States the English are the most disliked of all Europeans.*

The Spaniards at the time of the revolution formed the most wealthy and educated class of the community; most of them had creole wives; notwithstanding which, their race was declared extinct so far as related to civil affairs, and they were prohibited for the future from intermarrying with white women. This decree was, however, suffered to lie dormant until Francia had arrived at the height of his power; when, unfortunately, a fanatic Spaniard being exasperated at the quartering of six hundred men in the Convent of St. Francis, had the imprudence openly to exclaim, "The Franciscans, it is true, are extinct, but Francia's turn is yet to come." This language was duly reported—the culprit was sent for. "As to when I shall go," the dictator said to him, "I really am ignorant; but this I know, that you shall go before me." The unhappy man was shot next day, his property confiscated, and his widow and children reduced to beggary.

This was the commencement of the reign of terror, as far as regarded the Spaniards; the consular decree just mentioned was revived, and confiscations and executions rapidly increased. At length a conspiracy was formed; it was headed by Francia's late colleague, and other members of the junta established at the revolution—it was discovered—torture, chains, and death succeeded, and the failure of this hostile attack only served to confirm the power of the dictator.

The convicted and the sufferers upon this occasion had been chiefly creoles, but Francia was resolved to strike one grand blow at the Spaniards, against whom his suspicion never slept. Having shot one of them for not pleasing him in some mason-work he had been intrusted with, the dictator issued an order calling on all the Spaniards inhabiting the city and places within a league of it to assemble in three hours at the square in front of the government-house. They assembled to the number of three hundred; they were accused, among other frivolous charges, of obstructing the proceedings of government; they were led to prison, and crowded by fifties into ill-ventilated rooms, where they were shut up at night, and by day were allowed to walk in a small yard. The dictator appeared to think that he treated them with great lenity, and called them, not his *prisoners*, but his *recluses*. The late governor of Paraguay, who had ruled up to the time of the revolution, contrary to the usual practice of his countrymen, with much justice and moderation, was among the number; he sickened and died, without being able to procure medical assistance.

Some of the prisoners, those of humble condition, were in a short time enlarged, but compelled to withdraw from four to ten leagues' distance from the capital. The more influential persons remained in prison nearly nineteen months, and only recovered their liberty on the hard condition of paying within three days a fine of 150,000 piastres. The money was exacted upon so rigorous a principle, that one individual having died, his contingent was levied on his orphans, although they were creoles. Three were kept in prison for default of payment, and many others were only enabled to make up their proportion through the kindness of some creole merchants: much to the credit of the Paraguayos be it told, that on this occasion they buried in oblivion their national antipathy, and liberally assisted, fed, clothed, and employed the poor Spaniards, to whose influence in the state Francia had thus given a death-blow.

The complete isolation of Paraguay produced one important benefit; the inhabitants were forced to pay attention to agriculture, which the dictator wisely encouraged, and by his own practical knowledge greatly improved. Besides the cultivation of the tobacco-leaf, the sugar-cane, and the zucca-root, which, together with the preparation of the *herb of Paraguay*, had hitherto exclusively employed the industry of the natives,—their fruitful plains began now to be spread over with rice, maize, fruits, and vegetables hitherto unknown to them. Above all, the cultivation of cotton, which article they had until now received wholly from Corrientes, succeeded so well, that its home produce entirely replaced the quantity which had been usually imported. The encouragement of the breed of horses and horned cattle produced the same effects. Manufactures kept pace with agriculture; and the clothing of the people, which had for the most part been imported ready made at a great expense, was now entirely manufactured and made up at home. The Brazilian consul on his return from Paraguay in 1825, embarked at St. Catherine's, on board the frigate commanded by the husband of the writer of this sketch, and is the other informant to whom allusion has been made. He presented the writer with a scarf and pocket-handkerchief from Assumption; the scarf is of white cotton, of a rough, unfinished texture, with the ends most elaborately worked in all manner of devices; the pocket-handkerchief is of French cambric, worked in Assumption, most richly and delicately, although it had evidently been so long in hand that the material itself had become worn. The consul stated, that the females employed in these fine works were constantly attended by slaves, and were not even permitted to turn the handle of a door, for fear of spoiling the delicacy of their touch.

Thus out of evil came forth good; for it cannot be denied that Francia's suspicions and illiberal system has brought out, in objects of the first importance, the dormant energies of a very talented people. Commerce, where it precedes agriculture and manufactures, is out of its place, and this is its situation generally in regard to

* The lady is here mistaken.—*Ed.*

Sonth America, which remains poor in the midst of mines of silver, gold, and gems. Commerce has also, in this point of view, a demoralising effect—it encourages expense and idleness; it produces foreign luxuries, where no home comforts exist; speculation and rapacity take the place of steady industry; all is show and incongruity—nothing substantial and consistent. Some ludicrous effects have been related of this premature introduction of foreign conveniences.

At an inland estate in Brazil, the negroes and their overseers were employed in carrying ore, with all its weighty additions of earth, stone, and rubbish, to the stamping-mill, which was at a considerable distance from the mine, and much time and labour were wasted in the conveyance. To obviate this inconvenience, the owner of the estate, who was at Rio de Janeiro, sent them a supply of wheelbarrows from a lot which had been just imported. The sagacious overseers and their sable workmen admired the contrivance of the wheelbarrows, which they perceived would carry three times as much as could be transported in the usual way; accordingly they loaded them—the patient blacks stooped their silly heads—the wheelbarrows were placed on them, and they staggered along under the painfully increased load—congratulating themselves, however, that they should have but one run instead of three; and this continued, no one, black or white, discovering the blunder, until the astonished owner returned and rectified it.

A gentleman traveling in the interior of Brazil put up for a night at a farm-house, furnished in the primitive style of the country; but on the table, in company with a long tallow candle, were placed a handsome pair of plated snuffers and its stand, which he had received as a present from Rio de Janeiro. "What conveniences you invent in Europe!" said the Brazilian to his guest; "before I received this pretty present, I used, after taking off the candle-snuff to throw it about the floor, or perchance on the bench where I was sitting, or over my clothes—but now, mark the difference." So saying, he pinched off the long snuff between his thumb and finger, put it carefully into the snuffers, and closed them up with a look of triumph at his highly amused spectator.

But to return: while agriculture and manufactures thus rapidly improved and flourished, commerce on the other hand was absolutely annihilated. During the close of its port, Assumption resembled a coast where a hundred ships had run aground, and its storehouses, as well as those of the other principal towns, were heaped with rotting tobacco and the herb of Paraguay; the latter, which grows wild in the forests, being the staple commodity of the country, used for making *matté*, a kind of tea, without which the Spanish Americans can scarcely exist.

Among numerous instances of the breach of hospitality by Francia, one singular example of its observance merits being recorded. The bandit chieftain Antigas had done a great deal of injury to Paraguay, both by land and on the river, and had incensed Francia yet further by fomenting revolts among his Indians. Nevertheless, when one of Antigas's lieutenants rebelled against him, and forced him to retreat with the wreck of his army, he threw himself on the mercy of the dictator, and his appeal was listened to. He was conducted by an escort to the capital, where he was very anxious to obtain an audience of the dictator; but this was refused, and he was sent to the village of Curngnaty, eighty-five leagues north of Assumption. From that place it is impossible for him to escape but by a desert on the Brazilian side, of which there is very little danger that he will avail himself, after the excesses he has committed against that nation. The dictator assigned him a house and lands, with thirty-two piastres a month (his pay formerly as lieutenant of chasseurs), and ordered the governor of the circle to furnish him besides with whatever accommodations he required, and to treat him with great respect. It appears that since that time Antigas has wished to expiate, at least in part, the iniquities he has perpetrated. At the age of sixty he cultivated his farm with his own hands, and became the father of the poor in Curngnaty. It is presumed that he is still residing there.

Among other means of making himself master of all that passes in his territory, Francia has suppressed the post-office; but the post-masters keep their places, in order to expedite official letters, and collect the postage of all others brought by private conveyance, for these letters do not pass free. The violation of the confidence of letters is so well known, that few take the trouble of sealing them.

Francia does not encourage education, but he throws no obstacles in its way: he allows the public elementary schools for boys, which he found established at Assumption, to continue, and takes no notice of several private seminaries that have lately been formed for both sexes.

The city of Assumption is built in the shape of an amphitheatre upon a rising ground, washed by the river Paraguay. Its streets, in 1820, were crooked, irregular, and narrow. The houses, consisting of only one floor, generally stood apart from each other; they were interspersed with trees, little gardens, brushwood, and patches of verdure. Numerous springs issued from the ground in every part of the town, and formed streams or stagnated into pools; the rain-water had furrowed the soil, and broken up all the sloping streets. Such was the city Francia undertook to remodel; and the description given by the Swiss gentlemen of the effects produced by ignorance, miscalculation, and injustice, are almost incredible. At the end of four years the capital of Paraguay presented the aspect of a city that had been bombarded for several months; whole streets were seen bordered merely by hedges of dry reeds; and among the thinly scattered houses, but a very few had their fronts towards the street. The individual loss and suffering exceeded calculation.

It may be interesting to give, in conclusion, a few details of the private life of Francia, and a few anecdotes concerning him, which will place this singular personage in a closer point of view.

Discovering once (before he became corrupted by the acquisition of power) that he was possessor of eight hundred piastres, he thought this sum too much for a single person, and he spent

it. There seems to have really existed originally in the breast of this man somewhat of that simple and severe species of virtue which is essential in the formation and preservation of a republic.

The unfavourable change in his disposition when he became dictator perhaps not even he himself can clearly account for; he was past the age when any dormant vice, except that of avarice, springs up in the character; he was not dazzled by the pomp and circumstance of exalted rank, nor even by that nobler weakness, the desire of fame; for he takes no pains to display his power, or spread his reputation among foreign nations, nor to hand it down to posterity. On the contrary, he carefully shrouds himself, and as far as possible his dominions, in haughty seclusion. Admitting that he had become convinced that his country in her present state was not fitted for republicanism, and that it was requisite for her real welfare that absolute power, for a time at least, should be wielded by one able and vigorous hand —still, on assuming that power, had he not the most splendid opportunity ever enjoyed by a man, of rendering the most lasting and essential benefits to his country? Admitting even that it was necessary for him to rule with a rod of iron in one hand, who would have blamed him had he showered down blessings with the other?

One of the strongest and most painful proofs of how little the real good of his people lies at the heart of Francia, is, that no provision appears to be made for their government at his death, which may now, from his great age, be soon expected. All then will probably relapse into anarchy, unless the army take affairs into its own hand, and experience has fully shown us what the governor and the governed are then likely to endure.

The ruling, or rather the absorbing passion of Francia, is the love of power—of power for itself alone; it is with him a pure, abstracted principle, free from desire of the splendour which usually surrounds it, of the wealth which usually supports it, and of the fame which usually succeeds it. To this passion is united one more spring of action, and one only—it is the fear of assassination:—"Even-handed justice returns the chalice to his own lips,"—he who inflicts terror on all around him is himself its greatest slave; and for one death that he causes, he suffers in imagination a thousand.

There is one peculiarity which must not be omitted in any scrutiny into the causes of Francia's habits of mind. His father was of very eccentric habits, his brother and one of his sisters were lunatics, and he himself is subject to fits of hypochondria, which have sometimes degenerated into madness: his mind is therefore not *sound;* but while the knowledge of this fact diminishes our wonder at the inconsistency of his character, it very much increases it as to the folly of the people, who with such abject submission bend down their necks for him to trample on.

When the hypochondriacal fit comes on, Francia sometimes shuts himself up for several days, but if unhappily he does not do this, he ill-treats every one around him, orders arrests, inflicts the severest punishments, and thinks nothing of issuing a sentence of death.

On the occasion of an execution, the dictator himself gives out the ball-cartridges, and so parsimonious is he of these materials, that he allows but three men to each execution; so that, in more instances than one, the unhappy victims have been despatched by the bayonet. Francia is a witness of these scenes of horror, for the executions take place always beneath his window, and frequently in his actual presence. Once, while under the influence of his hypochondriacal affection, being offended at the intrusion of a poor woman, he gave the following order to the sentinels placed in front of his gate:—"If any passenger should dare to *fix his eyes* upon the front of my house, you will fire at him; if you miss him, *this* is for a second shot—(handing him another musket loaded with ball)—and if you miss again, I shall take care not to miss *you.*" The order being quickly made known through the city, the inhabitants carefully avoided passing before this terrible palace, or if any person was obliged to do so, he kept his eyes constantly fixed upon the ground. A fortnight had passed without any accident, when an Indian of the tribe of Payagua, who knew nothing of the order, stopped to look at the government-house; the sentinel discharged his carbine, but missed him, probably intentionally: the report of fire-arms brought out the dictator, and when the cause was made known to him, he revoked the order, averring that he did not recollect ever having given it.

Francia was never married; but in his earlier days he was by no means insensible to the charms of the fair sex; however, on becoming dictator, he abjured them altogether, and at the same time relinquished play. The only being for whom he seemed to have any lasting attachment was a sister, who was usually in charge of his country-house; but so jealous is he of his authority, that he sent her away, because she took upon herself to order a slave to be chastised. He has nephews, but apparently takes no interest in them; when he became dictator he dismissed two, who were officers in the army, only from the fear that they might presume upon their relationship. One he confined in irons four years for having at a ball (it seems people dance even in Paraguay!) struck a man who had insulted him; and another passed a year in the public prison for having employed one of the military band in a serenade which he gave his mistress.

At the commencement of Francia's dictatorship for life, while the people were not yet sufficiently trained for their yoke, when he rode out on horseback he was escorted by hussars; two went before and one followed him; it was their duty to see that every person on the road stopped in the most respectful manner as he passed. At a subsequent period, Francia required his attendants to drive back on the highway all who presented themselves; and the blows of the flat part of the sabre, with which these directions were enforced, very soon disgusted the curious.

He imprisoned the wife of a conspirator, who, upon the arrest of her husband, took the resolution of joining together the broken threads of the conspiracy. Though detected and put in irons, she still repeated every day, "Had I a thousand

lives to lose, I would risk them all to destroy this monster!"

A woman out of jealousy accused her lover of having uttered offensive expressions against the dictator, who ordered the unfortunate man to receive a hundred blows: but the latter was so averse to this disgraceful punishment, that he begged to be shot rather than undergo it, and his request was immediately complied with. The dictator, however, was never known to reward either a spy or informer: on the contrary, he so justly appreciated their character, that he dismissed some officers who had acted for him in that capacity, as soon as he had no further use for their services.

Since 1820, Francia has taken no part in public worship, and has seized every occasion to show his dislike to the established religion. To a commandant, who asked him for the image of a saint, that he might place a newly-constructed fortress under its protection, he answered—"O people of Paraguay, how long will you remain idiots! When I was a catholic I believed as you do, but *now* I know that bullets are the best saints you can have on the frontiers."

To give an idea of the instruction of the clergy, one anecdote will be enough. In the vale of Ita, about thirty miles from the capital, there is a community of Indians, subjects of Paraguay, who had a curate, the son of a warrior, on whom the King of Spain had conferred the title of don, in reward for some service. This title, which the courtesy of modern times extends to all who have the least pretension to gentility, descended by right to his son, the curate, who, it appears, had been regularly educated for the church. He was a kind, hospitable, social man, much beloved in the neighbourhood, and sought after by all travellers. There were three points on which he piqued himself: his great sobriety, the abundance and excellence of his table, and his deep knowledge of sacred history. It was no doubt his superiority on the last point which, in despite of his reputation for gallantry, attracted all the fair penitents of the country round. As a specimen of his scriptural erudition, he maintained that the Sacred Founder of our religion (whose name I dare not mention in such a sentence as this) "and Mahomet were very intimate friends: that they met frequently to discuss certain points of their respective religion, and that many an evening had they passed together, sitting on the same cloth, and smoking out of the same hookah."

Besides the neighbours and strangers that usually met at the padre's hospitable board, its benefits were extended to fifteen cats and one third that number of dogs, which daily surrounded it, and were fed from the hand of their benevolent master. The padre in the hot weather regularly *un*dressed for dinner; sitting down only in a pair of long drawers, trimmed at the ankles with lace, and a scarf thrown over his shoulders; of these he had a great variety, worked by the fair penitents aforesaid. Indeed the Paraguays, although fond and vain of dress on occasions of show, are very indifferent to it as an object of decency and comfort. Both sexes are permitted, especially in the country, to go unclothed, until they are well advanced in their teens; if a young girl be sent on a message to a neighbouring farm, she merely throws a scarf over her head, its ends hanging negligently down in front, and thus trudges along quite unconscious of the surprise her singular appearance excites in the passing stranger. From this complete freedom they spring up strait and well-proportioned: "I could not help," says the informant of the present writer, "comparing them to the palm-trees around; they were as graceful and as pliant, and, like them too, their heads alone were covered."

Francia is much praised for his disinterestedness in regard to money: his private fortune has never been increased by his elevation; he has never accepted a present, and his salary is always in arrear. He is not forgetful of the claims of old fellowship or kindness, provided they are accompanied with diffidence and great respect.

The dictator admits of no confidant; he has never been known to take counsel of any one, nor can any one boast of ever having exercised influence over him.

"I knew an officer," says our liberated fellow-countryman, "of the dictator's body-guard, who was supposed to be making rapid progress in his favour; he did not however stand his ground long; he was dismissed, and having no family who could support him, was reduced to become a day-labourer in the fields. One day, while strolling in the neighbourhood of the city, I saw this individual, naked from the waist upwards, occupied in roasting sweet mandioca for his dinner.

"The body-guard," he continues, "was composed of about a hundred picked men, the tallest and handsomest that could be found in the country. The lieutenant by whom the guard was commanded, was a young man of very little education, although the son of parents in easy circumstances. From his situation about the person of the dictator, he was much looked up to by many, and was considered as possessing favour at head quarters. This youth grew uncommonly vain, and scarcely knew how to walk or dress, till at last not a day passed without producing some new or extravagant article of apparel. Francia saw with displeasure his monkey-like behaviour, and one morning, when he presumed to appear at parade in an extraordinarily-shaped and ornamented jacket, he called him, and with some familiarity asked where he had got his pretty jacket?—'You look extremely well in it,' said Francia, 'but I think you would look still better if you were to take off your trowsers, and wear it without them, after the fashion of your countrymen.' The poor fellow was obliged to take the hint, strip, and walk a turn or two before the dictator, who complimented him on his appearance, and appealed to the soldiers as to whether he had not suggested a striking improvement. After this scene his services were no longer required."

This corps looked well; it was clothed in a handsome manner, and was much esteemed by Francia for a time: when in good humour he was in the habit of calling it his corps of "Frenchified Russians," thereby meaning, "barbarians in progress of civilisation." However, it finally incurred his displeasure and was disbanded.

Francia treats his officers with very little ceremony; when displeased he abuses them in the presence of the soldiers, as though they were his menial servants, thus aiming at diminishing their importance and increasing his own.

The death of a person in his service, under

the following melancholy circumstances, produced a great effect upon the mind of the dictator, and was followed by some beneficial consequences. About the middle of 1824, a young man (of whose capacity Francia entertained a high opinion, and for whom he had created the office of secretary of state) having committed some trifling errors in the exercise of his functions, became alarmed for the consequences. Dreading to be reproached or dismissed by the dictator, he resolved to drown himself, though, as first officer of the government, he might have effected his escape. Before dying, he wrote a letter to the dictator, in which he gave an account of his official conduct, adding, that in the position in which he stood, he considered that flight would dishonour his country and disgrace his name. The dictator was moved; he perceived how heavily his yoke bore even upon those who were most devoted to him. He was induced to hint that the time was not far distant when Paraguay might enjoy some liberty. Imprisonments became less frequent; none but criminals were sentenced to death, and the denunciations of informers were more disregarded: he punished, too, in his army, some instances of oppression and insolence towards the people. In short, Paraguay, from that moment, began to breathe somewhat more freely, and the self-sacrifice of this honourable and heroic youth was at least not made in vain.

The Swiss travellers describe the dictator as a man of middle stature, with regular features, and those fine black eyes which characterise the creoles of South America: and as having a most penetrating look, with a strong expression of distrust. On their first introduction he wore the official costume, which consisted of a blue laced coat, (the uniform of a Spanish general,) waistcoat, breeches, stockings of white silk, and shoes with gold buckles. He was then sixty-two years of age, but did not appear more than fifty. At the commencement of a conversation he is haughty and intimidating, but if met with firmness, he softens down, and finishes, when in a good humour, by conversing very agreeably; and he is then perceived to be a man of great talent and extensive acquirements. He is a devoted admirer of Napoleon, whose downfal he always deplores; he contemplated with much interest his portrait when shown to him by the Swiss gentlemen; he had in his possession a caricature of Napoleon, which he had mistaken for a portrait, until his visitors explained the German inscription that was underneath it. They believe that it must have been this caricature that suggested to the dictator the idea of adding to his costume an enormous badge in imitation of the clumsy star with which Napoleon is decorated in that piece. Francia also showed the strangers his library, which, together with the best Spanish authors, contained the works of Voltaire, Rousseau, Raynal, Rollin, &c. He possessed, also, some mathematical instruments, globes, and maps—among the latter the best map of Paraguay that is to be found in the country. From the knowledge of the constellations, which he acquired by means of his celestial globe, and of the localities of his own territory by the map, it is imagined by the people that he is an astrologer, but he himself does not encourage this notion.

In the last interview Dr. Renger had with Francia, when at the end of six years he and his friend had conceived hopes from the English being permitted to depart, and ventured to ask for passports, Francia listened to the request without replying to it, but desired Dr. Renger to go and inspect some forty or fifty recruits who had fallen sick. On his return, Francia asked him several questions about his travels in the interior of Paraguay, and what he intended publishing. He appeared to be very well satisfied with the recognition of the new republics by England, and said, "The French government was wrong not to have been beforehand with the English. The analogy between the characters of both nations, a common religion, and the nature of the produce and manufactures of France, which are better adapted to the wants of these countries, seemed to call for amicable relations, which would have opened new and invaluable channels to French commerce. But that government, instead of signalising itself by an act of liberality, which was in perfect conformity with the interests of France, has preferred maintaining, by a ruinous expedition, a tottering throne, the fall of which it can only defer, but not ultimately prevent. I should not be surprised to see that government making an attack upon our republics in the name of Ferdinand the Seventh, and that is one of my reasons for not permitting the French who are here to depart. With regard to your request, we shall consider of it." The result of this conversation is known to the reader. One motive for the delay in granting the request was, that the dictator wished to have appointed Dr. Renger chief physician to the troops, with the direction of a new military hospital he intended to establish.

Francia's household consists of four slaves—a negro, one male and two female mulattoes—whom he treats with great mildness. He leads a very regular life—the first rays of the sun rarely find him in bed. As soon as he rises, the negro brings a chafing-dish, a kettle, and a pitcher of water, which is heated in his presence. Francia then prepares, with the greatest possible care, his *maté*, or Paraguay tea; having taken this, he walks under the interior peristyle that looks upon the court, and smokes a cigar, which he first takes care to unroll, in order to ascertain that there is nothing dangerous in it, though it is his own sister who manufactures them for him. At six o'clock the barber arrives—a filthy, ragged, and drunken mulatto, but the only member of the faculty in whom he confides. If the dictator be in good humour, he chats with him, and often in this manner makes use of him to prepare the public for his projects. This barber may be said to be his official gazette (no new incident, by the by, in the annals of history). He then puts on his dressing-gown of printed calico, and repairs to the outer peristyle, where he walks up and down, and receives at the same time those persons who are admitted to an audience. At seven he enters his closet, where he remains until nine, when the officers and other functionaries come to

make their reports and receive his orders. At eleven o'clock the principal secretary brings the papers that are to be submitted to his inspection, and writes from his dictation until noon, when all the officers retire, and Francia sits down to table. His dinner, which is extremely frugal, he always orders himself; when the cook returns from market, she deposits her provisions at the door of her master's closet, who comes out and selects what he wishes for his own use. After dinner he takes his *siesta;* on awaking, he takes his *maté* and smokes a cigar, after observing the same precautions as in the morning. From this until four or five he is occupied with business, when the escort to attend him on his promenade arrives; the barber then enters and dresses his hair while his horse is saddling. During his ride Francia inspects the public works and the barracks, particularly those of the cavalry, where a habitation is preparing for him. While riding, though surrounded by his escort, he is armed with a sabre and a pair of double-barreled pocket pistols. He returns home about night-fall, and sits down to study until nine, when he takes his supper, consisting of a roasted pigeon and a glass of wine. If the weather be fine he again walks under the peristyle, where he often remains till a very late hour. At ten o'clock he gives the watch-word, and on returning into the house he fastens all the doors himself.

For several months in the year he resides at the cavalry barracks, which are outside the city, about a quarter of a league from his usual residence; but there his manner of living is the same, except that he sometimes takes the pleasures of the chase. In the apartments that he occupies there are always arms within his reach; pistols are hung upon the walls, or placed upon the table near him; and sabres, the greater number unsheathed, are to be found in every corner. This fear of assassination is also shown in the etiquette prescribed at his audiences: the person admitted must not approach nearer to the dictator than six paces, until he makes him a sign to advance, and even then he must always stop at the distance of three paces—his arms must be held close to his body, and his hands open and hanging down, so that it may be evident that he has no concealed weapons. The officers even are not permitted to enter his presence with swords by their sides. He is pleased, however, that the person addressing him should look him straight in the face, and return prompt and positive answers. He told Dr. Renger one day, when about to open the body of one of the natives, to see if his countrymen had not one bone more than the usual number in their necks, which prevented them from holding up their heads and speaking out. Alas! it was the fetter on the mind, beyond the skill of the physician to remove, that bowed down their necks.

In the foregoing sketch it has been the writer's object rather to excite than to gratify curiosty. It is impossible but that great interest will prevail towards Paraguay on the death of its singular ruler: none can contemplate with indifference the idea of this fine province, with its docile and industrious population, being given up to anarchy, and gradually returning to the waste desert from whence it has been struggling to emerge.

Rio de Janeiro, July, 1834.

From the Monthly Magazine.

THE DEATH OF MARSHAL NEY.

Much has lately been said both in England and France respecting the death of Marshal Ney, but with the particulars of that dreadful tragedy few of our readers we suspect are fully conversant. With the strictest adherence to historical accuracy, we shall therefore give a brief and succinct narrative of the facts, more particularly as regards the Duke of Wellington's connection with it. It will be necessary to give a short review of the events which preceded it.

Michel Ney was born at Sarre Louis in 1769, and entered when a mere youth into a regiment of hussars, in which he had risen to the rank of *sous-officier* when the revolution of 1789 was effected. During the sanguinary wars waged by nearly the whole of Europe against the French republic he served in every campaign, and for his good conduct, talent, and patriotism was made general of brigade in 1796. In the following year he commanded a division under the celebrated Hoche, and subsequently under Schaumberg, Massena, and Moreau, contributing in no slight degree to the gaining of the glorious battle of Hohenlinden.

In 1804 he was, for his distinguished merit, created a marshal of the empire by Napoleon, and the following year gained the battle of Elchingen in Suabia, for which he was created duke of that name. Marshal Ney subsequently commanded a division at the decisive battle of Jena with the most signal success, but as it would occupy too much space to enumerate all the invaluable and glorious services he rendered his country during his life, we shall only add that at the terrible battle of the Moskwa, in Russia, Ney commanded the centre with his usual talent and success, for which the emperor conferred on him the title of Prince of the Moskwa, observing at the same time—"*Le Maréchal Ney est le brave des braves*—his soul is of tempered steel!"

After the disastrous campaign of 1814, finding it was no longer possible for Napoleon to continue to reign, he was one of the first generals who submitted to the Bourbons, who soon after created him a peer of France.

In 1815 he was at Condreaux when Napoleon landed from Elba; he immediately received orders from the Bourbon government to assemble a military force at Besançon, with which he marched towards Lyons; but some proclamations from Napoleon having reached the troops at the same time that intelligence arrived of his triumphal entry into that city, Ney, yielding to the desire of the entire army and a united people, declared for the emperor, who in a few days again occupied the Tuileries.

During the hundred days, Marshal Ney used every exertion to save France from a second invasion, and, two days previous to the decisive battle of Waterloo, seriously checked the Anglo-

Belgian army commanded by the Duke of Wellington in the actions of Ligny and Quatre Bras.

After the defeat and partial destruction of the French army by the allies, Ney proceeded to Paris, where he gave a true statement of the disaster in the Chamber of Peers, and being averse to the new order of things, retired from public life.

In the meanwhile the English and Prussian armies approached Paris, where the remains of the French army had rallied, and being reinforced by several divisions not engaged at Waterloo, it still presented, with the national guard, a very imposing force; but Napoleon having signified his intention to abdicate, a convention for the capitulation of Paris was agreed to between the Duke of Wellington and Marshal Blucher, on the one side, and the governor of Paris on the other, to the effect that private property should be respected, and *no person be molested for their past political or other conduct.* By virtue of this convention Louis XVIII. entered the capital, and was a second time proclaimed King of France.

Notwithstanding the above convention, Marshal Ney was arrested on the 24th of July, and thrown into prison, accused of having contributed to the revolution of the 20th of March, or, in other words, having aided the return of Napoleon. A court-martial was summoned to try him, Marshal Moncey being appointed president; Moncey, however, nobly refused to sit in trial on such a man, *for which he was imprisoned three months in the chateau of Ham.*

The presidentship now fell by seniority upon Marshal Jourdan, who accepted it, and with Marshals Massena, Mortier, and Augereau, and three lieutenant-generals, composed the court martial, which in its second sitting declared itself incompetent to try the prisoner, and immediately dissolved itself, to the undisguised delight of the French people, with whom Ney was, as he merited to be, highly popular.

An ordinance of the king next directed that he should be tried before the chamber of peers; and so great was the interest excited by the approaching mock trial, that, in addition to the capital being surrounded by the English army (during Ney's trial and execution, be it observed, the English were the only foreign troops remaining in Paris,) special commissioners of police were appointed, the press was rigorously restrained from alluding to it, men were selected from each regiment of the line, for their opinions, for the service of Paris, the national guards were removed from the principal posts, patroles traversed the town in all directions, and the city was filled with gendarmerie, plainly indicating the apprehensions of the government, lest this cold-blooded murder should be prevented.

About the beginning of December the peers assembled in the palace of the Luxembourg, which was surrounded constantly by 2,000 men, and immediately proceeded to the trial of Ney, who was ably defended by the celebrated advocates and deputies, M. M. Berryer and Dupin; but it was evident that the accused could have no hope of justice from a tribunal of which three fourths of the members were enraged aristocrats, rendered poor and vindictive by their long emigration from France, and now eager for victims on whom to wreak their vengeance.

Marshal Ney was fully aware of his position, and though he allowed his advocates to defend him, he appealed, as he hoped, to a more impartial and independent power, previous to the trial.

The Duke of Richelieu, as minister, demanded Ney's condemnation in the *name of Europe;* he told the chamber they owed the world a signal reparation, and must not allow the prisoner a longer impunity.

Against these expressions M. M. Berryer and Dupin vehemently protested, and produced the convention of Paris as a complete defence; this the president refused to allow to be heard, and ordered them to continue the defence *without reference to that document!*

Marshal Ney on hearing this rose, and said, "I forbid my counsel to defend me more; my judges, I well knew, were long since determined: I am accused against the faith of treaties, and the law of nations, and you will not let me justify myself. I appeal to Europe and to posterity!"

His advocates, nevertheless, made one more attempt to save him, by showing that Sarre Louis was included in the territory ceded to Prussia; and that, consequently, Ney was not a subject of France; but he refused to allow the plea, and indignantly exclaimed—"Never, I am a Frenchman in my heart, and a Frenchman I will die!"

While the chamber was still effecting to deliberate, Ney returned to his room; he appeared to be supported by a feeling of deep resolution; he embraced his defenders, who had nobly exerted themselves, exclaiming—"It is all over, my dear friends, we shall meet each other in another world!"

He ate his dinner calmly, and with appetite: and observing that a small knife was an object of uneasiness and attention to the persons charged to guard him, he exclaimed—"Do you think that I fear death?" and with a smile threw the knife away.

We now come to the Duke of Wellington's share in this transaction, to which we entreat our readers to pay great attention, and in particular to the following letter, upon which the unfortunate Ney had placed so much reliance:—

"To his Grace the Duke of Wellington, Generalissimo of the Allied Armies, &c.

"Your Excellency,—Cannot be ignorant of the gross violation which has taken place in my person of the convention of Paris, on the faith of which the French army laid down its arms, and I remained in France.

"It was on the following articles I relied, and now appeal to you, not for justice, but simply as the only party to that convention remaining in Paris, who possesses the power to see that solemn engagement enforced.

"'ARTICLE 12.—Private persons and property shall be equally respected. The inhabitants and *all* individuals who shall be in the capital, shall continue to enjoy their rights and liberties without being disturbed or called to account, either as

› the situations *they hold, or may have held,* or s to *their conduct* or *political opinions.*

" ' ARTICLE 15.—If difficulties arise in the execution of any one of the articles of the present onvention, the interpretation of it shall be made ı *favour of the French army* and of the city of 'aris."

" Without these terms, is there a human being ho believes I would not have died sword in and, joined and supported by all the brave and irtuous that remained in France?

" It is then in direct contradiction to this capiulation I am now under arrest; and as a soldier, n Englishman, and an honourable man, I demand f *you* my instant and unqualified liberation.

" MICHEL NEY."

After several visits to the Tuileries, his grace ound leisure, in the intervals of his splendid enertainments at the Palais de l'Elysée Bourbon, o reply to the unfortunate writer. His answer nust ever be considered as a stain upon the ıational character. With the casuistry worthy ›f a pettifogging lawyer, he observed that the 2th article applied only to the military authority stablished in Paris, and was *not intended to tie ıp the hands of the French government.*

That this was a most treacherous and jesuitical interpretation of the 12th article, must alone e evident to every unbiassed mind, but a few noments' consideration will place its injustice in ı still stronger light.

Marshal Ney was clearly included in the terms ›f article 12, for he had his residence in the apital, in law and fact. The army and the inıabitants of Paris, possessing a certain force, ıtipulated with the generals of the allied armies or their safety and inviolability. The competency of that force being thus admitted, terms were assented to, which precluded all further esistance. But can it for a moment be supposed hat the object of the besieged was to obtain a nere temporary protection—a respite for 48 hours? ınd that the same army which had kept in awe a ıundred thousand men, surrendered at discretion o a government the nation abhorred, and which ıad not a soldier at its command without the coperation of the allies.

Such a Machiavelian doctrine is contrary to ıll reason, and such a principle once established night cover the earth with scaffolds. England, who prides herself on her advanced state of ivilisation, cannot suffer such detestable maxims o be promulgated, and must view with horror heir advocate and author.

Ney was informed of his sentence late at night, ınd was hurried to execution early the next morning. The sentence was carried into effect on the 7th December, 1815, in a clandestine manner, near the observatory, for all who were in any way connected with this detestable transaction, appear to have been ashamed of it.

When Ney reached the place of execution, he walked firmly from the coach to the fatal spot, ınd refusing to have his eyes blinded, calmly faced the detachment: taking off his hat with his left hand, he exclaimed, "*Je proteste solemnellement devout Dieu et devout les hommes de l'iniquité de mon judgement—l'histoire me jugera.*" Then placing his hand upon his heart, he added, " Soldiers, straight to the heart—*Vive le France —feu!*" He fell dead upon the spot, twelve balls having taken effect. Thus perished one of the greatest men France could boast, exhibiting to the last moment that undaunted courage which had ever distinguished him in battle. It needed not to wait for *posterity,* as Ney predicted—the justice of his death is already decided. As the noble and patriotic Armaud Carrel, the most talented political writer in France, boldly stated to the peers, many who had condemned Ney being of the number, when sitting in judgment on the *National,* for breach of privilege, "*Time has pronounced, at the present period the judges have more need of being reinstated in public opinion than the victim!*" After having been violently interrupted by the president, he continued—"*If, among the members who voted for the death of Marshal Ney, who sit in this assembly, there is one who considers himself aggrieved, let him summon me to this bar; I shall glory in being the first man of the revolution of* 1830, *who came here to protest, in the name of indignant France, against that abominable assassination!*"

This feeling is deep, and we may say universal, amongst our neighbours; it cannot, of course, be expected that the Duke of Wellington, as commander merely of the invading allied forces, could be popular in France; still his name would pass without indignant remark, were it not a lamentable error in his otherwise glorious career.

Critical Notices.

From the London Athenæum.

The Epidemics of the Middle Ages. From the German of J. F. C. Hecker, M. D. Part II.—*The Dancing Mania.* Translated by B. G. Babington, M. D. London: Sherwood & Co.

The first of these treatises was devoted to the fearful history of the "Black Death of the Fourteenth Century:" in the one before us Dr. Hecker has drawn together a copious and singular account of another of those strange disorders, which, in days less enlightened and more disturbed than our own, spread itself in different forms over a great part of the civilised world. The detail becomes more interesting if we follow our author in linking the *Convulsionnaires* of St. Medard—the Jumpers and Shakers, and other modern fanatics—(whom there would be neither pleasure nor profit in enumerating further) with the *Tarantati* of Italy, and those afflicted with what Dr. Hecker calls quaintly enough, "more ancient dancing plagues," with the "St. John's dancers" of old Germany, and, going back to the dim times of mythology, the Mænades and Corybantes of classic song and sculpture. We consider this second volume as likely to prove even more acceptable to the general reader than its predecessor, inasmuch as the malady of which it treats, from its close connection with the mind of the patient, offers almost as curious a subject of study to the psychologist, as to the mere medical practitioner. We shall examine its vagaries and ramifications with an eye to the former; and, as in our review of Dr. Hecker's first volume, merely make an abstract of facts, leaving

all questions of science to be discussed and examined in periodicals exclusively devoted to medicine.

According to the superstition of the 14th century, two saints, St. John and St. Vitus, were considered to have particular connection with the extraordinary disease, of which violent and convulsive motion formed a principal symptom. The anniversary of St. John's day has, from the darkest ages, been celebrated by the kindling of fires—in Germany this was called the "Nod-fyr"—and our author tells us, "that even to the present day the belief subsists, that people and animals that have leaped through these flames, or their smoke, are protected for a whole year from fevers and other diseases, as if by a kind of baptism by fire." "Similar customs," he further informs us, "are to be found among the nations of Southern Europe and Asia; and it is more than probable, that the Greeks transferred to the festival of St. John the Baptist a part of their Bacchanal mysterics. The same saint is still worshipped by the Abyssinian Christians, as the protector of those attacked by the dancing malady; and if we mistake not, the lighting of fires in his honour is still practised among the lower orders of Ireland.

Distinct accounts of the appearance of this whimsical, yet serious, plague in Europe go back to the year 1374, when "assemblages of men and women were seen at Aix la Chapelle, who had come out of Germany, and who, united by one common delusion, exhibited to the public, both in the streets and in the churches, the following strange spectacle. They formed circles, hand in hand, and appearing to have lost all control over their senses, continued dancing, regardless of the bystanders, for hours together, in wild delirium, until at length they fell to the ground in a state of exhaustion. They then complained of extreme oppression, and groaned as if in the agonies of death, until they were swathed in cloths bound tightly round their waists, on which they again recovered, and remained free from complaint until the next attack. This practice of swathing was resorted to on account of the tympany which followed these spasmodic ravings, but patients were frequently relieved in a less artificial manner, by thumping and trampling upon the parts affected. While dancing they neither saw nor heard, being insensible to external impressions through the senses, but were haunted by visions, their fancies conjuring up spirits whose names they shrieked out; and some of them afterwards asserted that they felt as if they had been immersed in a stream of blood, which obliged them to leap so high. * * *

"It was but a few months ere this demoniacal disease had spread over the neighbouring Netherlands from Aix la Chapelle, where it appeared in July. In Liege, Utrecht, Tongres, and many other towns of Belgium, the dancers appeared with garlands in their hair, and their waists girt with cloths. * * *

"At length the increasing number of the affected excited no less anxiety than the attention that was paid to them. In towns and villages they took possession of the religious houses, processions were every where instituted on their account, and masses were said and hymns were sung, while the disease itself, of the demoniacal origin of which no one entertained the least doubt, excited every where astonishment and horror. In Liege the priests had recourse to exorcisms, and endeavoured by every means in their power to allay an evil which threatened so much danger to themselves."

These St. John's dancers were remarkable for strange antipathies; the sight of pointed shoes so exasperated them, that an ordinance was issued against wearing such: they shared, too, the turkey-cock's irritability at the display of red colours, and some could not endure to behold persons weeping. The disease spread rapidly among the lower orders all over the Netherlands. The streets of Metz were, at one time, filled with eleven hundred dancers. The moral consequences of this active affliction need only be hinted at. Strasburg was visited by it in 1418, and so great was the stir caused by these strange exhibitions, and the crowds that followed the sufferers, among which were bagpipers (for the patients found great pleasure in music), that the civic authorities took the matter up, and the dancers were conducted in procession to the chapels of St. Vitus, near Zabern and Rotestein, where masses were performed for their cure.

But, though the above series of occurrences is placed by Dr. Hecker at the commencement of his history, it appears in his next chapter that traditions of a similar disorder had been long current among the people—of a hundred children who had been seized with leaping fits at Erfurt in the year 1237—of two hundred fanatics, who chose to dance "on the Mosel bridge, at Utrecht, on the 17th of June, A. D. 1278," and even refused to stop to do honour to the host as it passed, "upon which, in punishment of their crime, the bridge gave way, and they were all drowned!" Other similar legends are mentioned (one of them was not long since used by Campbell as a foundation for a ballad), and these had most probably prepared the minds of the nervous to receive and communicate the disorder. Much imposture of course was successfully practised, and time ran on as far as the sixteenth century, when Paracelsus turned his attention to the disease, and treated it as a bodily malady, and not a demoniacal possession.

About this time, the St. Vitus's dance began to decline. At the close of the sixteenth century, it was spoken of as a disease that *had been*. Some further facts respecting it may be interesting. We are told that it "attacked people of all stations, especially those who led a sedentary life, such as shoemakers and tailors; but even the most robust peasants abandoned their labours in the fields, as if they were possessed by evil spirits; and thus those affected were seen assembling indiscriminately, from time to time, at certain appointed places, and, unless prevented by the lookers on, continuing to dance without intermission, until their very last breath was expended. Their fury and extravagance of demeanour so completely deprived them of their senses, that many of them dashed their brains out against the walls and corners of buildings, or rushed headlong into rapid rivers, where they found a watery grave. Roaring and foaming as they were, the bystanders could only succeed in restraining them by placing benches and chairs in their way, so that their strength might be exhausted by the high leaps they were thus tempted to take. As soon as this was the case, they fell, as it were, lifeless to the ground, and, by very slow degrees, again recovered their strength. * *

"The cure effected by these stormy attacks was in some cases so perfect, that some patients returned to the factory or the plough as if nothing had happened. Others, on the contrary, paid the penalty of their folly by so total a loss of power, that they could not regain their former health, even by the employment of the most strengthening remedies. * * * That patients should be violently affected by music, and their paroxysms brought on and increased by it, is natural with such nervous disorders; where deeper impressions are made through the ear, which is the most intellectual of all the organs, than through any of the other senses. On this account the magistrates hired musicians for the purpose of carrying the St. Vitus's dancers so much the quicker through the attacks, and directed that athletic men should be sent among them in order to complete the exhaustion which had been often observed to produce a good effect.* This

* "It is related by *Felix Plater* (born 1536, † 1614) that he remembered in his youth the authorities of Basle having commissioned several powerful men to dance with a girl, who had the dancing mania, till she recovered from her disorder. They successively relieved

extraordinary disease was, however, so greatly mitigated in Schenck's time, that the St. Vitus's dancers had long since ceased to stroll from town to town. * * Throughout the whole of June, prior to the festival of St. John, patients felt a disquietude and restlessness which they were unable to overcome. They were dejected, timid, and anxious; wandered about in an unsettled state, being tormented with twitching pains, which seized them suddenly in different parts, and eagerly expected the eve of St. John's day, in the confident hope that, by dancing at the altars of this saint, or of St. Vitus (for in the Breisgau aid was equally sought from both), they would be freed from all their sufferings. This hope was not disappointed; and they remained, for the rest of the year, exempt from any further attack, after having thus, by dancing and raving for three hours, satisfied an irresistible demand of nature."

Dr. Hecker, in beginning his account of Tarantism in Italy, which follows the above, observes, drily enough, that it was very fortunate that the St. Vitus's dancers had fixed upon a patron saint, as it caused them to be treated with gentleness, and they were thereby screened from such harsh measures as were employed against others less canonically protected, and supposed to be *possessed*—as witches, and the like. After a few other judicious observations, he comes to speak of the Tarantism, and the music found useful for its cure, as a peculiar species of national dance music. Times are changed—and the modern Neapolitans caper and *pirouette* for amusement to quaint old melodies, which were employed to soothe the convulsions of their forefathers. The fable of the disease originating in the bite of a venomous spider, is too well known to be dwelt on here; all that we can gather, is, that as in the case of the hundred children at Erfurt, and the two hundred dancers on the Mosel bridge, the peasants of Italy were prepared for a sympathetic disorder by some ancient legend. We must also remember, that the fearful plagues of the middle ages—the leprosy of the Crusades—the St. Anthony's fire—the Black Death—could not have passed over Europe, without producing a strong impression upon the minds, as well as the bodies, of the people; and it is not, therefore, wonderful, that fancy, working upon frames in a state of morbid sensitiveness, should induce and perpetuate the very evil to be dreaded.

"Those who were bitten," says Perotti, "generally fell into a state of melancholy, and appeared to be stupefied, and scarcely in possession of their senses. This condition was, in many cases, united with so great a sensibility to music, that, at the very first tones of their favourite melodies, they sprang up, shouting for joy, and danced on without intermission, until they sunk to the ground exhausted and almost lifeless. In others, the disease did not take this cheerful turn. They wept constantly, and, as if pining away with some unsatisfied desire, spent their days in the greatest misery and anxiety. Others, again, in morbid fits of love, cast their longing looks on women, and instances of death are recorded which are said to have occurred under a paroxysm of either laughing or weeping."

Something of the more impassioned and voluptuous spirit of the south, seems to have distinguished this incarnation of the disease from its *avatar* in Germany; the Tarantists were even more passionately sensible to music than the St. John's dancers.

"Cities and villages alike resounded throughout the summer season with the notes of fifes, clarionets, and Turkish drums; and patients were every where to be met with who looked to dancing as their only remedy. Alexander ab Alexandro, who gives this account, saw a young man in a remote village who was seized with a violent attack of Tarantism. He listened with eagerness, and a fixed stare, to the sound of a drum, and his graceful movements gradually became more and more violent until his dancing was converted into a succession of frantic leaps, which required the utmost exertion of his whole strength. In the midst of this over-strained exertion of mind and body the music suddenly ceased, and he immediately fell powerless to the ground, where he lay senseless and motionless until its magical effect again aroused him to a renewal of his impassioned performances."

Different airs, called *tarantellas*, were composed, to suit the various moods of the patients.

"There was one kind of tarantella which was called 'Panno rosso,' a very lively impassioned style of music, to which wild dithyrambic songs were adapted; another, called 'Panno verde,' which was suited to the milder excitement of the senses, caused by green colours, and set to Idyllian songs of verdant fields and shady groves. A third was named 'Cinque tempi;' a fourth 'Moresca,' which was played to a Moorish dance; a fifth, 'Catena;' and a sixth, with a very appropriate designation, 'Spallata,' as if it was only fit to be played to dancers who were lame in the shoulder. This was the slowest and least in vogue of all. For those who loved water they took care to select love songs, which were sung to corresponding music, and such persons delighted in hearing of gushing springs and rushing cascades and streams.

"The music was almost wholly in the Turkish style (aria Turchesca), and the ancient songs of the peasantry of Apulia, which increased in number annually, were well suited to the abrupt and lively notes of the Turkish drum and the shepherd's pipe."

The cure of the afflicted gave occasion to a sort of annual festival, called "*Il carnevaletto delle donne.*" The abhorrence and passion for colours in the Tarantists, proceeded to a much madder height than in the leapers of Germany: red seems to have been a general favourite, but they were not implicit followers of any one particular hue. The following anecdote is from Kircher:—

"The dancing fits of a certain Capuchin friar in Tarentum excited so much curiosity, that Cardinal Cajetano proceeded to the monastery, that he might see with his own eyes what was going on. As soon as the monk, who was in the midst of his dance, perceived the spiritual prince clothed in his red garments, he no longer listened to the tarantella of the musicians, but with strange gestures endeavoured to approach the cardinal, as if he wished to count the very threads of his purple robe, and to allay his intense longing by its odour. The interference of the spectators, and his own respect, prevented his touching it, and thus the irritation of his senses not being appeased, he fell into a state of such anguish and disquietude, that he presently sunk down in a swoon, from which he did not recover until the cardinal compassionately gave him his purple cape. This he immediately seized in the greatest ecstacy, and pressed now to his breast, now to his forehead and cheeks, and then again commenced his dance as if in the frenzy of a love fit."

Many, too, were seized with an equally delirious passion for water—would bear about glasses of water while dancing, with the most extravagant expressions of fondness, and show an ardent longing for the sea. Others, of more sombre imagination, fancied they found relief in earth-bathing. Nor was it the natives only who were attacked by this madness; foreigners imbibed the contagion; dotards threw away their crutches and danced—children scarcely out of their cradles joined with them.

---

each other; and this singular mode of cure lasted above four weeks, when the patient fell down exhausted, and being quite unable to stand, was carried to an hospital, where she recovered. She had remained in her clothes all the time, and, entirely regardless of the pain of her lacerated feet, she had merely sat down occasionally to take some nourishment, or to slumber, during which the hopping movement of her body continued."

This frenzy was at its greatest height in the seventeenth century; whole bands of musicians, devoted to the cure of the *Tarantati*, traversed Italy during the summer months, and the women saved up money, before they came, to repay them, and to provide for the costs of the *carnevaletto*, so that the excitement was never permitted to die away. Even the most incredulous and sober churchmen were not proof against the contagion, for, we read that, at a later period,—

"Jo. Baptist Quinzato, bishop of Foligno, having allowed himself, by way of a joke, to be bitten by a Tarantula, could obtain a cure in no other way than by being, through the influence of the tarantella, compelled to dance. Others, among the clergy, who wished to shut their ears against music, because they considered dancing derogatory to their station, fell into a dangerous state of illness by thus delaying the crisis of the malady, and were obliged at last to save themselves from a miserable death by submitting to the unwelcome but sole means of cure."

We learn, however, that this disease was not a very fatal one; that of these who had been bitten, only one or two in a thousand died.

We must pass the collateral chapter on hysteria, with the curious illustrations added, in notes, by the translator—of the different insanities to which women, shut up in companies, have been especially subject—of the nuns in France who chose to *mew* in concert, till their cattish propensity was cured by a threat of flagellation—of their German sisters, who took the sharper fancy of biting each other, a pastime found particularly enticing and contagious; we must also pass the chapter devoted to the *Tigretier* of Abyssinia, with the strange anecdotes, similar to what we have already given, extracted from Nathaniel Pearce's journal, proving that a malady, like "the ancient dancing plague," still exists in these our own days, in that part of Africa. Nor can we enter upon the concluding division of the work, in which some of the deplorable effects of modern fanaticism are stated, having already devoted more space to the subject than some may think it deserves, and being willing to refrain from looking into one of the darkest and most degrading pages of the history of mind. But, in parting from this book, we must recommend it to our readers, not merely as valuable, but as very amusing; it may be beneficial, too, to those who are inclined to bear too harshly upon the extravagances of poor human nature, if it induce them to forgive as a disease, what they would persecute and ridicule as folly. Dr. Babington's notes contain many striking parallel anecdotes, and add to the interest of the work.

We observe that Dr. Hecker means to continue his labours, and that the next treatise announced, is on "The Sweating Sickness."

—

*The Exile of Erin, or the Sorrows of a Bashful Irishman.**

A bashful Irishman, like a silent woman, is a prodigy, which, like the unicorn, in spite of all the researches of our naturalists, must still be considered fabulous. This work is written with much humour, and exhibits many scenes of life in a ludicrous point of view. There is a mirthful solemnity in the description of some of the dilemmas in which the hero is involved by his *bashfulness*, which reminds us of Liston, in those happy moments of laughable perplexity, where, worried by a flirting wife, or teazed by some family *contre-temps*, he stands in serious, melancholy, musing, himself the occasion of laughter to hundreds. The hero, educated by an Irish priest, and nurtured upon whiskey, becomes, by sheer force of bashfulness, an actor, marries a scolding wife, deserts her, and, in due course of time, incited likewise by bashfulness, makes his *debut* as a newspaper reporter.

"At last a grand idea struck me! I resolved to try the press. I had often heard and read of those sprightly adventurers, who contrived to earn a subsistence by picking up, or in case of need, inventing accidents, &c., for the newspapers, so I presented myself at a dull period at the *Planet* newspaper office, with an affecting report of a young lady, who had swallowed a tea-cup full of arsenic water, under the influence of derangement, brought on by the diabolical conduct of a young guardsman who had seduced her.

"This paragraph, being well timed, was much approved; it became the subject of an indignant leading article in many of the ensuing Sunday journals, 'on the demoralised condition of the higher classes,' and went the round of the provincial press under the title of 'Shocking Suicide!'

"My next literary perpetration was a Hatton-garden police report, wherein I detailed the particulars of a pugilistic encounter between two Irish hodmen in a style of the most rampant vivacity. About this time, too, I contributed a foot and a half of good jokes weekly to the *Looker-on*, for which the editor, who was himself a wag of the first water, and liked, as he said, to encourage genius, remunerated me at a very handsome rate. But my chief reliance was on the *Planet* newspaper, on which, by adroit flattery of the proprietor, an odd little fellow, with a style of writing 'peculiarly his own,' I contrived to gain so strong a hold, that after a month's probation, I was declared to be master of my business, and placed on the establishment as a sort of flying reporter of all work.

"In this capacity I exhibited powers of invention which would have done honour to a Scotish novelist. Scarcely a day passed but a Mrs. Tomkins and her only daughter fell from a one-horse chaise in Tavistock or Brunswick-squares; or a Mr. Subthorpe, a stout gentleman of sixty, with a wife and six children, broke his leg by stumbling over a bit of orange-peel, which some urchin had inconsiderately flung upon the pavement. My phenomena were equally creditable to my fancy. The Planet abounded in accounts of extraordinary gooseberries, which measured four inches round the waist; of Irish potatoes on which could be clearly traced the words "Daniel O'Connell;" of three children born impromptu at a birth; of goats without beards, cows with five legs, and donkeys with horns like my Lord ——.

"Not unfrequently, when 'extra hands' were wanted, I made my appearance in the gallery in the house of commons, infinitely to the annoyance of the practised and well-educated gentlemen who attended there, not one of whom, however, came near me, whether in eloquence of style, originality of metaphor, or vivacity of logic. They stuck to fact, I expatiated in the airy regions of fiction.

"But ingratitude is the vice of public men in England. I had actually not distinguished myself above half-a-dozen times in the gallery, when I was summoned to the bar, for a breach of privilege contained in a report of one of Sir William Wiseacre's orations; reprimanded by the speaker in a style that brought the blood of a hundred ancestors into my cheeks; and then formally dismissed the Planet establishment. In justification of his complaint, Sir William urged that he was not in the house at the time I attributed to him the speech in question, and that nothing but the unparalleled impudence of the forgery should have ——; but I need say no more. Men of bashful temperament will at once appreciate the motives for my silence."

He soon rises to the high eminence of editor of a satirical newspaper; puts in a *harmless* paragraph about "*a certain baronet's lady*," is threatened with a prosecution, gives up the proprietors, and vanishes from a London life into a country borough. Here he stirs up an

* Republished by the Harpers. New York.

lection contest; bashfully fingers the cash of the reform andidate, and accidentally is made an inmate of the ail, where he industriously collects materials to regulate is future conduct, from the experience of others, among whom a young philosophical pick-pocket stands predominant:—

"It was at the Surrey Theatre—I linger on the recollection with a pleasing melancholy—that I made my irst appearance as an artist in this line. The house was rowded, and as good luck would have it, I chanced to tand next an asthmatic man, to whom I imparted my uspicions of there being thieves in the house, and hasened to prove the fact by decamping with his snuff box.

"This exploit at once got me into repute among my ontemporary artists, and inspired me with such self-onfidence, that for upwards of a twelvemonth afterwards wrought successfully night and day at my new vocaion; and one evening, on the steps of the Opera House, ad the honour of a personal interview with the prince egent."

"Indeed!" said I, "how came that about?"

"Why, sir, in attempting to ease his royal highness f a remarkably handsome gold snuff-box, I happened to nake a false step and stumbled up against him, whereupon he turned round with a smile, and made me such gracious bow, that I have been the most loyal of men ver since. But in politics I was always a tory, though cannot say I have fingered so much public money as ords E—— or B——. However, a man can but do his est.

"It was at this period of my life that I became acquainted with the immortal Ikey Singleton. We shook ands (strange enough!) in the coat-pockets of a clergyman, who had stuck himself at the back of one of the ress-boxes in Govent-garden, and against whom our rofessional dexterity was at one and the same moment mployed. Ikey was a great man, sir; still I cannot but hink he was over-rated. Certes, his mode of effecting ransfers was prompt and intelligent, but it wanted oriinality. You might know him any where by his style. With his contemporary Slender Billy, it was otherwise. He was all versatility, and had the finest conception of burglary, of any man I ever met with.

"But to return from this digression, into which I have een led by my respect for departed genius. Scarcely ad I achieved notoriety by the felonious capabilities of ny fingers, when my mind, fitted for nobler pursuits, egan to languish for pre-eminence in the higher ranches of the profession. Oh! sir, ambition has been ny ruin, as it has been that of many a great man before ne. On sounding my old schoolfellow, Fusby, on the ubject, he readily entered into my feelings, and agreed o join me in an attempt on a house in Brunswick-square, here I had previously ascertained that a rich old bachelor esided.

"Punctual to the moment, we proceeded to effect a odgment in his kitchen; but unluckily, while we were scending towards the drawing-room, a stout scullery irl, who, unperceived, had watched our motions, assaulted us both with her fists in so cowardly and unproroked a manner, that we were compelled to make a precipitate retreat. Detection was the inevitable consequence. Fusby, however, escaped, by turning king's vidence, while I was tried, convicted, and transported o Botany Bay, where I was immediately placed in the ervice of a Scotish emigrant who held vast pasturages n the neighbourhood of Sidney."

The jail is burnt down, and our hero liberated in a iot. He retires into Wales, where he perpetrates a seond marriage in sheer bashfulness. His character follows him from the borough of Humbug, and he is compelled to leave the *mella otium* of a Welsh apothecary, nd the *placens uxor* of a scolding wife. The land of his birth now receives him, and in failure of all other trades, his bashfulness prompts him to the avocation of patriotism. The sketch of the Catholic Association and his maiden speech are capital. Fate, however, now cuts the thread of his career, and vengeance pursues him in the shape of his first wife. While in the act of entangling himself for the third time in the silken fetters of Hymen, the police arrest him, and he is brought to trial for bigamy. The defence is conducted by O'Connell, whom the author happily and humorously delineates as throwing his client overboard after the first sentence of his speech, and rushing "head up" into a pathetic description of the wrongs of his injured country.

"When the case for the prosecution had closed, Mr. O'Cromwell rose for the defence.

"'May it please your lordship,—Gentlemen of the jury,—I am well aware that, to a certain extent, judgment must pass against my client. I mean not to deny the fact of his first, nor yet of his second marriage; but this I will maintain, that notwithstanding the eloquent vituperation of my learned friend, the evidence you have this day heard proves that defendant has been far more sinned against than sinning. In considering your verdict, gentleman, I trust you will take this fact into your consideration. Besides, do not let it escape your attention, that this prosecution has at least as much to do with politics as justice. The protestant magistrate, Kelly, who takes such extraordinary pains to promote it, does so, for the sole reason that the defendant is a catholic and a radical. But this is nothing new here, for Irish justice is notoriously of the Orange faction. Oh, my beloved countrymen, when shall we be free from this galling ascendancy? Where is there a lovelier climate? Where a finer peasantry? Oh, it galls me to the quick, to think that, where God has been so bountiful, man has been so base! We were designed to be a nation—we are a province. We were designed to be happy—we are miserable. But we have one consolation—WE ARE SEVEN MILLIONS!"

"'Mr. Sheilly.—I beg my learned friend's pardon. We were seven millions a month ago. We are eight now."

"'Lord Norvery.—Mr. O'Cromwell, you are traveling wholly from the record.'

"'Mr. O'Cromwell.—My lord, justice to my client compels me to show that this prosecution is for the most part of a political——'

"'Lord Norvery.—Sir, we know nothing of politics here.'

"'Mr. O'Cromwell.—I should have thought otherwise, from your lordship's extreme hurry to——'

"'Lord Norvery (in a loud voice),—I will have respect paid to the bench—I insist on it.'

"'Mr. O'Cromwell.—Really, my lord, this interruption is most ——'

"'Lord Norvery.—Oh, very well, sir, I understand your meaning. If you fancy yourself aggrieved, you know how to apply for your remedy.'

"'Mr. O'Cromwell (solemnly).—My lord, I have a vow—a sacred vow!'

"'Lord Norvery.—Enough, sir, go on.'

"'Mr. O'Cromwell.—Gentlemen, my client's case is only another proof of the necessity that exists for cleansing the fountain-heads of justice in this most afflicted country.'

"His lordship here again interrupted Mr. O'Cromwell, and the two parties continued addressing each other with inflamed gestures, at the very top of their voices, for ten minutes, while the court roared with laughter. At length, after a vehement altercation, Mr. O'Cromwell's superior wind prevailed, and he proceeded as follows:—

"'Gentlemen, I repeat my former statement,—this prosecution is almost wholly political. But thus has it ever been—thus will it ever be—until Irishmen have learned to know and vindicate their rights.

Hereditary bondsmen! know you not
Who would be free, themselves must strike the blow?

Yes, we are indeed a nation of bondsmen, and England is our task-master. We are hewers of wood and drawers of water, and the Saxon is our overseer. Yet Nature designed us for freedom. (A sort of running duet here took place between Mr. O'Cromwell and his lordship.) Our every hill is a fortress—"

" 'Lord Norvery.—Mr. O'Cromwell, this is no corn-exchange meeting.'

" 'Mr. O'Cromwell.—Our every road a defile'——

" 'Lord Norvery.—Sir, I insist'——

" 'Mr. O'Cromwell.—Our every field a redoubt——'

" 'Lord Norvery.—This conduct is really'——

" 'Mr. O'Cromwell.—Up then, countrymen, and be stirring! (Here his lordship sank back exhausted with his vehemence.) Up with your weapons—but let them be those of constitutional agitation! Strike, but let it be in theory! Fight, but let it be in a contest of obedience to the laws, to those laws which, where they but once thoroughly reformed, would make Ireland again what she once was—

Great, glorious, and free,
First flower of the earth, and first gem of the sea.'

" When the learned gentleman had concluded, the venerable judge commenced summing up the evidence; after which the jury returned a verdict of 'guilty;' whereupon his lordship sentenced the prisoner to transportation for life."

—

Crayon Miscellany. By the Author of "The Sketch Book.' No. 1. Containing a Tour on the Prairies. Murray. 1835.

We question whether the most ardent admirers of forest life, those who have envied the followers of the banished duke—their green retreats in the woods of Ardenne—would derive so much enjoyment from a sudden rush into the splendid wilds of America, as from the perusal of this delightful volume. Magnificent and beautiful as nature appears in these little-trodden solitudes, sublime as are the spectacles which they present, their aspect in sunshine and storm, their stately scenery, the noble animals belonging to the brute creation roaming at liberty over the fertile plains, and the ardour and excitement afforded by the chase of these spirit-stirring objects of pursuit, all these would be deprived of their highest relish without a companion whose admirable power of making minute points tell, and whose fine taste and quick perception of beauty render him the most enchanting guide that the traveller could be blessed with. We remember having been much interested by the narrative of a journey to the Rocky Mountains, published some years ago, and which gave a very faithful delineation of the scenery and productions of the prairies. We also cherish a very lively recollection of Mr. Cooper's striking novel, one of a series of works descriptive of American life upon which his fame as an author will ultimately rest; but, notwithstanding our previous acquaintance with the subject, the novelty and freshness which this most accomplished of travellers has infused into his work, give to it an originality which we could scarcely deem it possible that it should possess.

Mr. Irving's taste for the picturesque led him to join a large party, accompanying a commissioner, who was directed to employ all his rhetoric in persuading the Indian tribes to settle quietly down to peaceable occupations. The Pawnees being still averse to every kind of restraint, and desirous to keep their grand hunting grounds free from molestation, there was some danger of hostile attack from these monarchs of the waste, a circumstance which added greatly to the interest of the journey. Nothing can be more finely described than the enthusiasm of the whole party at first setting out: the excitement which the pursuit of elks, buffalos, and wild horses, and the expected irruptions of the Pawnees, produced, and then the gradual cooling down of the spirit of enterprise, and the weary, heart-sunken, forlorn array of the return.

—

Report of William Crawford, Esq. on the Penitentiaries of the United States. Printed by order of the house of commons.

On few subjects has there been more contradictory testimony, than the effects produced by the establishment of penitentiaries in the United States. One great cause of this, is the fact, that each penitentiary is subject to the local legislature; that there is consequently no uniformity in the system of discipline; and that the good effected in one state, has been frustrated by the defective or mischievous plans of another. A second cause is the neglect of statistical science in America; there is no central depôt for the state papers of the union, and the registers are not always kept with accuracy. Under these circumstances Mr. Crawford was sent by Lord Melbourne to inspect the several penitentiaries of the United States, examine the respective systems on which they are governed, with a view of ascertaining what portions of their regulations it would be practicable and expedient to apply to the prisons of this country. This report contains the result of his examination of fifteen penitentiaries, detailed with considerable minuteness. We shall, however, direct the attention of our readers only to those general propositions which seem applicable to the criminal legislation of England. The first popularity of American law noticed by Mr. Crawford, is one of great importance:—

"The most striking character, however, respecting the laws of the United States, especially to those familiar only with the circumstances and situation of criminals in Great Britain, is the desire shown for making reparation, not only to the state, by payment of a fine, but also to the party injured in cases affecting his property. In some states, in New York and Tennessee, for instance, the party injured may have execution against the convict for the amount of his loss, when capable of being estimated by damages, which is done by the jury who try the offender. In others, as Virginia and Missouri, restoration of the property stolen, or its value, forms part of the sentence. This practice obtains very generally in the cases of stealing slaves or horses; and in these instances, where restitution is not made, the sum to be paid is usually double or treble the value of the slave or horse. In Rhode Island, in the case of larceny, the owner is to receive full value as well as his property. In Connecticut, part of the punishment for forgery committed on a private person is a fine of double the amount of the damage sustained, to be paid to the injured party. The convict is generally made liable to the state for the costs of his own prosecution; but his property, if more than sufficient for this purpose, is not forfeited: indeed, the law in some instances specially provides for the administration of the estates of convicts during their imprisonment. That the fullest reparation should be made by the offender to the injured party is in the highest degree desirable, if it can be effected without, on the one hand, excluding a material, or, on the other, admitting an interested witness. But the principal object of such punishments, viz. the increased certainty of their infliction, in consequence of the additional inducement to prosecute, would not be much promoted in a community where the pecuniary circumstances of the criminals must, in the great majority of cases, render this part of the law little else than nominal. To secure the costs and fines, where the prisoner has no property, laws have in some states been passed, authorising the court to transfer the convict to any party as a hired servant for a

certain time, or to make him work out the amount in prison, by allowing him a certain sum per diem for his labour. In others he may be detained for costs, or liberated upon giving his note of hand, or continue liable to be apprehended in future should he obtain the means of payment."

The principle of procuring satisfaction to the persons injured, was always kept steadily in view by ancient legislators, but it seems strangely neglected in England. Our punishments may gratify the vindictive feelings of the prosecutor, but there is no compensation for the loss that he has sustained. In many cases, to be sure, it would be impossible to enforce restitution, still there is obvious justice in making every exertion to secure it. In England the injured person not only has to bear the original loss, but has too frequently to contribute to the expenses of the prosecution.

The penitentiary lately established at Philadelphia, appears to be the most efficient for the accomplishment of the best purposes of prison punishment, that has yet been devised. It derives its efficacy from the strictness with which solitary confinement is enforced :—

"This penitentiary is situated about a mile from the city of Philadelphia. The site occupies about twelve acres. It is built of stone and surrounded by a wall thirty feet in height. Every room is vaulted and fireproof. At each angle of the boundary wall is a tower for the purpose of overlooking the establishment. In the centre is a circular building, or observatory, from which several corridors radiate: they are under complete inspection. The cells are ranged on each side of the corridors, in the wall of which is a small aperture and iron door to each cell: through this aperture the meals of the prisoner are handed to him without his seeing the officer, and he may at all times be thus inspected without his knowledge. Other openings are provided for the purposes of ventilation and warmth. Heated air is conducted by flues from stoves under the corridors. In the arched ceiling of each cell is a window for the admission of light. The cells are eleven feet nine inches long, seven feet six inches wide, and sixteen feet high to the top of the arched ceiling. The cells on the ground floor have double doors leading into a yard, eighteen feet by eight feet, in which the convict is allowed to take exercise for an hour daily. The walls of the yard are eleven feet high. Prisoners are not allowed to walk at the same time in adjoining yards; and when in the yards are inspected by a watchman placed for that purpose in the tower of the observatory. * * * On the admission of a convict he is taken into an office at the entrance of the penitentiary and subjected to the usual course of examination. His person is cleansed and he is clothed in an uniform. He is then blindfolded and conducted to his cell. On his way thither he is for a short time detained in the observatory, where he is admonished by the warden as to the necessity of implicit obedience to the regulations. On arriving in his cell the hood is removed, and he is left alone. There he may remain for years, perhaps for life, without seeing any human being but the inspectors, the warden and his officers, and perhaps occasionally one of the official visiters of the prison. For the first day or two the convict is not allowed to have even a bible, nor is any employment given to him for at least a week, a period during which he is the object of the warden's special observation. The prisoner soon petitions for an occupation. It is not, however, until solitude appears to have effectually subdued him that employment of any kind is introduced into his cell. * * *

"So strict is this seclusion that I found, on conversing with the prisoners, that they were not aware of the existence of the cholera which had but a few months before prevailed in Philadelphia."

One advantage resulting from this seclusion, is too remarkable to be omitted :—

"The propensity of convicts, on their liberation, to revive acquaintances formed in prison is notorious. If any individual so situated be disposed to abandon his criminal habits he is too often assailed by temptations from his late associates, and threatened by exposure. An instance of this kind was related to me of a convict who had manifested great contrition for his past life, and conducted himself so well as to obtain his pardon from the Walnut-Street prison. Having been re-committed, he was asked why he had returned: he replied, 'I intended to behave well, and I went for that purpose into the state of Ohio, where I hoped that my former character would be unknown, and I might set out anew in life. I got employment and was doing well, when unfortunately I one day met a man who had been a convict here at the same time as myself. I passed him, feigning not to know him: he followed me and said, 'I know and will expose you, so you need not expect to shun me. It is folly to set out to be honest. Come with me and drink, and we will talk over old affairs.' I could not escape from him; my spirits sunk in despair, and I went with him. The result you know.' The seclusion of the eastern penitentiary removes this formidable obstacle to reformation. The convict, on leaving his cell, re-enters the world unknown by any of the former inmates of the prison."

The opponents of the system of solitary confinement assert that it is calculated to produce the most terrible of all inflictions, madness, and they quote in proof the result of experiments made at Auburn, in the state of New York, and also in the state of Maine. To this it might fairly be replied, that this fatal result has not occurred in the Gloucester Penitentiary, in the Glasgow Bridewell, or in the new establishment at Philadelphia; and that the effects produced in Auburn and Maine were owing not to solitary confinement, but to the contracted dimensions and unhealthy condition of the cells in which the experiments were conducted. Mr. Crawford gives us a fearful picture of the misery produced by these experiments :—

"A trial of solitary confinement, day and night, without labour, was made at Auburn in the year 1822, for ten months, upon eighty of the most hardened convicts. They were each confined in a cell only seven feet long, three feet and a half wide, and seven feet high. They were on no account permitted to leave the cell, during that long period, on any occasion, not even for the purposes of nature. They had no means of obtaining any change of air, nor opportunities of taking exercise. The most disastrous consequences were naturally the result.

"Several persons became insane: health was impaired, and life endangered. The discipline of the prison at that period was one of unmixed severity. There was no moral no religious instruction of any kind communicated within its walls, nor consolation administered by which the convict was enabled to bear up against the cruelty of this treatment. Nor was a trial of the same description which took place in the state of Maine, conducted under more advantageous circumstances. The night-rooms or cells at this prison are literally pits entered from the top by a ladder, through an aperture about two feet square. The opening is secured by an iron grate, used as a trap-door; the only other orifice is one at the bottom, about an inch and a half in diameter, for the admission of warm air from underneath. The cells are eight feet nine inches long, four feet six inches wide, and nine feet eight inches high. Their gloom is indescribable. The, diet, during confinement, was bread and water, only. Thus immured, and without any occupation, it will excite no surprise to learn that a man who had been sentenced to pass seventy days in one of these miserable pits hung himself after four days' imprisonment. Another condemned to sixty days also committed suicide on the twenty-fourth day. It became necessary to remove four others, who were unable to

endure this cruelty, from the cell to the hospital repeatedly before the expiration of their sentence. It is said that similar experiments have been made in Virginia, and that various diseases terminating in death, were the result. The cells in which the prisoners were confined have been since disused: they are, in fact, dungeons, being on the basement story, and so dark as to require a lamp in visiting them. In damp weather the water stands in drops on the walls. The cells were not warmed at any season of the year. A prisoner's feet were actually frozen during his confinement. No fair trial of the effects of solitude could have taken place, as has been alleged, in the penitentiary of New Jersey, the cells being so arranged that the convicts can converse with perfect freedom. From experiments of this character no just conclusions can therefore be derived unfriendly to solitary imprisonment of any kind, especially when accompanied by employment, in large and well-ventilated cells, the arrangements of which have reference to the preservation of the health, regular employment, and improvement of the mind of the offender."

Indeed, the entire system at Auburn appears the worst possible: liberty to inflict severe punishments at pleasure is granted to the overseers, the keepers, and even the under-keepers; and this authority is very frequently abused, as might indeed have been reasonably expected.

Mr. Crawford concludes his report with some very valuable suggestions; the most important are—

"That it is expedient to diminish as much as possible the number of persons committed for safe custody only, and with this view to extend the practice of taking bail as widely as is consistent with the public interests.

"That there should be a more frequent delivery of the county jails than twice in the year.

"That provision should be made in every jail and house of correction for the solitary confinement of certain classes.

"The last suggestion which I take the liberty to offer is, that arrangements should be made for enabling the convict on his discharge to earn an honest subsistence. The best system of prison discipline must necessarily be ineffectual if the offender on his liberation be unable to procure employment by which to earn a creditable livelihood. So greatly, however, does the supply of labour exceed the demand throughout England, that serious difficulties are experienced in this respect by thousands who have the advantage of character and connections, but who are nevertheless compelled to seek a subsistence by emigration to distant lands. How immeasurably are those difficulties increased when the individual is tainted by crime, and therefore shunned by society! It is in in vain to look for the means of procuring employment for the discharged convict in this country. In the colonies alone can the remedy be found. If the emigration of liberated criminals to a penal colony were encouraged, an opportunity would be afforded to the best disposed to change their habits and commence a new life. That there is a large class whose depravity would dispose them to reject such a proposal cannot be questioned, and it might form a subject of consideration whether a criminal, who had on his discharge from prison refused an offer of emigration, should not on reconviction be subjected to an increased punishment. There are, however, others who would gladly avail themselves of any opportunity by which they could escape from bad connections, and avoid the numerous temptations which inevitably beset them in this country. Emigration to Australia would be the means of enabling them to maintain themselves by industry, and become, what they never can hope to be by remaining at home, honest and useful members of society."

The last suggestion we deem particularly valuable, but it may be doubted, whether it would not be found too expensive in practice.—*Athenæum.*

Fine Arts.

The Crucifixion. By John Martin. F. G. Moon, Threadneedle Street.

This is one of those sublime works upon a scriptural foundation for which Mr. Martin is so remarkable, and in which he has no equal.

The subject of the crucifixion, in itself most wonderful and magnificent, is one which none can attempt with effect save those who possess the spirit of poetry; and this is Mr. Martin's in a high degree—to that which he touches he gives an interest and a beauty which it might otherwise want. And though this cannot be the case in the present instance, yet even here, he has been "himself alone," by striking out a new plan; and instead of rendering the "great atonement" itself his principal study, has devoted his attention to the objects around, and produced, as a whole, an effect of which it may be truly said, the minutest detail is made subservient to the grandeur of the whole.

The opening graves—the Temple—the sacred Mount of Calvary—the figures of "Mary the mother" and "John the beloved" of Jesus—all render a deep and affecting beauty in return for the interest which they themselves derive from the subject, while the whole of the engraving displays that high tone of feeling which ever has, and we believe, ever will, characterise the efforts of the artist whose work we have had so much pleasure in eulogising.—*Metropolitan.*

Finden's Landscape Illustrations of the Bible, consisting of Views of the most Remarkable Places mentioned in the Old and New Testaments. From finished Drawings, by C. Stanfield, R.A., Turner, R.A., and Calcott, R.A., and other eminent artists, made from original sketches taken on the spot. With descriptions of the plates, by the Rev. Thomas Hartwell Horne, B. D. of St. John's College, Cambridge, &c. John Murray, Albemarle Street; and Charles Tilt, Fleet Street.

We give this title at full length as a kind of security for the justice of the praise we are compelled to bestow on this undertaking. The names of the artists are of themselves a sufficient warranty that the views and plates shall be good. This, the twelfth part, contains a view of Nineveh, by Turner, after James Rich, Esq. Scarcely the *debris* of this once magnificent city remains. What there is of it, and the modern Moussul, on the Tigris, make a very romantic picture. Jericho, also by Turner, after Sir A. Edmondstone, is also a very interesting and well-engraved plate; but gives us a most impotent idea of that once important city, second only to Jerusalem. Ramah, with the building called Rachel's Tomb, is also by the same person. The fore-ground is relieved by an irruption of a detachment of wolves upon a flock of sheep. The last plate of this number is a View of Damascus, which gives a good impression of that often demolished, yet still surviving city. This twelfth part supports the character, high as it is, of those that have preceded it.—*Ibid.*

Notabilia.

Autographs.—Collections of autographs had their origin about the middle of the sixteenth century, in Germany, where persons who traveled carried about with them white paper books, to obtain the signatures of persons of eminence. These albums are frequently found in the manuscript libraries of Europe; several are preserved in the British Museum; and some are adorned

with splendid illuminations. The oldest bears a date as early as 1578, and appears to have belonged to a lady. There is one in the library which belonged to George III., made for King Charles I. The Album of the Synod of Dort, 1618-9, is still extant. It was collected by John Dibbezius, or Dibbits, the pastor of the church. The earliest royal autograph of England now known, is the small figure of a cross, made by the hand of King William Rufus, in the centre of a charter by which the manor of Lambeth was granted to the church of Rochester. The next royal autograph known, is the signature of Richard II. From this time the royal signatures of England continue in uninterrupted succession.

Paint.—An American gentleman, who was lately introduced at the drawing-room at St. James's Palace, in giving an account of the scene in an American publication, says, after speaking of the queen's courteous behaviour: "She is not handsome, but from the associations which her good reputation suggests, her looks are agreeable and interesting. I saw quite an elderly lady on the queen's right hand, whose *paint*, laid upon her cheeks, reminded me of nothing so impressively as the wife of a Winnebago chief in the North West territory of America, whom I had frequently seen, in 1830, as she came from making her toilet over the mirror surface of Fox River, with the aid of an abundance of vermilion. I could positively have taken her for the wife of the Indian chief, the other parts of her dress and the circumstances of the occasion aside. I should think her about seventy years old! With this singular exception—and really it was very remarkable—all the persons in attendance upon her majesty, male and female, appeared in a very becoming manner."—*Christian Observer.*

Gold medal.—A curious gold medal was discovered a short time ago by a labourer who was excavating a part of the road on the Ashford line, near Tunbridge-Bridge. It is one of the Roman emperors, and the obverse is a Roman head in relief, with an inscription which is said to denote its being commemorative of Severus. The head is encircled with small garnets, inlaid. It appears to have been worn as an ornament, as a rudely chased suspender is attached to the top of it. This piece of antiquity is now in the possession of Mr. Eastes, of Canterbury.—*Kentish Paper.*

Ancient Remains.—As a number of workmen were digging in a field on the right-hand side of Barkby-lane, Leicester, and lately laid out for building, about three or four feet below the surface of the earth they turned up several skulls, besides various other bones connected with the human frame. The extraordinary size of the leg-bones plainly indicated the parties, when living, to have been a stout and, no doubt, hardy race of men. Several sets of teeth were also discovered in a perfect state; but how and at what time they were buried history furnishes no record.—*New Monthly Magazine.*

Papyrus.—Professor Seyfarth, speaking of the result of his gleanings last year in the Museum of Egyptian Antiquities at Turin, observes, the most important discovery he made has been an outline of Egyptian history, described on each of the closely-filled sides of a papyrus, between fourteen and eighteen feet long, and two feet broad. It corresponds with the customary chronological accounts, by dating its narrative from the times of the dominion of the pagan deities. The first sovereigns of Egypt were Ammon, Vulcanus, and Ammon Sol; then follow their successors until the days of Osiris, Typhon, Horus, Thouth, Anubis, and Horus II.; the whole comprising an interval of thirteen thousand nine hundred and seventeen years, and corresponding in this respect with Manetho's testimony.

Roman Remains—at Kent-street, Southwark, and St. Clement's-Lane, London.—In the burial-ground of the Dissenters' Chapel, in Deverill-street, New Dover-road, which is situated about two hundred yards southwest of Kent-Street, a part of the line of the ancient Watling-street, Roman urns, lacrymatories of glass, and other vessels, are found almost on every occasion when the ground is open for a fresh interment. A very perfect and elegantly formed urn of gray pottery, eight inches high, seven inches in diameter at the top, and three at the bottom, containing calcined bones, evidently carefully separated from the embers of the funeral pile, has recently been discovered. Mr. Martin, an undertaker, who resides near the chapel, has numerous articles of similar antiquity in his possession, found on the same spot, and among them several fragments of highly polished bronze mirrors, which have apparently been *purposely broken* at the interment of the ashes of the females to whom they had probably belonged. These remains decidedly mark the site of a Roman or Romano-British burial-ground.—*Gentleman's Magazine.*

From the Annual Report of the Society for promoting Christian Knowledge, just published, it appears that "a very considerable augmentation of its income, and a proportionate increase in the circulation of its publications, have taken place in the past year. Its income has amounted to the sum of 74,000*l.* 16*s.* 5*d.*, being an increase upon the preceding year of more than 3,000*l.* The total number of its publications circulated during the past year has amounted to 2,152,073, being an increase of 72,000 upon the preceding year." The statement is exclusive of the books circulated by the committee of general literature and education. The number of publications circulated by that committee alone in one year, including the *Saturday Magazine*, has amounted to 5,163,929. Of the *Saturday Magazine*, which was their earliest work, an increase of the amount of nearly *fifteen thousand* numbers in each week has taken place; and the average of the weekly circulation, including the Supplements, is now more than *ninety-five thousand.* The total number of copies sold in the past year, is *four millions nine hundred and fifty-seven thousand and eighty-four.* The total number of the publications sold in the past year, exclusive of the *Saturday Magazine*, is *two hundred and six thousand eight hundred and forty-five.*—*Ibid.*

Unrolling a Mummy.—Two newspapers, the "Belfast News Letter" and the "Guardian" have been kindly forwarded to us, in both of which an account is given of the unrolling a mummy, brought to this country and presented to the Natural History Society of Belfast by Mr. Greg. So many mummies have of late been unrolled, and the results have been so uniform, that we shall, on this occasion, confine ourselves to a general notice of such facts and discoveries only as appear to have been peculiar. According to the interpretation given by the Rev. Dr. Hincks of the hieroglyphics on the coffin, the body was that of an unmarried female of the name of Kabooti, the daughter of a priest of Ammon, whose parents were dead at the time of her decease; but there was no legible part of the inscription which gave any precise information respecting the era when she lived; which, however, is presumed to have been about 2000 or 2500 years ago. According to the "Guardian," on unrolling the body sundry porcelain tubes, about three quarters of an inch in length, were found, through which some filaments of the cotton had been passed: these the "News Letter" seems to describe as part of the ornaments of the outer shawl in which the body was enveloped. In the course of unfolding the numerous wrappers, various dead insects (and one living one! described as about the size of—query, was it not?—a flea) were found, and on approaching the mummy these became more numerous, and the chest and the parts connected with the abdomen, says the "Guardian," had been either completely decomposed or devoured by insects, the space being occupied by large quantities of their larvæ. "The cloth," observes the "News Letter," "had evidently been

perforated by them in many places, and an immense multitude of either dead larvæ, or not improbably the exuviæ of the beetles, were discovered within pledgets of cotton. One leg, the arms, the upper part of the breast, and the head, were now entirely exposed to view, and an examination of the body itself soon commenced. The hair was in excellent preservation, being very fine, about three inches and a half long, forming ringlets like those of children, and of a deep auburn shade, with not the slightest appearance of wool—the eyes were replaced by balls of cotton—the lips, cheeks, and sides of the head had suffered much from the attacks of the insects, many of which were found deeply imbedded in the round holes which they had perforated in the flesh—the teeth were white, regular, and very pretty, and with one single exception not an unsound one could be seen—the appearance of the dentes sapientiæ proved the age of the body at death not to have been less than twenty, or more than thirty. The foot was particularly small and beautifully shaped. The body was five feet and one inch long." Afterwards some minor mummies were examined. "Two of these," says the "Guardian," "turned out to be the remains of snakes, and in an earthen jar, supposed to contain the mummy of a sacred Ibis, the egg of one of these birds was found enveloped in numerous folds of cotton cloth, of a much softer nature and looser texture than that in which the body of Kabooti was wrapped." —*Athenæum.*

Vittora Wheat, yielding two harvests in the year.—Loudon's horticultural and agricultural notices, last autumn, gave satisfactory accounts of the experiment tried in Somersetshire, of planting this valuable present made to his country by Sir Robert Ker Porter, our consular resident in that part of South America where it is a native of the soil. Loudon reports it to have given great promise, both from its spring and summer sowing. In Warwickshire, we ourselves know that it succeeded so well as to produce a fine crop in July last year, though, by an accident, it had been planted a month too late; and it yielded a particularly sweet and well-tasted flour, from which excellent bread was made. The proper times for sowing are February (which gives its harvest in June) and in June (which yields its harvest in October).

Quicksilver *versus* Steam-Power.—The Earl of Dundonald (better known as Lord Cochrane) was examined last session before the commons' committee on steam navigation to India. His Lordship, among other matters, said he had projected "a substitute for steam," as well as "a new mode of propelling vessels." The substitute for steam is quicksilver; and he employs it "to produce power by exhausting one vessel and compressing air in another, thus forming an atmospheric *plenum* and a *vacuum*, which will produce the same effect as the plenum and vacuum formed by the generation of steam and its condensation." This plan (superseding the necessity of carrying coals) he added, is peculiarly adapted to agitated water, like the sea. The plan may be wholly worked without fuel. The evidence and papers are too long for extract, but his lordship concludes this part of his evidence with stating, that "vessels filled with quicksilver apparatus might be provided with sails of the usual kind; there would be no smoke nor any fire, and there need be no indication from their external appearance that they are equipped in any other manner than as sailing vessels. As to the method of propelling *without paddle wheels* (his lordship says,) I should be happy to lay it before the committee, were my patent right secured."

The Potato.—Mr. Hickley has communicated to the "Irish Farmer's Journal" a very singular and successful experiment tried upon the potato in the county of Dublin: A gentleman, who holds a farm of 150 acres, planted in the usual manner 34 acres under potatoes in 1832; the result was, a complete failure of the crop. This induced him to try many experiments upon the root, all of which failed except the following: he took six potatoes and divided them into twenty cuts; he then got a large basin of water, into which he put a cupful of salt and a piece of blue stone about the size of a walnut. He put ten of the cuts into the basin, and let them remain there one entire night. On the following day he procured a very strong microscope, through which he examined the entire twenty cuts. On the ten cuts which were not immersed in the basin he could distinctly perceive many small white particles like eggs; and those cuts which were immersed presented no such appearance whatsoever. This discovery urged him to follow up the examination attentively; and every day, for a short period, he continued to watch the appearance of the aforesaid matter. The result was, that those white globular particles were animalcula, for in a few days they became quite visible to the naked eye in the form of worms or maggots. The cuts that had been steeped never showed the slightest appearance of any such thing, and they retained their solidity and firmness when the other ten cuts were completely decayed and rotted. Still unwilling to believe without further proof, he tried the experiment five or six times, and planted them, distinctly marking a division between those cuts which were steeped and those that were not. The consequence was, the almost total failure of the one kind and the complete success of the others placed the question beyond the possibility of a doubt. He considers that the air has a powerful effect upon the potato, and may sometimes impregnate it with this destructive matter.—*N. Monthly.*

Literary Intelligence.

Dr. Bird's deeply interesting novel, "Calavar," has been published in London under the title of "Abdallah, the Moor."

Mrs. Butler's Journal was to be published in London in May.

The poets Thomas Moore, William Wordsworth, and Robert Southey, are all at present in London, and each of them preparing to publish a new work. Southey is engaged on the Life and Works of Cowper.

The publication, in monthly parts, of Sir Jonah Barrington's popular History of the Irish Union is continued in regular order by the issue of the third part, in which the portraits, by the spirited hand of the elder Heath, consist, among others, of Arthur O'Connor, the Earl of Moira, Mr. Butler, &c.

The Pilgrims of Walsingham, or Tales of the Middle Ages, an Historical Romance, by Agnes Strickland.

A Journal of a Seven Years' Residence in New South Wales, by J W. Ord, Esq.

The Two Friends, a novel, by the Countess of Blessington, 3 vols. small 8vo., 1*l.* 11*s.* 6*d.*

Burke's History of the Commoners of Great Britain and Ireland, Part VIII. (completing the 2d vol.) 7*s.* 6*d.*

Lives of the most Eminent Literary and Scientific Men, by R. Southey, James Montgomery, &c. &c. vol. I. (forming Vol. LXIII. of Dr. Lardner's Cabinet Cyclopædia,) 6*s.*

Mr. Valpy has announced for publication, a new and illustrated edition of Pope's Works; to be edited by Dr. Croly, with a new Life, Notes, and Critical Observations on each poem. The work is to be published in six monthly volumes, on the plan of Byron, Scott, and Shakspeare. The engravings are of a superior kind, from drawings made expressly for the edition.

Shakspeare's Knowledge of Zoology, Botany, Physiology, Chemistry, Medicine, &c. will be displayed and illustrated by notes, original and selected.

From Fraser's Magazine.

CHARLES LAMB, ESQ.

Accident or caprice has delayed our notice of Charles Lamb until he was no more. We should have wished to record our great esteem for that kind-hearted, generous, and honourable man, during his life; but we now can do no more than offer up our tribute to his tomb.

Charles Lamb was one of those who in the beginning of his career thought that the French revolution was destined to bring about the reign of peace and good will; and with brighter, or at least more famous, spirits, he underwent the imputation of being a Jacobin. The muse of Canning called upon

"Southey and Coleridge, Lloyd and Lamb, and Co.,"

to praise some forgotten creature who was at one period a member of the directory. What were Southey's feelings at the time, he has immortally laid down in his letter to William Smith, whose worthless name is thereby preserved in our literature—we know from the tenor of Coleridge's life how little he deserved to be confounded by Canning with the crew of Jacobinism—as little did Lamb merit the censure; but those who love his name will not be sorry to find it on any pretence yoked to such company.

He was born in London, and educated in Christ's Hospital, as he has told us in some of his charming essays. Be it observed, however, that when an affected knot of pestilent scribblers intruded itself upon the public, some sixteen or seventeen years ago, and earned the title of the Cockney School, nobody was more solicitous than Lamb (who wrote, with some of the crew, for the *London Magazine*) to rid himself of all suspicion of being connected with them. Professor Wilson tells a droll story about Lamb's anxiety on this subject, but we have not room for it here.

From his situation in the office of the accountant-general in the India House, he derived a handsome income. He was very diligent and attentive in his department, being always to be found at his desk in the forepart of the day. He complained occasionally of the regularity imposed upon him. "I have had my little month already," he says, in a letter to a friend; "and, without incurring *disagreeable* favour, I cannot so much as get a single holiday till the season returns with the next year. Even our half hour's absences from office are noted in a book." And we know quite enough of the policy and prudence of the governing powers in the underling departments of the India Company, to be quite aware that the favours bestowed without scruple upon some libeling whig or tail-kissing papist, whom they rejoice to employ, would be made matter of grudge or insult if requested by a gentleman or a man of genius. At four o'clock he was emancipated, and away he went to Islington, there to dine with his sister—the sister, and friend, and admirer, and housekeeper, all in one. Then pleasant were the little parties, agreeable he ever varying chatter, endless the puns, made with good or bad fortune, as the case might be—then all the old favourite books (at some of which he is poring in our accompanying sketch, and eagerly expounding their merits in his eyes with flashing glance and eloquent tongue, the old familiar bottles being before him,) were quoted and requoted with infinite delight; until at last, the good drink having done its office, the due quantity of tobacco having been smoked to its last white ashes, he broke his pipe and wended to his bed, to rise again in the morning, fresh for the accounts of Mother Company.

Truly was he possessed of a quaint expression, a guileless wit, a gentle appreciation of the good things said and done in the old days by the old masters of the English tongue; and his verses, published with those of Lloyd, his *Rosamond Grey*, his *Old Blind Margaret*, his *John Woodville*, his odd lines, full of feeling and thought—(who forgets his *Verses for an Album*, or his *Old Familiar Faces?*)—his essays under the signature of Elia (he was, we believe of Jewish family, and his real name Lomb), or his stories from Shakspeare, well deserve that he should take a rank among those of whom he loved to speak. Adieu, then, kind Charles Lamb! long will thy conversations abide in the mind of those who heard them as (to use thine own words in the preface to the *Tales from Shakspeare*,) "enrichers of the fancy, strengtheners of virtue, a withdrawing from all selfish feelings and thoughts, a lesson of all sweet and honourable actions to teach courtesy, benignity, generosity, humanity"—for of examples teaching these virtues "thy life" was full.

From Blackwood's Edinburgh Magazine.

WILLIAM PITT.

PART III.

It is remarkable as a national distinction, and still more remarkable as a public advantage, that in England all the great principles of the life of nations are in a state of perpetual enquiry. In the continental kingdoms the sole object of public interest is the conduct of the monarch or the minister. In France a new era has lately begun, but it is still the infancy of legislation, and may never reach the manhood. Even in America, we hear of little more than the tricks of elections transferred to the tricks of congress; quarrels among obscure *coteries*; in the villages expanded into interminable speeches in the legislature; and the whole annual labour of American wisdom, compiled for the world in the speech of the president, whose whole labour seems to be that of lucky finance, and whose financial triumphs, in the midst of a new world, demanding the largest liberality of government to foster the growing powers of the people, seems to be limited to the saving of so many dollars this year, within the narrowest scale of national penury the year before. But in England we have topics of a more deliberate, manly, and majestic order. With us, all is not one sullen stream of the feelings, allied to despotism,—a Lethe, in which the national mind sinks, and is buried; nor one furious democratic torrent, in which it is hurried breathlessly along.

The breadth and depth of the public mind among us allows room for many currents—for all the innumerable impulses of earth and heaven upon its expanse—for the tempest to shake its surface, without penetrating its depths—and, above all, for that great periodic revolution which never fails—that perpetual recurrence and tide of thoughts and things, which is essential at once to its uses and to its salubrity. The advantage of this fortunate distribution, this return of events and renewal of discussions, is to be directly found in the knowledge of public principles which it constantly calls into exercise—in the ceaseless vigilance over public men and affairs which it demands—and in the solid experience which it administers to the successive generations of a land, where freedom always lives, and is always tried by power, popular rashness, or individual corruption.

A strong instance is before us at this hour.

The head of the state is arraigned for exerting the right of choosing his ministers. The charge is a grave one. But here we are not driven to the necessity of investigating political problems, of diving into the obscure mysteries of the constitution, nor even of revolving the pages of remote history. But half a century has elapsed since a king of England exerted the same right, under the strongest circumstances of personal difficulty and public clamour. We are thus not driven to the prevarication of living testimony for our facts, but appeal to the past, and are answered from registers which have passed beyond the influences of faction;—we draw the lessons of political wisdom from founts which are sealed against all the turbidness of the time. But in these evidences from the lips of the ancestry of freedom, we have not merely the moving principles,—we have the more substantial wisdom of the actual results. We see the monarch, in 1783, after having received a ministry forced on him by circumstances, and bearing with that ministry until it fell by its own act, summoning other men to his councils; pronouncing his unalterable right to exert this power for the benefit of the nation; resisting all efforts to overthrow his resolution; and finally succeeding, and casting the fallen cabinet into a minority of twenty-three years.

On the 2d of April, 1783, the memorable coalition ministry was declared. The Duke of Portland, first lord of the treasury; Fox, secretary for foreign affairs; Lord North, home secretary; Lord John Cavendish, chancellor of the exchequer; Lord Keppel, first lord of the admiralty; Lord Stormont, president of the council; Lord Carlisle, privy seal. The change of members in the cabinet was characteristic. Lord North's cabinet had consisted of nine. In the Rockingham and Shelburne cabinets, the number had been eleven; it was now but seven. The number of cabinet ministers may be so far increased, as to form a serious obstacle to deliberation, and a large cabinet is generally a suspicious evidence of the soundness of ministry. It looks too like compromise; men are paid for their principles by the indulgence of their vanity. But Fox's number was a direct contrivance for power. He had not merely the three Rockingham votes, while Lord North had brought in but two of his friends; but Fox's votes, the Duke of Portland, Lord Keppel, and Lord John Cavendish, were not only more bound to him, but they exercised higher departments. The treasury, the admiralty, and the exchequer, could be but feebly counteracted by the presidency of the council and the privy seal. Fox was thus virtual sovereign; yet he moved his sceptre gently over the head of his colleague. He suffered him to dispose of lord stewardships and lord chamberlainships; and thus, if he did not atone for the privation of power, at least softened the abruptness of its decline. In the minor but active offices, Fox again asserted his sway. The great name of Burke less added to than adorned the administration, as paymaster of the army. His brother Richard, with Sheridan, were made secretaries of the treasury, and Colonel Fitzpatrick was secretary at war.

It is a truth, and a truth that does the highest honour to England, that nothing can compensate in the public feeling for want of principle. The coalition ministry was composed of the most brilliant materials that England had ever seen. In other days, the solitary genius of a Walpole or a Chatham had thrown a lustre over the general mediocrity of the cabinet. But here were collected the most powerful orators, and the leading wits, and the most accomplished individuals of the highest ranks of society. Fox's public eloquence was beyond all rivalry for strength, vividness, and feeling. North's wit was exquisite and incessant. The annals of oratory have never seen an equal to the grandeur of Burke's conception, and the colouring of his language. Lord Townshend's promptitude and pleasantry, and Fitzpatrick's grace, animation, and elegance, were incomparable in their day of general pleasantry and animation. Of Townshend, who then replaced the Duke of Richmond, we have heard much from local knowledge. He had been already distinguished in his profession, having been second in command under the celebrated Wolfe; and, on the death of that officer, forcing the enemy, panic-struck by their extraordinary defeat, to surrender Quebec, and with it the French empire in the West. But it was in Ireland, a much more difficult position, that he shone. Whether from ill fortune, ignorance, or the general inaptitude of the English noble to adopt the habits of other countries, England has been in general strikingly unlucky in her Irish viceroys. Among the long list of representatives of majesty, from the famous and ill-fated Strafford, but one had hitherto acquired the good will of the Irish people, and that one was the Earl of Chesterfield. His instruments were neither the profundity of his wisdom, nor the zealotry of his opinions, but his wit, his invincible good-humour, and his punctilious attention to the enjoyments of the people. He has left behind him an enduring monument of his lieutenancy, in the formation of a vast park in the neighbourhood of the Irish capital, which he reclaimed from being in the state of a swamp, and made one of the finest pieces of public ground in Europe. His plea

santries are still recorded among the people, and his name will be remembered as long as there is recollection for public services.

The viceroys who succeeded each other with such rapidity, from the commencement of the reign of George III., and whose rapid succession was one of the calamities of the country, were uniformly unfortunate in their efforts for popular regard. Even from the period when to conciliate popularity had become a direct ministerial purpose, the failure was scarcely less palpable. Lord Harcourt's intelligence and vigour were forgotten in the chillness of his manners. Lord Buckinghamshire's knowledge, and what was called his aristocratic zeal for the interests of the country. were but a feeble drawback on haughtiness. Lord Carlisle's elegant scholarship was laughed at as spurious refinement. The Duke of Portland and Lord Temple, though each highly valued in the beginning of their government, yet closed their career in general indifference. Lord Worthington was an invalid, and unable to join in the national spirit of festivity. Townshend, fond of society, a humourist, acquainted with various stages of life, naturally of a vigorous understanding, cultivated in the school of experience, and largely acquainted with political and personal difficulty, possessed the exact measure of qualifications to make him a favourite among a people equally remarkable for talent, recklessness, and pleasantry. Faculties like his naturally delighted in similar companionship; and the table of the lord-lieutenant speedily became the central point of a crowd of the wits and humourists of Ireland. An eloquent opposition was either boldly met, or artfully softened by a treasury bench equally abounding in argument and pleasantry. Townshend's *bon mots* were passed from lip to lip through the streets; and though his direct mission was at once to break down a powerful party, which had taken the reins of government out of the hands of the minister, and to resist an opposition adorned by the highest talents of Ireland, two tasks either of which might have baffled very remarkable abilities, and which actually involved him in the keenest personal altercations with party; yet those hostilities were scarcely echoed, and never felt by the general body of the nation. His congenial good humour covered his multitude of political sins; his manly temper, soldierly bearing, and promptitude of wit, made him the purchaser of "golden opinions" of all sorts of men; and when he at length, after his allotted term of five years, gave up office, he was followed by the universal regrets of the nation.

This example is important from its evidence of the qualities essential to the successful government of Ireland. A great English satrap cannot govern it. No expenditure of his money, however lavish, will atone for the reserve of his manners. Political knowledge is not enough, where the true science is knowledge of human nature. Birth, public distinctions, eloquence, and scholarship, have all been singly exhibited on the largest scale, and all successively failed. Prodigality of expense, and personal dissipation, have been tried in their turn, and have discovered, by painful experience, that they utterly miscalculated the Irish character. The true power of popularity resides in sympathy, in the adoption of the national feelings, without giving way to the national follies, and in at once making due allowance for prejudices, and in vigorously coercing crimes. To cultivate national esteem in Ireland by laxity of personal character, by idle profusion, or licentious excesses, is altogether to mistake the national mind. Stained as the public fame of the country has been by the predominance of a fierce faction, the mind of the countless majority is still quick to judge, and keen to censure the slightest relaxation of the nobler qualities of our nature. Perhaps the best viceroy for Ireland would be an Irishman, sufficiently trained to English habits to escape the predilections of his birth, but sufficiently retaining the feelings of his original nature to enter into the sentiments and impulses, the common enjoyments, as well as the common sufferings, of his country.

Fitzpatrick, the new secretary at war, was a leading figure of this group of the high-bred and accomplished. He had the solid qualities of a gallant soldier, some of the talents of a statesman, and all the graces of a man of the first fashion. With a person manly, commanding, and handsome, and manners which, though lofty, were elegant, he was naturally admired among those courtly circles to which such advantages are objects of peculiar admiration. But in addition he had a fine taste for literature; and, though he exhibited his powers chiefly in the lighter poetry, this poetry was remarkable for point, polish, and even, not seldom, for pathetic beauty. From early association he had been the friend,—from public habits he had become the partisan, of Fox. Unhappily, not content with following the political principles, he adopted the personal weaknesses of that distinguished personage. At Brookes's the passion for play was ruinous and universal; and Fitzpatrick, always accustomed to lead the fashion, plunged headlong into the fatal error of his tribe. Perhaps no instance of individual vice, not amounting to a public crime, was ever punished more publicly than the gaming of Fox and his favourites, Fitzpatrick and Sheridan. The gaming table, unquestionably, was the primary obstacle to the national confidence in the great leader of opposition. The general language was, "Can we trust a notorious gamester with the finance of the country, or can we rely on his prudence as a statesman who has ruined himself as a private individual?" To this language there was, and there can be, no secure denial; the same intemperate eagerness for indulgence, the same disregard for public morals, and the same reckless defiance of inevitable disgrace and dilapidation, must form the ingredients of the character under whatever accidental changes of position. The distance between St. James's and Downing streets could not teach sudden self-control, nor the command of the vast resources of the English treasure inculcate economy in a mind whose principle was profusion. Sheridan, with all his genius, was cast down by this vice through all the grades of public contempt, until he perished. Fitzpatrick finally closed his showy career in decay of mind,

body, and reputation. Fox was morally exiled from the high station for which he was formed by nature, for which his fine abilities designated him from early life, and for which he continually struggled, with the keenest eagerness of political ambition.

The remaining appointments of this notorious ministry were rapidly made. Lee was brought back to the solicitor-generalship; Lord Northington was sent by Fox to the Irish government. The Duke of Manchester was named ambassador to Paris. The only difficulty was raised on the disposal of the chancellorship. The king desired to retain it in Lord Thurlow's hands; it was offered to Lord Loughborough, who declined it, and it was at length put into commission.

All was triumph for the time on the part of the Foxites. They had trampled on Shelburne, whom they hated, and had overcome the king, whom they regarded as almost a personal opponent. Never was a party more apparently secure, nor whose security was destined to afford a stronger lesson of the fallacy of all political confidence. Looking round the whole public horizon, they saw not a vestige of hostility capable of being matured into resistance. The king was indignant but passive, Pitt had returned to his books, and seemed to think only of returning to his profession. Shelburne had shrunk from public life in sullen resignation. Thurlow was still fierce and still ambitious, but his power had passed away, his personal character had no charm for popularity. He rolled his thunders still, but at a distance; their fires were ineffectual, and even their growlings were forgotten. One figure alone in the cabinet exhibited a melancholy contrast to the rejoicings of the new circle of power. North's prime minister for twelve sessions, now sat the possessor of an inferior office, lost in a crowd which once either feared or followed him. But no man was more fitted to grace adversity. His exhaustless good humour, his universal good nature, and a wit which neither time nor circumstance had the effect of depressing, rendered him still the delight of the house, and threw round his fall a respect which was often refused to the bolder pretensions of his confederates in authority.

A similar descent has since occurred, in the case of Lord Sidmouth. But his premiership had been of too short a duration to leave on him the stamp of fallen supremacy; and he was spared, by his removal to the house of peers, the contrast between the holder of the first office of the state and the secretary for the home department. With regard to North himself, the original intention had been to give him a peerage; but other considerations repelled the object. He felt that his retirement from the house of commons would throw the whole power of the state into the hands of his colleague—that Fox would be, not merely prime minister, but sole minister—and that the friends and adherents of the North interest would be gradually drawn away, or extinguished in the overwhelming force of his rival.

The first operations which came before parliament were those on which, perhaps, the character of an English administration is most rapidly decided—finance. The budget was opened on the 16th of April. Nothing could be more unfortunate than its attempts to relieve the national burdens. A loan of twelve millions was negotiated. The abuses which had been so loudly charged upon Lord North's administration were diligently adopted by its successors. The chief part of the loan was privately taken, 7,700,000*l.* being subscribed by eleven bankers, nearly upon their own terms, the remaining 4,300,000*l.* were distributed among the bankers in general, the monied companies, and *private friends*. But the negotiation had no sooner transpired than it produced an universal outcry. Pitt headed the opposition on the subject. He demonstrated that the holders had no less a bonus than *six per cent*—complained that the benefits of public competition had been disdained, and declaring that competition was ready, forced the chancellor of the exchequer to acknowledge that he had been offered to the amount of sixty millions. Lord Shelburne proved that the national loss on this single bargain amounted to 650,000*l.*! The bonus actually rose to eight per cent before the bargain was concluded. But the public opinion was still more unequivocally marked by the general fall of the stocks. The three per cent consols at the beginning of the ministry were at 70, by December of the same year they were at 56,—a fall totally unprecedented, without a war, or any public calamity to shake the confidence of the people.

Soon after this exposure, Pitt followed up the blow by bringing in a bill for the abolition of fees in the public offices. The subject is still so amusing from the extravagance of this old abuse, that we shall give an abstract of his speech. The chancellor of the exchequer had opposed the motion on the ground of inutility: Pitt proceeded to show its necessity. "He would prove that abuses in offices of revenue really existed, and to a very great amount. In the navy office, when an enquiry was instituted by the (Shelburne) board of treasury, the answer was, that no *fees* were received by that office. On a closer examination, however, it came out, that though *fees* were not received, *gifts* were—that those were received by many of the officers, and that, among the rest, the chief clerk of the office, whose salary was but 250*l.* a year, received no less than 2500*l.* in gifts. Those were the wages of corruption, and undoubtedly hazardous to the efficiency of the ships and stores, inasmuch as they were bribes to silence on abuses. Contracts had been made which gratified the government and the country by their apparent lowness. The solution of the enigma, however, was, that the officers who were to look to the execution of the contract were in the pay of the contractor. The secretaryship of the post office had a salary of 600*l.*; the annual income, by fees on the packets, was made up to 3000*l.* The two secretaries of the treasury had 2000*l.* a year each; but in war the fees swelled those salaries to 5000*l.* The supply of furniture for the public offices was one general abuse, there being evidence that officers not only made no scruple to order the different articles, at the public expense, to their dwelling-houses in town, but to their country houses, and that at the most extravagant rate. The abuses in the public offices

under the head of stationary were almost incredible, and frequently ridiculous in the extreme. He had heard of rooms papered with the public stationary. The annual charge for stationary was above 18,000*l.*; and it would, he believed, astonish the noble lord in the blue ribbon (North) to learn,—for he fully believed that the noble lord had no idea of any such circumstance,—that the year before last he had cost the public no less than 1300*l.* in stationary; and, great as this sum must appear to gentlemen, he should not have wondered,—knowing, as he did, of what curious articles the bill was composed,—if the amount had been as many thousands. One item of the bill was a charge of 340*l.* for *whip cord!*" The motion was agreed to, a committee appointed, and the bill passed the commons; but it was finally opposed by ministers in the lords, and lost.

Pitt might have made statements still more ludicrous, and not less true. A man of large fortune, and member of parliament, was publicly mentioned, who, on his being made a lord of trade, gave an order for a superfluity of pewter ink-stands for his own use. The ink-stands were brought, and he instantly exchanged the whole with the dealer for a handsome silver one. This piece of dexterity was too prosperous not be followed up. He was said to have ordered green velvet enough to make him a complete court dress, under pretence of making bags to contain his office papers. Stationary, the old official temptation, had not escaped his adhesive touch. His correspondents could recognise in his letters the office paper, full ten years after the board of trade itself was no more.

The interesting portion of this period is the king's conduct to the administration. He made no secret of his disapproval. He openly declared that they had been forced upon him; and the result may be deemed a sufficient prediction of their fate, whenever a ministry shall thus have roughly grasped at power. In the audience given to the Duke of Portland on the formation of the cabinet, his majesty said, that he had no inclination to suppress his sentiments on the subject; that, feeling the new arrangements to be altogether compulsory, the new ministers might dispose of the places of government just as they pleased; that he would not oppose, nor refuse his signature to any act presented to him officially for his sanction; but that the responsibility of advising the measures must rest solely with themselves. But his displeasure was still more distinctly marked by the declaration that he would not create any British peers on their recommendation, and by his displeasure at Lord Stormont's (his personal friend) accepting the presidency of the council.

This was the brilliant portion of Fox's life. He never was so animated, active, and vigorous, alike in parliamentary exertion and in general intercourse with society, as at this period. The virtual head of the government, he exhibited all the obvious requisites for this high position in an extraordinary degree. Always a most powerful debater, he was now an indefatigable one;—always fond of society, he now gave himself to the full play of his social capacities;—always sportive, good humoured, and abounding in pleasantry, he was now the universal delight and leader of all that was sparkling and accomplished in the gay conflicts and collisions of wits, scholars, and men of the world. His entertainments to the ambassadors and other distinguished strangers, as foreign minister, were of the most costly order. No man was better acquainted with the habits of foreign life. His knowledge of the French language was unusually perfect, and his intelligence on the various interests of the continental courts, and the chief points of diplomatic ceremonial and law, surprised all those who had seen him only in his dissipated hours. But Fox was capable of singularly close application, the ground-work of a vast variety of general knowledge had been early laid in his mind, and that mind was of so powerful and retentive a texture, that while it mastered the most perplexing subjects with apparent ease, it seldom lost any thing which it had once acquired. But here panegyric must close. If Fox had been formed for the express purpose of showing how the finest talents might be rendered useless, he would have perfectly fulfilled his vocation. Born with a hereditary veneration for monarchy and aristocracy, he sacrificed all his objects to the shout of the populace. Entering public life in the service of government, and the son of a royal adherent, his first labour was to separate himself from the royal cause, and, by dealing out personalities against the sovereign, sow the seeds of irreparable personal alienation; adapted by nature, and trained by habit, for the highest exercises of the noblest of human sciences —statesmanship—his whole governmental supremacy, from the beginning to the close of a life of fifty-eight years, amounted to less than two. His errors and virtues are now alike in that spot where censure and praise are equally unheard. The sacredness of the grave interposes itself between all bitterness and his memory. But we may justly lament that such powers should have been so lost to his country while he remained here, and that from his tomb we can draw no other moral than of defeated hopes, wasted ability, and worn-out fame.

The close of the year 1783 was a moral on a larger scale, a moral of the infinite uncertainty of all national provision for peace, the uncertainty of all great public transactions, and the short-sightedness of all political prediction. If Europe had possessed a temple of Janus, it would have been shut by the general hand of mankind. Peace had been made with all the leading belligerents of the world—with France, Spain, America, and lastly with Holland. Even the eastern disturber, Hyder Ali, the most formidable military genius which India had produced since the days of Aurungzebe, had closed his career but the December before; intelligence of which had arrived just at the period of the general signatures of European peace. Every thing promised the most unbroken tranquillity for an unlimited length of time. Yet, but a few years were to pass before Europe was to be involved in the bloodiest and most subverting hostilities known since the fall of the Roman empire.

The fates of parties and politicians sink into insignificance beside those tremendous examples

of the instability of human beings. But it is remarkable that the supremacy of the Foxite administration was similarly verging on the most fatal fall, at the moment of its most acknowledged supremacy. The moral is, that no administration, forced upon the King of England, can be of long continuance, and no moral is more salutary for the preservation of British freedom. No one now conceives the possibility of arbitrary power issuing from the throne. Every one, but the wildest partisan, is aware of its formidable probability of exercise by the populace. It is therefore of the first importance that a great protective power should be found somewhere, and it is obvious that this power cannot be placed with more wisdom in any portion of the community than in the individual who, alone, having nothing to hope or fear, being personally exempt from all injury, and equally exempt from all political temptation, is naturally placed in the best position to think gravely, act wisely, and deal honestly, in all the great concerns of empire.

Yet the mode in which the royal displeasure operated to overthrow the coalition, was at once so simple and so circuitous, that it forms one of the most striking cases of cause and effect in court history. Fox had offered such irreparable offence to the king in person, that reconciliation was never attempted by him. From the beginning, he felt that he must depend on himself, and the calm intractability of the sovereign, evinced, as it was on several occasions, determined the minister to lose nothing by deference to the royal feelings. But there was another consciousness strongly urging Fox to bold hazards. He had been the man of the people. He was so no more. His junction with North had loaded him with the sins of the old cabinet, enhanced by the sins of the new. He was openly charged even with having brought to the blunders of Lord North political frauds of his own. No state manœuvre had ever been pregnant with a more unpopular progeny than the coalition. It was clear that the minister had lost his popularity. He could no longer, in case of triumph, strengthen himself with the people. He could as little, in case of failure, retreat upon the people. In this difficulty he took the daring measure of rendering himself independent of both king and people.

The memorable India Bill was alike the intended instrument of his ambition, and the means of his ruin. Its history is now too notorious, or too remote, for public interest. The results alone are important, as substantiating the general moral of resistance to the constitutional authority of the king. The first English East India Company was established in 1600. The charter was renewed successively by James I., Charles I., James II., and William and Mary. A second company was established in 1698. The two were finally combined in 1708. Those companies were strictly commercial, and their privileges, constitution, and government, were regulated by the necessities of traffic. But another scene, unequaled in European or Oriental history, was now to open. The traders became sovereigns; the victories of Clive, a great military genius, who, like his masters, had risen from the desk to wield the truncheon, and whose gallantry deserved the sceptre, threw back the gates of an empire which every hour saw extending. The vast provinces of Bengal, Bohar, and Orissa, with the five Northern Circars, provinces equal to European kingdoms, were the prizes of the British sword. The factious illiberality of party libel, or the ignorant jealousy of foreigners, has charged England with aggression and avarice in those extraordinary conquests. But no charge was ever more destitute of foundation. The English wars in India were the product of the strictest necessity. In their origin they were totally defensive. The merchants fought for the narrow strip of land round their factory; for their ships and for their merchandise. The native prince, who repelled his enemy as well as theirs, by their assistance, rewarded them with additional privileges in the land, and with a portion of the territory forfeited by the invader. The restless rapine of the eastern sovereigns producing perpetual infractions of treaties, and their inferiority to the British in arms, discipline, and courage, producing the natural result, in new partitions of the conquered territory, at length the company stood in the attitude of sovereigns. But then came the severer trial. Sudden opulence, novelty of power, and a distance of eighteen thousand miles from the eye of authority, gave birth to excesses in the subaltern agents of this vast dominion. From the first territorial accession in 1765 to 1773, the nation had looked only with astonishment at the prowess of the British arms. But in 1773 other feelings called the attention of government to the abuses of authority, and a bill was brought in by Lord North to meet the chief sources of animadversion. The bill was practically eluded in India; and in 1781, on petitions at home and representations from abroad, Lord North moved for a "secret committee," to enquire into the Carnatic war, and consider the general state of the British possessions in the east. The committee with Dundas, afterwards Lord Melville, as chairman, sat for two years. The report contained a prodigious mass of information on all the heads of revenue, government, and polity. It was embodied in no less than 121 resolutions, submitted from time to time to the house, and the result was a universal acknowledgment that nothing but the immediate and vigorous interposition of the throne could save the Indian empire. But the European crisis was too anxious for ministers. The interposition was delayed. Dundas, impressed with the dangers of the delay, brought in a bill founded on his resolutions. To suffer a measure of such importance to proceed from a private individual, would have been contrary to all the interests of the cabinet. The bill was opposed by ministers, and lost. But upon its ruins Fox determined to build not only a new system for India, but a permanent dictatorship for the existing minister of England.

On the 18th of November, 1783, in a speech of extraordinary detail, information, and eloquence, he developed his memorable plan for the reform of India. He proposed to establish, for the supreme authority, a board in London, to consist of seven commissioners, in whom were to be vested

the authority over all property belonging to the company, all control, civil, military, and commercial, all appointments of officers of every description, in both England and India, and the possession of all charters, privileges, and papers. For the details of government, eight assistants were to be appointed by those commissioners, their chief employment being the commercial affairs of the company. In the first instance, both the commissioners and the assistants were to be *appointed by parliament*, their power continuing for a limited term of three or five years, any of the commissioners to be removable by the king, *on a vote* of either house of parliament, and any of the eight assistants to be removable by five of the commissioners. Any vacancy which should happen among the commissioners to be filled up by the king, and any among the assistants by the court of proprietors. Finally, the commissioners were to lay before the board of treasury yearly, at the beginning of the session, a statement of their proceedings. The bill was to be followed by another, giving security to the Indian subject, rectifying spoliations, &c..

This plan had been sedulously kept from public knowledge until the last moment. But its hazards were instantly seen by the vigilant sagacity of Pitt. He pronounced it a design for vesting the whole power of India in the hands of the minister, and for thus continuing the domination of that minister until the day of his death, and the domination of his party while we continued to possess an Indian empire.

Nothing can be more evident, from the simplest view of the bill, than the ministerial resolve to defy all the power of the constitution. The whole patronage of India, the military and judicial commissions, the contracts, the trade, the purchase of merchandise and stores to the amount, even then, of six millions a year, in the hands of a small body of men, must have created an influence dangerous to the throne and the constitution. With this influence on his side, a corrupt or ambitious minister might make himself master of every corruptible mind in the country, and storm the legislature. The bill, by its own nature, in the first instance, involved the most comprehensive violation of private property ever known, by the seizure of the rights of the stockholders; the most comprehensive violation of public engagements, by the seizure of the charters; and the most comprehensive violation of established policy, by the general change of the Indian system in all things that related to government and trade. But still higher evils were connected with this singular usurpation. The commissioners were placed in such a rank of independence, with respect to India, that they were enabled to resist the actual policy of the king's government, if such were their pleasure, and thus plunge England into unexpected war with European princes on account of Indian possessions, they not being compelled to keep up any communication with ministers beyond the mere annual statement of their measures. The guards proposed in the bill against those formidable results, were as palpably inefficient. The commissioners were to be appointed by parliament. But this was virtually the appointment of whoever swayed the parliament, which individual then was Fox. The commission was to be appointed only for four years. But long before that time the effect of its patronage would have been felt in securing the Foxite ministry; and as a vote of a submissive parliament had created the commission, a similar vote would renew it. The power of removing a commissioner by a vote of either house was given. But it must naturally be ineffective, for nothing would justify parliamentary interference except *gross* misconduct, and even that interference would still depend on the will of the minister, armed with the resistless patronage of India. The appointment by the king, in case of a vacancy by death, would be equally ineffectual, for if the minister still held his power, the appointment would vest in one of his friends; or if Fox were, by any accident, thrown out, he left behind him six commissioners to contend against one. As to the argument that the power proposed by the bill was only that hitherto exerted by the company, the direct answer was, that no difference could be greater than between an authority divided among the members of a great company, not politicians, and with a thousand different views, and an authority concentrated in a small body of political persons, partisans by their nature, independent of the crown, and owing their existence to the minister.

Pitt, from the first announcement of this most daring assault on the constitution, stood forth as its defender, and exhibited powers worthy of the occasion. His first effort was to retard the violent and suspicious rapidity with which the cabinet hurried on the second reading of the bill. "But a single week has been proposed to comprehend a bill which extends to every function of government, and menaces every interest of the empire, present and to come. Such is the time," exclaimed Pitt, "allowed by the mercy or the contempt of the cabinet for the enquiry into principles which involve the living and future fates of England and India. And such is the scheme of usurpation and defiance which is planned by the man always loudest in sounding the alarm of danger to the liberties of the country. I can see nothing in the haste exhibited in carrying this iniquitous measure through parliament, but the precipitancy and ardour of plunderers, eager to grasp and hold fast their prey."

The public were now awakened to their danger, and universal astonishment was succeeded by universal indignation. The East India proprietors instantly petitioned the house, denying the charges of the bill. The East India directors followed, with a demand to be heard by counsel. Yet, in the debate on going into committee, the motion was carried by 217 to 103, so suddenly had the members scented the banquet spread for them in India.

But the bill was to undergo a different fate in that assembly which has so often rectified the errors of the house of commons, and which, by its superiority of personal means, its remoteness from the immediate pressure of popular influence, and its large interest in the preservation of public

tranquillity, has been so long the refuge of the constitution. On the 9th of December, the bill was brought up to the house of lords by Fox, followed by an imposing train of members of the commons' house. Lord Thurlowe instantly pounced upon it with beak and talon. He declared "it to be a measure whose sole object was to create a power unknown to the constitution, an *imperium in imperio*—a strange and violent attempt to destroy the balance of the constitution. The present bill did not tend to increase the influence of the crown, 'twas true; but it tended to set up a power in the kingdom, which might be used at once in opposition to the crown and to the people." Turning to the house, and with that tremendous burst of voice which so powerfully suited his bold eloquence, "I desire," said he, "to see the crown respectable, to see the crown great; but if this bill should pass, the crown of England will be no longer fit for a man of honour to wear. The king will take the diadem from his own head, and place it on the head of Mr. Fox." In the debate, on the 15th, Lord Temple, on being charged with saying that the king was hostile to the bill, declared that he had obtained an audience of his majesty by his right as a peer, and that, though it was contrary to form to say what his advice to the sovereign had been, he was ready to say what it was not, "It was *not* friendly to the principle of the bill." On the question, ministers were left in a minority of 79 to 87. The fate of the measure was inevitable, and it instantly followed. On the 17th, the committal of the bill was *negatived* by a majority of 95 to 76. The bill was finally rejected without a division.

The king had thus far triumphed over his obnoxious cabinet, and he determined that no time should be given to recover themselves. On the day after the debate, late in the evening of the 18th, he demanded the seals of the two secretaries of state, and on the day following, placed them in the hands of Lord Temple, who was sworn in as secretary, and who wrote letters of dismissal to the remaining ministers. Pitt was summoned to the head of the treasury. He had steadily refused the office but nine months before. But the public aspect had totally changed. The cabinet was in the lowest condition of popular esteem. The lords and the king had risen together. The emergency was pregnant with hazard to the king's authority, for if the cabinet should force themselves back on him once more, he must be a cipher for life. Still the difficulties of Pitt's situation might have appalled a less resolute mind. He was to face a house of commons crowded with partisans of the late cabinet, furious in its wrath at their fall, and pouring out the most violent declamation on what they pronounced the unlawful influence of the king's name. To increase his perplexities, Lord Temple resigned the seals within three days, under the nominal pretext of more freely meeting the charges of tampering with the royal confidence, the true motive probably being his alarm at the force arrayed against him. Many of the leading persons, friendly to Pitt and his principles, shrunk from the responsibility of a cabinet in a direct state of war with the house of commons. It was universally predicted that this cabinet could not live a month. Pitt was fully sensible of those difficulties. Lord Temple's secession almost shook even his matchless serenity. "This was the only event," says his most intimate biographer (Tomline), "which I *ever* knew to disturb Mr. Pitt's rest, while he continued in good health. Lord Temple's resignation was determined on at a late hour in the evening of the 21st; and when I went into Mr. Pitt's bedroom the next morning, he told me that he had not had *a moment's sleep*. He expressed great uneasiness at the present state of public affairs, at the same time declaring his fixed resolution not to abandon the position he had taken, but to make the best stand in his power, *though very doubtful of the result*." At length the cabinet was formed. Pitt, first lord of the treasury, and chancellor of the exchequer; Thurlowe, lord chancellor; Lord Gower (afterwards Marquis of Stafford), president of the council; the Duke of Rutland, lord privy seal; Lords Carmarthen and Sydney, secretaries of state; and Lord Howe, first lord of the admiralty. Thus, in doubt and difficulty, commenced the most glorious administration of England, and Pitt was the inspiring name.

The remark has been already made, that the history of English politics is the finest lesson for a politician. The crisis in which the minister met the parliament on his assumption of office is a striking example of the maxim. But a month since the English ministry stood in the exact position of Pitt in December, 1783. The question then was, as it has so lately been, whether the minister should meet the existing house of commons, or call a new one? No cabinet had ever been so powerful in the commons as that of the coalition. No incipient statesman had been less successful in his attempts to carry measures against that powerful influence than Pitt. His talents were acknowledged; his information struck every one with wonder: his integrity was above all suspicion. He had already, in mere boyhood, placed himself in the foremost rank of debate; but his propositions were almost uniformly unsuccessful. In the great struggle of his early career, the India Bill, he had been beaten by majorities of two to one; he had been beaten by the same majorities, even after the dismissal of the cabinet was certain. The presumption and boyish folly of his hoping to stand his ground against opposition was a subject of incessant ridicule in the house. Fox contemptuously pronounced it a political absurdity totally unparalleled in the annals of immature ambition. The motion for a new writ for Appleby, the borough for which Pitt sat, was received with a burst of universal laughter! Fox openly staked his political foresight on the impossibility of conducting the public business by *this shadow* of a ministry. And to make assurance doubly sure, the opposition resolved to delay the passing of the land-tax bill, a measure essential to the national debt of that year, and which, therefore, must be passed before even an opportunity for a dissolution of parliament could be given. It was evident that opposition looked upon that house of commons as their own.

All these circumstances were revolved by the new minister. In his consultations with his friends, every argument was urged by them to dissolve parliament. The anxiety of his opponents to retard a dissolution, seemed to be a direct index to the adoption of the contrary measure. But his deep-thinking and powerful understanding soon decided otherwise. He saw that a premature appeal to the nation might terminate in a general impression that he had yet to learn the national mind. It was true, that the numbers of the ministerial side might be increased by the new election, but the real question was, whether these numbers would be increased to the amount of his making his administration powerful. Most of the great parliamentary interests were directly adverse to him. The public feeling, on the other hand, had not yet expressed itself with satisfactory decision. The conduct of North's combination, however stigmatised by men of honour, had not excited a spirit of scorn deep enough to overbear the personal interests that exhibit themselves when the question is of elections. The India bill was still recent, and the public mind had not yet possessed leisure to fathom the depths of that daring attempt at imperial plunder. But Pitt relied on the common sense and honour of the nation, to discover at length the contrast between his services and those of his opponents, and he determined to make the trial with the existing parliament. If he failed, he still possessed the power to dissolve it, with the additional advantage of proving to the nation that mere stubbornness and partisanship had rendered it unfit to carry on the national business. If he succeeded, he disarmed his antagonists on their own field, broke up their party, proved to the nation how little they had been sustained by character, and how much by patronage, and drove them into a state of political destitution, which nearly precluded their ever forming an effective parliamentary force again.

The man who thus reasoned, was little more than twenty-four years old![*] And it was at this age that Pitt, unaided, took upon him the government of the British empire. The overwhelming nature of the task which he thus adopted, may be judged of from a few of the immediate subjects which pressed upon his councils—the regulation of the Indian system demanding instant consideration—the state of the revenue at home, connected as it was with the necessity of reforming innumerable fraudulent practices upon the public—the restoration of the public income to a capacity of meeting the public expenses—the provision for an unfunded debt of thirty millions—a system for the reduction of the national debt—the choice of new taxes to supply the deficiency of the revenue—the disturbed condition of Ireland, even then a perpetual source of anxiety to government—the pressing claims of the sufferers by their loyalty in the colonial war—the commercial treaty with America—the vast, complicated, and threatened interests of England with the leading kingdoms of the continent—those, and more, formed the labour which was to be borne by a youth, scarcely acquainted with public life, or accustomed to the exercise of his own understanding. Those widely various subjects, involving questions of the most difficult order which can be presented to the human mind, were thrown on the capacity of Pitt, unsupported by colleagues, parliament, or the country. It is needless to say, how triumphantly they were borne; with what matchless clearness they were elucidated, with what steady vigour their principles were embodied, and with what solid strength their practice reinforced the liberties and the prosperity of England. Such are the duties, and such the glories of an English minister. To fulfil them, seems almost beyond the bounds of the human faculties; but as the difficulty is great, so is the renown. The whole range of honourable ambition offers to man no nobler prize than the fame of an English minister, worthy of his task. None more above the common soarings of mankind, none more comprehensive of good to general society, none entitled to more imperishable distinction in the ages to come.

[*] He was twenty-four on the 28th of May, and minister on the 19th of December, 1763.

From the Asiatic Journal.

PETER PEEBLES AT MADRAS.

There may be an appearance of pedantry in the phrase, but it is not the less true as a proposition, that there are two histories of India, an esoteric and an exoteric history. By the latter is meant only the general course of political and civil events, in our relations with the people whom Providence has placed under our rule; the mere outline, in which great changes and momentous transactions are as it were mapped and delineated;—by the other, the interminglings of our respective domestic histories, and which, though never formally recorded, are still valuable, inasmuch as they lift up the curtain to features of character peculiar to each, and are perhaps the more valuable, because, being beneath the dignity of regular history, they are chiefly oral traditions, which in a few years are forgotten, and sometimes impossible to be recovered with tolerable exactness. Yet, as moral pictures and moral lessons, they are full of instruction,—and most assuredly not devoid of amusement.

The *dubash* system is peculiar to the southern peninsula; but it has principally flourished at Madras. The dubashes are a class of persons, who act as stewards, bankers, and general agents to those emphatically called the *gentlemen*, a generic appellation of the civil and high military servants of the Company. Nor is it quite ancient history, when they had an influence, sometimes slight, sometimes powerful, and at times overbearing, upon men high in office at that presidency—and occasionally acted as go-betweens the government and the Arcot nabobs, at whose diwans they often held responsible situations of considerable importance. This may be traced, amongst other causes, to the pecuniary resources they were enabled to command beyond any other class of Hindûs, and to the immense accumulations which from small beginnings rapidly swelled

them into immense and bloated capitalists. It is not true, that native usages are impassive to change and untouched by time. Slowly, indeed, and almost imperceptibly, they undergo those silent modifications which, in a long cycle of years, make the contrast between *was* and *is*,—and probably there is no stronger proof of the fact, than the altered character of that class within the last forty years. They are now, for the most part, needy adventurers, on the watch for the arrival of ships from Europe, which at certain intervals import, as if for their special advantage, some raw inexperienced lads, to whom on their first landing every thing is new, and captains and mates of ships, to whom they render very important services in the disposal of their investments, and by the advance of money upon the goods themselves at a devouring interest.

Some authentic sketches of this pecular vein of character will not seem to be displaced in the *Asiatic Journal*,—and a genuine occurrence now and then elucidatory of that almost extinct genus, may probably be as worthy the attention of its readers, and even of the students of regular oriental history, as many of the romances which some of its contributors have imparted to it.

Amongst the principal members of this memorable body of natives, at the time we are speaking of, was Avadanum Paupiah Brahminy, a character which, from the vehement contrasts embodied in it, would require the colours of Rembrandt to depicture. Supple, submissive, patient of affront and even injury—but with the love of revenge—the *odium in longum jacens*—deeply lurking in the recesses of a mind capacious of every project that hate can devise or meditate. But the domineering passion was litigiousness. To the lawyers, as they were then called by courtesy, he was a treasure;—a Peter Peebles, though not reduced to indigence (for his resources were ample), whose name for years alternately figured in the mayor's court, as plaintiff and defendant. He was almost a fixture in his lawyer's chamber; squatting down on a mat in some dark corner of the room, patiently waiting until his *papers* could be attended to. At Mr. Samuel's he might be seen sitting, except during the short interval of a brief meal, which, consisting of nothing more than a handful of rice, he would "with haste despatch and come again;" occasionally ejaculating, as the attorney turned over the bundles of his other clients,—"*My papers, master!* Paupiah Brahminy, plaintiff, *versus* Vencatachellum Chitty." On one occasion, his lawyer fell into a short slumber; but, when he awoke, could not help smiling to find that the papers before him had been silently removed, and those endorsed "Paupiah Brahminy" placed directly under his nose. But not a murmur of complaint or dissatisfaction escaped his lips on account of any real or imagined delay. When a new lawyer, whose reputation preceded him, arrived at the settlement, Paupiah was sure to retain him, generally with a large fee, seldom less than a thousand pagodas (£400), the foundation, he would hint, and it frequently proved so, of *master's fortune*. This was not always a sheer profit to the lawyer; for it was understood to convey to the sole use of the said Paupiah the fee-simple of all his future labours, and the exclusive benefit of all his faculties, his occasional fees seldom amounting to the ordinary remuneration of professional services.

But Paupiah, in the high and palmy days of Madras corruption, when Lord Hobart, writing to the court of directors, called the entire settlement "a hot-bed of intrigue," was an indispensable instrument in the commerce of bribery, then the lever by which all the affairs of state were moved. Where any thing that shunned the light was to be transacted, he was the most efficient and useful of negotiators. Yet there were shades of character in the man, upon which it is pleasing to dwell. With hands dipped in the feculence of his time,—a mind never reposing from stratagem,—disdaining the tranquillity of virtue for the restlessness of intrigue, he was faithful where he conceived an attachment, beyond all example—passing and enduring in the cause he espoused even unto death. Where he was made a confidant to some defalcation, into which a young civilian, for instance, had been betrayed by indiscretion or extravagance, he not only supplied it out of his means—but no tortures could have wrung from him the guilty secret. These instances were then not rare. By the act of parliament, regulating the amount of salaries and prohibiting presents of every kind, the service was raised to a state of purity never dreamt of in the philosophy of that day. It is seldom that a mere act of legislation brings about a complete moral revolution; but certain it is, that Astræa was restored by that act of parliament to Madras, from which she seemed to have taken her flight for ever. The biography of Paupiah, if it were brought to light, would be found to overflow into these romantic fits of benevolence—never, indeed, requited and seldom acknowledged. It was computed that the bond and other debts, for sums thus generously advanced, due to him from civilians and sometimes military men, but especially tottering houses of agency (the great pest and moral disease of the eastern settlements), amounted to more than £50,000 sterling. But with money perpetually at his command, the sources from which it was extracted always remained a mystery.

At the durbars of the nabobs Wallajah and the Omdut-ul-Omrah, he was a constant attendant, for he supplied them with large sums to meet the kists or tribute due to the Company, and that too often in critical periods of the public treasury. When the assumption of the Carnatic revenues cut off the means of repayment from those princes, of all the bonds adjudicated by the commissioners, his were of the most *bonâ fide* description. Yet the grossest injustice was systematically dealt out to him, except in those cases (the greater number were of that class) where the evidence to authenticate the claim was as clear as the sun at noon. Those adjudicators had, from a series of misconceptions, reposed unlimited confidence in Reddy Row, a Brahmin, a poor and needy adventurer, who had cunning enough to convince those gentlemen that he was thoroughly conversant in all the mysteries of the durbar, and being the implacable enemy of Paupiah, induced them to beat

lown his demand to the utmost minimum of what n justice was due to him. This Reddy Row, vhen the nabob's bonds became marketable in :onsequence of the act passed for their consolida- ion, became a wholesale fabricator, not figura- ively, but literally, of those instruments, of which ıe disposed of a large number on the faith of his ›eing in the confidential employ of the nabob. His end may not be forgotten. Tried, convicted, ›ardoned, at the instance of a recent Madras go- 'ernor, one bond of his manufactory was proved ›y such minute evidence to be a forgery, that he vas deserted by those who had protected him hrough thick and thin, *per fas et nefas*, and took ıimself off by a dose of poison. During this time, Paupiah was shamefully persecuted by those who :new nothing of his real transactions with the lurbar, and estimating his character by looking ›nly at the wrong side of the tapestry, adjudicat- :d him almost to ruin. But the *English* commis- ioners did him justice, and his claims were with ew exceptions allowed. It was like much of the ustice of this world: it came too late, and not ill vexation and grief had removed him to take ıis chances at a better tribunal.

This same Paupiah was considered the natural ›rey for such vultures as Paul Benfield. Plucked o the last feather—cheated—laughed at—he was ›erpetually to be seen squatted and waiting with lesperate expectation of redress in the verandahs ınd antechambers of those who had plundered ıim. Still it was not with one word of menace hat he waited there, but as a suppliant, sueing or his right of the *great gentlemen*, as they were hen styled by the Madras natives—humbly and ilently imploring their justice (it was a most orry twig to catch at), but never quitting his hold —and seldom, indeed, but sometimes, darting his ittle green eyes piercingly in the face of those vho had defrauded him, although he could dis- ourse powerfully, in good English, had he been o minded. The respect universally conceded to Brahmin, secured him generally from personal utrage—but not uniformly. On one occasion, vhere he had been fraudulently treated, he was gnominiously thrust out from the garden-house f Mr. P——, and his turban torn in the scuffle. Apparently he forgave the insult. But every tyro n Indian affairs knows that no higher indignity an be sustained by a native of caste, than the ollution of this part of the Hindû habiliment. Then the feeling of revenge, though postponed or years, never dies. It burns like a lamp in a emple, constantly fed and trimmed. There is no tatute of limitations to the unextinguished, un- xtinguishable thirst for retribution. It is sure nally to be exacted to the very letter.

Mr P—— was at the head of the treasury de- artment, then conducted conjointly with the ollectorship of the Madras district. He had tood high in the estimation of several successive overnments. Paupiah, whose nature it was to e heedlessly confident in the integrity of those vhom he had been accustomed to look up to with espect, and whose bad qualities, whatever they vere, had no affinity to the suspicious avarice of he natives in their money transactions, had, a ear or two before, undertaken, in virtue of a re- ligious vow, a distant journey in the nature of a pilgrimage; and, whether to secure Mr. P——'s favour by covertly lending him a sum of money without exacting interest, or whether it formed a part of the superstitious ordinance that enjoined the pilgrimage, that, during the year of its fulfil- ment, he was inhibited from taking interest upon sums deposited in contemplation of it—(both causes were strenuously insisted on by Paupiah's counsel)—but, before he set out, he deposited twelve thousand pagodas with Mr. P——, on no other condition than that of its safe custody till his return. He demanded and took no receipt or acknowledgment whatever. This procedure was not only in unison with the unsuspecting habits of Paupiah, from which the repeated frauds he had experienced had not yet weaned him, but it was an indirect compliment to the honour and up- rightness of Mr. P——, whose interest and pro- tection he was anxious to secure. Be that as it may, the deposit was made; but when Paupiah returned, the fact of the deposit was denied, and the restitution of the money refused. By the Hindû law, the rules regarding bailments of every class are as strict, and governed by the same principles, as in our own; so much so, that Sir William Jones, in his Essay on the Law of Bailments, traced the equitable maxims that re- gulate that species of contract in the practice of Westminster Hall to the code of the Hindûs, of which it forms a large and comprehensive title.

But it was an unequal contest. On one side, was a civilian of the highest rank, fortified by that conventional reputation, which passes in the world for genuine virtue, fenced round by friends or by those persons who under that name swarm during the sunshine of a man's fortunes, secure of the support of the government, and especially those of its minions, who had a stealthy interest in its crooked and sinister practices; on the other, a native, unquestionably an artful intriguing indi- vidual, and convicted (right or wrong there are now no means of deciding) of repeated malversa- tions in several confidential employments:—in short, on one side, power, influence, and outward character; on the other, two of the most power- less and unpatronised things on earth,—truth and justice. What unequal chances! It was as a feeble piece of artillery against the ramparts of a droog or hill-fort.

In a corner of the black town of Madraspat- nam, was a sort of huckster's shop, where law was served out in scales, not always as correct as the balance of the sanctuary. It was called the Mayor's Court, and in its constitution not unlike the bench of Quarter-Sessions magistrates in this country, right and wrong being put to the vote and determined by the majority. In this court, Paupiah filed his bill (the process was of a mongrel kind, half equity, half *nisi-prius*) against P——, praying for a discovery and for the amount of the sum deposited. The answer denied *on oath* the plaintiff's allegations, and the cause came on to be heard. Paupiah's counsel or at- torney was not wanting either in strength of lungs or of argument. He might have spared both. "Where is the receipt or acknowledgment?"

said the opposing lawyer. "Is it probable that a native endued with the astuteness of a systematic lender, would incautiously place so large a sum in the custody of another without the slightest token or recognition of having so placed it? and Mr. P——, too, is a civil servant holding the most confidential office in the settlement, having been raised to it through a long gradation of tried services and a life of inflexible integrity. And who is the plaintiff?" Here some insinuations not highly complimentary to poor Paupiah were thrown out. Vainly was the religious custom urged, and the natural anxiety of Paupiah to court the patronage and favour of Mr. P——, and, moreover, the well-known incautiousness of the plaintiff in money transactions (there were upon that sacred seat of justice those who had beneficially experienced that peculiarity of his disposition), insisted on by his advocate. It mattered little. Justice, proverbially blind, had grown deaf in the Mayor's Court. She could feel sensitively certain touches, but her ears were those of the adder to the eloquence of truth. The balance was soon struck, and in favour of the supposed depositary. Paupiah retired, defeated and humbled. If, in the first agony of disappointment, he breathed at all—it was for the hope of retribution. That retribution at length came.

The singularity peculiar to the natives of India, in the south more especially, of continuing an unwearied and hopeless pursuit for what is due to them, has been remarked already. For months after his discomfiture in the Mayor's Court, Paupiah might be seen seated in the outward saloon of the collector's office, with a shawl thrown over his head in place of a turban, the only change of garb that denotes affliction among the higher castes of Hindûs. He said nothing, but his little green eyes darted now and then an expressive flash upon P—— as he passed into the interior apartment, which, though impossible to define, he knew and felt the meaning of. Some affected to pity the poor Brahminy, from a secret misgiving, probably, that foul injustice had been done to him. There was no appeal. It was of no use to excite the sympathies of the public. In India, there is no public. As for the authors of that injustice, the infamy was divided amongst too many to be felt by any one. The moral deformity was like the physical one of the Alps, where goitre keeps goitre in countenance. But there was a vow registered in the soul of the man who had been thus wronged. The vow was heard, and the bitter cup of revenge filled to overflowing. Yet how, by what agency (if by any it must have been of the subtlest kind), it was gratified so usuriously, has never been substantiated by positive evidence, although no problem was ever canvassed by so many sharp and ingenious casuists.

The department, over which P—— presided, necessarily placed the whole of the public money at his discretion. It was a serious charge. The cash-chest, indeed, was under the immediate care of Arnachellum Chitty, a faithful servant, whose merits had been repeatedly acknowledged by the government; but still the entire responsibility rested on the shoulders of P——. So vigilantly were these duties performed by P—— and Arnachellum, that the keys of the chest were never out of the personal custody of the treasurer himself. No native servant ever laid his hand upon them. Every evening before he retired from the fort, Mr. P——, after examining Arnachellum's balance with a nicety that left not the error of half a fanam unrectified, took the keys of the chest which he unlocked with his own hands, and having reckoned the amount of the cash deposited in it, by weight or tale, according to the nature of the coin, and removed the loose money to the same place of security, took the keys home with him to his garden-house, situated near the Loll-baug, the site upon which Paul Benfield afterwards built his princely mansion. The keys were of a most complicated construction. The chest was massive and nearly irremoveable. It was unlocked by four keys in succession. Both chest and keys were the master-piece of the most skilful artist in London, —the Bramah of his day. Mr. P—— had recently returned from Europe, and as in all the money departments of Madras, immense abstractions had been committed by the native servants, he readily availed himself of a complicated invention that would so assuredly defeat them. The keys, as already said, were four in number; but the exquisite skill of the contrivance consisted in the process of using them. It was requisite that the *first* and *second* keys should be entirely at the discretion of the party in whose custody they were placed. These were changed each successive day, or as often as he who was master of the combination might think fit. But if the wrong keys were *begun* with, a bar shot suddenly and irrevocably into a deep groove. It is plain, therefore, that in the hands of a mere novice, the chances of hitting upon that which was the *open sesamé* of the chest, were as four to one—and if by accident the first should be the right one, they were three to one against the right selection of the *second* key.

Mr. P—— was high in Lord Macartney's confidence, for nothing could be more religiously correct than the treasury accounts whilst he administered them. His vigilant inspection, but above all the newly imported machinery of the chest, rendered native subductions, formerly matters of such frequent occurrence,—the head of the office relying on his confidential servants, and those servants sheltered from all responsibility but to their immediate employers—next to impossible. All new brooms sweep clean. Lord Hobart came out to Madras, impressed with the comfortable conviction that the entire settlement was a sink of corruption, and resolved to make an effectual sweep in every department: but happily there was one civilian untouched by the *scabies* of the flock,—an Abdiel faithful among the faithless. With what delight did P——'s ear drink in the commendations of the new governor, to whom, though recently from England, the invention of the chest was quite new! Nor is this singular, for it was the last constructed by its inventor; and, besides this, in each the mechanism was varied so as to enhance its value to every respective proprietor. It is supposed also that the invention died with the artist and

the secret with him. There could, therefore, be no exchequer better secured than that of Madras. To be sure, it was occasionally at a low ebb. It had, however, its flows; and at the crisis we are speaking of, might be said to overflow, treasure having been collected from all quarters to meet the exigencies of a powerful confederacy then hatching amongst the native powers against us.

On the 13th of October 1795, owing to these and other causes, the chest, spacious as it was, was overgorged with coin and bullion. In the afternoon of that day, Mr. P——'s palanquin was at the lower door of his office, then situated on the beach, near the spot where the large room called the New Exchange has been since built. As usual, having gone through the financial process of the day, he took the keys with him into his palanquin, and, when he got home, placed them in an escrutoire, which was well secured, and, for more assured custody, was placed under his cot in his bed-room. Being a civilian of high rank, he had a small guard of sepoys regularly stationed in front of his house.

When he left the fort, it was past five by St. Mary's clock. Two sepoys, part of the usual treasury guard, were on duty as usual at the foot of the stair-case which descended into an arched lower story, where the palanquin-bearers remained during the hours of business, as well as horse-keepers with their horses picketed belonging to the Europeans, English and Portuguese, attached to the office. The sepoys were relieved every five hours. In short, nothing irregular or out of the usual course was observable when Mr. P—— quitted the fort. He discerned, indeed, Paupiah squatted according to custom in the outer-room, and when the latter made his salam, P—— observed a singular twinkling in the small piercing eyes, which seemed on that occasion to have changed their mournful expression for something of a far different meaning. This, however, might be mere fancy, and so he considered it at the time: it did not become matter of comment by him till afterwards. As to the chest and its contents, human vigilance could not have been carried farther. Perhaps the error, if there was any, arose, as the lawyers say, *ex abundanti cautelâ*, or too overstrained a caution. On the same evening Mr. P—— and his family were at a ball given at the Government-gardens, whence they returned about two in the morning. It was for this reason, probably, that he did not arrive at his office that morning till some time past his usual hour of attendance.

On his arrival, Paupiah sate in his usual niche —and with a complete change of habiliment. His finest muslin tunic and a handsome turban transformed him into another being, and his countenance beamed with an evident glow of satisfaction. Mr. P—— found, at the same time, a government peon, who had been waiting for his arrival, with an order from the governor in council to despatch Arnachellum to the military paymaster with 50,000 star pagodas in specie, and a receipt for the same. Mr. P——, with Arnachellum, proceeded forthwith to the chest, the former with the bunch of keys in his hand. Upon opening it, both started instantly back with consternation. But the visage of the European was pale and distorted with a thousand warring emotions,—that of the native remaining inflexible, and exhibiting a character as remote from the consciousness of crime as from the terror of its consequences. Indeed, Mr. P——, though his self-control gradually returned to him, might have been deemed, if looks could be interpreted into guilt, consusant of the theft: for a theft had been committed to an enormous amount from the chest, in mockery of the mystic keys that guarded it. It was computed that a lac and a half of pagodas had been abstracted, and that, too, in a coin that was not only portable, but exchangeable at sight. Paupiah, on being told what had happened, uttered not a word, but remained unmoved in the same position. Not a muscle of his frame quivered, not a feature of his face changed. It was a serious calamity to P——. His prospects, his hopes, his reputation, seemed cut off at one blow. The governor in council, as soon as the intelligence reached them, took charge of the treasury; the chest and what little remained of its wealth were put under seal, and Mr. P—— was suspended from his employments.

Adversity, whatever may have been the correctness of a man's life and conduct, will ever bring its critics and commentators. There were not wanting those who began to carp and cavil; but, as genuine materials for animadversion were not at hand, they were soon silent, and P—— became the object of general commiseration. It was pretty evident that he must have been plundered, by whom or in what manner, amidst the confused conjectures of the hour, all equally plausible and irrational, remained an inscrutable mystery. That P—— himself should have participated in the delinquency, was probable only on the supposition of his being actually a madman. The next day, however, strange rumours were afloat. It was at first whispered confidentially—afterwards unreservedly asserted,—that deposits to run at interest had been made in P——'s name at different houses of agency; amongst others, of a large amount of Porto Nuovo pagodas, which was chiefly the coin in which the nabob paid his kists;—besides this, of several thousands of star pagodas placed in the Carnatic bank, an opulent establishment (since dissolved), which allowed a considerable rate of interest; and P—— was called on to disprove these injurious insinuations. In the consciousness of innocence, the unfortunate man proceeded with two of his friends to Messrs. R.—— and Co., the house where the largest sum was stated to have been paid in on his account. The question was fearlessly put: "Have I placed any sum of money whatever with you? or, is there any money in your hands standing to my credit?" It was answered thus: "About nine o'clock on Saturday morning (the day after the robbery), two persons, apparently peons, and wearing what seemed to be an engraved plate on a belt of red cloth across their shoulders, but which we did not examine in the hurry of business, more especially as we took it for granted they had been sent by Mr. P——, placed to the credit of that gentleman the sum of —— star pagodas, which they brought in bags, a large por-

tion of which was in Porto Nuovo coin. They gave their names Rungapah and Verdapah, and enjoined great secrecy on the part of Mr. P——. We gave them the customary receipt, in the name of Mr. P——. It was a promissory note to pay on demand with interest at eight per cent." Mr. P—— was all amazement and perplexity; his friends were equally puzzled. The same enquiry was made at three other houses, and the result was the same. The aggregate, however, of these deposits, amounting to an immense sum, nearly corresponded to the deficiency of which the chest had been plundered; and as they had been deposited at the disposition of Mr. P——, there was no difficulty in repaying to government the whole deficiency. Still, however, he was not restored either to character or office. The current imputation was that, in addition to his being a rogue, he was the weakest of idiots. More than a year elapsed before the court of directors, to whom his case had been referred, gave their decision. It was not a satisfactory acquittal, but a species of compromise, leaving the stain upon his character nearly as it was before, although it recommended him, in consideration of former services, to a subordinate situation at the presidency. It must be remarked, however, that, from this time, Paupiah was no longer seen squatted at Mr. P——'s garden-house; for, it seems, he travelled to the southward after the affair had blown over. He was not heard of at Madras for many years.

Time, that brings all hidden things to light, seemed to have an unusual respect for this. The matter, indeed, was frequently discussed, and much ingenuity exercised about it. Many persons, whose opinions were of great weight, were inclined to make Paupiah the contriver, if not the actual artificer, of the whole. This theory was not very flattering to the integrity of Mr. P——, for if Paupiah was actuated by revenge, it was improbable that such a feeling should have gratuitously existed in his bosom. There must have been adequate reasons for it—and the denial of the deposit, a crime considered by the natives as the most inexpiable of social wrongs, embittered by the unjust decision in the mayor's court, sufficiently accounted for it. Was it credible that Paupiah should have fabricated the story, much more brought the question to trial, seeing how incapable of direct proof it was, and that none could be extracted but by means of P——'s answers upon oath? The truth is, they said, Paupiah had a high esteem for that gentleman, and imagined, notwithstanding his denial of the sum entrusted to his care, that his conscience would not stand the brunt of an oath. Nor was the conjecture of Paupiah's participation in the robbery wholly unconfirmed. Paupiah, having been put in possession of certain *teeps*, or assignments of the forthcoming crops of the districts of Chillambrum and Manargoody, in consideration of large advances to the nabob, had been for some time engaged in collecting them. It seems that, suspecting two natives of fraud and embezzlement, whom he had employed as agents, he had suddenly dismissed them from his service, and appointed two other persons to succeed them. One of the supposed defaulters named Ramiah Chitty, appeared at the cutcherry of the collector of the company's district, which bordered on Chillambrum, offering to substantiate some important facts relative to the robbery at the treasury, stating also that, if a pardon was guaranteed to himself and three others who had acted under Paupiah's direction, they would bring ample evidence to convict that person as the head and author of the conspiracy. He stated that those persons were now acting under Paupiah in the collection of the produce at Chillambrum, and if apprehended and confronted with him, would be soon brought to confess their share in the stratagem. He deposed that, on the night of the robbery, which was unusually dark, all three remained near the great tank, till they saw Mr. P——'s carriage on the Mount-road, proceeding to the government-house. One of them, to whom Paupiah had given the most precise instructions as to all the local peculiarities of Mr. P——'s garden-house, went cautiously to the window of Mr. P——'s bed-room, which was open, having eluded the observation of the sepoys who were stationed in the verandah in front of the house, the two others remaining at some little distance to watch; that the escrutoire was easily opened by means of a small key, with which he had been furnished by Paupiah, and the large keys transferred to that person, whom they met at gun-fire the following morning at the south gate of the fort. The deponent left them together, his services being no longer required, and supposes that, as soon as the gate was opened, they all proceeded to the treasury. His own personal knowledge went no farther; the two persons whom he before named, and Paupiah, were the only parties to the rest of the transaction, he acknowledged, however, having received two hundred rupees from Paupiah, as a reward for his share in the business. The substance of the man's deposition was forwarded to Madras, and the collector received instant orders to apply to the nabob for the apprehension and immediate transmission to the presidency of those persons, as well as Paupiah himself. The orders were instantly obeyed, but neither Paupiah nor his confederates were to be found, after the most minute inquisition set on foot for that purpose. Two years afterwards, indeed, Paupiah was apprehended at his house in Vepery, where he had arrived some days and lived without any concealment. When brought before the magistrate, his answers were cool and collected, and furnished no clue to the mysterious embezzlement. It is singular, also, that when Ramiah Chitty who had been confined in the jail during this long interval, was brought before the magistrate to be confronted with Paupiah, the former threw himself at his feet, imploring his forgiveness, and acknowledging the falsehood of the accusation, which he confessed he had fabricated from pure motives of revenge.

The secret history of the robbery has never been revealed. By what means Paupiah entered the office, or made himself master of the mysterious process of the keys, remains in impenetrable darkness. It is supposed that, by long observation, he had so studied every speck of rust upon the two which Mr. P—— had separated from the others as he proceeded every evening to the chest

leaving the rest on the ring as it were unemployed, as to discern the two keys which it was requisite to employ first; it being probably a mere matter of accident that he hit upon them in their right order. That it was revenge for the indignity of the turban, there was no doubt. Had it been merely the pecuniary wrong, those who well knew the habits and character of that singular man, have often maintained that so elaborate a scheme of vengeance would never have entered his mind.

SHAKSPEARE IN GERMANY.—PART II.

SHAKSPEARE'S TRAGEDIES—ROMEO AND JULIET.

Romeo and Juliet is placed next to Hamlet, in the usual arrangement of the poet's works, but in every thing else how widely separated are these wonderful productions! in their internal spirit as well as their outward accompaniments, how total the opposition! Far behind us, we have left the dusky towers of Elsineur, its gloomy galleries, its haunted platform; the hollow murmur of the Baltic sea, the chill breath of the northern wind, the regions of gloom without and melancholy within—and suddenly, as in a dream, we find ourselves in climes, "where other voices speak, and other sights surround." The fiery sun beats fiercely into the market-place of Verona; the young blood boils beneath his influence; cavaliers cross each other, with eyes in which defiance lowers; it needs but a word to make the swords spring from their scabbards; blades clash, blood flows, and we are swept at once into "all the currents of a heady fight." Then in the brightly illuminated halls of palaces follow the dance and the revel; masques flit before us in mazy rounds, the music of the lute or mandoline rings in our ear; for platforms, where spirits walk abroad, we have the balcony haunted only by love and youth, and silvered by the broad bright summer moon; the aloe raises its head beneath its beams, the odour of the myrtle and orange is on the air of night; from yon pomegranate-tree the nightingale wails, or the lark "doth beak the vaulty air above our head," to herald the approach of dawn.

The change in the spirit of the two plays is proportioned to the change of scene. As in Hamlet all is speculation, so in Romeo all is vehement passion and precipitate action. The current of life in Hamlet seems to stagnate, or to retrograde; here it is confined in one narrow channel, down which it gushes, with the headlong impetuosity of a torrent, till it is dashed over the precipice. One overpowering passion takes possession of the soul, and is instantly carried into action. There is no hesitation, no reflection; no reliance on accident, no procrastination; the events crowd upon each other in a rapid and fatally logical sequence; six days is the brief period of existence which is allowed to be birth, the triumph, and destruction, of youthful love. The play embodies the very essence of life—but an essence so potent, so intoxicating, that even to taste is dangerous—to drink is death.

Romeo and Juliet is the only play of Shakspeare in which the whole movement of the action is made to turn on the passion of love. It is the only play, too, it appears to us, not only in Shakspeare, but in the world, where that passion is represented in its truly dramatic aspect, or in such a light as to command fully and irresistibly the sympathies of all. In the way in which love is generally treated on the stage, it is felt to be an impertinent and tedious interference with the real business of the piece. When it is represented merely as one of many other passions, the same in its origin and its nature with them, holding divided empire with jealousy, with envy, with pride, with hatred; contending with duties, with prejudices, yielding to views of selfishness, or the rules of society; it may be decorous, but it is not dramatic. Voltaire rendered a service to the stage when he laboured to banish from the theatre the love scenes of the drama—as he found them in the pages of Corneille and Racine—as they are to be found indeed in every dramatic author except Shakspeare. Love mixed up with other feelings, and contending with them on equal terms, balancing between opposing considerations, uncertain of its line of conduct, impressing the mind of the spectator with the same uncertainty, is a picture which excites no sympathy, touches no noble or elevating chord within the mind; but, on the contrary, jars against that inward faith, which even the coldest heart delights to cherish, in the omnipotence, the omniscience, the divinity of love.

In a very different light has the passion been represented by Shakspeare. Here is indeed that Eros, which haunts the dreams of youth, which lives in the memory, and casts back a sunshine even on the twilight of age: not a passion of this noisy world, but a celestial sentiment; mysterious, immortal, born of the Deity, returning into his bosom. Where its spark lights it is inextinguishable; where its essence penetrates, it indelibly colours with its golden hue the whole fountain of existence. All duties yield to it, for it is itself the highest of all; all evil passions disappear before it, for they cannot coexist with its presence; it cannot hesitate or doubt, for a divine revelation has announced its destiny; all prejudices of rank and of society, all rules of custom, are abrogated by the dictates of its higher law; it is open and undisguised, for it is guilt only that is suspicious; it is not clamorous but calm, and yet assured, for it confides in its own energies, and its heavenly though invisible source. One and indivisible, it is never at war with itself, nor distracts us with a conflict of feeling. We foresee its course from the first, and follow it to the last with clear and unbroken sympathies. It no longer appears as a mere disturbing force, crossing the path of other duties, and jostling them in their courses, but a calm celestial luminary, which, in its irresistible round, draws all minor objects within its orbit, and round which they are contented thenceforward to perform their humbler revolutions.

In this point of view, love is not only highly dramatic, but perhaps the most dramatic, the most fascinating of all exhibitions of passion.

For it is the only one in which perfect purity can be combined with perfect power; in which the whole diapason of the human heart may be run through without touching one jarring note of evil. Our sympathy with Macbeth is the sympathy of fear—arising from the consciousness of a common nature, and the inward feeling, how easily, in the best of hearts, the slumbering demon may, by circumstances, be called into action; it is imperfect, it is in a manner extorted. But our sympathy with Romeo and Juliet—with beings who live not in themselves but in each other, to whom selfishness, pride, ambition, envy, are unknown, who have made for themselves an Eden on earth, and hedged and girt it about in the hope that nothing evil would enter its calm precincts—this sympathy is cordial and perfect; it is the sympathy produced by love and admiration, and the boding sense of coming evil, made more affecting and impressive by the very unconsciousness and thoughtless happiness of those who are so soon to be its victims. Nothing can be conceived more deeply interesting than the position of two beings so situated, to whom love has become a religion, and whose whole thoughts and actions are thus necessitated, as it were, by a power so essentially inconsistent with, and at variance with, those forces that regulate the ordinary course of human affairs. The collision with the world, with the warring passions of rivals, with family pride and "lodged hate," with all the accidents of an ill-starred destiny, is inevitable; and every one, save themselves, perceives that the result must be a hapless one; they alone have no thought and no fear; while *we* are dropping "some natural tears" at the thought how soon they shall be driven from their ideal paradise, "they, hand in hand," are wandering through its flowery walks, and repeating,

"Good night, good night! parting is such sweet sorrow,
That I could say—good night, till it be morrow!"

The world is all before them, bright and smiling. They cannot conceive that external circumstances should resist the omnipotence of this feeling which, in their own hearts, has effected so sudden and mysterious a revolution; has banished the visionary attachment of boyhood; has annihilated the prejudices of feudal enmity; has overcome the bashfulness of womanhood; has bound up their existence in each other at once, and yet for ever. Love, which has wrought such miracles within, may yet change even the hard hearts of kindred and fathers, and heal up the old wounds which pride and violence had inflicted. They see Verona, long agitated by the quarrels of their houses, once more united in amity and peace; they behold, in imagination, Montague and Capulet joining their hands above their bridal bed, which are only to be united above their grave.

This perfect self-abandonment, this union of wild fervour with extreme youth, the passions of the woman with the purity of the girl, can be conceived as existing only in beings of a southern clime. Hence the solicitude apparently with which Shakspeare has laboured, by all the accompaniments of the scene, to impress upon us continually its Italian character. The opening quarrels of the servants—for even to them has the feudal strife of their masters descended; the luxurious masquerade scene, with its display of all which can awaken or charm the senses; the freedom of tone which pervades it;—remind us incessantly with what suddenness and fatal energy the passions must shoot up into maturity in such a region, and under such fostering influence, and prepare us for the scene on the balcony—for the bursting forth of that fire which already smoulders in the bosom, and requires but the slenderest spark to kindle it into a flame. Juliet is pure and innocent; but she is already in mind and body a woman—an Italian; her heart demands an object; her feelings, "deep and boundless as the sea," a reservoir into which they can overflow. So also with Romeo. His fantastic love for the haughty Rosaline, which we see from the first to have been but a boyish dream, excites no ideas of inconstancy of character; it only shows the early developement of a temperament of fire; affords a standard by which to estimate the strength of the new passion of the heart, which extinguishes at once the old vision of the fancy; and assures us the more firmly, that, when the man truly loves and is beloved again, it will be unalterably, and with that headlong energy which nothing can resist; but which is but too likely to hurry himself and the object of his passion to destruction. Every thing about Romeo, from the commencement, announces the favourite and the victim of love. His first attachment, fantastic and superficial as it seems, has yet preserved the freshness of his character; his heart has not lost its innocent bloom; amidst the wild mirth and loose gaiety which surrounds him, he is melancholy; for he has no feeling in common with the reckless and somewhat libertine Mercutio, or the thoughtless and commonplace Benvolio; something purer and holier than Verona has yet offered to him hovers before his thoughts, and fills his heart with a nameless longing. Thus alike in youth, in purity of sentiment, in depth of feeling, and in confidence in the world, these beings are thrown together. The accidental nature of the meeting, and the instantaneous electric communication of their feelings, are in perfect harmony with the celestial inexplicable source to which Shakspeare has traced the origin of love. They seem to feel, by a mystic freemasonry, that each is to be the other's destiny; that they are parts of one whole hitherto separated, henceforth to be inseparable on this side of time—

"And like two solitary rills, that side by side flow'd on,
And had been long divided, they melt at once in one."

In this instantaneous union there is no giddiness, no levity. It is not the hasty, transitory preference of a boy and girl for each other, whose idea of eternity is of three weeks' duration; it is marked by that seriousness and solemnity that attend the consciousness that two beings are drawing from the urn of fate the unalterable lot of life. Juliet feels from the first scene that hers is fixed—that "if he be married, her grave is like

to be her marriage bed." Even in her interview with Romeo on the balcony—amidst all the excitement of a first fond confession of attachment—amidst all the visions with which hope and passion gild the future, the thought creeps in how awful and irrevocable is the step she has taken—

> "Although I joy in thee,
> I have no joy of this contract to-night:
> It is too rash, too unadvised, too sudden;
> Too like the lightning, which doth cease to be,
> Ere one can say—It lightens."

Her whole conduct subsequently is the result of this sense of the earnestness of her situation; she cannot trifle with her lover, for the sentiment she herself experiences is too holy to be tampered with; she is open and undisguised, because she feels that love cannot mistake the language of innocence; she urges forward the nuptials, because she would place their union, if possible, beyond the reach of fate, and invest it with an additional character of sacredness and solemnity.

Yet Romeo and Juliet are any thing but mere abstractions—mere beings of sentiment and imagination. The perfection of these characters lies in the art with which the human and divine elements are blended in them in the harmonious union of the senses with the soul. Schiller has in his Thekla attempted a character of the same kind as Juliet. His picture of this daughter of the North, the twin-sister of her of Verona, yielding with the same rapidity to the irresistible influence of a first passion, and forgetting every thing in that devotion, is certainly, next to that of Shakspeare, the most striking and affecting with which we are acquainted. But the very conditions under which the character could be supposed to exist in the drama of Wallenstein, excluded the warmth and vigour of colouring which Shakspeare was enabled to spread with such force and truth around the great original from which Schiller drew. The calm angelic daughter of the iron-hearted and iron-handed Friedland, leaving her convent for the first time, and meeting on the threshold the hero to whom her young heart devotes itself, as to a guardian angel, yields, perhaps, with as deep a conviction, and as entire a devotion, as Juliet to the influence of this newly discovered sentiment; but her feelings, trained from the first to submission, can find no vent in words—they manifest themselves, not in action, but in patience of suffering—not in vehemence, but only in endurance. Consistently with truth and German nature, Schiller could not have portrayed the character otherwise; but such a delineation is too ethereal, too refined for the purposes of dramatic interest. To awaken our sympathies, something more passionate, and partaking more of the ordinary leaven of humanity, is required; for Platonism is no basis on which the interest of a drama can be rested. All the fire which can be united with innocence of heart—all the elements, physical and moral, which make up the mysterious compound love—

> "All thoughts, all visions, all delights,
> Whatever stirs this mortal frame"—

must be employed, if our feelings are to be heightened into sympathy, our pity into tears.

Thus has Shakspeare treated these characters. He will admit of no separation of love into the spiritual and sensual—save, indeed, where he wishes to present the passion in a comic point of view, by ridiculing the affectations of Platonism, or exposing the coarseness of a mere animal passion; but in his pictures of real love both elements are united—the soul and the senses take their part, and the *whole being* loves—for only the whole being can love truly. Thus it is, that this romance of youth lays so firm a hold on the universal sympathies of mankind; that, unlike all other lovers, Romeo and Juliet are never tiresome; that though they love they are not lovesick; that they recall to each of us, in a sublimated and concentrated form, all the early longings of the soul, the hopes and fears, the heartfelt joys, the scarcely less sweet sorrows of the past.

It has sometimes been said that Shakspeare was careless in the construction of his plots, and that where he borrowed from Cintio, Bandello, or other Italian writers, he has generally altered the incidents for the worse. We are persuaded, on the contrary, that Shakspeare was not less skilful in this department than he was omnipotent in the construction of character. Romeo and Juliet is an admirable instance of the tact with which he improved while he borrowed. The immediate source from which the plot of this play reached Shakspeare is well known to have been neither Girolamo de la Corte's history, nor the novels of Massuccio, nor Luigi da Porto, but Arthur Brooke's tedious "Tragical History of Romeus and Juliet." But Shakspeare perceived intuitively that the languid movement of the action in Brooke's poem, which is spread over a long period of time, was utterly unsuited to the vehemence of the passions which were to lead to the catastrophe. Hence he condensed the events of months into days, and gave to the whole the sultry gloom and headlong sweep of a tempest.

In the arrangement and exposition of the piece the same tact and skill is discernible. While love is the moving power, family hate is the principle of obstruction, and from the contest of these two forces, the whole action is evolved with the most felicitous and easy flow.

In the outset, the quarrels of the very servants, the rude representations of the passions of their masters, impress us with an idea of the violence and long duration of the feudal hate which has thus descended even from the highest to the lowest, and of the fatal obstacle which it must interpose to the hopes of the lovers. No sooner are we thus masters of the position in which they stand, than chance instantly brings the future victims together, and love, kindled as if by lightning, takes possession of both. Their wishes hurry to their accomplishment; the masquerade, the garden scene, the cell of Friar Lawrence, succeed each other with breathless rapidity; for a moment the star of love seems to be in the ascendant, and the baleful planet which lowered upon them at the outset to have waned and disappeared. But it has been but obscured for a mo-

ment; it flashes forth again too soon in the encounter of Tybalt and Mercutio, and the fatal revenge of Mercutio's death by Romeo, which leads to his banishment. One other short scene of passionate happiness follows, and then the gloom deepens and deepens to the close. Love bears up in vain against the inexorable force of circumstances, "weight still is laid on weight till the resistless pressure bears him down." The hostile principle of late triumphs through the fourth and fifth acts, and only at the close of the piece does the spirit of love begin to reassert its empire; when over the tomb of their only children, the bereaved fathers unite their hands, and bewail those fatal feuds which have led to this mournful consummation. In their sad embrace, in their too late lament over the ruin they have caused, we hail the arrival of better days for Verona; with that last peal which has blighted the lovers, the thunder has died away, the storm has howled itself to rest, and peace, like the evening star, after a troubled day, is seen rising placid and cloudless above the night of the grave.

Is there an imagination which has not been fired by the moonlight scene in the garden, in which Shakspeare seems to have condensed all the magic of his genius, and all the music of his numbers! Juliet leaning from the balcony, inspired like Genevieve by "all impulses of soul and sense," beneath "the rich and balmy eve," and unconscious of her lover's presence, whispering her new secret to the ear of night, and Romeo watching beneath, seeing no peril in the swords of angry kinsmen, braving danger and death to obtain that interview, are figures which imprint themselves indelibly on the memory.

"The dialogue in the garden, (says W. Schlegel,*) has a romantic tone, and yet the picturesque, the fantastic, are blended throughout with that simplicity, in which we recognise the immediate effusions of the heart. What sweet secrets does the omnipotence of the poet betray to us! The close and silent night alone may be the witness of these touching complaints, these outpourings of affection, these confessions, these partings and returns. How she hurries to knit the indissoluble bond! Even the scenery around is not without its influence. Under the clear heaven, which may well suggest to Romeo his comparison of Juliet's eyes to stars, shaded by those trees which the moonbeams tip with silver, the lovers are placed under the direct influence of nature, and set free from the artificial relations of society. So also in the parting scene, the charms of a southern spring is brought before us by the nightingale which nightly sings from the pomegranate-tree; and not the stroke of the bell, but the voice of the lark, announces the ill-omened approach of day.

"As Juliet's whole being is love, so is fidelity her virtue. From the moment she becomes the wife of Romeo, her fate is united to his; she has the deepest loathing of every thing which could tend to separate them; she fears equally to be torn from him, or to be false to him. The tyrannous vehemence of her father, the commonplace character of both parents, offends us, but its spares Juliet the contest between love and filial affection, which would in this instance be out of place; for here the feeling is represented not as a deviation from moral rules, or at war with duties, but in all its original purity, as the first and best boon that nature has to bestow. After such a meeting, Juliet can feel no reverence for her parents, and when she is compelled to dissemble, she does it resolutely, and with no scruples of conscience.

"That the hint of Juliet's fearful soliloquy before swallowing the sleeping draught, is to be found in the tale, is only an additional proof of Shakspeare's skill. This superficial resemblance of the commonest and the highest is the triumph of art. With what inimitable superiority has he accomplished this masterpiece of representation; first, Juliet's terror on finding herself alone—almost as in her grave; then her sinking of heart—her natural suspicion—the resolution with which she repels it; the tumultuous images of terror which crowd into her brain; and at last the wild, distracted haste with which she drains the draught, which it would have been unnatural for her to have swallowed calmly!

"Her waking in the grave, and the few brief moments of existence which follow, are finely connected with the wildness of the former scene by the force of contrast. The slumber which has so long held her senses prisoner has stilled the fever of her blood. She opens her eyes like a child, to whom something has been promised by her mother, who has been dreaming of it, and wakes her mother to ask her for it. She wakes with a calm and perfect consciousness of the terrors around her. She will not allow herself to be dragged from the spot when she sees her husband lying dead. She asks nothing: she knows enough."

A pleasing contrast to the wildness of Romeo's passion is afforded by that of Paris. The one is love—the other inclination. Paris seems a quiet, gentle nature, to whom all extremes are hateful. He excites no great interest during his life, but there is something deeply pathetic and affecting in his death. He has come to strew flowers on the grave of his intended bride. The sight of him whom he believes to be the cause of her death exasperates even his calm temperament into rage: he shuts his ears to the affecting appeal of his rival—he rushes upon his fate, and dies happy in the thought that his adversary will grant his last prayer.

There are few characters on which Shakspeare seems to have bestowed more care, or lavished more wit, than Mercutio. He has but little share in the action of the play; he acts, indeed, but once, where he encounters Tybalt. But as it is his death which hurries Romeo to that of Tybalt, and is the origin of all the misfortunes which follow in such rapid succession, it was necessary to invest the character with a corresponding importance.

"As the play, (says Schlegel,) may be called one great antithesis, where love and hatred, the sweetest and the bitterest emotions, festive mirth and gloomy forebodings, embrace, and the fulness of burial vaults, youth and self-annihilation, stand closely side by side: so the frolic levity of Mercutio is contrasted with the visionary melancholy of Romeo. Mercutio's wit is not the cold offspring of the efforts of the understanding, but the spontaneous outbreakings of his restless temperament. The rich vein of fancy which, united in Romeo with deep feeling, inclines towards the romantic, under the influence of Mercutio's clear intellect, assumes the shape of genial humour. In both, the fulness of life is conspicuous; in both appears the fleeting duration of all that is fairest, the rapid decay of all those flowers of exist-

* Charakterisiken und Kritiken. Von August Wilheim Schlegel and Friedrich Schlegel. A joint work by the two brothers, which has never been translated into English, and is comparatively little known in this country.

nce, over the blight of which this play may be consi-
lered as a tender lamentation. Mercutio, like Romeo,
s destined to an early death. He deals with his life as
vith a sparkling wine, which we hasten to drink ere its
pirit evaporates. Ever active, ever jesting—an admirer
f beauty, yet a heretic in love, as brave as he is self-
willed—equally ready to do battle with his sword as with
is tongue, even his death-wound cannot check the cur-
ent of his humour, and he leaves the world with a jest,
s in life he had jested at all it contains."

"The part of the nurse also Shakspeare has obviously
aboured in the spirit of love; every thing about her has
speaking truth. As the ideas in her brain seem to be
ssociated by the slightest and most arbitrary threads, so
n her actions there is but the connection of inconse-
uence. She belongs to those beings in whom nothing
ppears to take root save prejudices, and whose morality
eems to fluctuate with the accidents of the moment.
She is jealous of her reputation, yet has a sort of disinte-
ested pleasure in sins of a certain kind, and developes
o inconsiderable qualifications for the office of go-be-
ween. Her chief pleasure is a tale of marriage, or a
ecret amour. It is not baseness, but a weak and culpa-
le good-nature which dictates her advice to Juliet, to
orsake Romeo and marry Paris. That her fidelity to-
wards the lovers cannot stand against temptation, is a
ircumstance which was necessary fully to illustrate Ju-
iet's strength of mind, since she can no longer find a
tay or a support in those by whom she is surrounded,
nd, alone and unassisted, must carry into effect the
ounsels of Father Lawrence. Had the nurse's conduct
lowed from real baseness of heart, it is hardly possible
o conceive that Juliet should ever have chosen her for
er confidante. The strange incongruous union of good
nd bad in her character, is admirably suited to its ob-
ect; and richly as Shakspeare has lavished on the part
is treasures of knowledge of the heart, we cannot think
e has been too prodigal."

It is well known that, on the English stage, the
atastrophe has been materially altered. Garrick,
who proceeded on the notion that, in every tra-
edy, the more heart-rending the grief could be
endered the better, could not resist the tempta-
ion of *amending* Shakspeare, and closing the
whole play with a distracting scene of separation
etween the dying lovers. He determined that
Romeo should not die, till Juliet had an opportu-
nity of wakening from her sleeping draught, and
oining in a pathetic chorus, to the blearing of
air eyes and the great damage of many white
ocket-handkerchiefs. No great invention cer-
ainly would have been required for this, had
Shakspeare thought that the close of Romeo and
Juliet ought to be constructed on what a clever
writer calls the "greatest misery possible princi-
ple," any more than for a totally opposite termi-
nation, namely, that Juliet should awaken just in
time to prevent her husband from swallowing
the poison, and that all should end merrily as a
nursery tale.

"It appears to me (says Schlegel) that Shakspeare,
whether from his close adherence to the tale which he
had before him, or from deliberate consideration, has
chosen the better course. There is a degree of suffering
beyond which all additions become torture, or glide off
without effect from the mind, already saturated as it were
with grief. In this brief and terrible meeting of the
lovers, Romeo's remorse at the thought of his rash sui-
cide, and Juliet's despair, in the momentary revival of
her hopes, followed by their sudden destruction, when
she seemed to have reached the very goal of her wishes,
—would have been too harassing, would have in all pro-
bability deviated into distortion. No one doubts that
Shakspeare could have represented such a scene with
overpowering strength; but here, on the contrary, there
was need of every alleviation, that the mind might not,
by harsh dissonance, be roused from the gentle sorrow
into which it had been lulled. Why should farther suf-
fering be laid to account of destiny, which has already
so much to answer for? Why should the tortured Romeo
not be left to shake off in peace from his life-wearied
frame 'the yoke of hostile stars?' He holds his beloved
in his arms, his dying consolation is the thought of an
eternal union. She too seeks death in kisses on his lips.
Their last moments must be left undivided to tenderness
and pity, that we may firmly cherish the thought, that
though the lovers have perished, love still survives."

It is in this spirit too that Shakspeare has pro-
longed the action for a little beyond the death of
the lovers, and shown us that the same stroke
which had leveled their hopes and happiness with
the ground, has destroyed also that spirit of hatred
from which their miseries had sprung. The feel-
ing of consolation which must always accompany
every proper tragic close, would have been incom-
plete without the scene where Montague and
Capulet, beside the tomb of their only children,
abjure their enmity.

"The lovers have not fallen in vain, for important and
beneficent are the effects of their sacrifice. The victims
themselves seem but transfigured before our eye, and
no weak sorrow nor bitter grief is mingled with the pure
and elevating feeling with which their fate inspires us.
Yet there is not wanting enough of the irony of life; for,
looking on the reconciliation which has just taken place,
we ask these heads of parties the involuntary question,
'Why did not your foolish quarrels end earlier? If blood
must flow ere ye could be satisfied, might not that of
Tybalt and Mercutio have contented you? Now, only
when the last, the costliest jewels of your house, are taken
from you; when the blooming youth of Juliet, of Romeo,
of Paris, lies trodden into dust beneath your feet, you
have the misfortune to be wise; now, when ye have little
or nothing left to lose, ye desolate old men! do ye begin
anxiously to guard against farther loss. It needed but
a word from the prince to make you clasp your hands
above your children's tomb—those hands now too feeble
to wield a sword. Scarcely can you now tell the cause
of your quarrel. And who are to be the chief gainers by
your tardy reconciliation? Your servants! Sampson,
Gregorio, Abraham, and Balthazar, will no longer need
to fight and brawl in your cause, and Verona's streets
will be more tranquil than of yore.' These thoughts in-
voluntarily occur; and although the poet has not expres-
sed them in words, he yet excites them in our minds, for
undoubtedly such thoughts floated across his own. He
wished not to write a mere love-tale, but to exhibit clearly
the broader picture of human life. Looking into the mir-
ror which Shakspeare holds before us, we see pathos,
elevation of mind, and irony, all blended in harmo-
nious unison. Even this irony at the close, strongly as
it is expressed, produces no harsh or overpowering effect;
for the idea still recurs, 'Better late than never,' and the
peace of a city is perhaps precious enough to be pur-
chased by the death of five persons. Thus our compas-
sion becomes again calm and still."

The incident of the sleeping-draught—of a po-
tion which was to enchain the senses, and pro-
duce "the borrowed likeness of shrunk death"
for two and forty hours, yet leave the patient at
the close in perfect health,—is not a very proba-
ble one, and required the aid of every circumstance

to remove from the mind our doubts as to its possibility. This is done so far as the difficulty admitted of being removed, by representing Friar Lawrence, by whom the draught is furnished, even in the very first scene where he appears, as one who has long pried into the secrets of nature, and familiar " with the powerful grace that lies

" In plants, herbs, stones, and their true qualities."

The idea, no doubt, is not original, for the same qualities are ascribed to Lawrence in the poem of Brooke; but Shakspeare instantly perceived the propriety of dwelling on and enforcing a point which seemed so important, with a view to the main incident on which the catastrophe turns. But Friar Lawrence's character in other respects is sketched with great delicacy, and is in its way a very finely finished portrait—in a sober, greyish colouring, no doubt, as becomes the subject, but in admirable keeping.* " Like a mild Providence, which, however, is unable to ward off the stroke of adverse fate, appears Friar Lawrence beside the lovers; no saint, but a man of wisdom in a monk's cowl—a worthy, gentle, meditative, old man"—not without a certain sublimity, through his intimacy with the secrets of lifeless nature, and strikingly attractive, through his accurate knowledge of the human heart, which in him is united with a cheerful, and even witty humour. He has a rapidity of perception, which enables him to discern the right moment for action, and to act on it; courageous in his schemes and resolves, he feels their importance with a humane earnestness, yet exposes himself unhesitatingly to dangers, that good may come. When he complies with the solicitations of his young friends, he yields not to the impetuosity of their passion, but to the strength of his own convictions; to his holy reverence for a passion like this, of which he can still form an idea, though his heart has never experienced it, or, at least, the atmosphere of his being has long been purified from such convulsions. He demands of Juliet the resolution of a heroine; he encourages her to constancy in love as to a virtue; he seems to anticipate with confidence that in her he will not be deceived. He has nothing of his order about him except some skill in disguise, and perhaps some touch of physical cowardice. The last feature, however, ought, perhaps, to be laid to the score of age. It overmasters and unmans him so, that he leaves Juliet alone in that luckless night in the churchyard, which, in his calmer mind, would have been inexcusable. And yet shortly afterwards, in a danger which he sees he cannot escape, he becomes calm, collected, and master of himself. It is singular that this monk should on all occasions deal so little in religious allusions or considerations, and so much in moral ones. When he seeks to comfort the despairing Romeo, he offers him "adversity's sweet milk, philosophy." And the beautiful speech which he addresses to him may, indeed, be called, a sermon of pure intellect. Once only does he allude to heaven, in addressing the sorrowing parents of Juliet after her supposed death, that is to say, on an occasion when he is not in earnest. We may see from this the absurdity of Johnson's remark, when he observes, that Shakspeare meant to exhibit in Juliet the punishment of hypocrisy, " because most of his deceptions are practiced under the guise of religion."

While the play of Romeo and Juliet has been so deeply felt, and its beauties so truly appreciated, as in Germany, it is singular that so distinguished a poet and critic as Goethe should, in his adaptation of the play to the German stage, have varied so much from the original, particularly in the opening scenes of the piece. We have already observed, that in that exposition the dramatic skill of Shakspeare is particularly susceptible. First the quarrels of the servants, then the masters; the entrance of the melancholy Romeo, his fantastic attachment for Rosaline so soon to be thrown off as a garb which had never fitted him; the chance which suggests the idea of presenting himself at Capulet's banquets, the simplicity of the scene between Juliet, her mother, and her nurse, connecting the idea of childhood with the scenes of passionate womanhood, which follow so rapidly; all these form an introduction so clear, so natural, so captivating, that we are surprised how Goethe should have thrown them all aside, to commence the action at once, and without explanation, by the masquerade in the palace of Capulet. It seems to us not less singular, that, instead of prolonging the action, as Shakspeare has done, for a few moments beyond the death of the lovers, so as to exhibit the extinction of feudal hostility between the rival houses, and thus dismissing the spectator with a "vade in pacem," he has preferred the plan of closing at once the grave of the lovers and the piece, by a single moral observation from Friar Lawrence.

Two things impress themselves strongly on the mind, even of the most careless reader, in the perusal of Romeo and Juliet; the exquisite music of the versification, and the accumulation of imagery. The song of the nightingale itself is echoed in the magic numbers which describe it; a chorus of divine voices seems to float through the air, and to catch and prolong the accents of the lovers till they die away upon the ear of night. It is wonderful with what skill, with what perfection of imitation, all this has been rendered back in the translation of Schlegel. It was his first translation, we believe, and it is his best. Will our English readers pardon us, if we place beside Shakspeare's enchanting lines a few corresponding verses from the Romeo and Juliet of Schlegel, in which the very pauses, the rise and fall of the versification, the very soul of the original, is placed before us?

" Juliet.

Yon light is not day-light, I know it, I:
It is some meteor, that the sun exhales,
To be to thee this night a torch-bearer,
And light thee on the way to Mantua;
Therefore stay yet, thou need'st not to be gone.

" Romeo.

Let me be ta'en, let me be put to death;
I am content, if thou wilt have it so.

* W. Schlegel. Charakteristiken and Kritiken.

I'll say, yon gray is not the morning's eye,
'Tis but the pale reflex of Cynthia's brow;
Nor that is not the lark, whose notes do beat
The vaulty heaven so high above our heads:
I have more care to stay than will to go;—
Come, death, and welcome! Juliet wills it so."

"JULIA.

Trau mir, das licht ist nicht des tages licht
Die sonne hauchte dieses luftbild aus
Dein fackeltrager diese nacht zu seyn
Dir auf dem weg nach Mantua zu leuchten;
Drum bleibe doch; zu gehn ist noch nicht noth.

"ROMEO.

Lass sie mich greifen, ja lass sie mich todten,
Ich gehe gern mich drein, wenn du es willst,
Nein, jenes grau ist nicht des morgens auge
Der bleiche abglanz nur von Cynthia's stirn.
Das ist auch nicht die lerche, deren schlag
Hoch uber uns des himmels wolbung trifft,
Ich bleibe gern; zum gehn bin ich verdrossen
Willkommen tod! hat Julia dich beschlossen."

Of the richness, the riotous prodigality of the imagery, and particularly of those allusions and plays on words, which many have so severely condemned in the speeches of the lovers—and of which Johnson remarks, that, be the misery of the personages what it may, they are never at a loss for some ingenious turn amidst their griefs—let us hear the truer and more profound views of Schlegel.

"When love reveals itself to love, the only aim of the heart is to express its internal conviction, and to inspire in the beloved the consciousness of that conviction. It shuns the pomp of words in which the empty professions of pretended attachment might clothe themselves with equal ease; it ventures not to attempt the inexpressible; but it possesses the secret of breathing a higher soul, even into simplicity itself. Can any one overlook this heart-touching tone, in the confessions, the protestations, the soft love whispers of Romeo and Juliet? Juliet yields, with as much childish openness as Miranda in the Tempest, and what she says

'Is silly sooth,
And dallies with the innocence of love.'

But the admiration, the idolatry of the beloved one, cannot express itself without imagery; it must find a vent in the boldest comparisons. With the magic stroke which has isolated and exalted that object above all the world, it has lost the standard of reality, and can soar to the farthest limits, far as the wings of fancy can bear it, without being conscious of its wanderings. Love is the poetry of life, why should it not grow poetical upon its object? Love falls involuntarily into these far-fetched comparisons, which wit can only laboriously bring together. There exist inconceivable contradictions in the very being of love; even with the fullest reciprocity, it cannot resolve itself into perfect harmony, and has a natural inclination towards antithesis. Still more is this the case when it has to sustain a conflict with outward embarrassments. A play on words is a comparison or contrast between the meaning of words and their sound; and, as in love, the spiritual and the sensual are always striving after a union, as it borrows from the one the tenderest allusions to apply them to the other, so it may amuse itself in like manner with the resemblances of sound. Such plays on words are generally condemned as childish and unnatural. If the former term be applicable to them, the latter cannot: and experience, in fact, convinces us, that children delight in these allusions and double meanings. But love, in its perfect abandonment, carries the soul, even with the full development of all its organs, and in all the vigour of life, back as it were into the state of childhood. Without intending it, I find I have been writing Petrarch's apology, whose strange images and comparisons, whose ever-recurring contrasts and mystical allusions have been a stumblingblock to so many readers and commentators. His ideal, ethereal, resigned adoration of Laura has indeed nothing in common with the youthful glow of strength and fire which impel Romeo and Juliet to live and die for each other; but the style of his poetry has a close resemblance to the colouring of Shakspeare's expressions of tenderness."

We shall conclude this short notice by an extract from another work of Schlegel, (his Dramatic Lectures,) in which he thus characterises, as a whole, this beautiful play, which he justly styles a magnificent hymn to love.

"It was reserved for Shakspeare to unite purity of heart, and the glow of imagination, sweetness, and dignity of manners, and passionate violence, in one ideal picture. By the manner in which he has handled it, it has become a glorious song of praise on that inexpressible feeling which ennobles the soul, and gives to it the highest sublimity, and which elevates even the senses themselves into soul, and, at the same time, is a melancholy elegy on its frailty, from its own nature and external circumstances—at once the deification and the burial of love. It appears here like a heavenly spark, that, descending to the earth, is converted into a flash of lightning, by which mortal creatures are, almost in the same moment, set on fire and consumed. Whatever is most intoxicating in the odour of a southern spring, languishing in the song of the nightingale, or voluptuous in the first opening of the rose, is breathed into this poem. But even more rapidly than the earliest blossoms of youth and beauty decay, it hurries on from the first timidly bold declaration of love, and modest return, to the most unlimited passion, to an irrevocable union; then, amidst alternating convulsions of rapture and despair, to the death of the lovers, who still appear enviable, since their love survives them, and by their death they have obtained a triumph over every separating power; and all these contrasts are so blended, in this harmonious and wonderful work, into a unity of impression, that the echo which the whole leaves behind in the imagination resembles a single but endless sigh."

From the London Metropolitan.

STANZAS FOR MUSIC.

OH STRIKE THE LUTE, LADY!

Oh strike the lute, lady! the wildness that clings
To my spirit grows tame, while I listen to thee;
'Tis music alone that can open the springs
Of this dark frozen bosom: sing, lady, to me!
That song—oh! how well I remember the strain,
When it stole on me first from the lips that are cold,—
Those lips, that can never breathe music again,
Or tell me to love, as they oftimes have told.

Oh strike the lute, lady! but wake not the strings
To the soft lay of love, or the light note of joy:
Some sweet sabbath air that to memory brings
The home and the friends that I left when a boy.
Thus beguiled let me sit; thus, in fancy, behold
The loved and the loving ones still at my side;
And forget the long years, that in darkness have rolled,
Since those *loved* and those *loving ones* faded and died.

From the Monthly Magazine.

RECOLLECTIONS OF CHATEAUBRIAND IN ENGLAND.

Landing of M. de Chateaubriand as ambassador.—His reception by the ladies of Dover.—His opinion of the degeneration of the English people.—Visit from the son of M. de Montesquieu.—His reception by the *corps diplomatique*.—English and French soldiers.—His opinion of the English aristocracy and democracy.—English and French ideas of liberty.—Profession of principles.—On mediocrity of talent.—Reasons for choice of residence.—His poetic temperament.—English and Arabian blood horses.—Eulogium of the ass.—Glory.—Bonaparte.—Wellington.—Pitt.—Voltaire.—Kensington gardens.—Canning.—Literary fund.—Annual dinner.—Anecdote of the viscount and coursing.

There are men who even in their life-time may be said to belong to posterity—predestined mortals, who, from their first entrance upon the business of existence, stand apart from their fellows, and the minute episodes seem stamped with a distinctive character. Of such men the Viscount de Chateaubriand is incontestibly one. His memoirs are amongst the few whose perusal leaves a trace behind them: they in some measure redeem the credit of autobiographies in general, and rescue that particular class of literature from the utter damnation of the reading world. We have been deluged with the egotistical tediousness of many worthy personages of both sexes, and of all ranks, grades, and professions. Patricians and plebeians, soldiers and sailors, old gentlefolks both of the masculine and feminine gender, have shamefully maltreated us in this particular line. Wherefore do we hail, with a feeling of thanksgiving, the advent of something of richer promise. We have at last found a green spot in a barren waste, and there would we fain rest our staff.

M. de Chateaubriand seems to consider that he has played his part on life's eventful stage—that he has done with its toils, its cares, its perils, and its passions. Like the traveller who has long struggled to gain some rugged steep, inaccessible to ordinary wayfarers, he feels a pleasure in looking down from his commanding eminence, and contemplating far in the distance beneath him the clouds and storms through which he has passed. His race is run, and to close accounts with the world, he bequeaths to posterity a history of his chequered career—a sort of poetic last will and testament, carelessly blending in one common record, emotions and feelings with facts; the reveries and idealities of genius with the sad and sober realities of life. A favoured few admitted to the intimacy of the noble poet, and enabled to snatch a furtive glance at his precious pages, have revealed some passages to public curiosity. But, notwithstanding the undoubted authenticity of the autobiography, to which the illustrious author daily adds some fresh recollections, we may reasonably entertain doubts on the score of its completeness: we may question if the self-constituted biographer will set down every fact creditable to the man—if his pen will or can retrace every thought and feeling—all the impassioned and involuntary poetry, which his soul, in the full tide of its overflowing, may pour forth in the ear of friendship. Of a truth, we have the consolation to reflect that any hiatus on these points will infallibly be filled up by one or more of the literary resurrectionists who do business in the reminiscence and last speech line—whose mission it is to wiredraw the social inspirations of genius in *dishabille*, and to imprison in one or two, or mayhap three goodly octavos, the fugitive sallies of the illustrious departed. So has it been with Byron: the nothings of his idlest hours have been "set in a note-book, learned and conned by rote;" the very stones have prated of his whereabouts. He has had his chroniclers from "the Hebrew nasalities of Nathan," to the mellifluous mawkishness of Moore. Thus have the bookmakers dealt with him; and in the spirit of our "prophetic fury" do we say—so will they deal with Chateaubriand. His sayings will be resuscitated in the shape of "conversations," and his doings appropriately attired in the costume of "reminiscences."

We repeat, our world of letters is occasionally subject to singular chances, and precisely by one of these do we stand possessed of materials which enable us to put forth a brief sketch, forestalling the more elaborate efforts of those well-meaning bibliopoles touching whose probable designs we have already spoken with the tongue of prophecy. In a word, we are able to communicate a few particulars, the substance of which has been gathered from a diary that has fallen into our hands—honestly, we conjure the reader to believe, but that main point stated, we have reasons, or it may be caprice, for declining to give further information as to the *quo modo*. Our journal contains not a few details touching the celebrated writer, whose name figures at the head of this chapter—details which relate to the period of his embassy to England, and of which the printed page, whether of quarto, octavo, pamphlet, or periodical, has hitherto been innocent.

On the landing of M. de Chateaubriand, at Dover, which took place on the 4th of April, 1822, he was welcomed by a sort of homage which, how flattering soever in itself, was, at least to his Gallic ideas, somewhat singular in its manifestation. Scarcely had the news of his arrival been circulated by one or more of the hundred tongues of Fame, when the literary ladies of the ancient and respectable town of Dover hastily resolved themselves into a committee, and named a deputation consisting of twenty-five of the most poetical and romantic of their body, who, headed by the mayoress of the town, were charged to compliment, not the ambassador, but the poet, in the name of the female rank, beauty, fashion, and literature of Dover. Ineffable was the modest confusion of his excellency at the approach of the formidable phalanx, to which he was obliged to capitulate by accepting an invitation for that evening at the house of my lady mayoress.

About twenty years had elapsed since the period of M. de Chateaubriand's first residence in England, which had commenced with the emigration of the French noblesse. The feelings produced on him by his second visit, were rather painful, and the more so when contrasted with the impressions which his too faithful memory still retained of the first. Above all, the metro-

polis itself was, in his eyes, wholly changed, through the inroads made upon the manners of its population by French revolutionary principles. The middle and lower classes appeared to him squalid, ill-clad, and deteriorated in healthy looks. The stature of the men had decreased—the beauty of the women had faded. Among other treasures hoarded during his foreign travels, the viscount had carefully preserved a collection of old family paintings and engravings, which lent to the English female physiognomy a bland and gracious expression irresistibly pleasing, from its contrast with the more vivacious beauty of his own countrywomen:—and for this soft winning grace—"such as youthful poets fancy when they love,"—his jaundiced eye now looked in vain. The race of Britons was, in the viscount's opinion, degenerating. The melancholy truth is that the change was in the spectator, and not in the living and moving drama which he witnessed. The noble envoy was now some twenty years older than when he first saw the white cliffs of Albion, and his grizzled and thinly scattered locks but ill concealed the furrows which the hand of time began to write upon his brow. He gazed with the chilled and withered feelings of age on the scenes which he had first seen when warm in youth. All—even to his social position—conspired to effect a change in his sentiments. Who can wonder that the no longer youthful but aristocratical ambassador was unable to look with a complacent eye on much that had been congenial to the warm heart of the young, though impoverished and friendless emigrant?

A few days after his arrival in London, the Viscount de Chateaubriand received a visit from M. de Montesquieu, grandson of the celebrated author of *L'Esprit des Loix*. This gentleman had married and settled in England, where he lived in great privacy and retirement. As soon as his name was announced to the ambassador, the latter advanced eagerly to meet him, seized him by the hand, and in a tone of great emotion, —"Ah!" said he, "how this visit rejoices—overpowers me! you will smile at the thraldom which my fancy exercises; but it almost seems to me that your grandfather in your person deigns to visit me!" M. de Montesquieu could do no less than draw upon his vocabulary of compliments in return. He was in fact inspired by the occasion. "My duty," said he, "no less than my inclination leads me to present myself to your excellency, whose person is a noble compound at once of my grandfather and of the immortal Fenelon." This was a handsome, and at the same time a just eulogium; and so deeply did it affect M. de Chateaubriand that his eyes involuntarily streamed with tears. In juxtaposition with the adroit and spiritual flattery of the immortal president's grandson, it may be curious to place a brief notice of M. de Chateaubriand's reception by the *corps diplomatique*, shortly after his first audience of his Britannic majesty.—"Gentlemen," said the king, presenting the illustrious Frenchman to Prince Lieven and Prince Esterhazy—"you are reinforced by a new colleague."—"We are happy and proud to see him amongst us!" coldly replied the Austrian ambassador.—"Delighted and honoured by the accession," re-echoed his Prussian excellency. Here was a set-off to the involuntary tribute of M. de Montesquieu, and to the genuine though turbulent admiration evinced by the ladies of Dover!

During the period of his stay in England, M. de Chateaubriand's remarks in general and familiar conversation were rather subtle and curious, than accurate or profound. He often expressed his surprise at seeing but few external and prominent signs of that military force which had successfully fought the battles of old England against France and her revolutionary principles. Prodigious was his wonderment that he seldom encountered, as in Paris, some *vieille moustache*, whose hoary and formidable redundancy denoted its possessor's long familiarity with the "pride, pomp, and circumstance of glorious war." He seemed almost to regret the absence of those sun-burnt, iron-faced professors of the sabre, who may be seen on high days and holy-days "frighting" the good city of Paris "from its propriety," laughing loud, drinking hard, and running grisettes *à la cosaque*. The noble stranger forgot the prudent jealousy which England entertains of military influence, and that ardent spirit of constitutional and civil liberty so hostile to the usurpation of the sword. But that his appreciation of the social and political state of England was often just and delicate, will perhaps be admitted after a perusal of some of his opinions which we here put together nearly as they were uttered—that is to say, without much regard or order of connection. "Here," said he, "the framework of society is formed of circles, each turning on its own centre. Even the opposition is aristocratic. The monarchy has ceased to exist, and has dwindled to a mere oligarchy. The government, such as it is, will *fall only by the hand of its aristocracy: it has nothing to fear from its democracy!* From the nullity of the monarchy and the power of the aristocracy it results that, strictly speaking, and in the French acceptation of the term, there is no court; in other words, none of the nobility cringe to a master, or bow before his nod. England has comparatively few court-flies, few court intrigues. The nobles, instead of passing their days in base adulation of the sovereign, are busied in preserving their power and influence in the country. The aristocracy of England is at least an enlightened aristocracy: its members might be deprived of their wealth—of their properties, and yet their personal merits would still suffice to place them at the top of the social wheel. Hence the contrast, so often remarked elswehere, between the splendour of posts and the incapacity of their occupants, is of more rare occurrence in England. Public men there, are more frequently in their proper places."

We are far from agreeing on *all* these points with the gifted ambassador of his late most Christian majesty Louis XVIII.; but not a few of them bear the indelible impress of truth. Above all, the opinion that "the government will fall only by the hand of its aristocracy," seems to us at this moment to have been dictated by the spirit of prophecy. The forecast shadows of coming

events, big with the destiny of a nation, are already visible.

The comparison which M. de Chateaubriand establishes between English ideas of equality and liberty, and that republican enthusiasm for *égalité*, so characteristic of a large portion of France, is, in our opinion, drawn with much force and accuracy. "In England," observed the viscount, "the principle for *égalité*, as interpreted by the French, is little understood. An Englishman often asks, does equality consist in the power of obtaining honours or places of emolument? Does it mean equal rights, even-handed justice, and equal protection afforded by the laws? The French are already in possession of these blessings, and Englishmen are unable to conceive that any other species of equality can exist." After a short pause, M. de Chateaubriand concluded with the following illustration of his idea:—"The old nobility of England," said he, "has not been annihilated by the mere fact of its political defeat along with Charles Stuart on the field of battle. It has passed through a period of revolution without abandoning a single right, and without incurring the slightest stain. It has still preserved its aristocracy, and constituted itself into the order of the peerage. The French noblesse, on the contrary, has entirely perished under the guillotine—it has been vanquished by the executioner—its order is irretrievably extinct—and from its ashes has arisen a sort of bastard nobility, without privileges, without dignity, and without honourable recollections!"

It would be an injustice to suppose that even at this period M. de Chateaubriand betrayed the slightest feeling of bitterness against the revolution of 1789, which had thus annihilated the aristocracy, and crushed to the earth the principle of sovereignty. At this very period—in 1802 (the date here is of some moment)—he openly made the following profession of faith, which, we believe, he has registered in his unpublished memoirs; it affords the key to his whole political career:—"I am," said he, "a republican from taste, a Bourbonist from duty, and a royalist from reason and reflection." Assuredly none will maintain, at least none can fairly show, that he has proved an apostate from this triple creed.

In passing from the consideration of opinions to that of individuals, and weighing in the balance many of the personages who have figured as public characters for the last thirty years, M. de Chateaubriand expressed his opinion, that mediocrity of talent, though impotent in its isolated state, acquired a certain degree of power and vigour when placed in exalted situations. "The mediocrity," said he, "nay, the nullity of those in power, is often sufficient for its day. Men in office sometimes acquire factitious strength from the very circumstances which invest them with authority. Their force increases with the exigences of the time."

With regard to France, M. de Chateaubriand invariably maintained that she would best consult her dignity and safety by taking a decisive part in politics, without waiting for the authorisation of examples. This opinion he expressed in 1822, when he was the ambassador of Louis XVIII. How profound would have been the noble viscount's amazement, had some voice, "foreboding luckless time," whispered in his ear, that twelve years afterwards a popular government, which had hoisted the national colours, would urge the expediency of strictly adapting its line of policy to the wishes of Europe!

The reader would be in error, were he to imagine that M. de Chateaubriand is habitually of too grave a cast of mind to handle with grace and playfulness those lighter themes which form the staple topics of modern conversation. If, when some abstract question is started—some discussion nearly connected with the interests of nations or of mankind at large—

> "The gordian knot of it he will unloose,
> Familiar as his garter——"

he is no less gifted with that happy versatility which can turn from grave to gay—which can abandon the domain of philosophical speculation for the fairy land of poetry and romance. The first genial ray of spring, piercing the substantial veil of fog and mist in which a London atmosphere is usually enveloped, has often sufficed to draw from him a rhapsody peculiarly his own, and, as may be seen from the specimen which we subjoin, but slightly connected with the idea that served him as his *point de départ*. On one such occasion he exclaimed—"Were the choice of a residence left to me, I would fix my abode in Rome. There all is grandeur, even in ruin—all is sublimity and recollection of former glory. In the environs that surround the wrecks of ages, all is silence and solitude. In the midst of the long tangled grass which overgrows the deserted fields, rises some solitary column; or, perchance, as in the days of infant Rome, groups of wild steeds are seen approaching to slake their thirst in the waters of the Tiber. In this genial climate, existence acquires double vigour—man breathes a purer air—the warm sunshine of heaven gives new elasticity to his movements, and may be said to clothe him like a garment. He quits the majestic solitude, and returning to the eternal city, kneels before some aged minister of peace, and receives the pious blessing, which, in Rome, is invoked alike upon the rich man's purple and the beggar's rags."

These were the poet's moments of sunshine—fleeting and transitory as the few brief rays of a London spring morning to which they owed their birth; his mind, like the external atmosphere which affected its mercurial temperament, being soon overclouded and dark. In his gloomy hours he was by no means nice as to the vehicle through which his fretfulness might be vented. his vigorous paradoxes being recklessly hurled against the subject under immediate consideration. Sometimes he would inveigh bitterly against smoky London "and all that it inherits" —against the city of steam-engines and rail-roads —the metropolis of gas, coal, and coke—against the prosaic cockneys who, as he said, turn even the elements to material use, burning the air, and the very earth on which they tread. On such occasions his strictures, though unjust, were not divested of a certain character of originality and

playfulness. Crossing Hyde Park one day, with some friends, he suddenly broke forth into a poetic and passionate anathema against some of the finest blood horses that ever exhibited their paces round the ring. Passing next from comparisons between the objects of his affected disdain, and the proud steeds of Arabia, which he characterised as possessing a sagacity approaching to intellect, the angry poet all at once diverged into a rhapsody on the spirituality, as he was pleased to term it, of the ass. "In the East," said he, "the ass is superb. A troop of camels would be unable to cross the desert unless headed by an ass. In an age like the present, when firmness of purpose is recognised as a virtue, can too much praise be given to the tenacity of the ass? I have ever," continued he, "admired that splendid comparison which Homer draws between the stern immobility of the warrior and the firmness of the ass, that having once effected his entrance into a field, resists with unshaken constancy all attempts to expel him from the favoured spot of his election. It is only in the west that the ass has ceased to be poetic. When warlike and barbarous tribes found it expedient to render the horse the accomplice of their guilty ravages, from that moment the ass lost his place in society, and became confounded among the democracy of the brute creation. His noble qualities were thrown into shade—his faculties degraded—his intelligence paralysed by vulgar toils—and his very name used as a symbol to represent the hopeless incapacity that would have been too much honoured by a kick from his hoof. This wanton injustice will perhaps be redressed by future ages."

Though by no means convinced that the reader will sympathise with the opinions here advanced in favour of asinine intellectuality, we yet believe the advocate to have taken up the cause, not in a vein of irony, but in a genuine spirit of zeal for his *protégés;* and, undoubtedly, if the universality of the prejudice existing against the defended constitutes the disinterested generosity of the defence, few will contest the liberal motives which actuated the pleader.

Few literary men of the present day are subject to more frequent moods of despondency and gloom than the noble and illustrious author of Moïse. Often has he confided to the ear of friendship a most doleful and incoherent chapter of confessions. "There are men," would he say, "who are fond of seeing sights, but mine is not an inquisitive temperament. My whole existence, from infancy till now, has been devoured by *ennui.* I have traveled with indifference to external objects, urged by mere weariness of life. I have observed nothing, felt nothing, with interest. I attach myself to nothing. I serve my king cordially, and yet without enthusiasm. My existence is, in short, a system of perpetual self-restraint. It would pain me to think that I have done ill, and yet—must I confess it?—to have done well affords me no intense gratification. Virtue is dear to me, but as a divinity that moves my reason rather than touches my heart. The faculties of him who can worship her as he ought, must be peculiarly organised. Buffon has occasionally appreciated her—Voltaire has loaded her with derision—Rousseau has treated her as a prostitute, and, at the same time, adored the beauty he endeavoured to degrade. And glory!—who, in his hour of sober, sad reflection, can seriously worship glory? The greatest man of the age has even now departed from amongst us: Bonaparte is no more. I have heard scores of discharged ballad-mongers roar themselves hoarse in the streets of London with the announcement of his death, and not one passenger turned aside to pay the tribute of a penny for the bulletin! Glory! Wellington, the great English captain of the age, willingly sacrifices his fame to fashion—to the pleasures of a London season—and he and his fame are alike lost in the crowd. He has become the rival of the *petits maitres* of Almack's, and their glory eclipses his. Of all the names of the past or the present generation, perhaps one only will survive, because associated with literary merit—and that name is Pitt. Two small tiny volumes sometimes hand down a name to posterity, for whom alone an author should write; and it is simply because I doubt if generations yet unborn will speak of my own works, that I hold them cheap. I feel an intimate conviction that my literary fame rests on no solid foundation: it will not resist the hand of the destroyer—time! When these reflections assail me, *ennui,* like an unwelcome guest, returns. Even the solitude, to which I have devoted the last twenty-five years of my life, is now distasteful to me. I was happier when exposed to danger; my soul was then absorbed by the excitement of a struggle. For this reason, my ten years of persecution under Bonaparte were perhaps the best of my life. When the king returned, his imbecile ministers prolonged my satisfaction for some five or six years, inasmuch as I had to combat their system, and their pernicious measures. But now that we have gained the battle, I am again the victim of *ennui.* I have been named ambassador; only one step more remains to complete the mishap: the probabilities are a hundred to one that I shall one day be appointed minister. Who has *not* been minister? 'Tis true, when I compose I am less subject to *ennui. The Martyrs,* the first two acts of *Moïse,* which I finished in my garden at Aulnay, afforded me some hours of mental activity. Mine is the trite story of the cobbler, who toils and toils at an old shoe, and yawns when his work is finished. There are but two or three things in the world which excite my admiration. Buffon sometimes awakens that feeling within me—Rousseau never. Of all the authors who have spoken of the Romans, Montesquieu is the most eloquent. It was unquestionably a glorious age that produced those three men—and Voltaire. I have never read the first scene of Athalie without shedding tears. An ode of Horace, and a little poetical piece of Voltaire, which has approached the nearest to it, produce the same effect upon me:—

'Si vous voulez que j'aime encore,
Rendez moi l'age des amours;
Au crépus-cula de mes jours
Rejoignez, s'il se peut, l'aurore.'

In that and the following stanzas there is a tone of feeling which affects me sensibly. The Bible, and the solemn hymns of the church, some of the canticles, and the *Dies iræ*, that fearful portraiture of the terrible day, terminated by the sublime cry of prayer, have always struck me with admiration. The following lines, too, by an obscure author, appear to me to breathe the genuine spirit of poetry:—

'Arrête-toi, passant—contemple ma poussière,
Il ne me reste rien de ma beauté première;
Vois l'état où la mort m'a mis.
Je n'ai plus mes parens, mes biens, ni mes amis.
* * * * * *
On doute en me voyant si j'ai jamais été.
* * * * * *
La mort ne m'a laissé que les os.'

"In the old church music," continued M. de Chateaubriand, "there is a something of inexplicable and celestial harmony—a something which disdains subordination to the rules of our modern musicians and artists."

Such are the thoughts which M. de Chateaubriand has often confided to the friends whom he cherished; but who shall say what balmy odours of poesy his soul has exhaled towards heaven when communing with solitude—the poet's divinity? From the period of his arrival in London to that of his departure for the congress of Verona, he was in the habit of walking for several hours every day in Kensington-gardens, where he occasionally met Mr. Canning. Being questioned as to the reason of his preference for the gardens, which were at a great distance from his residence, whilst the Regent's-park was almost close to his door, he replied, that the predilection was by no means a mere caprice, but was attributable to his repugnance to visit a place that too painfully reminded him of past sufferings. He said that, during his emigration, the Regent's-park, which was then nothing more than a dreary marsh, had frequently been the scene of his wanderings, when a prey to hunger and to the most poignant anguish both of mind and body; and that he was naturally anxious to shun a spot which, even after a lapse of twenty years, revived the recollection of that bitter period. In keeping with the noble simplicity and frankness of this avowal is the trait related in the following anecdote, with which we shall terminate our chapter:

Our readers are no doubt aware that there exists in London an association, called the Literary Fund Society, the object of which is to afford relief to literary men in distress. No such institution exists in France, where, however, distress amongst men of letters is by no means uncommon. M. de Chateaubriand had made a donation of one hundred pounds to the Literary Fund Society, and as this sum far exceeded the amount of an ordinary subscription, the ambassador received an invitation to the annual dinner of the association, to which were also invited several other distinguished guests, and amongst the number Mr. Canning. After dinner, the health of the Viscount de Chateaubriand was proposed, and the poet was delicately thanked for his munificent offering. He immediately rose, and as he felt some embarrassment in addressing his auditory in English, Mr. Canning, who was seated next to him, declared in his name and at his request, that he had given nothing—that he had merely discharged a debt, having, at the period of his first visit to London, been himself frequently assisted by the society—that in repaying the obligation, he had merely done as one of the literary fraternity should do towards another; and that it was from him that thanks were due. In our minds the munificence of the act was enhanced by the nobleness of the declaration. The ambassador of France, laying aside his dignity, his pride of office, and placing the forlorn and pennyless author of 1802 full in the recollection of the proudest aristocracy of Europe! And Canning, too! the prime minister of England! Canning, who, as our readers may know (for he never disguised the fact), had in his early days availed himself, as a literary man, of the society's assistance! It was a glorious scene—a scene of simple and genuine grandeur—one to be written among the few bright pages that redeem the insignificance of aristocratic recollections.

SKETCHES ON IRISH HIGHWAYS.

BY MRS. S. C. HALL.

IRISH RUINS.—PART II.—THE STORY OF CLOONEY BLAKEY.

It has been said, that the complacency with which we dwell upon the miseries of our fellow-creatures is a strong proof of the evil tendency of our nature. This may be, in some degree, true; but even the snarling French cynic tells us, that "Les vices entrent dans la composition des vertus, comme les poisons entrent dans la composition des remèdes. La prudence les assemble et les tempère, et elle s'en sert utilement contre les maux de la vie." Rochefoucault gives to our feelings, in this instance, a better interpretation than could be expected from him.

I assure those who peruse these pages that if I return to the subject of Irish ruins, like the bird which repeats its one melancholy note, until it is incapable of giving voice to any other, it is because my heart pants to excite sympathy for my poor country, and that I would fain draw the feelings of the English towards them in the time of their sore trouble.

There is in Ireland misery enough for gatherers of its records, without being confined to one subject. Misery is the *refrain* of Irish affairs; if we escape Scylla, we fall in with Charybdis. The change of a lord lieutenant—the misrepresentations of an agitator—the cold denunciations of the opposite party, and the bitterness of each against the other,—have little to do with the real state of Irish distress. There is positively nothing known, nothing imagined, of the utter, hopeless, degrading poverty endured by the peasants in the southern and wilder parts of Ireland.

As I write—while you read, there are hundreds of creatures, gifted, unhappily gifted, with feeling and intelligence, yet having no prospect but starvation, no refuge but the grave! "I have worked, lady," said a worn-down peasant to me in the neighbourhood of Cork, "I have worked from six o'clock in the morning till six at night, to support a bed-ridden mother, a wife, and seven childre', two of them (the childre' I mean) are—God brake hard fortune to you and yours, lady!—born naturals. I have slaved these twelve hours upon praties and a drink of could water *to wash them an' the throuble down together*, and the pay I get is tenpence a day."

"But," I replied, "though you work in that manner,

and at that small rate of wages, you have six acres of land, and your wife and sons cultivate it."

"We *had* six acres, we are only able to keep three now; it takes my eldest boy and myself the year round to work out the rent of them. The minister has his tithe, the priest his thrifle; the bit o' land is not rightly managed; the women and childre' hasn't the strength in 'em to manage the land which the devil has *trampled rough-shod over so many times*. The *baste** was seized and sould for the last gale, and so we've nothing to draw mendin: and what heart have we to mend it, houlding it as we do, at a rack-rent, and may be 'turn out' for the first fool that thinks he can pay more for it than we do?"

"It is certainly very hard," I said mournfully; "but, unfortunately, there are many in the same situation."

"And worse!" he replied; "there are some who haven't a broken roof even over their heads, nor the comfort of a *loving face to look into;* nor a child left with the fever; nor a pratee to the ditch-wather theyr'e forced to drink. But, ma'am, honey—that's no comfort!—Sure, the *craythurs, when they're poorer than ourselves, must have what little help we can give them.*"

Poor generous Paddy! *Here* the "craythurs poorer than ourselves" are sent to the workhouse; but in Ireland the half-starved cottager works for the half-starved beggar! We may and we must condemn the *system* which makes the poor man poorer, by letting loose upon him a population of paupers; but we cannot avoid sympathising with the disinterested generosity of the peasant, who gives voluntarily, and without the prospect of return.

Since the first portion of this subject was written, our feelings have been both dismayed and saddened by the fatal affray at Rathcormac: that it has been and will be made the instrument of much evil cannot be denied; but the fact of so many men, armed only with sticks, having been shot by soldiers, almost in *cold blood*, is so appalling in itself, that we wonder where British temper and British forbearance had gone during the few terrible minutes that made the green field red.

Never was there given to England a more touching picture of Irish desolation than that which reached us from the widow Ryan, in whose "haggart" the dreadful tragedy was enacted. After describing the commencement of the slaughter, the old woman unconsciously draws as affecting a picture of filial piety as can be conceived.

"With that I turned back, and I met my daughter in the bohreen; and she went with me, *guarding me with her arms round my neck.*"

After describing how she went to the dead bodies, turning them over in her agonising anxiety, to see if she could discover her son, she found him, poor woman! at last.—"I staggered down to him and I caught his pulse, *and he had no pulse;* I put my mouth to his mouth, *and he had no breath.* I then began to shut his eyes and close his lips; and Dick Willis cried out to me, 'Don't stop his breath;' 'Oh! Dick,' says I, 'he has no breath to stop.' With that I caught his *head*, and my daughter caught his *feet, and we stretched him in his blood where he lay.* And though my eye-balls are like two burning coals, *I cried no tear since.*"

Is not the poor widow's tale a more perfect, though more painful, illustration of the subject of "Irish Ruins," than "Way-Side Reminiscences" could furnish? It was spoken by the heart; and in every heart it will find an echo.

There is not as much *wild* pathos in the few words uttered by the widow of Rathcormac as in many episodes of distress which I have heard; but it is strongly concentrated—the agony is fearfully condensed.—"I put my *mouth to his mouth, and he had no breath!*" Only a mother can understand the strength of the description. It makes my blood run cold. They say the words are not the words of the widow—that they were uttered for her, to serve party purposes, by some ingenious dealer in spoken and printed fiction. I, for one, take no heed of this assertion. It is impossible to coin such *truth;* no human tongue could have uttered—no pen could have transcribed them, unless under the influence of NATURE, strong as that in the bosom of the widow bereaved of her children. It is a terrible note upon a terrible chapter in Irish history; and it will be fearfully used by those time-out-of-mind curses of Ireland—her FRIENDS!

"The four winds of heaven have been blowing upon my head these sixty years," said an old beggar to me, "until they have hardly left a gray hair to cover it." There was a perfect picture of desolation in that little sentence. The language of Irish metaphor is so strong that it bears thinking over; turn it as you will it is complete—there is no flaw in its construction—it is at once pathetic and forcible. I often call to mind the venerable man who had thus so happily expressed the loneliness of his situation. Clooney Blaney passed his latter years in migrating from parish to parish, and from ruin to ruin; he was fond of the "ould places;" though, unlike the "Old Mortality" of the great master spirit of our age, he had no desire to restore inscriptions or preserve monuments, he took much pleasure in patching up holes in crumbling walls, and spent the long days of summer, bare-headed, as indeed he always was, within their precincts.

Of all the ruins in my neighbourhood, he seemed most to delight in those of the seven castles of Clomines. Whether it was that they afforded him more extensive wandering-room, being scattered some on the very brink of the Scar, some far in the green and beautiful meadow, I know not; but I have often seen Clooney's bald head peeping above the gigantic trees of ivy that waved their sombre shining leaves in the gay sun, and heard the clatter of his trowel in the gray twilight of evening, as he pattered with the mortar or wet clay to "steady," as he used to say, "the stones—poor things!" Clooney could not bear to see the stone of a ruin displaced.

"It was weary work for them who put them there, and why should their spirits be bothered by letting go to destruction what we'll never build the like of again?"

A very wealthy farmer in the vicinity of the magnificent castle of Coolhull was so seized by the English mania for whitewashing, that he actually expended much time in "making the dirty baste of a castle look dacent for one't in its life"—he whitewashed it, inside and outside, even the splendid oaken beams underwent an ablution. Some one told Clooney of this, and never was "gaberlunzie" so enraged: he set out on a journey of twelve long Irish miles about ten o'clock at night, and before the next morning, by dint of scrubbing and washing, had succeeded in restoring the north wall of the building to its original hue. The farmer knew there was no use in contending with Clooney, so after in vain endeavouring to persuade him that the castle looked better, that that was the way they "*sarved* ould English ruins in England," and repeating, to no purpose, all the reasons in favour of whitewashing he had ever heard or imagined, he permitted the eccentric old man to have his own way, and, after a fortnight's hard labour, Clooney declared that "the darlint ould castle again looked fit to be seen."

I met him, or rather saw him once, seated on the bridge of Tintern, not the Monmouthshire Tintern, but its Irish namesake. The abbey is the residence, or rather *ought* to be the residence, of the Colclough absentees. It is, however, but justice to Mr. Colclough to admit, that he has appointed an agent whose example and whose precepts are of infinite service to the country; upright, honourable, and sincere, the agent of that happily managed property has proved himself the worthy son of a

* Horse.

worthy father, and is both beloved and respected throughout the country.

"I'm lookin at that fine ould place with a glad heart, lady," said Clooney: "I've been outside every taste of that beautiful abbey this morning, and sorra as much as the paring of your nail out o' place: all the stones firm, and the ould ancient mortar as firm as the stones; my eyes never ache looking at a fine even wall, and it's a good thing to see so holy a building so looked after; the pigs and the rooks are the worst enimies I have: the pigs do be always rooting at my walls, and the crows—ah! it's they's the bad stonemasons—it takes all the little thrifle I begs, and all the lime I gathers, to stop up the holes of them big black birds. It's a fine thing to keep a vow; I'll tell your honour the vow the man who built that holy abbey made, and then I'll *insense* you into my own vow. I have heard, and believe it, that a great Earl of Pembroke, William by name, made an offering to found an abbey in that place where he should first arrive in safety, being out at sea in a desperate storm. Well, the blessed wather he landed in, and in safety, sure enough, was the beautiful bay of Bannow down below; and if you look you will see the curos ould church by the same name at the other side. Well, he was unlike many of the new gentry, for he thought of his word, and dedicated this abbey to the Virgin (holy be her name!) and settled a convent of monks that he brought from an abbey called Tintern, in foreign parts, into it; and even when he was on his death-bed he left it with his beautiful lady to look to the comfort of these holy monks. Myself can't think of the half of those that came afther him, only I know that great tory Queen Elizabeth (and by the same token it's red hair turned just with the heat of the devil's fire in her head)—well, *she* took upon herself, to be sure, to give away the blessed abbey lands to one Toney Colclough for a dirty turn he did, as I have heard, though as I wasn't by, and there's as many lies a'most in printed books, as there do be upon people's tongues, why I can't spake for certain, nor wouldn't in regard of the peoples that's in it now, which they are not, being in England."

"How are lies to get into printed books?" I enquired of poor Clooney, repressing a smile at the same time.

"Augh!" exclaimed Clooney, shrugging his shoulders, "sure there's nothing more natural than to believe that them who would tossicate the air with their lies, would dirty the white paper with the same. I 've a great dread of them book writers; I never see one to my knowledge but onc't, and he was no ways differing from other people; a great man I heard, with a paper up in Dublin."

"And so there was nothing particular about that gentleman's appearance, Clooney?"

"Nothing that I remember: it's a long time ago to be sure; but, yes, there was. I heard say that he bet Father Roche by three tumblers, and walked steady afther it, and sure that was a proof to the wide world what a head he had!"

"So it was, but you promised to tell me the reason of your own vow. Is it true, as I have heard, that you have *taken an obligation** on yourself never to wear a hat, and wander over Ireland until your death, repairing the ruins of your country?"

"It is, ma'am," replied Clooney, "every word of it true: but if you plaze I'd rather not tell it to you here, for the people do be passing, so we'll go across the bohreen, and into the meadow by the strame, and there, if you wish, I'll tell you every word of my history: not that there's much in the differ between it and any Irish history going, they're too much alike, that's the worst of them."

I followed Clooney, and as the old man trudged on before, I could not avoid registering in my memory the picture he represented; the few hairs which, according to his own observation, "the winds had left to cover his bare head," when unmoved by the air, fell over his shoulders in two or three long thin tresses, now floating around him like a halo, and then twisting into elfin locks at either side of his bald crown: slung across his shoulder was his begging bag, patched with pieces of blue, red, or gray stuff, and his sturdy staff, from the top of which, suspended by a string, hung his trowel, was a genuine shillela, armed with a ferule, so that it would serve either for climbing or fighting; he was firm and erect in his carriage, and as he wended his way, first removing a car which was turned up upon its wheels to stop a gap, then striking his staff firmly into the ground, as if he delighted to see how deep it would go, as a specimen of the strength of his arm, it was impossible not to see in him the wreck of much bodily and mental power; and I called to mind sundry stories of poor Clooney, which represented him at once eccentric and superior to his associates, if indeed the peasants among whom he only passed occasionally deserved to be so called.

The spot he chose for his communication was—

"Where shady pathways to a valley led,
A weeping willow lay upon that stream;
And all around the fountain's brink were spread
Wide-branching trees, with dark green leaf rich clad,
Forming a doubtful twilight—desolate and sad!"

The very air seemed weighed nearer to the earth by sadness. As I looked upon the sky, its blue clear canopy grew gray and dim, and the stream murmured hoarsely amongst the sedges. Clooney was seated on a block of red granite, probably one which had not been needed for the completion of the bridge; he had unslung his wallet, and placed it by his side on the ground, his staff and trowel resting on it. I could hardly tell what made old "Grey Jacket," his soubriquet amongst the peasantry, so interesting to me at that moment: I suppose it was his being so admirably in keeping with the scene—the turrets of Tintern Abbey to the right just peering amid the trees; one arch of the old bridge we had stood upon seen above the swelling hill, and looking more calmly beautiful than ever it had looked before—at least to me—with its fringe of blossoming wall-flowers, and its patches of moss, green, gray, and brown, nature's own cunning embroidery: then, from far away, the boom of the fearful ocean came upon the ear, and I saw over the cliffs which skirted its shores the wavering and shining wings of the snowy sea-gulls, as they hovered for a moment in mid air, and then disappeared into the bay. So still, so calmly still was the scene, that I felt startled when Clooney's voice exclaimed, "There's a soft seat for you, lady dear, upon the stump of that ould tree, and you have no occasion to fear toads or sarpints, or any thing of that sort; I dare say you know why yourself;" and the old man smiled half in jest, half in earnest, at the allusion the Irish are so fond of making to the powers of Saint Patrick.

"Were you ever in Connamara, Dick Martin's kingdom, as I've heard it called lately, though that same gentleman's dead this good while?"

"Never."

"An' more's the shame an' the pity," he replied, "for Connamara flogs the lakes, and the Giant's Causeway, and the caves of Michelstown, for bare grandeur; it's a wonderful place entirely; so desolate, so lonely-looking, with nothing to disturb the clouds but an eagle flying through them, and the '*sough*' of the wind among the rocks is like the moaning of dead thousands; it's a wonderful district entirely, and foreigners, to look at it, would think there could be but small pleasure in living in such a place; but it's very quare to see how people take delight in what they're used to. To my thinking it used to be the joysomest place in the wide world. Well, lady,

* *Irish*—for made a vow.

I was born and bred up just on the borders of Connamara, and had the run of the house of one Terence O'Toole."

"O'Toole of Mount Brandon!" I exclaimed.

"Mount Brandon was its English name, to be sure; but the gentleman was beyond your memory, died before your time."

"He did; but I have often heard both of his talents and eccentricities. So you were really brought up by Terence O'Toole—by a man whose ancestral property extended to thousands upon thousands of green and fruitful acres, whose power was that of a despot over his tenantry, and who died——Do, Clooney, tell me how he died!"

"Avick! how fond people are to know how people die, and yet, to my thinking, people's deaths have a sort of relationship with their lives; your quiet, careful men die in their beds, while others, great, good, and of high blood, maybe have no bed to die on. Well, lady, I have heard tell that Terence O'Toole was, in his youth, I have heard, the handsomest man ever born in Ireland, and that's saying a bould word: he carried every thing before him in college with his head, and every thing out of it with his sword or pistol, for he had a dead thrust with the one, and a dead bullet with the other; he never put up with an affront, nor ever gave the wall to an inferior—or a superior; he was the devil for making love, which gave him some trouble in Ireland, but in far countries none at all, for there, I heard say, it's the ladies make love to the gentlemen: he was always the finest-bred man in the company, mighty civil and courteous, and Christian-like too, for whenever he shot a man in a *jewel** he would always kneel down by the side of the corpse and ax its forgiveness, which the whole country considered very condescending in the same gentleman: he was also the finest dancer in France, and the best singer in Rome, when he was there—one who knew said that a French queen, who was afterwards beheaded, was deeply in love with him. In the thick of his young days his father died, and left him a power of land, and a power of debts, but he didn't think it behouldin him to mind either the one or the other, though, like a thrue patriot, he gave up all foreign company-keeping, and resolved to spend his money like a prince in his own counthry. So fond was he of Mount Brandon, that he wouldn't be in parliament, and was quite satisfied with returning the members without thinking of being a member himself: he made it a boast, too, that not a member should ever spend a farthing in trating the men, only all at his expense. A six weeks' election was nothing those times, open house for all comers and goers, whiskey on draft for the poor, and claret on draft for the rich; nothing but feasting and fighting. Ah! Ireland will never see such times again!"

"I hope not!" I ejaculated, as the vision of duels and shillelahs rose before me, "I hope not!" I think Clooney looked at me reproachfully; I am not quite certain, but I think he did.

"Those were his young days," he continued, "and I suppose he thought they could never have an end; and, to be sure, every one in the counthry thought it high time for him to marry, but he did not think so himself, for his eye was set on a farmer's daughter on the estate, a young and beautiful girl, who loved him, as no one ever loved him before or since. She proved that, by bearing shame for his sake; and God knows, the memory of that poor girl's love is tould by the ould people of Connamara to this day, the same as they'd tell of a ghost, to warn their daughters from danger. Her father was a could, proud man, of an ancient family, and she was his only *dote*, and proud he was of the admiration bestowed upon her by high and low; though little he thought what was to follow: but when it was made plain to him, he said no hard word to her, but he took her hand, and walked her out of their house, and took the key out of the door, and nine straws out of the thatch, and he left her waping in a neighbour's house, and went up to the Mount, which was thronged with company, and walked straight into the hall, where they were at their wine after dinner; and *the masther* never saw him till he stood at the foot of his table, white as a sheet, and his teeth chattering. And the ould man laid the key of the farm and the nine straws upon the table without a word; and, having done that, he knelt down upon his bended knees, and he riz his long lean arms above his white head, and he cursed Terence O'Toole, with a curse that came slow and heavy from his lips, and that no one in all that grand company had power to stop; and when he had finished cursing, he turned his back upon them all, and stalked right away, without another word or a sign. It struck the masther, that if he acted so, he might ill use the poor girl, upon whom his heart had been so set. And as soon as he could he got away to see after her. He heard that she had been taken suddenly in her throuble in the neighbour's house, and that now she had a babby on her bosom. Well, to be sure, he ordered every thing for her like a lady, and went home, consoling himself for the sin, with thinking of all the good he would do for her, and for every one else; and how he would get her proud father over. But before the morning broke he was waked by the small cry of a babby under his window, and he called up the ould housekeeper, for his heart mistrusted, and she took it in; and there was a taste of a note from the grandfather pinned on its breast; and when he read the note (no one ever saw that scrap from that day to this) he flew to the cabin she'd been in, and there was the woe of the world; for the ould man had first stole away the babby, coaxed the stupid woman that had charge of it to let him have it to show its father; come back in no time, and, while the nurse slept, rolled his poor, feeble, helpless girl up in the blanket as she lay, and carried her, God knows where. Well to be sure, O'Toole roused the counthry, and, for that the snow lay deep on the ground, they tracked the old man's steps to the border of a broad lake, and there, lady, the mark of the feet ended; but the ice of the water was broken and destroyed at the edge, and under it——!"

"Good God!" I exclaimed, petrified with horror.

"Ay, sure enough, lady, the proud ould man had buried his own and his child's dishonour under that ice!" He paused, and then continued. "The gentleman took no pains to hide his sorrow; and the monument to *her* memory was put up of beautiful white marvel; and some talked of her end, *but more talked of O'Toole's generosity.*"

The world, I thought to myself, was the same then that it is now.

"I have heard tell," recommenced Clooney, "that the masther was never to say like himself afther that day; he took on more than ever with the fighting and the drinking, and seemed for a time to love nothing but the hounds. But a talk of great trouble came over the place, and the great gentleman was afraid to go off his own land, for fear of being took; and then came a dissolute of parliament, and he was advised to go in, and so he did; and promised the gentleman he had got in before a situation. Well, he went off in great grand style to Dublin, where the parliament was then; and some English lady at the castle, with thousands, fell in love with him and married him, though he never held up his head like a man afther. She was a weakly, conceited, little lady, and was never to say asy, till she got him to London; and I've seen a deal in my life, but I never saw the Irish fortune, to say nothing of the remnants of one, that could stand London yet. The masther, when he would come home, was not like himself, but chuff and rough; and the expenses at the Mount made less, and

* Duel.

many retainers turned off, and ancient residenters cast away, and the family seldom in it, and the masther high and up like with the gentry. I remember once he went as foreman to the grand jury with padlocks on his pockets, and when asked why, he made answer, he was afraid to go among such a pickpocketing set without them; and so they challenged him to fight, and it was a fine sight to see them all go out one afther the other, and he flinging away, winging one, laming another, and so on; but he behaved mighty like a gentleman all through, for he did not shoot one of them dead. Another election came on, and who should start against the masther, but the very gentleman that he had brought in so often—set up against him upon his own ground, out of revenge for his forgetting the situation he promised—and such a contest!—the ouldest people in the counthry never remembered the like. The luck of the O'Tooles turned; he fought—was wounded—and lost the election. This was not long before the rebellion; and sure any one then would know that throubles were coming, both to the ould residenters and the country itself. 'Where's your mistress?' said the masther to the ould housekeeper, and she handing him a drink of whey out of a silver pint. 'My lady's in her own room, very bad with the narvous disorder,' replied the ould woman. 'And my sons, where are they?' 'Indeed, then, they're just amusing themselves with shooting each other for divarshun, now the bother of an election is over.' 'This is not wine-whey,' said the poor gentleman. 'My grief, no, sir; but it's good two milk,' she made answer. 'Sorra a drop of wine in the cellars; and the divil of a marchant has sent in an execution, over eleven hundred, for his bill, and no one here strong enough to keep it out; only I oughtn't to be telling you the throuble, my darlint masther, while the weakness is on you.' She might well think of the weakness, and he almost fainting. 'Where's *the boy*?" said be again; 'and by 'the boy' he meant me.' 'He's below,' she said, 'afther hiding some of the plate under the turf-rick, for fear of them vagabonds seeing it,' 'Send him up,' says the masther; 'and though I'd the run of the house all my life, it was the first time I was ever had up before him. He called me to his bedside, he put his hand upon my head, and looked for full five minutes in my face; he then sighed out from the deep of his heart, and turned upon the bed.' 'May I go, your honour?' I said. 'Ay,' he made answer, 'do; why should you not go, poor boy? those I trusted in are all gone.' 'May be your honour would let me try to turn the luck, by staying,' I made answer. He held his hand over the side of the bed; I fell on my knees and kissed it; and I never left him from that day to the day of his death."

The old man, overcome by the full gush of remembrance, laid his head on his hands, and continued silent for some minutes.

"The young gentlemen (he had but the two) were fine, proud, wilful boys, that, on the tip top of an English education had been learnt what faults their father had done; and indeed they did pretty much the same themselves, only in a different way, siding with their mother against him: and she had none of the great love for her husband which makes people cling to the throuble, sooner than lave the troubled. I'm not going to set up but what the masther was hard to bare with; he certainly was. Yet any way, she soon took herself and her children off to England, to her relations—poor wake lady! The best property that could be sould was sould; and, at last, if it wasn't for the tenants who had been made over with the land to the new proprietors, the house of Mount Brandon would have been badly kept; but they were ever and always sending a pig, or a fat sheep, or something on the sly, to the housekeeper, who knew they war for the masther's use, and he none the wiser. Oh! 'tis untold what I've seen him suffer; trying, in his gray-headed years, to swallow the pride; and when at last we found that some, though they knew he had nothing but his body to give, wanted *that* to rot in a jail, we were night and day on the watch to keep them out; and one night the masther says, in his strange way, that there was no gainsaying, 'It's a fine, clear night, and I should like to walk to the ruin by the side of the monument.' I couldn't tell you how his health had gone, and his strength along with it, every thing but *his pride*. And the ould housekeeper and myself went along with him; and he romanced so much as we went, first about one thing and then about the other, that I thought the throuble had turned his brain. It was a clear, moonshiny night, and the stars were beaming along the sky, now in, now out: and he sat down upon an ancient stone, as this might be, and he says—I remember the very words—

"'Boy,' says he, 'the time will be, and that not long off, when what little respect belongs to ould families and ould ruins will be done away entirely; and the world will hear tell of ould customs and the like; but they will look round upon the earth for them in vain—they will be clean gone! If I had my life to begin over again, I'd take great delight in restoring all them things. It's no wonder I should have sympathy with ruins; I, who have ruined, and am ruined.'

"'Sir,' said the old housekeeper, who was hard of hearing, and stupid when she did hear, 'Sir,' say she, 'sure Michelawn and the boys might mend the ruins up of this ould chapel, if it's any fancy for it you have.' So he looked at me, and smiled a sort of half smile, cold and chilly, without any thing happy in it; like the smile you see sometimes upon the lips of a corpse when the mouth falls a little—a gasping smile. 'Sir,' keeps on the ould silly craythur, 'come away home, for it isn't safe for you to be any thing like out of the house, which you havn't been for many a long month before.'

"'True,' said he, 'true, just let me look here;' and he turned to where the little monument stood to the poor girl's remembrance, and he laid his hand on the marble urn, which was at the top, and drew it back on a sudden, as if he had not thought it would have been so could. He then rooted with his stick among the buttercups and daisies that grew about it; and, with a quick thought, flung off his hat, and fell on his knees upon the grass. As he fell, so four men, vagabonds of the law, sprung on him. Whether he felt their hould or not is between him an' heaven; but this I do know, that when I looked in his face, as they held him up off the grass, he was dead. And that was the end of the most beautiful and most accomplished Irishman of the last century.

"It was his end, God help us! And the murdering villains kept possession of the body for debt. The neighbouring gentry would not suffer it, and offered to pay the money; but his ould tenants would not hear of that; they rose to a man, over the estates which had once belonged to him and his, battled the limbs of the law out of possession, and gave the masther the finest wake and funeral that the country had seen for fifty years. There was a hard fight betwixt them and the constables when the body was moving, but they beat them off. And then—whew!—who would follow them into the Connamara hills?"

"What became of his sons?"

"They are both dead: nor is there one stone upon another of Mount Brandon."

"But your obligation?"

"Ay! didn't you hear that he wished the ould ruins of ould Ireland looked to?"

"True; but why do you wear no hat?"

"Didn't he, who was so high, so great, die, that bitter night, bare-headed?"

The old man's eyes were moist with tears.

"One other question, Clooney; the poor girl's child—the baby who wailed beneath his window?"

"Didn't he call me 'boy,' and give me his hand to

kiss; and don't I do pilgrimage through the world for the sins of my father and my mother! The poor girl's babby was the only child that loved him!"

From the London Spectator.

WOOD STATUES.

The curious and unique series of statues of the church reformers, carved in wood by Andrea Brustolini, which we noticed a few months back, are now exhibited at Stanley's Rooms, Old Bond Street; where we have had an opportunity of seeing all of them, with every advantage of light and space. The opinion which we before gave of these wonderful specimens of wood-carving is confirmed by a more attentive examination of the whole twenty-five. To compare them with the works of Michael Angelo in marble, would be an injustice. They possess extraordinary merit, viewed as the production of a sculptor working in a material unfavourable to the representation of the anatomy of the human form, and belonging to a class of artists whose chief excellence generally consisted in mechanical dexterity. The best wood carvings that we have ever seen are admirable chiefly as such; had they been in marble, the quality of the art would not have raised them far above mediocrity: nor do we think these statues an exception. The display of anatomical learning is in many instances more ostentatious than correct. Bearing in mind that they are represented as caryatides supporting a superincumbent weight, under which they groan —as is evident from the strong expression of their faces, some raging and scowling defiance, others more subdued in their display of suffering, and a few resigned to their hard fate—neither the action of the figures nor their musculation is truly characteristic. We do not, however, wish to be hypercritical; but, regarding them as curiosities, to estimate them by a lower standard than is applied to the grandest works of the sculptor's art. The statues on St. Paul's placed near the eye, would cut but a sorry figure; though at their proper elevation they are admirable. We do not scrutinise the carving of a chimney-piece as we do that of a monumental bas-relief. In this view, we admire the vigorous marking of the character and expression of the different physiognomies, living and dead; the uneasy and studiously varied attitudes; the picturesqueness of the draperies; and the masterly hand with which they are wrought. The figures are all of Herculean mould; and only one of them is clothed in his proper costume; the carver having preferred the nude figure, partially draped, in order to show his knowledge of anatomy. Had the individual stature and proportions been preserved in a similarly exaggerated resemblance with the faces, and each appeared in "his habit as he lived," the figures would have been more characteristic, though less imposing; and they would have been fitter subjects for the wood-carver's skill.

From Blackwood's Edinburgh Magazine.

THE WYVILLES.

1.—*George Wyville, Esq. to the Rev. Frederick Walsond, Hartley Rectory, Devonshire.*

Leamington Spa, August.

My Dear Fred.—Don't be alarmed for the health of your old friend, when you see my letter dated from this enlarged edition of the Hospital of Invalids. I am still sound, wind and limb, and almost as active, with the weight of fifty-six years on my back, as in the merry times of our youth, when you and I, Fred,—with humility be it spoken—were a couple of as gay young fellows as one would wish to meet with on a summer's day. It does one good to recall old times, and that is one reason why you and I are such indefatigable correspondents. I have written you a letter on my birth-day every year for these thirty years, and received your unfailing answer in the Christmas week. That is what I call a right English spirit, Fred—never to give up an intimacy with an old friend, when you have found by experience that he is a good and true one. I have been musing over some of our old adventures. I think they are something like wine—they improve every year. Some of them did not strike me much at the time; but now, after they have been bottled up for a quarter of a century, they have a flavour with them that none of one's newer incidents can equal. Do you recollect, Fred, when you and I, and Dick Breton, and Jack Burn, came home, as hard as our nags would carry us, from Harley one night, and just got into college before the stroke of twelve? What a dark night it was, and how Dick kept boasting all the time of our gallop, that his horse was fresher than ever! And then do you recollect his consternation when he discovered that the hostler by mistake had mounted him, in the hurry and darkness, on the Black Jewel, that was on its way to run at Epsom races? It makes one laugh yet to think of Dick's rage, when an officer came next morning, and arrested him for horse-stealing. Ah! these were the times, my boy, for mirth and jollity; there is no such fun now-a-days. I don't believe any Oriel man has been had up for theft since the year of Dick Breton's exploit. How strangely that party is scattered now! Jack Burn keeps his ears warm with a judge's wig, and Dick Breton is a baronet and major-general, with ten thousand a year, eighteen halfpenny-faced children, and only the recollection of a liver. You and I, Fred, are changed least of any. You were always a quiet, comfortable sort of fellow, and settled down as naturally as possible into a steady, respectable rector; and I have flourished as much as the rest of the vegetables in the fat fields of Glemsworth Hall. A squire, a parson, a judge, and a general, were four young fellows upon four fiery horses, dashing through turnpikes, or over them, I forget which; my favourite pace now is a quiet amble, and my charger a cob of fourteen hands. There is not such another punch in Suffolk. 'Twas given to me by Harry Travers; and as the rascal has behaved so infamously since, I think I ought to send him the pony back; but what can I do, Fred? he is as sure-footed as a mule, and warranted to carry sixteen stone. In short, his good qualities are innumerable—well bred, steady, without the least taint of vice, and just in his prime. On reading this last sentence over, I see it is a little doubtful whether I mean the horse or the man. I mean the Galloway, Fred—the other has noble points about him, but is cursedly ill broke in—I'll tell you more about him some other time—I will only let you into the secret, that this same Harry Travers is the cause of my being here; there, that will set you guessing. I have told you already I am sound as a bell in health—and so I am; but notwithstanding that, I am afflicted with a very troublesome disease, in the shape of a daughter, eighteen years of age—as beautiful as there is any occasion for, and filled to the

brim with feeling and romance, which is just another name for—mischief. I undertook to be my own physician; and as this Master Travers lives with his uncle, the old curmudgeon who bought the Scarlock estates, which lie close into mine, I prescribed a change of air. My boy Tom is just come from his travels; very much improved, I believe, but I hav'n't yet seen him. I have sent him home to take care of things in my absence, and have ordered him, without showing any symptoms of suspicion, to keep a watchful eye on young Travers, and a designing, blue-eyed, sweet-looking little thing, his sister. As I am so far away from home, and have neither workmen to superintend, nor any thing to do, but strut about the streets, I will perhaps write you oftener than at other times: for this Emily of mine, though a very nice, well-behaved, affectionate girl—I *will* say that for her—is not so much of a companion as she used to be, but mopes a good deal, and raves a great quantity of nonsense about Shakspeare that wrote the plays. Do you recollect John Kemble in Cato the night we went to Covent Garden after taking our Bachelor's——but, by the by, I don't think Shakspeare wrote Cato. Remember me very kindly to my good friend, Mrs. Walsond, and my god-daughter, little Jane; and believe me your very sincere old friend,

GEORGE WYVILLE.

2.—*Miss Emily Wyville to Mrs. Margaret Bethel.*

MY DEAREST AUNT PEGGY,—I wrote you a very hurried note just before leaving home, telling you of our removal to this place. As to its being for the sake of papa's health, I don't believe a word of it; he is stronger and better-looking than I ever remember him. Ah! I can't help feeling that I am the cause of his leaving home, and, I may say, happiness, behind him; for 'tis quite melancholy, I assure you, to see how out of his element he seems among the butterfly people of this frivolous town. He walks up and down the street as if he had no object in life but to while away the time; and, though we have only been here two days, I am sure he is more heartily tired of it than I am.

Two days after that happy, happy dinner at Scarlock, every thing seemed suddenly and unaccountably changed. My dearest friend!—the sweetest girl you ever saw in your life!—Oh! aunt Peggy, how you would love her, if you knew her so well as I do!—dear, dear Charlotte Travers was so good, so kind, so enchanting! In fact, ever since their old uncle, Mr. Dobbs, came to live at Scarlock, we have been more attached than sisters, and, for nearly half a year, not a week passed without our meeting two or three times; and papa was so fond of her too. And her brother, Mr. Henry Travers, was a great favourite of his. They were both almost constantly at Glemsworth, and you may easily imagine what a comfort dear Charlotte was to me, as we have no *near* neighbours but themselves. I will describe my Charlotte to you as nearly as I can. She is a little taller than I am, which you would not be surprised at, for she comes of a very tall family. Her brother is much taller than Tom. I should think he was fully six feet high; but then he is so elegant and graceful, that he is quite free from the awkwardness which is generally produced by great height. Her eyes are a deep, rich brown; not so dark or penetrating as her brother's, nor so proud and haughty-looking. Her smile is very like his; and, altogether, I am sure you would say, that Charlotte Travers is as beautiful as an angel.

Well, all this went on most delightfully till two days after our dinner at Scarlock, which I wrote you an account of, and then things went on very differently. Papa grew peevish and sullen; never laughed or joked with me as he used to do; never took me out for a ride; nor mentioned the name of his favourite, Charlotte Travers. I thought this very odd, and still more unaccountable that he hurried me off here on a single day's notice; leaving my maid Patison at home, and only bringing old Giles Gubbins, the coachman, to look after his punch pony. He used to call it Young Harry, because it was a present from Mr. Travers; but now he never calls it by its name, but only says, "Giles, bring round my bay Galloway." I expect a letter from my brother Tom, who is at home, and hope to hear of my darling friend Charlotte through him. And now, my dear aunt Peggy, I will tell you about our situation here.

We have a suite of rooms in the ——— hotel, and are as comfortable as if we were in a private house. The streets are spacious and handsome, and the country in the neighbourhood the most beautiful, and the richest in England. We are within an hour's drive of Warwick Castle, or Guy's Cliff, or Kenilworth, or the birth-place of Shakspeare. All these we are going to see next week, and I will give you as good a description of them as I am able. But lovely as this place is, I cannot help fancying how fresh and beautiful the green lanes about Glemsworth must be in this enchanting summer. How delicious the dark sombre shade of the huge sycamores that form the avenue to Scarlock must be now, with their leafy tops so interlaced, that, in walking beneath them, you might fancy you were in some old cathedral, with its dim religious light, and might listen for the swell of the noble organ to waft your soul beyond this visible diurnal sphere, and lap your senses in Elysium. Ah! when shall we get back to dear old Glemsworth!—Your ever affectionate niece,

EMILY WYVILLE.

3.—*Thomas Wyville, Esq. to George Wyville, Esq.*

MY DEAR FATHER,—I had stood here on my post without seeing any thing of the enemy for two days, and began to think of taking the first step myself, by calling on old Dobbs, and reconnoitring the position of his forces. However, I assuaged my *ennui* as well as I was able, by revisiting the scenes of my youth, which are rendered doubly dear to me by having been absent from them so long. Three years' tossing about in foreign parts has not rubbed off, I assure you, one particle of my English feeling, and I prefer the secluded beauty of an English village, with its venerable church tower arising from amidst a grove of trees, and the cottage smoke curling in blue wreaths far up into the silent air, to the more dazzling prospects of France or Italy. In looking at them my eye only is delighted—it never gets clear into the heart, as a home view, like the scene from our own Merrill Down. And certainly the landscape from that point is very much improved, by the additions your new neighbour has made to Scarlock Hall. The new facing he has given the turrets, and the very judicious openings he has made in the woods, give a greater harmony to the landscape than I had ever thought it susceptible of. But I am wandering from the business of the letter. Yesterday, about one o'clock, after I had been strolling about the park for several hours, I had retired to our old schoolroom, where Emily had left some of her books and drawings. I had thrown myself into the old arm-chair, with my back to the open window,—I had a book in my hand, but as I have now forgotten what book it was, I suspect I could not have been very highly interested in its contents; but certainly, whether by the story I was reading, or by something else, my mind was entirely occupied, when I was awakened out of my reverie by a step just at my side, and then a faint shriek! I started up and saw, nearly sinking to the ground, with agitation and alarm, the sweetest creature in the world; her cheek pale with fear, and in the next moment flushing with confusion. Excuse me, she said, I expected to find Emily here. I told her my sister had left the country.

and enquired if it was Miss Travers whom I had the honour to address. It was, indeed; and really, my dear father, I can't at all see how Emily can possibly be in the smallest danger from so very desirable a companion. She told me that her brother had accompanied her to the gate, and after our mutual awkwardness at so unexpected a rencontre had worn off, and after a great deal of laughing at her unceremonious *entrée* by the window, I ordered Lightfoot, and offered to accompany her until she rejoined her escort in the village. Her brother, however, not expecting her return so soon, had ridden somewhere else, and as she was afraid to return to Scarlock without him, we cut off into the lower woods, in hopes of finding him at a summer house to which she told me he was in the habit of making frequent pilgrimages. The thing that astonished Miss Travers more than any thing else, was the suddenness of your removal from Glemsworth, and Emily's entire silence on the subject. Poor thing, I could not help pitying her for losing her only companion through the savage meanness of the uncultivated barbarian her uncle. But in case this simplicity should turn out to be assumed, and both she and her brother are in a plot to thwart your designs, I have determined, as the best means of watching her closely, to ride out with her as often as I can. If you will tell me more at large than you have hitherto done the actual result of your conversation with old Dobbs, and your fears as to the designs of young Travers, I shall be more able to assist you than now when I am kept comparatively in the dark. After a long ramble through the alleys of the wood, we at last encountered her brother. I was struck with his resemblance to his sister, and though prepared by your last instructions to be suspicious of him, I could not help thinking, from his appearance, that he was rather deserving of the praises you used to lavish on him in the letter you sent to me when I was on my travels. We met as if we had been old friends, for really Miss Travers introduced us to each other in a manner which made it impossible for me to keep up the appearance of reserve which I had intended. I determined, however, not to have more conversation with him than was absolutely unavoidable, so I attached myself almost exclusively to his sister's side. This, I think you will allow, is the safest way, for if I permit myself to get on friendly terms with him, I shall find it very difficult to keep a properly unprejudiced eye upon his movements. After a delightful ride, I left them at Scarlock gate, and as they are going to-morrow to a farm of old Dobbs's—how immensely rich the old hunks must be!—about eight miles off, over Lipscott Down, I thought that was a very good opportunity of fishing out more of their real character, and I have accordingly agreed to go with them. Now, could any thing be more lucky than this acquaintance, so unexpectedly formed, and, from that very circumstance, divested at once of all the forms and stiffness of an ordinary introduction? I shall write to you the result of my observations to-morrow or next day. Now, that a sense of duty to you has reconciled me to my position here, I must confess that I thought it very provoking to have been sent down to this solitary mansion without once seeing either you or Emily after so long an absence. I hope you find Leamington agree with you, and if you do, I should advise you to be in no great hurry to deprive yourself of its advantages. Every thing goes on here as well as if you yourself were on the spot; and as Emily has luckily left the key of her book shelves, I can employ my spare time very profitably in study. Write to me immediately, and believe me, dear father, &c.

THOMAS WYVILLE.

4.—*George Wyville, Esq. to Thomas Wyville, Esq.*

That's the very thing; stick to it, my boy, and Harry Travers—Mr. Henry Travers, I mean—confound the boy, I can't help thinking and speaking of him as if he were my own. Well, that young man will find it impossible to escape your penetration. You ask me the particulars of my interview with old Dobbs. Did you ever see him? He is the scurviest-looking old rascal you ever saw—thin as a board, with a face apparently carved by a very rough workman out of a log of damaged mahogany. He and I used to get on very well, though he was continually jeering me about my high birth, as he called it; he was always doing the same to his nephew and niece;—for General Travers, their father, you'll observe, made what is called a low marriage, though, from all I can hear, their mother was a very respectable, ladylike sort of woman. You know, from my letters, what a favourite of mine young Harry was. In fact, he was the nicest lad that could be—famous rider, capital shot, admirable fisher;—in short, one of the pleasantest, best-informed fellows you can fancy. I was always thinking what an excellent companion he would be for you on your return, and installed him very nearly in your place, as my right hand man upon all occasions. As to minding his uncle, he did not care a stiver for all the old Dobbses that ever walked, compared to me. And if the truth were told, I think he likes me better yet than e'er a relation he has in the world, for Harry is the best-hearted—but enough of this. Two days before I came here in such a hurry, I went over to Scarlock, and sat down for a few minutes with old Dobbs. The old fellow has a habit of beginning every conversation with a strange grumphy sort of cough, and the bitterer the speech he is going to make, the quicker and more frequent grows his —ugg! ugg! ugg! After speechifying to each other about the weather for some little time, I thought it best to come to business with the old gentleman in an open, honourable kind of way; so I said to him,

"Your nephew, young Travers, is a great favourite of mine."

"Ugg, ugg—He is very well till he is known."

"Well, for my part, I like him the better the more I see of him. And what I was going to say to you was this, that if so be as by any chance our young ones should take a fancy to each other, why, then"——

"Ugg, ugg, ugg," interrupted old Dobbs; "why then, neighbour Wyville, you must make the young man your gamekeeper; and as to the young woman"——

"Mr. Dobbs," I said, getting angry at the impertinent old vulgarian, "I want to hear only a plain answer to a plain question. You would object to the match?"

"Ugg, ugg—between Glemsworth Manor and Scarlock Hall?—by no means—ugg, ugg."

"Why, you must be aware, Mr. Dobbs, that I have a son, and can do very little for my daughter."

"Then I can do nothing—ugg, ugg—for my nephew; for—ugg, ugg—d'ye see, you squires of gentle blood are very glad to get hold of a good settlement in any way you can—ugg, ugg. If it's love that makes Miss Emily run after my nephew, why let her marry him, and be contented. He shall get no settlements from me."

"We don't want any from any penny-saving old curmudgeon like you," cried I, in a great rage; "and if you gave him all the money you have scraped together, he should never have my consent to marry any one belonging to me. So, good morning."

"Ugg, ugg, ugg. What if he marries her without asking your leave?" replied old Dobbs, growing nearly as angry as I was. "What if he takes her in spite of you? what if he runs away with her before a month is past? Ugg, ugg, ugg."

"I shall take special care he has no opportunity."

"Ugg, ugg—no settlement from me. But what's to hinder him from marrying any squire's daughter he pleases? what's to hinder him, I say? Ugg, ugg."

Before he had time to finish his harangue, I had left the insulting old scoundrel's house; and as I have made up my mind to keep Emily out of the way, I brought

her off here, in hopes of her meeting some fellow that will put Harry Travers out of her head. But do you, in the mean time, continue your guard upon the brother and sister; spite old Dobbs in every way you can; and, after I have got all things a little more comfortably settled here, I will run down for a day or two to Glemsworth to see how the land lies. I have no time for any more at present; so remain your affectionate father,

GEORGE WYVILLE.

5. Miss Emily Wyville to Mrs. Margaret Bethel.

We have now been here, dearest aunt Peggy, for a whole fortnight, and still I have heard nothing of what they are doing at Glemsworth. My brother Tom has written two or three letters to papa; but their contents are rigidly kept from me. We were terribly dull for the first week. Papa had nothing to do. The news-room grew tiresome, so did the pump-room; and as we had no society, I was quite sorry to see him so wretched. Three or four days ago, however, he became acquainted with an old gentleman who lodges on the same floor with us. He is paralytic, and blind of an eye—very sarcastic and ill-natured: but papa finds him very amusing. I am glad of it for his sake; but, I must confess, the hideous snuffle with which all Mr. Griper's good things are said—for he speaks almost entirely through his nose—becomes excessively annoying. Regularly about twelve o'clock every day, we hear the creaking of the little wheeled chair, which he never leaves, coming along the passage, then a tap at our door, and here he sits with us all day. If we go for a walk, nothing will please old Griper but to have his chair wheeled up and down the street close beside us; so that from morning till evening we are never without the company of papa's new friend. He is one of that sort of persons one is always sure to meet with at watering-places. There is no person we know any thing of in any part of England with whom he is not acquainted. Papa calls him his peerage, almanac, and army list, all in one. He is even acquainted with our neighbour, old Mr. Dobbs; and shook his head greatly when papa asked him if he knew any thing of Harry Travers. Ill-natured, ridiculous old man, I can scarcely endure him. He even talks disparagingly of my amiable Charlotte, and told us in strict confidence, that old Dobbs had hinted to him that he had a plot to unite the Glemsworth property to his own, by getting young Wyville to marry his niece!

You ought to have seen what a rage my father was in at this information. He called him cozening old Jew, and fifty other epithets worse than these, and said he would go down and put a stop to the whole plot, by disinheriting my brother, if he ever said another word to my charming Charlotte. Another word, thought I. So they *are* acquainted. How very odd, that Tom should never have written to tell me so. Isn't this old Mr. Griper the most provoking creature that we could probably have met with? But the most puzzling circumstance of all is, how the fact of my brother's marrying Charlotte can, by any possibility, unite the two properties. The old man is not surely so mad as to make the girl his heir. Ridiculous thought! And if I could fancy for a moment that she entered into so unprincipled and infamous a scheme, "Though that her jesses were my dear heartstrings"—But no! The thing is impossible, and the whole story is only another ill-natured invention of this detestable old slanderer, Mr. Griper. He seems to have no pleasure equal to the delight of teazing and opposing me. Papa and I went a few days ago a pilgrimage to the shrine of Shakspeare. We drove through a most enchanting country, full of rich views and splendid mansions, and arrived at last at the birthplace of the Bard of Avon. The enthusiasm of the moment was enchanting. My temporary freedom from the cynical remarks of Mr. Griper added, if that were possible, to the raptures of my enjoyment in treading the same street, viewing the same scenes, and breathing the same air as the immortal poet. But my father's apathy was scarcely less provoking than would have been the sneers of his new acquaintance. To all my rhapsodies on the genius, the pathos, the tenderness, the magnificence of the glorious being, he only answered,—"Ah! cleverish chap, no doubt. Elliston was capital in Falstaff." The idea of that fat brutal old man being the only one of all the creations of the enchanter that comes to my father's mind while standing on the very grave of the imaginer of Constance, of Macbeth, of Hamlet, and of Romeo! 'Tis horrible!—most horrible! But our old coachman, Giles, was a thousand times worse, and made me blush for my country, to think that one human being—one Englishman, of whatever grade in society—should be so profoundly ignorant of the very name of the greatest miracle that ever his country produced. He turned to the person who showed us the tomb, and said,—"And, pray, can you tell us where this here old gentleman lived?"

"In this very town," was the answer.

"Mayor, mayhap, or topping tradesman? We ha' a many finer moniments in Glemsworth church. We ha' one to old Bill Figgins the grocer, with a statue twice as big as this. But then Bill Figgins was mortal rich. Was this here Mr. Shakespur a rich gentleman?"

"He was very poor when he began the world."

"Ah! so was Bill Figgins," said Giles.

"He was accused of stealing deer out of a gentleman's park."

"He was?—Then I wouldn't give Bill Figgins's monument for a score of his'n—for Bill was always honest."

"He then went to London, and, they say, held gentlemen's horses at the doors of the theatre."

"What! and slipt out their handkerchiefs, mayhap, or their pocket-books, as they walked past?—One of the light-fingered gentry—eh?"

My father stood by, and enjoyed this conversation very much. The whole scene was profanation to me, so I left them, and wandered in that beautiful churchyard. In silence, and with my heart full of a vast variety of emotions, I lay in a corner of the carriage as we went home, where, as usual, we were received in our own apartment by the odious Mr. Griper.

"I hope you've enjoyed your trip to the birthplace of old Billy the deer-stealer?" he snuffled.

"Ah! very nice place indeed," replied papa;—"the town seems most admirably supplied with coals—I wish to heaven we had such a canal near Glemsworth."

"And you, miss, have you picked up any more information about the life and manners of the playwright?"

I took no notice of his impertinent question.

"He's a pretty subject, truly," he continued, with his insufferable whine, "to be the object of a young lady's idolatry!—A robber in his youth—a vagabond in his manhood—a tippling, prosy, beer-drinking rascal in his old age—a sulky neighbour—a cruel master, an unkind husband"——

"Was he all that?" said my father. "Prove this, Mr. Griper, and I'll burn every volume the scoundrel wrote, the moment I get back to Glemsworth."

"Why, it can't exactly be proved," replied Mr. Griper, "because, unfortunately, at that time there was no brother poet to give us *mémoires* of his friend; but I think we may fairly guess that he was all I have said. For my own part, I have no doubt, in spite of the frowns I see gathering on Miss Emily's brow, that he was a hard-hearted, selfish sulky old rascal; and it is only a great pity Sir Thomas Lucy didn't tuck him up on one of the trees in his park."

"What sort of a looking fellow was he?" said papa, evidently believing all the scurrilous old man's assertions.

"Why, a little, ugly, bandy-legged fellow—fat and inchy as an alderman—with two great goggle eyes, id a red fiery nose, from breakfasting on onions and w gin."

I could endure this blasphemy no longer, and flaunted it of the room, but not before I heard the low snuffling uckle of my tormentor, and the broad, open, hearty ugh of papa—I'm sure I never longed so fervently for y thing as for the departure—(I don't exactly mean e death)—of this provoking old Griper. I have kept a rnal of all our trips to the different places in this ighbourhood—to Warwick Castle, where my heart ells with the triumphs of a tournament or a feast of eacocks,—to Kenilworth, vocal with the pomps and geantries of the noble Elizabeth, and consecrated no ss in the memory of the tender and the pure, by the onies and sighs of the lovely Amy Robsart,—to Stonegh Abbey, fit only for the residence of a poet, the lover f the good and beautiful,—but as I shall send my journal to you, my dearest aunt Peggy, the moment it is ompleted, I will spare you an abstract of it in the mean me. You will see how anxiously during all this letter have turned my thoughts away from home. Alas! if only mention the word, papa looks so black, and Mr. riper gazes at me with his one eye with such an expression of slyness and derision, that I am afraid to open y lips upon the subject. Writing to you is the greatest onsolation I have. Pity your poor niece, and believe e, ever affectionately, your

EMILY WYVILLE.

—*Mr. Giles Gubbins to Mrs. Barrtlett, Housekeeper, Glemsworth.*

Dear Sal, cording to promuss, I sit down to right you vith mutch plessure. Our dooins here has been but so so. About ten days ago there comed a cripple gentleman to ive in the next sweet rooms, as they calls 'm here to our naster and young missus. He is a rum un, surely. But naster takes to 'im greatly; and, what's more, thoff he has nly one eye, and never no legs, I'm considerable mistaken f he don't take a'ter Miss Emily. He be continually axin' questions about her whenever he meets me in the assage, as he goes whirring along in his sedan. I'll eep watch over the old varmint, so if Master Harry alls, tell him we are all in good health and well to do. wish we was all back at Glemsworth. I can't think hat put it in master's head to come here gallivantin' mong a set of people as sits in little arm chairs, runnin' n wheels, and calls 'emselves anvyleeds. They are uer people them anvyleeds surely, but we doesn't know one on 'em except this here old gentleman, Mr. Griper, I told you on as axin' so much about our young misis. Tell Master Harry we are all right and no misike. 'Cordin' to promuss, I will now tell you all as we ave seen; but as my memory is very bad, and I never ook no notes at the time, I perhaps confuses them a t. We have seed Warrick Castle, and Landleworth astle, Statford on Haven, and Stonelegh Habby; but t my mind is so worried with the lot on 'em, that can't recollect wich on 'em I seed first. Howsomever, Warrick Castle we seed a number of things. But the oet wonderfullest thing of all was a huge porridge pot, ual to our hundred gallon boiler, as belonged to a icked fellow in these parts called Shakespur. He stole horse, and then had something to do with holding ers at the doors of a theatre. Howsomever, there the t is, sure enough. There was also a great head of me enormous beast called a ell-of-want; and the fat ntleman as showed us the coorosities, said somcthing out a man of the name of Seesar—I always thought at was the name of a dog—as built a tower here, so I ppose he was a toppin' mason in this here country. hen there was a ruination—no, that was at Candleworth—a statue of a man not half the size of Master Figgins's in our church at home—no, I think that wur at Statford on Haven. But the place I remembers best about was Stonelegh Habby. You never seed sich a beautiful place in your born days; Scarlock Hall is nothin' to it. The gentleman as lives here was a great favourite of Queen Elizabeth; she came down for to see him, and every body thought she was a goin' to marry him; but here was the devil to pay, for he was married already to a very beautiful young lady, one Miss Hamy. Well, what does he do, but, like a bloody minded villain, murder she; and a'ter all, the queen, God bless her, would have nothin' to say to him. Now, between you and I, Sal, I don't think this here reform bill is of any kind of use whatsomever, if a man be at liberty to murder his wife without impunity, as a body may say. But here, this here gentleman is still livin, and from all I can see, as much liked and respected as if he was as innocent as a babe. Oh! Sal, the sin of this here world is prodigious. But whether this happened at the Habby or Candleworth Castle, I am not very sure; but it isn't of no grit consequence, so as it happened somewhere. After this account of our travels, you'll see as I have been a storing my mind with useful and entertainin nolledge, like the little books as lies in your room. There's nothin like travellin for openin one's mind,—or his eyes either, for the matter of that. I've seed a sight of things sin I left hoam. The horses, to be sure, is very fine; and master's cob—young Harry—is the admiration of all the fat old gentlemen in the town. They are always a axing me if it is to be sold; but master wouldn't part with it for its weight in ginnies; so tell Master Harry we are all right, and never to be down-hearted about nothin, for it will all come round in time. I wish we was all back hoam again, for they puts too little hops in their beer, thoff the porter I must confess is particklar. O, Sally, I hasn't had a bit of a junket-like since I left the old manor. The bar-maids in them parts is uncommon high; and besides, for the matter of that, I never could see no use in a parlour, with one whole side of the room, and one-haff of the door-way made of glass,—a pretty joke it would be if there was a glass door to your room at Glemsworth, where you and I and the butler has all been so snugg. I really wishes we was all back again, for I feels in this outlandish place just like one of the babes in the wood. Master would be as tired of it as I am, if it wasn't all along of this cripple gentleman, as takes to him amazin:—so no more at present, but remains your fello-servant,

GILES GUBBINS.

P. S. Tell Jim Fyler to be careful in giving the bay mare a canter every mornin. Young missus will ride her again before long.

7.—*Miss Emily Wyville to Mrs. Margaret Bethel.*

I am sure it is one of the most delightful things in the world to have such a dear, kind, good-natured maiden aunt as I have. What could I do in this banishment from all the places and all the friends that were dear to me, if I had not your sympathising bosom, dear aunt Peggy, on which to repose my sorrows? My situation here grows more and more distressing every day. This wicked old man Mr. Griper, does all he can to make me wretched; and he has now got so completely the mastery of papa, that he follows his advice in every thing. He has pressed him to Glemsworth for the whole of this autumn, and (horrible to relate!) the invitation is accepted. Indeed, I overheard him promising to papa to make himself useful in keeping me out of the clutches of that dangerous young man, Harry Travers. Did you ever hear of any thing so indelicate? I only wish Harry had heard him—But no! I wouldn't for all the world have Mr. Travers know of their suspicions. It is really

too bad to be twitted in this way, as if I had become secretly engaged to poor Harry, when I assure you there is no ground for it. It may perhaps strike you as very odd, that Harry never even hinted at any thing of that kind to me. I must say it appears rather extraordinary to me, especially as I know from the dear open-hearted Charlotte, that he doesn't consider me merely a common acquaintance. But now to be suspected wrongfully is very provoking.

I had written thus far, when I was summoned to the drawing-room, and there I found papa and Mr. Griper in deep divan. Papa held a letter in his hand, and paced up and down the room in a state of excitement. "The old rascal," he said, "that old scoundrel Dobbs will succeed, I verily believe, in both the things he has threatened me with. Young Travers gone off about ten days ago into Devonshire; and my boy Tom fallen evidently over head and ears in love with that minx, Miss Charlotte!"

"O, delightful!" I cried.

"Hold your tongue, miss," replied papa, in a towering passion: "If he has made such a fool of himself, he shall suffer for it, I can tell ye."

"And quite right too," snuffled old Griper. "She must be a very designing sort of vixen, this friend of Miss Emily's; and as to the young man Travers having gone into Devonshire I don't believe a word of it."

"How? where do you think he's gone to, then?" said papa.

"Why, here to be sure. I have no doubt he is lurking about in this very town—perhaps in this very house," replied Griper, looking impudently at me.

"I wouldn't advise him to let me catch him here—that's all. But what, in Heaven's name, is to be done? Old Dobbs shall not triumph over me, if I can help it. Tell me, my dear Griper, what I ought to do?"

"Why, your object, as I understand you," answered Mr. Griper, "is to prevent Harry Travers from running away with your daughter. There is no use keeping the matter a secret now. Old Dobbs crowed over you, and boasted that Travers would do so within a month, without asking your consent, and without his agreeing to settle a shilling on his nephew."

"Yes, that's what the old rascal said. But, adad! I think we'll beat him; for three weeks are past already, and it will be an extraordinary matter if we can't keep him at arm's length, at all events, for seven days longer."

"But there's another thing," continued Mr. Griper, "that you have to guard against; and that is—that old Dobbs and the girl together don't hook in your son to a marriage without any settlement,—so that the old fellow will *do* you on both points, and have both niece and nephew provided for without coming down with a single shilling."

"The skinflint old Jew! It isn't so much that, as the triumph it will be to him: there will be no end of his cursed 'ugg, ugg!' But how can I prevent it?"

"Your only plan, my dear Wyville, is this: you have a friend in Devonshire near the place they say young Travers is gone to?"

"Yes, old Fred. Walsond."

"Well, write him. He will easily ascertain whether or not he is really there. Go you, in the mean time, for two days to Glemsworth, and settle matters as you best can with Master Tom and Miss Charlotte. Leave charge of this young lady to me: I'll keep guard over her as if she were a golden apple; and"——

"Capital! the very thing!" exclaimed my father, shaking his friend's hand. "What could I have done without you? Emily," he continued, turning to me, "I put you entirely in the charge of my friend, Mr. Griper. See no one else but the landlady and your maid till I return. You have your books and music, and Mr. Griper will pass the mornings with you. I shall be back in three days, and hope to hear good accounts of you when I return."

"I am sorry, sir," I said, "you have not paid me the compliment of reposing confidence in my own sense of propriety, but put me under the care of a person whose company is at all times disagreeable, and still more so, when he is mean enough to take on himself the character of a spy." I glided majestically out of the room as I said this, but not before I heard papa say, "Never mind what she says, Griper; we'll keep her out of old Dobbs's hands at any rate." So here, dearest aunt Peggy, am I kept a prisoner, and without even the miserable consolation of having done any thing worthy of such restraint, and under the guard, too, of that detestable old man. I can't write another word: so adieu, dear aunt, your disconsolate niece,

EMILY.

8.—*George Wyville, Esq. to the Rev. Fred. Walsond.*

Never can any man, my dear Fred, know what it is to be thoroughly miserable, till he is plagued with marriageable daughters and flirting sons. I told you in my letter from this place, that I had set Tom to keep watch over young Travers and his sister. What the deuce do you think they have done? Why, blinded him, and, I verily believe, worked him into a marriage. You will say, why not? I will tell you. Old Dobbs, the girl's uncle, is a queer, disagreeable, purse-proud, old fellow, and put me into a rage with him the last time I saw him. I went over to speak to him about his nephew, who had been throwing sheep's eyes, as the saying is, at my Emily. He laughed and sneered, till I lost all patience, and told me, that if his nephew chose, he would run away with my girl in a month,—but he first of all said he would condescend to agree to the match, if I settled my whole estate on the bride! Did you ever hear of such a rascal? And now what do you think his plan is? Why, to get my son to run away with his unportioned niece, in hopes, as my good friend, Mr. Griper, suggests, to put me into a passion with the boy, disinherit him, and settle all upon Miss Emily, who will by this time have been snapt up by young Travers, without so much as saying to me by your leave. Here's a plot! I would submit to a great deal if I could only spite the old man. But how to do it is the question. One way certainly is, to keep my girl out of young Travers's reach; and at the same time to resist my boy's marriage with his niece, till I have returned him tit for tat for the insult he offered to me, by promising to consent to the match, provided he settles every acre of Scarlock Hall upon the bride. This will be capital revenge, and I sincerely hope the old rogue's indignation will choke him. All these plans have been put into my head by the pleasantest old fellow I ever met with. He is a prodigious victim to rheumatism, and is blind of an eye, over which he wears an enormous black patch. He lives constantly in one of those whirligig sort of chairs they have here, and has been of great use to me. He recommends my going to Glemsworth to put my revenge on old Dobbs in execution; and he has promised, in the mean time, to be as watchful as a dragon over Miss Emily. So much for her. She is pretty safe, I conclude, for though the fellow has but one eye, by Jove, he is as clever as the old chap we used to read of that had a hundred. Now, what I want you to do, is to ascertain for me immediately, whether Harry Travers, as I hear by a letter from home, has gone on a visit to your neighbourhood, to the house of a gentleman of the name of Sir Peregrine Potts, near Hartley. If so, the game is our own. But old Griper suspects that his Devonshire visit is a hoax, and that in reality he is on the watch in Leamington. Lose no time in letting me know. What could I have done without such an assistant as Griper! He is coming to me this autumn. You must make as

effort to come and meet him. I am sure you will like him, he is so confoundedly satirical and sharp. But the chaise is at the door, and I must be off. Yours ever, sincerely,

G. W.

9.—*Miss Emily Wyville to Mrs. Margaret Bethel.*

Oh, dear aunt Peggy, how you will be surprised at what I am going to tell you! Scarcely had papa been gone half an hour, when a message came to me in my bedroom, that a person requested to speak with me in the parlour. I went, and saw a very elegant handsome young man; and as I was hurrying out of the room again, thinking it was some unaccountable mistake, he rushed forward, calling me "Emily, sister Emily!" and when I looked again, I found it was my ever kind and affectionate brother! Was ever any thing so curious! It took a weight off my heart at once. I told him all the incidents of our stay here. He laughed immoderately at them all; and when I described my horror and detestation of the grim old gorgon who was set to watch me, his enjoyment of the joke, as he called it, became uncontrollable. I confess I felt greatly alarmed, in spite of Tom's presence and protection, when at this moment I heard the chair of the watchful Mr. Griper creak, creaking along the passage. At last the door opened, and in, as usual, wheeled my tormentor.

"So! Miss Emily," he snuffled, "who's this? You've lost no time, I see. Is this Mr. Travers come to disobey your father's injunctions already?"

My brother during all this address was nearly convulsed with laughter.

"Yes," he replied, "old gentleman, my name is Harry Travers, and I claim this young lady as my bride. What just cause or impediment can you advance to the contrary?"

"Only this," growled the invalid, "that I have a witness here who can swear that you are not the real Simon Pure. Come into court!"—and as he said this the door was pushed open, and Charlotte Travers rushed into my arms.

Whilst we were mutually embracing, and I wondering by what strange accident all this had come to pass, old Griper wrung his hands and tore his hair, as if he were distracted. But what was my horror, when my brother, walking up to him, said, "Come, old gentlemen, to the right about! your absence is particularly requested!" and he actually proceeded to lay hands upon his chair. Then, with a shout of prodigious laughter, in which even Charlotte joined very heartily, old Griper tore off the patch from his eye, the grey grizzled wig from his head, leapt out of the chair, and in a moment was kneeling at my feet. 'Twas Harry Travers! Isn't this more like a scene in a play than in actual life? How he has been able all this time to disguise himself, I can't imagine, But what will papa and old Mr. Dobbs do? We are all in a great alarm about how they will bear this disappointment. My brother says our only safe plan is to put it out of their power to throw any obstacles in the way; and I think he has persuaded Charlotte to enter into his views. Heigh ho! I have no spirits to write you at greater length. Harry evidently agrees with my brother, only he says he is afraid to hint at such a thing as a trip to the church to-morrow, in case old Griper makes any opposition. We can do nothing but laugh over the whole matter. Now that Charlotte is here, I never felt so happy in my life. I will write again to you soon.

Your dutiful niece,

EMILY.

10.—*George Wyville, Esq. to Rev. Frederick Walsond.*

They've done us, Fred, the young ones have done us completely. As to young Travers and Sir Peregrine, Potts, take no trouble about that. I told you in my last what my plans were about old Dobbs. You shall hear how I sped.

On arriving at Glemsworth, and asking for Tom, he was no where to be seen. None of the people had seen him for two or three days, and couldn't even guess where he had betaken himself. I could, though; and made direct for Scarlock Hall. I made sure Mr. Dobbs had tried all he could to inveigle my son into a marriage with his niece, as I had been informed by my lame friend in his wheel-chair, and be hanged to him! so, brimful of anger, I walked into the library,—"Well Mr. Dobbs," I began, "pretty behaviour this of yours, wheedling my boy to take your niece off your hands."

"Ugg, ugg! this is too much of a joke, neighbour Wyville. Your coming to crow over me is most insulting, ugg, ugg!"

"To crow over you? what the devil do you mean, sir? Hasn't your niece run off with my son? Don't you expect, by that trick of yours, to get me to give my whole estate to my daughter, who is to be whipped up immediately by your precious nephew? No, no, old gentleman, your plot's discovered; thanks to your friend and mine, Mr. Griper."

"Mr. Griper? ugg, ugg! I know no such person, ugg!"

"He knows you though, and that's quite enough for me. You shan't succeed, I promise you,"

"Ugg, ugg! I don't understand what you're driving at. You tell me your son has run off with my niece. Let her go, ugg, ugg! I am ready to give up her fortune whenever her husband demands it, ugg ugg!"

"Her fortune?" said I. "Why, I never heard a word of it."

"Ugg, ugg! very likely; ugg, ugg! If she had only told me of her intention I would have made a better bargain for her, that's all. But you and your son have beat me, ugg, ugg!"

This was a perfect puzzle to me. "Do you mean, Mr. Dobbs," I said, "to deny that you have hooked my boy into this match?"

"Hooked, ugg, ugg!—into a match, with twenty thousand pounds, and no settlement? ugg, ugg!"

"Pray, Mr. Dobbs, are you acquainted with a very infirm old gentleman of the name of Griper?"

"Never heard of him, ugg! who is he?"

"Why, he has staid in the same house with me at Leamington for a fortnight. He said he knew you very well. I have left him in charge of Emily."

"Whew!" said Mr. Dobbs, "say you so, Mr. Wyville? You have conquered on one wing; see if I don't beat you on the other."

The old gentleman rang for his carriage, put four posters to it, offered me a seat, and off we set on our way to Leamington, moping and wondering, one in each corner of the carriage. Next day we thundered down the main street: and, on looking up, who should be gazing at us from the window of my own drawing-room but Master Tom and Miss Charlotte Travers.

I couldn't find it in my heart to be angry, more especially as I saw how vexed old Dobbs was. We hurried up stairs.

"Ah! Tom, you're a pretty fellow," I began; "playing such a trick; and as for you, Miss Charlotte"——

"Oh!" interrupted Tom, "let me introduce you, Mrs. Wyville!"——

"What! married? ugg, ugg, and not a word about settlements?" said Mr. Dobbs.

"Even so," replied young Hopeful. "Don't you think I've done exactly as you told me, father?"

"How?" said I.

"Why, spited the old gentleman—look at him."

"But where is my friend, Mr. Griper, all this time?" said I.

"Oh!" replied Tom, "old Griper will be here directly;" and at that moment in wheeled the old invalid in his chair.

"How's this, Mr. Griper?" I cried, "where's your ward? This is your friend, Mr. Dobbs; you don't seem to recognise him."

"Ugg, ugg! never saw the gentlemen in the whole course of my life."

"Don't say so," replied Mr. Griper, snuffling even more than usual. "Didn't you boast to my friend, Mr. Wyville here, that your nephew, young Travers, would marry his daughter within a month?"

"I did, ugg, ugg!"

"Without a settlement?"

"Yes."

"To spite her father?"

"Yes."

"Then, dear uncle!" cried Mr. Griper, jumping out of his chair, and throwing off his disguise, "'tis done to your heart's desire, and here comes Mrs. Henry Travers to answer for herself."

The laugh was now turned against me; and old Dobbs, after enjoying his triumph for a while, held out his hand to me and said, "Ugg, ugg! couple of old fools, neighbour Wyville; least said soonest mended; let us all home again as soon as we can, and since we can't make our children wretched merely for the fun of tormenting one another, why, I say, ugg, ugg—let us make them as happy as we can."

Now, Fred, be a good boy; leave Hartley for a week or two, and join us during our rejoicings. Bring my god-daughter Jane with you; and believe me yours, very sincerely,

GEORGE WYVILLE.

THE INDIAN MOTHER.

[A granitic rock on the western bank of the Rio Temi attracted their attention. It is called the Piedra de la Guahiba, or Piedra de la Madre, and commemorates one of those acts of oppression of which Europeans are guilty in all countries whenever they come into contact with savages. In 1797, the missionary of San Fernando had led his people to the banks of the Rio Guaviare, on a hostile excursion. In an Indian hut they found a Guahiba woman with three children, occupied in preparing Cassava flour; she and her little ones attempted to escape, but were seized and carried away. The unhappy female repeatedly fled with her children from the village, but was always traced by her Christian countrymen. At length the friar, after causing her to be severely beaten, resolved to separate her from her family, and sent her up the Atabipo towards the missions of the Rio Negro. Ignorant of the fate intended her, but judging by the direction of the sun, that her persecutors were carrying her far from her native country, she burst her fetters, leaped from the boat, and swam to the left bank of the river. She landed on a rock, but the president of the establishment ordered the Indians to row to the shore and lay hands on her. She was brought back in the evening, stretched upon the bare stone (the Piedra de la Madre), scourged with straps of manatee leather, which are the ordinary whips of the country, and then dragged to the mission of Javita, her hands bound behind her back. It was the rainy season, the night was excessively dark, forests believed to be impenetrable stretched from that station to San Fernando, over an extent of eighty-six miles, and the only communication between these places was by the river; yet the Guahiba mother, breaking her bonds and eluding the vigilance of her guards, escaped under cover of night, and on the fourth morning was seen at the village, hovering round the hut which contained her children. On this journey she must have undergone dangers, hardships, and privations, from which the most robust man would have shrunk. And the result of all this courage and devotion was—her removal to one of the missions on the upper Orinoco, where, despairing of ever seeing her beloved children, and refusing all kinds of nourishment, she miserably perished—a victim to the barbarity and bigotry of wretches calling themselves Christians.—*Humboldt's Travels.*]

Amidst the rich banana trees,
Within the verdant shade,
Where sun-bright palms a canopy
Of gorgeous beauty made;

The Indian mother's palm-thatch'd hut,
In rustic beauty stood,
Shelter'd o'er head by quivering leaves,
Screen'd by the neighb'ring wood.

Within her quiet, happy home,
Three cherub children dwelt;
High swell'd with joy the mother's heart,
When at her feet they knelt.

Shrieks—shrieks—wild shrieks are in the air,
Fierce, fast devouring flame,
Is scorching up that Eden bower,
Its joys, its loves, its name.

Fiercer than elemental war
Man's passions stalk behind;
High rings the stern unpitying shout,
"Kill, kill, or firmly bind."

With bloody sword, with waving torch,
With slaughter drunk or mad,
Their leader urges on the fight,
In priestly garments clad.

Oh God! was this thy chosen one?
Was this thy servant good?
Whose dark, relentless bigotry,
Would plant thy word in blood?

With hurried speed, in terror wild,
With retroverted eye,
The Indian mother rushes forth,
With rapid steps to fly.

But not alone the mother came—
Two children on her hung;
A third dragg'd onwards by her side,
Within her tunic slung.

Vain—vain her flight; far fleeter steps
Are pressing close behind:
Again the same wild shout arose,
"Kill! kill! or firmly bind."

Seiz'd, bound, and with her little ones,
Allow'd no sign, no word,
Their cries fell bitter on her soul,
Her inmost spirit stirr'd.

Far down the Orinoco's stream,
Fetter'd, both hand and foot,
Far from her happy sun-bright home,
Far from her palm-built hut—

Away they sail'd—hope sunk—it died—
Onward the light bark sweeps;
When night's dark gloom o'ershadows them,
Something beside her creeps.

It is her child—her youngest one,
Seeking its mother's breast,
On which to lay its wearied head,
Its wonted place of rest.

Fast were her hands—she could not clasp
The cherub—but it crept
Close and more close—it threw its arms
About her neck, and slept.

Night pass'd—morn dawn'd—from fetters freed,
She moves her limbs at last,
Her trembling, bleeding, tortur'd arms,
Are round her darling's cast.

Watch'd, guarded day and night, she dwelt,
Amidst her captors stern,
Who strove by blows, by stripes, by chains,
Their faith to make her learn.

Her palm-built hut—her once blest home—
Rose brightly on her mind;
With woman's skill she 'scap'd her guards,
That happy home to find.

In vain—in vain—by bloodhounds trac'd
Through forest and o'er plain,
Herself—her little ones were found—
Once more to fly—in vain.

They stretched her on the granite rock,
They scourged her writhing frame,
And scornful jest and mockery
Were lavish'd on her shame.

The mother's rock was spotted o'er,
With drops of crimson blood;
Her piercing shrieks—her anguish'd groans—
Rose wildly o'er the flood.

Oh, Heaven! were these thy messengers,
Man's sinful soul to save?
Whose piety had led them forth
To cross the boundless wave?

They told of love—of charity—
Yet treated men as slaves;
They made that paradise a hell
Thick strown with tear-worn graves.

No, no!—thy heavenly mission breath'd
Of joy, of hope, of love:
Of holy calm, of happiness,
Of endless peace above.

How sacred is a mother's love!
Yet savage hearts are found
Would strive to break the life-link'd chain,
By which her soul is bound—

Would burst the rivet—break the spell—
Which clasps a mother's heart;
The heart may break—but a mother's love
Of life itself is part.

They dragg'd her from her little ones,
Though fast they weeping clung—
Though drops of tear-chok'd agony
Upon her forehead hung.

Far—far away they carried her—
Long sail'd the victim-bark;
They left her 'midst unforded streams,
'Midst swamps and forests dark.

Yet scarce had night commenc'd its reign
She broke her bonds and fled—
She plung'd 'midst dangers yet undar'd,
'Midst scenes of fear and dread.

Oh, Indian mother! did the beasts
Thy sacred errand know?
Oh, Indian mother! did the streams
Dry up their wonted flow?

How didst thou live in those wild haunts?
Thy food did angels bring?
Or did the God thy faith ador'd
Round thee his mantle fling?

Safely thou pass'd a wilderness
Man since has never trod,
Supported by a mother's love,
Upheld by mercy's God.

Again they found thee near the hut
Which held thy precious ones;
Again blows, stripes, and chains, were tried,
To still thy anxious moans.

Oh, mother! broken, bud-stript flower!
Was this thy sole reward
For untold dangers overcome?
For all thy perils dared?

Robb'd of her treasured loves—her joys—
Despair froze up her tears;
It iced the very springs of life,
Blasting both hopes and fears.

Heart-broken—withering—dying fast
With spirit unsubdued,
Firmly she shuts her parched lips,
Refuses drink, or food.

Bleeding—fast fetter'd—far away
Beyond her children's cry,
High tow'rds the Orinoco's source,
They bore her—but to die!

For, passive—listless—stirless now,
With closing, sunken eyes—
With thin, attenuate, woe-worn frame,
The Indian mother lies.

Deserted by her savage guards,
Left all alone to die;
Half-buried 'mongst the sedgy reeds,
Watch'd by no human eye—

Rous'd by the river's rush, the voice
Of whispering tuneful trees;
Or by the coolness freshly brought
Upon the passing breeze;—

She looks around—a quiet smile
Upon her pale cheeks play'd;
Perchance she dreamed that in her home
Her dying limbs were laid.

P. G.

STATUE OF BONAPARTE.—In nothing is the influence of political events on the fortunes of sculpture more remarkable, than in the history of Napoleon's own statue. This colossal work (12 feet in height) was commenced in the time of the emperor's greatest successes. It accordingly displayed him with the sceptre of subjugated Europe in one hand, and a little statue of victory, after the ancient type, in the other. But before the epoch arrived when the imperial resemblance should have been set up in Paris, the symbol had lost much of its propriety and application. A dread of the epigram (for such it had become), together with certain notions of ridicule, which Napoleon entertained of the classical nudity of the work, caused him to command its temporary seclusion from public view. It remained, therefore, hidden in the Louvre, behind a barricade of boards, till the fortunes of war delivered it, as it were, a captive, into the possession of the conqueror of Waterloo; and it now stands, in an almost equal obscurity, beneath the staircase at Apsley House.

From the Asiatic Journal.

INDIAN SPORTS.

Happy are those young men who take out with them to India the tastes and habits of a scholar or of a sportsman, though perhaps neither can be carried to excess, without danger, in a climate almost equally hostile to mental and to bodily exertion. Moderation, either in study or in field-sports, requires more self-command than is usually practised by the young and enthusiastic; and the latter pursuit, especially, is so fascinating, as to beguile veterans into rash enterprises, which could only be excusable in the days of boyhood. Formerly, almost all the European residents of India were mighty hunters; but, in the present day, though there are quite enough to keep up their ancient reputation, the slaughter of wild animals is not so general or so absorbing a passion as it used to be, when the company's territories were surrounded by the courts of native princes, who were accustomed to take the field against the furred and feathered rangers of the forest, with all the pomp and circumstance of war. Parties of gentlemen from Calcutta are in the habit of spending a part of the cold season amid the wildest jungles of Bengal; but their *cortège*, though exceedingly numerous, and the havoc they make, though sufficiently great to satisfy any reasonable person, are nothing compared to the displays of former times. The amusements of Cossim Ally Khan, the nawab of Bengal, in 1761, afford a strong contrast to the habits and pursuits of his degenerate representative. The fame of his exploits still survives in the memory of the people, and their scenes are pointed out with no small degree of exultation.

In one of his grand hunting-parties, his retinue, including a body-guard of cavalry, consisted of not fewer than twenty thousand persons. The officers of his army and household, and his European guests, were conveyed to the theatre of action on elephants, camels, and horses, or in palanquins. The hunters were armed with spears, bows, arrows, and matchlocks, and they were accompanied by greyhounds, hawks, and cheetahs. The scene of the chase was one of the most beautiful which the splendid landscapes of Bengal can present. Between the Ganges and one of the ranges of hills, which spread themselves along the frontiers of the provinces, there is a wide tract of country, diversified with rocks, woods, lakes, heaths, and rivulets, and abounding with every sort of game; hither the nawab and his party repaired, and, forming an extensive line, roused up the denizens of the field as they advanced, and letting the hawks fly as the wild-fowl sprang up, and loosening the greyhounds and cheetahs upon the deer, the spear and matchlock-men attacked the wild hogs, while others, mounted upon elephants, marked out the still more ferocious animals, and brought them down with a two-ounce ball. The nawab was one of the most active of the party; sometimes he rode in an open palanquin, carried on the shoulders of eight bearers, with his shield, sword, gun, bow, and quiver, lying beside him; sometimes he mounted on horseback, and at others, where the grass and bushes were high, he got upon an elephant. After the diversion had been carried on for three or four hours, and to the distance of twelve miles, the nawab and his guests repaired to their encampment, where a sumptuous repast was served up for their entertainment.

Hunting-parties, upon so grand a scale, are now rare in India, even amongst native princes, and though the imagination can scarcely fail to be dazzled by an assemblage of twenty thousand men, with their picturesque accompaniments of stud and equipage, scouring through the woods, and across the plains, in search of the noblest species of game, such scenes of barbaric splendour would soon become exceeding tiresome. The truest enjoyment of field-sports is offered to small parties of Europeans, who blend intellecual tastes with the love of the chase; who, while sojourning in the forest, delight to make themselves acquainted with the manners and habits of its wild tribes, and who, not entirely bent upon butchery, vary their occupations by devoting themselves to botanical or geological pursuits.

The period usually chosen for these excursions is from the beginning of November until the end of February, a season in which the climate of Hindostan is delightfully temperate, the air perfectly serene, and the sky often without a cloud. Some verdant spot, shaded by adjacent groves, and watered by a small lake or rivulet, is selected for the encampment. An Indian jungle offers so great a variety of beauties, that there is no difficulty in the selection of an appropriate scene. A natural lawn, sloping down to a broad expanse of water, shaded by palm-trees, whose graceful, tufted foliage forms so striking a feature in Oriental scenery, or beneath the canopy of the cathedral-like banian, stretching its long aisles in verdant pomp along the plain, or in the neighbourhood of a mosque, pagoda, or stately tomb, whose numerous recesses and apartments offer excellent accommodation for such followers of the party as are not provided with other shelter. There is no danger of being in want of any of the comforts and conveniences of life, during a sojourn in wildernesses, perchance as yet untrodden by the foot of man, or so long deserted as to leave no traces of human occupation. Wherever a party of this kind establishes itself, it will be followed by native shop-keepers, who make themselves very comfortable in a bivouac beneath the trees, and supply the encampment with every necessary which the servants and cattle may require. European stores are, of course, laid in by the *khansamahs* of the different gentlemen, and unless the sportsmen and their fair companions—for ladies delight in such expeditions—determine upon living entirely upon game, sheep and poultry are brought to stock a farm-yard, rendered impervious to the attacks of savage beasts. Every part of the surrounding country swarms with animal life; in the upper provinces, insects are not very troublesome during the cold weather, nor are reptiles so much upon the alert; in Bengal, however, the cold is never sufficiently severe to paralyse the musquitoes, which are said then to sting more sharply, and to cherish a more

insatiate appetite, than during the sultry part of the year. The inconveniences arising from too intimate a connection with lizards, spiders, and even less welcome guests, are more than counterbalanced by the gratification which inquisitive minds derive from the various novelties which present themselves upon every side. The majestic appearance of the trees, many of them covered with large lustrous flowers, or garlanded with creepers, which attain to an enormous size, must delight all who possess a taste for sylvan scenery. In some of the jungles of India, the giant parasites of the soil appear, as they stretch themselves from tree to tree, like immense boa-constrictors, and the blossoms they put forth, at intervals, are so large, and cluster so thickly together, as to suggest the idea of baskets of flowers hanging from a festoon: the underwood is frequently formed of richly-flowering plants; the *corinda*, which is fragrant even to satiety, and scarcely bearable in any confined place, loading the air with perfume, while the *dhag*, with its fine, wide, dark green leaves, and splendid crimson vase-like flowers, contrasts beautifully with other forest-trees, bearing white blossoms, smaller but resembling those of the camellia japonica.

So magnificent a solitude would in itself afford a very great degree of pleasure and interest to contemplative minds; but both are heightened by the living objects which give animation to the scene. Though wild hogs are most abundant in plantations of sugar-canes, which is their favourite food, and which imparts to their flesh the delicious flavour so highly esteemed by epicures, they are also to be found in the wildest and most uncultivated tracts. The roebuck, musk, and hog-deer, conceal themselves amidst the thickest heath and herbage, and the antelopes and large deer rove over the plains. All these animals, however, seek the thickets occasionally, and they are fond of resorting to the tall coarse grass, which attains to the rankest luxuriance in the levels of the jungle, and is the favourite lair of the tiger and the hyena. Panthers, leopards, bears, and the beautiful tiger-cat, are likewise inhabitants of these hiding places; and in the neighbourhood of Rajmhal, the Deyra Dhoon, the Terraie, &c., rhinoceroses and wild buffaloes are added to the list. Amid the smaller and more harmless creatures which haunt the jungle, one of the prettiest and most interesting is the fox; its size scarcely exceeds that of an English hare; the limbs are slender, and it is delicately furred with soft hair, generally of a bluish gray. It has not the offensive smell of the reynard of Europe, its food being principally grain, vegetables, and fruit. The passion of the fox for grapes was by no means a flight of fancy on the part of our old friend Æsop, who showed himself well acquainted with the habits of the Asiatic species. They burrow in holes, and prefer the side of a hillock, where the grass is short and smooth, to the wood, and there they may be seen, in the morning and after sunset, frisking about and playing with their young. They afford excellent sport, when hunted; for, though not strong or persevering, they are fleet and flexible, and make many efforts (by winding in successive evolutions) to escape their pursuers. Jackalls are almost as common as crows, in every part of India; but notwithstanding their numbers, and the great desire which they evince to make themselves heard, there is some difficulty in getting a sight of them, except when the moon is up, and then they seek concealment in the shadows, gliding along under covert, with a stealthy movement, like some dark phantom, or when the prospect of a banquet upon some newly-slain victim lures them from their retreat in open day.

However bare and solitary the place may be, the instant any animal falls to the ground, exhausted by wounds or disease, it is immediately surrounded by troops of two-legged and four-footed cormorants, who do not await its last gasp to commence their attack: four or five hundred vultures will be assembled, in an incredibly short period of time, in places where they are not usually to be found, whenever a bullock or a deer has fallen a sacrifice to a tiger. Upon these occasions, if the rightful master of the feast should be in the neighbourhood, and choosing, as often is the case, to delay his meal until sunset, the jackalls and the vultures, cowering close to the spot, await with great patience the moment in which they may commence their operations, without giving offence, taking care to remove to a respectful distance, when the tiger, who is said to approach the dead carcass in the same cautious and crouching manner as when endeavouring to steal upon living prey, makes his appearance upon the scene.

It is affirmed that whenever tigers roam or couch, multitudes of birds collect and hover about them, screaming and crying, as if to create an alarm, and it is also said that peacocks are particularly allured by the tawny monarch of the wood, and that, when he is perceived by a flock, they will advance towards him immediately, and begin, with their usual ostentatious pomp, to strut around him, their wings fluttering, their feathers quivering, and their tails bristly and expanded. Native sportsmen, who always prefer stratagem to open war, take advantage of this predilection, and painting a brown cloth screen, about six feet square, with black spots or streaks, advance under its cover, which is placed fronting the sun. The pea-fowl either approaches the lure, or suffers the fowlers, who are concealed behind it, to draw near enough to their mark to be quite certain of not missing it. A hole in the canvass enables them to take an accurate aim, and the *ruse* is always successful.

Strange instances of the fascination of animals are recorded, by which it would appear, that, under its influence, the most active and timid rush into the danger, which we should suppose they would be most anxious to avoid. The power which serpents possess over birds, squirrels, &c., is well known, and those who have visited unfrequented places, have had opportunities of witnessing the effect of novel sights upon the shyest denizens of the waste. When the line of march of large bodies of troops has led across sequestered plains, they have attracted the attention of

herds of deer grazing in the neighbourhood. When startled by the humming murmuring noise made by the soldiers in passing, they have stood for some time staring, and apparently aghast with astonishment, with their eyes fixed upon the progressive piles, whose glaring red uniforms and glittering muskets might well inspire them with fear. At length, in his bewilderment, the leading stag, striking the ground, tossing his antlers, and snorting loudly, has rushed forward across the ranks, followed by the whole herd, to the utter dismay and confusion of the soldiers, the frightened deer bounding over the heads of those files who were taken too much by surprise to halt, and make way for them. Incidents of a similar nature have occurred more than once, and they serve to give interest and variety to a march across some of those apparently boundless plains, which stretch to the horizon on every side, and are not of unfrequent occurrence, in the thinly-peopled districts of Hindostan.

The birds, in many places, are to be seen literally in myriads; water-fowl especially congregate in the greatest abundance and variety, their numbers almost covering the lakes and jheels, when resting upon the water; and forming thick clouds, when, upon any alarm, they rise simultaneously upon the wing. The margin of the stream is surrounded by storks and cranes. The species of both are numerous, and the gracefulness of the shape of many can only be exceeded by the beauty of their plumage. The crested heron, whose snow-white tuft is an emblem of sovereignty in India, and the only feather which the religious prejudices of the Rajpoot princes permit them to wear, is one of the loveliest creatures imaginable; its eyes are of bright scarlet, and, amidst many competitors in beauty, it shines conspicuous. There are no pheasants in the woods of Bengal or Behar; but they are found upon the confines of Assam, Chittagong, and the ranges of the Himalaya. In Nepaul, and particularly about the Morung, they are large and beautiful, more especially the golden, the burnished, the spotted, and the azure, together with the brown argus-eyed pheasant. There are several varieties of pea-fowls, black, white, and gray, in addition to the common sort; and though there are some districts in India, styled for distinction, *More-bunje*, "the place of peacocks," they are so common all over the country, that it would be almost difficult to find a woodland haunt where they do not abound. They are certainly not prized in India according to their merits, either as an ornamental appendage, or as an addition to the board. Some Europeans have only been reconciled to their admission at table, by an account which has reached them of their appearance at the lord mayor's state-dinners in London: Anglo-Indians, generally speaking, being exceedingly unwilling to judge for themselves where their gastronomic taste can be called in question. Nevertheless those who, where native productions are worthy of praise, entertain no absurd prejudices in favour of exotics, are glad to have an opportunity of repeating the justly-merited claims to distinction of the pea-chick, as an article of provender.

High as are the merits of this fowl, however, in its happy combination of the game-flavour of the pheasant with the juiciness of the turkey, it must hide its diminished head before the glories of the florikin; the flanderkin of feudal banquets, and the peacock's early rival at the baronial feasts of the Montacutes and the Courtenayes. The florikin is nearly, if not quite, as large as a turkey, and the plumage on the back is not unlike that which distinguishes the monarch of our poultry-yard; but the cock is furnished with a much more splendid crest. A tuft of fine black velvet feathers, which usually lies smooth upon the back of the head, can be erected at pleasure, and, when spread out, adds greatly to the noble appearance of the bird. Its favourite harbour is in the natural pastures which edge the extremities of swamps, and the borders of lakes, always in the neighbourhood of marshy ground, but not far distant from the uplands. In consequence of this choice of situation, and the variety of food which it presents, its flesh acquires a peculiarity unknown to other birds; the legs, which are white, resemble in flavour those of a pheasant, while the breast and the wings bear a similarity to the wild-duck: epicures pronounce the whole to be delicate, savoury, and juicy beyond all comparison. This fine bird is not sufficiently common in India to pall upon the appetite; it is found in Bengal and in the neighbourhood of the hill-districts: but, in many parts of the upper provinces, it will be searched for in vain.

The woodcock is not an inhabitant of southern Asia, but snipes are exceedingly abundant; and there is one variety, the painted snipe, which attains a very large size, and which compensates for the absence of the former-mentioned bird. The jungle-fowl performs the same duty for the pheasants, where that is not to be found, and in some places the speckled poultry of Guinea, which have wandered into the woods, and bred there, are discovered in a wild state. It is one of the most agreeable, amid the numerous enjoyments of forest scenery, to see the hens and chickens sculking and scudding between the bushes, and to hear the crowing of the jungle cock. The black and the rock partridge form very acceptable adjuncts to the table, whilst every variety of pigeons may be had for the trouble of killing them.

A camp-dinner for a hunting party is not only an exhilarating, but a very interesting meal. The most elaborate *pic-nic* provided for a *fête-champêtre*, in England, where people are put to all sorts of inconveniences, and must content themselves with a cold collation, is nothing to the luxurious displays of cookery performed in the open air in India. Under the shelter of some brushwood, the spits turn merrily and rapidly over charcoal fires; an oven is constructed for the baking-department, and all the beneficial effect of hot hearths, for stews and other savoury compounds, are produced with the greatest ease and facility. All that can be attainable within the range of fifty or sixty miles, is brought into the camp upon the heads of coolies, glad to earn a few pice for their daily bread, and indifferent to the obstructions which may beset their path. The multitude of followers, attendant even upon a small encampment, precludes the possibility of any dreary or

lesolate feeling; the habits of the people are in unison with the scene; they are quite as happy under the umbrageous and odoriferous canopy of a tope, as they would be in the marble chambers of a palace. A gipsey-life appears to afford them the truest enjoyment, and the scattered groups, which they afford in the glades and openings of the forest, their blazing fires, cheerful songs, and the majestic and picturesque forms of the elephants and camels glancing between the trees, make up a panorama, which the eye of taste can scarcely tire of contemplating, and which, once seen, can never be forgotten.

Living in a jungle-encampment presents the best opportunity of becoming acquainted with the habits and manners of the elephant, which its domestication can permit. The mahouts live in the most intimate association with the huge animals entrusted to their care; they have each an assistant cooly, part of whose business it is to prepare and bake the cakes for the evening meal. A fourth of the number he appropriates to himself, after going through the ceremony of asking the elephant's leave, a piece of etiquette performed in dumb-show, and which the sagacious animal seems perfectly to comprehend. The cooly feeds his companion, standing under the trunk, and putting each morsel into his mouth; an act of supererogation, but one in which native courtesy, or as it may be called officious zeal, delights. The khidmutghars who wait at table, will stir the tea for their masters, and would cut the meat upon their plates, if permitted, to show their diligence by such minute attentions. Though the gift of speech is denied to the elephant, he not only appears to understand all that is said to him by those with whom he is intimately acquainted, but also to possess the power of making his own sentiments and opinions known. He can be incited to extraordinary attempts by praises and by promises, and when sweetmeats, of which he is inordinately fond, are held out to him, as the reward of successful exertion, he cannot be disappointed of the expected treat without danger. The mahouts converse with their charges as if they were rational beings; perhaps the difference in intellectual acquirements is not very great between them, and where a strong friendship has been contracted, the elephant will refuse to admit of a successor in the office. Upon the dismissal of his keeper, an elephant, who had always been exceedingly gentle and tractable, suddenly changed its character and became unmanageable. Vain were all the efforts made to soothe and reconcile it to its new associates. After the struggle of several weeks, the attempt was given up, and the discharged servant being again re-established in his office, the elephant reassumed its former demeanour, and returned quietly to its duty.

Elephants, though sometimes tempted to fly the abodes of man, and roam in freedom through the wilderness, never forget those persons to whom they have been attached during their state of servitude. One, which had rejoined a wild herd, when encountered by a hunting-party, which was accompanied by the mahout who had formerly had the charge of him, suffered the man to mount upon his neck, and, notwithstanding the experience he had gained of the sweets of liberty, returned at once to all his old habits. They are subject, however, at least a few, whose tempers are not particularly good, to fits of caprice and ferocity. It is astonishing with what care and dexterity they can hook in, with that unwieldy-looking limb, the hind-leg, any object with which it comes in contact. Upon some slight provocation, an elephant has been known to ensnare the unfortunate cooly in attendance in this manner, and it is an expedient which is resorted to with infinite effect upon the attack of a tiger in the rear: the beast is speedily kicked to death, when once he is drawn within the range of those enormous feet.

The courage of the elephant is also liable to ebbs and flows: sometimes, at the sight of danger, especially on the sudden appearance of a tiger, he will take to flight, rushing wildly through the woods, and endangering the safety of the hunters on his back, by the violent collision of the howdah against the branches of the trees; at other times, he will run into the contrary extreme, and charge upon the tawny brute, by falling on his knees, and endeavouring to pin the tiger down with his tusks. This operation, which renders the howdah a very untenable position, is often followed by another of a still more hazardous nature; the elephant is apt to roll over upon its side, in order to crush the foe by its weight, and in this event the sportsman has a good chance of being thrown into the clutches of the tiger, while all the guns go overboard as a matter of course. The courage of an elephant should be of a passive nature, and those, whose good qualities have been improved by training, stand firm as a rock, sustaining the first burst of a tiger, uproused from his repose, with imperturbable coolness.

When an elephant has exhibited repeated proofs of cowardice, its dastardly conduct is punished by the degradation of being reduced from the honours of conveying the castle on its back, to the burthen of the baggage. It is not insensible to this disgrace, nor will a caparisoned elephant deign to associate with its brethren of the pad. No animal is better acquainted with its claims to distinction, or prouder of the splendour of its array, and the difference of the bearing between those decked in flowing jhools, richly bordered with gold, and bearing the silver howdah, or canopied ambarry, on their backs, and the humble beast of burthen, whose housings are of the meanest description, and whose load confers neither honour nor dignity, is very striking.

The care which elephants take of their trunks in an encounter with wild beasts, shows how conscious they are of the value of that important instrument; sometimes they will erect it over their heads like a horn, and at others pack it into the smallest possible compass.

The elephant's partiality for sweetmeats has been already noticed; it is acquired in plantations of sugar cane, and is universal. A curious instance of this attachment to confectionary, and the method pursued to gratify it by an elephant in its savage state, is upon record. It chanced that a cooly, laden with jaggery, a coarse preparation of sugar, was surprised in a narrow pass,

in the kingdom of Candy, by a wild elephant. The poor fellow, intent upon saving his life, threw down the burthen, which the elephant devoured, and being well pleased with the repast, determined not to allow any person egress or regress who did not provide him with a similar banquet. The pass occurred upon one of the principal thoroughfares to the capital, and the elephant, taking up a formidable position at the entrance, obliged every passenger to pay tribute. It soon became generally known that a donation of jaggery would ensure safe conduct through the guarded portal, and no one presumed to attempt the passage without the expected offering.

The elephant is fond of petting and protecting some inferior animal; it often takes a fancy to a little dog, and the latter, speedily becoming acquainted with the value of such a friend and ally, indulges himself in all sorts of impertinences. His post, a very secure one, under the shelter of the elephant's body, enables him to attack and annoy any thing that happens to come in his way; he rushes out to the assault, and when likely to get the worst in the encounter, flies back to his place of refuge, and barks defiance at his adversaries. Sometimes the sarus, a tall bird of the crane species, which is often domesticated in an Indian compound, is taken into favour; but instances of similar friendship, between animals of very different habits and species, are not at all uncommon. A terrier dog, a Persian cat, and an antelope, brought up together in the family of an officer, who was accustomed to divide his caresses amongst them, lived with each other in the greatest harmony and affection. During his residence in Calcutta, he was in the habit of spending the whole morning abroad, and of returning about sun-set to dress. His four-footed favourites were acquainted with the hour in which they might expect to see him, and the trio always came in a body to meet and give him welcome: the cat cared nothing about change of place, being perfectly satisfied to accompany her master in all his travels, and feeling quite at home wherever he and the dog were to be found.

A party of Europeans, encamping in a jungle, will speedily discover their powers of attraction by the number of carrion birds drawn to the spot by the scent of the slaughter in their farm-yard. The acuteness of the smell of these creatures has already been remarked; at the most extraordinary distance, they seem to be perfectly acquainted with every matter which can interest them, and solitary bungalows, where, on ordinary occasions, the kites and crows are allowed to collect the offal unmolested, will be certain of a visit from vultures, whenever any thing worthy of attention is to be had. The argeelah, or butcher-bird, though sometimes inhabiting solitary places, prefers a large cantonment to the jungle; they are always to be seen where European soldiers are quartered, but scarcely think it worth their while to visit small stations garrisoned by native troops, the few English officers in command not killing enough provision to satisfy their inordinate appetites. Their nests are, however, almost invariably found in remote and thinly peopled tracts; the country retirement, at the breeding season, for the fashionable visitants of the metropolis of Bengal, being the neighbourhood of Commercolly. It is not generally known, that the marabout feathers, by some supposed to be the tribute of the paddy-goose, are in fact furnished by this disgusting looking animal, whose coarse ragged attire gives no promise of the delicate beauty of the plumes so much in esteem in France and England. They grow in a tuft under the tail, and are not visible except upon close inspection. The men who get their bread by the sale of these feathers, conceal the fact as much as possible, under the idea that it would deteriorate their value. As the argeelah is protected by law in Calcutta, the people, who collect the plumes, visit the place of their retirement for the purpose, and give its name to their merchandise, which is sold under the appellation of Commercolly feathers. The tuft is easily extracted, and it sometimes happens that, when an adjutant, as the bird is commonly called, is caught upon some high terrace or roof-top, where the depredation cannot come under the surveillance of the authorities, he is robbed of the valuable appendage: it is only necessary to catch him by the feathers under the tail; the first struggle to be free leaves them in the hand of the marauder. Excepting the heron's, there are no other Indian plumes so highly prized, and as an article of commerce the marabouts are the most important.

In enumerating the amusements afforded by a jungle, that supplied by the monkeys must not be omitted. In topes, where particular tribes have taken up their quarters, they are innumerable, and upon the least alarm keep up an incessant discord and chatter amidst the branches. The frolics and gambols of these animals, when viewed at a distance, are highly diverting; but it is by no means desirable to come into close contact with a troop; their fierceness being quite equal to their cunning, they have been known to attack a single huntsman, and so far to get the better of him as to deprive him of his gun. Young men can scarcely withstand the temptation of having a pop at them, either to scare them from some act of depredation, or out of mere wantonness, and they are not slow to perceive the cause of their alarm: after the first consternation, occasioned by the report of a fowling piece, has subsided, they are apt to resent it upon the person of the offenders. They will shake the boughs over his head, grin, and chatter through them, and a few of the most daring will beset the path, and with some hundreds to back them, in the event of an assault, the battle is best avoided, since its issue would be rather doubtful. The extraordinary veneration with which the monkeys are regarded by the Hindoo natives of India, prevents the extirpation, which their exploits amongst the corn and other plantations seem to render necessary, as a measure of precaution. Monkeys, it is said, are not bad eating, and there appears to be a sufficient number to supply the bazaars of a district during a scarcity of grain, while the woods and plains swarm with more legitimate objects of the chase, and there are no game or forest laws to prevent the capture.

There is no part of the world, perhaps, which produces game in greater plenty or diversity than

Bengal. Besides fifteen species of deer, including the antelope, the roe-buck, the red-deer, the small noose-deer, the hog or bristled-deer, and the musk-deer, there are wild-hogs, hares, several kinds of common partridge, quails, which at a particular season have been compared to flying pots of butter, peacocks, ortolans, and black-partridge, wild-geese, wild-ducks, teal, widgeon, water-hens, cranes, storks, and snipes of sundry shapes, colours, and sizes; the florikin, before mentioned, though not in such abundance as the others, and the jungle-fowl. A great variety of fish is also supplied from the lakes, jheels, tanks, and nullahs: the latter are caught in large quantities, either with nets, or by a still more simple contrivance, that of placing large bundles of rushy bushes in the water over-night. Water-fowl are caught in Hindoostan by people, who either wade or swim into the lakes with an earthen pot over their heads, or the artificial representation of a duck, made to fit on like a cap. Thus disguised, they are enabled to get so close to the objects of their pursuit as to pull them by their feet under water, and to deposit them in their game-bag: the manœuvre is effected by expert persons with very little disturbance to other flocks upon the lake, and so easily as to allow them to sell the produce of their day's sport at a very low price.

From the Monthly Magazine.

BIOGRAPHICAL NOTES ON THE LATE F. J. TALMA.

The stage has ever exercised a powerful influence over the manners, feelings, and character of a people, and, if left free and unconstrained, must ever form the strongest incentive to high aspirings, noble daring, and lofty, virtuous sentiment. In proportion as this idea has been prevalent with its rulers, has the drama of a nation influenced the national opinion; and in such ratio has that people been renowned for the cultivation of, and excellence in, the arts conducive to its improvement, and, consequently, to its happiness. The professors of this mightiest, "youngest of the sister arts," have accordingly, wherever they have attained to any thing like excellence in its practice, been admired and courted alike by the accomplished and the illiterate, the high and the low; all ranks have acknowledged, and paid homage to, the master-mind that has been able to portray, in their every variation, the feelings and the passions of our varying, subtle, yet powerful nature.

The death of Garrick was said to have eclipsed the gaiety of a nation. All Paris mourned the loss of Talma—of him who, for nearly forty years, had been the pride and glory of the stage—their representative of heroes. He had roused the warm and generous feelings of the young, and deterred them, by his powerful delineations of crime, from its dark and fatal paths—the old had had their young remembrances refreshed at the fountain of *his* genius, who was at once the representative and the associate of heroes, of statesmen, and of kings.

Francis Joseph Talma was born at Paris, on the 15th of January, 1763; his earlier years were passed in England, at which time his father practised as a dentist in London. Here young Talma remained, till he had completed his ninth year, when he returned to Paris; and where he was put to a school in the Jardin du Roi, on the spot where afterwards stood the house inhabited by the celebrated naturalist, Buffon. It was customary at this school, at the annual distribution of the prizes, for the scholars to give recitations, and even, occasionally, to represent theatrical pieces. On one of these occasions, young Talma was entrusted with a part requiring both pathos and energy. His features, even at this early age, were expressive and marked; his figure was pleasing, and his action and manner generally very graceful. He was listened to with the attention such attributes command, on an occasion so *naturally* interesting, from an audience composed principally of the relations and friends of the young Roscius. Talma was acquitting himself most satisfactorily, when, coming to a particular passage, deeply descriptive of the feelings of the person he was representing, he was perceived suddenly to falter in his speech, his knees tottered beneath him, his countenance expressed the strongest marks of sorrow, and, bursting into a flood of tears, he fell fainting upon the floor. The passage that had so powerfully affected him was descriptive of the death of a friend, who had been condemned by his own father, and so entirely had he identified himself with his original, that, gifted as he was, or, it may almost be said, tortured, with that nervous excitability of temperament (without which, however, nothing great in the arts can ever be attained), his feelings, too powerful for his youthful frame, had overcome him in the way we have described—and to this constitutional conformation, developed by severe study, was it that he afterwards owed his splendid triumphs upon the French stage. When his "school-days" were over, he returned to England, where he did not neglect the opportunities that presented themselves of forming his judgment, and of improving his taste, in all that had relation to his favourite art. John Mounet, formerly manager of the Opera Comique, had endeavoured, without success, to establish a French theatre in London. The fashionable coteries at the west end of the town were much in favour of this scheme, but, by some means or other, it could not be effected, at least to the extent and after the plan contemplated. To make up, in some degree, for this disappointment, little French pieces were gotten up at the private houses of several of the nobility, and performed by the younger branches of French families, at that time resident in the English metropolis. Young Talma stood prominently forward on these occasions; and so successfully did he acquit himself in the parts entrusted to him, that he was earnestly solicited, by several persons of high rank and influence, to make an attempt at the Theatre Royal Drury-lane—his acquaintance with, and proficiency in, the English language justifying such a trial of his powers—and so much weight had these entreaties with him, that it was at this time doubtful whether he, who in France equaled, if he did not surpass, Lekain, was not destined to console England, and to wipe away her tears for the loss of her favourite Garrick; but the French stage was the destined scene of his triumphs.

He now, a second time, quitted the shores of England, and, returning to Paris, commenced the practice of his father's profession, which he continued to follow for about the space of eighteen months. He had opportunities, during this period, of seeing Molé, Mademoiselle Sainval the younger, and all the distinguished artists at that time on the Parisian stage. Mademoiselle Sainval endeavoured to dissuade him from his intention of becoming an actor, and fortunate may it be accounted for his own fame, and the advancement of the arts in general, but more particularly so of his own especial one, that she did not succeed in her endeavours. The success he met with in his performance of Orestes, in "Iphigénie en Tauride," fixed his, till then, wavering resolves, and determined him thenceforward to embrace the profession of the stage, and to become an actor. With the view of forwarding this, the darling object of his ambition, he entered himself at the school for declamation, established in 1786, and in which Molé, Dugazon, and Fleury were, at that time, professors. The advice and instruc-

tions of these talented artists were not, it may well be inferred, thrown away upon their distinguished pupil, who, under their tuition and guidance, made, on the 21st of November, 1787, his debut, and thus commenced a career, which he afterwards rendered so brilliant; and in which, by hard application and unwearied devotion to its object, he attained the highest excellence—where excellence is less often attained than in the pursuit of any of its sister handmaids. If the "new actor" on this occasion did not achieve a complete triumph, his debut was, at least, not only successful, but highly encouraging, and giving much of that promise which he afterwards so entirely realised. He followed this up with increasing success by the performance of various other characters, during the two years preceding that revolution which gave a new character to the whole face of Europe.

Talma, though but an humble associate of the old Comédie Française, employed the leisure imposed upon him by the aristocratical routine of theatrical management, in pursuing those studies bearing upon, and connected with, his own particular art. He sedulously applied himself to the study of history, and, encouraged by the example of David, who restored the classic character of the French school of painting, he first began to apply those principles of reform in dramatic costume, which his predecessors had either entirely neglected, or had touched with a too gentle hand. To the reform but just commenced by Lekain, Talma, ere he left off his good work, put the finishing stroke, as in England what Garrick began Kemble generally concluded, and in his own person thoroughly perfected. Talma commenced this course of reform in costume in the early part of the year 1789, on the enactment of the tragedy of Brutus, in which he had to personate a minor character, and in which he appeared habited, for the first time, in the true Roman toga, and in all the strict correctness of the ancient costume; and, though the character was short, and in itself unimportant, he achieved, in some degree, a triumph over old prejudices and long-established customs, founded as they were on ignorance and error. Talma's noviciate was just completed when Chenier presented his tragedy of Charles IX. to the Comédie Française. The part of Charles he, of course, offered to Saintphal, the then leading tragedian; but he, preferring that of the King of Navarre, the character of Charles was entrusted to Talma. This was on the 4th of November, 1789, upon which occasion this great tragedian laid the corner-stone of his after reputation and professional fame. The skill he displayed in portraying the weakness, hypocrisy, and cruelty, which formed the frightful mixture of Charles's character—the exactness of his costume—and, above all, the force and power he gave to the melo-dramatic portion of the character, with no faults but such as were attributable to youth and inexperience, gained him the highest applause, and produced an impression upon the minds of the audience, which was not easily to be effaced.

The success of Charles IX. was complete. Talma soon gave a fresh proof of the peculiar talent he possessed in seizing upon the style and expression of countenance of the persons he represented, in his personation of J. J. Rousseau, in a little piece, intended to celebrate the anniversary of the taking of the Bastile. The Baron de Gricum, speaking of Talma, on this occasion, says, "that much as he resembled the portraits we have of Charles IX., he seemed to have carried this peculiar faculty of his art still higher, in the representation he gave of Rousseau—it was the 'Philosopher of Geneva' himself. The actor might almost have sat as the original of the portraits we have of him, so exact was the similitude. Owing to a dispute among the actors themselves, which deprived the public of Talma's services in this part for a while, the tragedy of Charles IX. was shelved till the general voice recalled the young actor to the station he was so well qualified to fill. He had now seceded from the Théâtre du Faubourg St. Germain, to that of the Rue de Richelieu. Chenier, who had warmly espoused the cause of Talma in these internal brawls, again entrusted him with the principal character in his tragedy of Henry VIII., which was represented for the first time on the 2d of May, 1791, at the Rue de Richelieu, and it has ever since maintained the station on the boards it then acquired. But, although the public voice rewarded our aspirant's efforts with the most unconstrained applause, yet there were not wanted critics severe enough to censure, what *they* termed, his faults, and to scan even his beauties with no lenient tongue. But the public welcome consoled him for the ungenerous attacks of private enemies; and he pursued, with a firm and steady step, the path he had thus successfully entered upon.

The characters in which he now shone most were such as required the expression of the deeper feelings and more violent passions of the human breast; though he threw light upon whatever he undertook. "Nihil tetigit, quod non ornavit." But in Brutus in the death of Cæsar, in the tragedies of Arnault, and especially in the translations of Shakspeare by Ducis, he left all competition far behind. Till the retirement of Larive, he complied with the established custom of the theatre, in performing comedy in conjunction with tragedy; and herein he displayed no small portion of comic humour. It would exceed our limits to follow this great actor through those several characters which his genius made his own. Talma displayed, in his portraiture of Roman dignity and pride, a striking knowledge of human nature, and of the peculiarities of the Roman character; it seemed that he brought, as it were, in actual review before the spectator's eye the portraits of the persons he represented; and that he looked, talked and moved as they themselves might be supposed to have done, under similar circumstances and in similar situations. But of all the characters of Shakspeare made known to the French nation through the medium of the translations of Ducis, the master-piece of Talma's acting was Hamlet. On the French stage, the ghost of Hamlet's father is not actually seen, but raised by and in the imagination of the actor. The expression of his finely-marked countenance told you, at this juncture, more forcibly than even the eloquence of his lips or the energy of his action, of the phantom which affrighted him. When in the midst of his calm and melancholy musings, his father's spectre rises before him, he followed with his eyes all the imagined movements of the vision he had conjured up, the spectator was so strongly enchained by the delusion, that spell-bound, he no longer doubted the reality of that which was the mere coining of the actor's excited imagination. When, too, Hamlet, in the third act is alone upon the stage, ruminating that inspired soliloquy—"To be, or not to be," when he comes to the lines

"La mort, c'est le sommeil.—C'est un réveil peut-être,
Peut-être! —Ah! c'est le mot qui glace, épouvanté,
L'homme, au bord du cercueil, par le doute arrêté,
Devant ce vaste abîme il se jette en arrière
Ressaisit l'existence et s'attache à la terre"——

Talma stood motionless, or, if he made any movement, 'twas but first to raise his head slightly towards heaven, and then to turn again down to earth, as if to question them as to the nature of death. He was wholly absorbed in meditation: *there* he stood a single man in the midst of thousands hushed in silence, ruminating on the after-fate of mortality—

"To be, or not to be."

In the scene wherein Hamlet conjures his mother, over the urn which encloses the ashes of her husband, to confess that she had no part in his death, a guilty conscience displays the troubled secret of her soul; and

hen, after entreaties on one side, and dreadful hesitations and misgivings on the other, she at length discloses ıe fatal truth, Hamlet draws the dagger which, by aternal command, he is about to plunge into the breast f her who, with all her load of guilt and crime, is still is mother!—the trial becomes too much for filial feeling nd filial piety, though enlisted in the cause and urged n by the command of a dead father; and he suddenly urns from the appalling deed to his father's shade, and mplores it, in the deepest accents of grief, to revoke the readful sentence; then, throwing himself at his mother's eet, he falls extended before her, giving vent to his gonised feelings in these words:—

"Votre crime est horrible, exécrable, odieux;
Mais il n'est pas plus grand que la bonté des cieux."

The transition from the expression of horror conveyed n the first, to the calm resignation and hope implied in he second line, can only have been thoroughly felt in he action and utterance of Talma.

His enemies, however, now (1794) renewed the disraceful attacks with which they had some time preiously assailed him on the unjust grounds of his being ı jacobin and a revolutionary partisan; and, on the 1st of February of this year, when he enacted the part of Nero, no sooner had he appeared upon the scene than, nstead of being, as usual, hailed with hearty cheers, he was assailed with hissings and hootings, and every demonstration of displeasure, by an infuriated audience. Talma, indignant at this unmerited treatment, stepped forward; and in a tone in which manly firmness and wounded feeling were mingled, silenced his reckless accusers with these few but emphatic words:—"Fellow-citizens, I am now, and I shall ever continue to be, the ardent lover of freedom; but I have ever held crime and bloodshed in the utmost detestation and horror. The reign of terror has cost me more tears than I shall ever choose to tell you of. *All my friends are dead—upon the scaffold!*" But, although the envious tongue of detraction was silenced for the moment, his success had roused too much opposition to be so easily put down. Some among his detractors, more base than the rest, had set afloat the report that Talma had been one among the persecutors of the French actors who had been arrested and thrown into the prisons of the Luxembourg; Larive and Mademoiselle Contat advocated his cause on this occasion so successfully, as effectually to destroy these unfounded malicious reports, the shame of which reflected back upon their authors.

The intimacy that took place about this time (1795) between Bonaparte and Talma gave rise to much absurd rumour; among others was one, that Napoleon took lessons from the great actor as to his deportment and demeanour on state occasions. Talma let slip no opportunity of contradicting such reports, even after the fall and death of his royal associate, when less generous spirits, who had been raised to wealth and honours on the shoulders of this political colossus, joined in the general cry against him; but the intimacy that existed between these extraordinary men lived on "through good and through bad report." On Napoleon's being proclaimed emperor, Talma thought it but fit in him to discontinue his accustomed morning visit. Napoleon, observing this, sent for him on the very day upon which the public authorities were to congratulate him on his elevation to the throne; and he was ever after to be found at the breakfast-table of the emperor. In the year 1808, in conjunction with the performers of the Comédie Française, he performed, as Napoleon expressed it, before a parterre of kings. This was at Erfurt. But, to return to the Théâtre Français. Encouraged by his brilliant success, Talma strenuously set about restoring the honours of the ancient classic drama, which had been almost totally laid aside for the works of modern dramatists. He did not, however, escape the critic's lash for what they termed an innovation; but his ardour and perseverance were not to be daunted by any obstacles, however discouraging, when his end was at the attainment of perfection in the mighty art he devotedly loved. He thoroughly understood the simplicity of the true drama, aided by the developement of the feelings and passions of the human breast, in which the interest must be sustained and kept alive, without any other artificial resources than those derived from the poetry of the author and the eloquence of the actor. An anecdote is related of Talma, which sets in a powerful light the spell in which he held his audience, whom he kept so fast bound in the delusion of the scene, as to make them *feel* it reality. He was playing Hamlet in one of the provincial theatres: at the moment when he was about to plunge the dagger into the guilty breast of his mother, a piercing cry, instantly followed by a great commotion, was heard issuing from a box near the stage. A veteran officer of tried courage, who had again and again distinguished himself in the field, had had his nervous system so intensely wrought upon by the powerful acting of Talma, that his frame could no longer sustain itself against the force of its inward workings, and uttering a cry, he had fallen in a fainting fit from his seat. He was immediately carried out; when, after the lapse of some minutes, coming to himself, still under the effects of the nervous excitement of the scene, he anxiously asked if he had *really* killed his mother! The writer of this article himself witnessed the power of dramatic illusion even upon a child, and that child only about four years of age. The anecdote about to be related occurred at the Birmingham theatre during the performance of the popular spectacle of "Peter Wilkins." The child was standing up, holding by the orchestra railing, when *Phelim* (the Irishman) comes in, in almost breathless haste, in search of the wild man (who had just passed across the stage), and says, "Now, I wonder which way that hairy divil went!" The child with feelings so powerfully wrought upon as to be unconscious of any thing but the desire of aiding in the capture of the wild creature, instantly exclaimed (at the same time pointing with its little outstretched arm and extended fore-finger), "That way, he's just gone that way!" So instantaneous and so powerful was the appeal to every breast, that even the iron "gods" of Birmingham felt, and answered it with hearty cheers. Such is dramatic illusion, and such were the vivid feelings of this intelligent child!

In the early part of the year 1817, Talma paid a visit to England, and gave two *soirées dramatiques* at the Opera-house, assisted by Mademoiselle Georges and M. Mainvielle. These were well attended by the middling and higher ranks of society, eager to witness, though unaided by scenic effect, the exertions of the Roscius of the French stage. The applauses and reception he met with, in private as in public, gave him unmingled gratification. He renewed, at this time, his acquaintance with John Kemble, who, like himself, had done so much to reform the costume of the stage, and to bring to perfection the art he had so highly adorned, and of whose last performances on the stage he was now a witness. He was present, too, at the dinner given to him on his retirement from a stage of which, for the space of between thirty and forty years, he had been the ornament and pride. On this occasion Talma's health was drunk; and the accomplished and noble president, Lord Holland, in proposing it, highly complimented the French tragedians, and the Théâtre Français: to this he replied in a speech delivered in the English language.

Talma had now long remained confessedly without a rival on his own stage, when, "I witnessed," says the author of one of his Mémoires, "his last appearance in the character of the ill-fated Charles VI. The seeds of his fatal disease were already sown within him. On

beholding the old monarch, worn down by sufferings and misfortune, recovering for a moment his reason before resigning it and life together, I could not but call to mind the age of the actor, nor conceal from myself the existence of that malady which was visibly wearing him fast away; though he displayed upon the scene all the energy and depth of feeling which distinguished his acting in his best and youngest days. I felt as if I had been witnessing the last efforts of the 'dying gladiator.' I saw Talma after this, but never again upon the stage. 'His scenic hour' was 'for ever past,' 'and the valued plaudits' which that night rung upon his ear 'were his last.'"

From this time his complaint made such rapid progress as soon to convince his friends that his masterpieces must live thenceforward only in their yet warm remembrances; though they still cherished the delusive hope that he might recover so far as to bless and enliven with his presence and his converse the social hearth: but these fond hopes were too soon and too fatally blighted; for on the 19th October 1826, after having taken an affectionate and affecting leave of a few of his most intimate friends, and last of all, of his two sons, in undisturbed tranquillity this amiable man and great *artiste* breathed his last breath. Thus ended his illustrious career! Good in private as he was great in public life, the surest, best testimony of his worth and the estimation in which he was held when living, were the tears of many a mourning friend over his grave: that soul-felt sorrow showing itself more in the looks than in the words of those who had stood by his side on the classic boards, through many a year of his glories and his triumphs, to whom he had ever been ready to lend the aid of his experience and matured judgment when they required it, and whose strong right arm was ever held out to encourage and to assist the timid and the wavering. Not seldom, too, has his advice been influential in deterring those by nature and by education unfit to endure the hard privations too often attendant upon the young actor's early life, from its difficult and uncertain paths.

Talma, in many points, resembled our own unrivaled Kemble; like him he was beloved in private, as in public admired; like him, character gave weight to genius, while genius conferred brilliancy on character; like him, too, the scholar and the accomplished gentleman, he brought in the aid of the sister-arts in reform of the costume, and in bringing out, as it were, in mid-day splendour, the imposing grandeur and bright glories of the classic stage; and, like him, his name will long be associated in the mind of every lover of the arts, and, indeed, in that of every intelligent being who ever witnessed their labours, or who ever pored, delighted, over the written testimony of their effect; their names will, with such, be associated with the purest and most soul-exalting moments of their lives; and, however brilliant the galaxy of dramatic talent into which they may find themselves thrown at an after-period, they will still look back with grateful recollection to these polar stars of dramatic grandeur and scenic excellence, and recall to mind, with feelings too deep for utterance, the delights they have afforded them, and the "instruction wherewith they have instructed them," full "many a time and oft," "e'en from their boyish days."

The poet, the painter, the sculptor, the musician, all leave something to attest their excellence in their several arts—but the "mighty actor" must trust *his* after-fame to the pen of his biographer; and fortunate for him shall it be if he meet with one sufficiently generous to feel, and sufficiently skilful to describe, the workings of his master-mind when engaged in depicting, as they rise in rapid succession, the feelings, the passions, the weaknesses, and the strength of humanity!

From the Monthly Review.

A Visit to Iceland, by way of Tronyem in the "Flower of Yarrow" yacht, in the summer of 1834. By John Barrow, Jun. London: Murray. 1835.

The promise which Mr. Barrow's former work, "Excursions in the North of Europe," held out of his tact and talent, as a scientific, observant, and lively traveller and writer, are more than fulfilled in the present volume. We think there are abundant proofs before us, of such enlarged and ripened views, as were to be expected from a young man of the regulated judgment and accomplished powers that were evinced in the former work. That he has benefited by experience and time, at a rate fully commensurate with what was to be anticipated from his earlier effort, cannot be questioned by any one who makes himself acquainted with this and his former work. There is, besides the skill and the ability which the author has displayed in this volume, the freshness of almost a new subject. Few have been the travellers who have resorted to Iceland; and fewer still those that have taken such a comprehensive and varied view of it, as has been done by our author. No less than twenty years have expired since a fresh word has been uttered respecting the island. We may therefore readily presume that from such a visiter and writer as Mr. Barrow, a treat of no ordinary value and interest is to be obtained; nor will the confident expectation be disappointed. We shall at once proceed to give such an account of the contents of the volume as our limits will allow.

It is not an every day occurrence that a conveyance to Iceland is to be found from any part of the United Kingdom. A casual ship now and then proceeds from Hull or Liverpool with salt and a few articles of colonial produce, but nothing like a regular trade exists between England and that island. Mr. Barrow was fortunate enough, however, to obtain from a Mr. Smith, whose acquaintance he had made in Norway the preceding year, a passage from Liverpool to Tronyem or Drontheim, the capital of Norway, and thence to Iceland. Mr. Smith is a member of the Royal Yacht Club, and proceeded in a beautiful yacht, called the "Flower of Yarrow," which he had purchased from the Duke of Buccleuch. To this gentleman the author very appropriately dedicates the volume, in testimony of his gratitude for the friendly aid by which he was enabled, when all other means had failed, to visit Iceland.

Towards the close of the month of June, 1834, Mr. Barrow landed at Tronyem. During the few days that he spent in Norway, he paid a visit to the copper mines, about one hundred English miles from the capital, and thence to a few Laplanders, whose summer residence was not very far distant. From the specimens which he saw, they are a filthy, squalid people, of a diminutive size, the tallest of one particular family appearing to be under five feet; they speak the Norse language as well as their own, and like the Norwegians, testify their gratitude on receiving any benefit, by taking and shaking the hand of the giver. One can scarcely believe that amid such

retchedness as surrounds them, there is any appiness in their lot; but our incredulity is wing to our ignorance of what others feel, who ave all their lifetimes been placed in totally ifferent circumstances from ourselves.

Near the end of the month of July, our author anded at Reikiavik, the capital of Iceland; which, rom the anchorage, presents a very sorry appearnce, only a long row of houses, or rather the pper parts of houses, with red or brown roofs, eing conspicuous. The country in the vicinity f the town is nearly a uniform plain, and without a tree or a shrub. Yet Reikiavik, which means 'the smoking village," probably derived from the ot spring in the neighbourhood, is the residence f the governor-general, of the bishop of Iceland, f the president of the supreme court of judicature, and of other public officers; it is also the rincipal emporium of the island. Under the oof of the cathedral there is a public library, said o contain about six thousand volumes, to which he inhabitants have free access, being allowed, nder certain restrictions, to have books at their wn houses; and the author was assured of the ratifying fact, that the people are very fond of eading. The Icelanders, it is well known, were nce famed for their literary productions. The ooks in the public library spoken of, consist of eneral and ecclesiastical history, in the German, anish, and Norwegian languages, such as relate o the island, their Sagas and their Eddas; and ome of the best English works, together with a ollection of the Greek and Latin classics. To he merchants' houses, and to those of the princial inhabitants, there are small pieces of ground aid out as gardens, for the purpose of raising a ew culinary vegetables; but the produce appeared very scanty, as indeed was the case throughout the island, so that, according to our notions, he people are almost entirely deprived of one ource of domestic comfort, which, however, to hose who never knew its value, will be supplied y such sources as they have alone been acquainted with.

Travellers encounter frequently strange and nlooked for events. One cannot but participate n the feelings which the author experienced when e was introduced to the governor, who asked him whether his name was not Barrow? And it turned out that this self-same gentleman had traveled with the author among the mountains of Switzerand a few years ago. But we must not tarry at Reikiavik, which, though enlivened in the summer y the society of the Danish merchants, who resort thither in the fishing season, can boast of nothing like refined inhabitants in the winter, save the few functionaries mentioned above. It is stated by the most accredited historians of Iceland, that the Irish were the first people who visited the country. But the author discovered no vestige that could lead to this opinion, unless in the construction of the hovels of the people; and even these answered more closely the descriptions given of those to be seen in the Hebrides.

A journey to the Geysers or boiling springs of Iceland was of course a principal object with Mr. Barrow; and when speaking of this journey, we have to note a singular sort of food given by the peasants to their horses in winter. This consists of fishes' heads and bones hashed up with a little hay, and boiled altogether in water. There is no such thing, we learn, in the whole island, as a wheel carriage, nor even a wheelbarrow, and indeed if there were, they would be useless, as there is nothing in the shape of a road on which they could move. The paths are either over beds of lava, so rugged that the horses are obliged to pick their way, or over boggy ground, where, if left to themselves, they are remarkably skilful in traversing, avoiding sagaciously those places into which they might sink up to the belly. In some parts the way resembles a deep rut, formed by the cracking or disruption of a stream of lava, where the rider may put his feet on the two sides. Our readers may be curious to learn what sort of buildings the Iceland country churches are, and the use to which they are sometimes put. At the close of a day's journey towards the boiling springs, the author and his companions lodged for a night in one of these structures—for in the few huts that surrounded it, and even in the clergyman's mansion, travellers had no chance to find accommodation; so that the church, of which the following is a description, is usually resorted to by strangers.

"As this building, consecrated to religious purposes, was altogether different from any I had before seen, curiosity led me to take its dimensions: the extreme length was twenty-three feet, but of this eight feet were devoted to the altar, which was divided off by a partition stretching across the church, and against which was placed the pulpit. Over the pulpit were the following Latin inscriptions—

'Scio opera tua.'
'Habenti dabitur.'

A small wooden chest or cupboard, placed between two very small square windows at the end of the building, not larger than a common sized pane of glass, constituted the communion table, over which was a miserable representation of the Lord's Supper, painted on wood, and apparently of great antiquity. The width of the church was ten feet, and the height of the walls about six feet. These were wainscoted, and from them large wooden beams stretched across from side to side. On these beams were placed in great disorder a quantity of old bibles, psalters, and fragments of dusty manuscripts. The interior of the roof, the rafters of which rested on the walls, was also lined with wood. On the right of the door as we entered, and under which we were obliged to stoop considerably, we remarked two or three bells suspended from the beams within reach. Four or five benches with backs to them, so crowded together, as almost to touch one another, were placed on each side the aisle, a narrow passage being left between them. There were also some benches placed against the wainscoted walls, round that part which formed the altar. The accommodation was said to be sufficient for forty people; but I am quite at a loss to imagine how they could all find seats, or even room to stand. It is not however often, if ever, that the church is so crowded, as the number of inhabitants living in the immediate neighbourhood is very small—not above twelve or fourteen families in the whole parish."—pp. 143, 144.

The poverty and destitution even of the clergy are lamentable. It would appear that of the three hundred that are on the island, two hundred know

not what spirituous liquors are; a milk diet and a little coffee is the food to which their stomachs are almost alone accustomed. The parsonage-houses, and those of the peasantry that have more apartments than one, are composed of a low range of turf-roofed huts, every room having its separate roof, and being an additional and united hut. Mr. Barrow had an opportunity of seeing the people proceeding to church on a sabbath, and we may presume that they are generally devout, since they make long journeys to attend divine service, though the roads be any thing but tempting.

The Geysers have been described fully by former travellers, but as forty-five years have elapsed since the last good account, the author did right in going over the same ground, were it only, as he says, for the sake of examining whether any and what changes may have taken place in the course of that period. On having reached the plain of these boiling fountains, smoke and steam were beheld rising on all hands; boiling springs and bogs of heated mud were to be found every where. This extraordinary piece of ground, which does not exceed twelve acres, seemed to be shaking and trembling under the travellers; and issuing from below, a sort of murmuring or rumbling noise not unlike that of distant thunder was heard. In some places there were detached jets throwing up steam mixed with water; in others, several smaller ones grouped together, emitted steam only. We extract the description of one of these springs.

"The Great Geyser, as I have said, is situated on a mound which rises considerably above the general surface of the plain, and slopes on all sides to the distance of a hundred feet or thereabouts from the borders of the large basin on its summit; and in the centre of this basin, forming, as it were, a gigantic funnel, there is a pipe or tube up which the boiling water rises and the eruptions burst forth. The basin or bowl of this funnel is from four to five feet deep, sloping a little, like a saucer, towards the central tube. Into this basin the water had flowed to within a foot and a half of the brim when we visited it; and, as it was gradually rising, we remained on the spot till it overflowed, which we were told was a certain sign of an eruption being about to take place; the more certain, as a bubbling or boiling up of the water was observed over the mouth of the tube at the same time. The temperature of the water in the basin at this period, as far as I could reach to plunge in the thermometer, was from 180 deg. to 190 deg. of Fahrenheit.

"After anxiously waiting a considerable time, instead of that grand burst we had expected to take place, to our great mortification the water began gradually to subside, and did not cease to diminish till the basin was left quite dry. I had now, however, an opportunity of taking the dimensions of the basin and its pipe, the former of which was found, from actual measurement, to be fifty-six feet in the greatest diameter, and fifty-two feet in the narrowest, and the greatest depth about four feet. The shaft, or tube, in the middle, at the upper and shelving part, was found to be 18½ feet one way, and 16 feet the other; but it narrows considerably at a little distance from the mouth, and appears to be not more than ten or twelve feet in diameter.

"I measured its depth on two sides: on one I found it to be sixty-seven feet, and on the other a little more than seventy. The sides of the tube are smoothly polished, probably by the constant friction of the water, which is also the case with the floor of the basin, whose surface is perfectly smooth and even, and has the appearance, in parts, of agate, and is so hard that I was unable to detach a single piece with a hammer. It is difficult to imagine in what manner this capacious tube, perfectly perpendicular, has first been shaped, and equally so how the smooth crust with which it is lined has been laid on—whether at once, or by successive depositions of the laminæ of siliceous matter. The lining of the basin or bowl would appear to be of more easy explanation: the water remaining therein quiescent may deposit its silica undisturbed, but in the pipe of the funnel it is always bubbling or boiling, sometimes higher, sometimes lower, or exploding steam and water. But after all, that which is the most difficult to comprehend is this—that the water of the Geyser is perfectly clear, and gives no deposite without the application of chemical tests, and then only in the smallest possible quantity: it may be kept for years in bottles without depositing the least sediment."—pp. 177—179.

The author supposes that this deposit is from the condensed steam or vapour. The siliceous incrustations extend to the whole distance down the slope of the mound around the brim, and several yards below. They consist of little tufts resembling the heads of cauliflowers. They are of a delicate texture, and not to be removed in a perfect state and without damaging the minute crystalline efflorescence with which they are beautifully covered.

"Every sort of adventitious fragment, whether of pieces of wood, bones or horns of animals, were here found in a silicified state, and among other things, by the edge of the stream, I met with a piece of printed paper, which, with the letters perfectly legible, exhibited a thin plate of transparent silex, giving it the appearance of a child's horn-book, but the moment it was removed it fell in pieces. Previous to our departure, the governor had shown to me a worsted stocking which, by laying on the banks of this streamlet about six months, had been completely converted into stone, as had also a blue handkerchief, which exhibited all the cheques and colours of the original; and these were solid enough to bear handling, and as hard as silex itself. I must observe, however, that these streams are lined with a white siliceous stone of a close compact texture, resembling pure white marble, which continues down to their junction with the Huit-as.

"We had shot some plovers and curlews on our way to this place, which we ordered to be boiled in the basin of the Great Geyser, and they were sufficiently cooked in the space of twenty minutes, the temperature of the water continuing to vary from 180 deg. to 190 deg. of Fahrenheit. The steam arising from this, as well as all the Geysers, is sensibly, but not very strongly, impregnated with the smell of sulphur; and our guides told us the birds would taste of it so strongly as not to be eatable; but whether our appetites were sharp, or our senses dull, we did not by any means find this to be the case, nor could we perceive the slightest taste of sulphur. At this time, however, I filled a bottle with the beautiful clear water of the Geyser, which at the moment certainly had a strong smell of sulphur; but though firmly corked on the spot, it had lost it altogether on my arrival in England, nor was there the least deposite either of that or of any other substance whatever, when submitted to chemical tests.

"The circumstance that now attracted our attention was that of observing our guides digging up and throwing into the orifice large masses of peat or turf. The guides seemed to think that, by such provocation, they might succeed in bringing on an eruption; and as this was a wished-for event, we all lent our assistance in heaving in turf and peat in large quantities; and soon

nough the boiling fluid, as if filled with rage and indig- ation at such treatment, burst forth almost instantane- ously, and without giving the least notice, with a most iolent eruption, heaving up a column of mud and water rith fragments of peat, as black as ink, to the height of ixty or seventy feet, and continuing to do so for eight or en minutes, when it subsided, and all the water sunk into he shaft, where it remained in a tranquil state at its for- ner depth. The masses of turf had been completely hattered to atoms, and dissolved as it were in the water, vhich did not recover the usual transparency of the Gey- er waters when it ceased: the fragments of turf in de- cending fell back into the shaft."—pp. 182—188.

Mr. Barrow did not ascend Mount Hecla, nor lo we see that there could be much wisdom in :lambering toilsomely up a mountain buried in :now, and generally enveloped in mist. The nformation that particularly interests us, which ie has furnished, besides what regards the extraordinary physical phenomena resulting from subterranean fire, belongs to the consideration of he character and condition of the people; and to he portion of the volume chiefly devoted to hese, we now call the attention of our readers.

The only school of any kind in the whole sland was visited by Mr. Barrow. But it was vacation time, when all the scholars go to their espective homes, where they are useful in ssisting their parents in their summer work, not lisdaining to undertake any manual labour for which they are fitted. The academical establish- nent is not exactly on the same scale, or in its nanagement of the same style, with Cambridge or Oxford, yet doubtless it is a venerable and earned institution in the eyes of the Icelanders. We give the author's account of it.

"The sleeping-room might have been mistaken for a menagerie. There were wooden recesses on either side of it (filled with hay and straw and some dirty bedding), each having a sliding door which completely shuts up the berth. I was astonished, and heard with disgust that each of these cribs or berths is occupied by two boys, and that till recently each bed-place contained three young men. This may be thought lightly of in Iceland, as I believe it is in Norway, but to us it appears a barbarous practice.

"The number of scholars is forty. Before the Sees of Skalholt and Hoolum were united in one, in the year 1797, by order of the Danish government, Skalholt rec- koned forty scholars and Hoolum thirty-four, and landed property was appropriated for the support of these insti- tutions, sufficient for their maintenance, and the pay of their instructors. At the union of the sees, the united schools were transferred to Reikiavik, the very worst place that could have been chosen on every account, as it was shortly found to be; and, in consequence, they were removed to Besestad, where there was a good house that had formerly been the residence of the governors of Iceland, and close to it the best church in the island. There are three masters: the one, professor of theology, instructs the pupils in Hebrew and Greek, as far as the Greek Testament and Xenophon; the second is the lec- turer, and instructs the pupils in the Latin language, in history, mathematics, and arithmetic; and the third, in the Danish, Norwegian, and Icelandic, languages. They are all but poorly paid; that is to say, according to our ideas of the nature of their situation and the value of money; but this is not by any means a fair criterion of judging. Their attendance is constant from October to May, the intermediate months being the time of vacation, when the students go to their several homes. The funds appropriated for the school are said to be sufficient to pay the teachers, and to afford board, books, and clothing, to the scholars gratis.

"According to the official statement procured by Dr. Hooker, the bishop of Iceland draws about 1800 dollars, or 360*l.* a year from the school funds; the lecturer on theology 600 dollars, or 120*l.* a year; and the inspector or steward, whom I have called the housekeeper, about 220 dollars, or 44*l.* a year, and receives for each of the forty scholars 60 dollars a year, or 480*l.* in the whole for their subsistence; and the two assistants 300 dollars, or 60*l.* a year each.

"The admission to this school is professedly confined to such as have made a certain progress, to such as have been confirmed, and to such as produce good certificates from the clergyman of the parishes to which they respec- tively belong; and at the period when they have finished their education, they are strictly examined in presence of the bishop, and those who are found qualified receive a *dimissus* from the heads of the college, which entitles them, on vacancies occurring in the church, to receive holy orders. The clergy, however, are not exclusively taken from this school: the sons of clergymen and of the peasantry are frequently educated at home, and if they can pass the requisite examination before the bishop, they too are equally eligible for the church."—pp. 228—231.

It would appear, indeed, that private education at home is more esteemed by the people, where the morals of youth are less likely to be corrupt- ed, than at a place where a number of young men are thrown together. One does not well see how the same sort of learning is to be found in private; but the clergyman of the parish assists, and it is also stated that numbers of the peasantry, as well as the clergy, are well versed in the classics, particularly in Latin, which they write fluently. To the credit of the college it is mentioned, that some of the best and most learn- ed works in Iceland have issued thence, and that five volumes in Danish and Latin have just been completed and published by "The Royal So- ciety of Northern Antiquities at Copenhagen," the work of the lecturer at the college, which contains historical treatises relating to events that occurred out of Iceland, and more par- ticularly to the exploits of the Danes in England, from the middle of the tenth to the beginning of the fourteenth centuries—an obscure period of English history certainly. Both the peasantry and the priests are a simple minded, innocent, and virtuous people, and are generally well versed in religious and historical works, as also in the ancient mythology and traditions handed down in the Sagas and the Eddas, composed mostly in short verses, and easily retained in the memory. Some few who can afford it send their sons to study at the University of Copenhagen. The clergy in Iceland officiate in one sort of work that would be thought toilsome and de- grading to the priesthood in England, or any where else.

"The clergy almost universally submit to every species of drudgery from necessity: their incomes are too small to allow them to hire and feed labourers, and nothing is more common than to find the parish priest in a coarse woollen jacket and trowsers, or skin boots, digging peat, mowing grass, and assisting in all the operations of hay- making. They are all blacksmiths also from necessity, and the best shoers of horses on the island. The feet of an Iceland horse would be cut to pieces over the sharp

rock and lava if not well shod. The great resort of the peasantry is the church, and should any of the numerous horses have lost a shoe, or be likely to do so, the priest puts on his apron, lights his little charcoal fire in his smithy (one of which is always attached to every parsonage), and sets the animal on his legs again; and here again he has a laborious task to perform in procuring his charcoal. Whatever the distance may be to the nearest thicket of dwarf-birch, he must go thither to burn the wood, and to bring it home, when charred, across his horse's back.

"This mode of life, however, may not be considered as altogether consistent with the character of him who is entrusted with the religious instruction of his humble parishioners. Sir George Mackenzie says, that the minister of Gardé, styled the Provost of Goldbringé Syssel, and superintendent of all the ecclesiastical concerns of that district, was so poor that, to use his own words—'knowing his poverty, we were not surprised that this dignitary of the church exhibited in his person and habiliments a figure, the description of which we shall spare our readers, that they may not partake the pain inspired by the most squalid indigence in a clerical garb.' Yet this poor man had a considerable collection of books, and among others, translations of some of the works of Pope and Young's Night Thoughts! Their condition may however have, and probably has a beneficial effect. What an example may it not afford for the poor peasantry to be contented with their lot, many of whom, indeed, are in far better circumstances than those of their pastor! But whether this equality of drudgery and of external habiliments be favourable to the propagation of religion, morality, and of that respect which is due to the sacred character of the pastor, is not for me to offer an opinion; but, taking the whole island, there is little doubt that the pastor and his flock are nearly on an equality as to worldly concerns. None of them can be considered as wealthy, but all of them appear to be contented with their lot: poverty, indeed, may truly be said to be the general condition of the Icelandic inhabitants. Never was any thing more true, as regards Iceland, than what the poet has applied to another and very different country:—

'Though poor the peasant's hut, his feasts though small,
He sees his little lot the lot of all;
Sees no conspicuous palace rear its head,
To shame the meanness of his humble shed.'"

Mr. Barrow had some grounds to believe that there is not a beggar in all Iceland; the want of money in the island will partly account for this. Yet, poor as the people are, and bleak and frigid as the island is, when in a foreign country, the Icelanders, like the Swiss, sigh and repine after home. Their native situation and habits strengthen the ties of domestic life, and are turned to the advantage of the mind. Their winter nights are so long, that they have ample time for improving upon what they learnt in youth. They then recite to one another the deeds and descent of their forefathers. Our author asks, what inducement there can be for these islanders wasting their days and nights, as numbers do, in laborious studies? The pure love of literature and science no doubt prompts them to such occupations, and the conscious elevation and refinement of mind that results, is their reward. But will not the love of fame have its influence in Iceland as well as elsewhere? Where learning is so much revered, and where the people and priesthood are otherwise so much on a level as to external comforts, there is no other peculiarity by which a man can command that respect and admiration which are exciting and exalting motives. It has been said that the present state of Icelandic literature shows that it is on the decline; but we presume the author is right when he supposes that it has rather changed its character and become more widely diffused. Instead of those historical romances, the Eddas and Sagas, being the species of composition which occupy the clergy in making or transcribing—the history and literature of the more refined nations of Europe now form a part of their studies, together with the registration of events, and the digesting into annals and chronicles what passes in Iceland, and other parts of the world. An example is quoted by Mr. Barrow, as a proof of what has been said respecting the triumph of literary pursuits over pinching penury, that is affecting.

"It is the case of an Icelandic clergyman of the name of Jonas Thorlakson, the parish priest of Backa. This venerable pastor, when nearly seventy years of age, had just completed a translation of Milton's Paradise Lost in his native tongue, having previously translated Pope's Essay on Man. Three of the first books only of the Paradise Lost were printed by the Icelandic Literary Society, when it was dissolved in 1796, and to print the rest at his own expense was altogether out of the question, as we are told that the whole of his annual income, from the united parishes of Bægisa and Backa, did not exceed thirty rix-dollars, or 6*l.* sterling, out of which he had to pay an assistant nearly half. This must of course mean the pittance given by the crown, his parishioners and his glebe making up the rest. In allusion to his poverty, he thus expresses himself in Icelandic verse:—'Ever since I came into this world I have been wedded to Poverty, who has now hugged me to her bosom these seventy winters, all but two; and whether we shall ever be separated here below is known only to Him who joined us together.'

"I cannot omit the account which Mr. Henderson gives of a visit to the dwelling of this venerable man at Bægisa, particularly as it ultimately led to the means of alleviating the ills of poverty, when age and infirmity most required their aid.

"'Like most of his brethren, at this season of the year, we found him in the meadow assisting his people in hay-making. On hearing of our arrival, he made all the haste home which his age and infirmity would allow, and bidding us welcome to his lowly abode, he ushered us into his humble apartment, where he translated my countrymen into Icelandic.

"'The door is not quite four feet in height, and the room may be about eight feet in length by six in breadth. At the inner end is the poet's bed, and close to the door, over against a small window not exceeding two feet square, is a table where he commits to paper the effusions of his muse. On my telling him that my countrymen would not have forgiven me, nor could I have forgiven myself, had I passed through this part of the island without paying him a visit, he replied that the translation of Milton had yielded him many a pleasant hour, and often given him occasion to think of England.'

"This description of the deplorable condition of so superior a genius as Thorlakson unquestionably was, being fully corroborated by enquiries made of Mr. Bourke, then Danish minister at the court of London, was not unheeded by our countrymen. At the instigation of one of the most active members of that liberal, humane, and highly beneficent society known as the 'Literary Fund,' the case was immediately taken up, and having, as the committee state, 'discovered the venerable bard of Iceland where he patiently reclined

neath the shed of poverty,' they at once resolved, to use their own words, 'to give transient affluence to the bard, who shivered near the arctic circle, and, under the novel of poverty, had erected with the magic of his mind a temple to the sacred muse.' In June, 1819, he signed a receipt for the money, he writes therein, 'signed with my own hand,' being then, as may be inferred from his own account to Mr. Henderson, in the seventy-third year of his age. The contribution was 30*l.*—equal to five years' income of his miserable pittance; but he did not long survive this act of benevolence, as it is stated, in a short view 'Of the Origin, Progress, and operations of the Society,' dated 3d March, 1821, that 'the poet of Iceland is now in his grave; but it is satisfactory to know that the attention, in this instance, of a foreign and remote society to his genius and his fortunes, was highly gratifying to his feelings, and contributed not immaterially to the comfort of his concluding days.' He wrote a letter in very elegant Latin, expressing his heartfelt gratitude for the kindness and generosity of the society, so accordant with the character of the British nation, and accompanied it with a MS. copy of his translation of Milton's Paradise Lost into the Icelandic language; but the letter is not now to be found, being taken away probably by one of the members who particularly interested himself in the case, and who is since dead."—pp. 245—248.

Mr. Barrow was requested, on his departure from England, by one of the members of the Statistical Society, to obtain detailed answers to certain queries intrusted to him; and although his opportunities were not so full as he could have wished them to be, for collecting accurate information on several points, what he has presented us he has every reason to believe may be relied on. This information was derived from a gentleman, a Danish merchant of high respectability and sound judgment, who had been resident on the island for a great number of years. We shall introduce considerable portions of this interesting statistical account into our pages, furnishing, as it does, some striking facts and lessons.

"*Q.* What are the tenures of estates?

"*A.* Generally for life, on paying about 5 per cent. of the value of the estate, besides an annual payment for the cattle belonging to the estate, which in general are few in number, for the tenant commonly is the owner of the greater part of the live stock.

"*Obs.*—This requires some explanation. Estates are held of the crown, or in fee-simple; but there is no such thing as entailed estates, they being generally sold at the death of the proprietor, and the produce divided among the children; unless some one of them can purchase the estate, by paying each his share of the property. The crown lands and many others are let to farmers on what may almost be called perpetual leases. The rent of a farm is paid in two parts—the land-rent, which is fixed by an old valuation which it has not been found necessary to alter,—and a rent for a fixed number of cattle which it is calculated the farm is able to support; and these are transferred from one tenant to another, each succeeding one to take them, and to leave the same number on quitting the farm. But this is not to prevent a farmer from keeping as much stock as he can maintain, without paying any additional rent. The rent of both is paid, according to the agreement, in money, wool, tallow, butter, &c.; the tenant is for life, provided he does not injure the farm; he may quit whenever he pleases, on giving six months' notice.

"From the Landnama book of 1695, which Von Troil had in his possession, the proportion of estates belonging to the crown, the church, and the freeholds, were as 718, 640, and 1847, since which many of the two former have been sold, and the number of the latter fully doubled. The estimated number of farms, including freeholds, were then 4058: they are now supposed to be above 6000.

"*Q.* Does the crown claim any superiority?

"*A.* The crown claims superiority in very few instances only, which superiority is called Forstrands-Rettighed.

"*Q.* what are the laws of descent?

"*A.* The same as in Norway.

"*Obs.*—The law of descent in Norway excludes primogeniture. If a person dies intestate, the property is sold or valued, and divided among the children, so as to give equal shares to the sons, and half shares to daughters; and where wills exist, they seldom deviate from this rule. If any one of the brothers can pay the shares to his brothers and sisters, it is generally arranged that the freehold estate should be made over to him, in order to retain it in the family."—pp. 271—281.

The size of the estates is estimated by a certain number of cattle which they can feed. In the interior, a middling extent is such as can feed six cows, eighty sheep, and eight horses, of the value of 300 to 400 specie dollars. They are cultivated by owners and tenants. Rents are paid in produce—on the coast in fish; in the interior, in butter, sheep, &c. &c., according to an annual tax; partly likewise in money. Serfs do not exist. Persons in easy circumstances generally employ one or more labourers. The ordinary ages of marriages are with the men from twenty-four to thirty-two; with the women from nineteen to thirty.

"*Obs.*—The authority given to the clergy, by law, not to marry a woman unless she can read and write, would appear to be an admirable one, and will explain why the peasantry of Iceland are so much better informed than those of any other nation of Europe. It is from the mother that the child learns the first rudiments of education, and receives a taste for reading; and a well-educated mother cannot fail to instil into her young offspring the principles of religion and morality. I am informed by Mr. Broder Knudtzon, that the clergy of Norway have the same authority to refuse confirmation to those who cannot read and write, as well as answer certain questions regarding religion.

"*Q.* What is the ordinary fertility of marriages?

"*A.* From four to six: sometimes more.

"*Q.* What is the gross amount of population?

"*A.* About 53,000.

"*Obs.*—This is but a scanty population for so extensive an island, whose surface is to that of Ireland as 1 to 1¼, or thereabouts; but that surface, it is true, from its nature, and the nature of the climate, is perhaps as unfavourable as any that exists within the limits of the two Arctic circles. The extremes of the northern latitudes are 63° 24′, and 66° 33 min.; and of western longitude 13° 28′, and 24° 31′, and deducting the areas of the numerous fiords, by which it is intersected pretty much in the same manner as Norway, the square contents of the land is about 37,388 statute miles; but, as I was assured, one third part is the very least that could be assumed as wholly useless to the inhabitants. The centre of the island, being nothing but yokuls or snowy mountains, is said to be fully equal to that extent; so that the inhabited part cannot be reckoned at more than 25,000 square miles; and the population on each square mile will not exceed 2 1-10th persons. This fact alone will suffice to show what inconveniences the inhabitants must be subject in such a country where there are no roads, and over

which it is utterly impracticable to attempt to stir in the winter months while the snow is on the ground.

"*Q.* What is the annual number of deaths?

"*A.* For the last three years the number of deaths has been from 1100 to 1400."—pp. 284—286.

In the year 1832, there were 1126 more births than deaths; of these births, 383 were illegitimate—a large portion for so sober and sedate a people. The manner in which they live huddled together serves to account for the fact. The whole population is either employed in feeding cattle, or fishing, or both; the number of those who breed cattle, to those who mostly live by the other mode, is as three to one nearly.

"*Q.* What employments exist for labourers independent of agriculture?

"*A.* Other employments than those of breeding cattle and fishing do not exist; nor is there any other class of people or townsmen, save the small number of tradespeople in Reikiavik and other trading establishments.

"*Obs.*—There are no manufactures of any kind carried on as a trade. Every branch of industry is domestic, and confined chiefly to articles of clothing—wadmal or coarse cloth, gloves, mittens, and stockings. The peasantry are generally ingenious: they make such pieces of furniture as their simple cottages require; some aspire to make trinkets of silver, snuff-boxes, and some other articles of the walrus tusks; they also forge implements of iron. But Iceland is scantily supplied with metals; vestiges of iron are abundant, but if worth extracting the metal, they have neither wood nor coal to do so—in fact, the only mineral they extract from the earth is a little sulphur from the mines of Krusivik, which is scarcely worth the labour of preparing it. Iceland consists strictly of a pastoral and fishing population."—pp. 287, 288.

Wool, knitted stockings, mittens, or gloves without fingers, fish, &c. are exported in considerable quantities. There is one physician, and six district surgeons in the island; four hospitals for invalid lepers, of whom there are generally not more than three or four for each, the sick and poor being almost wholly supported by their own families. The taxes are moderate, and may be said to be directly upon property, every one paying according to his circumstances, whether he be possessed of land, stock, or money. After certain deductions, the taxes are divided between the public revenue, the clergy, the churches, and a small portion applied to the maintenance of the poor. Milk, fish, both fresh and dried, meat, bread made of imported corn, cabbages and potatoes, though of an inferior size generally, game, and Iceland moss, which is used for porridge in some parts of the island, are the articles of diet peculiar to Iceland.

"*Q.* Are spirits much used—their effect?

"*A.* Of late years brandy has been much cheaper than formerly, and consequently the sale has considerably increased, so that about 1000 barrels have been imported, which makes something more than two bottles per annum for each individual. The effects of the increased consumption of brandy can be attended with no salutary results, which, however, be they good or bad, will not be apparent to their whole extent till after the lapse of some years.

"*Q.* Are epidemics frequent?

"*A.* Epidemics are not very frequent.

"*Q.* The state of crime, of punishment, of morals, of education in Iceland?

"*A.* Crimes are rare; small thefts, especially of sheep, are the most frequent; but the high tribunal of the country has seldom to decide more than six or eight cases per annum, private as well as public. The whip is the only punishment applied in this country, excepting fines. Those who are punished with hard labour are sent to Copenhagen. Education is altogether domestic; every head of a family teaches his children generally to read and write, and the precepts of religion according to the religious books prescribed by law.

"*Obs.*—The gentle and peaceable disposition of the natives, their moral and religious education and sober habits, act as preventives of crimes of a flagrant kind, so that capital punishment, which is confined to murder, has not occurred for many years. The last instance of one condemned to die, was of a peasant for the murder of his wife, when no one in the island could be prevailed on to perform the office of executioner, and it was necessary to send the criminal over to Norway, to undergo the sentence of the law. No Icelander, unless for the accusation of a crime that would, if proved, incur capital punishment or imprisonment for life, can be kept in confinement before the time of his trial—indeed, so infrequent are crimes of any kind, that the governor told us the courts of law at Reikiavik had little or nothing to do."—pp. 304, 305.

Whilst Mr. Barrow was in Iceland, the Prince of Denmark was there also on a tour.

"The prince is a young man, as I should think about twenty-six years of age, of easy and affable manners, a suavity of address, an inquisitive turn, calculated to invite rather than repel familiar conversation. Free from any appearance of hauteur or reserve himself, he soon puts others at their ease in his presence. His figure is of the middle size, and in good proportion; his countenance not such as would generally be called handsome, but agreeable, and marked with intelligence; and if he should, unfortunately for himself, not be considered, which I sincerely hope he may be, as—

'The expectancy and rose of the fair state,'

and if he be not precisely such a copy of that Prince of Denmark, whose portrait our immortal bard has drawn, and whom we have been in the habit of admiring, as—

'The glass of fashion, and the mould of form,
The observed of all observers,'

he was yet what, in common parlance, we should call a fine young man. It was not from a single interview that I formed my idea of the character of this prince. We saw a great deal of him in the short stay we made on the island, and found him always, and on all occasions, the same: always civil, agreeable in conversation, and studious to oblige. His suite consisted of two lieutenants of the navy, as aides-de-camp; their names Irminger and Pencillius, two remarkably fine young officers, both of whom spoke English, the former perfectly; a physician, and a painter of the name of Klose, a German.

"On my introduction to the prince, he immediately said that we were old acquaintances; and on my expressing some doubt, he said, Yes, at Geneva; he repeated the same thing at a future interview. It was not for me to contradict him, though I could not call to my recollection having fallen in with him there, or any where else, although I certainly was at Geneva at the time he mentioned. He told us that, while in the north of the island, they had been very fortunate in the weather, which was constantly fine and pleasant; but as they approached the south, it became bad, with frequent rain, of which little or none had fallen in the northern districts.

"I ought to state that the whole conduct of the prince gave great satisfaction to the resident merchants and the settled inhabitants of Reikiavik: he never complained

f his banishment, nor, of course, did any one presume o hint at a wish to know the cause of it; but he once bserved to his countrymen, that he supposed he owed is visit to Iceland to his having spoken his mind too reely at court. The inhabitants, previous to his north-rn tour, had given him a public ball, at which he made imself very agreeable, and danced a great deal, particu-arly with the *belle* of Reikiavik, the shoemaker's daugh-er, who was reckoned a great beauty, and to whom he vas very attentive.

"It is to be hoped that this visit of the prince will have he good effect of being attended with benefit to those who, in all probability, will become his future subjects—ndeed, I am confident he will neither forget nor neglect hem. A small addition to the public expenditure of Denmark might be made an important boon to these oor people, and above all to the clergy, whose lament-ble condition he must have witnessed on his travels. An addition of ten pounds a-year to each of their mise-able stipends, which would not entail an increase of hree thousand pounds—nay, even half that sum—would ring down the blessings of the whole community on his ead. It would not appear that he is much out of favour t home, for I perceive by the papers, that he has return-d, and is appointed to the command of the fortress of the own of Fredericia, on the eastern coast of Jutland, oppo-ite to Zealand."—pp. 307—315.

On closing Mr. Barrow's volume, we have again to express the gratification we have experienced from its interesting, sensible, and kindly contents, and our hope, that ere long we shall again meet with him, enlarging and embellishing the depart-ment of knowledge and literature he has chosen to cultivate, and for which he is so admirably adapted, as our extracts prove him to be. We have observed one peculiarity in his manner, that gives character to his writing, which our readers may not detect from the portions we have quoted, so well as they would do by an uninterrupted ex-amination of this volume; it is this, that no cir-cumstance is too slight for his notice—that he speaks very frequently of perfect trifles, but that he does so with such feelings, and represents them in such colours, as neither to be tiresome, nor unsuccessful in finishing the picture intended to be presented.

From the Court Magazine.

AFTER THE DRAWING-ROOM.

BY THOMAS HAYNES BAYLEY, ESQ.

The drawing-room is over, and I have seen the king!
I'm very sure my head is turned, and won't come right this spring:
I positively can't take off my feathers and my train;
I never looked so well before, and never may again.

I heard a lady to a lord complaining of the crowd,
And say, "What common people come!—I wonder they're allowed!"
Of course that wasn't mean't for me, though father did sell cheese;
Since brother made a noble match, I'll go there when I please.

And I was ornamented too, nobody looked so fine,
I did not see one gown or train that looked the least like mine;
I'm sure I had more colours on, than any body there,
Green, red, and yellow mingled, and blue feathers in my hair.

Then some one came and took my train, and spread it out behind,
Just as a peacock spreads his tail; I thought it very kind:
And seeing 'twas a nice young man, dressed out in gold and blue,
I said, "I thank you kindly, sir—I'd do as much for you."

They led me to his majesty—I thought I would have dropped,
He held his hand out *friendly like*, and kissed me when I stopped:
And there the king and I were standing, face to face together,
I said, "How *is* your majesty?—it's mighty pleasant weather."

And then the people pushed me on! I didn't half like that—
I'm sure the king had half a mind to bid me stop and chat;
But looking on, I saw the queen! I'm sure I hope and trust
She didn't see the king kiss me! and yet I think she must.

I curtseyed to her majesty, the proper thing to do,
And seeing ladies standing round, I curtseyed to them too;
I honour maids of honour so, I wished to be polite,
And the queen and all the ladies smiled, which proved that I was right.

I knew (though ne'er at court before!) well what I was about—
Of course I did not turn my back, but tried to sidle out;
But walking, I tripped and fell—(they make them trains so big!)
And, catching at the first thing near, pull'd off a lady's wig!

And then I fainted dead away!—a dreadful thing to do—
Until I found myself at home no earthly thing I knew!
I've graced a court! indeed I'll add, by way of being witty,
'Twas in a court that father lived—a back court in the city!

From Cochrane's Foreign Quarterly Review.

LIFE OF WOLFF.

Leben und Studien Friedr. Aug. Wolfs, des Philologier. Von D. Wilhelm Korte. (Life and studies of Frederick Augustus Wolff, the philologist. By Dr. William Korte.) Essen, 1833. 8vo.

There may be some who are inclined to ascribe the distinguished place which Wolff, during his life time, occupied among the scholars and philologists of Germany, not so much to his superiority of talent, as to the novelty and singularity of his views; as heretics and schismatics occupy a larger place in the eyes of the world than those who are content to remain within the pale of the true faith. But though, undoubtedly, such a work as his famous *prolegomena to Homer* was sufficient, from the startling nature of its theories, to raise him at once to notoriety, nothing but the prodigious stores of learning with which these new positions were supported, and the remarkable acuteness, power, of mind, and even wit and humour, which he could always bring to bear upon every subject, could have enabled him, to his death, to maintain the literary pre-eminence which that remarkable work had conferred upon him.

It is by no means our intention, in this short article, to attempt any enumeration or appreciation of Wolff's numerous contributions to classical literature; the *Prolegomena* alone, were we to enter upon a criticism of its views, would demand more space than we can afford to devote to the whole subject. We shall pass lightly, too, over the latter portion of his life, when he reigned with undisputed superiority in the united strength of wit and wisdom, over the field of classical antiquity and philology. It is to his earlier history—to his struggles and difficulties—to the developement of his mind—to the course of study he pursued—to his incentives and discouragements—to the strong reliance on his own energies, which, under all circumstances accompanied him,—that we would wish for a moment to direct attention. It is in this point of view that the life of a man of learning is interesting,

not merely to the learned but to all. "What is the life of a literary man?" says Wolff, himself, in a journal which he began at an advanced period of life: "Many a merchant, many an indifferent artist, can boast of a more interesting one. That he lived and studied, is all that can be said. But then, *how?* This *how* is worthy of some detail."

Wolff was born at Hainrode, near Nordhausen, in 1759. His father, who was schoolmaster and organist there, was a man of proverbs and wise saws; who seemed to think that human life, with all its duties, might be epitomised in half-a-dozen sentences, such as "Nil admirari;" "Take things as they come;" "Mind not the opinion of the crowd;" and so on. He was a fair scholar, wrote a beautiful hand, and made pens, not wisely but too well, so far as his son was concerned; for Wolff, accustomed to avail himself constantly of his father's dexterity, never learned the art of making a pen for himself in his life; and used invariably to inflict upon his friends, when they visited him after the poor organist was no more, the penance of making pens enough to supply him till their next call. His mother was a religious, cheerful, and strong-minded woman; contented, though poor, which, indeed, she would hardly allow herself to be. No one is poor, she would say, but the Devil. Even from the first she excited the activity and encouraged the ambition of her son; and was extremely delighted one day, when in answer to her enquiry what he intended to be, he replied, "A superintendent!" Such a pitch of daring as this—for, in the eyes both of mother and son, the superintendent was a most illustrious personage—seemed to indicate to the delighted mother that elevation of sentiment, and that confidence in himself, which augured well of his future destiny. His father lost no time in commencing his education; for even at two years old he was taught to repeat with distinctness sentences and verses, sometimes in German, sometimes in Latin, such as *Cœlum serenum hodie*, and such like; at four, he recited publicly in church, after sermon, a sort of thanksgiving ode written by his father on the conclusion of the peace in 1763: and at six, he used to read sermons in church for his father with much approbation, and, as his biographer asserts, not without some tears. So rapid, indeed, was the operation of his memory, that any fifteen lines once read over to him, he could instantly repeat them without difficulty.

Nor, while cultivating his intellectual faculties, was he behind his fellows in less creditable exploits; having a considerable propensity to apple stealing, which was only checked by a severe fall, and a wound in the cheek, which, with the assistance of a bungling surgeon, confined him for about six weeks to bed.* When Wolff was about six years old, his father was induced, by a better appointment, to remove to Nordhausen (1765); and his first care was to place his son, already a tolerable Latin scholar, and not altogether ignorant either of Greek or French, in the gymnasium of the town—a sort of purgatory, or middle state, between the elementary schools and the university, where Wolff, after an examination in Greek and Latin, took his place in the third class, out of seven of which the gymnasium was composed. His picture of the head master, Fabricius, "a very pretty fellow in his day," as far as Greek and Latin were concerned, but by this time perfectly decrepid, stalking up and down the school-room in a grey striped doublet and peruke of preposterous longitude with a whip appended to his button-hole, is enough to strike terror into the heart of every truant. Fabricius had at least, one feature in common with Horace's portrait of Death:—

> "Nec parcit impelles *juventæ*,
> *Poplitibus timidove tergo*;"

and, old as he was, seems to have been viewed as a regular hobgoblin (*Popanz*) by the juniors of the gymnasium. Of him Wolff saw little; for very shortly after his entrance, Fabricius himself submitted to the ferule of death, and was replaced by Hake, a man of decided abilities; precisely the person likely to call out the energies of a boy of superior talent, but utterly to ruin and discourage, by exacting too much, those of moderate ability and activity, of whom, of course, nine-tenths of his whole classes were composed. Wolff always remembered him as one whose discipline had tended, in the highest degree, to bring out the latent energies of his mind; and who, delighted with his quickness of comprehension and persevering study, had been ever ready, by private and confidential intercourse and familiar explanations, to smooth his difficulties and accelerate his progress. Above all, Wolff felt indebted to him for having early impressed upon his mind the practicability of self-instruction, a lesson of which he had soon occasion to avail himself; for Hake shortly followed Fabricius, and under his successor, Albert, the reputation of the Nordhausen Gymnasium began sensibly and deservedly to decline.

Already, however, Wolff felt that strong impulse towards classical literature, as his natural destination, which enabled him, though by no means an exemplary attendant on the school classes, to devote days and nights, in the solitude of his own room, to a course of study which he had prescribed for himself; a degree of application, it must be admitted, somewhat rare in a boy not yet thirteen years of age. His application was, in fact, too violent; his health began to give way under the constant mental fatigue to which he had accustomed himself; nature began to vindicate its rights; and singularly enough, but at the same time most fortunately for Wolff's future developement, both corporeal and mental, the portion of his life from his twelfth to his fourteenth year was one of almost utter idleness; in which, casting care and classical learning behind him, he seemed to have no other object but

* This catastrophe he has recorded in a fragmentary Latin journal, bearing date, Feb. 1823:—"Etsi proprii horti non deerant, vicini pruna mihi majora videbantur; enisus summam arboram, et a ramo ad ramum transiliens, decidi in struem lignorum, ex quâ tenues quædam assulæ dexteræ malæ infixæ, ulcus fistulosum mihi contrahebant, cujus curatio satis diuturna."

xercise and amusement—a period, in fact, chiefly pent in playing foot-ball and walking the streets. lis frame strengthened and his mind attuned by iis interval of relaxation, he returned again with ew zest to his studies; and, as if by a fortunate oincidence, he at this time attracted the atten- on of one of the masters, a friend of his father, he professor of music, Frankenstein—a man in vhom a singular facility for the acquisition of iodern languages was mingled with no ordinary egree of eccentricity. Frankenstein was to Volff in modern languages what Hake had been o him in the ancient: he stimulated his faculties o the utmost; French, Italian, Spanish, English, of which, be it observed, Frankenstein himself ad never heard a single word pronounced, and vhich, of course, he most cruelly mangled, as Volff afterwards found when he became ac- uainted with some English students at Göttin- en,) were all at once begun, and to a consider- ble degree, mastered by the industry of Wolff. The devotion of mind to one pursuit, which is at nce the prognostic and the cause of success, hows itself in the minutest trifles. Neither Frankenstein nor his pupil was in possession of uch an article as a tolerable English dictionary; Volff, however, in his distress applied to a friend or the loan of a copy of Bailey's Dictionary; his riend could only part with the book for a month; nd during that period he copied one-third, and ommitted the other two-thirds to memory!

At a later period of his life, he used frequently o look back almost with horror on the intensity of iis studies at this time; the means to which he iad resorted in order to enable him to stifle the emonstrances of nature herself, and to make those mmediate drafts upon his physical constitution vhich were afterwards to be repaid in the shape of long years of disease and pain: "Multa tulit ecitque puer, sudavit et alsit." His plan was to levote himself for the time to one subject, to the exclusion of every thing else: night after night ie would sit up in a cold room, keeping off the ttacks of sleep by placing his feet in a pail of old water. During this period of excessive study, vhich continued from his fourteenth to his ighteenth year, he added the elements of Hebrew, o his other acquisitions; and acquired, so far as he limited stores of the Nordhausen libraries vould permit, a competent knowledge of biblio- raphy. The kindness of the collaborator Leo- old, of the academy at Ilfeld, who gave him the se of his library, made him acquainted with the est editions of the Greek and Roman classics. Once every fortnight, the young student, accom- panied either by his mother or the maid-servant, night be seen trudging along from Nordhausen o Ilfeld, a distance of several leagues, bringing ome in a basket some twenty thick and heavy volumes from his patron's library. He used to remember, many years afterwards, how one day, when he was confined to bed, his kind mother had walked alone to Ilfeld, and brought him under her arm the folio edition of Barnes's Euripides to amuse him during his confinement. Shortly afterwards, to the consternation of the conrector of the Gymnasium, who had been expressing his regret in one of his lectures, that only *three* of Euripides' plays had come down to us, Wolff quoted passages from about twenty of them, with which, during his watchful nights, he had made himself familiar.

A youth of Wolff's penetration could not long be insensible to the ignorance and inefficiency of his teachers, of which a whimsical instance is given by his biographer. The rector, Albert, Hake's successor, had to deliver a lecture in the room of the conrector, who was indisposed. He found the scholars in the class of Roman anti- quities engaged on the subject *De Ædilibus:* with the greatest possible effrontery he sat down and delivered a lecture on the subject; in which the supposed duties of these functionaries were described as analogous to those of certain of the Nordhausen town-council, who had the super- intendence of the public buildings; much in the same way as if we were to compare them to that member of the Scotish town-councils who is called the master of kirk and bridge-work. Wolff, accordingly, by degrees abandoned his attendance on the Gymnasium altogether, and betook himself to a course of solitary study, beginning again with the very elements; for, convinced as he was of the incapacity of his instructers, he began to sus- pect that all the instruction he had received had been upon a wrong plan. Already it would ap- pear, the extent of his acquirements was beginning to be known in Nordhausen, for at fifteen several young men were intrusted to his tuition.

At this period of his life the intensity of his application was a little relaxed, in consequence of a youthful attachment he had formed, and which took its rise at a dancing party, where Wolff, to please his mother, was accustomed oc- casionally to be present. The object of this boyish flame was a pretty young widow, who had just buried her husband, and who used to "drop in" familiarly in the evenings to his father's house, and dissipate her grief by listening to the young student's musical performances, or occasionally accompanying them with her voice. Wolff at first regarded her with considerable awe, and actually on one occasion styled her *venerable friend!* a distinction to which she very earnestly protested she had no claim. Wolff soon came to be of the same opinion; for, in the course of a few weeks, notwithstanding the difference of years, they were very heartily in love with each other, and carry- ing on a secret correspondence, which Wolff always maintained had tended materially to im- prove his German style. It is not every one who, like Wolff, is so fortunate as to render even love the handmaid to learning; but such was the case in this instance—his mistress was his best in- structress in German, French, Italian and music. This romantic episode in Wolff's life was brought to a close by the unfortunate death of the lady, who died about a year and a half afterwards of consumption.

After this deprivation, which had rather given a new direction to Wolff's studies than interrupt- ed them, he resumed his old habits of night study, with the accompaniment of the cold water pail as before. His memory, trained by daily exercise, had acquired astonishing powers both of appre- hension and retention; he could recite whole

tragedies, or whole rhapsodies of Homer by heart. In 1776 he commenced his studies at Gottingen, where he took up his abode in a little room, containing just space enough for a table or two and a few chairs. His first interview with the celebrated Heyne, to whom he brought a letter of introduction from his friend Leopold, was far from encouraging. Heyne endeavoured to persuade him that of all pursuits philology was the least advisable; and when Wolff enumerated the authors he had read, told him he had read a great deal too much, and that "*perpauca sed multo labore*" should have been his motto. Heyne indeed, never seemed to have given himself the trouble to understand Wolff's character, which was not one to be appreciated at a glance; though remembering his own struggles in youth, he might have been expected to have some feeling of sympathy with a young man similarly circumstanced, fighting his way up the steep "where Fame's proud temple shines afar." From the librarian Diez, however, he met with a more favourable reception: the stores of this excellent library were liberally placed at his command; and he was allowed, by special licence, to borrow ten or twenty volumes at once whenever he required them.

Wolff's disappointment was extreme when Heyne commenced his lectures on Homer; every thing seemed to him so superficial, so unsatisfactory, so unworthy of Heyne's great reputation, that in a short time he began to relax in his attendance on the lectures, and ultimately to absent himself altogether. Heyne, short-sighted as he was, remarked his absence: he said nothing; but when Wolff applied for admission to his private course on Pindar, he was told that only those who were much farther advanced could be admitted. Wolff offered to make proof of his qualifications by submitting to a Greek examination, but received no answer. This treatment from a man like Heyne grieved and mortified him in the extreme; and he could not so far suppress his feelings as to abstain from occasional satirical remarks upon his conduct, which found their way to Heyne's ears, and tended to increase that feeling of coldness, and even dislike, with which he ever after appeared to regard Wolff.

The only use which Wolff now made of the public courses in the university was to attend them diligently for about a fortnight, till he had learned from what sources the best information and materials for study were to be derived; then, bidding adieu to the lecture-room, he filled his basket from the library, and studied the subject after his own fashion. He was so anxious not to lose a moment unnecessarily, that he grudged the time required for dressing; and, with the view of shortening the process of the toilet, he had his hair cut off and replaced by a peruke; and, instead of his customary garb of coat and waistcoat, attired himself in one long doublet, which soon acquired among his friends the name of the *pallium philologicum*. By these alterations, he had contrived to reduce the time occupied in dressing to three minutes; but this ingenious device of the cloak he was ultimately obliged to abandon, as he found that it suggested comparisons between himself and an eccentric student of the name of Penzel, who had preceded him, of rather questionable reputation; and who had carried his ideas of simplicity so far, that though he wore a cloak, he had dispensed with his breeches as an unphilosophical superfluity.

At college he had many acquaintances, but, perhaps, only two friends, Diederichs and Meurer. He scarcely ever visited any of the other students in their rooms, and never at night, when the drinking parties commenced. He seldom even stopped to speak to any one in the street, but touched his hat and hurried on to his room, the door of which was generally found carefully locked against all intruders. Silently, however, under this eccentric and auto-didactic course of study, he was laying up the most prodigious stores of erudition, and exercising the faculties of his mind by meditation and original research. In the course of one year he read with attention and excerpted about eight hundred volumes, and even committed great part of their contents to memory. His only indulgence during this period was in tobacco-smoking—a science in which he almost emulated the proficiency of Boxhornius—being frequently accustomed to consume twenty pipes a night while engaged in hard reading. Perhaps the smoky atmosphere with which he thus surrounded himself habitually may have had quite as much to do with the severe inflammation of the eyes, to which in 1779 he was subjected, as the reading of the small Greek text to which he was himself disposed to attribute it.

Wolff now began to eke out his small allowance from home by private teaching in English, Latin, and Greek. In the latter he gave instructions in his own room to a class of sixteen. Shortly afterwards he began to deliver regular courses of lectures, which were well attended, and brought him a tolerable addition to his limited income. His lectures were, however, interrupted by an unexpected summons from Heyne, who informed him that the situation which had been held by his old friend Leopold at Ilfeld was vacant, and was to be disposed of by comparative trial, and who strongly urged that he should offer himself as a candidate. Whether Heyne's motives in this matter were altogether pure, or whether he might not secretly wish to remove from the university one who was likely to prove a dangerous rival to his fame, we shall not stop to enquire; suffice it to say that Wolff took his advice and was successful.

His residence at Ilfeld need not detain us long. It seems not to have been regarded by Wolff as very pleasant; and, indeed, it is evident that a mind so expansive must have felt its limited field and monastic uniformity very wearisome and monotonous; not to mention the awkward position in which a teacher of twenty must have occasionally found himself, when surrounded by pupils taller and older than himself. It is chiefly remarkable for two things: first, that he seems at that time to have reduced to shape those views with regard to the Homeric poems which were afterward to excite so much attention and discussion; and, secondly, that he there became acquainted with his future wife, the daughter of the

ustiz-amptmann Hupeden, a pretty, quiet, affectionate girl, whose heart he seems to have ained by supplying her with books a little more o her taste than the volumes on criminal-law vith which alone the old jurist had furnished her ibrary. Marriage, however, was out of the question, till some better security against the *res angusta domi* should be found than his situation it Ilfeld afforded. One evening about this time, vhile Wolff was sitting with some of his colleagues and their families, one of them happened o read aloud the announcement of a vacancy in the rectorship at Osterode. Wolff's mind was instantly nade up to offer himself as a candidate. Without saying a word to his intended bride, who was n the room, or to any of the company, he hurried out and ordered a carriage instantly for Osterode. When he returned, he told them what he had lone; but was not a little annoyed to be told, hat the newspaper from which the announcement had been read was nearly three months old. Still, ie would not be dissuaded from his journey. He posted off to Osterode, and on his arrival enquired of the landlord at the inn, in what quarter application was to be made for the situation. The andlord gave him the necessary information; but old him, at the same time, that the matter might almost be considered as already settled in favour of a young man from Gottingen, Krause, who had delivered a trial lecture with more than ordinary approbation.

The Burgomaster Jenisch, to whom he first addressed himself, gave him but little encouragement, and was quite surprised when Wolff requested, if it were not yet too late, to be allowed to deliver a lecture, and that the earliest possible day might be assigned for the purpose. The burgomaster, however, seemed to be struck by the easy confidence in his own resources which the request implied; and proposed to lay his application before his colleagues, and, if possible, to obtain for him the desired opportunity. The Syndicus Kopp, whom he next visited, gave him better hopes; and intimated, that his chance might be considerable, if, upon such very short warning, he could contrive to deliver a trial lecture with success. He was politely received by the others, and a round of invitations lowed in upon him, which Wolff accepted as if his preparations had been made for months before. A fortunate chance concurred to give still greater publicity and effect to this self-reliance. As he was just setting out for a large party at the syndicus's, he met the servant of the town-council bringing him the themes selected by the magistrates for the trial lecture, to be delivered next morning. Wolff told the servant coolly to lay them on his desk, where he would find them in the evening, and joined the party as if all preparation were unnecessary. Next day he delivered, in presence of a numerous audience, his trial lecture; for which the subjects prescribed were, an ode of Horace, and two chapters of Thucydides, and received at its close the congratulations of all present, and strong assurances that he had every chance of success. Shortly after his return to Ilfeld, his election was intimated to him.

This must have been one of the happiest periods of Wolff's life. By his own unassisted exertions he had conquered for himself an independence (for, besides a comfortable home, the salary attached to the rectorship at Osterode was 700 dollars), and had removed the only obstacle which retarded his wished-for union. His marriage now immediately took place; and the young rector, still only twenty-three years of age, removed to his new residence.

Though the period of his residence at Osterode (1782 and 1783) was not distinguished by many literary works, it was one of uninterrupted literary activity, and unceasing exertions to improve the disciples of the academy, and to train the scholars to habits of thinking and reasoning for themselves. In one year, his biographer says, he did more towards its improvement than had been done for half a century before. This left little time for private study. Indeed, with the exception of his long meditated edition of Plato's *Banquet*, which had appeared immediately on his taking possession of his new situation, nothing else appears, during this period, to have been published. But the general approbation with which that work was received, and his high reputation as a teacher, soon procured him offers of various situations; the directorship of the Gymnasium at Hildesheim, and a similar situation at Gera, both of which he declined. His anxiety was now to obtain a professorship; and he had not long to wait before an invitation was given him by the Prussian minister, Zedlitz, to accept one of the chairs in the university of Halle, which the Prussian government seemed anxious to establish as a rival to that of Göttingen. But the change from 700 dollars to 300, which was the whole salary annexed to the Halle professorship, was a serious item in the consideration of this new scheme, and for some time created obstacles to his acceptance of the office, however otherwise desirable. At last, on the understanding that there was every chance of his shortly afterwards obtaining an addition of 150 dollars to his salary, he agreed to the proposition of the minister, and in 1783 commenced his labours at Halle.

The sound judgment and conscientious activity which he had been accustomed to devote to the cultivation of mind in the children of others, he had now an opportunity of transferring to his own. His infant son, whom he had been so fond of that he could not bear him out of his sight, and used to have laid in a basket on his writing-table while engaged in composition, died just as he removed to Halle; but three daughters were afterwards born to him, and he entered upon their education with all the enthusiasm, and, at the same time, strong sense and knowledge of the human powers and their developement, which distinguished his character. In his other domestic relations he was not so happy: the strong opposition of temper, habits, and pursuits, between himself and his wife, seems to have embittered the existence of both, and at last terminated in a separation after a union of ten years. It was Æmilius Paulus, we think, who being asked by his friends why he had divorced

his wife Papiria, who seemed to be at once so beautiful and so virtuous, answered, as he held up his shoe, that no one but himself who had worn it could know where it pinched; without a minuter knowledge of the circumstances of Wolff's case, it would be difficult to say in what quarter the pinch lay, or how far the step of separation was justifiable. As regarded his literary activity, the world had every reason to approve of it; for the unfortunate terms on which for some time past he had lived in his family had depressed his spirits and impaired his usual energy. After matters had thus come to a crisis, he seemed to plunge with renewed strength and spirits into the wide and deep ocean of classical antiquity; an impulse to which fresh activity was imparted by his transference to a better professorship. Zedlitz, who had not forgotten his promise of befriending Wolff, no sooner heard of a vacancy in the professorship of eloquence, which was considered the first in the philological faculty, than he offered it to him, and the offer was of course most gratefully accepted.

The natural cheerfulness of his disposition, and the unaffected vivacity of his manner, made him at once a lover of society and a welcome guest in every party. At the social board he seemed to cast all care aside. He was a frequent attendant at the convivial mysteries of the masonic lodge. With his students, especially those who appeared to be more than ordinarily gifted, his intercourse was peculiarly easy, affectionate and confidential; so much so, as frequently to excite the astonishment of the new comers, who could hardly comprehend how so much learning and so much simplicity, such prosody and such punning, could co-exist in a German professor. His literary contributions at this time were numerous; a new edition of the *Theogony* of Hesiod, with a Commentary; *Lectures on the History of Greek Literature* (the book is but a fragment, embracing only the commencement of the period from Constantine the Great to the capture of Constantinople); a *History of Roman Literature* (a syllabus for his lectures); *Antiquities of Greece; Tetralogia Dramatum Græcorum;* a most valuable Commentary on Demosthenes's *Oration against Leptines;* editions of Lucian, Herodian, and Cicero's *Tusculan Questions*. But we pass over these, however interesting to scholars, to come to the work which first directed the attention of the learned men in Europe in general to the professor of Halle.

At this period of his life (1793), he was requested by a bookselling house in Halle, to prepare a new edition of Homer, for the use of schools; a subject on which Wolff had long meditated, and fully digested those extraordinary views by which he was about to startle the literary world. He applied himself to the task with all his customary impetuosity of study, laying every thing else aside; and, in 1795, his new edition appeared, accompanied by the celebrated *Prolegomena*.

Wolff certainly was not the first who had thrown out the doubt how far the Iliad and Odyssey were the work of Homer alone, for the subject had been touched on by Blackwall and Wood, as well as by others. But, for the first time, the doubt acquired strength and importance in his hands; and the grounds of the established opinions on the subject were attacked with an array of learning so imposing and multifarious, and an acuteness of criticism and closeness of reasoning so remarkable, as fairly to justify the cry, that the classic "church was in danger."

The *Prolegomena* are written in Latin, and with a degree of purity, precision, and transparency of thought, which (independently of the originality and importance of the general views which they embody) would be sufficient to render the work most attractive as a literary composition. Without attempting in any way to epitomise so remarkable a production, we may notice, in a word, that the leading propositions which it professes to establish by arguments drawn both from external and internal sources are these: 1. That writing was utterly unknown to the Greeks at the time, and that the poems of Homer were merely preserved by memory and tradition; 2. That the Iliad and the Odyssey are not the work of one author, but that the former is at least a century older than the latter; and, 3. That neither the one nor the other is the work of a single poet, but that both consist of a series of rhapsodies, the work of different poets, which, at a later period, not earlier than the time of the Pisistratidæ, were dovetailed, as it were, into each other, and formed into a whole.

Wolff saw very well that even if his views were correct, the creation of the Homeric poems would only become more mysterious, more miraculous, we may say, than before; but by this consideration, or by the outcry against his want of taste in endeavouring to push the monarch of epic poetry from his throne, he was not likely to be deterred. It may easily be imagined with what discordant sentiments these new theories were received by the literary world; considered by some as heresies of the blackest die, by others as the most remarkable and original contribution which had been yet made in Germany to the science of philosophical criticism,—but received by all, even those who were most revolted by them, with a feeling of admiration at the skill and learning by which they were supported. Among the admirers of the work were Goethe and William Von Humboldt; though we believe Goethe ultimately reverted to the established faith in regard to the unity of these poems. Schiller thought the views contained in the *Prolegomena* "barbarous;" he could not bear to see blind Mæonides thus uncourteously discrowned after an undisputed reign of some two thousand years. Herder approved of them, but maintained that the same idea had occurred to himself long before. Heyne reviewed them unfavourably in the *Göttingische Anzeigin*, ascribing most absurdly and unjustly, the merit of the conception to Villoison: and characterising the *Prolegomena* as little more than a *rifacimento* of the views of the abbé. Fichte again annoyed him by remarking that the same result might be arrived at *a priori*, which Wolff had elaborated *a posteriori*. Amidst this conflict of opinions, it may easily be imagined

that Wolff, with his warm temper, did not feel himself placed on a bed of roses; and though not exactly a man to consign a brother grammarian to the devil for a theory of impersonal verbs, he had too little patience to bear attacks, particularly such and from such as Heyne's, without retorting; and, accordingly, a controversial correspondence, published in the journal entitled *Deutschland*, was the result. In Fichte's case, he ought to have been shamed into a confession of his own unreasonableness by the temperate and philosophical manner in which Fichte answered some sarcastic and injurious observations he had made in regard to him. These were his expressions:—

"I had the mortification of hearing, through the mouth of busy tale-bearers, that the man for whom I had been endeavouring, as I thought, to express my high and hearty estimation, had taken my observations amiss, and seemed to consider it as an attempt to undervalue the merits of his deep and laborious investigation; as if any discovery made *a priori* could render superfluous a demonstration *a posteriori*.

Wolff's conduct in this, as in several other instances in his life, was certainly childish and unreasonable enough. He had too many and too unquestionable pretensions to learning and ability to require that he should maintain his reputation by this uneasy Ismaelitish warfare in magazines and reviews; and had he never written one line in reply to his critics, the *Prolegomena* would probably maintain the same distinguished position in the learned world which they do at the present moment. On the whole, notwithstanding the violent discussions to which they gave rise, they continued to advance in reputation both in Germany and in other countries.

This was the most brilliant period of Wolff's literary life; his reputation had reached a point beyond which it could hardly be expected to rise; and, though that reputation was honourably supported during the remainder of his life by a long course of literary activity, it will always be in connection with this remarkable work that his name will be remembered. It is not our intention, therefore, to pursue farther with any minuteness the history of the scholar and the critic, but rather to direct our reader's attention to some of those domestic traits which characterise the man.

The misfortunes which Prussia experienced in 1806, fell severely upon Halle, which was annexed to the kingdom of Westphalia, and had its university entirely suppressed. Wolff, who had removed to Berlin about a fortnight before, suggested the establishment of a university in the capital to replace that of Halle, and the government entered into his views; but the present condition of the country delayed the execution of the plan, which was, in fact, only carried into execution after the retreat of the French. In 1810, the minister of the interior wrote to Wolff, who was then at Vienna, requesting to know whether he was prepared to deliver a course of lectures at the new university, and on what footing. Wolff replied, that according to *his* understanding, he was to deliver these lectures in the character of a member of the Academy of Sciences, and not as an ordinary professor; and, after a good deal of discussion about a matter which was not worth the trouble, he seems to have carried his point.

But discontent at many things connected with the university, and the increasing infirmities of a constitution on which his early excess of study was now beginning to make serious ravages, seem to have impaired his exertions, and his lectures were extremely irregular. The resource to which he turned for relaxation of mind and relief of physical suffering was traveling. In 1816, after an absence of fifty years, he revisited his native place, Hainrode. He walked over the spots where he had played, the trees under which he had lain, when a boy of three or four years of age. He listened with delight to the anecdotes of an old man who remembered his mother, and who recalled to his recollection many particulars of his early years. He visited the schoolhouse which his parents had inhabited, the church in which he used to read sermons and recite thanksgiving odes for his father. The sight of the reading-desk and font, and the sound of the little organ, brought tears into his eyes. At Nordhausen, too, he visited the graves of his father and mother, and presented to the gymnasium a handsome edition of his Homer, besides a pecuniary donation. In Göttingen he sat down once more in his old chamber, and wondered how he could ever have been accommodated in such a nook; he saw and conversed with his former landlord, now in extreme old age, and who in the course of another day was struck by apoplexy. One of the entries in his journal is characteristic enough.—

"In our two-horse carriage, the stronger horse placed on the left-hand, and the weaker and worse on the right, in the place of honour. Just as men are generally placed in most states, only with more reason; for, in driving, it is done only to bring the lazy animal the better under the operation of the whip."

In 1818, he made a tour to the North Sea; in 1820, another, by Weimar, to Frankfort, to visit his daughters, who had been both married, and the elder of whom was already a widow; and thence along the Rhine into Switzerland. In 1822, he had an attack of severe illness, from the consequences of which, indeed, he never thoroughly recovered. The truth is he was a wretched patient, for he never would submit to the precautions and rigid abstinence which his physicians prescribed, and the nature of his complaints required. His long confinement, however, was cheered by the visits of his numerous acquaintances, who were surprised to find that, notwithstanding the depressing effects of disease, his intellectual energies, nay, his cheerfulness and wit, were as lively and conspicuous as ever.

About this time, at the request of his friends, he was induced to begin to commit to paper some notices of his own life, but the manuscript never made any great progress. It was written, as the mood struck him, in Latin, German, or French, with here and there a sprinkling of English, but in the most fragmentary style; and his matrimonial miseries occupied so large a portion of the whole, that on reading what he had written he destroyed it. One or two similar journals seem to have been commenced, one entirely in German, the other in Latin; but neither were

proceeded with to any length, or contained any materials which could be of much use to the biographer.

In 1824, he was ordered to try the effect of a change of climate, and proceeded through France to Lyons, sorely annoyed by the constant blunders of his German servant, who would occasionally ask for " *tapisserie*," while poor Wolff had been expecting " *pâtisserie*;" or " pain de *manège*," instead of " pain de *ménage*," the term by which the finer species of bread was distinguished. In Lyons he became worse, and from thence he proceeded to Montpelier, and ultimately to Marseilles, where he arrived much exhausted. Here his illness rapidly increased, and on the 8th of April, 1824, he expired. He had left some instructions for his funeral, which were rather of a singular nature, and was particularly anxious that there should be a small attendance, but a liberal allowance of wind music !*

Wolff was of middle stature; his demeanour natural yet dignified; his forehead broad and lofty; his eyes blue, deep set, and penetrating; the mouth gracefully formed, but with a slightly sarcastic expression; the general expression of his countenance was that of power tempered with mildness. His gait and movements partook of the vivacity of his mind; his temper was quick and sensitive; he was easily offended, but as easily reconciled. He never brooded over vexations and disappointments, but expressed his feelings strongly, once for all, and forgot them. So open was his mind to the influence of the pathetic, that, like our own Richard Bentley, he could not peruse a tender passage in his favourite poets without tears.

In his conversation there was a singular charm —wisdom was so set off by wit, and profound learning poured forth with so little pedantry; anecdotes and characteristic sketches of the many eminent men, with whom his long literary career had brought him in contact, succeeded each other so amusingly and with so little appearance of egotism, that it had equal attractions for the learned and the unlearned. With none was Wolff a greater favourite in society than with the ladies, with whom he could entirely abandon the dictatorial and Johnsonian style, into which, in argument with the other sex, he was not unfrequently betrayed. Of irony he had a wonderful command, and when provoked by any appearance of pretension or affectation, he used it unsparingly. He had less of the intellectual gladiator about him, however, than the doctor; he did not throw down the gauntlet to all comers, though, when once embarked in debate, their conversation had many features in common.

His household arrangements, with a great pretension to order, seem to have been confusion worse confounded. Knowing the peculiarity of his own habits and dispositions, he entertained a great dislike to " clever servants;" his object always was to secure some quiet, good-natured creature, who would be as much as possible an automaton in his hands, and live, move, and have his being, exactly as the professor chose to direct. Wolff had the greatest aversion to being kept waiting, and had never, probably, kept a coachman waiting five minutes in his life. He exacted the same punctuality from his unfortunate servant: in the morning he would give him a list of twenty messages to be performed, for each of which a quarter of an hour or half an hour was allowed, as the case might be; and if, as was occasionally unavoidable, his servant exceeded the time allowed, the professor would pour such a storm about his ears, that with all his liberality he had enough to do to retain a servant in his house.

Of taste, either in matters of dress or ornament, he had not a vestige. He was fond of fine clothes, but never could contrive to dress decently; the furniture of his house was gaudy, but selected without the least regard to propriety, and huddled together as in an upholsterer's wareroom. Like many other literary men he was a most irregular correspondent; letters from his correspondents would be occasionally left unanswered for years: his own, when he did write any, are generally distinguished by wit and a careless felicity of expression.

As a teacher, we have already said, he was active and conscientious in the highest degree; and few seem to have so thoroughly possessed the art of conciliating affection united with respect. He had the satisfaction of witnessing in his lifetime the most gratifying results of these exertions, in the progress and high character of many who had derived their instruction from him, and drawn their inspiration from his example. " I enjoy," he writes in a blank leaf of his journal, on one of his latest birth-days, " a good fortune which falls to the lot of few, that of seeing while alive the promise of a plentiful harvest from the seed I had sown with toil, and of calculating, in some measure, its increase when I am no more."

* " At half an hour after daylight, without distinction of seasons, I wish the funeral to proceed to the churchyard with as little attendance as possible. There must be wind-music, and not too sparingly supplied."

From the New Monthly Magazine.

" ALL HEART."

When I first knew Tom Richards at school, he was a thoughtless, idle, dirty, naughty boy; he cared for nobody, and it was evident that nobody cared for him. He was a snarer of birds, a killer of cats, a tormentor of dogs; the dread of all little boys, and the scout of all big ones. From this let no one imagine that Tom wanted feeling, snaring birds, killing cats, tying kettles to the tails of dogs, and frightening little boys out of their wits, were all matters of mere amusement. But if you talked to Tom in an angry tone, or above all if you rapped Tom's knuckles, Tom's eyes filled with tears, and it was evident that Tom's feelings were hurt.

Tom's tears, in fact, lay near his eyes, and on small occasions would blubber like a girl. This was by some supposed to indicate deep feeling, and certain it is that the prevalent opinion was that Tom had a *very good heart*.

Now I must confess that I thought but little

about Tom at the time, but had I been asked to give an opinion, I should have said, that if you wished to trace his tears to their source, his heart was the very last place you should have thought of; bodily pain or wounded vanity, the loss of a plaything or the confiscation of a tart, would make his eyes twinkle. But little as I could then pretend to penetrate into the motives or actions of men or boys, I should have said that though Tom certainly gave no evidence of possessing a *bad* heart, he had never so far blubbered himself into my good graces, as to make me believe that he had a particularly *good* one. Tom Richards and I, in fact, knew but little of each other; we sat on different forms, played at different games, and whether he or I first quitted the school was a matter (I should imagine) little noted by either, whichever may have been the one left behind.

He was the son of a very rich mercantile man; I one among many descended from a younger brother, a colonel in the army, who had very early in life united himself to a charming young lady without a penny.

I was therefore left to carve out my own destiny; and for many years after I quitted school, I was far away in a foreign clime diligently toiling for independence. I was absent twenty years, and then came home, with a face quite as yellow as the gold which I had contrived to scrape together, and though by no means a nabob, I possessed sufficient to insure my future comfort. I confess I think I was wiser to come back and settle down contented with my little competency, than to go on toiling, as many do, amassing wealth, and sacrificing health—digging out dollars for other people, and graves for themselves. On my return to England after so long an absence, I felt a lonely being; and after sojourning in London sufficiently long to become very sick of the Oriental Club, I resolved to settle in Cheltenham, partly because I thought the waters would (like Rowand's Kalydor) be beneficial to a faded complexion; but principally because many excellent families, formerly well known to me in India, had made that pretty town their home. With them I passed my time pleasantly enough, and could curry and mullagatawney have made me insensible to the chill breezes of a Gloucestershire atmosphere, I might still have imagined myself a native of Calcutta or Bombay. At an evening party I one night encountered a fat, good-humoured, little man, who was my partner in a rubber of whist: little passed between us beyond the usual interchange of civilities common among strangers so circumstanced; I was aware that his name was Richards, a common name enough, and after paying him the few shillings which were his due as victor of the green cloth, I wished him good evening.

The next day, soon after the removal of my morning meal, to my very great surprise, Mr. Richards was announced, and he immediately entered the room, in a state of hurry and agitation, for which it was impossible for me to account. He came forward rapidly, grasped my hand, looked at me with a pair of wet, twinkling eyes, and wiping them with a pocket-handkerchief, sank into an arm-chair.

"The poor man," thought I, "is periodically a lunatic, and now the fit is upon him!—how shall I get him out of my house?"

I stood upon my own hearth-rug irresolute what step to take; the servant had left the room, and if I were to ring the bell, I thought my new acquaintance might be irritated; I looked at him in silence.

Mr. Richards with his eyes still wet, gave me a sort of April smile, and faintly articulated "JONES!"

I have not before made the avowal to the reader, but my name *is* Jones—a name familiar to the ear as Richards, perhaps more so; but the more common your name, the more necessary is it that it should be treated with becoming respect. There were not three men in the wide world who had ever hailed me as plain "*Jones*" before me, and here was an acquaintance of twelve hours familiarly omitting the "*Mister*."

> The gentlemanly man, whom you prefer,
> Will know you for a year, and call you *Sir*;
> The vulgar being, whom you never seek,
> Will slap your back, and *Jones* you in a week!

Nay, here was actually a fat man of the name of Richards, calling me "Jones" at our second meeting, and holding out the bare paw of familiarity! I drew instinctively back, and ejaculated "Sir!"

Mr. Richards started up, put his arm upon my shoulder, and cried with a flutter of sensibility, "You do not remember me?"

"Pardon me," I replied, "indeed I do not."

"No, and I did not remember *you* last night; and I dare say *I* am somewhat changed since you knew me as a boy," said the very fat man, with a sentimental sigh.

"Possibly, sir," said I; "I certainly do not recollect you."

"My dear Jones," he replied, grasping both my hands, and affectionately squeezing them; "I am Tom Richards, your old schoolfellow: what a meeting after the lapse of so many years!" and while I was endeavouring to bring to my recollection a person for whom I had never felt interested, and who had never professed nor evinced any interest for me, he was indulging in a fit of sensibility, from which he was suddenly moved by a knock at the door.

"A visiter!" he exclaimed; "how provoking that such a meeting should be interrupted; I am unfit to meet any one; adieu, friend of my early days! I trust we shall often meet."

Saying this he hurried out of the room, and I was fortunately spared the necessity of evincing that I had but a very indistinct recollection of Master Tom Richards, and felt no gratification whatever at being made acquainted with the fatness and the sentimentality of the middle-aged gentleman into whom he was now transformed. To my new visiter I laughingly described the scene, and found that he was well acquainted with the actor who had just precipitately quitted the stage. "It is so like Mr. Richards," said he; "he is all heart: when next you meet, receive him kindly, for he feels all that he professes, or fancies that he feels it, which amounts to much

the same thing: his feelings are skin deep; they are aroused by any thing or nothing, and never last long; but still, poor man, he has the best heart in the world."

I soon had frequent meetings with my quondam schoolfellow, and what I saw of the man very soon recalled vividly to my recollection the boy whom I had so entirely forgotten. His father's wealth had insured him independence without the necessity of choosing a profession; but, to increase his income, he had very recently taken a step which had nearly reduced him to beggary. He had advanced a very large sum to an individual on usurious and most exorbitant interest; the borrower had absconded, and the illegality of the transaction had left the lender without a chance of redress. His constant topic was the ingratitude of his friend; not one word was said about the pecuniary advantage which he was himself to have derived from the transaction; the tale *he* told was one of disinterested friendship on the one side, and of calculating cruelty on the other; of money generously advanced, and the repayment fraudulently evaded; and then the disappointed usurer would twinkle his wet eyes, and people, who knew nothing about the real state of the case, pitied the poor Pylades, who had been so ungenerously treated by a runaway Orestes.

He had a wife and several children, of whom he always spoke with conjugal and parental fondness; he would, even on the commonest occasions, and with the most uninterested acquaintance, talk himself into a paroxysm of uxorious tenderness, and cry about nothing. To me it seemed an anomaly that the same man should thoughtlessly at the card table, and elsewhere, lavish the money which might have rendered Mrs. Richards and the little ones comfortable; and often did they experience the most distressing privations, and encounter difficulties brought upon them solely by his want of thought. At the time of his wife's confinement, she has seen him hurried off to a prison, and after her recovery the whole family have for months inhabited a garret, Mrs. Richards perforce enacting the part of maid of all work; and not once only did all this happen; *once* it might really have been the result of want of thought; but it occurred again and again, and to me the conduct of Mr. Richards appeared utterly unfeeling and *heartless*.

"Heartless!" said somebody to whom I had ventured to express this opinion; "heartless! oh you wrong him, poor fellow; he is *all heart*."

This appeared to be every-body's opinion, and I began to be persuaded that what every body said must be true; particularly as Mr. Richards sought me out with persevering assiduity, and was perpetually doing deeds that certainly carried the appearance of extraordinary good nature.

He was in a state of nervous excitement until he had teased me into employing all his own trades-people; he appeared to be quite as intimate with his baker, and his baker's wife, as he was, or as he affected to be, with me; and had his butcher been, like myself, his schoolfellow, he could not have evinced a warmer interest in his welfare. Now all this anxiety to bring custom to the shops of particular trades-people was called good nature, the emanation of his particularly good heart; I must confess that when I met with bad joints, and tough morsels, and fared infinitely worse than I had done before I changed butchers, I could not but suspect that a desire to render himself of importance, and the fidgetiness of a busybody, were the real sources of his apparently benevolent actions. The man who has nothing to do is ever sure to make much ado about nothing; and thus it was that Tom Richards spent his life in legislating for other people's establishments, calculating the consumption in their kitchens, and maintaining the virtues and vices of their domestics.

For my own part, however, though I could not endure his invariably calling me "Dicky Jones" in all societies, and in the loudest key, I began to think more favourably of him; and having lived so long in a distant country where the habits of life are so dissimilar to those of England, an assistant overseer of my weekly bills was not so disadvantageous as it might have been to others; I therefore became Mr. Richards's plaything; and how he could have passed his time before my arrival is more than I can guess.

He one day found me grumbling over a very ill-dressed curry which my cook, who certainly, take her for all in all, was not a bad one, had sent me up for my tiffin. What odd names do people give to their mid-day meal! The English word luncheon is bad enough; the French word *goûte* is infinitely worse; and as for the Indian tiffin, I never could endure it.

"If you are going to part with your cook," said my visiter, "I can recommend you a perfect treasure—such a servant—I would take her myself, only mine is a treasure too; but I know that the one who is going to leave her place is the best creature in the world."

Hearing these words while I was masticating an unpalatable mouthful, I was instigated to the immediate discharge of my really very tolerable cook; and that very evening a respectable looking young girl was installed in her place. Words cannot describe the dinners which were set before me, soup, fish, flesh, and fowl were alike detestable; and at the end of a week I summoned before me the offender. After briefly enumerating her delinquencies, I paused for a reply, and to my astonishment, the girl answered,——

"Law, sir, I never professes to be no cook."

"No cook!" said I, "in what capacity did you live with your late master?"

"As nursery maid, if you please, sir."

"Nursery maid!" said I, "Were you never a cook before?"

"No, sir, never;" she answered with a curtsey, "except once that I helped in the kitchen when Dorothy scalded her foot."

"Then what on earth made you come to me?"

"Why, sir," said the girl, "Mr. Richards, you knows, is such a kind gentleman, and has such a good heart, and hearing I was out of place, he came and said I could but try."

"Try!" said I in a fury, "it's well you didn't poison me;" and the poor experimentalist was

mmediately sent about her business. Mr. Richards I am sure thought me a brute, when I very ceremoniously upbraided him for the inconvenience which he had caused me.

"My heart," said he with a moistened eye, always impels me to do a kind action: those who coldly calculate are more fit for this world."

"A kind action!" I exclaimed, "and to whom was your kindness shown? To the cook who ost her place principally at your instigation? To ie nursery maid who is now just where I found er, out of place? or to me,—to me who have ost a very tolerable cook, and who am now without a servant?"

Mr. Richards pressed my hand, and said he ould immediately send me a paragon of culinary alent; but I coldly thanked him and said, that or the present I would dispense with his services, nd I am sure he left me congratulating himself hat, at all events, his heart was infinitely warmer nd better than mine.

Here the exceeding warmth of our intimacy nded; but he by no means learnt wisdom from ie failure of his experiment on me. To one eighbour he shortly afterwards recommended a otman out of place as a person qualified to take are of horses; and the "groom of the chambers" eing utterly unfit to act as "master of the horse," ie gentleman's stud suffered materially.

To a friend who wanted to purchase a four-heeled carriage, he strongly recommended one hich another friend for the best of all possible easons, wished to get rid of, and, at the end of a onth, the purchaser lay extended in the mud n the king's highway, the half-rotten phaeton aving fallen to pieces.

Though I cannot pretend to possess a heart at ll to be compared to Tom Richards's, still I am ot of an unforgiving disposition; and after a ime we began to renew our former intercourse. There was one circumstance, indeed, which induced me to seek his house much oftener than I should otherwise have done: a young lady was ow domesticated with him, a lady of very great eauty, and very fascinating manners. The ady's face was full of expression, and there was t times a sort of something (which I believe a oet would have called *lightning*) in her eyes, hich almost startled me: but, at other times a ensive melancholy pervaded her countenance; nd, as she condescended to seem particularly artial to my society, no one could feel surprised hat a middle-aged bachelor, like myself, should ose his heart. We daily met; and it began to e an understood thing in Cheltenham, that Mr. Richards's friend, Miss Mildew, was shortly to become Mrs. Richard Jones.

Tom Richards was eloquent in his praises of he lady, and I began to think myself an uncommonly happy man.

Fortunately for me, my *happiness*, such as it was, was prematurely nipped in the bud, by the arrival of one of my oldest friends, who happened to have met Miss Mildew before, and who knew her history.

I will briefly state that the poor young lady had eloped from a boarding-school some years before, and had resided for some months with an unprincipled man, who had subsequently deserted without marrying her. But I must add in her defence, that she had always been the victim of hereditary madness, and was obliged, periodically, to submit to strict confinement, and the severest discipline. Here was a pretty piece of business! My breaking off my proposed connection with this unfortunate woman would inevitably bring on a fit of insanity, and very probably an aggravated one! yet what was I to do? An unpardonable concealment had been practised towards me, and now that the discovery was made, our marriage was not to be thought of. I made immediate preparations for leaving the place, and then sent for Mr. Richards, who I was quite convinced had been aware of every circumstance, while he had permitted me to commit myself with his most unfortunate guest.

The moment the culprit entered the room and saw my corded trunks, the truth flashed upon his mind, and not knowing exactly what to say, he burst into a fit of (to him) ever-ready tears, and hid his face (as well he might) in his pocket-handkerchief.

"Poor girl;" sobbed he, "my feelings would not allow me to betray her; and, besides, you might never have found out—and you might both have been so happy; oh, what a cold hearted world it is! What gossiping person could have told you?"

"Silence, sir!" said I, in a voice that made him start; "The friend who told me only did a friend's duty,—I leave you the task of revealing to the lady the disappointment and mortification in which *you* have involved her."

"Oh," said Tom Richards, "you little know *me*, I am all heart!"

"A good heart," I replied, "is a good thing, but pray, bear this in mind,—those who act from impulse, may, at the moment, appear to do very good natured things, yet disagreeable results may afterwards prove that a little cool deliberation would have been better; however good your *heart* may be, be assured that it requires a *good judgment* to guide it." T. H. B.

TRANSLATIONS FROM THE GREEK.

PAUL THE SILENTIARY.

No gracious boon is life, if vexing cares
Whiten the temples with thin hoary hairs.
Be mine *enough*—since too much golden store
Always corrodes the maddened heart the more.
Thence better oft, amid this mortal strife,
Is poverty than riches—death than life.
Since thus it is, on Wisdom fix thy gaze,
Here thy heart's wishes, here be all its ways.

CARPHYLIDES.

While from the strand his line a fisher threw,
Shoreward a shipwrecked, human head he drew.
His moistened eyes soft drops of pity shed
While gazing on the bald and trunkless head.
No spade he had: but while his active hands
Scrape a small grave amid the yielding sands,
A store of gold there hid he found. Yes! yes!
Heaven will the just man's pious actions bless.

From the London Metropolitan.

JAPHET IN SEARCH OF A FATHER.

Continued from page 539.

On my return I found Emanuel, the money-lender, who had accompanied Timothy, fancying that I was in want of more assistance, and but too willing to give it. His surprise was very great when I told him that I wished to repay the money I had borrowed.

"Vell, dis is very strange! I have lent my monish a tousand times, and never once they did offer it me back. Vell, I will take it, sar."

"But how much must I give you, Mr. Emmanuel, for the ten days' loan?"

"How moch—vy you remember, you will give de bond money—de fifteen hundred."

"What! five hundred pounds interest for ten days, Mr. Emmanuel; no, no, that's rather too bad. I will, if you please, pay you back eleven hundred pounds, and that I think is very handsome."

"I don't want my monish, my good sar. I lend you one tousand pounds, on de condition that you pay me fifteen hundred when you come into your properties, which will be in very short time. You send for me, and tell me you vish to pay back de monish directly; I never refuse monish—if you wish to pay, I will take, but I will not take von farding less dan de monish on de bond."

"Very well, Mr. Emmanuel, just as you please; I offer you your money back, in presence of my servant, and one hundred pounds for the loan of it for ten days. Refuse it if you choose, but I earnestly recommend you to take it."

"I will not have de monish, sar; dis is de child's play," replied the Jew. "I must have my fifteen hundred—all in goot time, sar—I am in no hurry—I vish you a very good morning, Mr. Newland. Ven you vish for more monish to borrow, I shall be happy to pay my respects." So saying, the Jew walked out of the room, with his arm behind his back as usual.

Timothy and I burst out into laughter. "Really Timothy," observed I, "It appears that very little art is necessary to deceive the world, for in every instance they will deceive themselves. The Jew is off my conscience, at all events; and now he never will be paid, until——"

"Until when, Japhet?"

"Until I find out my father," replied I.

"Every thing is put off till that time arrives, I observe," said Timothy. "Other people will soon be as interested in the search as yourself."

"I wish they were; unfortunately it is a secret, which cannot be divulged."

A ring at the bell called Timothy down stairs: he returned with a letter; it was from Lord Windermear, and ran as follows:—

"My dear Newland,—I have been thinking about you ever since you left me this morning, and as you appear resolved to prosecute your search, it has occurred to me that you should go about it in a more systematic way. I do not mean to say that what I now propose will prove of any advantage to you, but still it may, as you will have a very old, and very clever head to advise with. I refer to Mr. Masterton, my legal adviser, from whom you had the papers which led to our first acquaintance. He is aware that you were (I beg your pardon) an impostor, as he has since seen Mr. Estcourt. The letter enclosed is for him, and with that in your hand you may face him boldly, and I have no doubt that he will assist you all in his power, and put you to no expense. Narrate your whole history to him, and then you will hear what he may propose. He has many secrets, much more important than yours. Wishing you every success that your perseverance deserves,

"Believe me, yours very truly,

"Lord Windermear."

"I believe the advice to be good," said I, after reading the letter. "I am myself at fault, and hardly know how to proceed. I think I will go at once to the old gentleman, Timothy."

"It can do no harm, if it does no good. Two heads are better than one," replied Timothy. "Some secrets are too well kept, and deserting a child is one of those which is confided but to few."

"By the by, Timothy, here have I been, more than so many years out of the Foundling Hospital, and have never yet enquired if any one has ever been to reclaim me."

"Very true; and I think I'll step myself to the workhouse, at St. Bridget's, and ask whether any one has asked about me," replied Timothy, with a grin.

"There is another thing that I have neglected," observed I, "which is, to enquire at the address in Coleman Street, if there is any letter from Melchior."

"I have often thought of him," replied Timothy. "I wonder who he can be—there is another mystery there. I wonder whether we shall ever fall in with him again—and Nattee, too?"

"There's no saying, Timothy. I wonder where that poor fool, Philotas, and our friend Jumbo, are now?"

The remembrrnce of the two last personages made us both burst out a laughing.

"Timothy, I've been reflecting that my intimacy with poor Carbonnell has rather hindered than assisted me in my search. He found me with a good appearance, and he has moulded me into a gentleman as far as manners and appearance are concerned; but the constant vortex in which I have been whirled in his company, has prevented me from doing any thing. His melancholy death has perhaps been fortunate for me. It has left me more independent in circumstances, and more free. I must now really set to in earnest."

"I beg your pardon, Japhet, but did not you say the same when we first set off on our travels, and yet remain more than a year with the gipsies? Did not you make the same resolution when we arrived in town, with our pockets full of money, and yet, once into fashionable society, think but little, and occasionally, of it? Now you make the same resolution, and how long will you keep it?"

"Nay, Timothy, that remark is hardly fair; you know that the subject is ever in my thoughts."

"In your thoughts, I grant, very frequently; but you have still been led away from the search."

"I grant it, but I presume that arises from not knowing how to proceed. I have a skein to unravel, and cannot find out an end to commence with."

"I always thought people commenced with the beginning," replied Tim, laughing.

"At all events, I will now try back, and face the old lawyer. Do you call at Coleman Street, Tim, and at St. Bridget's also, if you please."

"As for St. Bridget's, I'm in no particular hurry about my mother; if I stumble upon her I may pick her up, but I never make a diligent search after what in all probability may not be worth the finding."

Leaving Timothy to go his way, I walked to the house at Lincoln's Inn, which I had before entered upon the memorable occasion of the papers of Estcourt. As before, I rang the bell, the door swung open, and I was once more in the presence of Mr. Masterton.

"I have a letter, sir," said I, bowing, and presenting the letter from Lord Windermear.

The old gentleman peered at me through his spectacles. "Why! we have met before—bless me—why you're the rogue that——"

"You are perfectly right, sir," interrupted I. "I am he rogue who presented the letter from Lord Windermear, and who presents you with another from the same erson; do me the favour to read it, while I take a chair."

"Upon my soul—you impudent—handsome dog, I nust say—great pity—come for money, I suppose. Well, t's a sad world," muttered the lawyer as he broke open he letter of Lord Windermear.

I made no reply, but watched his countenance, which hanged to that of an expression of surprise. "Had his ordship sent me a request to have you hanged if possible," said Mr. Masterton, "I should have felt no surprise, but in this letter he praises you, and desires me to ender you all the service in my power. I can't understand it."

"No, sir; but if you have leisure to listen to me, you will then find that, in this world, we may be deceived by ppearances."

"Well, and so I was, when I first saw you; I never ould have believed you to be—but never mind."

"Perhaps, sir, in an hour or two you will again alter our opinion. Are you at leisure, or will you make an ppointment for some future day?"

"Mr. Newland, I am not at leisure—I never was more usy; and if you had come on any legal business, I hould have put you off for three or four days, at least; ut my curiosity is so raised, that I am determined that I will indulge it at the expense of my interest. I will urn the key, and then you will oblige me by unraveling, what at present is to me as curious as it is wholly incomprehensible."

In about three hours I had narrated the history of my ife, up to the very day, almost as much detailed as it has een to the reader. "And now, Mr. Masterton," said I, s I wound up my narrative, "do you think that I deerve the title of rogue, which you applied to me when I came in?"

"Upon my word, Mr. Newland, I hardly know what o say; but I like to tell the truth. To say that you have een quite honest, would not be correct—a rogue to a ertain degree you have been, but you have been the ogue of circumstances. I can only say this, that there re greater rogues than you, whose characters are unblemished in the world—that most people in your peculiar situation would have been much greater rogues; and astly, that rogue or not rogue, I have great pleasure in aking you by the hand, and will do all I possibly can to erve you—and that for your own sake. Your search fter your parents I consider almost tantamount to a vild-goose chase; but still, as your happiness depends pon it, I suppose it must be carried on; but you must llow me time for reflection. I will consider what may e the most judicious method of proceeding. Can you line *tête-à-tête* with me here on Friday, and we then will alk over the matter?"

"On Friday, sir; I am afraid that I am engaged to Lady Maelstrom; but that is of no consequence—I will vrite an excuse to her ladyship."

"Lady Maelstrom! how very odd that you should bring up her name after our conversation."

"Why so, my dear sir?"

"Why!" replied Mr. Masterton, chuckling; "because —recollect, it is a secret, Mr. Newland—I remember ome twenty years ago, when she was a girl of eighteen, efore she married, she had a little *faux pas*, and I was alled in about a settlement, for the maintenance of the hild."

"Is it possible, sir?" replied I, anxiously.

"Yes, she was violently attached to a young officer, without money, but of good family; some say it was a rivate marriage, others, that he was—a *rascal*. It was ll hushed up, but he was obliged by the friends, before e left for the West Indies, to sign a deed of maintenance, and I was the party called in. I never heard any more about it. The officer's name was Warrender; he died of the yellow fever, I believe, and after his death she married Lord Maelstrom."

"He is dead, then?" replied I, mournfully.

"Well, that cannot affect you, my good fellow. On Friday, then, at six o'clock precisely. Good afternoon, Mr. Newland."

I shook hands with the old gentleman, and returned home, but my brain whirled with the fear of a confirmation, of that which Mr. Masterton had so carelessly conveyed. Any thing like a possibility, immediately was swelled to a certainty in my imagination, so ardent and heated on the one subject; and as soon as I regained my room, I threw myself on the sofa, and fell into a deep reverie. I tried to approximate the features of Lady Maelstrom to mine, but all the ingenuity in the world could not effect that; but still, I might be like my father—but my father was dead, and that threw a chill over the whole glowing picture which I had, as usual, conjured up; besides, it was asserted that I was born in wedlock, and there was a doubt relative to the marriage of her ladyship.

After a long cogitation I jumped up, seized my hat, and set off for Grosvenor Square, determining to ask a private interview with her ladyship, and at once end my harassing doubts and surmises. I think there could not be a greater proof of my madness than my venturing to attack a lady of forty upon the irregularities of her youth, and to question her upon a subject which had been confided but to two or three, and she imagined had long been forgotten: but this never struck me; all considerations were leveled in my ardent pursuit. I walked through the streets at a rapid pace, the crowd passed by me as shadows, I neither saw nor distinguished them; I was deep in reverie as to the best way of breaking the subject to her ladyship, for, notwithstanding my monomania, I perceived it to be a point of great delicacy. After having overturned about twenty people in my mad career, I arrived at the door and knocked. My heart beat almost as hard against my ribs with excitement.

"Is her ladyship at home?"

"Yes, sir."

I was ushered into the drawing-room, and found her sitting with two of her nieces, the Misses Fairfax.

"Mr. Newland, you have been quite a stranger," said her ladyship, as I walked up to her and made my obeisance. "I did intend to scold you well; but I suppose that sad affair of poor Major Carbonnell's has been a heavy blow to you—you were so intimate—lived together, I believe, did you not? However, you have not so much cause to regret, for he was not a very proper companion for young men like you; to tell you the truth, I consider it as a fortunate circumstance that he was removed, for he would by degrees have led you into all manner of mischief, and have persuaded you to squander your fortune. I did at one time think of giving you a hint, but it was a delicate point—now that he is gone, I tell you very candidly that you have had an escape. A young man like you, Mr. Newland, who could command an alliance into the highest, yes, the very highest families—and let me tell you, Mr. Newland, that there is nothing like connection—money is of no consequence to you, but connection, Mr. Newland, is what you should look for—connection with some high family, and then you will do well. I should like to see you settled—well settled, I mean, Mr. Newland. Now that you are rid of the major, who has ruined many young men in his time, I trust you will seriously think of settling down into a married man. Cecilia, my dear, show your tambour work to Mr. Newland, and ask him his opinion. Is it not beautiful, Mr. Newland?"

"Extremely beautiful, indeed, ma'am," replied I, glad at last that her ladyship allowed me to speak a word.

"Emma, my dear, you look pale, you must go out into

the air. Go, children, put your bonnets on and take a turn in the garden; when the carriage comes round I will send for you." The young ladies quitted the room. "Nice innocent girls, Mr. Newland; but you are not partial to blondes, I believe?"

"Indeed, Lady Maelstrom, I infinitely prefer the blonde to the brunette."

"That proves your taste, Mr. Newland. The Fairfaxes are of a very old family, Saxon, Mr. Newland. *Fair-fax* is Saxon for light hair. Is it not remarkable that they should be blondes to this day? Pure blood, Mr. Newland. You, of course, have heard of General Fairfax, in the time of Cromwell. He was their direct ancestor—an excellent family and highly connected, Mr. Newland. You are aware that they are my nieces. My sister married Mr. Fairfax."

I paid the Misses Fairfax the compliments which I thought they really deserved, for they were very pretty amiable girls, and required no puffing on the part of her ladyship; and then I commenced. "Your ladyship has expressed such kind wishes towards me, that I cannot be sufficiently grateful; but, perhaps, your ladyship may think me romantic, but I am resolved never to marry except for love."

"A very excellent resolve, Mr. Newland; there are few young men who care about love now-a-days, but I consider that love is a great security for happiness in the wedded state."

"True, madam, and what can be more delightful than a first attachment? I appeal to your ladyship, was not your first attachment the most delightful—are not the reminiscences most lasting—do you not, even now, call to mind those halcyon days when love was all and every thing?"

"My days of romance are long past, Mr. Newland," replied her ladyship; "indeed I never had much romance in my composition. I married Lord Maelstrom for the connection, and I loved him pretty well, that is, soberly, Mr. Newland. I mean, I loved him quite enough to marry him, and to obey my parents, that is all."

"But, my dear Lady Maelstrom, I did not refer to your marriage with his lordship; I referred to your first love."

"My first love, Mr. Newland; pray what do you mean?" replied her ladyship, looking very hard at me.

"Your ladyship need not be ashamed of it. Our hearts are not in our own keeping, nor can we always control our passions. I have but to mention the name of Warrender."

"Warrender!" shrieked her ladyship. "Pray, Mr. Newland," continued her ladyship, recovering herself, "who gave you that piece of information?"

"My dear Lady Maelstrom, pray do not be displeased with me, but I am very particularly interested in this affair. Your love for Mr. Warrender, long before your marriage, is well known to me; and it is to that love, to which I referred, when I asked you if it was not most delightful."

"Well, Mr. Newland," replied her ladyship, "how you have obtained the knowledge I know not, but there was, I acknowledge, a trifling flirtation with Edward Warrender and me—but I was young, very young, at that time."

"I grant it; and do not, for a moment, imagine that I intend to blame your ladyship; but, as I before said, madam, I am much interested in the business."

"What interest you can have with a little flirtation of mine, which took place before you were born, I cannot imagine, Mr. Newland."

"It is because it took place before I was born, that I feel so much interest."

"I cannot understand you, Mr. Newland, and I think we had better change the subject."

"Excuse me, madam, but I must request to continue it a little longer. Is Mr. Warrender dead, or not? Did he die in the West Indies?"

"You appear to be very curious on this subject, Mr. Newland; I hardly can tell. Yes, now I recollect, he did die of the yellow fever, I think—but I have quite forgotten all about it, and I shall answer no more questions; if you were not a favourite of mine, Mr. Newland, I should say that you were very impertinent."

"Then, your ladyship, I will put but one more question, and that one I must put, with your permission."

"I should think, after what I have said, Mr. Newland, that you might drop the subject."

"I will, your ladyship, immediately; but, pardon me, the question——"

"Well, Mr. Newland——?"

"Do not be angry with me——"

"Well?" exclaimed her ladyship who appeared alarmed.

"Nothing but the most important and imperative reasons could induce me to ask the question," (her ladyship gasped for breath, and could not speak,) I stammered, but at last I brought it out. "What has become of—of—of the sweet pledge of your love, Lady Maelstrom?"

Her ladyship coloured up with rage, raised up her clenched hand, and then fell back in violent hysterics. I hardly knew how to act—if I called the servants, my interview would be at an end, and I was resolved to find out the truth: for the same reason, I did not like to ring for water. Some vases with flowers were on the table; I took out the flowers, and threw the water in her face, but they had been in the water some time, and had discoloured it green. Her ladyship's dress was a high silk gown, of a bright slate colour, and was immediately spoiled; but this was no time to stand upon trifles. I seized hold of a glass bottle, fancying, in my hurry, it was *eau de cologne*, or some essence, and poured a little into her mouth; unfortunately it was a bottle of marking ink, which her ladyship, who was very economical, had on the table in disguise. I perceived my error, and had recourse to another vase of flowers, pouring a large quantity of the green water down her throat. Whether the unusual remedies had an effect, or not, I cannot tell, but her ladyship gradually revived, and as she leant back on the sofa, sobbing, every now and then, convulsively, I poured into her ear a thousand apologies, until I thought she was composed enough to listen to me.

"Your ladyship's maternal feeling," said I.

"It's all a calumny! a base lie, sir!" shrieked she.

"Nay, nay, why be ashamed of a youthful passion; why deny what was in itself creditable to your unsophisticated mind? Does not your heart, even now, yearn to embrace your son: will not you bless me, if I bring him to your feet, will not you bless your son, and receive him with delight?"

"It was a girl," screamed her ladyship, forgetting herself, and again falling into hysterics.

"A girl!" replied I, "then I have lost my time, and it is no use my remaining here."

Mortified at the intelligence which overthrew my hopes and castle buildings, I seized my hat, descended the stairs, and quitted the house; in my hurry and confusion quite forgetting to call the servants to her ladyship's assistance. Fortunately, I perceived the Misses Fairfax close to the iron railing of the garden. I crossed the road, wished them good-b'ye, and told them that I thought Lady Maelstrom looked very ill, and they had better go in to her. I then threw myself into the first hackney coach, and drove home. I found Timothy had arrived before me, and I narrated all that had passed.

"You will never be able to go there again," observed Timothy, "and depend upon it, she will be your enemy through life. I wish you had not said any thing to her."

"What is done cannot be undone; but recollect that if she can talk, I can talk also."

"Will she not be afraid?"

"Yes, openly, she will; but open attacks can be parried."

"Very true."

"But it will be as well to pacify her, if I can. I will write to her." I sat down and wrote as follows:

"My dear Lady Maelstrom,—I am so astonished and alarmed at the situation I put you in, by my impertinence and folly, that I hardly know how to apologise. The fact is, that looking over some of my father's old letters, I found many from Warrender, in which he spoke of an affair with a young lady, and I read the name as your maiden name, and also discovered where the offspring was to be found. On re-examination, for your innocence was too evident at our meeting to admit of a doubt, I find that the name, although something like yours, is *spelt very differently*, and that I must have been led into an unpardonable error. What can I say, except that I throw myself on your mercy? I dare not appear before you again. I leave town to-morrow, but if you can pardon my folly and impertinence, allow me to pay my respects when London is full again, and time shall have softened down your just anger. Write me one line to that effect, and you will relieve the burdened conscience of

"Yours most truly,

"J. Newland."

"There, Tim," said I, as I finished reading it over, "take that as a sop to the old Cerberus. She may think it prudent, as I have talked of letters, to believe me and make friends. I will not trust her, nevertheless."

Tim went away, and very soon returned with an answer.

"You are a foolish mad-cap, and I ought to shut my doors against you; you have half killed me—spoilt my gown, and I am obliged to keep my bed. Remember, in future, to be sure of the right name before you make an assertion. As for forgiving you, I shall think of it, and when you return to town, you may call and receive my sentence. Cecilia was quite frightened, poor dear girl, what a dear affectionate child she is!—she is a treasure to me, and I don't think I ever could part with her. She sends her regards.

"Yours,

"C. Maelstrom."

"Come, Timothy, at all events this is better than I expected—but now I'll tell you what I propose to do. Harcourt was with me yesterday, and he wishes me to go down with him to ———. There will be the assizes, and the county ball, and a great deal of gaiety, and I have an idea that it is just as well to beat the country as the town. I dine with old Masterston on Friday. On Saturday I will go down and see Fleta, and on Tuesday or Wednesday I will start with Harcourt to his father's, where he has promised me a hearty welcome. Was there any thing at Coleman-street?"

"Yes, sir; Mr. Iving said that he had just received a letter from your correspondent, and that he wished to know if the little girl was well; I told him that she was. Mr. Iving laid the letter down on the desk, and I read the post-mark, Dublin."

"Dublin," replied I. "I should like to find out who Melchior is—and so I will as soon as I can."

"Well, sir, I have not finished my story. Mr. Iving said, 'My correspondent wishes to know whether the education of the little girl is attended to?' 'Yes,' replied I, 'it is.' 'Is she at school?' 'Yes, she has been at school ever since we have been in London.' 'Where is she at school?' enquired he. Now, sir, as I never was asked that question by him before, I did not know whether I ought to give an answer, so I replied, 'that I did not know,' 'You know whether she is in London or not, do you not?' 'How should I?' replied I, 'master had put her to school before I put on his liveries.' 'Does he never go to see her?' enquired he. 'I suppose so,' said I. 'Then you really know nothing about it?—then look you, my lad, I am anxious to find out where she is at school, and the name of the people, and if you will find out the direction for me, it will be money in your pocket, that's all.' 'Um,' replied I, 'but how much?' 'Why, more than you think for, my man, it will be a ten-pound note.' 'That alters the case,' replied I; 'now I think again, I have an idea that I do remember seeing her address on a letter my master wrote to her.' 'Aye,' replied Mr. Iving, 'it's astonishing how money sharpens the memory. I'll keep to my bargain; give me the address, and here's the ten-pound note.' 'I'm afraid that my master will be angry,' said I, as if I did not much like to tell him. 'Your master will never know any thing about it, and you may serve a long time before he gives you a ten-pound note above your wages.' 'That's very true,' said I, 'service is no inheritance. Well, then, give me the money, and I'll write it down.'"

"And did you give it?" interrupted I.

"Stop a moment, sir, and you shall hear. I wrote down the address of that large school at Kensington, which we pass when we go to Mr. Aubry White's."

"What, that tremendous large board with yellow letters—Mrs. Let—what is it?"

"Mrs. Lipscombe's seminary—I always read the board every time I go up and down. I gave him the address, Miss Johnson, at Mrs. Lipscombe's seminary, Kensington. Well—and here's the ten-pound note, sir, which I think I have fairly earned."

"Fairly earned, Tim?"

"Yes, fairly earned; for it's all fair to cheat those who would cheat you."

"I cannot altogether agree with you on that point, Tim, but it certainly is no more than they deserve; but this is matter for reflection. Why should Melchior wish to find out her address without my knowledge?—depend upon it, there is something wrong."

"That's what I said to myself coming home; and I made up my mind, that, for some reason or another, he wishes to regain possession of her."

"I entertain the same idea, Timothy, and I am glad you have disappointed him. I will take care that they shall not find her out, now that I am upon my guard."

"But, sir, I wish to draw one good moral from this circumstance; which is—that if you had been served by any common footman, your interest would, in all probability, have been sacrificed to the ten-pound note; and that not only in this instance but in many others, I did a very wise thing in taking my present situation."

"I am but too well aware of that, Tim, my dear fellow," said I, extending my hand, "and depend upon it, that if I rise, you do. You know me well enough by this time."

"Yes, I do, Japhet, and had rather serve you than the first nobleman in the land. I'm going to purchase a watch with this ten-pound note, and I never shall look at it without remembering the advantage of keeping a watch over my tongue."

I proved the will of Major Carbonnell, in which there was no difficulty; and then I sat down to consider in what way I might best husband my resources. The house was in good repair, and well furnished. At the time I lived with the major, we had our drawing-room, and his bed-room, and another room equally large, used as his dressing-room, on the first floor. The second floor was appropriated to me, and the sitting-room was used as a dining-room when we dined at home, which was but seldom. The basement was let as a shop, at one hundred pounds per annum, but we had a private

door for entrance, and the kitchens and attics. I resolved to retain only the first-floor, and let the remainder of the house; and I very soon got a tenant at sixty pounds per annum. The attics were appropriated to Timothy and the servants belonging to the lodger. Of this tenant, I shall speak hereafter.

After having disposed of what was of no service to me, I found that, deducting the thousand pounds paid into the banker's, for Lord Windermear, I had a little above three thousand pounds in ready money, and what to do with this I could not well decide. I applied to Mr. Masterton, stating the exact amount of my finances, on the day that I dined with him, and he replied, "You have two good tenants, bringing you in one hundred and sixty pounds per annum—if this money is put out on mortgage, I can procure you five per cent., which will be one hundred and fifty pounds per annum. Now, the question is, do you think that you can live upon three hundred and ten pounds per annum? You have no rent to pay, and I should think that, as you are not at any great expense for a servant, that you might, with economy, do very well. Recollect, that if your money is lent on mortgage, you will not be able to obtain it at a moment's warning. So reflect well before you decide."

I consulted with Timothy, and agreed to lend the money, reserving about two hundred pounds to go on with, until I should receive my rents and interest. On the Friday I went to dine with Masterton, and narrated what had passed between me and Lady Maelstrom. He was very much diverted, and laughed immoderately. "Upon my faith, Mr. Newland, but you have a singular species of madness; you first attack Lord Windermear, then a bishop, and, to crown all, you attack a dowager peeress. I must acknowledge, that if you do not find out your parents, it will not be for want of enquiry. Altogether, you are a most singular character, your history is most singular, and your good fortune is equally so. You have made more friends before you have come to age, than most people do in their whole lives. You commence the world with nothing, and here you are, with almost a competence—have paid off a loan of one thousand pounds, which was not required—and are moving in the best society. Now the only drawback I perceive in all this is, that you are in society under false colours, have made people suppose that you are possessed of a large fortune."

"It was not exactly my assertion, sir."

"No, I grant, not exactly: but you have been a party to it, and I cannot allow that there is any difference. Now, do you mean to allow this supposition to remain uncontradicted?"

"I hardly know what to say, sir; if I were to state that I have nothing but a bare competence, it will be only injurious to the memory of Major Carbonnell. All the world will suppose that he has ruined me, and that I had the fortune; whereas, on the contrary, it is to him that I am indebted for my present favourable position."

"That may be very true, Mr. Newland; but if I am to consider you as my protegé, and I may add, the protegé of Lord Windermear, I must make you *quite honest*—I will be no party to fraud in any shape. Are you prepared to resign your borrowed plumes, and appear before the world as you really are?"

"There is but one inducement, sir, for me to wish that the world may still deceive themselves. I may be thrown out of society, and lose the opportunity of discovering my parents."

"And pray, Mr. Newland, which do you think is more likely to tend to the discovery, a general knowledge that you are a foundling in search of your parents, or your present method, of taxing every body on suspicion. If your parents wish to reclaim you, they will then have their eyes directed towards you, from your position being known; and I will add, there are few parents who would not be proud of you as a son. You will have the patronage of Lord Windermear, which will always secure you a position in society, and the good wishes of all, although I grant, that such worldly people as Lady Maelstrom may strike your name off their porter's list. You will, moreover, have the satisfaction of knowing that the friends which you make have not been made under false colours and appearances, and a still further satisfaction, arising from a good conscience."

"I am convinced, sir, and I thank you for your advice. I will now be guided by you in every thing."

"Give me your hand, my good lad, I now will be your friend to the utmost of my power."

"I only wish, sir," replied I, much affected, "that you were also my father."

"Thank you for the wish, as it implies that you have a good opinion of me. What do you mean to do?"

"I have promised my friend Mr. Harcourt to go down with him to his father's."

"Well?"

"And before I go I will undeceive him."

"You are right; you will then find whether he *is* a friend to you, or to your supposed ten thousand pounds per annum. I have been reflecting, and I am not aware that any thing else can be done at present than acknowledging to the world who you really are, which is more likely to tend to the discovery of your parents than any other means, but at the same time I shall not be idle. All we lawyers have among us strange secrets, and among my fraternity, to whom I shall speak openly, I think it possible that something may be found out which may serve as a clue. Do not be annoyed at being cut by many, when your history is known; those who cut you are those whose acquaintance or friendship is not worth having; it will unmask your friends from your flatterers, and you will not repent of your having been honest; in the end it is the best policy, even in a worldly point of view. Come to me as often as you please; I am always at home to you, and always your friend."

Such was the result of my dinner with Mr. Masterton, which I narrated to Timothy as soon as I returned home. "Well, Japhet, I think you have found a real friend in Mr. Masterton, and I am glad that you have decided upon following his advice. As for me, I am not under false colours, I am in my right situation, and wish no more."

In pursuance of my promise to Mr. Masterton, I called upon Harcourt the next morning, and after stating my intention to go down for a day or two into the country, to see a little girl who was under my care, I said to him, "Harcourt, as long as we were only town acquaintances, mixing in society, and under no peculiar obligation to each other, I did not think it worth while to undeceive you on a point in which Major Carbonnell was deceived himself, and has deceived others; but now that you have offered to introduce me into the bosom of your family, I cannot allow you to remain in error. It is generally supposed that I am about to enter into a large property when I come of age; now, so far from that being the case, I have nothing in the world but a bare competence, and the friendship of Lord Windermear. In fact, I am a deserted child, ignorant of my parents, and most anxious to discover them, as I have every reason to suppose that I am of no mean birth. I tell you this candidly, and unless you renew the invitation, shall consider that it has not been given."

Harcourt remained a short time without answering. "You really have astonished me, Newland; but," continued he, extending his hand, "I admire—I respect you, and I feel that I shall like you better. With ten thousand pounds a year, you were above me—now we are but equals. I, as a younger brother, have but a bare competence, as well as you; and as for parents—for

he benefit I now derive from them, I might as well have none. Not but my father is a worthy, fine old gentleman, but the estates are entailed; he is obliged to keep up his position in society, and he has a large family to provide for, and he can do no more. You have indeed an uncommon moral courage to have made this confession. Do you wish it to be kept a secret?"

"On the contrary, I wish the truth to be known."

"I am glad that you say so, as I have mentioned you as a young man of large fortune to my father, but I feel convinced when I tell him this conversation, he will be much more pleased in taking you by the hand, than if you were to come down and propose to one of my sisters. I repeat the invitation with double the pleasure that I gave it at first."

"I thank you, Harcourt," replied I; "some day I will tell you more. I must not expect, however, that every body will prove themselves as noble in ideas as yourself."

"Perhaps not, but never mind that. On Friday next, then, we start."

"Agreed." I shook hands and left him. The behaviour of Harcourt was certainly a good encouragement, and, had I been wavering in my promise to Mr. Masterton, would have encouraged me to proceed. I returned home with a light heart and a pleasing satisfaction, from the conviction that I had done right. The next morning I set off for ———, and, as it was a long while since I had seen Fleta, our meeting was a source of delight on both sides. I found her very much grown and improved. She was approaching her fifteenth year, as near as we could guess—of course her exact age was a mystery. Her mind was equally expanded. Her mistress praised her docility and application, and wished to know whether I intended that she should be taught music and drawing, for both of which she had shown a decided taste. To this I immediately consented, and Fleta hung on my shoulder and embraced me for the indulgence. She was now fast approaching to womanhood, and my feelings towards her were more intense than ever. I took the chain of coral and gold beads from her neck, telling her that I must put it into a secure place, as much depended upon it. She was curious to know why, but I would not enter into the subject at that time. One caution I gave her, in case by any chance, her retreat should be discovered by the companions of Melchior, which was, that without I myself came, she was on no account to leave the school, even if a letter from me was produced, requesting her to come, unless that letter was delivered by Timothy. I gave the same directions to her mistress, paid up her schooling and expenses, and then left her, promising not to be so long before I saw her again. On my return to town I deposited the necklace with Mr. Masterton, who locked it up carefully in his iron safe.

On the Friday, as agreed, Harcourt and I, accompanied by Timothy and Harcourt's servant, started on the outside of the coach, as younger brothers usually convey themselves, for his father's seat in ——— shire, and arrived there in time for dinner. I was kindly received by old Mr. Harcourt and his family, consisting of his wife and three amiable and beautiful girls. But on the second day, during which interval, I presume Harcourt had an opportunity of undeceiving his father, I was delighted to perceive that the old gentleman's warmth of behaviour towards me was increased. I remained there for a fortnight, and never was so happy. I was soon on the most intimate terms with the whole family, and was treated as if I belonged to it. Yet when I went to bed every night, I became more and more melancholy. I felt what a delight it must be to have parents, sisters, and friends—a bosom of a family to retire into, to share with it your pleasures and your pains; and the tears often ran down my cheeks, and moistened my pillow, when I had not an hour before been the happiest of the happy, and the gayest of the gay. In a family party, there is nothing so amusing as any little talent out of the general way, and my performances and tricks on cards, &c., in which Melchior had made me such an adept, were now brought forward as a source of innocent gratification. When I quitted, I had a general and hearty welcome to the house from the parents: and the eyes of the amiable girls, as well as mine, were not exactly dry, as we bade each other farewell.

"You told your father, Harcourt did you not?"

"Yes, and the whole of them, Japhet; and you must acknowledge, that in their estimation you did not suffer. My father is pleased with our intimacy, and advises me to cultivate it. To prove to you that I am anxious so to do, I have a proposal to make. I know your house as well as you do, and that you have reserved only the first floor for yourself; but there are two good rooms on the first floor, and you can dispense with a dressing-room. Suppose we club together. It will be a saving to us both, as poor Carbonnell said, when he took you in."

"With all my heart; I am delighted with the proposal."

Harcourt then stated what it was his intention to offer for his share of the apartment; the other expenses to be divided, and his servant dismissed. I hardly need say, that we did not disagree, and before I had been a week in town we were living together. My interview with Mr. Masterton, and subsequent events, had made me forget to call on the governors of the Foundling Hospital, to ascertain whether there had been any enquiries after me. On my return to town I went there, and finding that there was a meeting to be held on the next day, I presented myself. I was introduced into the room where they were assembled.

"You wish to speak with the governors of the hospital, I understand," said the presiding governor.

"Yes, sir," replied I; "I have come to ask whether an enquiry has been made after one of the inmates of this charity, of the name of Japhet Newland."

"Japhet Newland!"

"If you recollect, sir, he was bound to an apothecary of the name of Cophagus, in consequence of some money which was left with him as an infant, enclosed in a letter, in which it was said that he would be reclaimed if circumstances permitted."

"I recollect it perfectly well—it is now about six years back; I think there was some enquiry, was there not, Mr. G———?"

"I think that there was, about a year and a half ago; but we will send for the secretary, and refer to the minutes."

My heart beat quick, and the perspiration bedewed my forehead, when I heard this intelligence. At last my emotion was so great, that I felt faint. "You are ill, sir," said one of the gentlemen; "quick—a glass of water."

The attendant brought a glass of water, which I drank, and recovered myself. "You appear to be much interested in this young man's welfare."

"I am, sir," replied I; "no one can be more so."

The secretary now made his appearance with the register, and after turning over the leaves, read as follows: "August the 16th ——, a gentleman came to enquire after an infant left here, of the name of Japhet, with whom money had been deposited—Japhet, christened by order of the governors, Japhet Newland—referred to the shop of Mr. Cophagus, Smithfield Market. He returned the next day, saying that Mr. Cophagus had retired from business—that the parties in the shop knew nothing for certain, but believed that the said Japhet Newland had been transported for life for forgery, about a year before."

"Good heavens! what an infamous assertion!" exclaimed I, clasping my hands.

On reference back to the calendar, we observed that one J. Newland was transported for such an offence. Query?

"It must have been some other person; but this has arisen from the vindictive feeling of those two scoundrels who served under Plegget," cried I.

"How can you possibly tell, sir?" mildly observed one of the governors.

"How can I tell, sir?" replied I, starting from my chair. "Why I am *Japhet Newland* myself, sir."

"You, sir?" replied the governor, surveying my fashionable exterior, my chains, and bijouterie.

"Yes, sir, I am the Japhet Newland brought up in this asylum, and who was apprenticed to Mr. Cophagus."

"Probably, then, sir," replied the president, "you are the Mr. Newland whose name appears at all the fashionable parties in high life?"

"I believe that I am the same person, sir."

"I wish you joy upon your success in the world, sir. It would not appear that it can be very important to you to discover your parents."

"Sir," replied I, "you have never known what it is to feel the want of parents and friends. Fortunate as you may consider me to be—and I acknowledge I have every reason to be grateful for my unexpected rise in life—I would at this moment give up all that I am worth, resume my foundling dress, and be turned out a beggar, if I could but discover the authors of my existence." I then bowed low to the governors, and quitted the room. I hastened home with feelings too painful to be described. I had a soreness at my heart, an oppression on my spirits, which weighed me down. I had but one wish—that I was dead. I had already imparted to Harcourt the history of my life, and when I came in, I threw myself upon the sofa in despair, and relieved my agonised heart with a flood of tears. As soon as I could compose myself, I stated what had occurred.

"My dear Newland, although it has been an unfortunate occurrence in itself, I do not see that you have so much cause to grieve, for you have this satisfaction, that it appears there has been a wish to reclaim you."

"Yes," replied I, "I grant that, but have they not been told, and have they not believed, that I have been ignominiously punished for a capital crime? Will they ever seek me more?"

"Probably not; you must now seek them. What I should recommend is, that you repair to-morrow to the apothecary's shop, and interrogate relative to the person who called to make enquiries after you. If you will allow me, I will go with you."

"And be insulted by those malignant scoundrels?"

"They dare not insult you. As an apothecary's apprentice they would, but as a gentleman they will quail; and if they do not, their master will most certainly be civil, and give you all the information he can. We may as well, however, not do things by halves; I will borrow my aunt's carriage for the morning, and we will go in style."

"I think I will call this evening upon Mr. Masterton, and ask his advice."

"Ask him to accompany us, Newland, and he will frighten them with libel, and defamation of character."

I called upon Mr. Masterton that evening, and told my story. "It is indeed very provoking, Newland; but keep your courage up, I will go with you to-morrow, and we will see what we can make of it. At what time do you propose to start?"

"Will it suit you, sir, if we call at one o'clock?"

"Yes; so good night, my boy, for I have something here which I must contrive to get through before that time."

Harcourt had procured the carriage, and we picked up Mr. Masterton at the hour agreed, and proceeded to Smithfield. When we drove up to the door of Mr. Plegget's shop, the assistants at first imagined that it was a mistake; few handsome carriages are to be seen stopping in this quarter of the metropolis. We descended and entered the shop, Mr. Masterton enquiring if Mr. Plegget was at home. The shopmen, who had not recognised me, bowed to the ground in their awkward way; and one ran to call Mr. Plegget, who was up stairs. Mr. Plegget descended, and we walked into the back parlour. Mr. Masterton then told him the object of our calling, and requested to know why the gentleman who had enquired after me had been sent away with the infamous fabrication that I had been transported for forgery. Mr. Plegget protested innocence—recollected, however, that a person had called—would make every enquiry of his shopmen. The head man was called in and interrogated—at first appeared to make a joke of it, but when threatened by Mr. Masterton became humble—acknowledged that they had said that I was transported, for they had read it in the newspapers—was sorry for the mistake; said that the gentleman was a very tall person, very well dressed, very much of a gentleman—could not recollect his exact dress—was a pale, fair man, with a handsome face—seemed very much agitated when he heard that I had been transported. Called twice, Mr. Plegget was not in at first—left his name—thinks the name was put down on the day book—when he called a second time, Mr. Plegget was at home, and referred him to them, not knowing what had become of me. The other shopman was examined, and his evidence proved similar to that of the first. The day book was sent for, and the day in August —— referred to; there was a name written down on the side of the page, which the shopman said he had no doubt, indeed he could almost swear, was the gentleman's name, as there was no other name put down on that day. The name, as taken down, was *Derbennon*. This was all the information we could obtain, and we then quitted the shop, and drove off without there being any recognition of me on the part of Mr. Plegget and his assistants.

"I never heard that name before," observed Harcourt to Mr. Masterton.

"It is, in all probability, De Benyon," replied the lawyer; "we must make allowances for their ignorance. At all events, this is a sort of clue to follow up. The De Benyons are Irish."

"Then I will set off for Ireland to-morrow morning, sir," said I.

"You will do no such thing," replied the lawyer; "but you will call upon me to-morrow evening, and perhaps I may have something to say to you."

I did not fail to attend Mr. Masterton, who stated that he had made every enquiry relative to the De Benyons, as he had said; they were an Irish family of the highest rank, and holding the peerage of De Beauvoir; but that he had written to his agent in Dublin, giving him directions to obtain for him every possible information in his power relative to all the individuals composing it. Till this had been received, all that I could do was to remain quiet. I then narrated to him the behaviour of the agent, Mr. Iving, to Timothy. "There is some mystery there, most assuredly," observed Mr. Masterton; "when do you go again to ——— ?"

I replied, that it was not my intention to go there for some time, unless he would wish to see the little girl.

"I do, Newland. I think I must take her under my protection as well as you. We will go down to-morrow. Sunday is the only day I can spare; but it must be put down as a work of charity."

The next day we went down to ———. Fleta was surprised to see me so soon, and Mr. Masterton was much struck with the elegance and classical features of my little protegée. He asked her many questions, and with his legal tact continued to draw from her many little points

lative to her infant days, which she had, till he put his probing questions, quite forgotten. As we returned to town, he observed, "You are right, Japhet, that is no child of humble origin. Her very appearance contradicts it; but we have, I think, a chance of discovering who she is—a better one, I'm afraid, than at present we have for your identification. But never mind, let us trust to perseverance."

For three weeks I continued to live with Harcourt, but I did not go out much. Such was the state of my affairs, when Timothy came to my room one morning, and said, "I do not know whether you have observed it, sir; but there is a man constantly lurking about here, watching the house, I believe. I think, but still I'm not quite sure, that I have seen his face before; but where I cannot recollect."

"Indeed, what sort of a person may he be?"

"He is a very dark man, stout, and well made; and is dressed in a sort of half-sailor, half-gentleman's dress, such as you see put on by those who belong to the funny clubs on the river; but he is not at all a gentleman himself—quite the contrary. It is now about a week that I have seen him, every day; and I have watched him, and perceive that he generally follows you as soon as you go out."

"Well," replied I, "we must find out what he wants—if we can. Point him out to me; I will soon see if he is tracing my steps."

Timothy pointed him out to me after breakfast; I could not recollect the face, and yet it appeared that I had seen it before. I went out, and after passing half a dozen streets, I turned round and perceived that the man was lodging me. I took no notice, but being resolved to try him again, I walked to the White Horse Cellar, and took a seat inside a Brentford coach about to start. On my arrival at Brentford I got out, and perceived that the man was on the roof. Of a sudden it flashed on my memory—it was the gipsy who had come to the camp with the communication to Melchior, which induced him to quit it. I recollected him—and his kneeling down by the stream and washing his face. The mystery was solved—Melchior had employed him to find out the residence of Fleta. In all probability they had applied to the false address given by Timothy, and in consequence were trying, by watching my motions, to find the true one. "You shall be deceived, at all events," thought I, as I walked on through Brentford until I came to a ladies' seminary. I rang the bell, and was admitted, stating my wish to know the terms of the school for a young lady, and contrived to make as long a stay as I could, promising to call again, if the relatives of the young lady were satisfied as I professed to be. On my quitting the house, I perceived that my gipsy attendant was not far off. I took the first stage back, and returned to my lodgings. When I had told all that had occurred to Timothy, he replied, "I think, sir, that if you could replace me for a week or two, I could now be of great service. He does not know me, and if I were to darken my face, and put on a proper dress, I think I should have no difficulty in passing myself off as one of the tribe, knowing their slang, and having been so much with them."

"But what good do you anticipate, Timothy?"

"My object is to find out where he puts up, and to take the same quarters—make his acquaintance, and find out who Melchior is, and where he lives. My knowledge of him and Nattée may perhaps assist me."

"You must be careful then, Timothy; for he may know sufficient of our history to suspect you."

"Let me alone, sir. Do you like my proposal?"

"Yes, I do; you may commence your arrangements immediately."

The next morning Timothy had procured me another valet, and throwing off his liveries, made his appearance in the evening, sending up to say a man wished to speak to me. He was dressed in high-low boots, worsted stockings, greasy leather small clothes, a shag waistcoat, and a blue frock overall. His face was stained of a dark olive, and when he was ushered in, neither Harcourt, who was sitting at table with me, or the new servant, had the slightest recognition of him. As Harcourt knew all my secrets, I had confided this; but had not told him what Timothy's intentions were, as I wished to ascertain whether his disguise was complete. I had merely said I had given Timothy leave for a few days.

"Perhaps you may wish me away for a short time," said Harcourt, looking at Tim.

"Not at all, my dear Harcourt, why should I? There's nobody here but you and Timothy."

"Timothy! excellent—upon my word, I never should have known him."

"He is going forth on his adventures."

"And if you please, sir, I will lose no time. It is now dark, and I know where the gipsy hangs out."

"Success attend you then, but be careful, Tim. You had better write to me, instead of calling."

"I had the same idea; and now I wish you a good evening."

When Timothy quitted the room, I explained our intentions to Harcourt. "Yours is a strange, adventurous sort of life, Newland; you are constantly plotted against, and plotting in your turn—mines and counter mines. I have an idea that you will turn out some grand personage after all; for if not, why should there be all this trouble about you?"

"The trouble, in the present case, is all about Fleta; who must, by your argument, turn out some grand personage."

"Well, perhaps she may. I should like to see that little girl, Newland."

"That cannot be, just now, for reasons you well know, but some other time it will give me great pleasure."

On the second day after Tim's departure, I received a letter from him by the twopenny post. He had made the acquaintance of the gipsy, but had not extracted any information, being as yet afraid to venture any questions. He further stated that his new companion had no objection to a glass or two, and that he had no doubt but that if he could contrive to make him tipsy, in a few days he would have some important intelligence to communicate. I was in a state of great mental agitation during this time. I went to Mr. Masterton, and narrated to him all that had passed. He was surprised and amused, and desired me not to fail to let him have the earliest intelligence of what came to light. He had not received any answer as yet from his agent in Dublin. It was not until eight days afterwards that I received further communication from Timothy; and I was in a state of great impatience, combined with anxiety, lest any accident should have happened. His communication was important. He was on the most intimate footing with the man, who had proposed that he should assist him to carry off a little girl, who was at a school at Brentford. They had been consulting how this should be done, and Timothy had proposed forging a letter, desiring her to come up to town, and his carrying it as a livery servant. The man had also other plans, one of which was to obtain an entrance into the house by making acquaintance with the servants; another, by calling to his aid some of the women of his fraternity to tell fortunes: nothing was as yet decided, but that he was resolved to obtain possession of the little girl, even if he were obliged to resort to force. In either case Timothy was engaged to assist. When I read this, I more than congratulated myself upon the man's being on the wrong scent, and that Timothy had hit upon his scheme. Timothy continued:—that they had indulged in very deep potations last night, and that the man had not scrupled to say that he was employed by a person of large fortune, who paid well, and whom it might not be advisable to refuse, as he had great power.

After some difficulty, he asked Timothy if he had ever heard the name of Melchior in his tribe. Timothy replied that he had, and that at the gathering he had seen him and his wife. Timothy at one time thought that the man was about to reveal every thing, but of a sudden he stopped short, and gave evasive answers. To a question put by Timothy, as to where they were to take the child if they obtained possession of her, the man had replied, that she would go over the water. Such were the contents of the letter, and I eagerly awaited a further communication.

The next day I called at Long's hotel upon a gentleman with whom I was upon intimate terms. After remaining a short time with him, I was leaving the hotel, when I was attracted by some trunks in the entrance hall. I started when I read the address of—"A. De Benyon, Esq., to be left at F——— hotel, Dublin." I asked the waiter who was by, whether Mr. De Benyon had left the hotel. He replied that he had left it in his own carriage that morning, and having more luggage than he could take with him, had desired these trunks to be forwarded by the coach. I had by that time resumed my serenity. I took out a memorandum book, wrote down the address on the trunks, saying that I was sorry not to have seen Mr. De Benyon, and that I would write to him.

But if I composed myself before the waiter, how did my heart throb as I hastily passed through Bond Street to my home! I had made up my mind, upon what very slight grounds the reader must be aware, that this Mr. De Benyon either must be my father, or if not, was able to tell me who was. Had not Mr. Masterton said that there was a clue—had he not written to Dublin? The case was to my excited imagination as clear as the noon day, and before I arrived home, I had made up my mind in what manner I should proceed. It was then about four o'clock. I hastily packed up my portmanteau—took with me all my ready money, about sixty pounds, and sent the servant to secure a place in the mail to Holyhead. He returned, stating that there was a seat taken for me. I waited till half past five to see Harcourt, but he did not come home. I then wrote him a short note, telling him where I was going, and promising to write as soon as I arrived.

"Ireland is to be the ground of my future adventures, my dear Harcourt. Call upon Mr. Masterton, and tell him what I have done which he surely will approve. Open Timothy's letters, and let me have their contents. I leave you to arrange and act for me in every respect until I return. In the mean time believe me,

"Ever yours,
"J. Newland."

I gave the letter to the valet, and calling a coach drove to the office, and in less than five minutes afterwards was rolling away to Holyhead, felicitating myself upon my promptitude and decision, little imagining to what the step I had taken was to lead.

It was a very dark night in November when I started on my expedition. There were three other passengers in the mail, none of whom had yet spoken a word, although we had made several miles of our journey. Muffled up in my cloak, I indulged in my own reveries as usual, building up castles which toppled over after one another, as I built and rebuilt again. At last one of the passengers blew his nose, as if to give warning that he was about to speak; and then enquired of the gentleman next to him if he had seen the evening newspapers. The other replied in the negative. "It would appear that Ireland is not in a very quiet state, sir," observed the first.

"Did you ever read the history of Ireland?" enquired the other.

"Not very particularly."

"Then, sir, if you were to take that trouble, you will find that Ireland, since it was first peopled, never has been in a quiet state, nor perhaps ever will. It is a species of human volcano—always either smoking, burning, or breaking out into eruptions and fire."

"Very true, sir," replied the other. "I am told the White Boys are mustering in large numbers, and that some of the districts are quite impassable."

"Sir, if you had traveled much in Ireland, you would have found out that many of the districts are quite impassable, without the impediment of the White Boys."

"You have been a great deal in Ireland then, sir," replied the other.

"Yes, sir," said the other with a consequential air, "I believe I may venture to say that I am in charge of some of the most considerable properties in Ireland."

"Lawyer—agent—five per cent.—and so on," muttered the third party, who sate by me, and had not yet spoken.

There was no mistaking him—it was my former master, Mr. Cophagus; and I cannot say that I was very well pleased at this intimation of his presence, as I took it for granted that he would recognise me as soon as it was daylight. The conversation continued without any remarks being made upon this interruption on the part of Mr. Cophagus. The agent, it appeared, had been called to London on business, and was returning. The other was a professor of music bound to Dublin on speculation. What called Mr. Cophagus in that direction I could not comprehend; but I thought I would try to find out. I therefore, while the two others were engaged in conversation, addressed him in a low tone of voice. "Can you tell me, sir, if the College at Dublin is considered good for the instruction of surgical pupils?"

"Country good at all events—plenty of practice—broken heads—and so on."

"Have you ever been in Ireland, sir?"

"Ireland!—never—don't wish to go—must go—old women will die—executor—botheration—and so on."

"I hope she has left you a good legacy, sir," replied I.

"Legacy—humph—can't tell—silver tea-pot—suit of black, and so on. Long journey—won't pay—can't be helped—old women always troublesome—live or dead—bury her, come back—and so on."

Although Mr. Cophagus was very communicative in his own way, he had no curiosity with regard to others, and the conversation dropped. The other two had also asked all the questions which they wished, and we all, as if by one agreement, fell back in our seats, and shut our eyes, to court sleep. I was the only one who wooed it in vain. Day broke, my companions were all in repose, and I discontinued my reveries, and examined their physiognomies. Mr. Cophagus was the first to whom I directed my attention. He was much the same in face as when I had left him, but considerably thinner in person. His head was covered with a white night-cap, and he snored with emphasis. The professor of music was a very small man, with mustachios; his mouth was wide open, and one would have thought that he was in the full execution of a bravura. The third person, who had stated himself to be an agent, was a heavy, full-faced, coarse-looking personage, with his hat over his eyes, and his head bent down on his chest, and I observed that he had a small packet in one of his hands, with his fore finger twisted through the string. I should not have taken further notice, had not the name of *T. Ising*, in the corner of the side on which the direction was, attracted my attention. It was the name of Melchior's London correspondent, who had attempted to bribe Timothy. This induced me to look down and read the direction of the packet, and I clearly deciphered, Sir Henry De Clare, Bart., Mount Castle, Connemara. I took out my tablets, and wrote down the address. I certainly had no reason for so doing, except that nothing should be neglected, as there was no saying what might turn out. I had hardly replaced my tablets when the party awoke,

made a sort of snatch at the packet, as if recollecting it, and wishing to ascertain if it were safe, looked at it, took off his hat, let down the window, and then looked round upon the other parties.

"Fine morning, sir," said he to me, perceiving that I was the only person awake.

"Very," replied I, "very fine; but I had rather be walking over the mountains of Connemara, than be shut up in this close and confined conveyance."

"Hah! you know Connemara, then? I'm going there; perhaps you are also bound to that part of the country? but you are not Irish."

"I was not born or bred in Ireland, certainly," replied I.

"So I should say. Irish blood in your veins, I presume."

"I believe such to be the case," replied I, with a smile, implying certainty.

"Do you know Sir Henry de Clare?"

"Sir Henry de Clare, of Mount Grunnis Castle, is he not?"

"The same; I am going over to him. I am agent for his estates, among others. A very remarkable man. Have you ever seen his wife?"

"I really cannot tell," replied I; "let me call to mind."

I had some how or another formed an idea, that Sir Henry de Clare and Melchior might be one and the same person; nothing was too absurd or improbable for my imagination, and I had now means of bringing home my suspicions. "I think," continued I, "I recollect her—that is, if she is a very tall, handsome woman, dark eyes and complexion."

"The very same," replied he.

My heart bounded at the information; it certainly was not any clue to my own parentage, but it was an object of my solicitude, and connected with the welfare of Fleta. "If I recollect right," observed I, "there are some curious passages in the life of Sir Henry?"

"Nothing very particular," observed the agent, looking out of the window.

"I thought that he had disappeared for some time."

"Disappeared! he certainly did not live in Ireland, because he had quarreled with his brother. He lived in England until his brother's death."

"How did his brother die, sir?"

"Killed by a fall when hunting," replied the agent. "He was attempting to clear a stone wall, the horse fell back on him, and dislocated his spine. I was on the spot when the accident happened."

I recollected the imperfect communication of Fleta, who had heard the gipsy say that "he was dead;" and also the word *horse* made use of, and I now felt convinced that I had found out Melchior. "Sir Henry, if I recollect right, has no family," observed I.

"No; and I am afraid there is but little chance."

"Had the late baronet, his elder brother, any family?"

"What, Sir William? No; or Sir Henry would not have come into the title."

"He might have had daughters," replied I.

"Very true; now I think of it, there was a girl, who died when young."

"Is the widow of Sir William alive?"

"Yes; and a very fine woman she is; but she has left Ireland since her husband's death."

I did not venture to ask any more questions. Our conversation had roused Mr. Cophagus and the other passengers, and as I had reflected how I should behave in case of a recognition, I wished to be prepared for him.

"You have had a good nap, sir," said I, turning to him.

"Nap—yes—coach nap, bad—head sore—and so on. Why—bless me—Japhet—Japhet New—yes—it is."

"Do you speak to me, sir?" enquired I, with a quiet air.

"Speak to you—yes—bad memory—hip! quite forgot—old master—shop in Smithfield—mad bull—and so on."

"Really, sir," replied I, "I am afraid you mistake me for some other person."

Mr. Cophagus looked very hard at me, and perceiving that there was no alteration in my countenance, exclaimed, "Very odd—same nose—same face—same age too—very odd—like as two pills—beg pardon—made a mistake—and so on."

Satisfied with the discomfiture of Mr. Cophagus, I turned round, when I perceived the Irish agent, with whom I had been in conversation, eyeing me most attentively. As I said before, he was a hard-featured man, and his small gray eye was now fixed upon me, as if it would have pierced me through. I felt confused for a moment, as the scrutiny was unexpected from that quarter; but a few moments' reflection told me, that if Sir Henry de Clare and Melchior were the same person, and this man his agent, in all probability he had not been sent to England for nothing; that if he was in search of Fleta, he must have heard of my name, and perhaps something of my history. "I appear to have a great likeness to many people," observed I, to the agent, smiling. "It was but the other day I was stopped in Bond Street, as a Mr. Rawlinson."

"Not a very common face either, sir," observed the agent; "if once seen not easily forgotten, or easily mistaken for another."

"Still, such appears to be the case," replied I, carelessly.

We now stopped to take refreshment. I had risen from the table, and was going into the passage, when I perceived the agent looking over the way-bill with the guard. As soon as he perceived me, he walked out into the front of the inn. Before the guard had put up the bill, I requested to look at it, wishing to ascertain if I had been booked in my own name. It was so. The four names were—Newland, Cophagus, Baltzi, M'Dermott. I was much annoyed at this circumstance. M'Dermott was, of course, the name of the agent; and that was all the information I received in return for my own exposure, which I now considered certain; I determined, however, to put a good face on the matter, and when we returned to the coach, again entered into conversation with M'Dermott, but I found him particularly guarded in his replies whenever I spoke about Sir Henry or his family, and I could not obtain any further information. Mr. Cophagus could not keep his eyes off me—he peered into my face—then he would fall back in the coach. "Odd—very odd—must be—no—says not—um." In about another half hour he would repeat his examination, and mutter to himself. At last, as if tormented with his doubts, he exclaimed, "Beg pardon—but—you have a name?"

"Yes," replied I, "I have a name."

"Well, then—not ashamed. What is it?"

"My name, sir," replied I, "is Newland;" for I had resolved to acknowledge to my name, and fall back upon a new line of defence.

"Thought so—don't know me—don't recollect shop—Mr. Brookes's—Tim—rudiments—and so on."

"I have not the least objection to tell you my name; but I am afraid you have the advantage in your recollection of me. Where may I have had the honour of meeting you?"

"Meeting—what, quite forgot—Smithfield?"

"And pray, sir, where may Smithfield be?"

"Very odd—can't comprehend—same name, same face—don't recollect me, don't recollect Smithfield?"

"It may be very odd, sir; but, as I am very well known in London, at the west end, perhaps we have met there. Lord Windermear's, perhaps—Lady Maelstrom's—and I continued mentioning about a dozen of the most fashionable names. At all events, you appear to have the advantage of me; but I trust you will excuse my want of memory, as my acquaintance is very extensive."

"I see, quite a mistake—same name—not same person—beg pardon, sir—apologies—and so on," replied the apothecary, drawing in a long sigh.

I watched the countenance of the agent who appeared at last to be satisfied that there had been some mistake; at least he became more communicative, and as I no longer put any questions to him relative to Sir Henry, we had a long conversation. I spoke to him about the De Benyons, making every enquiry that I could think of. He informed me that the deceased earl, the father of the present, had many sons, who were some of them married, and that the family was extensive. He appeared to know them all, the professions which they had been brought up to, and their careers in life. I treasured up his information, and as soon as I had an opportunity, wrote down all which he had told me. On our arrival at Holyhead, the weather was very boisterous, and the packet was to depart immediately. Mr. M'Dermott stated his intentions to go over, but Mr. Cophagus and the professor declined; and, anxious as I was to proceed, I did not wish to be any longer in company with the agent, and, therefore, also declined going on board. Mr. M'Dermott called for a glass of brandy and water, drank it off in haste, and then, followed by the porter, with his luggage, went down to embark.

As soon as he was gone I burst out into a fit of laughter. "Well, Mr. Cophagus, acknowledge that it is possible to persuade a man out of his senses. You knew me, and you were perfectly right in asserting that I was Japhet, yet did I porsuade you at last that you were mistaken. But I will explain to you why I did so."

"All right," said the apothecary, taking my proffered hand, "thought so—no mistake—handsome fellow—so you are—Japhet Newland—my apprentice—and so on."

"Yes, sir," replied I laughing, "I am Japhet Newland." (I turned round, hearing a noise, the door had been opened, and Mr. M'Dermott had just stepped in; he had returned for an umbrella, which he had forgotten; he looked at me, at Mr. Cophagus, who still held my hand in his, turned short round, said nothing, and walked out.) "This is unfortunate," observed I, "my reason for not avowing myself, was to deceive that very person, and now I have made the avowal to his face; however, it cannot be helped."

I sat down with my old master, and as I knew that I could confide in him, gave him an outline of my life, and stated my present intentions.

"I see, Japhet, I see—done mischief—sorry for it—can't be help'd—do all I can—um—what's to be done? be your friend—always liked you—help all I can—and so on."

"But what would you advise, sir?"

"Advice—bad as physic—nobody takes it—Ireland—wild place—no law—better to go back—leave all to me find out—and so on."

This advice I certainly could not consent to follow.

(To be continued.)

TRANSLATION FROM THE GREEK.

ANTIPATER OF SIDON.

Tears, tears, Artemidorus, tears were shed
O'er thy young corse, while thus thy mother said—
"Vain were a mother's pangs, a father's joy,
Vain were they all, the pyre must have our boy:
Vain our delight, just tasted, when it fled
Away for ever, to the cruel dead.
So soon cut off, my child! and must we see
Nought but thy urn and dust, instead of thee!"

From the Eclectic Review.

ABEEL'S RESIDENCE IN CHINA, &c.

Journal of a Residence in China and the neighbouring Countries, from 1829 *to* 1833. By David Abeel, a Minister of the Reformed Dutch Church in North America, and Missionary of the American board of Commissioners of Foreign Missions to South-Eastern Asia. 12mo. pp. 398. New York, 1834.

No Opium! or, Commerce and Christianity working together for Good in China. A Letter to James Cropper, Esq., of Liverpool. By a Minister and a Layman. 8vo. pp. 56. London, 1835.

Open China! An Appeal to the British and American Churches, on the question is China open to the Gospel? By two Friends. 8vo. pp. 16. London, 1834.

A recommendatory note is prefixed to this American publication, from the Rev. Andrew Reed, D.D., "Delegate (from England) to the Churches in the United States," dated New York. "The greater part of the following work," says Dr. R., "was read to me while the author was reposing as an invalid under my roof; and I am satisfied that it is not made unnecessary by any existing publications, valuable as those publications are." We are disposed to concur in this opinion, for, although it does not supply much novel information, and the author's means of personal observation were circumscribed by his ignorance of the vernacular dialects, any work which is adapted to awaken attention to the moral claims of China and the further East, and to raise the tone of Christian feeling in relation to missionary objects, must be considered as a useful contribution, and, at the present moment, particularly seasonable.

"Look where we may," remarks Mr. Abeel, "beneath the wide expanse of the heavens, we can find no distinct enterprise so laudable, so imperious, so inconceivable in its results, as the conversion of China;"—an empire more extensive than Europe, and containing, according to the authentic census of 1812, upwards of 360 millions of human beings—at least one third of the entire population of the globe!

"The real condition of her hundreds of millions is but little understood. With all her empty boast of perfection, and the vapid eulogiums of her ignorant panegyrists, there is probably no other space upon earth so filled with real wretchedness as China. Her mild, patriarchal government is a system of injustice and oppression. From the 'Dragon throne' to the lowest menial in authority, self-aggrandisment is the reigning passion; extortion and cruelty the means of its gratification. Her plebeian happiness is the combined result of poverty, virtual slavery, and vice. Those who have had the best opportunities of judging give the most painful description of the indigence and depravity of the populace. The middling class, or those who enjoy a competence, is a small minority; and they too are often dealt with, without justice or mercy, and, if capable, are quite as unjust and merciless. Even the appearance of happiness which captivates the stranger, must be mere show; for, consisting as it does in earthly possessions, there is very little in the laws, or their corrupt administration, to give it basis or perpetuity.

"It is true, their literature is extensive. But how far it is calculated to elevate their character or ameliorate their condition, may be determined by the fact, that scarcely a subject of which they treat is understood

hile the most important truths, the only ones which an improve the moral character of man, are totally unnown. Thus, the conversion of China, with all the lessings attendant upon Christianity, becomes an object of vorldly philanthropy, as well as of Christian benevolence. None whose heart is not adamant can gaze on this scene of distress without emotion. But how infinitely vast—ow worthy of all sacrifice—all hazard—all experiment —does the moral elevation of this nation appear, when iewed in its connection with the Redeemer's glory. Here is a triumph and a trophy for his victorious grace; —a gem the purest and brightest which earth can offer o deck his mediatorial crown! With the eye of this racious Being upon us, and his heart upon the salvaion of those who have been promised Him as his inheitance, what can express our gratitude, evince our disiple-ship, or display our allegiance and love, if the onversion of China be not in our prayers and plans and ıtmost endeavours!

"For the present accomplishment of this undertaking, nuch, very much may be done. Missionaries should be ent forth to every accessible place in the empire, and to very mart of her commerce in the circumjacent seas. The coasts should be invaded, and the sea-ports entered, s they have been, and still are, by the undaunted genius f commerce. Every opening should be searched out, —every tenable post occupied,—every lawful engagement subordinated,—every passport possessed. Others ave entered, and gained their respective objects. Pagans, Jews, Mohamedans, Catholics, nominal Protestnts, all have penetrated, but those who were alone capale of benefiting the nation, and the only ones comanded to hazard their lives in the attempt.

"There is probably no other pagan country in the vorld, which holds out to us such facilities of operation as hina. Energy of mind and body is a national characristic. They are extremely inquisitive—patient in reearch—fond of literature—free from the shackles of sect, and comparatively but little wedded to their sysms of religion. These qualities, added to their knowdge, and the fact that the Bible, and some scores of xcellent works, have been translated and written in heir own character, afford the greatest encouragement o pray with expectation, and labour with confidence, for heir spiritual welfare."

The interesting voyages of Gutzlaff have placed hina in altogether a new aspect. Contrary to ll previous opinions, they have shown that the atives are fond of intercourse with foreigners; hat they have a high opinion of our medical kill; that they are a reading people, and receive hristian books with avidity. Hitherto, however, the national mind has never been awakened. he people have been kept under intellectual ondage to the beggarly elements of their puerile uperstition; and their minds, like the feet of heir women, have not been suffered to attain heir natural developement. Their unwritten anguage has isolated them, and shut them up to hemselves; and their written character, though apable of recording and perpetuating the wisdom hat may be enclosed in axioms, or the slighter iterature of poetry and the drama, is ill adapted o express *new* and foreign ideas. As a logical pparatus, it must be altogether defective. We hink in words; and where there exists no alphaetic character to express, with the requisite preision, logical ideas, and the particles which are he verbal links of reasoning, it is next to impossible that knowledge can be carried forward, or he higher intellectual faculties be developed. The *mind* of the Chinese has thus been stereotyped. There has been no progress made during successive centuries, beyond that childhood of civilisation to which all their institutions are adapted. But let access be once gained to their minds,—let free intercourse be opened between these docile children and European teachers,—and above all, let the stimulant of Christian knowledge be brought to operate upon their half dormant faculties; we may then reasonably expect to witness a revolution in the national mind, as rapid and genial as the change wrought by the three days of a Russian spring. "Where the gospel gains access," remarks Mr. Abeel, "according to human calculation, it must have a speedy and wide circulation. *There is no moral power to confront it.* The religion of the empire is baseless. Nothing appears to support it but one vast scaffold of ignorance, which, it is believed, can withstand no shock, and, when it yields, must bury the whole fabric in one common ruin."

"The three leading sects in China are known in the Mandarin dialect by the names of Joo, Fuh, Taou, i. e. the Confucians, Buddhists, and the Taou, or Alchymic sect, 'the mystics of the heathen world in China.' The first and last originated in China; the other was introduced from India, soon after the Christian era, and, principally by means of *the circulation of tracts*, has become the most prevalent superstition in the empire. The Buddhists and Taou sect inculcate future rewards and punishments, decking the former in all the charms of sensuality and sloth, and representing the latter by every horrid combination of bodily torture.

"Notwithstanding all the admiration heaped upon Confucius and his system, by ignorance in the empire, and infidelity in more enlightened parts, the philosopher confessed that he 'knew but little about the gods, and therefore preferred saying nothing on the subject.' Respecting the immortality of the soul, and its future retribution, he advances not a sentiment. The common opinion of his followers is, that virtue is rewarded and vice punished only in the individuals or in their posterity on earth. They speak of the immortal principle as 'annihilated,' 'melted,' 'scattered' at death.

"From one of the native books, it appears there are in China upwards of one thousand five hundred and sixty temples dedicated to Confucius. About sixty-two thousand victims, bullocks, pigs, sheep, deer, are annually sacrificed, and twenty-seven thousand six hundred pieces of silk offered to the manes of the sage. This is the wisdom of the *learned heathen*, who generally teach that 'death is annihilation,' and who sometimes affirm that there is neither 'God, angels, nor spirits.' To whom, to what do they present these offerings? Like many in Christian lands, these very persons show the insincerity of their professions in the prospect of death. Then the priests of Budh, whom they despise and ridicule in health, are called to give the mind some support under its dread, if not its consciousness of immortality.

"Besides the numerous temples in the city, small images, answering to their notions of district gods, are placed in the corner of the streets, and receive the homage of the neighbourhood. Not satisfied with these, every house has its family altar, either before the door or in the principal room, frequently in both places. Those in front of the house are generally small alcoves, in a projecting platform, furnished with a few idols, or more commonly with the Chinese written character signifying God, or superior being. As you walk out in the evening, the fumes of sandal-wood, of which their incense-stick is made, accost the senses in every direction, and their

light almost answers for city lamps in these narrow streets. These, with a few wax tapers, and one or two unmeaning bows of the person who prepares them, are the daily offering made to the images of China.

"The popular religion of China, if definable at all by limits or language, is probably made up of a combination of tenets held by the different sects in the empire, with a mixture of notions and customs, which neither system originated, but the votaries of both practise. Among these customs are sacrificing to the dead, and burning gold and silver paper on religious occasions. If there be any thing which to their minds appears the most sacred of all observances, it is the former, if not both of these customs.

"The observance of the fifteenth day of the moon, and its full, is almost universal. With a people fond of sloth and addicted to sensuality, it is not to be wondered at that feast days should be as popular, and their frequent recurrence welcome to those who have the means of providing for them. Among the most prevalent of their doctrines, is the Buddhistic notion of transmigration, which hangs 'in terrorem' over the more sedate and thinking class of the nation. According to the excellent Dr. Milne, 'When we behold the best of the rulers of China, and the most enlightened of her sages, (e. g. Confucius,) worshiping any god or no god at all, just as suited time, place and the taste of the age, what shall we think of their hearts, virtues, and productions? Can we suppose these systems capable of directing the bulk of the people to God, which left their authors to worship the heavens and the earth, mountains, and rivers, the gods of the kitchen, and the spirits of the dead?' 'The current of Chinese idolatry widened and deepened as it flowed by the accession of tributary streams from Western and Eastern Tartary. Most of the forms of mythology which make any figure in the page of history, now exist in China, except that their indecencies, and their direct tendency to injure human life, have been cut off. China has her Diana, her Æolus, her Ceres, her Esculapius, her Mars, her Mercury, her Neptune, and her Pluto, as well as the western pagans had. To use their own expression, 'her gods are in number like the sands of Havy river.' She has gods celestial, terrestrial, and subterraneous,—gods of the hills, of the valleys, of the woods, of the districts, of the family, of the shop, and of the kitchen. She adores the gods who are supposed to preside over the thunder, the rain, the fire; over the grain; over births and deaths; and over the small-pox. She also worships the genii of the mountains, rivers, lakes, and seas, together with birds, beasts, and fishes.

"'Astrology, divination, geomancy, and necromancy, every where prevail: spells and charms, every one possesses.'

"As might be expected, the god of wealth is the most popular deity among the tradesmen and merchants. He is represented with a wedge of gold in one hand.

"On the doors of the houses a figure is painted, which they call the god of the door. His protection is deemed of incalculable importance to the family. The inscription of his name is often employed as a substitute."

The hold which a false religion has upon the minds of a people, greatly depends upon the power and ascendancy of the priesthood. In China, there is, properly speaking, no sacerdotal order to contend against. There are no vested interests, no corporate rights, no privileges of caste to be encountered; nor, again, does there appear to exist that high military spirit which is found among the Burmese, and which opposes a scarcely less formidable obstacle to the reception of the Christian faith. The Chinese are a nation of agriculturists and traders,—sensual, voluptuous, and unfeeling, but displaying little bigotry, and much less tenacious of "old customs" than has been imagined. Who would have supposed that the most essential and characteristic appendage of the outward man in a Chinese, his tail, is comparatively a modern fashion, and one which was not voluntarily adopted?

"Upon the Tartar conquest, not two centuries ago, the Chinese were compelled to adopt this style of wearing their hair, as a mark of subjugation. Many considered it such a disgrace that they preferred losing their heads to their hair. Now it has become an ornament, and a mark of proud distinction."

To the *nominal* reception of the Christian faith by the three hundred millions of the Chinese empire, there would seem to be as little positive obstruction as could any where be conceived to exist; and numbers make so little difference, where the million is but a numerical repetition of the moral unit, bearing nearly the same shape and impress, that the overthrow of idolatry might be expected to be as easily brought about in China, by the mere authority of the emperor, as in an island of the Southern Sea. It is probable that if, like the Czar of the Russians in the ninth century, (which is about the time of day at present with the Chinese,) their Celestial Emperor were to decree the national recognition of the Christian religion, and the abolition of idolatry, the edict would be obediently submitted to, without any show of resistance, and the Chinese would very speedily become as good Christians, at least, as the Russians. A Tartar Constantine might probably effect this national reformation with as much ease as his predecessor compelled his subjects to decorate themselves with tails. And, though such an act of despotic authority could not secure the genuine reception of the Christian doctrine, the hearts of the untaught and superstitious millions remaining still unchanged, and being unprepared to embrace the new faith prescribed to them; yet, if free toleration were allowed, and every facility were afforded to the Christian teacher, it is quite reasonable to conclude, that such a moral revolution as has been witnessed by the present age among the Polynesian tribes, might take place, within as brief a period, on the immense scale of the Chinese empire. Perhaps it might truly be said, that the Chinese are less unprepared for the mighty change, than Christians are to concur with it. The very possibility of such an event reproaches the narrowness of our expectations, as well as the feebleness and tardiness of our efforts. What "mighty works" may not be hindered by our unbelief! The reverse of such an event may, however, be deemed more likely. As remarked in the Instructions of the Prudential Committee of the American Board of Missions, to the Rev. Peter Parker, M. D., when about to proceed to China as an agent of the board:

"The probability is, altogether, that the government of China will array itself against the propagation, within its dominions, of protestant, as it has of Roman Catholic, Christianity. It would be contrary to all analogy, if it did not do so. The very genius and structure of the government lead us to expect of it this course, more cer-

ainly than any *other* government on earth. The fundamental principle of the whole policy, and morality, and religion of China, is, the obligation of universal obedience to parents, and to the emperor as the great parent of all: who of course feels himself responsible, not only for the civil and social, but also for the domestic and private conduct, and for the opinions and belief of all his subjects. And if not from the government, persecution may come from popular superstition and prejudice, excited to struggle with desperation for their malignant empire over the souls of a third part of the human race. The missionary to China, at the present day, must, therefore, be in spirit and conduct, not only "almost, but altogether" such as Paul.—*No Opium*, pp. 52, 53.

History, continues the author of the letter to Mr. Cropper, confirms this view of the case.

"Marjoribanks takes too much for granted, when he says, 'If Christianity is now proscribed in China, it is solely on account of the apprehension that it is associated with political intrigue. Remove this apprehension, and you will have as wide a field opened to the efforts of the Protestant Christian, as is about to be opened to the enterprise of our merchants.' The field may, indeed, be equally open to both; but that it will be equally favourable to the former, is more than doubtful. All experience is against a hope so sanguine. It cannot be sustained by the assurance, that 'it is a common and vulgar error,' to believe that the Chinese, like many other Asiatics, are *bigoted* in matters of religion. They are grossly superstitious; but are careless, in general, of religious observances: whilst the government has almost always acted on a principle of most *liberal* toleration. The Buddhism of India, the worship of the Grand Lama of Thibet, the Jewish and Mahomedan religions, as well as the Christian, have at different periods been introduced and established in China.'—*Marjoribanks.*

"This is plausible, but hollow. The Roman empire tolerated all idolatries; but it persecuted Christianity; and protestantism is too like apostolic Christianity, to escape all persecution in China. It will provoke none, as popery did, by political intrigues or anathematising rivalries; but it must endure some; because it can neither wink at popular crime, nor symbolise with superstitious custom." Ib., pp. 51, 52.

There is, it may be thought, almost a moral necessity for the concurrent agency of persecution in planting the Christian faith. Otherwise, the infant church would be, in the first instance, overrun with formalism and hypocrisy; and the tares would choke the wheat. Yet it does not follow, that persecution is to be desired; still less such direct persecution from the ruling powers as, in more countries than one, has well nigh extinguished the Christian faith, and which the language of prophecy refers to as a judgment upon declining and apostate church, not as conducting to the advantage of its first promulgation. Obstacles enough, of an intellectual and moral nature, must oppose, under all circumstances, the reception of the divine truth, in its purity and spirituality, where no political obstructions exist. Our duty is plain: we may leave it to Divine Providence to ordain what degree of opposition shall baffle and test our efforts. It is enough that, in a certain sense, and to a certain extent, China both invites and is accessible to both our merchants and our missionaries. The author of the *stirring* pamphlet above cited, thus appeals to the former class among us.

"It is a happy thing, sir, for our commercial interests, that we have in the Christianity of the New Testament a *key* to the hearts of all nations, and especially of China. Even he who doubts the adaptation of this key must confess, that all our other keys have failed to open the heart of that peculiar people. Neither the pomp nor the power of British embassy has made any favourable impression upon them. Both the wealth and the honour of the East India Company, although before them for ages, and that in splendid forms, have failed to win their confidence, or even to command their respect, as a nation. They have neither "danced" to the "piping" of diplomacy and monopoly, nor "wept" to the "mourning" of private adventure. Our greatness has not amazed them, nor our science fascinated them. We have played all our parts before them but one; and still China, like the deaf adder, has shut her ears against the voice of the charmer, charmed he ever so wisely! We are yet represented as little better than demons, and at best only as barbarians!

"So much for what commerce has done, whilst working without Christianity in China! It has laid no hold upon either the affections or the curiosity of the people. Even the gratification it has ministered to their worst passions, has not subdued their weakest prejudices, but rather exasperated and confirmed their contempt for the foreigner, throughout all the interior, at least. What, then, can commerce call to its aid, if religion can lend it no efficient help? It cannot call on government to negotiate at the cannon's mouth. Free trade cannot be forced, even by war, in such an empire as China; if war itself were not criminal. Nothing less than the subjugation of the empire could compel its trade; and its subjugation is, happily, an impossibility." Ib. p. 8.

We differ entirely from the writer upon this point; but we readily concede that its subjugation is not desirable. We want the commerce of China, not the extension of our Asiatic territory; otherwise the Tartar yoke is not so dear to the Chinese as to make them disposed to fight very hard for their emperor. The possession of the emperor's person would, in all probability, settle the matter as easily as the transfer of the Mogul empire to a company of merchants was effected. Nor should we anticipate much difficulty in retaining the conquest by a pacific and conciliatory policy. We shall not, however, be understood as counseling or desiring aggressive measures of any kind. It is not our intention to go into either political or commercial speculations on the present occasion; nor shall we even moot the opium question, but must content ourselves with strongly recommending to attentive perusal the letter before us. We return to the question, is China open to the gospel? The answer supplied in the "Appeal," though somewhat too rhetorical and declamatory for our taste, deserves the serious consideration of the Christian public.

"If it be not, then, more than three hundred millions, or one third of the human race, are placed beyond the reach of the wide and warm sympathies of the living church of the living God! Is this likely? His spiritual life must be at very low ebb, who can take for granted, that China is 'hermetically sealed!' Father, forgive all who have repeated this insult against the gospel commission: they knew not what they said. They durst not have said in plain terms,—That the girdling and guarded wall of China is as impassable as 'the great gulf, fixed' between hell and heaven. Any tongue, which would try to say that, would cleave to the roof of its mouth. No Christian audience would allow any man to translate the chemical phrase into scriptural English: for

it implies, that China is as much impaled from hope as hell itself. Where is the difference—if we 'cannot pass to them?' This is just the position of all in heaven towards all in hell; and as that is the final position of the church, it cannot be her present position to the world.

"'Is then China open to the gospel?' What do you mean by 'open?' It is certainly not open in the same sense as the presidencies of India, the tribes of Africa, and the islands of the Pacific. It is not open, as the three continents were to the first missionaries of the cross. But it is not shut. It never was shut entirely. It never can be 'hermetically sealed.' 'He who hath the keys of David,' set before his church an open door, which no man can shut,' into all nations, when he commanded her to preach the gospel unto all nations. The Emperors of China have, indeed, tried to shut it, and declared it shut; and we, alas! have believed it to be so. They never believed their own pretences! They never could have believed them, except during the pauses of Asiatic enterprise and ambition. Protestants alone have been weak enough to believe Chinese pretences! The Bhuddists of the first century found the door open enough for their idolatry; and the Nestorians of the seventh century, for their heresy; and the Mahometans of the eighth century for their Koran; and the Papists of the thirteenth century, for their Mass. Thus, whenever "*Invenism viam aut faciam*," has been the maxim of any sect or system, they have scaled the imperial wall, and penetrated far enough into the celestial empire, to prove that neither were impassable. It was not, indeed, for such missions that Christ opened or kept open the door of China: but he permitted them to enter in succession, in order to prove to his own church, that no man could shut any door, which 'the keys of the House of David' had once opened.

"Ignorance has been one great cause of our apathy hitherto. Accordingly, at the times of this ignorance God has winked. But now the darkness is past! Gutzlaff has proclaimed to Europe and America, that 'no country in Asia, ruled by native princes, is so easy of access' as China. 'The people fairly robbed me of my books.' 'I intend to make a voyage through the whole of central China, up to Thibet and Bengal; a matter as practicable as a voyage from Rhio to Batavia.' Well might one of the missionaries (Medhurst) say, 'If we had known this twenty years ago, how many fruitless experiments and useless expenditures might have been spared; for, instead of spending strength and resources in small contracted spheres in the Malayan Archipelago, amongst a few thousand emigrants, we might have gone directly to China, and traveled through the length and breadth of the land, distributing the Word of Life, and proclaiming spiritual freedom to millions. But, even now, it is not too late to retrieve what has been lost, if labourers abroad, and the churches at home, awake to a sense of their duty.'

"America has begun the work. She remembers that the Jesuits sent the very flower of their army to conquer China for the Pope; and she is pledging the flower of her 'noble army' of missionaries to attempt its conquest for Christ. Two of them are already in the field. And what is their opinion of the enterprise? They frankly confess it is perilous; that they have no security from the government for safety or continuance; that they may even peril the lives of the natives by trying to convert them, and thus be themselves 'stigmatised as murderers.' Thus they weigh consequences: but they add, 'The experiment will be made.' This view of the case is not at variance with Gutzlaff's. They write, be it remembered, under the meridian of Canton—where the laws are most rigid, and the police strong; whereas Gutzlaff speaks of central China and the principal northern parts; and there the empire is as open to missionaries as to merchants. Will, then, the former be less enterprising than the latter? 'God forbid; and let all the people say, Amen.'"

* * * * * *

"It was not thus that the primitive church viewed the Roman emperors. She cared nothing for their opinions or their power, when these stood between her and her duty to Christ. She took Domitian into account, just as she did the devil; only that she might take effectual measures to defeat both his strength and stratagem. She kept her protests and prophecies against idolatry ringing throughout the empire, just in proportion to Cæsar's wrath against Christianity. She could not tame him, but she made him feel that he could not silence nor intimidate her. He could not so entrench himself in power or pleasure, as to shut out the sound of that challenge which she gave to the gods of Rome. It kept both the camp and the cabinet of Cæsar sleepless. He was not allowed to imagine for a moment that his eagles or his edicts had frightened the church. She had more mercy on the soul of Cæsar himself, as well as on the world, than to act any part which could lead him to flatter himself with the hopes of her extinction.

"Not thus has the Emperor of China been treated! He is left, if not led, to suppose that Christ is afraid of Confucius, and that Christendom has no object but commerce or conquest. Church of the living God! undeceive him at once. You have made him a dreamer by your cowardice; break his dreams by your courage. The weapons of your warfare can soon do this; for they 'are not carnal, but spiritual.' He does not understand moral power, and therefore he knows not how to resist it. Thunder without artillery, and attack without arms, would confound his policy. He has nothing but brute force to bring forward against Christian zeal. His philosophers have no genius, and his priests no fascination, and his creed no charms. No emperor, with whom Christianity ever grappled, had so little moral power. He wields his empire by custom, not by motives; by system, not by sympathy or sentiment. He has thus to hold upon the hopes or fears which

'Wander through eternity.'

And through it they do wander. Even the dream of a terrestrial immortality haunts the people, notwithstanding all their fruitless experiments to discover the elixir of life. Shall such a people be left without 'the water of life?' God forbid!"*—*Open China*, pp. 10—16.

One of the greatest impediments to the entrance and progress of protestant missionaries in the Chinese dominions has, in time past, been the influence of the Romish priests. "It is difficult to determine," Mr. Abeel remarks, "to what extent the forces of catholicism have been weakened in China."

"Since the general expulsion of the European priests, numbers have ventured, and are continually venturing, into the interior, although they have generally been conveyed to their charge in a clandestine manner. Some have been sent from Macao to Pekin, to supply the board of mathematicians; but the emperor's request, and their avowed object in compliance, were equally distinct from all ecclesiastical interference. Very recently, one of them was transferred from Pekin to Canton with con-

* We are happy to learn that, under the influence of these considerations, a society has been formed in the metropolis for the promotion of *female education* in China, India, and the East; auxiliary to the efforts of the missionary societies in Eastern Asia. The Duchess of Beaufort has allowed her name to stand as president of the society, which reflects much honour upon the ladies who have originated it.

iderable pomp, and with the intention of returning to Europe. It was said by many, to be a plan of the emperor to get him respectably out of the country; others maintain that he requested permission to visit his aged mother before her death. However this may be, I am informed that at present, there is but one catholic priest employed in the emperor's service; and for the last twenty years no others have been invited.

"The following estimate of the catholic forces was obtained from one of their more credible priests by a professed friend of both of us. Connected with the French mission, are two bishops, four or five European missionaries, thirty native missionaries, and 51,000 converts. Portuguese mission: one bishop, one European missionary, twenty-nine native missionaries, and 80,000 converts. At Macao, they have two seminaries, eight European missionaries, and 1,000 converts. Italian mission: four European missionaries, 30,000 converts. Spanish mission: one bishop, two European missionaries, and 35,000 converts."

This will give a total of four bishops, eighteen European missionaries, fifty-nine native missionaries, and 197,000 converts. The results, inconsiderable as they are, ought to provoke protestant Christians to emulation. The *numerical* success of British missionary labours has hitherto been small; yet, Leang Afa, and his nine or ten associates, who "with one heart and united minds continue to serve the Lord and practise his holy doctrines of the gospel," present to the eye of enlightened faith, a more unequivocal testimony to the power of the truth, and a more encouraging earnest of the future triumphs of the cross, than the two hundred thousand converts to popery. Mr. Abeel had the gratification of meeting this "first fruits" of China at the rooms of the late Dr. Morrison, whose lamented decease was, for the time, cast such a gloom over the prospects of the mission. He describes Leang Afa as evidently possessing, with the zeal of an apostle, the spirit of a martyr. "The feelings he expressed, in welcoming missionaries to his benighted country, were awakened in us at the sight of one in whom appeared so distinctly the image of the Saviour."

The first six chapters of the present volume describe the author's voyage to China, and his visit to Macao and Canton. He thence proceeded to Java. At Batavia, Mr. A. had some conversation with a number of Cochin-Chinese converts to the Romish faith.

"It was conducted partly in French, a limited knowledge of which they had acquired from the catholic priests in their country; partly in Malay, picked up in trading; and partly by means of the Chinese written character. They professed the catholic religion, and evinced a degree of caution and bigotry which had, no doubt, been inspired by calculating leaders. To employ their own expression, there were *thousands upon thousands* of catholics in the country, and priests from France, Portugal, Bengal, and America. They spoke of convents belonging to different orders of monks. It was quite evident from their questions and remarks, that they had been apprised of the exertions of protestants, and prepared for a probable encounter.

"A tract was presented, containing nothing obnoxious to catholicism, but their imagination soon furnished it with the most pernicious doctrines; and though they did not read a single page, they were perfectly aware of its soul-destroying contents. Their principal objections to the religion of the Dutch and English were, the want of celibacy among the priests, and of auricular confession among the people. They spoke of the instruction they had derived from catechisms; such as the frequent worship of *la très sainte Vierge;* but, upon being asked if they had read the Bible, replied in Chinese, it was forbidden, disapproved; adding in French, It is contraband. One of them enquired of M. how many disciples he had. The indirect reply often was, that he deemed something beyond the mere profession indispensable to true religion, and consequently never included in such an estimate those who were not sincere. 'Ah,' said the shrewd enquirer, 'the fault is in your doctrines; if they were true, there would be no lack of genuine disciples.' He was asked what he considered true doctrine. 'Oh,' said he, ironically, 'your books are full of it.' 'But you know nothing of the contents of our books, and how are you qualified to condemn them?' 'I have no time,' said he, 'to prattle any longer with you;' and waited only long enough to hear that the truth was of sufficient importance to demand his time, and that a good man ought to make it a matter of the most diligent enquiry.

"This, then, is the effect of Romanism, falsely termed Christianity; and this the barrier it erects against the pure doctrines of the cross. If the word of these men can be relied on, how widely prevalent must be its errors, and anti-Christian its influence in Cochin China!"

In a note, Mr. Abeel states, that he subsequently learned, that ten Romish missionaries (six European and four native) had arrived at Batavia on their way to Cochin China. According to their statement, there are 300,000 catholics in Cochin China and Tong-king. "According to the authority upon which is given the number of catholics in China, there are in Tong-king and Cochin China, four bishops, fifteen European missionaries, upwards of one hundred native missionaries, and more than 400,000 converts. More than three-fourths of this number are in Tong-king." Recent advices from these parts refer to internal disorders, in which the Christians are implicated; and a severe persecution is stated to have been raging against them. There can be no doubt that political causes, and possibly the misguided zeal and ambition of the Romish priests, have had more to do with such disturbances, than religious animosities.

From Java Mr. Abeel proceeded to Singapore, and thence to Siam, where he spent some months, which were devoted to the study of the Chinese and Siamese languages. The following extracts from the journal kept during his residence at Bangkok, will be read with deep interest.

"An event occurred to-day, which we earnestly pray may be repeated, until the whole kingdom is converted to Christ. A priest of a very respectable appearance and train, sent a messenger before him, to inform us that he had read our book with approbation, and being unable to comprehend some of its doctrines, would be happy to receive from our lips a solution of its difficulties. He waited a short distance from the house, until the messenger returned to him with a favourable answer. He remained a long time, and plied us with such questions as convinced us that he had thought deeply on the subjects. The Saviour of sinners was the burden of his enquiries —who He was—what was the distinction between Him and the Father—whether His love extended to men of all nations—how He expiated the sins of the guilty—and whether God the Father bore an equal affection to the world. He was particular in enquiring about the nature of sin, the process by which the heart could be sanctified,

and the manner of divine worship. Many points of minor importance were proposed, and a number of their own opinions submitted to the test of our faith. Such was the earnestness of the man, that when he thought his questions not perfectly understood, he would turn to a China youth in his train, and beg him to put the enquiry in Chinese. It afforded a good opportunity for preaching the gospel, to apparent advantage, and many most important ideas were suggested to his enquiring mind.

"Sept. 10th. Three priests of distinction spent part of the evening with us. Probably with the fears, though evidently not the object of Nicodemus, they came "by night." They had been before, and greatly interested us by their mild and friendly demeanour. Of Jesus and his religion, they always speak with approbation, though we fear not always with sincerity. It is delightful that his blessed name, and some knowledge of his character and offices, are becoming familiar to these deluded men. It is by no means uncommon for us to be saluted by the title of disciples of Jesus—often with an encomium upon the gracious Being whom we serve. The folly and consequences of idol worship were pointed plainly out to-night, and the unpublished Scripture, containing the sermon on the mount, given to one of them to read aloud.

"That their own religion sits lightly upon many of them is evident, from numerous facts. Some of them do not hesitate to eat, and even to ask us for, articles strictly prohibited in their laws. Though not allowed to partake of any thing after the mid-day meal, two of our visiters had infringed the rules before, and were waiting to-night only for the assent of their superior. Since our arrival, the priests have constituted a large proportion of our visiters. Hundreds, probably thousands, have applied for books and medicines, and not a few of them have become very sociable, and frequently spend part of the day or evening with us. They express not the least aversion to the dissemination of a faith which they might know is both opposite and destructive to their own. Many of them, there is every reason to believe, care nothing about their own religion, and know as little about ours. Not expecting to remain in these monasteries beyond their term of pupilage, they appear to feel themselves quite as much at liberty to gratify their curiosity, as to sacrifice it to an object in which they have no permanent interest. Selected from all classes of society, and destined to fill all stations in public life—having abundant leisure to read, and seemingly desirous to learn the contents of our little volume—we should be callous indeed, if our hearts did not often move with sorrow for their blindness, and prompt the most fervent intercessions on their behalf.

"Our most frequent visiter was introduced to us by a note from Gutzlaff, in which he is recommended as 'a friend of truth, thoroughly versed in the doctrines of Buddhism, humble and docile, a chaplain to his majesty.' He is far above the standard of his countrymen, and one of the finest models of unchristianised men we ever saw. He evinces nothing of the idle curiosity of his countrymen; but is fond of science, and particularly anxious to learn the habits, languages, and religions of other nations. He comes often for instruction, and proves himself an assiduous and apt scholar. There is something more than ordinarily engaging in his countenance and deportment, and the knowledge he has acquired of Christianity, and the apparent candour with which he speaks of the gracious Redeemer, render tenfold more deplorable his remaining darkness, and controlling fears. At his first visit, we gave him the manuscript life of Jesus, which he read; since that he has taken different parts of the unpublished Gospels for perusal."

Mr. Abeel, after returning to Singapore, paid a second visit to Bangkok; previously to his embarking, May 25, 1833, for England. Some useful information may be gleaned from his notices of Siam, Cambodju, and the islands of the Indian Archipelago, but we meet with nothing in this part of the volume that will be very new to English readers who are already in possession of Mr. Gutzlaff's journal, Mr. Tomlin's modest little publication, Bennet and Tyerman's Missionary Voyage, and other works, reviewed in our pages.

From the London Athenæum

Excursions in the Mediterranean. By Major Sir Grenville T. Temple, Bart. 2 vols. London: Saunders & Otley.

There are few countries so rich in historical associations as northwestern Africa; there is none in which the traces of former greatness have been so completely obliterated. There is scarcely a plain, mountain, river, bay, or cape, that does not recall the memory of nations once powerful and gallant: Africans, Carthaginians, Greeks, and Romans—Goths, Vandals, Byzantines—Arabs, Spaniards, and Turks; but now, to use the words of Fletcher—

Hardly the place of such antiquity
Or note of these great monarchies we find;
Only a fading verbal memory,
And empty name in writ is left behind:
But when this second life and glory fades,
And sinks at length in time's obscurer shades,
A second fall succeeds, and double death invades.

The Christian views this country with still more painful feelings. In the fifth century there were a hundred and thirty-two episcopal sees in the proconsular province alone; nearly four hundred bishops attended the council of Carthage; but now, ages have elapsed since a Christian community existed in Barbary. Nor are these regions destitute of modern interest! France, since the conquest of Algiers, has been engaged in the great experiment of reviving the ancient agriculture and commercial eminence of northern Africa, and, independent of all political consideration, we cannot avoid watching the result with anxious interest.

Sir Grenville Temple visited the regencies of Algiers and Tripoli without any design of "making a book;" it was only since his return that he has been induced to transcribe and arrange his daily journal; there is, consequently, a want of order and consistency in the volumes. subjects of little interest occupy disproportionate space, others of great moment are only slightly glanced at, or wholly neglected. Our quotations, consequently, must be as miscellaneous as the work itself. We shall begin with the French at Algiers, who are, it appears, anxious to make it resemble Paris.

"About half way between the two gates the French have lately cleared away an extensive space of ground, which is called Place du Gouvernement, and which is to be faced with public offices and other edifices, built according to European models: the erection of a church and of a theatre has already been ordered. . . . The principal mosque was pulled down by the French to make room for the new square, and another in the Rue du Divan was shortly to be consecrated to Christian worship. All the houses are numbered, and the streets

ave received names, the medley of which is curious, or we read, Rue Annibal, Orléans, Sophonisba, du Chat, Belisaire, Trois Couleurs, Barbarossa, Sidney Smith, Numides, la Charte, Lotophagus, Etat-Major, &c. *

"Algiers is daily assuming a more European aspect; hats are nearly as often seen as turbans, cigars have replaced the long pipes, and the Moorish bazaars give way to the glazed windows of French shops. Upwards of fifty merchants have established counting-houses, and a considerable number of tradesmen and mechanics, including, of course, a full proportion of modistes, couturières, and perruquiers, are thickly scattered about. Eleven grand cafés with billiard-tables, four grand hotels (which are, however, execrable), three restaurateurs, one hundred eating-houses, two *cabinets littéraires*, one circus, a cosmorama, &c. have already been established, and omnibuses were shortly to ply from the Bab Azoon to Mustafa Pasha, and from Bab el haout to the bey's country villa."

The army of occupation is composed of rather discordant materials:—

"Among the corps which compose the French army of occupation in Africa, I particularly remarked the Zouaves regiment, formed of the followers of Muhammed's religion, but serving under the banner of the cross. This phenomenon, though existing, as we all know, in the vast regions of our Asiatic possessions, I certainly never expected to have seen repeated by the fanatic tribes of the Mauritanian shores; such, however, was the case, and from all accounts I received, these men were as subordinate and faithful to their new masters as the sons of France themselves. * * * * *

"There is also a corps called *la légion de Paris*, composed originally of the scum and refuse of the population of the French capital, whose irregular and insubordinate conduct soon gained for them, from the troops of the line, the *soubriquet* of *Bedouins de Paris;* it is, however, but justice to add, that before the enemy they have always rivaled in bravery the best and oldest corps of the line. In addition to this is a *Légion Etrangère*, composed of the most heterogeneous materials, collected from all nations."

Such soldiers cannot be expected to be very orderly in their conduct; and, accordingly, we find a large portion of the *Moniteur Algerien* occupied by the sentences of courts martial, in which severe punishments are inflicted for crimes of violence and fraud, the former, as might be supposed, being the more frequent.

The Algerines were not destitute of naval heroes; our author mentions one, whose exploits deserve to be recorded.

"Hammooda Rais, a native of the wild regions of the Atlas, who entered the navy of his country at the age of seventeen, and greatly distinguishing himself by his talents and intrepidity, was in a few years raised to the command of a frigate. In 1801 he carried, by boarding, a Portuguese frigate, of much superior force to his own, and which had been purposely fitted out and equipped to capture him. In 1810 we find him an admiral, in command of three frigates, cruising off the rock of Lisbon. The Portuguese, who had then a large force stationed in the roads of Gibraltar, detached from it one ship of the line and three frigates to intercept him. The Algerine passed by the bay of Gibraltar under easy sail, and when he saw the Portuguese, hove to off Europa Point, in order to offer battle to his enemy. On this, one of the Portuguese ships (commanded by an Englishman) bore down upon him and poured in a broadside, but was immediately recalled by his admiral. After watching each other for some time, the Portuguese squadron again anchored in Gibraltar roads, and the Algerine continued his course, and performed a very successful cruise in the Mediterranean. The Portuguese admiral was tried, and, not only honourably acquitted, but also highly complimented for the bravery he had displayed in *looking* at the foe. During the war between Tunis and Algiers, Hammooda greatly distinguished himself, and in 1811 captured a Tuniseen frigate of thirty-two guns, having on board their admiral. He however assumed no credit to himself for this victory, as other parts of his squadron were at this time in sight. After having become the terror of the Mediterranean, he in 1815 fell in with the Guerriere, a frigate of the United States, with which nation the Algerines were then at war, and immediately determined to defend his ship in such a manner as to justify the reputation he had acquired. His frigate was taken, but his feelings were spared the mortification of his giving up his sword, for he was killed before she surrendered, dying, as he had lived, without ever having struck his flag to an enemy."

A more extraordinary personage is Yusuf, now a colonel in the French service, whose gallant capture of Bona is probably remembered by most of our readers. We must quote some account of his history:—

"Yusuf is by birth a Frenchman, his name Louis Tesser, and his father was intendant of Napoleon's police at Elba. Young Louis having run away from school at Leghorn, was with one of his comrades in a café, when being invited by some Tuniseens, who were there at the time, to visit their ship, they repaired on board, and whilst employed in eating sweetmeats below, the vessel put to sea. Landed at Tunis, he became the property of the bey, and received the regular education of a Mamlook. The military exercises, the beautiful horses, the splendid arms and dresses, all pleased him so much, that he felt no desire to return to France.

"An intrigue he had with one of the bey's harem obliged him to fly, after having narrowly escaped death, for which purpose he was obliged to remain shut up three hours in a large hall-clock. He was received on board a French man-of-war, and went to Algiers, where he entered the French service, and distinguished himself at the battle of Mahdia. He returned on a mission to Tunis, but under the protection of the French flag, and it was on his way back to Algiers that he seized upon Bona."

Yusuf showed every possible kindness to the English travellers, and was particularly attentive to the ladies of the party. He commands a corps of native cavalry, which he has rendered the most effective in the French army of occupation, by judiciously introducing no more of European discipline than was consistent with the habits of the Arabs and Moors.

From the regency of Algiers we proceed to that of Tunis. The traces of the ancient harbours of Carthage may still be found, but the large marsh in the neighbourhood of that city has been changed into a lake by a violent storm in 1831, and seems capable of being formed into a better naval station than any that the Carthaginians possessed. The mode of fishing on this lake is somewhat strange:—"A floating platform is towed astern of a boat, which rows about in different directions; the fish follow, and, in their gambols, jump upon it, and are caught by a boy, placed there with a bucket ready to receive them."

To those who remember the enthusiasm with

which Chateaubriand speaks of every thing connected with antiquity, in his very entertaining and somewhat conceited travels, the following anecdotes will appear extraordinary.

"M. Chateaubriand does not, however, from his own account, seem to have felt sufficient interest in the ruins of Carthage, to pay them much attention. He landed at Tunis in 1807, and remained there six weeks, during which time he never quitted the house of M. Devoise, the French consul. When the time of his departure arrived, he went to the Goletta, for the purpose of embarking; but the vessel having been detained one day longer, he was induced by M. Humberg, a Dutch engineer officer, to visit the *locale* of Carthage, where he is said to have remained even more than half an hour. This *insouciance* on his part becomes, however, less surprising, from his former acknowledgment, that though residing some days at Kahira, he had never visited the pyramids, though this did not prevent his name being carved upon their summit. 'Je chargeai M. Caffe,' he says, 'd'écrire mon nom sur ces grands tombeaux, selon l'usage, à la première occasion: l'on doit remplir tous les petits devoirs d'un pieux voyageur.'"

Immediately after their arrival at Tunis our travellers were introduced to the bey, who received them with great kindness. He appears to be a wise and humane governor, but his probable successor is directly the reverse. On the invitation of the bey, Lady Temple and her sisters paid a visit to the ladies of the harem; as ladies are the best judges of each other, we shall extract her ladyship's account of this sanctuary, and its principal inmates.

"We were received at the entrance of the palace by Giuseppino Raffo, the bey's Bash Kasak, who, leading us up a short staircase, consigned us over to the charge of a Christian woman, who, addressing us in Italian, conducted us to a door, where stood her highness, the Lillah Kebirah, ready to receive us. She took me by the hand, and not speaking any other language but Arabic herself, addressed a great many compliments to us, through the Christian woman, who was a Tuscan, and served as interpreter. We passed through a *patio*, paved with white marble, covered in with a silk awning, and surrounded by arcades, in their turn supported by fluted pillars, likewise of white marble. In each corner was a beautiful vase-shaped fountain to cool the air in this delightful spot, than which nothing could look more truly oriental, and carrying one in imagination completely into those enchanting scenes described in the Arabian Nights. Under the arcades were seated a number of fat, unwieldy creatures, talking furiously, and looking most attentively at us. No etiquette seemed to reign amongst them, for, on the Lillah's approach, they none of them rose, but retained their half-reclining posture, with the exception of those blacks, who, from their meaner dress, I imagine were very subordinate slaves, and who, as she passed, came up and kissed the palm and back of her hand. Her dress was rich, and, though shapeless, I thought not ugly: indeed they are right in covering themselves with this loose sort of robe; for the immense size to which they all attain, from the constant use of the bath, wearing no stays, and taking no exercise, would be quite disgusting, unless concealed by their dress."

A table of perfumed cakes and sweetmeats was provided for the guests; and during their repast, a little incident occurred, which shows the Moorish women to have strong motherly feeling.

"The Lillah asked if I had no children, and on hearing that I had a little boy, enquired why I had not brought him, and seemed really sorry; all the Moors, both male and female, being very fond of children. When we had finished our luscious repast, she ordered all the remaining cakes to be put into a basket, and desired that I would take them for my child. She had her own little boy of about two years old in her arms; he was a miserable, sickly-looking child, and by his embroidered dress made to appear still more so; he wore a shasheah tight to the head, with an enameled chain wound about it, and chains and amulets hung round his neck."

The amusements of these secluded ladies are very limited.

"On going down the stairs, which are all paved with glazed tiles, as in all Moorish houses, we went across a little square garden into a large vaulted gallery, delightfully cool, with a fountain playing in the centre, full of gold fish. Here, the interpreters told me, the ladies come to amuse themselves in summer by looking at the fish. What a delightful, intellectual amusement! but the poor creatures are allowed no other, and it is a very mistaken notion that they all despise us for going out for amusement, and that they think themselves much happier for being always obliged to stay at home. Indeed, I am sure they envy Christian women very much in that respect, notwithstanding what many affirm, that they do not wish for more liberty; for I never spoke to a Turkish or a Moorish woman, the bey's wife included, who did not say with a sigh that she longed to go out with freedom."

The tournaments exhibited by the Arabs on marriage festivals, recall the memory of the days of European chivalry; we can scarcely imagine a more animating spectacle.

"The tournament field is oblong, and bordered by rows of spectators, who form its boundaries by sitting cross-legged round the open space. The best riders of the tribe, mounted on the most active horses, are then introduced into the arena, the men being clothed with as much splendour as their means will permit them, while the chargers are covered with large silk housings of different colours, reaching to the ground, and resembling those of ancient knights, as represented in Froissart. Some of the Arabs then commence making their horses dance to the sound of drums and trumpets, whilst men on foot occasionally rush forward and discharge their muskets close to the horses' ears. Others dash forward at full speed along the line of seated spectators, as close to their feet as they possibly can, without actually trampling upon them: and every now and then suddenly throwing their horses on their haunches, spin them round on their hind legs, and resume in the opposite direction their wild career. It is a nervous sight to behold, for you momentarily expect to see some person or child crushed beneath the horses' hoofs; but no accident ever happens, and men, women, and children, maintain their seats with the greatest calmness and feeling of security, saluting any well-executed point of horsemanship with loud and exulting shouts of approbation, whilst the women accompany them with the usual but indescribable cries of the quick-repeated lu-lu-lu-lu; in return for which they are covered with clouds of sand and dust, which the impetuous coursers throw up behind them. Three or four others, dashing their sharp stirrups into the flanks of their impatient steeds, rush madly along the length of the arena, shouting forth their *tekbir*, or war-cries, and whirling round their heads the long and silver-adorned Arab guns, which they discharge at the spectators when they have reached the farthest extremity of the lists. Others engage with swords soldiers on foot, galloping round their adversaries in incredibly small circles, twisting their horses suddenly round, and then circling to the

other hand; and I know not which most to admire, the activity and suppleness of the rider or of his horse. Others, whilst at full speed, will lean over, and without in the least reducing their pace, pick up from the ground a piastre or any other equally small object, thrown down for the purpose. These sports form on the whole one of the gayest and most animated scenes I ever beheld, increased as it is by the waving of many silken sanjaks of the brightest colours, by the music, the report of fire-arms, the war-cries of the performers, and the shouts of the spectators."

The Tuniseens have been always gallant sailors; a recent proof of their valour occurred not many years ago, and there is sad evidence in the account of it, given by our author, that the Christians had not always a right to reproach the Barbary States with cruelty.

"A small schooner of ten guns, belonging to the kiayah of the Goletta, was cruising off Civita Vecchia, when she fell in with two papal frigates, one mounting thirty-six guns, and the other twenty-eight; against these she maintained a gallant action, which only ceased, after seven hours and a half fighting, by her going down with her colours still flying; the surviving part of her crew were picked up by the enemy and made slaves, being obliged to work in chains for three years upon the fortifications and arsenals of Civita Vecchia—and this in a country governed by the Father of the Christian religion, and who, in common with all other European nations, has lavished on the Barbary powers the deepest curses and abuses for thus treating their prisoners."

The memory of another example of Christian intolerance is singularly preserved in the ruinous city of Ghar-el-Milah.

"Many of the families at Ghar-el-Milah are descendants from the Spanish Moors; and though none of them have retained any portion of the language of Spain, yet many still possess the keys of their houses in Granada and other towns."

Sir Grenville Temple undertook an excursion through the interior of the Tuniseen regency, and, in general, had reason to be pleased with the treatment he received. At the very outset he had proof that the character of the Moors is not quite so dishonest as it is usually described.

"On our arrival at Nabel, we rode up to the sheik's house, but found it shut, and the owner absent. Asking a man who was passing, if he knew where the chief was, he answered that he did not, but could find the key of his house—saying which, he introduced his hand into a hole and drawing it out, gave it up to us, by means of which we immediately took possession of the interior. I am afraid it would prove rather a dangerous experiment were we to impart to our neighbours in England the secret of where the house key is concealed."

It had been represented to our author, that he would encounter great danger in visiting Keerwan, the very centre of Mohammedan bigotry in Africa; he persevered, however, and escaped both injury and insult. His safety, probably, was owing to the protection of the kaeed or governor, whose administration of justice is equally prompt and severe. An anecdote related of this functionary, will show that he is not very scrupulous in the punishment of delinquents:—

"During the reign of Hammooda Basha, the kaeed, who, according to custom, had made his rounds, and had ascertained from different travellers what they had paid for their provisions, found that one of them had purchased a certain quantity of bread, which was found deficient in weight when placed in the kaeed's scales. The party proceeded to the baker's whose scales gave correctly the weight at which he had sold the bread; on this the kaeed had them broken, when they were found to contain a quantity of quicksilver in a hollow tube, which could thus be made to throw its balance on either side. The baker's oven happened at the moment to be properly heated, and the kaeed, without any farther trial, ordered the culprit to be immediately thrown into it. Hammooda having heard of this, remonstrated with the kaeed on his precipitancy, when he answered, 'I have done great good—bakers will in future deem it preferable to heat their ovens for bread of a proper weight, than to bake themselves, of whatever weight they may chance to be.'"

The flat coasts of Tunis seem to have gained upon the sea; they abound in fish, but if any credit is due to the anecdote related by our author, they must be very dangerous to fishermen and bathers.

"In these shallow waters are caught great quantities of fish, by forming curved lines or pallisades some way out to sea, with palm branches; by which the fish which come up with the high water, are retained when it recedes. The horrid polypus, which is, however, greedily eaten, abounds, and some are of an enormous size; they prove at times highly dangerous to bathers. An instance of this occurred two years since; a Sardinian captain bathing at Jerbeh, felt one of his feet in the grasp of one of these animals: on this, with his other foot he tried to disengage himself, but the limb was immediately seized by another of the monster's arms: he then with his hands endeavoured to free himself, but these also in succession were firmly grasped by the polypus, and the poor man was shortly after found drowned, with all his limbs strongly bound together by the arms and legs of the fish; and it is extraordinary that where this happened, the water was scarcely four feet in depth."

The success of Sir Grenville Temple will, probably, lead other travellers to explore this interesting country; it may be some inducement to them to know that Englishmen are more favoured than other Christians in the Barbary States, though the reasons of this preference are not very consistent with history or geography:—

"The learned men told me that they looked upon the English nearly in the light of Mussulmen, stating that Mohammed the prophet had sent to acquaint them with his announcement of the true faith, and to request them to range themselves in the number of his disciples. The English answered that they felt deeply the truth of his religion, but that previous to openly adopting it, they requested explanations upon one or two trifling points, chiefly regarding the abolition of wine; unfortunately, however, before this letter reached Mekkah, the prophet had been taken up to the seventh heaven. Had his death been for a short time delayed, he would have explained any little difficulties, and we should have been faithful followers of the tenets of Mohammedanism. They also told me that England was the nearest country to Tunis, and that the Moors and English were, and always had been, the greatest friends."

We have omitted Sir Grenville Temple's antiquarian researches, though they are generally interesting, especially the identification of the places described by Virgil in the first and fourth Æneid; but they yield in importance to the character of the living inhabitants of a country that now occupies an important place in the general politics of Europe.

From the Monthly Review.

Nimrod's Hunting Tours, including Notices of the Principal Crack Riders of England; to which are added Nimrod's Letters on Riding to Hounds. London. M. A. Pittman. 1835.

England is the country for fox-hunting. This sport has affected the character of its aristocracy, as truly as Oxford or Cambridge education has done. We cannot think for a moment of an old English gentleman, without seeing him, by the mind's eye, at times booted for the chase, just as certainly as we conceive of him at the head of his hospitable board, or maintaining the high bearing of the descendant of a long line of illustrious ancestors. If we could suppose that the day ever should arrive when the love of rural sports shall diminish, or be in disrepute amongst us, we may be sure that the destruction of that fresh nobility of spirit, which has hitherto obtained for the nation a peculiar renown, has been accomplished; and that no system of legislative enactments ever can neutralise the injury thus sustained. Every one feels that the management of the horse is the most manly pastime he can engage in. The animal is so docile, sagacious, noble, and beautiful, that there is a generous and exalting pride gratified in associating with him, and still more in cultivating a gentle mastery over his powers. In the chase, this mastery finds amplest scope. The excitement of the sport, the splendid courage of the horse, the strong influence of lovely nature, the fervour of life that is abroad, commingling and lending mutual aids, complete a glorious scene, that cannot but mould the human spirit to a kindred degree of rich and magnanimous emotions. But, not to be longer sentimental in an abstract sense, we turn to Nimrod's Hunting Tours, to give our readers a taste of its right good English healthful contents, the production of a mind as fresh and green as the verdant fields that garnish the island. The anecdotes, sayings, and doings of sporting men, interspersed throughout these pages, lend the narratives a living character, and a continuous flow of natural feeling, that finds its way insensibly to the bosom of the reader, and makes *riding to the hounds*, even by the fireside, a charming pastime.

Leicestershire is justly considered the first of the *crack* English counties for hunting. Its deep and rich soil is favourable for holding a scent: its enclosures are large, and its fences generally not insurmountable; and its gorse coverts numerous, but not too large, having been planted and arranged with a particular eye to the convenience of fox-hunting.

Many of our public men have been fearless and famous in the chase. Lord Sefton, for example, though a man of great weight, was for a time one of the most splendid Leicestershire riders to the hounds. He required the best and strongest horses, and gave the highest prices; from five to eight hundred pounds, being common sums in his hunting days for a hunter. We may be sure that such horses were magnificent animals. He had always three out each day for his riding. One of them was ridden close to him; the third was kept at a proper distance, going easily to himself, until an opportunity presented of getting up to his lordship, in case a fresh horse was required. It must have been a brilliant thing to see, when the chase furnished such men and *cattle* of mettle, *rasping* a fence, and the hounds in full cry. Sir Francis Burdett has been also celebrated for his nerve in the hunting field. We have heard, that it was comparatively late in life before he took to it, and that among his first appearances in the Leicestershire Hunt, he asked who was the best rider to the hounds in the field. On being informed that *Tom Smith* was esteemed to be such, he from that time made it his study to *keep up* with this renowned sportsman, and to rival him; nor was it long ere he was one of the best riders in that favourite county.

But it is well known that clergymen—even doctors of divinity—have loved the chase.

"A hunting parson, and a parson who hunts, should not be confounded together; they are as different as Paley's drunkard and the man who may sometimes be drunk. The following is a good anecdote on this subject. The circumstance that gave rise to it occurred to a brother of my own, also of the sacerdotal order, and who can ride well to hounds. Trotting over one day to call on a brother clergyman, mounted on a clever gray horse, and rather good about the boots and breeches, he saw his friend walking at some distance in his grounds, accompanied by another person. On cantering up to him, he found it was his diocesan. After looking him over for a minute or two, the bishop observed; '* * * * *, you put me in mind of a brother prelate of mine, who met one of his clergy in the road, not very canonically dressed (I don't allude to you, added his lordship), but mounted on a very fine black horse; on which he patted him on the neck, and said, you are a noble animal, and I wish your master was as clerically dressed as you are.' His lordship continued the joke by a second assurance that he did not allude to my brother, and asked him to return with him to his palace to dinner. He thanked him, but told him he was afraid even to dine with a bishop on a *Saturday*.

"Bishops, however, are men. A few years since I passed two days in the same house with one of them, and, owing to a sporting man or two besides myself being of the party, we talked so much about hunting, that his lordship was heard to declare, that he really believed, if he had remained a little longer at * * * * *, he should have become a fox-hunter, though he had never worn a pair of boots in his life.

"The best anecdote of a bishop and hunting is yet to come. It is well known, that (though before I was born) a certain high-bred dignitary of the church kept a pack of fox-hounds, and was one of the best sportsmen of his day. When, however, the mitre adorned his brow, the hounds were transferred to his noble brother, who continued them in great style, but the bishop did not attend them. Taking a ride, however, one day in a country in which he thought it *not unlikely* he might see something of them, he met the fox. The hounds were at fault; when, putting his finger under his wig, his lordship gave one of his beautiful view-halloos. 'Hark, halloo!' said one of the field. The huntsman listened, and the halloo was repeated. 'That will do,' said he, knowing his old master's voice; '*that's gospel* ——.'"—pp. 112, 113.

We have curtailed the last portion of the last sentence in this extract, thinking it highly profane, on such an occasion, even to copy the oath that therein is found. Very frequently do we detect, in this volume, the sacred words introduced, that we allude to, and that are meant, no doubt,

o give emphasis to the anecdotes to which they belong. We fully believe that the author has done nothing more than faithfully report the language used on these occasions; nor is it to be denied that sporting gentlemen are very apt to strengthen their oratory by such tremendous exclamations. The heat of the chase lends them an unwonted vehemence, and they mouth with marvellous hardihood the dreadest name. But it is not right, nor to be passed over without strong animadversion, that an author should, in this permanent form, violate the composure and satisfaction of every well regulated mind. If the profanity of the sportsman was appalling, that of the recorder of it, in the above spirit, is not less so; for the humour, or the ludicrous nature of the anecdote is what is sought to be heightened by the unwarrantable language. In Nimrod's account of his hunting tour in Yorkshire, there is a scriptural passage quoted, that is equally objectionable; to which alone we shall farther refer in adverting to the very blameable course frequently taken by him, in his attempt to lend spirit or attraction to his paragraphs. He has been speaking of a narrow escape which a Mr. Fenton made in a fall, and in accounting for the accident, uses these words—"The goddess of hunting, like other maids, is easily affronted, and when she knits her brow is of vindictive temper, sometimes requiring even human sacrifice. Mr. Fenton's costume was ill-suited to her court: he was attired in white Russian-duck trowsers and Wellington-boots, looking very unlike a fox-hunter in the end of November. As his cloth was *black*, he ought to have remembered the words of the text—'How camest thou hither, not having the wedding garment?'" This is most offensive, and with other similar violations of good taste, must be marked as a serious blemish to his otherwise rightly conceived passages and unaffected representations.

We have some good anecdotes connected with the Craven country. The Rev. Fulwar Fowle figures here. He was rector of Hungerford, and never failed being at his post in the hunting field, at the time that the author was with the hunt in that county. This reverend gentleman was also an active member of society, we are informed. In the time of our troubles, and when fox-hunting as well as every other valuable institution in the country was in danger, he stepped forward and got the command of a corps of Berks yeomanry. King George the Third said of him, that he was not only one of his best cavalry officers, but one of the best preachers, one of the best shots, and one of the best riders to hounds in his dominions.

"From the following anecdote of the reverend colonel, we may very fairly conclude that he would not have disgraced the martial order had he met with the enemy in the gate: He got a fall one day into a brook, by which he knocked out three of his teeth, and broke one of his legs. He was carried home and put to bed; but having a party that evening in his house, he had a glass of wine brought to him, and drank all their good healths and *success to fox-hunting*.

"The following circumstance, also for the honour of fox-hunting, ought not to be lost to the sporting world: A medical gentleman, by the name of Hemsted, residing near Newbury, ordered his gardener to set a trap for some vermin that infested his garden. As ill luck would have it, a fox was found in it in the morning with his leg broken. On being taken to the doctor, he exclaimed, 'Why did you not call me up in the night, that I might have set the leg?' He did set the leg, however, and the fox is quite recovered, and Mr. Ward told me he expected him at the kennel every day for the purpose of being turned out upon some earths."

"It is not my practice to introduce the ladies, but I must take leave to make mention of one here. A few years back, when the country was so depressed, and rents came in so slowly, Mr. Ward told his lady he feared he must give up his hounds. 'Oh, no!' said she, 'don't do so, the times perhaps may mend.' Going shortly after to his banker's, he found the sum of a thousand pounds placed to his credit by a 'Friend to Fox-hunting.' This friend to fox-hunting was Mrs. Ward, and the sum was paid out of her private purse. Hear this, ye married ladies, and do not forget the moral! If you wish to retain the affections of your husband, encourage, but do not thwart his favourite pursuits. Your beauty may fade in his eye; your charms may pall upon the sense; but such conduct as this can only be forgotten in the grave."—pp. 139—141.

The devotion of fox-hunters to their splendid sport, it may hence be conceived, is singularly engrossing.

Our Nimrod talks of his spending half of his life in a saddle, and of his being ever ready to look at a country, merely with a sportsman's eye, as a friend of his said on his road to Doncaster. "What a beautiful country," said one of his fellow-travellers. "Aye," said he, "'tis a pretty country enough; but how the devil do they ride over it?" He is as particular in giving the pedigree, character, and names of hounds and horses, as many men are when going back to dim antiquity in the history of their house.

From recollection we already spoke of Sir Francis Burdett as a hunter. The author says, that the enthusiastic baronet laughs at danger, and that no man rides harder over a country. "When dining one day," says he, "in a large party at Melton, I heard the following question asked by a gentleman who has been at the top of the tree in that country for eleven successive seasons:—'Has any man,' said he, 'seen Sir Francis refuse a fence which any other man rode at, or over?' The answer was in the negative. Another question was put. 'Have we not, all of us, seen Sir Francis Burdett frequently ride at fences which other hard-riding men have refused?' The answer was in the affirmative."

Nimrod tells us of Sir Tatton Sykes, among the great multitude of sportsmen here celebrated, and says, if asked to go a hundred miles to ride a race, he puts a clean shirt in his pocket, his racing jacket under his waistcoat, a pair of overalls above his leathers, and jumping upon some thorough-bred tit, arrives there the next day by the time of starting; and when the race is over, canters his thorough-bred home again. The iron strength of constitution that is required for such feats, reminds one of the days of fabled hardihood. Lord Darlington (now the Duke of Cleveland), of course, comes in for a due share of notice. That nobleman's passion for fox-hunting is perhaps unrivaled; who, at the time of which the author speaks, had hunted his own hounds thirty-

six seasons; and not only hunted them, but going through all the drudgery of a huntsman, by constantly drafting and feeding them in the season, and paying the most minute attention to all the operations of the kennel.

The ruling passion, strong in *sickness*, is thus exemplified:—

"I cannot here let pass an anecdote of Dick the whipper-in, as it is so truly characteristic of *the ruling passion*, and also of the attachment men have to hounds, when cradled in a kennel. It so happened that we were all—and a pretty large party—seated at the breakfast table, when Lord Darlington made his appearance. Next to the usual enquiries after his lordship's health, the question was asked by two or three at once, 'Have you heard how Dick is?' 'I have been to his bed-side,' said Lord D.; 'he has had a restless night, nevertheless I hope he will do well; but he made me smile when he said *he had no doubt* but he should be able to go out with the hounds on Wednesday! He also enquired *after Lightning's eyes, and how Rufus and Mortimer had fed?*'"—pp. 381, 382.

Of the prevalence of any particular gratification over thought, word, or deed, the author gives an instance, when speaking of a keen sportsman, Mr. Thomas Shafto, who, when the oratorical powers of some of our leading senators became the topic of conversation, and, amongst others, Earl Grey's name was mentioned, observed, "A good speaker, but can't ride over Stanley pastures." It is not, however, the only instance in which the earl has found *Stanley* troublesome.

Nimrod, in what he says on *riding to hounds*, is particularly sensible and interesting. To experienced sportsmen, his *Tours* will, we have no doubt, be more acceptable, inasmuch as the variety of his facts, and the number of places which he has hunted over, combine almost all that is to be learned of the best grounds and best hunters in England. But to the tyro in the *chase*, we recommend the matter here added on *riding to the hounds*, although not appearing for the first time in this volume. Riding to hounds, we are informed, has, like many other things, undergone a revolution in the march of time. Some years back the best man was he who, after never being near the hounds for nineteen miles, it might be, came up to them at the twentieth, and got the brush. The best man now is he who goes through the best part of the run, even should he be "dead beat" at the last. It is thus now held better to be *up*, on a horse half beaten, than to be riding about the country asking the old question, "Did you see the hounds?" on a fresh one.

"The following anecdote is in point. A gentleman of large fortune, well known in Staffordshire, was out with the late Mr. Meynell when he hunted Leicestershire, and in those days was going 'with high and vent'rous sail.' Coming to a river which had much overflowed its banks, he pulled off his coat and waistcoat, and swam for a considerable distance. The first man who got round by a bridge was Lord Forester, who, getting on a line of them, asked a countryman whether he saw the hounds. 'Oh yes,' said the fellow, 'I seed 'em—but you will never see 'em no more; they have been gone this quarter of an hour.' 'Who was with them?' said his lordship. '*No one but the miller*,' was the reply, '*and he was riding most nation hard to be sure.*' This was Mr. G . . . . in his shirt."—p. 540.

On the excellent effects of exercise on horseback, the author must be allowed to be a good judge, considering, as he says, that when the weather has been open, his time has almost been divided between his saddle and his bed. For several years of his life he has had horses, with three different packs of hounds, choosing the best fixtures of the day for each, and that he never knew what it was to be fatigued, provided he lived temperately, and went to bed early. His rules on riding are manifestly excellent.

"As 'without a genius, learning soars in vain,' so is riding to the hounds like the inspiration of the muse. It must in some degree be born with a man, or he will never excel in it. He must possess judgment, temper, coolness, and courage; and even then, though these good properties may receive their birth with himself, yet they must be perfected by practice and observation. A madman or a coward are equally unfit for the business; but under any circumstances, as *Humphrey Clinker* observes, he must serve an apprenticeship to it. As far, however, as nature is concerned, the form of a man has a good deal to do with it; for it is impossible that any one with a round thigh and a large calf to his leg can have a perfect seat on his horse, and without a good seat he cannot have a good hand.

"The *hand* on a horse I take to proceed also from other causes. I conceive it to be intimately connected with the nervous functions of the digestive organs—and here again is the necessity for temperance and regular living in those who wish to excel in the field, more particularly enforced.

"The advantages of a fine hand on a horse are, no doubt, of the very highest importance in riding a race, but not more so than in riding over a country; and if a horse could speak, he would say, 'ride me with a fine hand and an easy bit.' A horse's ear is said to be in his mouth; and it is from the bit that he receives the wishes and instructions of his rider."—p. 546.

Lord Forester is named by the author as being remarkably graceful on his horse—strong and active—"A fine man upon a fine horse;" for he has always showed a master judgment in the points of his hunters. He has insisted on the necessity of lengthy shoulders, good fetlocks, well-formed hind legs, and open feet; knowing better than to confound strength with size, his horses seldom exceeded fifteen hands two inches. Such experienced skill as his lordship possesses in horse flesh must benefit the country essentially, in helping to establish and keep up a first-rate breed of that noble race of animals. It would appear, however, that he is apt to be sarcastic at the expense of "slow tops." Our readers may be curious to know what species of creatures are so designated. We quote the explanation. That man is one of this class who is so unfortunate as to appear by a covert's side within twenty miles of Melton Mowbray, under any of the following circumstances:—with a front to his bridle, or with a martingal, or a country-made saddle, or with nobs on his stirrups; with a saddle-cloth; in a straight-cut coat; in leather breeches or military spurs. It is deemed impossible that such a man can "do the thing." The pleasures and dangers of the

base are depicted by Nimrod with great felicity of style and circumstance. Take a specimen.

"Exclusive of brooks and timbers, there is another sort of fence that should be ridden at quickly, and that is, a bushy or 'blackbird' fence, as it is called, being a live white-thorn hedge, not plashed, but with a strong suspicion of a wide ditch on the other side, and 'no time allowed,' as the coachmen say, for looking at it. This is termed '*swishing at a rasper;*' and the only chance a man has of getting a horse to extend himself sufficiently over it all, and to 'come well into the next field,' is to put him three-parts-speed at it, and trust to the *momentum* for getting over it. It was precisely at a fence of this description that I witnessed the accident two years ago to Mr. Osbaldeston in Leicestershire. The horse he rode (Cervantes) was a particularly *high* leaper, but apt to drop short on the other side, which was the case in this instance, and where the *momentum* was more particularly rendered necessary.

"I never see the word '*momentum*' but it brings to my recollection an anecdote of an old friend of mine—a Fellow of a college, and a good fellow too—who was used to amuse me much by talking philosophically and mathematically on riding to hounds, the words *momentum*, *vis viva*, and *impetus*, being for ever on his tongue. With the nerves of a bull-dog, and no mean opinion of his prowess, he was in the habit of purchasing horses, which, from natural or acquired defects, had failed in making hunters in the hands of others. His idea was, that if nature had unfortunately intended such brutes to carry themselves in all forms but the right, that intention could be obviated by the means of mechanical force. To effect this, all sorts of trappings were resorted to; and it was really alarming to men with any nerves at all to see him sailing across a country with the *momentum*, *vis vivida*, and *impetus*, all in full operation, on horses with mouths like the heart of oak, but with their heads confined with a strong cavesson-martingal. On one occasion a most ridiculous accident occurred. This gentleman was out with the Duke of Beaufort's hounds in Oxfordshire, on a horse thus accoutred, when the cavesson he was riding in unfortunately gave way. As may be expected, having no further power over the brute, away went the philosopher, like a ship at sea without a rudder, and, as ill luck would have it, the *momentum*, the *vis vivida*, and the *impetus*, all formed their nucleus in the person of an unfortunate butcher on his pony, who was going quietly along a road; and the two riders and their horses were laid prostrate on the ground."—pp. 574—576.

We learn that though the breath was for a time knocked out of both, the butcher was the first to rally, when he rated the philosopher soundly. In giving some account of three sportsmen who were drowned all in one day while hunting, we have been struck with some of the author's observations in no ordinary degree, and think them highly valuable to all who ride much on horseback, particularly in rural parts, where bridges are not abundant, and streams numerous. Sportsmen especially are apt to feel that without danger there is no glory. One of the unfortunate men alluded to was the Rev. Marmaduke Theakston, who, in the ardour of the chase, was tempted to try crossing the river Tees at a ford near Worsall.

"On reading this calamitous account over again, I see much reason to suppose that the free use of the horse's head when in difficulty, and which I have already so much dwelt upon, was denied to him in this fatal instance; and to it, perhaps, may the melancholy catastrophe be attributed. 'His horse,' says the writer of the paragraph in the *Hull Advertiser*, 'a spirited and powerful animal, swam with him into the middle of the river, when *getting impatient, he reared, and threw his rider backward.*' Now there is every reason to believe, that had Mr. Theakston left the horse to himself, holding on by the mane, and only directing his course when necessary with the snaffle rein, he would have borne him in safety across the stream.

"I speak from practical observation on this subject. When at a watering place in Wales, I was in the habit of having my horse swum in the sea by a man who was in the constant practice of swimming them for a very trifling consideration. He was himself a very expert swimmer, and regularly attended the bathing machines. From this man I learnt, that there were only three things to be observed in swimming a horse—first, to give him free use of his head; secondly, to hold on by the mane; and lastly, taking the feet out of the stirrups, to lean the body obliquely forward as much as possible, which will cause the water to get under it and float it, and thereby diminish the weight of it on the horse. It was the opinion of this person, that a horse would swim nearly as far with a man on his back, who was thus expert at the management of him, as he would without him.

"When I was about eighteen years of age, I had a narrow escape from being drowned with Mr. Leech's hounds. The hounds crossed the river Dee—naturally a very rapid river, but then increased by the rains. Sir Watkin Wynn, who (as well as his two brothers) is like a duck in the water, went first, and was followed by about six out of the field. 'Half venturing, half shrinking,' I went a little way into the stream, and came back again. Seeing the hounds hitting off their fox on the other side, I made a second attempt; and being mounted on a mare of Sir Watkin's, called *Thetis*, and trusting to her *genii* to preserve me, I made a second attempt, and was carried down the stream amongst some huge stones. Not being able to swim, I gave myself up for lost; but the resolution of the mare, and my holding on by the mane, enabled her to regain the opposite bank, and I have never tried such an aquatic excursion since. A man may attempt the Hellespont for a woman; but, on cooler reflection, he is scarcely justified in running such risks of his life for a fox."—pp. 583—586.

It will be seen from the above passages, that Nimrod has produced a spirited and charming volume for the fireside; and, without a question, nothing short of an oracular authority for fox-hunting.

SICILIAN FACTS.

THE DEVIL'S BRIDGE.

The bridge over the Cantara, the Onobola of the Greeks, is called the Devil's Bridge. It derived this name, according to the peasants, from the following circumstance, which they relate with great gravity, and firmly believe. The stream, thus runs the tale, was so impetuous, that no architect could throw a bridge over it, the torrent invariably carrying it away before it could be completed. In this perplexity recourse was had to the devil, who is accounted an excellent workman; an angel acquainted him that if he would undertake to build one, the first that passed over it should become his prey. Ever on the watch to lay his claws on us poor mortals, the infernal mason soon terminated his task, and

sharpening his talons, sat down in expectation of his victim, when a dog crossed it. Enraged at being thus outwitted and disappointed, his Satanic majesty, stamping with his foot, struck out a stone; for a long time it was impossible to find another to fill up the gap, and the bridge consequently continued useless, until saint somebody, I have forgot his name, gave it his benediction, when the defect was immediately remedied, and the bridge rendered fit for its proper use.

—

WEDDINGS OF THE LOWER CLASSES IN AUGUSTA AND MESSINA.

When in Augusta, a friend conducted me one evening to the wedding party of a couple of young peasants, who had that morning been riveted in the perdurable fetters of matrimony. We found the company assembled, and the usual ceremonies about to begin. At the upper end of the room, on two elevated chairs, sat in state the bride and bridegroom, exchanging sweet words and soft looks with each other. The girl could not be more than fifteen, whilst the husband scarcely appeared twenty. She was a good-looking, lively brunette, dressed in a tight rose-coloured satin bodice, profusely ornamented with ribands, with a striped silk petticoat tied up with a white bow as high as the knee, so as to discover another of cloth of very gay colours underneath; a handsome silk handkerchief covered her shoulders, her hair was carefully tied back with ribands, and fastened to a huge silver bodkin, called by the Sicilians *spatella*. The youth was arrayed in a jacket of blue velvet, with smallclothes of the same material, a red silk sash, and a waistcoat, on which dangled at least three dozen of large silver filigree buttons. In a short time the mother of the bridegroom came in with a basket, which she presented to every person in the room, who in turn put in a present prepared for the purpose, such as a riband, a pair of shoes, a comb, or a handkerchief; whilst some of the wealthier inhabitants of the town who honoured the fete with their presence, contributed a shawl, a ring, or a pair of earrings. We also had taken care not to come unprovided, so that the basket soon assumed a respectable appearance. Having received our oblations, the old lady carried them to the young couple, taking them out, one by one, and commenting on their respective beauty and value. This done, she retired with the offerings; but presently returned with a basket on each arm, one containing toasted ciceri, (chick peas,) the other comfits and sugar plums, and followed by a sturdy fellow, carrying an immense jar of wine, holding many bottles, with a glass, out of which we were all obliged to drink in succession, to the prosperity and happiness of the newly-married pair; a large handful of the ciceri, and a smaller of the comfits, having been previously distributed to, and devoured by, the guests. The company then fell to dancing with great spirit the farantella and other dances of the peasantry, during which the young couple took an opportunity of slipping away, and we followed their example, not a little diverted with the novelty and simplicity of the scene.

I was also present at a marriage between parties of the inferior orders in Messina. On returning home from church, the bride and bridegroom were saluted by a sharp shower of comfits, amongst which were nuts and almonds covered with sugar, from which I fancy the happy couple received some compliments they would rather have dispensed with.

Presents were made by the company to the bride, which were afterwards placed with her *dote*, or dowry, in the middle of the room, on a fine damask counterpane, for the inspection of her friends, the different articles, as is also the custom in Italy, having been previously appraised by a confidential person. All the male guests are expected, on these occasions, to sing a song in praise of the charms and accomplishments, however little deserved, of the bride. One of the songsters, when I was present, compared the beauty of the lady to that of *sirena di mare*, or mermaid, which was excessively appropriate, as her father happened to be a fisherman. They concluded the evening with dancing.

I was introduced to the mother and grandmother of the bride, both of them, it singularly happened, in a fair way of adding to their respective families; the latter told me she was forty-eight years of age, her daughter, by far the handsomest woman in the company, not excepting the bride, was about thirty-two; nor is this uncommon in Sicily, where girls are often wives at twelve, and not unfrequently mothers at thirteen.

There are certain districts in Sicily, where they cast handfuls of wheat on the newly-married couple, as an omen of fertility and abundance. Sometimes they give them honey to indicate the sweetness and concord with which their lives ought to be passed together. The custom of throwing nuts at nuptials is of great antiquity. Catullus, "in Epithalamio," says—

Da nuces pueris.

And Virgil—

Tibi ducitur uxor,
Sparge marite nuces, tibi deserit Hesperus Œtam.

—

SHORT COMMONS.

Two friends, rather out at the elbows, and very much in want of a dinner, who had not seen one another for a long time, happened to meet one day in the streets of Catania; delighted at the rencontre, they agreed to adjourn together to an eating-house. Upon enquiry into each other's circumstances they found they could just muster enough between them for a ragout and macaroni, with the ordinary accompaniments of bread and wine. When the tempting viands were placed on the table, one of them, to whom nature, more liberal than fortune, had allotted a first class appetite, measuring with an experienced eye the contents of the dish, found, without much calculation, that he could dispose of the whole without running any great risk of a surfeit. Hitting then on a lucky thought for securing at least the greater portion for himself, he said, with a long face, to his com-

panion, "Dear Tom, since we last met, you have had the misfortune as I have heard, to lose your worthy father; pray, my good fellow, tell me how the melancholy event took place." The other, who happened to be a great talker, and very vain of his elocution, instantly most obligingly commenced the pathetic narration; his friend, all mouth and little ear, immediately attacked the dinner, cramming the beef and macaroni down his throat at a prodigious rate, whilst his unsuspecting companion continued minutely detailing all the particulars of his parent's decease, which he just finished by a decent burial as his friend finished his fifth plateful, leaving but a beggarly account of the macaroni in a corner of the dish. The orator, whom a glance at his empty plate now awoke to the cause of the other's curiosity, hoping at least to secure the scanty portion remaining for his share, said, "Dear Dick, I have told you all; so now let us hear how your poor father died." "Mine," said his friend, whose father had unfortunately been hanged, helping himself to the rest of the macaroni, "my father died suddenly."

GERMAN TOURISTS.

1. *A Visit to Germany and the Low Countries.* By Sir Arthur Brooke Faulkner.—2 vols. 8vo. 1833.
2. *Visits and Sketches at Home and Abroad.* By Mrs. Jameson.—4 vols. 8vo. 1833.
3. *Journal of an Excursion to Antwerp.* By Captain the Honourable C. S. W.—2 vols. 12mo. 1833.
4. *Simeon's Letters to his Kinsfolk.* Written chiefly from France and Belgium.—2 vols. 8vo. 1834.
5. *Belgium and Western Germany.* By Mrs. Trollope —2 vols. 8vo. 1834.
6. *Holland and Belgium.* By Pryse L. Gordon, Esq. —2 vols. 12mo. 1834.
7. *Bubbles from the Brunnens of Nassau.*—1 vol. 8vo. 1834.
8. *Slight Reminiscences of the Rhine, Switzerland, and a corner of Italy.*—2vols. 8vo. 1834.
9. *A Family Tour through Holland and up the Rhine.*— 1 vol. 12 mo.

In D'Israeli's "Curiosities of Literature," there is a chapter on authors who have ruined their publishers. Some new compiler will certainly have to add the names of more than one of the above mentioned to the list; at least if booksellers do not take warning, and put an end to the traffic in this literary crockery, the flaws and breakages in which must far outbalance the profits of what is sound.

"We met, 'twas in a crowd,"

would be a fitting song for this choir of tourists; and what a crash of contradictions have they let loose upon the public! There is nevertheless scarcely one of them that does not contain some shrewd remarks or lively sketches; and several abound in description, observation, and acuteness. But taken *en masse*,—and it is so they must be taken in these days of wholesale production,—they are in the main but a collection of crudities, unworthy the materials which are within every traveller's reach, and insufficient to satisfy the desire for information of the inquisitive and purchasing public. *Parva leves capiunt animos* is a good reason, but no excuse, for the frivolities of tourists. Yet, after all, their abounding frivolity is less offensive than their occasional presumption. Light sketches, "airy nothings," "bubbles," might be tolerated and enjoyed; and were mere amusement the end and aim of these tourists, as it is certainly very amply afforded by some of them, there would be no cause of complaint. But the profane dabbling with serious subjects, the slap-dash sacrilege which defaces the holiest topics of human interest, religious faith, mental cultivation, and political opinion,—these are the offences which excite both indignation and regret, while they demonstrate the paucity of enlarged views and generous objects, in those who having a whole harvest of knowledge within their reach, let the grain escape and garner up the chaff.

The good old breed of English travellers, who traveled for knowledge sake alone, seems to be quite extinct. Eustace, Forsyth, Russell, Hodgskin, and others of that stamp, prejudiced or plodding as they may have individually been, had still one fixed and definable purpose in view for which they laboured, and of which the public obtained the advantage, such as it was. But now a professed tourist sets out from England, with no apparent plan but to make a rambling excursion and write a scrambling account of it, neither giving himself or herself time or trouble to examine into national character or political institutions, satisfied with skimming the surface of things, as if supposing that the cream of knowledge was to be found only at the top.

The books named in the title are by no means all of the same class. Nothing, in fact, can be more startling than their differences. But they form a convincing test of the proof of Montesquieu's remark, that a monotony of contrasts fatigues as much as a monotony of similitudes. Some of these volumes taken up singly, and read at long intervals from the perusal of the others, would be entertaining, and in some degree instructive on many points. But driven as they are in droves to the market, by the impatience of authors and the avarice of publishers, they become huddled together like cattle in a fair, to the grievous injury of their own effect. Any country which possesses the smallest temporary political interest, is now instantly overspread with a swarm of English tourists, sketchers, visiters, and correspondents, whose chief impulse seems to be, not an anxiety as to who shall best describe, but an emulation as to who can fastest write. The London booksellers are on the alert to whip up each trite and trivial production, the subject is overdone, the market overstocked, and the "fatal facility" of Sir John Carr beaten hollow by hundreds who fall far short of his liveliness and tact.

Place aux Dames is a maxim of gallantry, and is in this instance a principle of justice; for precedence should certainly be given in point of merit to the works of Mrs. Jameson and the ano-

nymous authoress of "Slight Reminiscences." There are many passages in both, of infinite grace and delicacy, of beautiful description, and genuine taste for nature both inanimate and human.

The chief portion of Mrs. Jameson's volumes is however only a reprint of the "Diary of an Ennuyée,"—a delightful book with an affected title,—which has, it is hard to say why, only attained the honours of a second edition in this almost surreptitious, and certainly not very flattering re-appearance. The "Bubbles from the Brunnens" deserve the next place, from their sustained and animated style, and the flow of well-bred humour which give them such a pleasant flavour throughout. "Simeon's Letters to his Kinsfolk," are a melancholy proof of degeneracy in our living literature. Humour so flat, news so stale, labour so unprofitable, it would be impossible to meet with elsewhere. These volumes, published in 1834, profess to give an account of the events in France in 1830, garbled from newspapers, and badly garbled; and a sketch of manners and politics in Belgium in 1832 and 1833, the result of less than a four weeks' sojourn in that country in November of the former year, and a fortnight in each of the months of July, September, and October following, in all ten weeks of desultory visiting. It may be mentioned *par parenthèse*, that Mrs. Trollope did not spend half that period in Belgium, nor more than as much in Western Germany, the names of which countries figure at the top of her title-page, as if they implied that the book contained all that ought to be said in an ample description of each. The writer of "Simeon's Letters" professes himself to be neither Whig, Tory, Radical, nor Republican. What on earth could induce such a nondescript to write what he calls, and no doubt considers, politics? How could any human being imagine himself capable of enlightening the world at the present day, by a series of rigmarole on a subject on which he admits himself to have no opinion? Yet does the writer surmise that his lucubrations, a mere *réchauffé* of newspaper anecdotes some years old, or sketches of ground as beaten as the *pavé* of Paris, "may perhaps be instructive to those who have the moral courage to read without prejudice."

Nearly a hundred pages of most commonplace description, of a route to which the *nullum sine nomine saxum* may now be more truly applied than it ever was to Troy, leads the reader to Paris, the author's residence in which city draws forth a series of gossiping trivialities, as, for example, in speaking of the then French ministry:—

"The classification is as follows: Marshal the Duke of Dalmatia, president of the council and minister of the war department; the Duke de Broglie, a good and disinterested man, minister of foreign affairs in room of the sly Sebastiani; M. Thiers, a little mean, cunning, Clement's-Inn-attorney-looking creature, minister of the interior; and M. Barthe lately a carbonari (*carbonaro*), Oh! Tom Paine! Oh! Sancta Maria! is charged with the department of foreign worship. The formation of such a ministry is even more startling than that which my Lord Grey had the courage to nominate in 1831, even if Mr. Hume (not David but Joseph) had been included as supernumerary, to take charge of the Liturgy and Church of England."—vol. ii. pp. 48, 49.

It is hard to imagine from what source the traveller picked up the information that "one third of the direct and indirect revenue of Belgium is paid to the clergy," (vol. ii. p. 297); or that "the church of Belgium has too much power in political and financial matters,' (*id.* 296) or that "the commerce of Antwerp is nearly annihilated," (vol. ii. p. 129) or that "the principal shipowners with their ships have declined trade" (*id.* p. 131) a very foolish measure, had it been true, on the part of either shipowners or ships. But it is as wide of fact,—both as relates to the men-merchants, and the merchant-men,—as is the assertion, more than once made, of many of the trading establishments having been removed to Rotterdam, it being now well known that there has not been an instance of the kind since the revolution, except in the case of two Dutchmen, owners of ships; although near a dozen of Belgian and German houses in the India trade have been forced by a decree of the Dutch government to form a branch of their establishment in Holland, at a double expense and serious personal inconvenience, to entitle their ships to employment in the service of the India Trading Company.

Such misrepresentations might however be pardoned, as arising from false reports, or as carrying no weight when coming from such a source as these volumes. But no excuse can be offered for the flippant opinions, repeatedly put forth in the course of the work, on a people so eminently religious as the Belgians, that "they fear God and reverence their clergy, but love mammon better than either." But Simeon endeavours to redeem this, and other perhaps inconsiderate calumnies with respect to Belgium (see vol. ii. p. 280), by giving his testimony to the general happiness and prosperity of the country, and his refutation of the exaggerated notions which are abroad, as to the supposed intolerance and despotism of the priesthood.

Mrs. Trollope is well known to the reading world as a traveller for the Absolutist firm; and she is of course prepared to encounter all the rubs incidental to the character, in either the old world or the new. The graceful and unassuming tone of the other lady tourists whose volumes have been mentioned, brings out into painful relief the contrast afforded by the writings of Mrs. Trollope, whose pretensions to refinement, and penchant towards aristocracy, betray a vulgar taste endeavouring to be fine. Mrs. Trollope is really unconscionable in inflicting on the public "the illustrious obscure" of her private friendships. Who is "the eloquent Mr. Moke, the author of Hermann?" And what is Hermann? Putting such questions may be arguing oneself unknown; and judging by the delight felt by the authoress in the cultivation of this and other acquaintanceships, ignorance in such cases is not bliss. But there is an occasional dash of sarcasm in Mrs. T.'s panegyric, or something very like it. How can she hold up to ridicule such respectable but common-place individuals as the MM. Rodenbach of Brussels, by calling them "these distinguished men!" and speaking too of their "eloquence!"

What lady had the misfortune to be meant in the paragraph which states that at the *soirée* at Bruges there was singing that might have made Pasta herself look about her (but this was from [by] an English woman.")—vol. i. p. 22. There was also a certain "Mr. C. W. a lively Englishman well known in the literary world,"—for what? Besides an incalculable number of Marquisses, Counts, Barons A, B, C, &c., well known and most unsparingly bepraised, in Mrs. T.'s particular world. For the alphabet has scarcely letters enough to enumerate the many anonymous dignitaries with whom the fair tourist came in contact.

It appears that in various places on her route, Mrs. T. met with "old friends, long valued and long lost;" at Brussels and Hanover more especially. Yet not a paragraph is spared to the record of any of the visits paid to the associates of her early days, whose information on a thousand topics of continental economy might have given some value to her book. As far as social life is touched on, all her time was devoted to the great, and all her talents to the details of their "graceful and gracious kindness,"—[vol. i. p. 73.] A hurried audience at the palace of a princess [vol. i. p. 230] is minutely recorded, as well as every snatched-up dinner at an ambassador's or a nobleman's,—those questionable compliments, of which any person with the most common-place letter of introduction, or having set their name in the titlepage of any kind of book, is sure for once (and such appears to be the extent of Mrs. T's experience). She loses no opportunity of boasting of all these admissions to high society. "We had the pleasure of dining with the British minister," (at Brussels). "We were dining with the Prince Auguste d'Aremberg" (ditto). It is this prince, since dead, as Mrs. T. says in a note), that Sineon confounds with the Duke d'Aremberg, and whom the Abbé de Pradt, a keen judge of character, designated as "*Un de ces mediocrités ambitieuses que l'on rencontre souvent dans les affaires, qui y portent les inconvénients de leurs prétentions, qui veulent toujours diriger, qui se croient nées pour la direction, &c.*" "We had the pleasure of dining with the British minister," (at Frankfort), and here, in her anxiety to add another title to her list of acquaintances, she converts into "Lady C." Mrs. Cartwright the wife of "the British minister," of whom those who have the pleasure of her acquaintance will no doubt be ready to confirm every thing advanced in her honour by Mrs. T., except the title.

There certainly never was any thing so agreeable as this tour of Mrs. T's. There was only one thing of a questionable kind throughout, a certain repast at the Waterloo Hotel in Ostend, "A meal, wherein supper was at odds with breakfast as to which it might be called."—[vol. i. p. 2.] But with this exception, every thing was sure of its own name, and all things perfect. "There was a very agreeable pic-nic party at Ghistelles.—vol. i. p. 6. A very pleasant evening at Bruges, [*ibid.* p. 22.] at which, "We" (Mrs. T. and her friends) "fell into some of those playful exercises of wit and fancy for which the French language is so admirably adapted, where," continues Mrs. T., "every one's faculties were brought into play.

> From every head
> A lambent flame (of wit) arose, which gently spread
> Around the brows and on the fancy fed.

"When we had laughed till we were weary, we were refreshed by wine, cakes, and the finest fruits of the season, and so ended the *soirée.*"—[*ibid.* p. 23]. At Brussels they "had the good fortune to make the acquaintance of many agreeable people."—[*ibid.* p. 61.] And they "Spent their evenings in very agreeable society.—[*ibid.*] At a museum they "Were joined by a very agreeable party of English."—[*ibid.* p. 67.] Mrs. T. has "Seldom been present at a more agreeable entertainment than a dinner given by Mr. W. at the Restaurant of the justly celebrated Du Bois."—[*ibid.*] "Nothing can be more easy and agreeable than the style of the Brussels parties."—[*ibid.*] "There was a delightful party at the table d'hote at Godesberg."—[vol. i. p. 175.] "The public gallery at Frankfort is a delightful lounge.—[289.] Mrs. T. "took a delightful drive to a pretty woodland scene near the town."—[281.] In short "Was it not for the hateful practice of smoking," Mrs. T. "would have said, that every thing she saw of the social manners of Germany was delightful."—[vol. i. p. 166.] They met "A most agreeable party of Dutch travellers" at Kreutzberg,—[vol. i. p. 153,] where they also "Found a lazy lounging meal very agreeable."

In short every person and every thing was agreeable, pleasant, or delightful, from "The dowager Baroness * * *" to the guide at Waterloo. This most pleasant fellow *par excellence*, asked Mrs. T. if the Duke of Wellington was not *adoré en Angleterre.*"

"*Oui, mon ami, oui*, was my reply;" "And if I spoke not truth, the sin rests on other heads than mine." Certainly, at least on one head, whose wearer is alone the cause of his own unpopularity. Mrs. T. has sins enough of her own, literary and political, to answer for. Ex. gr., she asserts on the loose authority of this guide, unconfirmed by any thing approaching to facts, that Napoleon at Waterloo, "Uttered his last command *sauve qui peut!*"—vol. i. p. 80.

She says:—

> "No one I believe could pass a month in Belgium and converse as freely with people of all parties as I did, without becoming aware that the King of Holland still reigns in the hearts of the majority; and that any person, however illustrious, who had become the instrument of the factious demagogues employed to dismember his kingdom, could have little chance of retaining his station were the genuine wishes of the Belgians themselves alone consulted."—vol. i. p. 53.

Heaven knows from what source this outrageous absurdity is drawn; whether the guide at Waterloo, or "The eloquent Mr. Moke" is responsible for it. But it would appear that monstrosities which would choke any ordinary traveller are not too much for the capacious swallow of the tory Mrs. T., who sings forth the while, like Keates's nightingale, "in full-throated ease." That she was on many occasions mystified by some wag, is evident. She has been persuaded

that "No enmity is expressed by the inhabitants of Antwerp against General Chassé;" and that "No people engaged in the painful labour of repairing the devastation of a siege, ever looked upon the enemy who carried it on with so gentle and forgiving an eye,"—[vol. i. p. 44.] A forbearance which finds no parallel except in Sir John Davis's assertion, 150 years ago, that "the Irish loved justice so well, they liked it even when it punished themselves." Mr. T.'s confounding the besieged with the besiegers, is scarely worth remark.

Even the serious Germans cracked an occasional joke at Mrs. T's. expense. How they must have stared at finding themselves guilty of quizzing the lady tourist! But phlegm itself could not resist the temptation. It appears that she read somewhere that "there is a spirit abroad in Germany which in the fulness of time is to bring revolution," that "massacre and rapine shall engender liberty and peace, and in a few short years all the nations of the earth are to be leveled into one vast ocean of equality." Mrs. T. took considerable pains to disabuse herself of this stupendous notion, and the result is her conviction that "far different is the state of public feeling in Germany. Ask a Prussian:" gravely, yet with amusing *naiveté*, adds Mrs. T.

It will be seen that she is "excellent good at such combustions" when she gets thoroughly into the Ercles' vein. "Woe betide the politician," she exclaims, "who shall labour to enforce by law the art of reading, while he slothfully, viciously, or from party spirit, continues to advocate the unrestricted freedom of a press which fills every village-shop with blasphemy, indecency, and treason."

The following is a more puzzling specimen of fine writing;—"At rouge and noir, folly stakes against fortune, and though the odds are terribly against fortune, she may generally look for fair play; but when knavery makes fortune his thrall, and forces her to take the credit of all the tricks he may chuse to play, poor folly is badly off indeed."

The female philosopher proceeds;—"Where the smaller states have granted constitutions, and undermined the foundation of authority by signing trumpery charters concocted by a reckless set of noisy orators, the consequences have been uniformly injurious to the prosperity of the people."

"I venture to repeat that a revolutionary spirit is not prevalent in any part of the country through which I have traveled. That 'such a spirit is abroad,' to use the fashionable phrase, is most certain;—and so is a spirit of drunkenness, and a spirit of gambling, and a spirit of robbing, and that in more countries than one."

I heard much ridicule from various classes,—and decidedly not the least pointed from among the lower orders,—against the political enterprises and revolutionary snappings, which are continually exploding with the bustle and effect of a cracker."

Such is the coarse, mean, and meagre style in which the holiest topics of public feeling are discussed after her few weeks' ramble by this gentlewoman, ignorant of German by her own confession, and manifestly deficient even in French; witness her wonderment at the every-day phrase "*fournée de pairs*;" totally unfitted by nature, education, or opportunity, to give more than some scanty caricature sketches of manners, and quite incapable, as far as evidence goes, of comprehending national character in even its broadest exhibition. And such are fair specimens of this most feeble effort to mislead opinion in England as to the lost cause of despotism in "Belgium and Western Germany."

The only things in the volume of merit or originality, are some sketches of English female vulgarity and presumption, exemplified in certain steam-boat and Eilwagen travellers. In doing these things Mrs. T. is in technical phrase "at home." In every thing of a higher order she is verbose, uninformed, and tiresome. She has given only two volumes to the public on this occasion, and it appears that the public had a narrow escape. Mrs. T. says, "I should write a volume on Godesberg, were I to indulge myself in speaking at length of its walks, its donkey rides, its ruins," &c.

The work of Sir Arthur Faulkner marks him in every page an amateur author, writing for writing's sake, either not knowing or not caring for the arts of composition; a scholar, rather too much addicted to quotations; and a man of taste, but not always of the purest as far as style is concerned. He is, moreover, of decidedly liberal opinions in politics. The objects of his work are excellent; and had he entered on it with a decorous determination to be grave, he had succeeded infinitely better. Levity is unworthy of his serious purpose, and humour does not appear to be this author's *forte*; though some of his scenes, or rather his sentences, are lightly enough thrown off. It is pleasant to be told in the preface, that "if the reviewer can pardon what I publish, he ought not to be wholly ungrateful for what I have burnt;" and further on, "it is of my political creed, to believe, that as surely as a lobster turns red by boiling, a Whig grows Tory when long in power," a truth amply exemplified during the last four years. The social, which means the unsocial, system of Holland is admirably illustrated in these pages; and many pungent anecdotes of Dutch prejudice and meanness are scattered through the book.

Sir Arthur most unsparingly exposes on many occasions the insolent and immoral conduct of some of those anointed nuisances, whom Napoleon raised into separate sovereignty, and who are still tolerated perforce by the outraged people of Germany. But he is never urged by political bias, to unfair severity towards these royal delinquents. He is always ready to do justice to the merits which glimmer through the chinks and crannies of their characters. His graceful sympathy leads him [vol. i. p. 66] to dwell with much warmth on the sufferings of the amiable electress of Hesse, while he vigorously lays the lash on her husband. It is to this shame-branded elector that Mrs. Trollope is so indulgent, as to decline entering on "the gossip of Cassel," because, forsooth it relates to "private matters."

Mrs. Trollope and Sir Arthur Faulkner are directly at issue respecting the popularity or un-

popularity of the King of Prussia in the Rhenish provinces. The high-principled and plain-spoken Englishman giving, of course, the public opinion; the lady stating the notions of Count A., Baron B., Madame de C., or the other noble and anonymous authorities whom she is proud of having sitten beside at the *tables d'hote* of Aix or Wisbaden. The fact as regards the King of Prussia is, that he is personally popular, politically unpopular;—considered in Prussia Proper, as a patriotic hereditary ruler, in his Rhenish provinces as a conqueror; in neither as a tyrant, but in both as a man who has forfeited his kingly promise to grant a constitution,—a heinous offence, which his subjects hope to see him yet voluntarily expiate. During the lifetime of Frederick William, things will most probably remain as they are. The accession of his son must be the signal for the establishment of constitutional freedom throughout Prussia, and its realisation in the various small states, where it is now a mere mockery.

Almost all Sir Arthur Faulkner's speculations on Belgian politics, written three years ago, have turned out to be mistaken ones. Belgian independence in spite of his fears and the wishes of less liberal observers, has, day by day, fixed itself more firmly in the European system, and the conduct of King Leopold has gradually gained him the esteem and attachment of the nation he governs with such praiseworthy moderation. It is not easy to comprehend the motive which led to such a blemish in Sir Arthur Faulkner's book, as the disparaging tone which every where mingles with his apparent wholesale approval of Leopold's character and conduct,—like drops of vinegar on a broad surface of oil. However conscientious the author might have been in his sketches of this monarch, all who are competent to judge of the portrait will exclaim *multum abludit imago.* And if Sir Arthur meant his caricature for pleasantry, he of all men must excuse another short quotation from his favourite Horace, *non est jocus esse malignum.* Sir Arthur could write a much better book, and the reading world will gladly hail his re-appearance in print.

Mr. Pryse Gordon's is a well intended, and, in some points a useful publication, the result of his experience as an old resident in Belgium. It will be a good guide for families proposing to reside in that country, on many homely but indispensable topics of house-keeping economy, and the tone and bearing of society in Brussels. The political portion is happily short, and the author gives it at second-hand. Mr. Gordon and his informant are thorough liberals, a little prejudiced perhaps; but who could be quite impartial, under the exciting events of the last four years?

The Rhine, Belgium, and Western Germany are utterly exhausted as topics of merely superficial remark or fanciful description. The numerous well-written guide-books, and the fictions of writers more capable than any of those whose productions are the subject of this notice, have done enough, or more than enough, for mere description or amusement, connected with the fertile region of romance and picturesqueness. And the works of Cousin, Russel, and more particularly that of the American traveller Dwight, have given the details of almost all that can be, certainly of all that needs be, known on the management of public education in Germany.

As to the intricacies of German politics, the state of manners, of domestic life, the various shades of public opinion, and all the substantial materials for knowledge connected with the literary, religious, and social condition of the millions composing the population of the Germanic confederation, England is still in comparative ignorance.

"QUARRELS OF" ZOOLOGISTS.

SECOND LETTER TO ROBERT JAMESON, ESQUIRE.

Regius Professor of Natural History, Lecturer on Mineralogy, and Keeper of the Museum in the University of Edinburgh; Fellow of the Royal Societies of London and Edinburgh; of the Antiquarian, Wernerian, and Horticultural Societies of Edinburgh; Honorary Member of the Royal Irish Academy, and of the Royal Dublin Society; Fellow of the Linnean and Geological Societies of London; Honorary Member of the Asiatic Society of Calcutta; of the Royal Geological Society of Cornwall, and of the Cambridge Philosophical Society; of the York, Bristol, Cambrian, Northern, and Cork Institutions, of the Natural History Society of Northumberland, Durham, and Newcastle; of the Royal Society of Sciences of Denmark; of the Royal Academy of Sciences of Berlin; of the Royal Academy of Naples; of the Imperial Natural History Society of Moscow; of the Imperial Pharmaceutical Society of Petersburgh; of the Natural History Society of Wetterau; of the Mineralogical Society of Jena; of the Royal Mineralogical Society of Dresden; of the Natural History Society of Paris; of the Philomathic Society of Paris; of the Natural History Society of Calvados; of the Senkenberg Society of Natural History; of the Society of Natural Sciences and Medicine of Heidelberg; Honorary Member of the Literary and Philosophical Society of New York; of the New York Historical Society; of the American Antiquarian Society; of the Academy of Natural Sciences of Philadelphia; of the Lyceum of Natural History of New York; of the Natural History Society of Montreal, &c. &c.

BY CHARLES WATERTON, ESQUIRE, OF WALTON HALL.

SIR,—Since I had the honour of writing to you, I have procured your Journal for January, 1835; and until I had read the review on Audubon, I was not aware that your allusions to me were so numerous, or of so caustic a nature.

Finding that you have raised up the shade of Linnæus;—that you have brought the Charleston philosophers to your aid, in order that you might finally cut off the vulture's nose at my expense; and that you have indirectly charged me with "much virulent and unornithological abuse" towards Mr. Audubon, I have determined to address you again, without loss of time.

Had you read attentively Loudon's Magazine of Natural History, you would have seen, that I was obliged, in duty to myself, to support my account of the vulture which had appeared in the Wanderings, before that by Audubon came out in your Journal. Accordingly I sent a paper to Mr. Loudon, in order to prove my statement; after which, commenced the controversy; and I have had Bakewell, young Audubon, and Backman, &c. &c. for opponents.

You, yourself have now thought fit to attack me through Audubon, and I trust I have already placed both him and yourself in no very enviable light before the public. He stands convicted of having passed off an absurd hoax, for a zoological fact; and you are considered to have believed it,

by admitting it, without comment, into your Philosophical Journal.

The earth has already immortalised your name, by having afforded you an unbounded range, in which to prosecute your unrivaled exertions in the science of mineralogy. Why, then, put on waxen pinions, and attempt to soar amongst the winged inhabitants of air? We are told, that by flying too high,—*Icarus, Icariis nomina fecit aquis.*"

In your late strange and very rash review of Audubon's second volume, you ask, was "Linnæus refused credit, because he alleged that swallows go under water?"

It would be unreasonable in me to expect that the Regius Professor would make a wry mouth at the fable of the Swede, after he had swallowed the boot-story of the American.

For my own part, however, I frankly confess, that I shall neither pardon this childish credulity of Linnæus, nor even attempt to extenuate it; though at the same time, I willingly pay a due tribute of praise, to his indefatigable researches in other departments of natural history.

I do not hesitate to affirm that he was ignorant of the very rudiments of ornithology; and that he continued so, to his dying hour, is unfortunately too clearly proved, by his allowing that preposterous statement respecting swallows, to remain uncorrected in his great work on natural history.* His ignorance, indeed, was most unpardonable. Had he only taken a swallow, near the annual disappearance of that bird, and immersed it in a tub of water for a few short weeks; he would have found its feathers detached from the skin; —the skin itself decomposed;—the bones disjointed; and their integuments in a state of irretrievable dissolution. Instead of that great philosopher listening to a silly story, which his grandmother had heard and believed when she was a young woman; he ought to have dedicated a quarter of an hour to the inspection of the internal formation of a swallow. Then he would have seen at once that its breathing organs are just the same as those of other birds; and of course, he would have come to the conclusion, that a swallow cannot possibly remain immersed in the water, for a very few minutes, without losing its life. And had you, sir, just taken a few short lessons in ornithology, before you perused Audubon's unlucky account of the passenger pigeon, you would have escaped the following exposure, which I am about to make of your want of discernment and ornithological knowledge. But pardon, I pray you, this digression. I grieve if I have offended the shade of the great Linnæus; but you first raised it from its honourable repose.

In the review of Audubon's biography, which appeared in your Journal for March, 1831, I must say, that I expected to have found you dissatisfied with his account of the passenger pigeons. But no. Not one word of censure or dissatisfaction has escaped from your lips.

Always bearing in mind that you have first attacked me, I shall, in return, without any ceremony, bring down about your ears, Audubon's flight of *one billion, two hundred and fifteen millions, one hundred and thirty-six thousand passenger pigeons,*—with *eight millions, seven hundred and twelve thousand bushels of food in their crops.* But ere I do so, I request you to look into the lamented Wilson's account of those birds; and after comparing Audubon's narrative with it,—say, if you are not forcibly put in mind of the daw with borrowed plumes?

Before Audubon describes his columbine adventure, he affects to pause awhile, and assure himself, that what he is going to write, is fact. "Yet (says he) I have seen it all."

"He adds, "many trees, two feet in diameter, I observed were broken off at no great distance from the ground." Mind, sir, this breaking off, of the solid boles of trees, *two feet in diameter,* was effected by a number of pigeons alighting on their branches. Now, sir, you ought to have known, that no weight in the world, acting with a downward pressure upon the branches of trees, could break the upright boles of those trees at no great distance from the ground.

Again, "The pigeons (observes Audubon,) arriving by thousands, alighted every where, one above another, until solid masses as large as hogsheads, were formed on the branches all around." And this too, sir, you have swallowed! Pray, how did these American pigeons, *inside the solid masses,* contrive to draw their breath? Our pigeons would have been suffocated in less than three minutes.

Audubon saw the pigeons coming to roost *after midnight!*—"The pigeons (says he) were constantly coming, and it was past midnight, before I perceived a decrease in the numbers of those that arrived."

Now, there is only one genus of the order of Columba, and it retires earlier to its roost, and rises later from it, than any known bird in the creation, except the woodpecker. How then came these really day-birds to trench six hours upon the night.

I will here call your attention to the wild beasts, which *were seen* sneaking away from this pigeon-slaughter at sunrise.

"At sunrise (says Audubon) all (the pigeons) that were able to fly had disappeared. The howlings of the wolves now reached our ears, and the foxes, lynxes, cougars, bears, raccoons, oppossums and polecats, were seen sneaking off." Mind, sir, these multifarious beasts of prey were seen sneaking off, from "a scene of uproar and confusion," in which Mr. Audubon found it quite useless to speak," or even "to shout to those persons (continues he) who were nearest to me." So deafening was the noise, that "even the reports of the guns were seldom heard;" and (adds Audubon) I was made aware of the firing, only by seeing the shooters reloading." He also tells us that "the uproar continued the whole night."

Now, sir, you must have known, at the time that you were recommending Mr. Audubon's works to the public, that wild beasts, all the world

* I have never read any of the writings of Linnæus, but take for granted that this error is contained in them, otherwise the professor would not have disturbed the shade of that great man at this time of day.

over, invariably retreat from the place where fire-arms are used. You must also have known, that no such motley group of carnivorous animals, such as Mr. Audubon mentions, ever assemble together for predatory purposes, even in the recesses of the forest; much less in a place of "uproar and confusion" occasioned by men carrying fire-arms and lighted torches, &c. &c.

Here it may be asked, what brought all these wild beasts to this particular spot?—Did they calculate, that men would assemble and kill the pigeons for them; and that they would have permission to eat them during the night, in the midst of the firing?—for remember they all sneaked off at sunrise. Or had they received information that pigeons, merely coming to roost, would smother each other, and then fall to the ground to be eaten? Again, as there was sufficient light for Mr. Audubon to see the pigeons arriving after midnight: there must have been sufficient light for the shooters to have discovered the wild beasts, as there was "little underwood" in the pigeon roost.

In a word, if, as Audubon informs us, no one "dared venture within the line of devastation," we may naturally infer, that sly reynard, and the wolves, lynxes, cougars, bears, raccoons, opossums, and polecats, had a sufficient stock of instinct in them, to keep on the right side of the line of devastation too. Then where had they taken their stand? They could not have been far off;—otherwise, how could Mr. Audubon and his company have seen them sneaking away at sunrise? All these *night* prowlers seen at *sunrise!!!*—Eh!!!

Two farmers had driven three hundred lean swine above one hundred miles, "to be fattened on the pigeons which were to be slaughtered." Pray, in this sequestered part of the forest, how did these two clodpoles manage to make a pen sufficiently strong to keep three hundred hungry hogs, *in;* and sufficiently high to keep the daring wild beasts *out?* "Incustoditum, captat ovile lupus."

Now, sir, these are questions which I call upon you to answer satisfactorily. You have just told us, that Mr. Audubon's "works will be referred to, as amongst the most perfect productions of our times." Prove then to us, that his account of the rattlesnake swallowing a large American squirrel *tail foremost*—is perfect. Prove that the rattlesnake boot-story—is perfect. Prove, that a weight of pigeons breaking off boles of trees two feet in diameter, at no great distance from the ground—is perfect. Prove that the account of the wild beasts—is perfect. I shall not let you off. You have thought fit to commence an attack upon *me;* and I think fit to oppose *you*. When you shall have answered these questions, I will, if necessary, put one hundred more to you, equally as tough and indigestible.

So far, I have made use of Audubon as a kind of stepping-stone, in order to get a retaliating thrust at you; just as you have made use of him (see your last journal) to throw a deeply piercing dart at me. "Petimusque, damusque vicissim."

You may affect to lament, that America refused your friend a seat amongst her naturalists; but, sir, be assured, they had seen what Judge Hall has seen; and, believe me, they have no room for him. You may introduce the words "unknown wanderer of the woods," and tell us that he spent "more than twenty years of almost unremitted observation of the habits of birds." But we have his own words to prove that "for a period of nearly twenty years, his life was a succession of vicissitudes;" and I have yet to learn, how a visit to Philadelphia could be necessary to open "his eyes to the ways of men," when he had been keeping shop, amid shop-keepers keen as mustard, in different towns of the Union, for a long series of years.

But I will now take leave of your protegé, and go southward with you as far as Charleston, where you tell us that "the alleged dulness of the olfactory nerves of the carrion crow and turkey buzzard, the two vultures of the United States, which has brought upon Mr. Audubon so much virulent and unornithological abuse (here is another thrust at me; I'll return it,) has been most satisfactorily established by experiments instituted by respectable persons in Charleston; and the taste which these birds have for fresh as well as for putrid food, which has also been obstinately denied, (by whom?) has been testified by Dr. Strobel and a number of planters."

Yes, sir, these far-famed ornithologists, in lieu of showing that putrid effluvium does not ascend in the atmosphere, thence to be carried to an indefinite distance by the breeze, (which was the only rational way to support Audubon's new theory,) lost their time in prosecuting a series of experiments on the wild vultures, inconclusive in the extreme. Indeed these experiments effected more than was absolutely required, for lo! the vultures were proved to be *deficient* in *eye*, as well as in *nose;* we are told, that the birds actually attacked the figure of a sheep, coarsely painted on a piece of canvass, having mistaken it for a *real sheep*. But in order that these Charleston philosophers might prove to a nicety, that I am wrong, and that Audubon is right, they had recourse to an experiment, which for cruelty and inconclusiveness, has no parallel on ornithological record. They caught a vulture, and after putting out the poor creature's eyes, they placed carrion close to its feet. The bird, reduced to this shocking condition, and smarting under its bleeding wounds, refused to touch the carrion. Whereupon its very logical tormentors gravely concluded, that it could not smell the carrion. These, sir, are a specimen of the experiments which you tell us have *satisfactorily established* the dulness of the vulture's olfactory nerves. Upon *these* you are now reduced to rest your belief; for you must be the most credulous professor in the world, if you can put implicit confidence in your friend's statements, after the hoax which he has played off upon you, concerning the American boot. Depend upon it, sir, you are no ornithologist, otherwise the two reviews of Audubon's biography which have appeared in your Journal, would have been written in a very different strain.

Your great name is a passport and a sanction to any thing that may appear in your periodical; and thus, the paper signed "Ornithophilus" in

your Journal for March, 1831, has no doubt been approved of, *because* it has been presented to the public by the Regius Professor of Natural History. In it our attention is drawn to the floods, tornadoes and earthquakes, as *instructive* and *amusing sketches*. Audubon says, "I have crossed the path of the storm, at a distance of a hundred miles from the spot where I witnessed its fury, and, again, four hundred miles farther off, in the state of Ohio. Lastly, I observed the traces of its ravages on the summits of the mountains connected with the great pine forest of Pennsylvania, three hundred miles from the place last mentioned."

Pray listen to Judge Hall, in the Western Monthly Magazine for July, 1834.—"How far this hurricane had traveled before it fell in with Mr. Audubon, we are not told, but it seems that its path was extended to a distance of eight hundred miles *after* it had passed him! What a long-winded hurricane! Now the truth (mind, sir, the TRUTH) about the hurricane that crossed the Ohio above Shawneetown, and is here described, is, that it did not extend more than twenty miles, and that its direction was not such as would have brought it to the state of Ohio."

Thus Audubon has merely added seven hundred and eighty miles, to one of these *instructive* and *amusing sketches!!!* Ah, sir, this is really too much even for us Englishmen to swallow, whose gullets are known to be the largest, the widest, and the most elastic, of any in the world.

I have the honour to be, sir,
your very obedient and humble servant,
CHARLES WATERTON.

Walton Hall, March 2d, 1835.

I must beg your excuse for the error in your name, in my last letter to you, into which I inadvertently fell, and which you will find corrected in this present epistle.

From the London Monthly Repository.

SKETCHES OF DOMESTIC LIFE.

THE NOTABLE.

It is not often that the present day exhibits the spectacle of a mere scholar; that is, a being to whom books are almost the only realities in life, and all things else little other than visions.

Joshua Drennan was one of these "dry-as-dust" doctors. He had some such conception of the men and women moving in the world, as they have of evil spirits or angels; that is, notions which they can neither understand themselves nor make any one else understand; the second dilemma a necessary consequence of the first.

To Dr. Drennan, as he was called, with what claim to the title I know not,

> "Not rude nor barren were the winding ways
> Of hoar antiquity, but strewn with flowers."

And there many a garland had he gathered, beneath the shade of which he sat, a fit emblem of the studies he pursued.

Nevertheless he was a loveable creature, for he was one of the kindest, gentlest, as well as the simplest of nature's children. A bereavement in early youth had, it was said, unsettled his mind; which severe study first restored, and then engrossed.

Yet social sympathy, that inextinguishable power, at times prevailed. If in his lonely wanderings the voice or laughter of children reached his ear, he would pause and drink in the sound, as he did breathings from a bed of flowers; while a smile brightened his deep-seated eyes and played upon his pale quiet lip, as if some of the sunshine of his own mother-time came back upon his heart.

But if, instead of sounds of gladness, he chanced to hear the wail of sorrow from any living thing,—the bleat of a stray lamb, the cry of a distressed dog, let alone the tone of suffering from any *human* tongue,—the instinctive spirit of pity spake within him, and no matter what the obstacles which might lie between him and the appealing creature, to *that* creature he would make his way.

In this manner he had gained one of the most faithful of his household friends, Sancho, a fine Newfoundland dog, who had survived the snow wreath which had buried his first master. A stranger had perished near the village churchyard, and after some fruitless attempts to discover who he was, had been buried there. Sancho, whose name was inscribed on a brass collar about his neck, was the only mourner at that chance funeral; when it was over, he remained at the grave to watch and wail over it, as if he thought thereby to awaken his buried friend.

Dr. Drennan discovered the dog; drew him home, but came back with him the next day to the grave, and then took him home again; he did this for many days, saying, as he patted the dog's head, "I will give him a tear, too, Sancho, since he was so kind to thee; and I will try and win thy love; for it is worth some trouble to win the love of a creature so full of gratitude and attachment as thou art."

Sancho was not insensible to the kindness of his sympathetic protector, and soon learned to lie at his feet with an expression of devotion in his watery eyes, as if to love some one being exclusively was a necessity of his nature—the first condition of his existence.

About twelve months after this event, two circumstances occurred which made a great change in the feelings and views of Dr. Drennan. A work, which with much labour he had given to the public, was most favourably received, and a somewhat considerable independence was bequeathed to him.

How often do points of character lie unperceived till some peculiar circumstances, calculated to excite, call them forth! Fame and fortune coming together to Dr. Drennan, as they did, mutually heightened and strengthened each other. Vanity, and the desire of social consideration, awakened in the hitherto apparently humble and retiring mind of the doctor. The obscure lodging in which he had dwelt undisturbed and undisturbing so long that the spiders considered themselves not *tenants at will*, but *tenants in common*, was speedily vacated for a large house; and instead of the chance attendance of a slatternly girl, the daughter of the little

shopkeeper whose garret he had occupied, he engaged two or three servants, resolving to draw round him a circle of admiring friends.

All this, which in speculation and preparation had appeared so pleasant, proved far otherwise in the realisation. Old habits are not easily changed, nor new ones readily acquired. Absence of mind, the consequence of abstract studies and social isolation, was as constant a characteristic of the doctor, when a householder, as it had been when he was a garreteer. Many, as soon as he was disposed to *lionise*, came to see him, and all the more readily, as report made him more of a *golden lion* than he really was. But he soon discovered that servants and visiters disturbed his quiet and his studies more than they ministered to his comfort or his vanity.

By a singular effort of social sagacity, or rather observation, the doctor after a time saw what appeared a remedy for all his annoyances: he resolved, as most others of his neighbours had done, to take unto himself a wife; that is, (acting with the views and from the feelings which the doctor did,) an upper servant, who, unlike every other servant, should have no power of obtaining, retaining, or possessing any independent property, nor any power of quitting her service, however insuited to her it might be, unless for the coffin and the grave.

Dr. Drennan had all the same amability, and some of the genius, of the immortal Goldsmith; but he partook, also, of the same want of perception of the improvements possible and essential to the social state. He looked on women with the kindly eye with which he looked on all creatures; but never dreamed that a capacity above making puddings and pies, and gooseberry wine, existed in the sex, or that they could be better employed than

"To suckle fools and chronicle small beer."

As long as women are treated as fools, such they will, more or less, suckle; nature perpetuates injuries as well as benefits.

Now it was that Dr. Drennan, who for the last twenty years had felt more interest about fossil bones than about the fairest belles, turned to that *terra incognita*, the female world, and the notable widow of a farmer soon fixed his attention.

She was well-looking, in what, in a drawing-room, would be called *rude* health, and, according to the report of a friend who was abetting the doctor in the rash act he was about to commit, she was neither a gossip nor a gad-about, but just such a delegate as a man of letters might desire; one who would attend to her *own* province, not infringe upon *his*. Her utter want of intellectual culture the doctor and his friend deemed a matter of no moment, since she might always avail herself of the rich funds of her husband's mind.

These worthies did not reflect that funds exist in vain for those unfitted to use them.

Dr. Drennan expected to find a domestic delegate, who would superintend the economy of the kitchen and the comfort of the parlour, without interfering with the library.

He was unconscious that in all things a general harmony is essential to happiness—that the *essence*, if not the substance, of the library, contributes most materially to brighten and warm the atmosphere of the parlour.

During the *embroidered* days of courtship, (for though the widow was a sort of *dowlas*, and the doctor a sort of *foolscap*, the common course was pursued,) how fondly did Dr. Drennan anticipate the time when of all the *locks* in his house he should only turn *Locke on the Human Understanding;* when, without reference to roast or stew, he might enjoy Bacon and Boyle; recreate with *Cook's Voyages*, without any care about *cook's* accounts; when a train of precious thoughts should run no risk of being disturbed by an appeal about *preserves;* when he might sit knee-deep in litter, cutting up newspapers, pasting and compiling without hearing any thing about *pickles;* enjoy saying a smart thing, or indulge in uttering an angry one, without interruption about *vinegar* and *spices;* when he might crack jokes in happy unconsciousness of the contingencies of *cracked crockery;* when he might give a connecting thread to a treatise, and not find such wanting to the buttons of his shirt or the strings of his waistcoat; in short, when he might cater for the mind, relieved of all cares about the body.

Nor were his friends less interested upon the present occasion, since in the event of his marriage they *did* hope, that when he invited guests to dine with him, a dinner *would* be provided,—a part of the arrangements which the doctor frequently forgot.

Alas! it is one thing to sketch a scheme of happiness, another to realise it. Not the Goths and Vandals, when they ravaged Rome, ever made such relentless work as did the farmer's widow, when she became the doctor's wife. From that moment nothing was heard *in* the house or about it, from sunrise to sunset, but the sound of brooms, brushes, mops, and all the multiplied *et ceteras* necessary to household purification; while nearly all the remainder of the four and twenty hours (for she was no sleeper, and detested so idle a propensity as sleep in others) was devoted to florid lectures and ejaculations, more emphatic than polite, on the slovenliness of bachelors and the laziness of their servants.

The doctor discovered that the lady, who had said so little *before* marriage, could say a great deal too much *after* it; that though he had gained so much admiration from her as a suitor, he won none whatever as a *husband*. However, he good-naturedly persuaded himself that there were sufficient grounds for the change; that his house was really a nest of enormities; and he resolved, heroically, to endure the purgatory of the process of reformation for the sake of the paradise which was to be the result.

Mrs. Drennan led her forces into the field; carpets were taken up, and hangings taken down; fires were banished because they made dirt; books because they made litter. Sancho was voted a brute unworthy of the least encouragement; the quiet domestic cat, notwithstanding her innate love of her home, under almost *any* circumstances, fled outright of her own accord, and never was heard of more; the swallow ceased to build beneath the eaves of the house; the

robin red-breast to visit the sill of the windows; an alarum clock, which, like the statue of Memnon, sounded at sunrise, was introduced into the hall; and every thing flew or stood affrighted before the bride, but Dolly the cook.

"When Greek meets Greek then comes the tug of war."

Dolly was disposed to view her mistress more in the light of a usurper than a legitimate sovereign: Mrs. Drennan, however, had superior might as well as superior right, and Dolly was ejected; not, it is said, without making an impression on her exterminating mistress, which was not *aimed* at her heart, but which went to it; and if the process of *instantaneous* retaliation had not been preferred, an appeal might have been made to the *milder* hand of the law. Dolly's sufferings in this conflict were not very much commiserated, as it was generally thought that her back was broad enough to bear any thing.

Under an attack of nervous irritability, consequent on the ceaseless commotion existing around him, Dr. Drennan retreated once again to strict seclusion in his library. Its exemption from the persecuting "red right hand" of his wife, armed as it ever was with a duster, was obtained by unceasing locking and watching; but the discordant sounds of her scolding voice penetrated to the *sanctum;* while daily hints and evening lectures convicted the doctor of unsociality, for his indulgence in bookish seclusion. His good nature suffered under the reproach; he made efforts to cultivate fireside cordiality; but the mole and the eagle would make as meet companions as did the doctor and his wife.

She was perfect mistress of the faults and affairs of all her neighbours; and while she sat mending holes in stockings and table-cloths, liked nothing so well as making holes in those poor people's characters. Dr. Drennan was, on the contrary, utterly devoid of that perpetual and practical observation which may be called Paul Pryism; and he was full of philanthropic feeling. Thus a mutual and an undisguised interchange of thought produced nothing but disgust; *he* recoiled from the narrowness of her aims, the enviousness and unkindness of her feelings; *she* despised what she deemed his affectation, and hated what she thought his folly.

When the doctor found converse impracticable, it occurred to him that he might still preserve some appearance, at least, of the social character, and, perhaps, induce some reform by reading aloud: but he gave meat where he ought to have given milk; he could form no conception of the mental indifference, unsusceptibility, and ignorance, which he addressed. Though individuals are incessantly judging each other, how few are qualified or capable of so doing.

It has been said that the lesser cannot comprehend the greater; equally true is the converse. If I may be allowed, I will liken one individual to a vessel which contains a pint; is it to be supposed that individual can understand another which contains a quart? No: it is either utterly unconscious of the other's superiority, or regards the surplus, above its own measure, as superfluous. In the same manner the larger vessel has no, or a very imperfect, idea of the stinted capacity of the smaller, and thence judges it wrongly, or makes fruitless efforts regarding it.

Mrs. Drennan's natural capacity was not deficient; it had suffered from distortion and disuse. Her case, and her husband's, probably, appears an extreme one, it is only because they are morally as incongruous, as they were mentally unsuited. Had her disposition been more quiet, and his less kindly, they would have presented the dull, unvarying, unsympathising routine, which passes, unknown or unnoticed, behind many of the bright windows, and nicely kept street doors, of this metropolis, to go no further.

Let it not be imagined that I contemn, or would cast ridicule upon household duties, or domestic management; so far from that, I regard skill upon those points as among the first essentials of female education. Truly says one of the most enlightened men of the present day, "Whatever is of any importance, either to the present or the future comfort of any being, is worthy of care in the degree in which it may be the means of enjoyment, or the cause of suffering. Its *minuteness* cannot render it unworthy of notice, if it be of any consequence; and what would detract from dignity and greatness would be, not taking care of these minute concerns, but neglecting them."

I purpose to show, if a patient hearing be accorded me, that philosophy and poetry may beneficially find place in even the kitchen, that household drudgery may be divested of the contemptible character which, unjustly, sinks those devoted to such toils so low in the scale of social existence.

"A great number of little things," says the author I have just quoted, "particularly if they often occur, become of greater importance than any single event, however vast and momentous; *they* produce, taken together, a larger sum of enjoyment, and there seems no possible way of taking care of this collective sum, but by taking care of particular events. And, indeed, the superintendence of minute events implies as much dignity as the superintendence of great events; and our admiration is never more excited than when we contemplate an intelligence which, while it directs the most grand and mighty movements, overlooks not the most insignificant concern capable of effecting the ultimate result."

The want of a general perception of these truths have produced evils which are passing rapidly away before the increasing intelligence of the people. Our mechanics' institutions are giving daily evidence that the trades, which have been looked down upon with so much aristocratic contempt, are consistent with poetic feeling and philosophic thought. All hail to the operatives of England! They are destined to shed more distinction upon her than any naval or military destructives, with stars, and garters, flags, and finery to boot, have ever yet done. The decree has gone forth, "Down with brute force and blind obedience, and up with the beaming ensign of intelligence, justice, and union."

But the animating principle which has awak-

ened the spirit of the working man, must be brought to bear upon the women of all classes. If a tailor now not only finds, but proves, that he has "a soul above buttons," in like manner must women find and prove that they were not created to feel and think at second hand, and hardly that; that the tie which unites them to men does not merge them in their husbands, but that it is for women, as equally essential and indispensable co-agents in the work of human progression, to originate high thoughts and views, to advance useful and independent objects, and that the feelings of wife, mother, daughter, and sister, may co-exist with those of the philosopher, philanthropist, and patriot.

One day Dr. Drennan received a message from a neighbouring friend, a poor curate. The messenger's clay-covered shoes were not permitted to sully beyond the threshold of the door, and he departed, leaving no particulars as to the cause of the sudden summons. Dr. Drennan, however, obeyed it promptly, for he knew that his friend was in bad health. On reaching the curate's dwelling, he found his worst fears realised; the old man had been struck by paralysis, and was not expected long to survive. Motionless, almost speechless, he lay extended upon his bed; but his mind, retained by the strong power of affection, was still present. Life and light yet lingered in his eyes, and they took a glow of more intense lustre as they were lifted to the face of Dr. Drennan, and then turned to a young boy who stood in tears at the bed-side. He was the orphan grandson of the dying man, and scarcely seven years old. For *him* the spark of life tarried in that aged breast; for *him* appealing light lingered in those closing eyes. Dr. Drennan understood the mute eloquence of his expiring friend, and answered him more expressively than by words; he took the little fellow upon his knee, and passing an arm around him, and laying a hand upon his fair-haired head, pressed him gently to his bosom, while he bent eyes, swimming with tears and illumined by kindness, on the dying grandsire. One look, effulgent as the feelings from which it sprung—a look, in which gratitude, affection, hope, and faith, were mingled, gleamed with seraphic beauty upon the boy and his protector, then the eyes, taking a yet more devotional character, were raised, glowed again as intensely as before, then fixed for ever.

In a few hours Dr. Drennan said to the boy, "Harold, you must come home with me, and be unto me as a son, and I will be unto you as a father." There was a sweetness in that kindly voice, now touched with an unusual tremour, that unconsciously soothed and cheered the child, who put his hand confidingly into the hand so opportunely held out to his aid, and they went forth together.

Harold had little conception of the bereavement he had sustained—he was no stranger to the benevolent man he companioned, and he soon began to prattle as he was wont to do whenever a visit from Dr. Drennan had made a holiday for him: the prospect of an abode at the doctor's house awakened curiosity, expectation, and that prospect of change so pleasant to the young; and Sancho, too, left his master's side, and came round to Harold's, as if willing to chase away any remaining heaviness from his spirit. The boy and dog soon began to sport together, and, after a time, the doctor seated himself on a honeysuckle bank to watch their gambols.

"Harold," he said, when he rose again, "yonder, just below the hill, is my house, the one with the bow-windows: play in the meadows as long as you like, and then let you and Sancho come home together." Again he paused to look at the play-fellows; what power, yet what gentleness in the generous dog! what confidence in that generous nature about the genial child! "Why are not all creatures linked thus?" sighed the doctor, as he walked down the hill.

As he approached his house he looked up at it; the library windows were open, and he fancied he saw the figure of some one in the room. He felt his pocket for the key—it was not there, and he now recollected that he had left it in the door! It instantly flashed across his mind that an incursion had been made into that room of refuge. The idea was soon strengthened, for, at the street door, he picked up a sheet of manuscript which had been blown out of one of the windows. With this mute witness of the violation which he foresaw was going forward, he thundered at the door, hurried up stairs, and entered the library.

Mrs. Drennan, like an adjutant, stood in the midst of it, giving orders to two remorseless housemaids, who were down on their knees scrubbing the floor, which had so lately been strewn with books, papers, maps, and prints.

Who may paint the doctor as he stood

> "Struck with severe amazement—hating life,"

in a voiceless convulsion of indignation and despair? The anger of an habitually patient person is the most awful thing on earth; once thoroughly aroused, the doctor was terrific. The domestics fled before the terror of his looks; his spouse, however, stood her ground manfully, I had almost said, but doggedly were the better word, and before the undone scholar could relieve *his* feelings by a single word, *she* launched forth a cataract of invective, which, by depriving him of all hope of a hearing, effectually secured his silence. But the desperate state of his feelings demanded some relief, so turning from the living foe of his peace, he fell upon the inanimate agents of her mischief; pails, brooms, brushes, flew out at the windows with the force and celerity of a bomb from a mortar; so that any one chancing to pass the house at the time, and escaping the effects of such windfalls, might have imagined it on fire, and the inmates adopting the readiest mode of saving its contents from conflagration.

Whether Mrs. Drennan imagined that she ran some risk of taking, like a witch, a journey with a broomstick; or that she thought it best to make her exit at the door, seeing that her husband had a prejudice for departures at the window, certainly she made a precipitate retreat down stairs.

At length Dr. Drennan seated himself to draw breath; but with an aspect stern as Marius when he appalled the assassin. It had certainly not been well for the reputation of the doctor's charity

or philosophy, to have asked him at that moment his opinion of our eighth Harry's matrimonial system. The doctor was doubtless well read in the book of Job, but none of its consolations occurred to him; and had the absolute power of punishing Mrs. Drennan been suddenly vested in his hands, I *will* believe that he would have stopped short of *death*, but certainly not of *divorce;* and assuredly never would the file of doctors' commons have exhibited a more eloquent bill of grievances.

He had sat some time with more of frenzy than philosophy in his thoughts, when little Harold entered the room. The appearance of the child called up the calm image of his dying grandfather, and changed the current of the doctor's thoughts and feelings; anger and animosity sank rebuked before the impressions of the morning, and, taking the boy's hand, he left the library.

In the midst of this domestic storm Harold received a kinder reception from Mrs. Drennan, and made a quieter settlement in her abode, than he would otherwise have done; for she feared to attempt any further exasperation of her husband's temper.

But real reformation of conduct only grows from conviction produced upon the mind, not from fears. The disposition and habits of Mrs. Drennan speedily took their accustomed course, and a new and lamentable consequence of their prejudicial influence gradually ensued. Harold was an acute, sensitive child, he was directly dependent upon her for his domestic comforts, and she had the power of inflicting punishment upon him by means of privation; thus she operated upon all his lower feelings, and they were brought into action, and overgrew his higher feelings. He discovered, with almost intuitive penetration, that he could at any time conciliate Mrs. Drennan, or put her in a good humour, by telling her a ridiculous story of any of her neighbours, or joining her in a malicious review of their character. The precepts of Dr. Drennan were feeble of effect when opposed to a practical course of this kind; and his well meant, but ineffective teaching, served no other purpose than to add hypocrisy to Harold's other faults.

The youth gradually fell under the stigma of the whole neighbourhood, being convicted of a hundred instances of wilful falsehood and wanton mischief. Dr. Drennan, for an offence of an unusually flagrant nature, was induced to inflict on him a severe punishment. Harold felt the deepest resentment, and resolved upon revenge. He poisoned Sancho, now an aged creature, and apparently the creature on earth which Dr. Drennan loved best. The consequences of this act were dreadful: through some carelessness the poison used on this occasion was communicated to some liquid, of which Mrs. Drennan drank—her death was the result.

Suspicion instantly attached to Dr. Drennan; for the circumstances of his domestic inquietude were well known. With the calmness of conscious innocence he went to prison—there was not the slightest evidence on which to ground a conviction, and he was acquitted by a jury; not so by his neighbours. Slander was busy among the idle and the ignorant, and the story soon grew that Harold was the natural son of the doctor. who had poisoned his wife for some *supposed* unkindness to the bastard boy.

Alas! the only poisoners had been Mrs. Drennan, and the circumstances which made her what she was. How fatal is such moral poison, especially when administered in that plastic time when the character is forming, Harold sufficiently exhibited; for, though his faults became modified and veiled as he advanced to manhood, he never bore the character of which he was originally capable. His sorrowing and disappointed friend attributed, not to early corruption, but to inherent degeneracy, the dereliction of his conduct; because Dr. Drennan had no conception of the power of female influence, interwoven as it is into the very texture of every feeling and habit of youth. Thus fatal to an excellent man and a promising child, was one narrow ignorant woman, whose strong energies, properly enlarged and directed, might have made her as beneficial as she was baneful.

From the Dublin University Magazine.

THE SAUNTERS OF CASTLE SAUNTER.

The Saunters of Castle Saunter, in Bedfordshire, are as ancient and illustrious a house as any in the British empire. They are connected by blood and by marriage with many families of the first rank and consequence, particularly with the Onslows, Tardys, and Slomans. Their crest is a tortoise courant, and their coat of arms three snails, with the motto "Moveo," adopted, say the scholars of the family, from one of the Latin comedies, where a certain venerable old lady employs that word to express her own deliberate mode of performing the locomotive process.

I have been more than once a visiter at Castle Saunter. It is an edifice of the Plantagenet times—the architecture massy, solemn, and gloomy; the windows few, narrow, and set in the walls so deep as to resemble port-holes for cannon more than orifices for the admission of sunshine; the wings are a good deal dilapidated and ivy-grown; old Father Time (the Destructive) having carried the work of decay steadily forward for four centuries, and having met with but a feeble opposition from the labours of the carpenter or the mason. The central structure, however, is in tolerable repair and tenantable order; the principal entrance is through a low-browed arch, opening, through the medium of a ponderous gate, thickly studded with huge iron nails, immediately upon the grand hall, and surmounted, at a great elevation, by a square turret of dark-red brick, the front of which contains a clock, which (in singular correspondence with the genius of the family, averse to every thing rapid,) has for the last hundred and fifty years, been bereaved of the minute-hand! The scenery about the castle is of a lazy, melancholy, sleepy character. On every side it is environed by clumps of lofty forest trees, principally elms, the immemorial settlement of an immense commonwealth of rooks, the

most monkish-looking rooks in all England; and to increase the air of stillness with which dense masses of old timber always invest a mansion, a vast oblong sheet of water (the greater part of its perfectly motionless surface overgrown with a variety of aquatic plants) reposes in a basin artificially excavated in front of the castle, serving as a mirror for its ruinous battlements, and answering the further purpose of sustaining a pair of swans, enough stricken in years to have been the very birds of Juno, and as majestically indolent in the navigation of their patrimonial pool as if their intention was to keep time with the sole remaining hand of the clock in the square turret.

In fact, every thing at Castle Saunter either stands stock-still or moves with the pace of the afore-mentioned animal which constitutes the principal heraldic emblem of the house. The rolling-stone, whose function it is to preserve the nice level of the walks and grass-plots, is half overgrown with moss, in flat rebellion against the old adage. The greyhounds have no idea of coursing, or the horses of so much as a trot. The jack in the kitchen requires half an hour to accomplish every single revolution of the joint on the spit. The teapot draws the tea so much at its leisure, that by the time the process is performed, the tea is cold enough to make a Lapander's teeth chatter. There is a three-minute glass in the breakfast-parlour to regulate the boiling of your egg; but let me advise you, should you ever visit Castle Saunter, to depend rather upon your watch; for the three-minute glass has got the family-failing, and takes six minutes to run out, at the expiration of which period your egg is, of course admirably done—for a salad. Ralph, the footman whose duty obliges him every morning to undertake a journey to the next post-town, which is but three miles distant, starts at six, and traveling like Cæsar, "*summâ diligentiâ*," (which the wag translated, "on the top of the diligence;" but which, in Ralph's case, would be better rendered, "the roof of a hearse,") returns not with the letters until a quarter before nine. Ralph, upon one occasion, in the time of the late proprietor, made extraordinary despatch, and appeared at the castle with his mission accomplished, at a few minutes past eight. He was severely reprimanded, however, for his impetuosity. Sir Simon Saunter repeated the ancient family maxim, "slow and sure;" to which Lady Saunter added, "more haste, worse speed;" and Miss Catherine Saunter, the maiden sister of the baronet, concluded the lecture on precipitation with, "fair and easy goes far in the day"—a truth which, she declared, shaking her head like a Burleigh in petticoats, ought to be written, like the ten commandments over the communion table, *in letters of gold*."

It is easy to understand how the characteristic tardiness of the Saunters has influenced the whole history and fortunes of the family. From generation to generation have they lounged through life with their hands in their breeches-pockets; the attitude in which Thomson (their favourite bard) was wont, it is recorded, to nibble the peaches on his garden-wall. The idea of the Castle of Indolence was, very probably, taken from Castle Saunter,

"Here nought but idlesse reigns, indulgent ease,
Good-natured lounging, *sauntering* up and down."

And again,—

"Their only labour was to kill the time,
And labour dire it is, and weary wo;
They sit, they loll, turn o'er some idle rhyme,
Then rising sudden to the glass they go,
Or *saunter* forth with tottering step and slow:
This soon too rude an exercise they find;
Straight on the couch their limbs again they throw,
Where, hours on hours, they sighing lie reclined,
And court the vapoury god, soft-breathing in the wind."

There is one more passage which I cannot avoid quoting, on account of the striking likeness of the portrait it contains to poor Hildebrand Saunter, the third son of Sir Simon, a young man whose brilliant natural abilities would have raised him to any height his ambition might have aspired to, had not his hereditary hatred of exertion detained him all his life, which was a brief one, upon the lowest rounds of the ladder. Independently of this, however, the reader will easily excuse me for reviving his recollection of two of the most beautiful stanzas of a beautiful poem,

"To noon-tide shades incontinent he ran,
Where purls the brook with sleep-inviting sound,
Or when Dan Sol to slope his wheels began,
Amid the broom he basked him on the ground,
Where the wild thyme and camomoil are found,
There would he linger, till the latest ray
Of light sate trembling on the welkin's bound,
Then homeward through the twilight shadows stray,
Sauntering and slow; so had he passed many a day.

Yet not in thoughtless slumber were they past;
For oft the heavenly fire, that lay concealed
Beneath the sleeping embers, mounted fast,
And all its native light anew revealed,
Oft as he traversed the cerulean field,
And marked the clouds that drove before the wind,
Ten thousand glorious systems would he build,
Ten thousand great ideas filled his mind;
But with the clouds they fled and left no trace behind."

The fortune of the Saunters, originally a splendid one, has not (as but a little of poor Richard's philosophy will enable you to comprehend without difficulty) been augmented in the lapse of years. On the contrary, it has, I believe undergone (like the greater part of their family mansion, which, as I have said, is no longer habitable except by the bat and owl) a gradual dilapidation. The Saunters act upon three principles which can hardly fail to lead them from embarrassment to embarrassment, and ultimately cause their ruin. It is a maxim with them never to do to-day what, upon any pretence whatever, can be deferred until to-morrow: secondly, they never do any thing in their own persons which can possibly be done by proxy; and in the third place, they never discharge any debt or demand, however reasonable and just, until compelled to do so by process of law, which, of course, subjects them, in each case, to a considerable addition to the original liability, in the shape of an attorney's bill of costs. This, you must under-

stand, is purely the result of their family failing, not by any means of laxity of principle in money matters. Their integrity has never been questioned: but they have an unconquerable aversion to what they call *trouble;* in other words, to any thing that cannot be done with their hands in the pockets of their pantaloons. Shearcraft, their tailor, makes it a rule to serve them with a latitat every Christmas: in fact, at Castle Saunter, a suit of clothes is invariably followed by a suit at law.

The Saunters act as if the span of Methusalem was the average duration of human life; they forget that there is a vast deal to be done upon this side the grave, and but a very short time to do it. They forget too that while *they* are creeping, the rest of the world is in a trot, a canter, or a gallop. Men of business will not lag on the road for the mere pleasure of keeping company with the Saunters, or their relations the Onslows. No! (in spite of Zeno's sophism) the tortoise and greyhound can never be fellow-travellers. If *you* travel in a French diligence, and *I* in a steam-coach, the only possible plan by which we can reach a given destination at the same moment is, that *you* should start before *me* a certain length of time; but this the Saunters seem never to remember; they will not even set out *along with* their more expeditious neighbours; they cannot get their hands out of their pockets, or be prevailed on to make a single preparation for the journey, until every body else is at their journey's end, snug in the inn, with their nightcap and slippers on, and a tumbler of negus on the table before them. The Saunters have often reminded me of a classical anecdote related in one of Pope's letters. The people of Troas despatched an embassage of ceremony to the Emperor Tiberius, upon the occasion of the death of his wife Julia; the envoys loitered or *sauntered* on the road, and before their arrival at Rome the melancholy event, which was the subject of their mission, was gone clean out of every body's recollection; they, however, obtained an audience, and humbly begged of the emperor to accept the condolence of his faithful subjects of Troy upon the loss of his empress. "I thank you," answered Tiberius, with all gravity, "and I beg of *you* in return to accept *my* condolence upon the death of Hector!"

The courteous reader must excuse me for introducing Sir Simon so much oftener than any other member of the family in this little memoir; but the truth is, that my chief knowledge of the Saunters was acquired in his time, when circumstances caused me, on several occasions, to make rather long sojourns at the castle. Of the present proprietor, Sir Hargrave, who has now been for two or three years in the enjoyment of the estate and title, I know very little, except that he set out about seven months back upon the tour of Europe, and that I yesterday saw a letter from him which had just arrived, bearing the Amiens post-mark! The young baronet very superfluously mentioned in a postscript that he was going up to Paris *by easy stages*.

When I first visited Castle Saunter, I was only twelve years old; and never shall I forget the severe rebuke I met with one day from Lady Saunter, (who, I should mention, was my maternal aunt,) for *running* across the drawing-room to look at Sir Simon mounting Slug, his favourite charger.

"You ought to punish him, Louisa," said her sister-in-law, the notable "femme sole," who has been already on the stage, reprimanding Ralph (the courier) for his unseemly despatch with the letters.

"Indeed, Catherine, I believe I ought," replied her ladyship, with a most maternal air; "how would you advise me to do it?"

Miss Catherine Saunter pondered.

"Give him some pretty passage from the Lounger to get by heart," said Augusta, her ladyship's eldest daughter, who was engaged in painting an albatross upon velvet.*

"Or from the Idler," said the second girl, Letitia, who was sedulously stringing some coral beads at the incredible rate of a bead every ten minutes.

"No, no, mamma," said Henrietta, "let it be the beautiful story of the "Seven Sleepers."

"Do not speak so fast, Henrietta, my dear," said Lady Saunter.

"What do you think, mamma," said the eldest girl again, "of the introductory lines to the second canto of the Corsair?

> "Slow sinks, more glorious ere his race be run,
> Along Morea's hills the setting sun.

You made Hildebrand once commit them to memory, the day he chased the rabbit in the laurel-walk under the western tower."

"You are mistaken, my love," said her ladyship, "it was the beginning of the Traveller—

> "Remote, unfriendly, solitary, slow,—

Both passages, however are extremely beautiful; nothing can be more exquisite than that word *slow;* but we must hear what Aunt Catherine says before we decide."

Aunt Catherine was a kind of lady high chancellor in the domestic government of Castle Saunter: her decrees were of the highest authority; and it is no more than justice to her to say that no court of equity could have been less hasty in pronouncing a decision.

"I am just thinking," said this mirror of ancient maidenhood.

"Aunt Catherine is thinking!" said Augusta, reverentially. "Aunt Catherine is thinking!" said the two younger girls at the same moment; the subdued, awe-stricken tone of voice in which they said it, betokening the highest veneration

---

* The albatross, the reader will remember, if he be aught of an ornithologist, is the bird which is said to *sleep* flying. Moore alludes to this circumstance, probably a mere fancy, in "The Fire Worshippers," describing the dizzy height of the Gheber's tower.

> ——Oft the sleeping albatross
> Struck the lone ruin with his wing:
> And from his wind-rocked slumbering
> Started to find man's dwelling there,
> In his own silent fields of air.

for the shrine from which the oracle was expected to issue.

The operations of mind were as slow in the Saunter family as the movements of the body. Twenty minutes elapsed; my cousin Letitia had threaded *two* of her coral beads before the intellectual machinery of aunt Catherine's understanding manufactured the final sentence upon my misdemeanour.

I was condemned to read aloud "the Legend of Sleepy Hollow;" and Hildebrand, who had hitherto been silent, offered to go for the Sketch Book.

"Mi venga la muerte de Spagna—" let my death come from Spain, for then it will be sure to be long in coming, says the old proverb; and it applied well to Hildebrand Saunter, who, as a gentleman of small despatch, might have challenged comparison with any hidalgo in either Castile.

What became of Hildebrand after he left the drawing-room I never learned; I know not even whether he performed the journey to the library, or not; all I know is this, that he never executed the commission he undertook, or returned with the works of Geoffrey Crayon. Perhaps he sat him down in the hall, which he had to traverse in the course of his expedition, and gazed upon the portraits of his ancestors, until their drowsy faces, staring at him from all sides, worked the same soporific effect upon his faculties that the reader may remember to have experienced, if ever (under some malignant star) it was his lot to have been present in a conclave of whig legislators, assembled at the Crown and Anchor, or a congregation of the broad-brimmed followers of George Fox in a Quaker's meeting-house. Perhaps on reaching the library, he took up by mistake some modern epic poem, (Bloxham's Paradise Regained, for instance*), and in the natural order of things fell asleep in Sir Simon's blue velvet arm-chair before he got half way through the first somniferous sentence. Perhaps; but a truce to speculation! it is enough to say that Hildebrand did *not* return; and, to my inexpressible satisfaction, the arrival of General and Mrs. Tardy, to pay a morning visit, banished the whole transaction from the not very tenacious memory of my fair relatives.

Of General Tardy I now recall but very few particulars: he was an old officer who had commanded a regiment of heavy dragoons in the American war; all his ideas of military tactics were taken from the Spartan phalanx; and he considered Fabius, surnamed Cunctator, the greatest captain that ever appeared in any age or country. Hildebrand had always some new anecdote of Fabius ready for the general; and upon one occasion, when Lady Saunter bought a handsome gold seal to present him with for a Christmas-box, Hildebrand got a head of the old Roman engraved upon it, with the words "*Cunctando restituit rem*" round the border.

The Saunters, it is scarcely necessary for me to say, are the most decided opponents of all the modern innovations, commonly called improvements, in the art of traveling. Their triennial trip to London is performed, to this day, in the old family coach in which Sir Christopher Saunter made the journey to the metropolis in the reign of Queen Anne, upon being elected knight of the shire for his native county. By the by, I find, by reference to the parliamentary debates of that period, that this gentleman distinguished himself, the very night that he took his seat, by a speech of considerable eloquence, and marvellous energy (for a Saunter) in opposition to a grant of money to reward an eminent philosopher of that day, who, it was alleged, had discovered the perpetual motion. Motion of all kinds and in all degrees was repugnant (Sir Christopher declared) to the principles of his family; and as to the idea of *rewarding* a man for perpetuating what for the repose of society it would be most desirable, were it possible, to *abolish altogether*, he would just as soon think of making pecuniary compensation to a rebel or a traitor for the concoction of an ingenious plan for overturning the throne and altar.

In the same spirit, though not always with the same activity, have the descendants of this profound senator opposed, from time to time, all projects for establishing more rapid modes of communication between different parts of the country, as well as between this country and others. It is not the fault of the Saunters that steam is now so rapidly supplanting the ancient dominion of Æolus and his myrmidons. They objected to steamboats and steam-coaches in the most decided manner. They threw the whole "vis inertiæ" of their house into the opposite scale. Mr. Onslow Saunter wrote a pamphlet; the sole literary effort of the family since the era of the discovery of the circulation of the blood, when a Doctor Saunter manfully supported the theory of the stagnation of the vital fluid in a very learned essay in reply to Harvey. The production of Mr. Onslow Saunter was also an able one; so much so, indeed, that the late lord high chancellor, in his famous speech-making tour through North Britain, availed himself to a great extent of its topics and arguments. The author exhibited the steam-engine in all its horrors. He contended that the application of its power to the purposes of traveling, whether by sea or by land, was fraught with danger and impiety. Providence, when he caused the winds to blow, had given them the exclusive sovereignty of the ocean, and steam was a profane attempt to rob them, as Mr. Canning had well expressed it, of their royal prerogative and birthright. In England, he said, this attempt was particularly criminal by reason of its flagrant *ingratitude*. To the winds she owed her commercial greatness and her naval glory. In how many magnificent enterprises, mercantile and martial, had they not piped in her shrouds and swelled her canvass? How often had they not blustered in her behalf, and earned for themselves the epithets of ruffians and bullies? Had they not more than once actually saved her from destruction? What power was it that delivered

* Bloxham ranks high amongst those amiable bards described in the Dunciad as

"Sleepless themselves to give their readers sleep."

her from the Spanish yoke by dispersing and shattering the invincible Armada? What power was it that, in later times, destroyed the fleet sent by the French directory to invade Ireland? Was it not the power of the winds at both junctures? And this is the power that *now* is to be so unceremoniously discarded to make room for a new-fangled, impertinent project for impelling ships like tea-kettles? Could any ingratitude be baser, or any chimera half so wild? It was a project for degrading the British navy into something lower than a kitchen-range, and all true born Britons were called upon to resist it with their lives and fortunes.

So wrote, so argued, Mr. Onslow Saunter; but in spite of his writings and his arguments the steam-engine flourished; and ships went, with wind and tide against them, nine knots an hour; and his majesty's mails went by steam; and even that was not all, for there were steam-carriages as well as steam-packets; nay, there were even omnibuses by steam; in short, there was a general confederacy against winds and horses, and all the ancient, respectable, and deliberate modes of conveyance, by which our decent and solemn ancestors traversed the surface of the globe; traveling became like a race at Newmarket; before you were well out of Liverpool you found yourself "taking your ease" at your inn at Manchester; in a word, the whole world was in a gallop; and all this was a sad and sore sight for the Saunter family; it disturbed the serenity of their thoughts; it violated all their notions of dignity; it upset all their plans and systems; it broke the very tranquillity of their noonday slumbers with frightful visions of rampant tea-kettles, and a thousand other horrid chimeras. Miss Catherine Saunter (the veteran spinster we have already presented to the reader) had one night the most appalling dream imaginable: She dreamed that the two huge stone tortoises, that surmount the piers of the grand entrance into the demesne of Castle Saunter, took a sudden freak into their heads, and, leaping down into the lawn, frisked and capered about, and played all manner of antic tricks, like a pair of merry-andrews at St. Bartholomew's fair. Then the dream changed, and the tortoises, seeming to *recollect themselves*, and recover their gravity, stood side by side, before the gate of the castle, yoked to the family-coach, the huge, square, lumbering, rumbling old vehicle already alluded to. Sir Simon then made his appearance at the porch with his hands, as of immemorial custom, in the pouches of his nether garments. She asked him where he intended to drive. "Only as far as Pekin," said the baronet; "I shall be back to dinner." Upon which he gave a hop, step, and jump, and vaulted into the coachbox, while, at the same instant, Ralph, the footman, in a monstrous pair of jack-boots, sprang into the postilion's seat, and then the whole equipage dashed off in full speed, the tortoises kicking and curveting all the time, and old Sir Simon shouting at the top of his lungs, and offering a bet of a thousand guineas that he would overtake the steam-coach. What will not spinsters of forty dream?

Poor Sir Simon! I never shall forget him; I was a visiter at the castle when the unfortunate circumstances occurred which laid the foundation, there can be no doubt, of the illness which, in a few months after, terminated his life. As these circumstances are calculated to display in a very lively manner the characteristic oddity of the family, I need offer no apology for detailing them. At a few miles distance from Castle Saunter was Bustle Hall, the seat of the Fleetwood family, descendants from Fleetwood, one of the republican leaders in the great rebellion. This revolutionary pedigree, alone, was sufficient to raise a wall of separation between them and the Saunters, who, it is hardly needful to say, have never, at any period, belonged to the party of the movement. If the Saunters could, with propriety, be said to belong at present to any section of the political circle more than another, it is that of the moderate whigs, as they are called. They have been heard, for instance, to approve cordially of Lord Palmerston's conduct in the affairs of Belgium and Holland; they liked the rate at which the business of the Foreign Office traveled in his administration; protocol followed protocol with the pace of a duchess at a coronation; and at the close of a long tissue of treaties and negotiations, as tedious as the sermon of a Cromwellite divine, the nicest eye could not discover the minutest indication that the "corps diplomatique" had advanced a single step beyond the point where they started.

"Any news from Belgium, Onslow?" the general would frequently ask his relative, who was the politician of the family.

"None," was the everlasting reply, "things are in *statu quo*."

Now was it music to the ears of the general to hear of any thing being in *statu quo:* it was just the state in which, if he had had the power, he would have kept the affairs of the whole world. The man who could keep things for ever in *statu quo* was the man for him. That was his definition of a great statesman, as Fabius was his *beau ideal* of a great captain. You may easily conceive how he idolised such a foreign secretary as Palmerston.

"Onslow," he would say, "I wish you had an appointment in the Foreign Office; Palmerston would teach you how to do business! By the by, he is a relation of yours by your mother's side; her father and his grandmother were brother and sister, both children of my old friend Roger Sloman, the master in chancery."*

But let me return to the Fleetwoods. They were too unlike the Saunters in all their ideas, tastes, and habits, for any thing more than the most formal and distant acquaintanceship to exist between the families. Mr. Fleetwood held shares in the Manchester railway company; he hunted three times a week in the season; his character in the county was that of an active magistrate; he traveled in his own carriage ten miles an hour; and he had twice made the passage from South-

* The celebrated author of "The Law's Delays Justified"—a pamphlet which procured and fully entitled him to the lucrative place he held.

ampton to Havre la Grace in a steamboat; judge then how little the

"idem velle atque idem nolle"

must have existed between him and old Sir Simon. In fact, there was no ground whatever upon which a treaty of friendship could possibly have been arranged between Bustle Hall and Castle Saunter. Mrs. Fleetwood was a lady of the Diana Vernon school; she rode a beautiful high-mettled pony, which she called Hurricane; and she forgot herself so far one Sunday, when the families happened to meet at the church door after service, as to ask Lady Saunter if she did not intend to be at the Ascot races the following Wednesday! The utmost, therefore, to be expected under such circumstances, was an interchange of the coldest civilities; and even this was a commerce never carried on when it was practicable to avoid it.

It had been well for Sir Simon had his eldest daughter been less celebrated for painting on velvet! Odd as it may seem, her skill at that art was one of the links in the chain of causes which pushed her venerable parent down the hill of life much faster than he would have traveled, if he had been permitted to descend the slope at his own natural and constitutional rate of going. The ladies at Bustle Hall having undertaken to get up a bazaar, an active canvass was on foot in every direction to engage all the long white fingers in the county, in the manufacture of pin-cushions, thread-cases, needle-books, hand-screens, reticules, and ten thousand other nick-nackeries and fashionable trumperies, as hard to number or name as the spangles in the firmament upon a frosty December night. All the girls thirty miles round were laid under contribution, and the havoc of blue ribbon, pink satin, gold paper, and pasteboard, was prodigious. Augusta Saunter was not forgotten; the fame of the birds and flowers which her creative genius occasionally produced upon white velvet, had reached the ears of the Fleetwoods; and they determined to make an effort (without any very sanguine hopes of success) to prevail upon her to contribute a specimen of her skill to the common stock. A polite note, in form of a triangle, on rose-coloured paper, was written by Mrs. Fleetwood, conveying the request in the most winning terms, and Frederick, her eldest son —a lad of about sixteen, then at home for the vacation—was appointed envoy-extraordinary to present it to Miss Saunter.

And a most extraordinary envoy indeed he proved! Never did ambassador make his appearance at a foreign court after a fashion less likely to make an impression in his favour. It was just the time when velocipedes, or accelerators, as they were sometimes called, were all the rage; and it struck our young bazaar-commissioner that it would be capital fun to perform the journey to Castle Saunter upon one of these whimsical vehicles which had but a few days before come into his possession. The thing was done almost as soon as imagined. The road being perfectly smooth and level, in little more than half an hour Mr. Frederick Fleetwood made his *entrée*, going as fast as a lamp-lighter, between the stone tortoises which had figured so grotesquely in aunt Catherine's dream.

"The Lord save us and keep us!" exclaimed the gate-keeper.

The gatekeeper thought it was "the crack of doom;" he had no conception of any more unequivocal prognostic of the general dissolution. He followed the apparition with a gaze of astonishment and horror, until a clump of trees hid it from his view, and then returned to the lodge, murmuring between his few remaining teeth, whether a benison upon himself, or a malison upon young Fleetwood, (whom he ever afterwards with bitter irony called "a promising boy,") it was not easy to determine.

But who shall paint the consternation of the castle? Who shall take it upon him to describe the mingled terror and petrifaction of its inmates, from the baronet in his blue velvet arm-chair, down to Dorothy, the fat scullery-maid in the kitchen.

All intense feelings are speechless—the "infernal machine" was within a hundred yards of the door before the amazement which its first appearance spread through the family was sufficiently mitigated to be susceptible of utterance. Lady Saunter recovered her voice first. She let Baxter's Saints' Rest fall from her hands; clapped them to her eyes; and exclaimed, with the look of one who had seen a ghost,

"Oh! Catherine, Catherine!"

Catherine was in no condition to answer; she had fallen on the floor in a kind of swoon.

"What can it be?" said Letitia, pale as any snow-drop in February.

"How frightful!" said Augusta, with a ghastly stare, now at her mother, now at the horrid object which came careering up the avenue like Mazeppa on the wild horse.

"Oh, Hildebrand!" said Henrietta, "did you ever see any thing so shocking; can you guess what it is?"

"It's the velocipede," replied Hildebrand, who had seen one at Oxford.

"The velocipede, the velocipede!" exclaimed all the girls at once.

"The velocipede!" cried her ladyship, "my love, what can bring the velocipede to Castle Saunter?"

"Of all places in the world," added Letitia, trying at the same time, by dint of smelling-salts, to recall her aunt's senses.

The cry of "the velocipede," soon found its way through every part of the castle. Lucy, the ladies' maid, had been in the drawing-room when Hildebrand announced the name, without explaining the nature of this novel and terrific visiter, and she flew immediately to the servants' hall, screaming as she went, "the velocipede, the velocipede!"

I met Ralph at the corner of the corridor leading to my bed-room, and asked him what was the matter.

"The velocipede, sir! the velocipede," was the only answer I could get as he scampered up the back-stairs as if Halley's great comet was at his heels.

Ralph was the most consummate coward I ever

met with; when the hubbub was over he was discovered, after a long search, at the bottom of a huge trunk in the house-keeper's room, covered a foot deep with blankets. He never could give any clear account of the meaning he attached to the word velocipede; but I suppose he took it for some "horrible wild-fowl," as Bottom (that prince of stage managers) says of the lion.

Proceeding to the drawing-room, in order to learn what had taken place, from the ladies, and having to traverse a dark passage, I heard a female voice a few paces before me, exclaiming in the stifled accents of extreme terror, "Joseph, will it eat us?"

The reply was worthy of as gallant a Perseus as ever drew sword for an Andromeda.

"I'll defend you, Dorothy, with my life. I will, Dorothy, my darling."

I had no occasion for day-light to tell me that I had stumbled on the coachman and the fat scullery-maid, playing Celadon and Amelia.

"Hers the mild lustre of the blooming morn,
And his the radiance of the risen day."

The coachman afterwards acknowledged, that they both conceived the velocipede to be some dreadful beast of prey, escaped from an itinerant menagerie which had been very lately in the neighbourhood.

Scarcely able to move with laughing, I made my way to the drawing-room. To my surprise I found nobody there but the baronet's maiden sister, who was stretched on a sofa, looking miserably ill, and unable to articulate a syllable. I repaired to the library.

I found the poor baronet in a fit, with his wife and all his children about him, uniting all their strength to carry him back from the window, where he had fallen, to his established seat at the fire-place. With my aid this was soon accomplished; and then I begged of Henrietta, who was the least agitated, to tell me, in heaven's name, what was the matter; that something awful had happened, there was very little room to doubt.

"He saw it, he saw it!" was the only explanation I could get.

I asked all the girls, and then her ladyship, the same question, but without avail.

"He saw it!" was the only answer.

"Saw what?" said I to Hildebrand, with some impatience. "Did he see a ghost or a goblin?"

"Almost as bad," was the reply; "one of those confounded Fleetwoods on his accelerator."

Hildebrand said this with an energy that surprised me; but I was still more astonished when I heard him propose to ride off for Dr. Diddler, of Bedford.

This I had too much regard for Sir Simon to allow; I took that office on myself, representing to Hildebrand that, in the dangerous state in which his father was, it would be wrong for any of his children to leave him but for an instant.

I had to saddle my horse with my own hands: not a stable-boy was to be found. An earthquake could not have produced more general trepidation.

Riding round by the front of the castle, the first object I beheld was the innocent but unlucky author of all this confusion, just preparing, after an ineffectual battery for nearly half an-hour at the hall door, to retrace his way to Bustle Hall, under the firm impression, from the uproar that reached his ears from the interior of the castle, that the whole Saunter family had gone stark staring mad. Not wishing to expose the foible of my relatives, I made the best apology in my power to young Fleetwood for the length of time he had been detained outside the fortress; told him that it was entirely owing to the sudden illness of the baronet; and offered to take upon myself the commission with which he came charged to my cousin. I then galloped off for the doctor by the back entrance to the demesne; leaving the knight of the velocipede to return by the road he came, and astound the weak understanding of the gate-keeper a second time by a degree of speed identified in his mind with a violation of all laws, human and divine, besides being an affront of the most outrageous kind to the family he served.

Sir Simon was gradually restored by medical aid so far as to be able to totter upon crutches from one apartment to another; all the skill of Dr. Diddler could do no more. The velocipede was a blow at the very centre of his system; it unhinged the whole frame of his constitution; every body that knew him was aware from the first that his complete recovery was out of the question. He lingered, however, some months longer than was generally expected: nearly a year had elapsed from the unhappy event which has just been related, when Onslow, going into the library one morning about an hour after breakfast, found his venerable uncle dead in his chair, with one hand (steady to the last!) in his breeches-pocket, and the other grasping a crumpled letter which he had just received from his agent in London. The letter ran thus; it sufficiently accounts for Sir Simon's sudden demise —the only hasty step he was ever known to take!

"Lincoln's Inn Fields, Nov. 3, 1832.

"Dear Sir—I take the earliest opportunity of informing you that I have just concluded a treaty relative to a portion of the lands of Castle Saunter, with the Birmingham and London railway company. So convinced am I that the execution of this magnificent project will be productive of the greatest possible advantage to the landed property of Bedfordshire, that I have exerted myself, and I am happy to say with success, to have several miles of the new line of road carried through your estate in that county. It is to run in a direction from east to west through the middle of the lawn, touching the southern angle of the square pond, and at one point approaching the castle within less than fifty yards, so as to afford a full prospect of the steam-carriages, passing, or I should rather say flying, backwards and forwards to and from the metropolis. It is not easy to imagine a more lively scene than you will command from your library windows when this grand work is finished, as I trust it will in the course of the next twelve-month.

"I have the honour to remain, &c.

"Isaac Thriftwell.

"*Sir Simon Saunter, Bart.*"

From the London New Monthly Magazine.

WAS I RIGHT, OR WAS I NOT?

Was I right, or was I not?
The age exact I cannot tell,
But 'twas sometime in teens, I wot,
That I came out a dashing belle.
My mother called me "hare brain'd chit,"
But that I needed ne'er a jot,
For little Miss *must* flirt a bit,
Was I right, or was I not?

Away I sparkled in the ring;
And soon was known as false and fair:
Oh! 'tis a dear, delightful thing
When first we make a swain despair.
There was young Frederick all on fire,
Who vowed and swore—I know not what—
Of course I left him to expire.
Was I right, or was I not?

Dear me! I felt a trifle sad,
When all cried out "what have you done!"
For, sure enough, I loved the lad:
But who'd take up with number one?
So *vive l'amour!* I gaily cried,
And he, poor wretch, was soon forgot,—
For I'd a hundred sparks beside.
Was I right, or was I not?

Some shook their heads, but I had skill:
Lovers and friends I went on winning,
What will you have? I flirted still,—
Because I flirted at beginning.
A long gay train I led away;
Young Cupid sure was in the plot;
I thought the spell would last for aye:—
Was I right, or was I not?

But now 'tis come into my head
That I must grow discreet and sage;
For there are hints my charms have fled,
And I approach "a certain age."
So the next offer—that's my plan—
I'll nail, decisive, on the spot;
'Tis time that I'd secured my man.
Am I right, or am I not?

But ah! though gladly I'd say "Yes,"
The looks of all the men say "No."
Who would have thought 'twould come to this?
But mother says, "I told you so!"
Friends, lovers, danglers, now are gone:
Not one is left of all the lot,
And I'm a "maiden all forlorn!"
Is it right, or is it not? Q. Q.

Obituary.

THOMAS PRINGLE, ESQ.

Dec. 5. In London, aged 46, Thomas Pringle, Esq. late secretary to the Anti-Slavery Association, and author of several interesting works.

Mr. Pringle was born in Teviotdale, a romantic pastoral district in the south of Scotland, of which he has left some pleasing remembrances, in the poetry which, from time to time, he gave to the public. He applied himself early in life to literature, as a profession; and was concerned in the establishment and early management of Blackwood's Magazine; shortly after, however, he chose to follow the fortunes of his family, who became settlers in South Africa. There, after a time, Mr. Pringle entered into some literary speculations in Cape Town, which, however, he was speedily forced to relinquish by the government, at a pecuniary loss of little less than 1000*l*. Upon the failure of these speculations, Mr. Pringle returned to England; and his services were soon after engaged by the Anti-Slavery Society, as secretary to that body, a situation which he continued to hold until within these few months, when the object of the society was accomplished; and the duties of which responsible office he discharged, not merely as one expected to labour for hire, but as one whose heart was in the cause of humanity and justice.

Mr. Pringle is also favourably known to the public as a sweet and graceful poet. His "Ephemerides" abound in graphic pictures of African scenery; and are rich in evidences of the kind and Christian spirit which accompanied the writer, in all that he did or wrote. As the editor of "Friendship's Offering," Mr. Pringle brought to his task a sound judgment and a refined taste. The last work in which he was engaged, and which he finished only a month or two ago, was the revision of his volume entitled "African Sketches," with a view to a second edition, which, we believe, will soon appear. Early last summer, the rupture of a blood-vessel confined Mr. Pringle to a sick bed, and greatly reduced the energies of a naturally strong constitution; and towards the autumn, it became apparent, that, for the preservation of life, a removal to a warmer climate was indispensable. Mr. Pringle's circumstances not permitting a trial of the south of Europe, he again turned his thoughts towards the Cape: the necessary preparations were hastily completed; the passage money paid; and it wanted but three days of the time appointed for sailing, when a diarrhœa began to show itself, under which the powers of nature, already enfeebled by confinement, speedily sank, and he died without a struggle; exhibiting to the end that moral courage for which he had ever been remarkable, and supported by the recollection of a well-spent life, and by the hopes that spring from religion. Few men were richer in friends than Mr. Pringle; among their number we might enumerate most of the literary men of the day, and very many of those public men who have made philanthropy the beacon of their political career.—*Gentleman's Magazine.*

MR. F. W. SMITH.

Jan. 18. At Shrewsbury, Frederick William Smith, second son of Anker Smith, the eminent engraver, and the first and best of the pupils of Chantrey, the sculptor.

His merits as an artist were of no ordinary kind; he had much force of conception, and singular ease and gracefulness of execution: in male figures, such as his Ajax, he united natural action with great anatomical knowledge; and his female figures were remarkable for their unconstrained elegance of posture, the round softness of their limbs, and their perfect delicacy and truth of expression. By his group of Hæmon and Antigone, he gained the gold medal of the Royal Academy, and raised expectations which were realised in his beautiful group from the Deluge, of a Mother and Child, his Ajax, and other creations of the same kind. He failed in obtaining the prize on which he had set his heart—namely, the one which entitles the winner to study three years in Rome; his model, though nothing like so smooth as the one which won it, excelled it far in originality of conception. Nor were his busts inferior to his other works; those of Chantrey, Brunel, and Allan Cunningham, are the best; it was of the latter that Flaxman, who was then arranging the works of art in Somerset House, said—"I shall give this bust, by Smith, the best place in the exhibition, for in sentiment it surpasses any head I have seen here for some years." It is needless to add, that he kept his word. This young artist was frank, spirited, and kind-hearted, and was warmly beloved by all with whom he had intercourse.—*Ib.*

JAMES HEATH, ESQ.

Nov. 15. In Coram-street, aged 78, James Heath, Esq. Senior Associate Engraver of the Royal Academy.

Mr. Heath was for more than half a century one of the most eminent engravers in Europe. He had long, however, retired from the profession, which he resigned to his son, Mr. Charles Heath, whose almost numberless illustrated works, and other exquisite productions of the graphic art, do so much honour to the country.

Mr. Heath was the early associate and friend of Stothard, the artist; they may be said to have commenced their career of popularity and distinction at the same time. The old "Novelist's Magazine," published by Harrison, which extends to twenty-two octavo volumes, is adorned by the delicately finished engravings of James Heath, from the exquisite and imperishable drawings of Thomas Stothard. This work remains at the present moment a monument of the supremacy of the genius and skill of Heath and Stothard. Heath's fame as an engraver extended all over the continent, and was by no one more highly appreciated than by that distinguished artist, Raphael Morghen at Florence. During many years he confined himself to book illustrations; but it was impossible that an artist of such high capabilities should fail to strike out a more enlarged sphere for the display and exercise of his art, and with equal success. The "Death of Major Pearson," from a painting by West, and, as a companion to it, the "Death of Lord Nelson," from a painting by the same artist; the "Dead Soldier," from a picture by Wright of Derby; a whole length of General Washington, engraved from American Stuart's well-known portrait in the possession of the Marquis of Lansdowne; and the portrait of Pitt, from the statue at Cambridge University, are a few of the many lasting specimens of Heath's graphic excellence.

In private life Heath was esteemed and loved by the large circle in which he was known. He was a delightful companion, abounding with entertaining anecdotes and stories relating to the eminent persons with whom he had associated. Sir Joshua Reynolds, Sir Thomas Lawrence, West, Stothard, F. Reynolds, Morton, John Kemble, Miles Peter Andrews, Wroughton the actor, and to the end of his life Jack Bannister (who, we rejoice to say, survives him in excellent health), were his attached friends. Although his engravings were highly prized in all the principal cities of Europe, we question if his visit to the continent extended beyond Calais, on an occasion when Jack Bannister was his companion, and who often tells a humorous story of an occurrence that happened to them at Dessein's Hotel.

Mr. Heath was a widower when he died. He has left behind him three children: George, Serjeant-at-law; Charles, the eminent engraver; and Mrs. Hamilton, who is understood to be almost equal to her brother as a professor of the graphic art. Godefroy of Paris, who engraved the celebrated Battle of Austerlitz, from the splendid painting by Gerard, was a pupil of Mr. Heath.

Notabilia.

Important to Sheep-Breeders.—The dipping of sheep in the autumn seems to answer fully the expectation that was formed; and wherever it was done properly, the ticks and lice, and their eggs, seem all to have been destroyed; and the wool has made a more rapid growth, the sheep are quiet and contented, and feed well, and their coats are light, with scarcely a lock of wool displaced; while the flocks in the adjoining fields, that were not dipped, are tormented with swarms of these vermin, and are continually nabbing, rubbing, or kicking, to the injury of the wool, as well as its loss, and the cause also of considerable trouble to the shepherd; neither will they feed or sleep so well, or obtain so much flesh, or so great a weight of wool, and of course are rendered of less value. This dipping will doubtless be almost universally adopted; but we would beg to state that it is a strong and powerful remedy, and requires great experience, with a careful and judicious management, or in unskilful or negligent hands a deal of mischief may be done in a very short time.—*County Chronicle.*

The Thames Tunnel.—A meeting of the Directors and Proprietors of the Thames Tunnel Company has been held to receive the report of the directors. The chairman said that they met there under circumstances different from what they had done for the last seven years. The late government had consented to provide them with a sum of money which had been considered necessary for the completion of the work, which would be done in the cheapest possible manner. The money had been advanced in the shape of exchequer bills, the interest upon which was available to the benefit of the company. There was now no doubt of the final success of this great national undertaking, which had engaged attention in all parts of the world.—Mr. Burkitt read the report of the directors, which stated that for the last six years they had used their exertions to fulfil the duty imposed on them, and they had, at length, succeeded under the sanction of the lords of the treasury, who, by act of parliament, were provided with money on account of the improvement of public works, in obtaining a loan from the commissioners for issuing exchequer bills, and which was considered sufficient to complete the magnificent work. In order to obtain the required assistance, Lord Morpeth and Sir Harry Inglis, with a deputation, waited on Lord Althorp, to whom a statement was given that 246,000*l.* would be as much as they should want, and which was readily acceded to. Under the advice of their solicitor, 30,000*l.* on the 5th of December last, was placed in the Bank of England. At no distant period, therefore, the Tunnel would be finished. The report concluded by stating that not only the late, but the present government, have afforded every facility for the promotion of the work, while the Duke of Wellington and Lord Morpeth have manifested the greatest interest throughout its progress. The report of Mr. Brunell was next read, which expressed the fullest conviction of that gentleman as to the possibility of the Tunnel being perfected, for which purpose a house had been taken for him close by the Tunnel. A new shield will have to be made; but in the making of this there will be no impediment in the prosecution, as many preparatory steps must be taken, and which have been going on since the beginning of November last. Mr. Brunell will not commence the Tunnel from the north side, but continue the line on the south side, beginning where they left off. The accounts were then read by Mr. Burkitt, beginning from January 1, 1834, to December, 1834. On the credit side there was an account of admission-money to view the Tunnel, 1,119*l.* 18*s.*; while on the debit side, on account of advertising the exhibition of the Tunnel, 300*l.*

Savings' Banks.—In the county of Hants, containing a population of about 314,313 souls, Savings' Banks are established at Alton, Andover, Basingstoke, Fareham, Gosport, Havant, Lymington, Newport (I. W.), Portsmouth, Portsea, Southampton and Winchester. According to the last official returns, the number of accounts kept at these banks amounted to 8773, while the average amount of each deposit was 35*l.* In the Wiltshire banks of a similar description, the number of accounts opened is 7089. The average amount of each is 37*l.* Population, 239,181.

Antiquarian Discovery.—In the dissenters' burial-ground, near Dover-road, there were recently found a sepulchral urn, fractured pieces of a metallic mirror of elegant workmanship, the fragments of a glass urn, and some glass lachrymatories in the shape of a tear. A
